IBM Cloud | SaaS

Accelerate Business Operations with Cloud

IBM

Highlights:

- Global competition requires true enterprise-wide collaboration among colleagues, customers and partners

- IBM Software-as-a-Service solutions for business operations accelerate innovation and deliver secure, always up-to-date collaborative solutions

- IBM offers best-in-class SaaS solutions to help organizations focus on business goals rather than IT deployment

In a global 24x7x365 economy, organizations need to seek every possible advantage to remain competitive. Those companies that are ill-equipped to collaborate across their enterprise and ecosystems are not maximizing their collective power; innovation thrives in a collaborative environment, while silos limit the potential impact of new ideas.

Businesses need to securely collaborate with colleagues, customers, and trading partners in a more fluid way, enabling them to more quickly achieve business objectives. A critical component is having secure global access to projects and files inside and outside the firewall; being able to share information in real-time can mean faster response to opportunities.

While technology plays a vital role in supporting business operations and enterprise collaboration, lengthy IT deployments are unacceptable when business innovation is at stake.

The Power to Innovate

IBM Cloud solutions for Business Operations accelerate innovation, deliver the power of secure and always up-to-date collaborative solutions on demand, and offset significant capital expenses with subscription-based operating expenditures. Now, establishing and managing your internal and external communities while providing simpler, more security-rich document exchange is as simple as tapping into the IBM Cloud, where solutions are readily available to help deliver business process innovation, insight and business results.

IBM Cloud solutions for Business Operations can more quickly enable organizations to be:
- More agile: collaborate more effectively, capture knowledge, share ideas and work across boundaries
- More responsive: develop highly reliable connection between you and your B2B partners
- More effective: collaborate more fluidly and, driving smarter decisions through in-context insights
- More profitable: reduce infrastructure costs and scale quickly to meet changing demand
