

Elavon provides end-to-end payment processing
to **1 million+ merchants** globally

Overseeing almost
25 million
transactions a month

 = approximately 832,000 a day

But with a legacy compensation system scattered across continents built on outdated spreadsheet - and web-based systems, **Elavon** required a flexible and streamlined compensation solution to improve payment accuracy and simplify the payout process

IBM Cognos Incentive Compensation Management

Sped reporting from 2 weeks to 48 hours

Quicker results processing delivered faster, more accurate reports for better customer service

Equipped business users with visibility into data changes

To rapidly configure new partners and products and control the payment process with greater accuracy without demanding IT involvement and oversight

Increased flexibility for planning and reporting

With greater customization for calculation streams, management can define compensation plans for each segment including multi-language support for non-English markets

IBM Cognos ICM enabled automatic processing for data-driven insight **improving compensation efficiency by more than 85%** to secure Elavon's place as a market leader in payment solutions
