About this information ............................................ ix

Chapter 1. Db2 Recovery Expert overview .......................... 1
  What’s new in Db2 Recovery Expert ............................. 1
  What does Db2 Recovery Expert do? ............................ 5
  Backup and recovery solutions ................................. 5
  Db2 Recovery Expert features and benefits .................... 6
  Db2 Recovery Expert components ............................... 9
  Db2 Recovery Expert product definitions ....................... 11
  Determining which interface to use ............................ 12
  Db2 Recovery Expert scenarios ................................. 14
  Db2 Recovery Expert validation ................................. 16
  User ID authorities required for installation ................. 16
  Hardware and software requirements ........................... 17
    Db2 Recovery Expert server and agent component requirements ............................ 17
    Web interface requirements ................................. 17
    Db2 Recovery Expert ISPF interface software and hardware requirements ................... 18
    Product constraints ..................................... 21
  Service updates and support information ...................... 22
  Product documentation and updates ........................... 22
  Accessibility features .................................... 23

Chapter 2. Planning for system backup and recovery .............. 25
  System backup usage considerations ........................... 25
  Backup frequency and space utilization ....................... 27
  Analyzing data set isolation ................................ 28
  Planning for the creation of a Db2 subsystem backup .......... 30
  Performing a Db2 system, application, or object recovery ........ 32
  Planning a tape-basedDb2 disaster restart methodology .......... 34
  Db2 Recovery Expert and storage system integration .......... 35
  Copy blade selection considerations .......................... 37
    IBM FlashCopy blade ...................................... 37
    EMC TimeFinder copy blade ................................. 38
    HDS ShadowImage copy blade ................................ 40
    IBM DFSMSdss copy blade .................................. 41
  Db2 32 KB table space requirements ............................ 42

Chapter 3. Preparing to customize Db2 Recovery Expert ........... 43
  Set up your environment prior to customization .............. 45
    Adding ARYSTSOC to SYSLPARMLIB .......................... 46
    Create RBA Capture utility PDS library .................... 46
    Undiscovered Db2 parameters ................................ 47
    Specifying Db2 parameters .................................. 47
    Installing the web interface ................................ 48
    Clearing web browser cache after upgrading or applying maintenance ....................... 48
  Configuring the PARMLIB member ................................ 48
  Configuring access profiles for Db2 Recovery Expert ........... 48
  Setting up the Db2 Recovery Expert server to use VIPA .......... 64
  Setting up a Db2 subsystem with multiple data sharing members ......................... 64
  Worksheets: Gathering required data set names ................ 65
  APF authorizing load libraries ................................ 67
  Worksheets: Gathering parameter values for Db2 Recovery Expert ...................... 67

Chapter 4. Customizing Db2 Recovery Expert ........................ 115
  Roadmap: Customizing Db2 Recovery Expert for the first time .......... 115
  Roadmap: Customizing a new version of Db2 Recovery Expert from a previous customization ................................................. 116
  Roadmap: Recustomizing Db2 Recovery Expert .................. 117
  Specifying the metadata library for the product to customize .......... 118
  Discovering Db2 Recovery Expert information automatically .......... 120
  Creating and associating Db2 entries .......................... 121
  Defining parameters .................................... 123
    Defining Db2 Recovery Expert parameters ..................... 123
    Defining LPAR parameters ................................ 127
    Defining Db2 parameters .................................. 129
  Generating customization jobs ................................ 131
  Submitting customization jobs ................................ 132
  Browsing parameters .................................. 135
  Copying Db2 entries .................................... 135
  Removing Db2 entries ..................................... 136
  Deleting Db2 entries ..................................... 137
  Displaying customization jobs ................................ 137
  Maintaining customization jobs ................................ 137
  Using Tools Customizer in a multiple-LPAR environment .............. 138

Chapter 5. Administering client, server, and agent communications ........ 139
  Establishing server, client, and agent communications .......... 139
  Maintaining the Db2 Recovery Expert server .................... 139
    Server environment .................................. 140
    Server security .................................... 140
    Server output ..................................... 141
    Stopping the server .................................. 141
    Administrative commands (server) .......................... 142
  Maintaining the Db2 Recovery Expert agent .................... 143
    Agent environment .................................. 143
    Agent security .................................... 144
    Agent output ..................................... 145
    Stopping the agent .................................. 145
    Administrative commands (agent) .......................... 146
Chapter 11. Recovering database objects ........................................ 289
Application Recovery: Using application profiles ......................... 289
Backing up objects using system backups .................................. 290
Displaying profiles and specifications ......................................... 290
Creating application profiles and recovery jobs ......................... 295
Creating application profiles .................................................. 295
Selecting object types for profiles and specifications .................. 296
Filtering the subsystem objects .............................................. 297
Selecting the object .................................................................. 298
Viewing an application profile ................................................. 299
Updating an application profile ................................................ 301
Performing quiet time analysis for an object .............................. 304
Creating ad-hoc recovery specifications ..................................... 305
Ad-hoc Operations: Transaction specifications ........................... 305
Selecting the transactions for recovery ...................................... 308
Sample transaction recovery job JCL and results ...................... 310
Saving a transaction specification .......................................... 311
Ad-hoc Operations: Log based specifications ........................... 312
Generating recovery DDL for an object ...................................... 318
Generating object recovery plans ............................................. 320
Specifying recovery options .................................................. 322
Performing redirected recovery .............................................. 328
Specifying statistics options ................................................. 335
Specifying Log Read and Log Apply recovery options .............. 336
Selecting a recovery point .................................................... 339
Selecting an object definition level for a recovery point ............ 339
Selecting a history event for a recovery point ......................... 340
Selecting a quiet time recovery point ..................................... 343
Recovery plan generation ...................................................... 343
Selecting a recovery plan ...................................................... 346
Recovery plan validation ....................................................... 348
Submitting the recovery plan job .......................................... 349
Building application profiles in batch .................................... 351
Specifying recovery options for application profile batch job ..... 353
Sample build application profile batch job ............................. 357
Building log based specifications in batch ............................... 357
Sample build log based specification batch job ...................... 360
Building recovery plan batch jobs by editing JCL sample .......... 360
Sample Build Recovery Plan in Batch job ............................. 362
Building recovery plan batch jobs in ISPF ............................. 363
Build Jobs Options panel ..................................................... 363

Chapter 12. Recovering Db2 objects and IMS applications .................. 367
Connecting Db2 Recovery Expert and IMS Recovery Expert ............ 367
Setting up and managing the coordinated recovery process ............ 368
Creating coordinated recovery profiles .................................. 371
Associating a Db2 and an IMS profile to the coordinated recovery profile ...................... 372
Updating the coordinated recovery profile ................................ 373
Viewing a coordinated recovery profile .................................. 375
Renaming a coordinated recovery profile ................................ 376
Deleting a coordinated recovery profile .................................. 376
Performing quiet time analysis for a coordinated recovery ............ 377
Building the quiet time analysis job ........................................ 378
Building the coordinated recovery jobs ................................... 379
Selecting the recovery point .................................................. 379
Generating the Db2 object recovery plans ............................... 380
Selecting the Db2 object recovery plan .................................... 381
Submitting the recovery plan job .......................................... 383
Building the coordinated recovery job for IMS objects .............. 384

