

Why IBM TS4500 for z Systems?

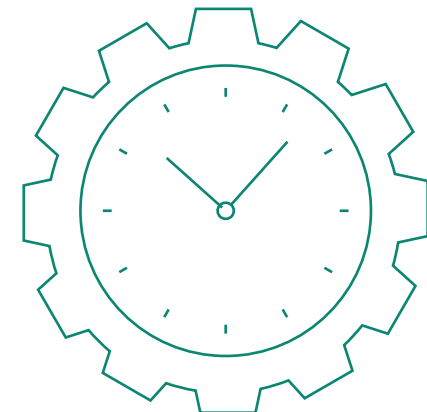

Forward-thinking organizations exploit next generation technologies to build greater business value, reduce cost and create competitive advantage.

z Systems infrastructures can now take advantage of the **TS4500**, the next generation enterprise tape library.

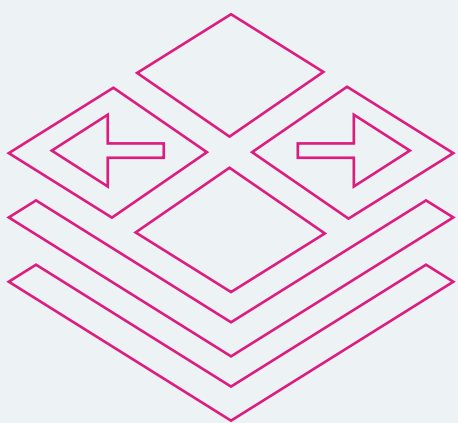

Reduce cost of floor space and energy consumption

- **3.3** times slot density of TS3500 to reduce floor space costs by up to **60%**¹
- Up to **30 PBs** in **10 sq ft**²

Reduce operator training and management time

- **34%** fewer screens to navigate with new simplified GUI
- New **control system integrates** built-in and external tools

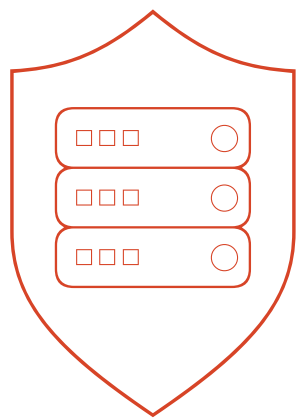

Improve data center space utilization

- Scale out to the left or right
- **25%** reduction in floor space with integrated service bays
- 10U “**top rack**” space above frames for switches, flash, etc
- Support both mainframe and distributed systems connectivity

Increase overall capacity to meet growing data requirements

- 2 times more capacity in a drive frame than TS3500
- Up to **18 frames**, up to **128 drives**
- Support **up to 8** TS7700s in only 8 frames

Utilize standard IBM enterprise library features to protect business critical data

- Transparent media verification
- High availability dual active accessors
- Broadband call home
- **Encryption, WORM support**
