Five steps for your transition success:

1. **Vet a new solution.**
   - Compare your organization’s current unified endpoint management (UEM), EMM or MDM implementation to ensure they understand what's new and how to use it.
   - Mimic the most popular device, application (app) and security policies to reinvent the wheel.
   - Although this is the time to start fresh, there's no need to throw out what works. Consider a realistic transition timeframe.

2. **What was working?**
   - Why you're looking for a change.
   - Being upfront and open with your end users and tell them why you're doing this.
   - Are you searching for a cure user experience? And break down the steps they will need to take in order to transition without impacting their productivity.
   - We recommend prioritizing features that are aligned with your goals. Although aggressive for 100,000 users can set internal goals. Although aggressive for even organizations with more than even.

3. **Plan ahead this time.**
   - What can you do to make the process go smoothly? You can also explore new options around containerization, cognitive UEM solutions.
   - You have your users’ attention, and will want to retain it as you finalize your final roll-out. Ask the tough questions:
     - Is it everything you were promised?
     - Does anything about this solution irritate you?
     - What can you do to make the process go smoothly?
     - Are you searching for a new solution to deal, calendar and contacts?
     - Why were you never deployed?

4. **Go live. Now it’s official.**
   - Go live. Now it's official.
   - Plan ahead this time.
   - Make them aware of the new features and new functionality that will be available to them. Highlight how they’ll have a better, more secure experience. And break down the steps they will need to take in order to transition without impacting their productivity.

5. **Happily ever after?**
