

# Break through roadblocks with smarter supply chains

In a volatile market, you need the right tools on your side to efficiently manage your supply chain. Are you facing these common obstacles?

## Take back your time

You weren't hired to be a data historian or spreadsheet manager. Your skills should be put towards value-added activities like analysis.

- **60-70%** of finance and operations teams' time is spent on data collection and validation.

## Visibility depends on good data

You can't see (and thereby can't effectively act upon) what's really happening in your business without accurate, up-to-date, consistent data.

- **6%** of firms say they have achieved full supply chain visibility.

- **88%** of spreadsheets contain some type of error, leading to unreliable plans and conflicting versions of the truth.

## Cut out the cut-and-paste

Too much manual updating means high probability for error. You can't afford to base decisions on inaccurate numbers.

## Late data may be too late

The market changes too quickly and supply chains are too vulnerable for you to rely on out-of-date information.

- **60%** of Sales & Operations professionals say they lack timely data.

## Build confidence in your supply chain planning

Break through your roadblocks with more reliable planning analytics tools.

Ask yourself these 4 simple questions:

1. Do I have the right data to effectively manage my supply chain?
2. Am I in control of production with real-time visibility?
3. Can I map out the effect of market changes on my supply chain?
4. Can I change my demand forecast in real time?
