Show your employees only the information they need—and nothing more

Help protect sensitive data with role-based redaction

Safeguarding sensitive data and the interests of customers, citizens and patients is critical. Unauthorized access to intellectual property, personally identifiable information (PII) or protected health information (PHI) could be disastrous for your organization.

Documents can be redacted automatically, blocking out information based on the role of the requestor and according to your specifications. You can protect private data while enabling users to access the information they need for their jobs.

Direct who sees what with role-based redaction from IBM® Enterprise Content Management

Manage risks:

- Help prepare for your compliance requirements, such as the General Data Protection Regulation (GDPR), by limiting information visibility.

Speed response time:

- Facilitate immediate access to the right information for authorized individuals only.

Streamline security:

- Simplify information protection processing with automated redaction.

Reduce costs:

- Help control storage and document management costs by keeping only the original document of record.
