How are you managing separation-of-duties (SoD) violations? If SoD policies are tied directly to roles, you’ve got a problem. The most efficient identity governance platform aligns risk to business activities.

It’s time to RETHINK RISK MODELING AND SoD, unless inefficiency is your thing.

IBM takes a new, business activity-based approach to enterprise SoD

Identity governance done right offers easy administration and valuable, audit-ready insights that show instantly that you’ve made the right kind of access decisions.

With business activity-based SoD, entitlements are translated into easily understandable risk identifiers that an auditor or a compliance officer can take action on.

Unique among major vendors, IBM employs two modeling paradigms: role modeling for delivering access, and business activities for risk and SoD management.

Take the first step toward efficiency today.

Move SoD from roles to business activities with IBM Security Identity Governance and Intelligence
