

AI Health Check

Mitigate drift, bias and model risk ↳ with trust and transparency

AI and Machine Learning are essential enablers for virtually every company, across every industry. But AI adoption doesn't come without some risk.

An AI Health Check reviews and evaluates seven major types of risks in your current AI models. This assessment allows you to put steps in place to avoid potential damage to your brand and address regulatory risk.

This workshop generates a risk profile for your AI use case and an assessment of your processes and approach to Trustworthy AI. This allows you to evaluate your AI maturity and trust gaps:

Trust in model: address concerns around model bias, explainability, privacy and robustness.

Trust in process: ensure consistency, compliance and transparency for AI at scale.

Format

This is a no-fee engagement. The workshop is an interactive on-site or virtual session facilitated by the [IBM Data Science and AI Elite team](#) and IBM Research. A typical workshop session takes about 4 hours.

What to expect?

IBM employs a range of approaches to ensure that AI systems are fair, robust, explainable, privacy-preserving, accountable and align with the values of society. You'll learn more about these topics with our AI experts, self-assess your AI maturity, and receive a qualitative assessment based on this workshop.

Participants

Key participants typically include the owners of the potential model risk — Risk Managers, Data Science Leads, Business Owners/Sponsors, Compliance Officers, and other business leaders.

What's produced?

The AI Health Check includes a report detailing a risk profile of your AI use case and overall approach to Trustworthy AI, and recommendations for next steps. This report is considered client confidential. Possible follow-on activities include proof-of-concept engagements around IBM products and a Model Risk Assessment from IBM Research, which can quantifiably assess the risks of a particular model in a similar way that a home inspector can assess the risks of purchasing a new house.

Cost

This no-fee workshop is a part of IBM's partnership with your company. The lessons learned will help you enhance your AI initiatives and achieve your business goals.

To register, contact your IBM Sales Representative or request a consultation at ibm.biz/DSE-Consultation.
