

IBM DS8880

Enterprise data systems made for Business-Critical workloads

All-Flash & Hybrid Storage Data Systems built to deliver the highest performance & uncompromised availability for mainframe & distributed systems.

Accelerate your mission-critical applications up to 4.5 times with High-Performance Flash Enclosures.

Keep your production environment always on, with 2, 3 & 4 site remote replication for higher performance & maximum availability.

Enable your data center with real time analytics for traditional & hybrid clouds environments.

Reduce operating costs with a wide range of all-flash & hybrid configurations, delivering a 30 percent smaller footprint.

Efficiently consolidate all your business-critical applications

Only the IBM DS8880 family provides the deepest integration with IBM® z Systems™ while supporting mainframe, IBM Power Systems, and Distributed Systems under a single management point.

Enable your business to efficiently address the widest variety of workloads:

Cognitive: All-flash and hybrid configurations to support operational decisions, improve customer service and optimize business processes.

Business Analytics: Superior performance and unparalleled availability for analytics applications and real-time decision making.

Cloud: RESTful and OpenStack APIs to enable critical workloads applications in private and public cloud environments.

I/O-intensive: Improved data speed access for databases, enterprise resource planning systems, OnLine transaction processing systems and data warehouse applications.
