

IBM XIV[®] is for cloud

Benefits of using cloud

80% of enterprise IT organizations will commit to hybrid cloud architectures by 2017¹

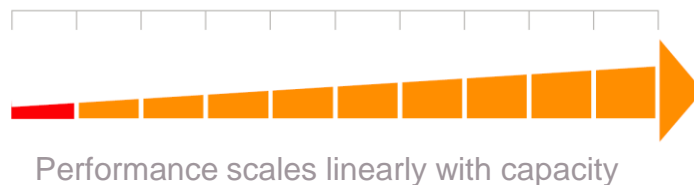

85% of leading organizations are reducing costs with hybrid cloud²

9 in 10 leading organizations say hybrid cloud gives them greater ROI than either an all-traditional or all-cloud environment²

Predictable SLAs

Predictable performance for any workload anytime

Breakthrough scaling with IBM Hyper-Scale: manage over 144 arrays, balance workloads across arrays, and scale data protection in the cloud

Game-changing simplicity and scalability

Connect and forget through self-tuning, and optimal, automatic load balancing at all times. Ideal for cloud scale

Grid architecture that ensures no hot spots and best performance under all conditions, with zero tuning

Self-healing capabilities with record rebuild time

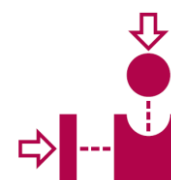

Optimized cloud deployment and automation

OpenStack enabled with Cinder and Nova volume support

XIV RESTful API for maximum flexibility in automating your custom storage operation

Excellent VMware integration, including single-pane deployment for VMware admins from IBM Storage Integration Server