Chapter 13. Recovering objects using application groups .................. 387
Displaying application groups ............................................... 387
Creating application groups .................................................. 390
Updating application groups .................................................. 390
Viewing application groups .................................................... 392
Deleting an application group ............................................... 393
Renaming application groups ............................................... 393
Generating application group recovery plans ......................... 394
Selecting a recovery plan for the application group .................. 396
Submitting the recovery plan job .......................................... 398

Chapter 14. Performing a Combined System Level Backup ............... 401
Planning for a Combined SLB .............................................. 401
Configuring Combined SLB ............................................... 402
Creating shared repositories ............................................... 403
Creating Combined SLB groups .......................................... 404
Creating system profiles for Combined SLB groups .................. 407
Using system restore and offload with Combined SLB ............. 410
Using application profiles with Combined SLB ...................... 411
Creating disaster recovery profiles for Combined SLB groups ... 412
About this information

Db2 Recovery Expert for z/OS® (also referred to as Db2 Recovery Expert) is a feature-rich product that assists you with system-level as well as object level backups, and system-level, application, and object-level recoveries.

The topics in this user’s guide are designed to help database administrators, system programmers, application programmers, and system operators perform the following tasks:

• Plan for the installation of Db2 Recovery Expert.
• Install Db2 Recovery Expert.
• Configure your Db2 Recovery Expert environment.
• Operate Db2 Recovery Expert.
• Diagnose and recover from Db2 Recovery Expert problems.

Always check the Db2 Tools Product Documentation page for the most current version of this information:

http://www.ibm.com/software/data/db2imstools/db2tools-library.html
Chapter 1. Db2 Recovery Expert overview

IBM® Db2 Recovery Expert for z/OS (also referred to as Db2 Recovery Expert) is a storage-aware backup and recovery solution that integrates storage processor fast-replication facilities with Db2® backup and recovery operations to allow instantaneous backups, reduce recovery time, and simplify disaster recovery procedures while using less CPU, I/O, and storage resources.

What's new in Db2 Recovery Expert

September, 2019

The following updates were made to Db2 Recovery Expert for z/OS:

Update:
- Recovery Plan and JCL Generation in batch now available via ISPF
- LBDR Recovery now available in batch
- SQL grantees for GRANT statements may be specified in Tools Customizer
- Improved informational messages about recoverable and unrecoverable objects, replacing the ARYZ018E message
- Server can register in a system to allow other products to discover it and obtain the connection information
- Infrastructure changes in agent and server components

Related APAR: PH17194

August, 2019

The following updates were made to Db2 Recovery Expert for z/OS:

Update: Several fixes related to system operations, and some new error and information messages.

Related APAR: PH14687

June, 2019

The following updates were made to Db2 Recovery Expert for z/OS:

Update: Enhancements have been added to system level backup (SLB) and offload.

Description: If PARMLIB option WAIT_FOR_BACKGROUND_COPY is set to Y, FASTREPLICATIONSTATE is also checked, and error messages are produced if RECOVERABLE status is not achieved. Additional monitoring of the offload process may be enabled with a new PARMLIB option WAIT_FOR_OFFLOAD: if it is set to Y, DUMPSTATE of the copypool is repeatedly checked, and the offload step finishes successfully only if ALLCOMPLETE is achieved.

Related APAR: PH13181
**Update:** The ISPF client is more task-oriented and more consistent with the Web client.

**Description:** All LBDR and transaction recovery operations are available from the new "Ad-hoc Operations" added to the main menu. It is no longer necessary to create a profile to perform LBDR or Transaction recovery.

**Related APAR:** PH12477

**Update:** The internal format of application profiles is changed, and migration of existing profiles is required.

**Description:** After applying the PTF, users need to enable Migration option in TCz and run the generated JCL for each subsystem in which the environment for Recovery Expert exists, in order to migrate the profiles, using template ARYPRMIG. To undo migration, users need to manually modify generated jobs and change job parameters: PARM='SSID,MIGRATE' should become PARM='SSID,REVERT'. After modification, submit the edited jobs.

**Related APAR:** PH12477

**Update:** Fast Replication copies are deprecated and removed from the ISPF client.

**Related APAR:** PH12480

**Update:** Allow Redirected Recovery of Dropped Objects. See Performing redirected recovery.

**Description:** Redirected Recovery is allowed for LBDR profiles. With this enhancement, Redirected Recovery of dropped, or altered objects, is allowed if source and target SSIDs are equal and log apply is not disabled.

**Related APAR:** PH11064

**Update:** ARY optional indexes are not required and should not be created. See Preparing to customize Db2 Recovery Expert and Customizing Db2 Recovery Expert.

**Description:** ARY provides a template job which creates optional catalog indexes. These indexes are not required anymore as Db2 creates corresponding indexes automatically. See Worksheets: Gathering parameter values for Db2 Recovery Expert.

**Related APAR:** None.

**Update:** New options for copy-scope parameter. See Specifying recovery options for application profile batch job.

**Description:** Available options are now N (do not create image copies after recovery), T (copy tablespaces only), and I (copy tablespaces and indexes).

**Related APAR:** None.

**Update:** User Guide has been updated with additional detail about the syntax for the application profile in the ARYIN DD statement. Procedures and functions have
different syntax from the other object types. In addition, the TP object type has been added. See [Building standard application profiles in batch](#).

**Related APAR:** PH11064

**Update:** Db2 Recovery Expert now uses work files instead of 64-bit memory, so it is not limited to 500 archive logs. See [Specifying recovery options](#).

**Related APAR:** PI88704

**Update:** Runtime statistics for dropped objects may be restored during the LBDR recovery. See [Specifying recovery options](#).

**Related APAR:** PI88704

**Update:** User Guide has been updated to explain that Remember Password does not work with multifactor authentication. See [Using passwords to authenticate ISPF users](#).

**Related APAR:** None.

**November, 2018**

The following updates were made to Db2 Recovery Expert for z/OS:

- Accelerated tables will be automatically reloaded into IDAA after a recovery action.
- MQT are now supported for Redirected Recovery.
- Added an option to allow the use of member ids in profile names, configurable from the TCz panels.
- Restriction removed from Redirected Recovery.
- Updated messages.

**October, 2018**

The following updates were made to Db2 Recovery Expert for z/OS:

- Added recovery utility for reorganizing VSAM repository files (ARYRORG1 and ARYRORG2).
- Added recovery utility for listing available SLB backups at disaster recovery site (ARY#RPTD).
- Added a new option to detect unrecoverable resources during plan generation.
- Added restrictions to Redirected Recovery.
- Updated messages.

