

5 ways IBM can help you simplify your hybrid cloud environment

IBM Global Technology Services delivers visibility and control in hybrid cloud design and management

1 Manage everything in one place

- **Get everyone—and everything on the same page** with a single point of management for both public and private cloud solutions.
- **Take advantage of a one-stop ITaaS solution** that lets you source, provision and manage your hybrid cloud solution.

2 Reduce complexity

- **Manage billing across regions and providers**, handling chargebacks among departments and divisions.
- **See a clear visual layout of what's happening** across regions—and add additional services if and when you need them.

3 Simplify your processes

- **Create solution blueprints** that make it easy to offer pre-approved solutions you can re-deploy across your organization, eliminating unnecessary duplication.
- **Design the solutions that meet your specific needs** with an easy-to-use interface that lets you choose the features and function you want.

4 Keep track of what's going on

- **Gain greater visibility into billing** with detailed reporting on actual vs. estimated costs and output—for fewer surprises at the end of the month.
- **Spot potential issues**—such as unused VMs and budget overruns—before they become problems.

5 Get the solutions you really need

- **Sponsor innovation** by working with IBM experts to supplement your existing resources and begin realizing hybrid cloud benefits now.
- **Accelerate your move to hybrid cloud** by working with IBM GTS Consulting Services to map a transformation model for your enterprise.
