IBM M&A Accelerator™

Solution Overview

IBM’s M&A Accelerator™ is an online SaaS application built from the ground up to track, manage, and share related M&A activities throughout the deal lifecycle. It’s like a GPS for executing a merger, acquisition, or divestiture. Providing leadership the visibility it needs to ensure that M&A goals are on track while at the same time providing an efficient and effective way for the entire deal team to manage the day to day execution.

Key Benefits:

- **Track and manage realization of value:** by focusing the entire team on activities that create value and by identifying problems before they impact the value proposition
- **Increase productivity of the entire team:** by streamlining the administrative processes that keep the execution team from focusing on high value activities
- **Reduce risk:** by identifying issues early and streamlining handoffs between due diligence and integration teams
- **Single Source of Truth**— Unlike multiple generic tools, that get cobbled together, M&A Accelerator becomes the “single authority”

M&A Accelerator is used by IBM’s industry-leading M&A teams, along with many of the world’s leading acquirers. With M&A Accelerator’s capabilities and best practice set up, you have the combined experience of hundreds of successful M&A deals at your fingertips.

Change the way you manage M&A

The Road to Improved Transaction Success:

**IBM’s M&A Accelerator™** can cover the entire deal process, from opportunity identification, process and change management through successful deal completion.

Handoffs between phases are made easy as M&A Accelerator has built in features for you to manage your data, tasks, issues, risks and materials throughout the deal lifecycle, through to value achievement.

The M&A Accelerator solution allows your team to leverage existing M&A experience and knowledge while augmenting their skills with the combined experience of hundreds of previous M&A deals.

M&A events are typically fast moving and involve many, if not all, areas of an organization. These events can be quite distractive for even the most prepared. M&A Accelerator provides a rich, full-featured environment for management of any transaction, including data collection, step by step execution, exception management, remediation and reporting, while providing a **single point of command and control for any size or type of M&A transaction**.

Our complete M&A solution includes:

- Intuitive, prescriptive home pages, customizable by transaction | deal role | permissions
- Single focus transaction data, reports and status, or work on multiple deals at once
- Built in, robust reporting, that is highly configurable & automated, consumable by all levels of the organization, from executive, to functional lead, to extended team
- Robust user friendly permissions ensure confidential data stays that way
- Customizable and dynamic templates for repeatable process control and incorporation of learnings from deal to deal
- Full audit trail and activity capture