**August 24, 2018**

The following updates were made to Db2 Recovery Expert for z/OS:

- Added ability to monitor recovery jobs and recovered objects.
- Added new requirements for Redirected Recovery and Advanced Recovery.
- Added support for new batch utility plans.
- Clarified a misleading HFS installation path requirement.
August 3, 2018

The following updates were made to Db2 Recovery Expert for z/OS:

- Added topics that describes Db2 migration and product migration through TCz.
- Added administrative commands available on the Db2 Recovery Expert agent.
- Added Override PARMLIB option and a topic discussing the Override PARMLIB Options panel.
- Assorted updates to Redirected Recovery.
- Updated parameters list.
- Updated messages.

July 2018

The following updates were made to Db2 Recovery Expert for z/OS:

- Added a topic that describes performing redirected recovery at an overview level.
- Updated messages.

June 2018

The following updates were made to Db2 Recovery Expert for z/OS:

- Added a topic that describes how to login to a database from the ISPF interface using either a password (up to 8 characters) or a password phrase (up to 128 characters).
- Added a Multicast options that allows users to disable multicasting on the server.
- Added and updated server and agent messages.

May 2018

The following updates were made to Db2 Recovery Expert for z/OS:

- Added a recovery option that enables users to add SYSAFF to a recovery job card. Including SYSAFF on the job card ensures that the job runs on the same system (LPAR) as the target DB2 system to which the objects will be recovered.
- Added the Notify if Data Capture Changes enabled redirected recovery option. This option specifies whether a warning message is issued if Data Capture Changes is enabled on the table that is being recovered.
- Added Trigger objects to the list of object types that can be selected for redirected recovery.
- Added an option to log based recovery that enables users to selected all dropped objects for recovery with one click. When selected, all dropped objects of every type are included in the profile for recovery.
- Added a redirected recovery option that allows users to choose whether the generated job JCL includes detailed comments describing the function of each step.
- Added a recovery option that allows users to choose whether to generate recovery plans for all objects in a profile even if some objects in profile.
- Added support for Log Read and Log Apply recovery and redirected recovery options that can be used for redirected recovery and fast recover plans.
• Added the **Use DB2 System Catalog only** recovery option specifies that any information about recovered objects stored in RBR repositories should be ignored.

• Added support to allow workfiles to be used for Undo/Redo SQL plans instead of the 64 bit storage. This helps to overcome a restriction on the amount of scanned log activity.

• Added support for single character wildcards and arbitrary string wildcards options that can be used to define redirected recovery source and target names.

• Added support for XML redirected recovery options.

The web browser section of the documentation was updated to include a topic on the benefits of clearing your web browser’s cache after applying maintenance and before opening the DB2 Recovery Expert web browser interface.

---

**What does Db2 Recovery Expert do?**

Db2 Recovery Expert helps you avoid accidental data loss or corruption by providing the fastest, least costly method of backup and recovery.

Db2 Recovery Expert provides a fast and easy-to-use implementation of a Db2 system backup and recovery methodology. It reduces backup windows by leveraging storage-based fast-replication such that backups of multi-terabyte databases can be performed in seconds or less. It simplifies backup and recovery methodologies by allowing full-system, application, and object-level recoveries to be performed from a common system backup.

Consistent backups can be created using "full" or "data-only" system level backup options. It provides Db2 system backup and recovery support even for complex applications, where all of the application's data must be backed up, restored, and recovered as a unit. System backups can be taken while the Db2 system remains active. In addition, when creating system level backups, Db2 Recovery Expert invokes storage-based fast-replication facilities through appropriate storage processor APIs, reducing host CPU and I/O resource utilization and enabling legacy data copy methods to be used while the Db2 system is down.

Db2 Recovery Expert has integrated, intelligent recovery and disaster recovery managers that analyze recovery assets and establish optimal recovery procedures to minimize recovery time and recovery point objectives. Recovery jobs are tailored specifically to available backup and hardware resources.

• The Intelligent Recovery Manager supplies the ability to perform local recoveries efficiently using all available recovery resources. Restore operations that invoke fast-replication facilities through appropriate storage processor APIs and parallel recovery can significantly reduce recovery time and complexity.

• The Intelligent Disaster Recovery Manager uses local site procedures to prepare for offsite disaster recovery or disaster restart in advance. The information that is acquired allows Intelligent Disaster Recovery Manager to intelligently perform remote site restoration operations and appropriate recovery or restart procedures.

---

**Backup and recovery solutions**

IBM solutions help IT organizations maximize their investment in Db2 databases while staying on top of some of today's toughest IT challenges. Backup and recovery solutions can protect your data and lessen the negative impact that data loss can have on your business.
Backup and recovery is one of the most complicated areas of database management. Having the right resources to do a recovery is critical, and unfortunately in many cases, is not addressed until after data is already lost.

Database backup and recovery solutions include recovering from a dropped object to bouncing back from a major disaster, and everything in between. Recoveries that are done manually can be error prone, time consuming, and resource intensive.

Some of the questions you might face as a database administrator who is responsible for backup and recovery tasks include:

- Can a transaction be reversed or does the entire database have to be recovered?
- How can you determine which objects have been impacted?
- Do you have the necessary resources to recover to a point in time?
- Are you prepared for a disaster?
- Can you recover your subsystem?
- How much data are you willing to lose?

Db2 Tools for z/OS products support and exploit the most current versions of Db2, optimizing the performance and management of Db2.

Db2 Recovery Expert for z/OS, one of several important Db2 Tools for z/OS, is a storage-aware backup and recovery solution that integrates storage processor fast-replication facilities with Db2 backup and recovery operations to allow instantaneous backups, reducing recovery time, and simplifying disaster recovery procedures while using less CPU, I/O, and storage resources. This product provides an intelligent analysis of altered, incorrect, or missing database assets, including table spaces, tables, indexes, and data. It automates the process of rebuilding these assets to a specified point in time, often without taking the database or the business operations offline.

Other Db2 Tools for z/OS that can assist with database backup and recovery include:

- Db2 Log Analysis Tool for z/OS
- Db2 Change Accumulation Tool for z/OS
- Db2 Archive Log Accelerator for z/OS
- Db2 Automation Tool
- IBM Application Recovery Tool for IMS™ and Db2

**Db2 Recovery Expert features and benefits**

Db2 Recovery Expert offers several unique and significant features that you can use to significantly improve your Db2 backup and recovery methodology.

Db2 Recovery Expert features include:

**ISPF interface**

Db2 Recovery Expert provides an easy-to-use ISPF interface to manage all of its main functions. Through the ISPF interface users can easily create system backup, object, and disaster recovery profiles that contain all the information necessary to run backup, restore, and disaster recovery jobs.

**Db2 system backup and recovery**

Db2 Recovery Expert provides the ability to backup an entire Db2 system
These profiles designate the Db2 system, the user options and the resources that will be used to perform the backup. When executed, Db2 Recovery Expert will validate that all Db2 data is included in the backup by performing dynamic discovery of all the data sets and their associated volumes. This will ensure that the entire Db2 system is backed up.

