

Deliver new value from your Linux applications

The new IBM Power Systems LC line is designed to deliver superior performance for big data, analytics and high value Linux workloads running in cloud and cluster deployments.

IBM's continuous dedication to open source collaboration provides leadership solutions that address real business needs. With this unique platform ecosystem, you can not only choose the best infrastructure for your workloads, but also benefit from the consistent performance of your Linux operating environment.

Now available online

These new offerings can be purchased and consumed in new ways, but still deliver the strengths of Power Systems.

Compare and buy the S812LC and the S822LC online – giving you a great place to access POWER8. Each server arrives ready to go with the option to purchase Linux OS support and hypervisors.
