

GET MORE WITH FLASH

Why you should consider IBM® Flash

Our competition cannot deliver on these key

7 value differentiators

1. Engineered for performance

IBM FlashCore technology helps deliver lower latency than other SSD based All Flash Arrays. It is based on a patented hardware FPGA designed to cut latency out to access the Flash chip.

2. Affordable at scale

By exclusively using Real Time data reduction, IBM FlashSystem delivers the Flash technology benefits at scale immediately, transparently and affordably.

3. Mainframe grade Availability and integrity

IBM FlashSystem is capable of hosting all types of applications including critical business applications where 100% uptime and zero data loss is required. For that, it satisfies local, metro HA for the most stringent requirements - Out-of-the-box.

4. Designed for operation ease and flexibility

IBM FlashSystem can integrate into any existing storage environment, leveraging proven external virtualisation technology. Virtualisation is at the core of the IBM FlashSystem capability with new releases every 2 years.

5. Optimised for Hybrid Cloud

IBM FlashSystem was born Software Defined Storage. It runs anywhere regardless of location and also on all tiers of Flash, from flashcore to SSD.

6. Analytics based monitoring

IBM Flashsystem monitors the array leveraging analytics as well as the network and the host to make sure every component along the way is optimised to deliver the best performance and service possible.

7. Application and server aware

IBM Flashsystem monitors the array leveraging analytics as well as the network and the host to make sure every component along the way is optimised to deliver the best performance and service possible.