The system backup can be taken while the Db2 system is active by using fast-replication storage devices, or while the Db2 system is down using DFSMSdss or FDR to copy each Db2 volume. Db2 Recovery Expert also provides the ability to "offload" or copy the system backup to tape.

A system backup can be used at the local site to restore an entire Db2 system, or at the remote site to restore the Db2 system for disaster recovery purposes. In addition, Db2 Recovery Expert can restore individual Db2 objects from a system backup.

**Db2 system backup configuration and management**
Db2 Recovery Expert includes a System Setup feature that can be used to discover a Db2 system and recommend layout and configuration changes so that the Db2 system can be set up appropriately to accommodate a system backup and recovery methodology.

**Backup validation**
Db2 Recovery Expert provides extensive backup validation to ensure that the system backup contains all Db2 files and catalog structures required for a successful recovery.

**Tape offload support**
Db2 Recovery Expert provides tape offload support to automate copying a system backup or partial system backup from disk to tape. Backups created on disk can be copied to tape using DFSMSdss or FDR so the backup disk volume pool can be reused. Db2 Recovery Expert allows you to encrypt the data when offloading to tape or disk. Data encryption can be specified for either DFSMSdss or FDR offloads.

Db2 Recovery Expert provides a report of backups and offloaded tapes for offsite support. A subsequent Db2 system restore operation will restore the backup from disk or tape depending on system backup availability and recovery scope. Db2 Recovery Expert will use the most appropriate backup for application-level recovery and will restore the databases from disk, tape, or a previous image copy depending on which backup provides the most expedient recovery process.

**Object level recovery**
Db2 Recovery Expert object level recovery enables users to recover individual Db2 objects or groups of related objects from a system backup or from image copies.

Users create application profiles that contain the information that is used to recover a Db2 subsystem’s objects to a desired point in time. When recovery is necessary, Db2 Recovery Expert analyzes all the available backup resources to generate the most appropriate recovery JCL to recover all the objects in the profile. Db2 Recovery Expert can also invoke additional recovery utilities after restoring the databases to bring them to a more current point-in-time.

In addition, object-level recovery leverages storage-based data set fast-replication facilities. The use of storage-based data set fast-replication
allows object recovery to be performed in parallel to the database restore process, thus significantly reducing the overall recovery time. Object or database recoveries that traditionally have taken many hours can be performed in minutes or seconds using Db2 Recovery Expert.

Tape-based disaster restart
Db2 Recovery Expert provides disaster recovery support by transforming traditional Db2 disaster recovery procedures into a tape-based disaster restart methodology.

System backups can be tagged for offsite transport to a disaster recovery site during the offload process. The tape-based disaster restart methodology loads the system backup tapes and restarts Db2 at the disaster recovery site. The Db2 restart process transforms the system backup into a transactionally consistent Db2 system that is ready to accept work.

Using Db2 Recovery Expert to implement an Db2 tape-based disaster restart methodology simplifies disaster recovery procedures and reduces recovery time objectives.

Automation and management of disaster recovery
Using Db2 Recovery Expert to automate and manage traditional disaster recovery processes simplifies disaster recovery procedures, reduces recovery time, and makes the recovery process less error-prone. Users create disaster recovery profiles which contain the recovery assets that will be sent to the recovery site. These assets can include system backups, archive logs, and image copies. The Db2 Recovery Expert Intelligent Disaster Recovery Manager runs at some set interval at the local site, performing the following functions:

- Analyzes, prepares, and identifies any new assets to be sent to the recovery site.
- Copies and then conditions Db2 recovery data sets (RECONS) with the recovery assets to be used at the remote site.
- Creates JCL that can be executed at the disaster recovery site to recover the Db2 system.
- Produces a detailed report showing all tapes that need to be transported to the disaster recovery site.

The user simply has to submit the predefined jobs that were created at the local site by the Intelligent Disaster Recovery Manager to perform the actual recovery of the Db2 system at the remote site.

System restore interface
Db2 Recovery Expert provides an ISPF interface to display all the system backups that have been performed. Db2 systems can be restored by selecting a system backup and specifying restore and recovery options. Db2 Recovery Expert will then build JCL that can be executed to restore and recover the entire Db2 system from the system backup and other recovery resources created since the system backup.

Copy blades
Db2 Recovery Expert copy blades provide storage processor integration and extensibility to support heterogeneous storage platforms and fast-replication features. Db2 Recovery Expert supports IBM, EMC and HDS storage systems and fast-replication facilities using integrated copy blades. Db2 Recovery Expert copy blades include:
• IBM FlashCopy® copy blade which provides support for IBM native FlashCopy®.
• EMC TimeFinder copy blade which provides support for TimeFinder/Mirror, TimeFinder/Clone, TimeFinder/Snap Virtual Device.
• HDS ShadowImage copy blade which provides HDS ShadowImage support.
• DFSMSdss copy blade which allows backups to be performed using DFSMSdss. DFSMSdss can optionally be used to invoke FlashCopy or SnapShot fast-replication methods.

Metadata repository
Db2 Recovery Expert provides a comprehensive metadata repository to record backup information such as backup time, backup type, log byte addresses, and volumes used for the backup. Reports can be generated to monitor information such as backup methods and operations, storage volume usage, system backup volume usage, and archived backups.

Multi-purpose system level backup
Db2 Recovery Expert generated system level backups can be used for multiple purposes saving storage and processing resources. A system level backup can be used for Db2 system recovery, application recovery, object recovery, and for disaster restart or recovery. With this ability, significant CPU, I/O, and storage resources that would otherwise be required to make multiple backups for different purposes are saved.

Db2 recovery performed efficiently
Db2 Recovery Expert reduces recovery time by running restore and recovery operations in parallel. Storage-based fast-replication facilities are used to restore backups quickly while invoking Db2 recovery processes in parallel to reduce overall recovery time and minimize subsystem and application down time.

Db2 systems are restored using volume-based fast-replication, and Db2 applications and objects are restored using data set-based fast-replication facilities.

Db2 Version Support
Db2 Recovery Expert supports Db2 versions 10, 11, and 12 in either data-sharing or non data-sharing modes of operation.

Note: Db2 V10 is supported only in NFM (New Functionality Mode).

Db2 Recovery Expert components
Db2 Recovery Expert consists of several components that include a server, an agent, repositories, an ISPF interface, and a web interface.

The main components of Db2 Recovery Expert are:

Web interface
This is a browser based interface.

Server The Db2 Recovery Expert server centrally manages and controls all Db2 Recovery Expert functions that are performed on behalf of user requests. You must run at least one instance of the server to manage all of your Db2 subsystems and data sharing groups and to support all of your Db2 Recovery Expert user clients. Using TCP/IP connections, the server, clients, and agents communicate with each other to perform the recovery functions. The server supports dropped objects.
Agent  The agent provides access to database and system services, in support of the server and remote clients. You must run one instance of the agent on every system or logical partition (LPAR) that hosts Db2 subsystems or data sharing groups that you want to access with Db2 Recovery Expert. Each agent communicates with the Db2 for z/OS server to provide services.

