With a growing number of remote workers, cybercriminals have even more open doors. Compounding the problem is the shortage of in-house security staff to protect against these advanced attacks.

IBM Security ReaQta Essential MDR Service is for mid-sized organizations who are looking to benefit from a SaaS based, AI-powered, managed endpoint detection and response solution. This service includes 24/7/365 monitoring with additional options to extend your protection and recovery through our extensive catalogue (Advisory, Systems Integration, Managed Security Services) further reducing the risk of downtime.

Essential MDR delivers:

- Machine learning alert dispositioning to automatically close false positives.
- Critical alerts handled by an analyst and enriched with an AI recommendation or response.
- Notifications for critical alerts with a recommendation or response through the ReaQta console.
- Uniform policy management to ensure consistent rulesets and response to the latest threat sets.
- Reduced downtime because of response and recommendation actions that are included.
