

Who we are

The company was founded by Rawa Karadaki in 2019 and now has a pool 200+ guards. Rawa has a background in the industry and saw the need for a solution to improve both for sellers and buyers and also an opportunity to contribute to a safer world.

What we do

We are an app-based security and guarding company. We are the link between guards and clients, and we provide a platform that enables transparency and simplicity. The guards can increase their salary with up to 30% and the cost for clients can be reduced with 10-20%. Our app reduces manual work and increase the quality of the guards by having the clients rating the guards and services.

Three things we like about IBM and “Startup with IBM”

1. The personal contact and engagement
2. IBM Cloud, the capacity and the features in the platform. Some of the features in IBM cloud have been crucial for building our solution
3. IBM believed in us and our idea from the start and we got good advice from day one

“We want to build the smartest system for linking buyers and sellers of security guard services and offer the best value for both parties. IBM Cloud enables us with the technology to do it.”

Rawa Karadaki, CEO and Founder of Safetly
