

Who we are

FoodChain by Blockchain comes from a passionate commitment to food production. We are a team of experts in agriculture and blockchain technology who are committed to adding value across the whole supply chain for food. Our modest motto (with a twinkle in the eye) is world domination in this area.

What we do

We are digitalizing parts of the farming industry which today are completely analogue. This is adding value for the farmers and traceability to the supply chain - all the way to the consumer. We are enabling traceability in the complete supply chain, which is useful in several ways – from being able to backtrack goods in case of infections, to ensuring proof of origin or to enable carbon dioxide indexes for consumers.

What we like about IBM and “Start up with IBM”

1. The network both locally and globally as well as the holistic perspective we gained from this collaboration
2. The authority, credibility and brand that IBM has in the industry is a great advantage for us.
3. The engagement from the team of IBMers working with us

“We have increased our development pace from normal speed to high speed as we need to step up to the demands of the cooperation with IBM and this is very positive

for us. IBM has created completely new conditions for us to boost our business both locally but also internationally.”

Tommy Jacobsson, Blockchain expert FoodChain By Blockchain

“We are surprised to be treated with so much interest, respect and enthusiasm by a big corporation like IBM. We think this is very rare in companies of the size of IBM in fact, - we thought we would need to fight for our ideas as a small company, but IBM is very open and perceptive to what we want to achieve. We have been introduced at many different levels at IBM. ”

Cecilia Ryegård, CEO and founder FoodChain By Blockchain
