

## IBM i + IBM Power Systems is a winning combination for Financial Services

Widespread digital disruption is transforming the financial services industry. New technologies like artificial intelligence and mobile applications are changing the way customers interact with financial services organizations, and they expect to be treated like a person rather than a number. Users want service whenever and wherever, so downtime is not an option. Your customers also expect that their sensitive information is secure and protected, and trust in your brand is more important than ever. To support this transformation and provide customers with the best service and digital experience possible, you need an IT infrastructure that can rapidly scale up and is secure at all layers of the stack.

IBM i on IBM Power Systems has been the infrastructure of choice for financial services and banking institutions for the past 30 years, and will continue to be as they undergo transformations and projects to improve customer service and support new business initiatives. Many of these businesses are connecting their IBM i environment to the IBM Cloud and Watson to utilize artificial intelligence and building private clouds with PowerVM and PowerVC to accelerate development times.

**See below how IBM's financial services clients are transforming their businesses and supporting mission critical applications with IBM i on Power Systems.**

### Real Clients. Real Results.

#### **Svenska Handelsbanken AB**

Svenska Handelsbanken AB is a Swedish bank providing universal banking services including traditional corporate transactions, investment banking as well as consumer banking and life insurance. The company runs its primary banking systems for the US, Asia, UK, Netherlands, Germany, France and Poland on IBM i and Power Systems. Handelsbanken is currently implementing a private cloud with PowerVC to speed up development time and increase agility and flexibility.

#### **KDPW**

Krajowy Depozyt Papierow Wartosciowych (The Central Securities Depository of Poland, KDPW) is part of a vibrant group of companies that offer specialty services for the financial sector of Poland. This includes the operation of a depository of dematerialized securities, the registration of financial instruments, the clearing and settlement of transactions on several markets, intermediation in payments to security holders, and data collection and maintenance. KDPW uses IBM i on Power Systems for all its core business solutions. As a core part of the infrastructure of the financial markets in Poland, being able to provide secure and highly availability solutions for its sector is mission critical to both its business and the economy of Poland.

#### **Caixa Geral de Depositos**

Caixa Geral de Depositos is a universal bank with 48 branches throughout France. The bank created a hybrid cloud credit-scoring application that uses advanced machine learning with IBM Watson to rapidly and accurately determine each customer's credit-worthiness. The solution elements running on the IBM Cloud connect back to CGD France's core banking system which runs on IBM i and Power Systems in its private data center.
