

IBM z/OS V2.5

IBM z/OS®, Version 2 Release 5, was announced on July 27, 2021 and is planned to be made generally available on September 30, 2021. This new release enables innovative development to support hybrid cloud and AI business applications. This is accomplished by enabling next-generation systems operators and developers to have easy access and a simplified experience with IBM z/OS, all while relying on the most optimal usage of computing power and resources of IBM Z® servers for scale, security, and business continuity.

With a continuous delivery model, [new z/OS capabilities](#) are available each quarter with no impact to stability, complexity, or costs.

Below is a list of all **z/OS V2.5** release and continuous delivery announcements:
