

# Keep your vital applications up and running with IBM Cloud™ for VMware Mission Critical Workloads

**99.99%** availability

**Minutes** to full recovery

**Zero data loss** in a failure

Running IBM Cloud for VMware Mission Critical Workloads gives you a higher level of availability than most on-premises deployments. Each site has a separate failure domain with high levels of isolation between sites.

IBM Cloud is architected to recover from site failure with zero data loss. Dual-site design and automated failover via vSphere High Availability (HA) gets your virtual workloads up and running in minutes.

## Benefits of IBM Cloud for VMware Mission Critical Workloads

**No-cost replication**  
between IBM Cloud data centers

**Multiple disaster recovery and backup**  
options with cost savings

**Workload security and data protection**  
unmatched with IBM Cloud

**Automated compliance**  
support and tooling

**No additional skills or training required**  
managed by IBM

**Automated recovery**  
for reduced operational costs

## New in our latest release

**Lower entry point**  
Get up and running at a reduced cost

**Flexible sizing and availability options**  
Choose from small, medium and large configurations

**Choice of storage options**  
Includes flexible disk configurations for VMware vSAN stretched clusters and support for NFS-based storage for management and edge clusters

**Smaller footprint**  
The hosting requirements are now less than half of the previous release
