

IBM Application Integration Suite

Three primary trends changing the integration market

#1 Increasing need to integrate across a hybrid environment

#2 Changing dynamics require a combination of app + API + data integration in an enterprise solution

#3 Integration being adopted in the line of business

Business projects are driving the “hybrid” agenda

Hybrid User Communities: Used by both IT as well as LOB who are adopting integration tooling to automate application interactions.

Hybrid Connectivity: Reach across secure connections to get to data where it is from wherever you need

Hybrid Integration Styles: Combining app integration, API integration and data integration

Hybrid Deployment: Software can be flexibly deployed on cloud and on-premises to optimize solution architecture

The IBM Application Integration Suite is a powerful hybrid integration solution that will help you to be successful in your digital transformation.

What is the **IBM Application Integration Suite**?

IBM Application Integration Suite is built on the best in breed offerings that IBM already has for on premises integration, cloud integration and API management and creation.

IBM Application Integration Suite provides the tooling you need to connect your cloud and on premise applications, build microservices and expose and manage APIs; helping you to create a hybrid environment, complimenting agile development and support your business in its digital transformation journey.

The suite allows you to simply and quickly build new APIs using integration technology and accelerate your integration creation and management through the use of pre-made patterns, rich connectors and easy-to-use tools. This means you can react faster to take advantage of new business opportunities.

Can I deploy **IBM Application Integration Suite** on the cloud?

Yes, the Application Integration Suite can be deployed on premise or in the cloud. With the Application Integration Suite, you can leverage your existing IT systems and investments whilst taking advantage of cloud. Connecting across hybrid environments provides you with greater flexibility and scalability, allowing you to react faster to changing business needs.

IBM Application Integration Suite

How the **IBM Application Integration Suite** can help your business

- **Connect** Rapid access to hundreds of applications and data sources both in the cloud and on-premise, with secure communication;
- **Transform** Extensive set of pre-built objects that transform, join, aggregate, restructure, cleanse and enrich data to satisfy simple & complex requirements;
- **Deliver** Seamlessly scale workloads in order to route and deliver data in real-time with quality of service guarantees;
- **Compose** Quickly assemble APIs into a coherent flow in order to provide higher grained business value; and
- **Expose** Provide secure and managed access to enterprise assets across internal and external developer communities

IBM Integration clients are leaders in every industry

80% of all worldwide airline reservations

The top **20** Global communication service providers

21 of top **25** Insurance companies

23 of top **25** US Retailers

90% of top **60** Banks

90% of global credit card transactions
