

BYOD Implementation Planning

Putting it all together

Highlights

- Addressing the challenges
 - Building a comprehensive plan to ensure success
 - Aligning education and IT in a BYOD environment
-

The integrated nature of the mobile enterprise requires a corresponding integration of platforms, processes and organizational decision making. This is in marked contrast to the one-off projects and disparate data and applications that have, up to now, comprised mobility initiatives for many organizations. Everyone from the Director of Education to teachers to IT managers need to embrace this new reality and work proactively to include and leverage the mobile enterprise.

Linking efforts at all levels

The purpose of the BYOD Implementation Planning engagement is to build a comprehensive plan which focuses on the components that are essential to making effective use of your BYOD program and devices, such as a strong communication and professional development plan.

Using the IBM BYOD Effectiveness Framework, IBM consultants work with districts that have completed the IBM BYOD Readiness Assessment to create an implementation plan that will guide the district with critical implementation components such as:

- Classroom management and instructional strategies for teachers that integrate the student devices to enhance and enrich the learning experience
- Standard software and digital resources to support the learner
- Comprehensive learning plans for teachers and administrators to allow them to understand, be comfortable and take advantage of a 21st century learning environment
- Equity of access provided through a combination of district and student provided devices

Why IBM?

We have the understanding and experience to help you bridge your strategy to a successful implementation and achieve your desired educational results. Our best practices from prior projects give us the insight to identify issues and build strategies for a thriving implementation.
