

Mind the utilities cybersecurity gap

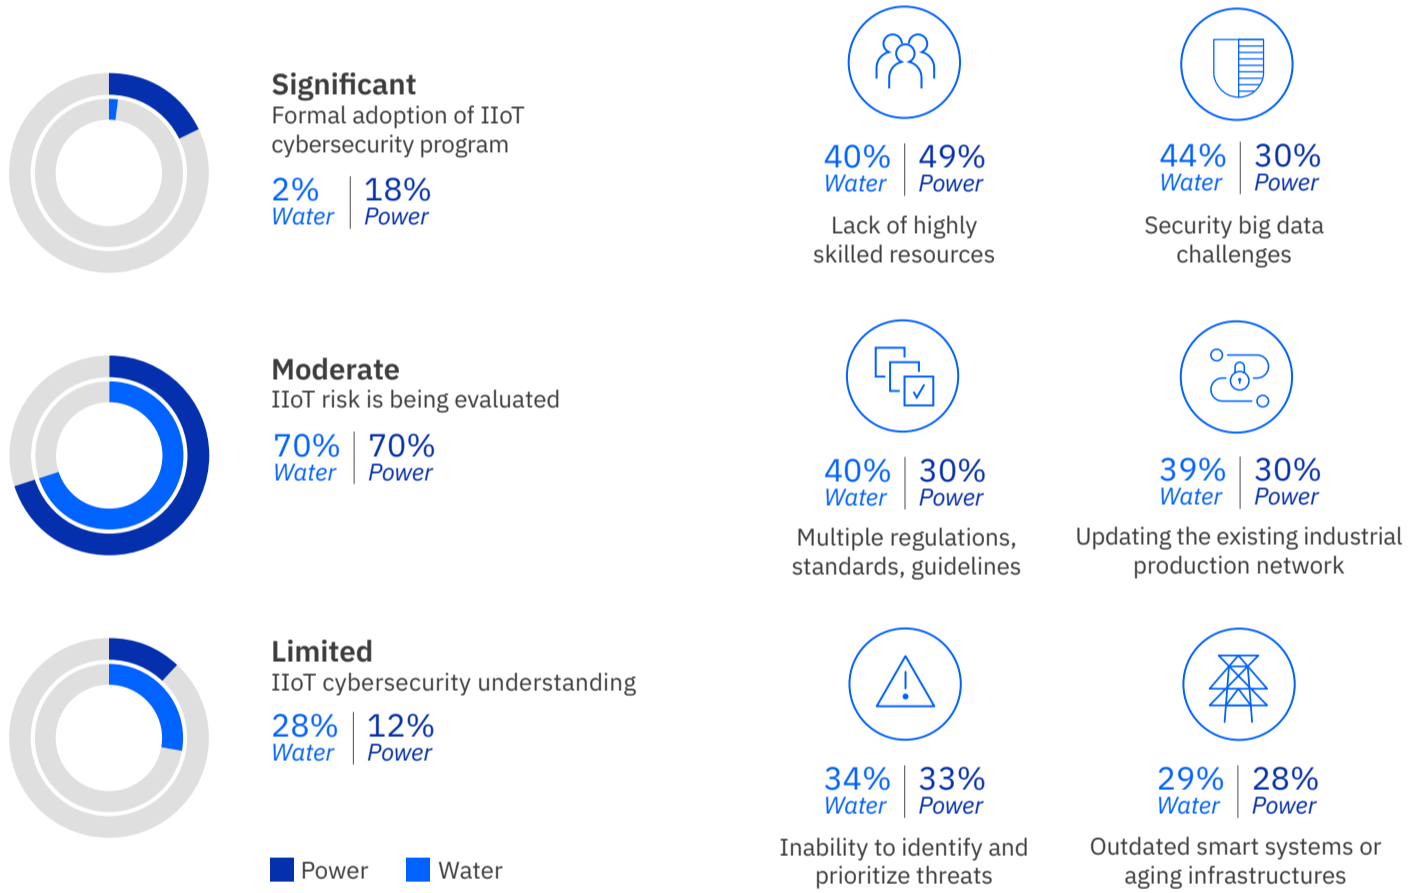

Move from pieced together to peace of mind

Utilities are early and extensive adopters of IIoT technologies and are clearly aware of the cybersecurity risks this brings.

