

Customers love IBM Cloud Bare Metal Servers' fast provisioning, flexible configuration, and value for the price.

Fast provisioning is a common theme highlighted by IBM Cloud Bare Metal Servers customers on TrustRadius.

IBM Cloud Bare Metal Servers customers on TrustRadius highlight **flexible and easy configuration** as one of the product's top four pros.

High overall value for the cost is a common return on investment (ROI) theme highlighted by IBM Cloud Bare Metal Servers on TrustRadius.

Users explain why they chose IBM Cloud Bare Metal Servers over other Infrastructure-as-a-Service (IaaS) solutions:

"With IBM Cloud Bare Metal Servers we have a lot more options on data center locations, fantastic network routing between data centers and any server capacity I would need. With regards to Azure, AWS, etc., those models just don't work for our projects, too many restrictions on networking and other details. IBM Cloud Bare Metal Servers are just easier."

— **Gustavo Villarreal, CEO** | Information Technology & Services | 51-200 employees

"IBM Bare Metal Servers are super configurable. It's very easy to tailor them to your needs. For our company, we choose IBM Bare Metal Servers because they support GPU servers, unlike the competition. On the other hand, GCP and AWS are expensive and have rigidly defined bare metal configurations."

— **Venkat Charan, Co-Founder**
Computer Games Company | 1-10 employees

Compared to Amazon EC2 Auto Scaling:

"IBM servers are just as fast
and are half the price."

— **John Rivers, Owner | IT Consultant**
Computer & Network Security | 1-10 employees
