

Large American Bank

How can we deliver new services to market faster?

IBM Z
Financial Services

A large American bank is undergoing an application modernization journey that will allow them to deliver services to market faster. Before, there were communication gaps between hybrid cloud platforms. By modernizing applications with IBM z/OS® Connect Enterprise Edition, the bank is bridging those gaps and reducing the risk of disruption to core applications.

With IBM, the bank is empowering developers, giving them a simple and intuitive way to access data and services on IBM Z®. The bank is bringing new services to market faster by adapting existing business applications to seamlessly support web and mobile platforms. Now, differentiating assets are securely unleashed without changing the backend applications.

Modernize applications and drive innovation on the most secure, resilient and scalable platform to maximize value from hybrid cloud investments

“The application can remain the same and IBM z/OS Connect handles the running of the transaction and returning the data back to the front-end application.”
