

Dynamic Web Form Apps in Minutes

Are you looking for ways to quickly create customer engagement apps that will help you be more agile and responsive to market trends? Do you need to use modern web languages that make it easy to leverage existing skills and incorporate the latest cool tools? Would it help if it was easy for business users to create compelling applications, that would work on any device, without having to involve IT?

IBM Forms Experience Builder on Cloud is an agile and flexible solution, where business users can create data collection web applications by using an intuitive, drag-and-drop interface.

Drag and drop widget onto the page

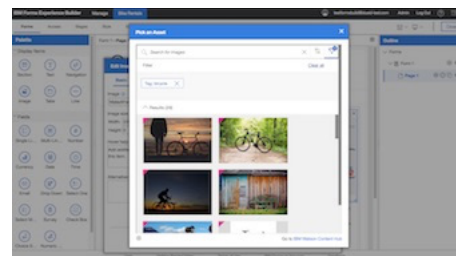

Features available in this offering include:

Mobile Friendly	Highly Extendable	User Friendly	Simple Workflow	Flexible Integration
Build applications that respond and adapt to mobile devices	Add custom functions and behaviors with common web development skills	Create web applications with little or no training	Speed approval processes with flexible, role-based workflow and access control	Integrate information from other applications and APIs using services

Easily create and deploy customer engagement apps in minutes

With **Forms Experience Builder on Cloud**, solutions are agile and easily changed to accommodate changing business requirements.

Select assets from IBM Watson Content Hub

Secure Cloud Deployment

Data is encrypted at rest and in transit and secured through IBM ID

Highly Available

Includes a dedicated, high-availability database with up to 500 GB of storage and service level agreement

Enterprise Directory Federation

Lets your users log in with their existing organization credentials

Control Over Preferences, Properties and Users

Define who can design and use applications as well as set preferences and security properties

Catalog for Interacting with your Services

Set up definitions in the service catalog which can be used by designers to map into their applications

APIs for Accessing the Data you Collect

API keys let you control developer access to the data you collect.
