Winning with an intelligent, self-correcting supply chain

Become an IBM Business Partner to deliver supply chain solutions built to improve the customer experience.
The supply chain market opportunity

An organization’s reputation and customer loyalty rely on the ability to deliver on its brand promise. Businesses depend on their supply chain operations to provide a customer experience that delights customers as well as trading partners.

It’s important for our clients to orchestrate a frictionless supply chain that simplifies B2B connectivity, collaboration and decision making. Executing with speed and confidence is essential for supply chain leaders to meet business needs and exceed the expectations of customers and trading partners.

The move to the cloud, coupled with disruptive technologies such as blockchain, Internet of Things (IoT) and artificial intelligence (AI), is enabling organizations to become more agile and efficient. According to IDC, the manufacturing sector spent $316 billion in 2017 on its digital transformation and it is expected to grow at a compound annual growth rate (CAGR) of 18.8 percent from 2017 to 2021.

To meet this challenge, organizations are seeking to design an intelligent, self-correcting supply chain because:

- 75% of retailers can’t deliver a seamless and consistent experience across sales channels
- 63% need to increase security of file transfer systems
- 59% seek to reduce costs with self-service for the line-of-business
- 75% want to improve trading partner satisfaction through enhanced line-of-business collaboration

“The supply chain continues on its journey of almost unparalleled levels of change. Digital transformation is now the overriding priority for most manufacturers and retailers, with the adoption of digital technologies aimed at improving efficiency and effectiveness as well as providing the opportunity to either disrupt their market segment or be resilient to others that may try.”

Simon Ellis, IDC program vice president, Global Supply Chain Strategies

IBM Sterling solutions
How to achieve success as an IBM Business Partner
Get started
First-generation supply chains are good at automating and optimizing processes in functional silos. But the next chapter of digital transformation will require supply chains that are dynamic, responsive and interconnected with ecosystems and processes. To succeed, supply chain leaders need to take bold strides forward in driving efficiencies and being resilient to disruptions.

The IBM® Sterling Supply Chain Suite gives you end-to-end visibility, real-time insights and recommended actions to turn disruptions into opportunities for customer engagement, growth and profit. It’s an open, integrated platform that easily connects to your supplier ecosystem, while leveraging advanced technologies like AI and blockchain. Armed with these solutions, IBM Business Partners can help clients achieve better business outcomes by completely reinventing the way supply chains operate.

When supply chain professionals think about their operations, they may overlook the importance of the data that drives the supply chain. Within the data, however, lies the answers to many questions that practitioners typically rely on the IT department to answer:

– What’s the status of the purchase order, invoice or payment?
– Was there a cancellation or change request for the original order?
– Do we have the inventory to fulfill the request by the date promised?
– Can we give customers and trading partners the flexibility to choose how they want to connect with us, receive information or manage shipments?

IBM solutions can provide enterprises end-to-end visibility into their supply chain and access to actionable, personalized insights.

IBM Sterling enables a two-pronged approach to digital transformation that drives optimal customer outcomes to help clients achieve long-term success.

IBM Sterling B2B Collaboration
Improve data flow across B2B relationships by automating manual processes and ensuring critical transactions and data exchanges are reliable, secure and scalable.

IBM Sterling Supply Chain
Get end-to-end supply chain visibility, real-time insights and recommended actions to turn disruptions into opportunities for customer engagement, growth and profit.
**IBM Sterling solutions**

**IBM Sterling B2B Collaboration**

With IBM Sterling, you can help clients implement best-in-class solutions that deliver tighter integration between the people, systems and data needed to connect and collaborate throughout the supply chain.

Many organizations face increasing regulations, missed service level agreements (SLAs), lengthy onboarding processes and rising costs of maintaining disparate systems and manual processes. As an IBM Business Partner, you can reinvent the way organizations connect and collaborate.

These IBM solutions are built on security-rich technology that enables IT professionals to:

- Establish a scalable, secure and always-on B2B information exchange
- Drive down costs and complexity of maintaining B2B connections
- Automate onboarding and relationship management with trading partners, suppliers and customers
- Strengthen regulatory compliance by safeguarding data and files at rest and in transit
- Proactively mitigate risk through end-to-end visibility and governance

IBM Business Partners can lead this market by providing complementary solutions and embedded platforms. In addition, the migration, integration and mapping services that IBM Business Partners offer help enable a frictionless supply chain.

**IBM Sterling Supply Chain**

IBM is focused on delivering solutions that improve supply chain visibility and accelerate the digital transformation to give customers a competitive advantage.

Supply chain professionals are experiencing overwhelming change, driven by increasing customer demands and shifts in the external market. In fact, 61 percent of organizations want to improve their supply chain visibility. Addressing this challenge is an exercise in overcoming seen and unseen obstacles, from delivery delays and quality defects to weather conditions, market instability and even political unrest.

IBM Sterling is designed with disruption in mind. It is built to streamline collaboration and deliver deep search and visibility through the use of structured and unstructured data. AI taps into vast amounts of data nearly instantaneously, interprets it and provides recommendations that empower business users to make faster and more informed decisions.

A smarter supply chain gives clients real-time upstream and downstream visibility to capitalize on every market opportunity. Modern systems enable order monitoring based on promise dates. Clients gain the ability to find the lowest cost by using optimized sourcing. An intelligent, self-correcting supply chain provides unmatched fulfillment flexibility to meet the ever-changing demands of both B2B and B2C customers.
IBM Sterling solutions
IBM Sterling Supply Chain

IBM Sterling Order Management is the only solution that makes it possible to achieve truly cost-effective omnichannel order fulfillment. IBM order management solutions make the most profitable sourcing decision for every order. IBM provides solutions that combine multi-channel order aggregation, inventory and delivery visibility, and service availability within a single platform.

As an IBM Business Partner, you can help your clients transform the supply chain lifecycle from the initial customer touchpoint through delivery. IBM’s advanced technology helps clients gain deeper, trusted visibility into their end-to-end supply chain so that they can confidently act to mitigate disruptions, minimize business risk and capitalize on market opportunities.

IBM Sterling Supply Chain solutions bring key future-proof differentiators that stand out in the market:

01
Inventory management applications help clients understand what inventory is available and where it is, optimize to demand and support accurate available-to-promise in real time, at virtually any time.

02
Supply management applications streamline connectivity and collaboration with suppliers and provide comprehensive visibility to help clients proactively manage compliance as well as predict, prioritize and mitigate disruptions and risks and make better decisions faster.

03
Order fulfillment applications automate changes to sourcing in real time so clients can tailor fulfillment processes to more profitably address customers’ expectations.

“For IBM, supply disruptions, exacerbated by dark data, created an urgency for a solution that could bring greater visibility and orchestration. We wanted to better understand and meet the supply-demand balance, as well as bring people together with the intelligence and capabilities to respond to disruptions and events quickly.”

Ron Castro,
Chief Supply Chain Officer, IBM