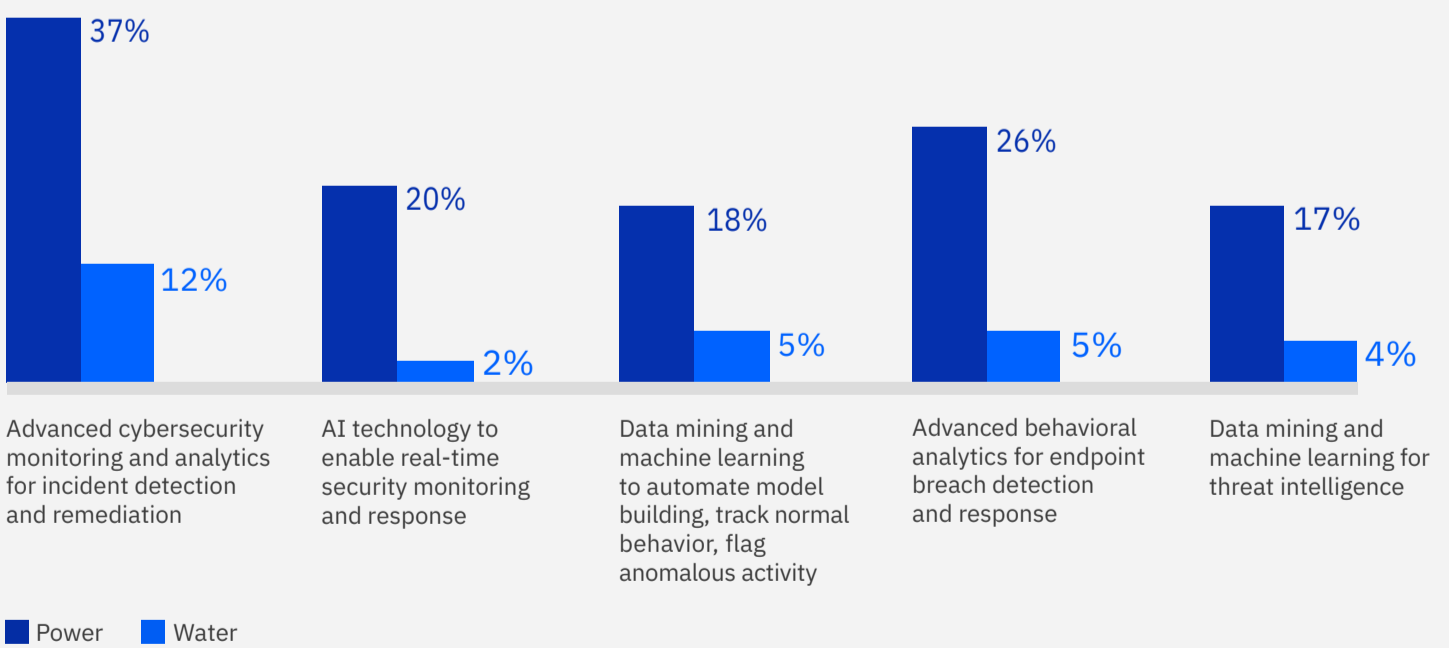

But they don't fully understand the cybersecurity requirements necessary to protect their networks and systems from those risks.

Comprehensive cybersecurity for IIoT remains a challenge.

Utility companies should institute and enhance IIoT cyber hygiene by building a strong cybersecurity foundation—and then leveraging AI and automation for more advanced capabilities.

Do you know how to overcome your IIoT cybersecurity challenges to ensure continuous operations and service delivery?
