Overview

IBM^(R) SPSS^(R) Statistics 29 enables organizations to evaluate data with ad hoc analysis, hypothesis testing, and predictive analytics. It offers a powerful set of tools to validate assumptions, analyze past performance, and forecast trends.

SPSS Statistics 29 enhancements include the following:

- Linear ordinary least squares (OLS) alternatives that include Elastic Net, Lasso, and Ridge
- Parametric accelerated failure time (AFT) models that provide an analysis that invokes the parametric survival models procedure with nonrecurrent lifetime data
- Pseudo-R2 measures in linear mixed models and generalized linear mixed models
- Command syntax that includes GENLINMIXED, LINEAR_ELASTIC_NET, LINEAR_LASSO, LINEAR_RIDGE, MIXED, and SURVREG AFT
- Python 3.10.4 and R 4.2.0 that are installed with SPSS Statistics 29
- Unselected cases no longer hidden in the Data Editor
- Workbook mode enhancements that make it easy to switch between Classic and Workbook modes, and feature two new toolbar items
- Search feature enhancements so users can enter terms directly in a toolbar field and view results in a drop-down pane
- The Graphboard Template Chooser now includes a new violin plot

Description

New features and capabilities of SPSS Statistics 29

Analyze procedures

- Linear OLS alternatives
 - Elastic Net
 - A new Python-based procedure `LINEAR_ELASTIC_NET` fits linear regression models with specified L1 and L2 hyperparameters, displays trace plots, or selects hyperparameter values through cross-validation.
 - Lasso
 - A new Python-based procedure `LINEAR_LASSO` fits linear regression models with specified L1 hyperparameters, displays trace plots, or selects hyperparameter values through cross-validation.
 - Ridge
 - A new Python-based procedure `LINEAR_RIDGE` fits linear regression models with specified ridge hyperparameters, displays trace plots, or selects hyperparameter values through cross-validation.
- Parametric AFT models
 - The Parametric AFT models can be used to obtain a AFT model analysis, which invokes the parametric survival models procedure with nonrecurrent lifetime data. Parametric survival models assume that survival time follow a known distribution, and this analysis fits AFT models with their model effects proportional with respect to survival time.
- Pseudo-R2 measures in linear mixed models and generalized linear mixed models
 - Pseudo-R2 measures and the intraclass correlation coefficient are now included in linear mixed models and generalized linear mixed models output (when appropriate). The coefficient of determination R2 is a commonly reported statistic, because it represents the proportion of variance explained by a linear model. The ICC is a related statistic that quantifies the proportion of variance explained by a random grouping factor in multilevel or hierarchical data.

Command syntax

- `GENLINMIXED`
 - Output now includes pseudo-R2 measures and the ICC when appropriate.
- `LINEAR_ELASTIC_NET`
 - New extension command uses the Python `sklearn.linear_model.ElasticNet` class to estimate regularized linear regression models for a dependent variable on one or more independent variables.
- `LINEAR_LASSO`
 - New extension command uses the Python `sklearn.linear_model.Lasso` class to estimate L1 loss regularized linear regression models for a dependent variable on one or more independent variables. The command includes optional modes to display trace plots and to select the alpha hyper-parameter value that is based on cross-validation.
- `LINEAR_RIDGE`

- New extension command uses the Python sklearn.linear_model.Ridge class to estimate L2 or squared loss regularized linear regression models for a dependent variable on one or more independent variables. The command includes optional modes to display trace plots and to select the alpha hyperparameter value that is based on cross-validation.
- MIXED
 - Output now includes pseudo-R2 measures and the ICC when appropriate.
- SURVREG AFT
 - New extension command invokes the parametric survival models procedure with nonrecurrent lifetime data.

Removal of ability to hide unselected cases

- By default, unselected cases are no longer hidden in the Data Editor when a subset of cases is selected, and the unselected cases are not discarded.

Search enhancements

- Search feature now provides options for entering terms directly in a toolbar field and for viewing results in a drop-down pane.

Violin plots

- The Graphboard Template Chooser includes a new violin plot, which is a hybrid of the box and kernel density plots. Violin plots show peaks in the data and are used to visualize the distribution of numerical data. Unlike a box plot that can only show summary statistics, violin plots depict summary statistics and the density of each variable.

Workbook mode enhancements

- Two new workbook toolbar items have been added: Show or Hide all syntax windows and Clear all output. There is also a new button on the status bar to switch between Classic (Output and Syntax) and Workbook modes.

Statement of good security practices

IT system security involves protecting systems and information through intrusion prevention, detection, and response to improper access from within and outside your enterprise. Improper access can result in information being altered, destroyed, or misappropriated or can result in misuse of your systems to attack others. Without a comprehensive approach to security, no IT system or product should be considered completely secure and no single product or security measure can be completely effective in preventing improper access. IBM systems and products are designed to be part of a regulatory compliant, comprehensive security approach, which will necessarily involve additional operational procedures, and may require other systems, products, or services to be most effective.

Important: IBM does not warrant that any systems, products, or services are immune from, or will make your enterprise immune from, the malicious or illegal conduct of any party.
