YADRO EC13														
<i>In this exhibit, Machine type YADRO EC13 is described with a model nomenclature of SYSBASZ13Nxx where N represents the capacity setting (4 is smallest, 7 is largest) and xx represents the number of general purpose central processors (CPs). For machines above 99 CPs, xx is an alphanumeric code: A0 = 100, A1 = 101, A2=102... B0 = 110, C0 = 120, D0 = 130, E0 = 140.</i>

(A) YADRO EC13c models qualify for AWLC pricing when participating in an AWLC Sysplex and all other AWLC terms and conditions are met.
 (S) Models qualify for offering when participating in a Sysplex and all other offering and Sysplex conditions are met.

In the Machine column, the letter "x" means any alphabetic or numeric character. "@" means any alphabetic or numeric character other than "x".
 Millions of Service Units per Hour (MSU) describes machine capacity
 Advanced Workload License Charges (AWLC), Advanced Entry Workload License Charges (AEWLC), Midrange Workload License Charges (MWLC) and System z New Application License Charges (zNALC) are capacity-based pricing models based on the capacity of a machine, stated in MSUs.
 MWLC does not support aggregation. MWLC applies only to z/VSE V4 and later versions, and select key middleware programs.
 AEWLC does not support aggregation.
 zNALC applies only to the z/OS operating system and is only available when a Qualified Workload is present, and all other terms are met.
 zSeries Entry License Charge (zELC) is a model based pricing option limited to those machines that have been approved for one of the zELC categories.
 Tiered Entry Workload License Charges price structure (TWLC) is associated with the AEWLC pricing metric, for eligible products. TWLC pricing is a capacity-based pricing model and eligible machines are classified into tiers, according to the table shown below:

Tier A, 1-11 MSUs	Tier B, 12 - 15 MSUs	Tier C, 16 - 40 MSUs
Tier D, 41-75 MSUs	Tier E, 76-1500 MSUs	Tier F, 1501+ MSUs

 In the case that AEWLC/TWLC/zELC is not available for a software product on a YADRO, then the product should be priced according to Graduated Monthly License Charges (GMLC) BASIC. The other variations of GMLC pricing (MOSP, DSLO, MOSP/DSLO) are not available on this machine type.
 Parallel Sysplex License Charge (PSLC) is a capacity based pricing model based on the capacity of a machine as stated in MSUs. Standalone PSLC pricing is available for all machines designated as "PSLC=Yes". Aggregated PSLC pricing is only available for machines in a qualified parallel sysplex and designated as PSLC=Yes or PSLC=Agg.
 Coupling Facility (CF): To qualify for aggregated PSLC, zNALC or AWLC pricing two or more machines must be actively coupled using an approved Coupling Facility.
 Group charging or graduated charging is a capacity based pricing model where the charges are based on the group the machine is classified. This pricing model has been withdrawn for new MVS, OS/390 and z/OS products.
 Software licensed under the IBM Program License Agreement (IPLA) has an up-front license fee and an ongoing (optional) maintenance fee.
 CPU Mach, Model: Original administrative convention to represent Non-IBM vendor machines for software designation.
