

UBA 3-day quick start

With a proven track record of success, our team of experts has perfected the process of quickly and seamlessly deploying UBA (User behavior analytics) for your organization

Whether is a simple setup, guidance on standard use-cases or transforming a number of use-cases into UBA, our team of experts is here to take you all the way through.

Top deployment concerns:

Installing UBA can be overwhelming as security analysts try to map the main installation pre-requisites for a successful and quick deployment.

- **Pre-requisites** necessary to install a **fully-functional** UBA application on top of QRadar.
- **Configuration** steps of each **piece** that will make a successful UBA installation.
- **Understanding** of standard **use-cases and thresholds** that need to be tweaked for a successful deployment.
- Not enough **knowledge** about how to best apply **security analytics** to business.

Innovative Solutions:

-  Capturing **voice of the customer** feedback, through expertly guided workshops, understanding concerns (determining what really matters) is a cornerstone for success.
-  Informed decision making during **solution selection**, i.e. assess deployment options, identifying solution design accelerators, and solidifying associated timelines.
-  Expert advisor will **greatly reduce risk** of loosing existing customization investments, as well as offset resource demands while in transition; and identify components you may be missing out on.
-  Well defined milestones and deliverables, along with training, documentation and knowledge transfer; greatly accelerating **Time to Value (TTV)**.

Positioned for Success

A scalable services delivery methodology, through a blend of Six Sigma and Agile frameworks; taking an iterative approach; incorporating an on-going customer feedback loop into each phase gate. As a result, adaptive adjustments are made when and where required, for total quality management.

The blended approach also provides structured oversight for an accelerated workflow, i.e. well defined roles and responsibilities, with clear and measurable milestones and deliverables.

ASSESS

- Define pre-requisites
- Map necessary configuration
- Assess QRadar
- Understand user base

PLAN

- Validate necessary configuration
- Define thresholds
- Define primary use-cases to be applied
- Define unified user-model

EXECUTE

- UBA Installation;
- LDAP reference-data import configuration;
- Unified user-model mapping;
- Threshold adjustment;
- Enable up to 5 use-cases

What to Expect:

Leveraging years of experience, across **varied** industry segments and geographic regions, our UBA readiness program is time-tested: eliminating guesswork, simplifying complexity, and ultimately, achieving the highest levels of success and satisfaction.

- Take your SIEM deployment to the next level
- Implement meaningful and relevant use cases
- Increased security intelligence visibility
- Enhanced integrations and customized content
- Roadmap for today, tomorrow, and beyond
