

# Cloud Impact Assessment for Oracle IaaS & PaaS

Oracle customers running Oracle applications on premise face common questions about moving these applications to the Cloud

Can I scale up on demand?

What will be the ROI if I move to Oracle IaaS?

How much can be saved by moving to the cloud?

What is the migration approach to cloud?

What is the business case for moving to IaaS?

Can I be on cloud and on premise?

What features in cloud can I exploit?

Can I extend cloud applications to suit my unique needs?

How do I modernize my applications?

# IBM can help you take your Oracle applications to the cloud

We'll work with you to define your road map, business case and transition

## 2 Analysis

- Cloud Affinity and target disposition
- Cloud service model and deployment options
- Modernization assessment

## 1 Discovery

- Tool based portfolio assessment
- Software lifecycle and standardization assessment

## 3 Value

- Business Case for cloud
- Cloud IaaS/PaaS Demo

### Roadmap to

SaaS | PaaS | IaaS

## IBM's Cloud Impact Assessment for Oracle can help lead the way

### Scope

- Lift and shift Oracle Applications (eBusiness Suite, PeopleSoft, JD Edwards and Siebel) to Oracle Cloud Infrastructure (OCI)
- Move Oracle Database to Cloud (Database as a Service)
- Move custom Applications and Databases to OCI
- Modernize Application Architecture
- Move to Cloud native development and reduce technical debt
- 6 - 7 week assessment timeline with minimal client involvement
- Management information and reporting

### You'll get

- Current state infrastructure and application assessment
- Target state infrastructure and platform in transitioning to Oracle Cloud
- Target state transition risk assessment
- Recommended roadmap
- Costed business case and ROI statement
- Pre-provisioned application on a live demo OCI environment with access to Oracle Cloud Platform