Schema level repository
Db2 Recovery Expert offers the option of capturing Db2 system catalog information and storing it in a set of Db2 tables referred to as the schema level repository (SLR). The SLR is an archive to hold object definitions and alterations to object definitions. The SLR can be created using the Tools Customizer.

The initial population of the SLR may take several hours to copy the contents of the Db2 system catalog. Run times vary depending on the Db2 system catalog size. You must run the schema level repository update job at least daily. If important application object definition updates are performed, then run the schema level repository update after the object definition updates.

This image depicts the Db2 Recovery Expert client/server environment and the way in which the server, agents, and clients interact.

The Db2 Recovery Expert ISPF interface includes:

**Db2 Recovery Expert ISPF interface VSAM repository**
The Db2 Recovery Expert ISPF uses a set of VSAM files to store information related to system-level backups and Db2 subsystem definitions. This repository can optionally be automatically backed up any time that a system-level backup is created by Db2 Recovery Expert.

**Note:** This repository is used for the Db2 Recovery Expert ISPF interface only.

Db2 Recovery Expert product definitions

To help you navigate through the Db2 Recovery Expert interfaces, this section provides definitions of the main features. Db2 Recovery Expert includes a web and an ISPF interface. Depending on your installation, you may use one or both of these interfaces.

Web interface definitions

The following features are accessible through the web interface:

Recovery Advisor
Use the Recovery Advisor to recover data or dropped objects in your operational database system. This feature allows you to select objects or groups of objects to recover and review and edit recovery plans before running the JCL. After running the recovery, you can review the results and restart any failed jobs.

Log Based Recovery Advisor
Use the Log Based Recovery Advisor to recover dropped objects without an up-to-date schema-level repository (SLR). The Log Based Recovery Advisor uses the Db2 log files.

Transaction Recovery Advisor
Use the Transaction Recovery Advisor to undo a specific transaction or set of transactions in a transactionally consistent manner and recover any objects that may have been impacted.

Log Analysis Advisor
Use the Log Analysis Advisor to help you analyze database log files to determine points of consistency (quiet times or periods of inactivity) for objects or sets of objects.

System Restore Advisor
Use the System Restore Advisor to restore a subsystem that has been backed up by Db2 Recovery Expert. With this feature, you can restore an entire Db2 system to a prior point in time. If both data and logs were backed up, you have the option to restore data and logs or only data. In addition, if the backup was configured for data only, you can only restore the data.

Note: The System Restore Advisor can only be used to restore a Db2 system from a system-level backup taken from within the product.

Specifications Advisor
Use the Specifications Advisor to work with previously saved recovery, log analysis, and system restore specifications. You can save your work while in another advisor and return to that configuration using the Specifications Advisor. This feature improves your efficiency and reduces the amount of rework that you must do.

Db2 Recovery Expert ISPF definitions

From the main panel of the Db2 Recovery Expert ISPF interface you can access the following features.

System Backup Profiles
From this panel, you can define backup profiles to specify the type of backup (Db2, BCV, FlashCopy, Snap, or DFSMSdss), the source volumes to
be backed up for a subsystem, and their associated target units. Backup profiles contain information that is used to backup a Db2 subsystem. In addition, backup profiles set other options such as the backup type (full or data only), the number of backup generations to keep, options for offloading backups, and enabling object restore. Backup profiles are reusable and editable.

**System Restore and Offload**
From this panel, you can perform system restores and backup offloads. A system can be restored to a particular recovery point from a backup made by Db2 Recovery Expert. You can run a health check report to determine if objects may be unrecoverable after a system restore is performed, before you actually run the system restore. If object restore was enabled for a backup, you can make image copies of selected objects from a system backup. You can also offload selected backups to tape or disk.

**Application Profiles**
From this panel, you can build jobs to recover a Db2 system's objects to a desired point in time. You can create application profiles that will recover objects using the schema level repository (SLR) or Db2 logs. You can also create a transaction application profile that can be used to recover objects that were changed by a transaction. You can include in an application profile individual objects or groups of objects that can be recovered singularly or collectively. You can build a recovery job from an application profile, and have Db2 Recovery Expert take into consideration all the recovery resources (each backup that you have created) and choose the best object recovery resource available, based on the desired point in time to which you want to restore the objects, and the options that you have specified.

**Disaster Recovery Profiles**
In case of a disaster that renders a Db2 subsystem unusable, you can restore the subsystem at a remote site if you have implemented the disaster recovery feature of Db2 Recovery Expert.

**Db2 Subsystem Analysis and Configuration**
From this panel, you can analyze Db2 subsystems to ensure proper configuration for backups. It provides information about the z/OS user catalogs, aliases, boot strap data sets, and active logs data sets. It also provides detailed information about the volumes and the data sets in use by a subsystem. If your subsystem is not correctly configured, you can use the **Db2 Subsystem Analysis and Configuration** panel to create z/OS user catalogs and aliases, rename or move boot strap data sets, log data sets, and/or Db2 object data sets to the proper locations.

**Coordinated Application Profiles**
From this panel you can build jobs that can be used to recover the Db2 objects and IMS databases that are used in an application to the same consistent point in time.

---

**Determining which interface to use**

Db2 Recovery Expert provides a browser-based web interface and an ISPF interface. You can perform all Db2 Recovery Expert functions using the ISPF interface. You can perform many of the recovery functions using the web interface.

The following comparison table lists the functions that can be performed using the web interface and the functions that can be performed using the ISPF interface.
<table>

**Note:**

- Object recovery must be enabled in the system backup profile. Set **Enable Obj Restore** to **Y** in the **Update Backup Profile** ISPF panel.
- Db2 Recovery Expert parameter IPC IPC_RBR must be set to **Y**.

### Db2 Recovery Expert scenarios

The Db2 for z/OS environment can experience different kinds of failures such as application errors, Db2 subsystem failures, Internal Resource Lock Manager (IRLM) failures, disk failures, z/OS failures, power failures, site failures, and so on. When these failures occur, appropriate recovery procedures must be executed. This is where Db2 Recovery Expert can help address your day-to-day data management problems.

When your Db2 system or application experiences failures, appropriate recovery procedures must be executed swiftly and precisely to ensure minimal loss of data and minimal loss of system availability. The following scenarios illustrate how you can use Db2 Recovery Expert to quickly recover from unforeseen failures:

**Recovering data to a specific point in time (PIT)**

Db2 Recovery Expert makes recovery to a specific point in time (PIT) easy to implement. Recovery options can include rolling changes forward or backward, whichever is the most efficient in a given situation. Not only does the tool provide options for recovery scenarios, it also makes recommendations as to which option is relatively the least expensive in any given situation. This functionality saves you time and money by helping you make better decisions.

