IBM Security

IBM Security Framing & Discovery Workshop

$4.35M

Is the average cost of a data breach – an all-time high, up 13% over the last 2 years[1].

—

Accelerate your security posture while protecting your investments

The Security Framing & Discovery Workshop provides a collaborative review of your security program including a holistic analysis of people, processes, and technology **to align stakeholders**, **understand your current security landscape**, and **prioritize key initiatives to mitigate risk.**

[1] Cost of a Data Breach Report, 2022

Format: 3-hour interactive design thinking session, virtual or in-person, facilitated by senior IBM security architects & consultants.

Focus: Workshop agenda is customized to align to your priorities: ransomware, cloud, zero trust, data protection, identity, threat management, and more.

Participants: Includes 5-7 participants such as security leaders, security and enterprise architects, security analysts, and other IT representatives from the data, application, and operational areas of your organization.

Deliverables: One week after the session, IBM will provide a customized, client-confidential report that highlights the top business priorities, critical capabilities, areas of opportunity, and identify next steps to increase maturity and mitigate risk.

This no-cost session is a joint investment as part of IBM's partnership with your organization.
