

Friday 15

Top 3 things you need to know about Workday 32

Time Zones (GBLZN-454)

- Improves how time zones are assessed for users not on PST, and removes delays of certain transactions
- With this feature enabled, Workday now bases effective dating in transactions on your local time zone
- Prior to this enhancement, when a staffing transaction took place for a worker in a non-PST time zone, the Workday UI did not reflect the appropriate data based on the effective date in the local time zone
- This feature is opt-in via “Maintain Feature Opt-In”. If you do nothing, there will be no change.
- Once you opt-in to this feature you can’t opt out
- The plan is to automatically enable this feature for everyone with Workday 33. Opting in now will allow you to test in advance.

Worker Document Security (HRINFRA-3751)

- Worker document security enhancements separate the security that defines users’ abilities to add or remove worker documents in Workday
- Additionally, Workday delivers a new web service to delete worker documents
- More information can be found [here](#) →

Preview Asset Depreciation Schedules

- Ability to preview the depreciation schedule for an asset before you register it, allowing you to see the impact for each fiscal period.
- Perform a what-if analysis and understand the depreciation impact of registering a proposed asset
- Ability to scale and support future depreciation functionality, such as new depreciation methods and conventions that meet additional global accounting requirements
- More information can be found [here](#) →