**Recovery Scope**

Db2 Recovery Expert supplies options to recover a complete Db2 subsystem to some point in time as well as a selected set of objects to a point in time. A DBA can create in advance the jobs that will
be used at recover time. This decreases analysis time, application unavailability time, and time spent fixing errors.

When generating recovery plans, Db2 Recovery Expert will automatically include all Db2 enforced Referential Integrity (RI) objects. Application RI can be supplied to Db2 Recovery Expert via application profiles when creating recovery plans.

**SQL based recovery**
Db2 Recovery Expert will incorporate Undo/Redo SQL into recovery plans. In some recovery scenarios, such as backing out a single bad transaction that has incorrectly updated an application, a DBA can quickly identify and surgically extract the Undo/Redo SQL that can be used as a recovery option leaving the tables available for others to access during the SQL based recovery.

**Schema versioning feature**
A DBA performs schema/table changes to support application development in both development and production environments. On occasion these schema/table changes are incorrect or need to be altered or changed. Backing out the schema changes to the pre-change schema version is time consuming, a manual process and prone to error. Each time a change is backed out the DBA needs to develop a strategy, create all the JCL to support the change and execute a manual job flow to back out the schema changes in each of the multiple non-production environments.

Db2 Recovery Expert has a versioning feature that allows a DBA to maintain multiple versions of their Db2 objects. With this feature a DBA can go back to a prior version of the object should the need arise. Db2 Recovery Expert will generate plans and automatically create all steps needed to back out these type of changes. The Db2 Recovery Expert versioning feature drastically reduces the time a DBA spends performing this recovery by decreasing analysis time and by creating accurate and efficient JCL to be used to back out the changes.

**Recovering accidentally dropped objects**
Db2 Recovery Expert also supports the recovery of accidentally dropped objects in the Db2 for z/OS environment. The Db2 Recovery Expert tool provides an easy-to-use, automated recovery solution that enables database recovery operations with minimal disruption and enables you to maintain high availability for database users.

**Performing recoveries at a remote location**
Db2 Recovery Expert includes support for recovering objects or entire subsystems at a remote location. You can perform recoveries at a remote site using either traditional Db2 image copies or the equivalent of a system-level backup created by Db2 Recovery Expert.

**Using IBM Db2 Automation Tool profiles**
Db2 Recovery Expert takes advantage of profiles that are developed with the IBM Db2 Automation Tool to recover a set of objects. You can use Db2 Recovery Expert to generate the Job Control Language (JCL) to execute each backup of the objects in the profile and you can perform the backup on a predetermined schedule without having to re-generate the JCL. Extensive validity checking makes the backup and restore more thorough and less error-prone and is performed before each backup to ensure a complete and accurate backup.
Db2 Recovery Expert validation

Db2 Recovery Expert has the ability to perform several validation and configuration checks to help ensure a successful recovery before the recovery process is needed.

Subsystem analysis & configuration

In order for Db2 Recovery Expert to provide the fastest and most effective backups that can be used to recover a Db2 subsystem, that subsystem must be configured according to specific guidelines. Db2 Recovery Expert includes a feature that enables a DBA to verify the proper configuration of a Db2 subsystem. This feature will flag non-optimal configurations and supply warning messages, providing a DBA the ability to correct any non-optimal configurations prior to recovery.

System level backup validation

Db2 Recovery Expert enables a DBA to correct any errors that might occur during recovery at the time a backup is taken. A new or recently modified system level backup (SLB) can be run using the SETUP option. When run in setup mode, Db2 Recovery Expert will not perform the backup but will validate Db2 source and target volumes to be sure the proper mapping has been completed. Any error can be corrected so that when the system level backup is taken and the same validation occurs there will be no problems. In addition, when the system level backup is taken, Db2 Recovery Expert will report any objects that are in a restricted state and might negatively impact the success of the restore. By discovering these errors at backup time, a DBA can make corrections prior to a recovery scenario.

Health check report

The Db2 Recovery Expert health check feature supplies a DBA with the ability to check the recovery health of a Db2 system using a system level backup as a starting point. After a system level backup is taken, various activities can take place that would cause an object to be in a non-recoverable state. By running a health check report, Db2 Recovery Expert will flag non-recoverable objects. If a log no event occurred on an object and an image copy was performed after the log no event, Db2 Recovery Expert will flag the log no event object and show the supporting image copy.

Recovery plan validation

After a recovery plan(s) is generated by Db2 Recovery Expert a validate function can take place prior to executing the recovery plan. The validation function will check to see if all recovery assets are available for the recovery to be successful.

User ID authorities required for installation

This information describes the Db2 Recovery Expert user ID authority required for installation.

Db2 Recovery Expert can only be installed using a TSO user ID that has SYSADM authority. If your site does not have a TSO user ID with that authority and does not allow one to be created, there are other ways for you to install Db2 Recovery Expert:
• If the Db2 installation zparm DBACRW (DBADM CREATE VIEW) setting is set to YES then Db2 Recovery Expert can be installed with a user ID that has SYSCTRL authority.

• If the DBACRW (DBADM CREATE VIEW) setting is set to NO, then the installation user ID must have SYSADM authority to install Db2 Recovery Expert.
  – A user ID has SYSADM authority if they are running as the SYSADM user ID.
  – A user ID can use Db2 secondary authorization IDs. For more information about Db2 secondary authorization IDs, see the Db2 Administration Guide.

Additional user ID authorities required for installation are:
• Server user ID — Requires SYSCTRL as the primary auth ID.
• Agent user ID — Requires SYSCTRL as the primary auth ID.

---

**Hardware and software requirements**

These are the hardware and software requirements for the various components of Db2 Recovery Expert.

**Db2 Recovery Expert server and agent component requirements**

These are the requirements for the Db2 Recovery Expert server and agent components.

**Hardware requirements**

• Any hardware environment that supports the required software.

**Software requirements**

• z/OS Version 2 Release 1 or higher
• Administration Guide. (one of the following versions)
  – Db2 UDB for z/OS Version 10 (CM8, CM9, ENFM, and NFM)
  – Db2 UDB for z/OS Version 11 (CM and NFM)
  – Db2 UDB for z/OS Version 12 (CM and NFM)
• The Db2 Recovery Expert z/OS components must be executed on an operating system version that is equal to the operating system version the product SMP/E install was performed on.
• Utilities that are used by Db2 Recovery Expert require execution under TSO/E. Refer to the Db2 V10, Db2 V11, or Db2 V12 product support information for information regarding TSO/E support levels.
• The Db2 Recovery Expert client/server component supports profiles created with any version of Db2 Automation Tool.
• Db2 Recovery Expert has no dependencies on Rocket Software, Inc. Common Code groups (FEC, DLC).

**Web interface requirements**

These are the requirements for the browser client interface of Db2 Recovery Expert.
Hardware requirements

There are no specific hardware requirements required to run the Db2 Recovery Expert web interface application. The web interface application runs in a browser and communicates directly with the Db2 Recovery Expert server.

