

# IBM Collaboration Services for Kaltura

Video has become an effective medium to drive employee communication as well as engagement. In this time constrained world, reading and writing requires focused attention and skills from employees, whereas video makes it easier for employees to access or share information. Video is an integral part of Social networks and how people communicate. Why not enhance the video capabilities of Connections to offer a more engaging experience for employees?

**Collaboration Services for Kaltura provides secure and scalable video capabilities seamlessly integrated into IBM Connections, enabling employees to create, edit, search, publish, and watch videos directly from within IBM Connections.**

### Enhanced Social Tools

Transform communities, blogs, wikis, forums, profiles and activities into more interactive and response-provoking collaboration tools

### Engaged employees

Enable employees to upload video, capture webcams, record screens and capture mobile device content within IBM Connections

### Improved Communications

Improve internal and external communications with video

**Bring the power of enterprise video into IBM Connections to improve training, knowledge sharing and communications.**
