

IBM Managed Services for Cloud Consumption for Microsoft Azure (SaaS/IaaS) -

IBM Managed Services for Cloud Consumption – MS Azure Silver

IBM Managed Services for Cloud Consumption (IMS4CC) provides a SaaS platform that bundles value-added management services combined with the ability to procure Cloud Service Provider (CSP) cloud consumption. The IMS4CC family of offerings provides a “pay-per-use” cloud consumption and delivery model.

IBM Managed Services for Cloud Consumption Silver provides account management including billing and administration, cost reporting and optimization services. This base level of managed services capability, “Silver”, is often requested as a minimum level of cloud management support by Federal clients.

IBM Managed Services for Cloud Consumption – MS Azure Silver is a base level Azure account management service enabled by IBM Cloud Management Platform tooling. Delivered by IBM, this specific offering IMS4CC- MS Azure Silver, includes Azure cloud services.

IBM Managed Services for Cloud Consumption runs in a DISA Impact Level 5 (IL5) and FedRAMP High cloud enclave so the client’s data is always protected at the appropriate level.

SIN	Manufacturer Name	Charge	Description	IBM Price without GSA IFF	IBM's Price with GSA IFF
