IBM Product Cooling and Thermal Analysis services

Leading the industry in electronic product cooling technology

The product cooling and thermal analysis services team provides clients with innovative solutions such as high performance air moving devices, low temperature refrigeration, heat pipes, high conductivity materials, and many other advanced approaches and techniques that help optimize a product's thermal operating environment. Our highly skilled staff provides resilient cooling solutions that are key components in the high reliability and availability of our own server products and can also work for your product cooling requirements. The team also provides heat transfer analysis, design guidance, and testing services.
