

MaaS360 Mobile Threat Defense Professional

Enhance and manage endpoint security faster

■ Highlights

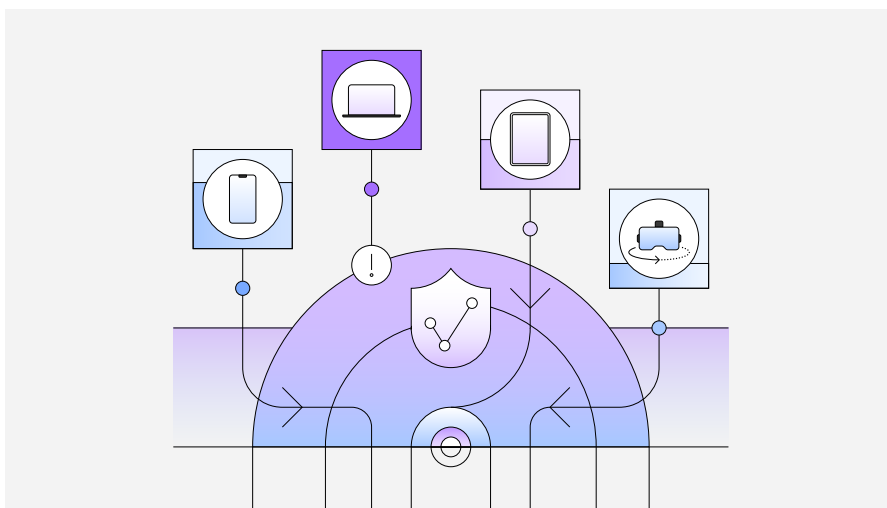

Integrate endpoint management and security to protect a hybrid workforce

Automate deployment with simple endpoint security configurations

Detect and respond to advanced and persistent mobile threats

Many organizations operate with a mobile blind spot and are unaware of the risks associated with advanced mobile threats. More remote users, along with their out-of-office behavior, can dramatically expand attack surfaces in your business. In addition, existing detection and response solutions are often complex to set up and usually sit alongside endpoint management solutions. This situation creates silos that can increase the time it takes to detect and respond to threats.

IBM® MaaS360® Mobile Threat Defense Professional supports CISOs and mobility managers to proactively identify and respond to emerging mobile threats quickly and effectively. The add-on consolidates devices, users, threats and vulnerabilities into a unified endpoint management and security platform. MaaS360 Mobile Threat Defense Professional provides device management, mobile threat defense, seamless integration with existing cybersecurity stacks, and AI-driven security insights to accelerate assessing risk and responding to threats.

Integrate endpoint management and security to protect a hybrid workforce

MaaS360 Mobile Threat Defense Professional helps organizations automate security detection, prevention and response on corporate and personally owned mobile endpoints. The solution combines an on-device, machine learning-based engine with advanced security analytics and forensics. This combination enables both manual and automated threat response that can prevent a single compromised device from turning into an outbreak.

Automate deployment with simple endpoint security configurations

MaaS360 Mobile Threat Defense Professional is an add-on component to the MaaS360 Unified Endpoint Management platform. Deployment is fast—it takes just a single click. Administrators simply define their mobile endpoint security policies so that devices and users can be protected from various possible threats, including:

- Malicious URLs through SMS, email and other messaging apps
- Advanced network threats such as man-in-the-middle and rogue access points
- Malicious apps and malware
- Tampering and insecure configuration of the device itself

Detect and respond to advanced and persistent mobile threats

MaaS360 Unified Endpoint Management, combined with MaaS360 Mobile Threat Defense Professional, offers IT administrators a comprehensive, integrated, end-to-end solution that brings together best-in-class endpoint management and mobile threat defense. Administrators can manage and protect their mobile ecosystem from a central point of control with granular endpoint security policies and automated, proactive threat detection and response.

Conclusion

MaaS360 Mobile Threat Defense Professional helps protect organizations from evolving mobile threats. Even better, it also can improve employee productivity while reducing risks to corporate data and employee privacy.