No local disk storage is required for product intermediate or result data since all processing occurs remotely on the Db2 Recovery Expert server or on the Db2 database server systems. A reasonable amount of local disk space should be available if the user wants to export JCL, job results or other information.

Software requirements

Certain older web browsers are not supported for use with the Db2 Recovery Expert browser client interface. For example, Db2 Recovery Expert will only work correctly in Microsoft Internet Explorer 11 or higher, or in current versions of other browsers.

Db2 Recovery Expert ISPF interface software and hardware requirements

These are the software and hardware requirements for Db2 Recovery Expert ISPF interface. Db2 Recovery Expert operates under a traditional mainframe environment running Db2 for z/OS.

Software requirements

Db2 Recovery Expert runs under ISPF and invokes ISPF services. Db2 Recovery Expert requires the following software:

- z/OS V1R11 or higher.
- Db2 UDB for z/OS V10 or higher

TSO requirements

The minimum TSO region size required to run Db2 Recovery Expert for z/OS ISPF interface is 35000 kilobytes.

FlashCopy requirements

For FlashCopy backups, Db2 Recovery Expert requires the following:

- To use FlashCopy for a full system backup and restore, the storage subsystem must be FlashCopy V1 capable.
- To perform the object-level restore function, the storage subsystem must be FlashCopy V2 capable.

Db2 Recovery Expert uses IBM’s FlashCopy interface to make a backup of a Db2 subsystem. This interface is designed for replicating data sets or volumes.

The invocation of the FlashCopy interface takes a point-in-time copy of data at the volume level. To use this feature, you must define source and target volumes to emulate identical device and model types. In addition, the source and target volumes must both be located in the same logical storage subsystem, and the storage subsystem must be able to execute the FlashCopy interface.
EMC BCV and SNAP requirements

For BCV and SNAP backups, Db2 Recovery Expert requires the following:

- EMC Symmetrix 6 and higher running with Microcode 5x67 or higher
- To use Enginuity Consistency Assist (ECA), Microcode 5x67 with patch 14882 or Microcode 5x68 with patch 18954 or Microcode 5x69 or higher is required. To use ECA with SNAP VOLUME technology, the EMC SNAP library must be level 5.5 or higher.

Note: Db2 Recovery Expert performs a “Protected BCV restore” in order to preserve the BCV backup point. This type of restore is not supported prior to Microcode 5x70. If any Symmetrix array is at a microcode level lower than 5x70, then a SNAP type restore will be performed instead.

Requirements for BCV backups

Db2 Recovery Expert uses EMC’s TimeFinder/Mirror for z/OS to make a BCV backup of a Db2 subsystem. A BCV device can be established as a mirror of a standard device; whatever data is sent to the standard device is also sent to the BCV device when it is established. The two devices together are called a BCV pair. When the pair is synchronized and Db2 Recovery Expert is called to make a BCV backup, the BCV device currently mirroring the standard device is split from the standard device.

This BCV device is then available as a point-in-time volume backup. If you configured Db2 Recovery Expert to keep more than one generation of BCV backups, then another BCV is immediately established to the standard device. This next generation continues the standard device mirroring.

Standard devices and BCVs must be the same model type (for example, 3380 or 3390) and have the same number of cylinders (for example, 3390-3 or 3390-9). In addition, the source and target volumes must both be located in the same physical Symmetrix storage subsystem. If you have questions about your Symmetrix configuration, contact your EMC customer service representative.

Requirements for SNAP backups

Db2 Recovery Expert uses EMC’s TimeFinder/Clone Mainframe SNAP Facility (hereafter referred to as the SNAP utility) to make a SNAP backup of a Db2 subsystem. This utility is designed for replicating data sets or volumes. The invocation of the SNAP utility takes a point-in-time copy of data at the volume level.

To use this feature, you must define source and target volumes to emulate identical device and model types. In addition, the source and target volumes must both be located in the same Symmetrix storage subsystem. The target volumes can be either standard volumes or BCV devices. If users have questions about their Symmetrix configuration, they can contact their EMC customer service representative.

Db2 backup method requirements

For Db2 system-level backups, the BACKUP SYSTEM utility uses copy pools, which are new constructs in z/OS DFSMSshsm V1R5. A copy pool is a defined set of storage groups that contain data that DFSMSshsm can backup and recover.
collectively. These copy pools must be defined before attempting to back up or restore a subsystem. For more information about copy pools, refer to the z/OS DFSMSdfp Storage Administration Reference. In addition, refer to the Db2 utilities guides for other requirements for the BACKUP SYSTEM and RESTORE SYSTEM utilities.

**DFSMSdss requirements**

DFSMSdss must be version 1.8 or higher to use DFSMSdss backups and to create a Db2 image copy from a system level backup.

To perform encryption during offloads, DFSMSdss requires the following software:

- Encryption Facility DFSMSdss Encryption Feature (FMID HCF773D).
- IBM Cryptographic Services Facility (ICSF) (HCR770B or higher)

**Db2 subsystem architecture requirements**

Db2 Recovery Expert helps make Db2 subsystem backup and restoration uncomplicated if your subsystem architecture follows best Db2 design practices. To ensure the most complete and accurate subsystem restoration, the Db2 subsystem should follow these recommendations:

- The user catalog(s) for the Db2 log and bootstrap data sets should be separate from the user catalog(s) for Db2 object data (table spaces and indexes) and not reside on the same volume(s) as any other Db2 object data or Db2 object data catalog(s).
- The Db2 bootstrap, active log, and archive log data sets should reside on separate volumes from the Db2 object data.

These requirements ensure that your Db2 object and log data are contained on separate sets of volumes. When you restore the volumes, the user catalogs will be restored and will reflect the data and log locations as they were at the time of the backup. Db2 Recovery Expert performs extensive validity checking for these requirements. If it detects any condition where log data and object data are not separated, a message is issued containing the volume name(s) that hold both types of data. The backup will still be allowed, but only full system restores will be allowed from the backup (called a “mixed data” backup). You must recover both object and log data from a mixed data backup.

You can use the Db2 Recovery Expert Subsystem Setup facility to get your Db2 subsystem(s) in optimal condition. The Db2 Recovery Expert Subsystem Setup facility analyzes your subsystem and provides information about the volume location and aliases of user catalogs, boot strap data sets, and active logs. It also provides detailed information about the volumes and the data sets in use by a subsystem. If your subsystem is not correctly configured, you can create MVS catalogs and aliases, rename or move boot strap data sets, log data sets, and/or Db2 object data sets to the proper location using the ISPF interface.

**Db2 32 KB table space requirements**

Beginning with Db2 V8, Db2 data sets can be defined with variable control interval sizes. However, if you are planning to suspend the logs during backups, Db2 Recovery Expert requires that Db2 data sets defined with a page size of 32KB must have their control interval size defined as 32 KB. This ensures that when I/O to a device is stopped for backup, the control intervals of a data set are not spread across more than one track, possibly resulting in a broken page.
If Db2 Recovery Expert is going to suspend the logs, 32 KB data sets with 32 KB page sizes are checked during the backup. If the CI size is not 32 KB, the space is flagged, and it is skipped. If you want to use Db2 Recovery Expert on this space, you must alter the CI size and run an IBM REORG utility on the table space.

