

Pay for what you need with IBM Netezza

Take advantage of granular elastic scaling and speed, powered by a mature massively parallel processing engine to maximize value from your data warehouse in the cloud.

IBM Netezza Performance Server as a Service (NPSaaS) is IBM's fully managed, modern cloud enterprise data warehouse for faster insights and processing, in-database analytics, and a pay-for-what-you-need cost model.

Simplicity drives Netezza and Netezza sets the standards on what simplicity of use means in the world of enterprise data warehousing and analytics.

NPSaaS uses granular elastic scaling to allow you to easily address both planned and unplanned workload spikes.

It also provides access to powerful, in-database analytics which enables teams to build models that operate on, predict, and score data directly inside Netezza. Enjoy these benefits and much more while only paying for what you need when you need it!

Built on an open and extensible cloud-native AI platform and fully managed on Microsoft Azure, NPSaaS modernizes how businesses store and analyze their enterprise data.

Compare the benefits of Netezza vs other EDWs on-premises or in the cloud:

NPSaaS is up to 78% faster than the leading competitor

Save up to 47% on licensing costs

Pay only for what you use with granular scaling

See the strength of NPSaaS Analytics-at-Scale

See how you can lower costs, enhance productivity, and reduce risk by choosing IBM Netezza Performance Server as a Service (NPSaaS). Looking to upgrade from NPS on-premise to NPSaaS? Enjoy risk-free, frictionless upgrades with Netezza when you upgrade with single command, `nz_migrate`.
