

IBM Endpoint Manager for Core Protection Data Protection Add-on

Version 9.1

Quick Start Guide

This guide describes a quick and easy way to install the product.

National Language Version: To obtain the Quick Start Guide in other languages, print the language-specific PDF from the installation media.

Product overview

IBM® Endpoint Manager, built on BigFix® technology, delivers endpoint lifecycle and security management through a single, lightweight, extensible infrastructure. The solution consolidates management of servers, desktops, laptops, and mobile devices with clear, accurate reporting and unparalleled control over today's increasingly complex physical and virtual infrastructures.

IBM Endpoint Manager enables organizations to securely manage even the most intermittently connected mobile users, delivering continuous updates regardless of connectivity to the internal corporate network and enforcing policies offline to ensure regulatory compliance. This dynamic, content-driven messaging and management system allows for quick delivery and adoption of new product capabilities and enables organizations to easily tailor solutions to meet their specific requirements.

IBM Endpoint Manager V9.1 delivers consolidated lifecycle management and security and compliance solutions. It adds new core capabilities and extends its platform coverage to include:

- More flexible deployment options with the addition of support for Red Hat Enterprise Linux and DB2® as an IBM Endpoint Manager Server platform.
- Native encryption capabilities for server to client communication and additional security configuration options for managing Internet-connected computers and mobile devices.
- Extended support for deployment of agents to Solaris 11, Debian 6, and Ubuntu 12.04 in addition to previously released support for Mac, OS X 10.8 and Windows 8 and Windows Server 2012.
- New, simplified Representational State Transfer (REST) based application programming interfaces (APIs) and an easy-to-use command line interface.

IBM Endpoint Manager for Core Protection Data Protection Add-on is optional and can be deployed and managed through the IBM Endpoint Manager infrastructure. The module also helps improve data protection capabilities while helping to control operational costs.

IBM Endpoint Manager for Core Protection Data Protection Add-on offers a robust data loss prevention and device control solution that integrates into the anti-virus and anti-malware capabilities provided by the Core Protection solution and can:

- Secure data (sensitive or not) on devices that leave the business premises
- Enforce security policies such that users can access sensitive data for their jobs, but not misuse or lose that data
- Comply with the growing number of data privacy laws that affect the industry or company.

IBM Endpoint Manager for Core Protection V9.1 delivers on-demand scan performance with the refreshed Office Scan V10.6 module by Trend Micro and delivers real-time antimalware functionality via protection methods such as file and web reputation, personal firewall, and behavior monitoring.

1 Step 1: Access the software and documentation

The IBM Endpoint Manager software can be accessed from Passport Advantage® or from DVD.

If you download your product from Passport Advantage, follow the instructions in the download document available at <http://www.ibm.com/support/docview.wss?rs=1015&uid=swg21662495>

The IBM Endpoint Manager package includes the following product DVD:

- IBM Endpoint Manager Core Protection - Data Protection Add-on for Windows

For complete documentation, see http://pic.dhe.ibm.com/infocenter/tivihelp/v26r1/index.jsp?topic=/com.ibm.tem.doc_9.1/welcome/welcome.html.

For information about using the IBM Endpoint Manager for Core Protection Data Protection Add-on, see the Data Protection for CPM 10.6 SP1 Administrator's Guide.

2 Step 2: Evaluate the hardware and system configuration

See the IBM Endpoint Manager System Requirements at <http://www.ibm.com/support/docview.wss?rs=1015&uid=swg21652841>.

3 Step 3: Get started and install IBM Endpoint Manager

A complete IBM Endpoint Manager installation is composed of installation and registration of the platform, followed by the configuration of the applications:

1. For an introduction to the product platform and applications, see Getting Started
2. To learn about the installation of the platform and the product components, see Installation Guide.
3. Install IBM Endpoint Manager by following the instructions in the Installation Guide.
