

IBM Security ReaQta for MSSPs

Security as a growth strategy

Introduction to IBM Security ReaQta for MSSPs

Designed for managed security service providers (MSSPs) to effortlessly manage and secure more of their customers' endpoints, this industry-acclaimed endpoint security platform is built with powerful, complete endpoint detection and response (EDR) capabilities for streamlined management.

The ReaQta platform simplifies threat handling and management for MSSPs while equipping them with powerful threat hunting and automation capabilities. MSSPs benefit from continuous monitoring and incident response to post-breach analysis, all with a single platform.

Using AI and machine learning, ReaQta combines exceptional levels of automation and intuitive design to autonomously detect and remediate threats—known or unknown—in near real-time.

Through deep learning, the platform constantly gets better at defining normal behavior tailored to each unique business on each endpoint, blocking any anomalous behavior. As a result, MSSPs experience security without complexity and benefit from knowing their customers' valuable data and assets are safely protected against the most advanced threats.

Key benefits for MSSPs

Increase productivity

The ReaQta platform's exceptional levels of AI and machine learning autonomously detect and remediate even the most sophisticated threats in near real-time, freeing staff from manual analyses.

Improve efficiency

ReaQta reduces MSSP alert fatigue by delivering real-time, condensed high-fidelity alerts that provide direct visibility and deep insight into processes. This facilitates swift action to stop threats quickly and effectively.

Reduce costs

The platform simplifies operations for MSSPs with a user-friendly, intuitive interface and automated processes. No additional highly skilled staff or headcount is needed.

3 reasons why MSSPs are switching to ReaQta

1. World-class technology

We are reinventing EDR. ReaQta is fully automated and runs autonomously to detect and remediate the most advanced threats. Our unique use of AI and machine learning, in combination with our proprietary NanoOS technology, is designed to be invisible to attackers and malware, and not tampered with, shut down or replaced.

With NanoOS technology, MSSPs gain complete visibility into processes and applications running on their customers' endpoints. NanoOS sits at the hypervisor layer and protects the endpoint from outside the operating system.

2. Best-in-industry support

We believe in putting our customers first. No more waiting in customer support queues and speaking to myriad different people to get your questions answered. Get direct access to friendly and dedicated expert support staff who are trained and empowered to solve your questions from start to finish.

3. Superior ROI

Manage and secure more endpoints. Increase team efficiency and boost productivity with our highly condensed, high-fidelity alerts that give MSSPs direct visibility over all endpoint and threat activity. Reduce costs with our intuitive UI—no additional headcount or highly skilled staff required.

Designed for easy operation and simple management

Easier to operate

- Benefit from the ReaQta platform’s high level of automation. Contain any situation in seconds with complete remediation guidance and clickthrough response automations that provide analysts with a single, easy-to-use workflow.
- The platform’s intuitive design, coupled with condensed high-fidelity alerts, reduces the skill level required to respond to threats.
- Experience threat hunting made easy. The ReaQta platform’s one-click detection strategies can be efficiently deployed across the whole customer base.
- The Cyber Assistant learns from analyst actions, reducing the burden of repetitive work and freeing time for higher-level analyses and threat hunting.
- MSSPs can easily connect ReaQta to other components of their solution stack using a flexible application programming interface (API).

Simple to manage

- MSSP-friendly and multi-tenanted, the ReaQta platform lets you manage existing and new customers with just a few clicks.
- The platform’s powerful reporting feature enables MSSPs to report management and technical information in a fast and compliant way for individual customers, or overall.
- Flexible deployment options help MSSPs adhere to customers’ data policies.

Statement of Good Security Practices: IT system security involves protecting systems and information through prevention, detection and response to improper access from within and outside your enterprise. Improper access can result in information being altered, destroyed, misappropriated or misused or can result in damage to or misuse of your systems, including for use in attacks on others. No IT system or product should be considered completely secure and no single product, service or security measure can be completely effective in preventing improper use or access. IBM systems, products and services are designed to be part of a lawful, comprehensive security approach, which will necessarily involve additional operational procedures, and may require other systems, products or services to be most effective. IBM DOES NOT WARRANT THAT ANY SYSTEMS, PRODUCTS OR SERVICES ARE IMMUNE FROM, OR WILL MAKE YOUR ENTERPRISE IMMUNE FROM, THE MALICIOUS OR ILLEGAL CONDUCT OF ANY PARTY.
