

Accelerated Architecture Plan

Workshop

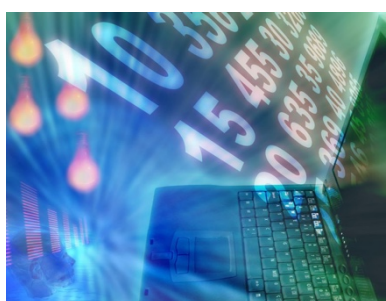

As you define a company-wide vision and strategy for empowering a highly efficient workforce, including ongoing evaluation of the latest available productivity-enhancing and communication tools, you must also look at the technology architecture and policy framework that will ensure a secure, reliable and scalable solution.

Leverage IBM expert guidance to develop and implement a secure, reliable and scalable solution architecture for your Connections deployment.

Improve time to Value

The right solution architecture and deployment will ensure reliable performance and avoid infrastructure and software environment issues slowing down your implementation

Secure your environment

Align architecture with corporate IT policies and security controls. Leverage the security features Connections offers fully to secure your enterprise social data and environment.

Improve ROI

Get better ROI from your IT investments – use an architecture that optimizes and reuses components, is performance optimized and provides future scalability.

In the Accelerated Connections Architecture Workshop offering, IBM conducts a series of working sessions with IT staff and key stakeholders and develop a Connections solution architecture. After the working sessions, IBM presents the jointly developed results as an Architecture Overview work product. This short and simple architecture workshop format allows our customers to leverage IBM architecture and design expertise to develop a sound and secure architecture design for their Connections environment.
