

## Install the beta Connector:

Be part of the vanguard developing blockchain applications and using the beta Connector to integrate your apps with Salesforce. But please be aware that the beta Connector has only email support during the beta period.

1. Open Salesforce.
2. Select the Install button > **INSTALL**
3. Provide your Salesforce credentials in the pop-up window and select **Install**.
4. The tab installs within Salesforce. If you want IBM Blockchain as the first tab within the repository, drag it to the front.
5. You will receive an email from Salesforce when the IBM Blockchain Platform for Salesforce Connector tab has installed.
6. Open Salesforce, locate the IBM Blockchain Platform tab.
7. Enter your IBM Blockchain Platform credentials within the pop-up window. If you don't already have an IBM Blockchain Platform membership, you will be prompted to join.
8. Click **Verify** to connect the Connector to your IBM Blockchain Platform account.
9. You are now ready to start connecting your blockchain apps built using IBM Blockchain Platform to Salesforce.
10. To connect your first app, click the **Add blockchain app** button on the IBM Blockchain Platform tab within Salesforce.
11. Specify the app within your IBM Blockchain Platform account that you want to connect. Click **Connect** to import the new app into your Salesforce IBM Blockchain Platform page.
12. You should now be able to access your blockchain app via the tab within Salesforce.
13. Questions on the beta version of the Connector? Email your questions to [ibpchelp@us.ibm.com](mailto:ibpchelp@us.ibm.com).
