

# VMware Horizon on IBM Cloud

Reimagining Virtual Desktops and Apps

Today, deploying virtual desktops and applications can be a rigorous process if organisations are not using the right tools. Even within the best run IT organisations, setting up a complete virtual desktop infrastructure (VDI) environment can take several days and sometimes weeks with multiple servers/ Virtual Machines (VMs) to be installed and configured, networking policies implemented and applications and desktops managed.

The pain is not a one-time thing - ongoing management of multiple moving parts means long maintenance windows and a lot of time needs to be set aside to design and scale the environments. Almost all environments are over-provisioned, leading to higher costs.

Horizon on IBM Cloud service architecture

VMware Horizon on IBM® Cloud is a fully managed Desktop-as-a-Service solution that delivers feature-rich virtual desktops and applications. The service supports a cloud-scale architecture that makes it easy to deliver virtualised Windows desktops and applications to any device, anytime. Also, with flexible subscription model and turnkey solutions, organisations can easily get up and running and scale quickly.

Drawing on the best of mobile and the cloud, VMware Horizon on IBM Cloud provides seamless simplicity, flexibility, speed and scale with a predictable pay-as-you-grow model. This solution offers unmatched performance and security capabilities while allowing for the growth and evolution of the cloud data centre with no service degradation or bottlenecks and no compromise on security.

## Solution Benefits

VMware Horizon on IBM Cloud was built to deliver workspaces as a cloud service providing unique benefits to our clients.

### Cost & Complexity Reduced

Transforms traditional desktop and application virtualisation with a predictable cost model that lets you pay as you grow.

### Cross-cloud Architecture

Designed specifically to support cloud deployments with a fully multi-tenant cloud-scale architecture.

### Digital Workspace Experience

Makes it easier than ever for end users to securely access their digital workspaces on any device, at any time, from anywhere.

### Global Cloud Infrastructure

Quickly configure and scale computing and storage options housed in data centres around the world.

---

# Pricing

VMware Horizon on IBM Cloud is available in two subscription models:

## Per named user (NU)

For virtual environments with staff that require dedicated access to VMs throughout the day.

## Per concurrent connection (CCU)

For virtual environments with a high number of users who share machines throughout the day, such as students and shift workers.
