## Launches company

with startup funding and support from the IBM Global Entrepreneur Program

## Supports business plan

that projects significant revenue growth and expansion throughout Europe and the United States

## Solution component Services

- SoftLayer®

**Business challenge:** Startup business Deliver.ee sought a scalable, cost-effective cloud hosting platform for the applications supporting its online delivery service. Anticipating rapid business growth, the company wanted to team with a cloud provider offering data center presence worldwide.

**Solution:** Deliver.ee provisioned virtual servers in the SoftLayer Paris data center, quickly and easily migrating workloads from its DigitalOcean environment. With the powerful infrastructure, the business supports a platform that calculates optimized routes for its fleet of 500 delivery employees. Deliver.ee anticipates deploying additional cloud resources, including bare metal servers, in SoftLayer facilities worldwide as its business grows.
