

# Simplify management with zCX

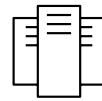

## Running IBM Service Management Unite on zCX

Reduce installation time and effort

Use a browser-based interface for z/OS® management

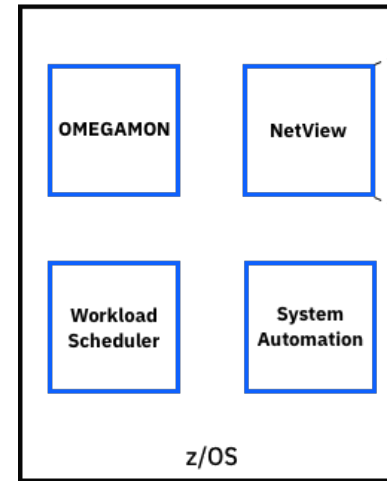

Linux® environment is not needed

You can now deploy Service Management Unite in IBM z/OS Container Extensions. Service Management Unite is a customizable dashboard to interact with IT service management products like OMEGAMON® and IBM Z® NetView®.

Deploying Service Management Unite in zCX doesn't require a separate Linux server and can simplify system relocation or disaster recovery planning.

Without zCX