Product constraints

This information describes the constraints that must be taken into consideration when using Db2 Recovery Expert.

Simple table space limitation
A simple table space created in a version of Db2 prior to version 9 cannot be dropped and recreated because of a Db2 limitation. Dropped simple table spaces will be restored as segmented table spaces.

ROLES and Trusted contexts
Db2 Recovery Expert does not support recovery of dropped roles or dropped trusted contexts.

Tables with IDENTITY columns
You must be cautious when attempting to use Db2 Recovery Expert to recover a table that contains IDENTITY columns.
- If the data recovery does not require generated SQL then the IDENTITY column attributes require no alteration and the recovery will be generated without any IDENTITY column adjustments.
- If the data recovery does require generated SQL then the IDENTITY column attributes will be checked to determine if a table drop and create recovery is required. The IDENTITY column attributes will be assigned values based on the current SYSIBM.SYSEQUENCES setting for that column. If a column is a user-defined sequence Db2 Recovery Expert reads the recovered column data and does not reset the starting IDENTITY column value. A recovery of this type can result in data corruption because of a different table definition and sequences.

Tables with EDITPROCs
Db2 Recovery Expert does not recover the executable module, or program, for module-based functions or procedures. This includes EDITPROCS. Db2 Recovery Expert cannot determine what library holds the program because that information is not stored in the Db2 system catalog. You must add the names of the user program load libraries that are required by the functions and procedures used by a table to the redo or undo SQL execution JCL STEPLIBs.

Tables without unique keys
When you are selecting objects for recovery, remember that any recovery plan might include undo or redo SQL. You must ensure that there is a primary, or unique, key on the tables for which you are generating SQL. Without a primary key, you might not get the desired results because of the inability to uniquely identify rows that were changed by the original SQL.

Tables with ROWID columns
Any table that contains a ROWID column requires a primary key to be defined. Without a primary key, recovery plans with undo or redo SQL might generate unintended duplicates of the table.

Table containing a GENERATED ALWAYS column
Db2 Recovery Expert cannot recover a table containing a GENERATED ALWAYS column when an update has been made that only changed the
GENERATED ALWAYS column. The error message ARYA618W is issued and the recovery step STEPM issues a return code 4.

Service updates and support information

Service updates and support information for this product, including software fixes, PTFs, frequently asked questions (FAQs), technical notes, troubleshooting information, and downloads, are available from the web.

To find service updates and support information, see the following website:

Product documentation and updates

Db2 Tools information is available at multiple places on the web. You can receive updates to Db2 Tools information automatically by registering with the IBM My Notifications service.

Information on the web

The Db2 Tools Product Documentation web page provides current product documentation that you can view, print, and download. To locate publications with the most up-to-date information, refer to the following web page:

http://www.ibm.com/software/data/db2imstools/db2tools-library.html

You can also access documentation for many Db2 Tools from IBM Knowledge Center:

http://www.ibm.com/support/knowledgecenter

Search for a specific Db2 Tool product or browse the Information Management > Db2 for z/OS family.

IBM Redbooks® publications that cover Db2 Tools are available from the following web page:

http://www.redbooks.ibm.com

The Data Management Tools Solutions website shows how IBM solutions can help IT organizations maximize their investment in Db2 databases while staying ahead of today’s top data management challenges:

Receiving documentation updates automatically

To automatically receive emails that notify you when new technote documents are released, when existing product documentation is updated, and when new product documentation is available, you can register with the IBM My Notifications service. You can customize the service so that you receive information about only those IBM products that you specify.

To register with the My Notifications service:
2. Enter your IBM ID and password, or create one by clicking **register now**.
3. When the My Notifications page is displayed, click **Subscribe** to select those products that you want to receive information updates about. The Db2 Tools option is located under **Software > Information Management**.
4. Click **Continue** to specify the types of updates that you want to receive.
5. Click **Submit** to save your profile.

**How to send your comments**

Your feedback is important in helping to provide the most accurate and high-quality information. If you have any comments about this book or any other IBM product documentation, use one of the following options:

- Use the online reader comment form, which is located at [http://www.ibm.com/software/data/rcf/](http://www.ibm.com/software/data/rcf/)
- Send your comments by email to comments@us.ibm.com. Include the name of the book, the part number of the book, the version of the product that you are using, and, if applicable, the specific location of the text you are commenting on, for example, a page number or table number.

**Accessibility features**

Accessibility features help a user who has a physical disability, such as restricted mobility or limited vision, to use a software product successfully.

The major accessibility features in this product enable users to perform the following activities:

- Use assistive technologies such as screen readers and screen magnifier software. Consult the assistive technology documentation for specific information when using it to access z/OS interfaces.
- Customize display attributes such as color, contrast, and font size.
- Operate specific or equivalent features by using only the keyboard. Refer to the following publications for information about accessing ISPF interfaces:
  - **z/OS ISPF User’s Guide, Volume 1**
  - **z/OS TSO/E Primer**
  - **z/OS TSO/E User’s Guide**

These guides describe how to use the ISPF interface, including the use of keyboard shortcuts or function keys (PF keys), include the default settings for the PF keys, and explain how to modify their functions.
Chapter 2. Planning for system backup and recovery

Before configuring Db2 Recovery Expert, it is important to consider and understand how the system backups (SLB) will be used in your environment’s recovery situations. This section describes the types of recoveries that can be performed from a system backup and the considerations that should be made when selecting a specific type of backup and recovery methodology.

System backup usage considerations

Before configuring Db2 Recovery Expert, it is important to consider and understand how the system backups (SLB) will be used in recovery situations.

Your first consideration when planning for system backup and recovery is to decide what you want to recover. For example, you can recover an entire Db2 subsystem, you can recover just an application or database objects, or you can recover at a remote site. You may decide you need to do only a partial backup of a Db2 subsystem, or a data only backup. Once you determine what you want to recover, you will create a backup profile that will be tailored to your specific recovery needs.

System backup (SLB) used for local system recovery

Local system recovery is the process of restoring an entire Db2 subsystem (Full), including database data, logs, BSDSs, and Db2 system data sets, to the point in time of a system backup. Local system recovery may also include running forward recovery processes to apply any changes that occurred after the system backup was created. It is also possible to restore just the volumes that contain database data from a system backup and then run forward recovery processes to bring the databases to a more current state.

When Db2 Recovery Expert restores an entire Db2 subsystem, it is important to understand that it does the restore at a volume level. When a volume is restored, it will restore all data sets that were on the volume at the time of the system backup and it will overlay changes or new data sets that may have been created on the volumes since the system backup. Because of this, if local system level recovery is a viable recovery scenario, it is important to analyze data set isolation (see “Analyzing data set isolation” on page 28) prior to creating any backups to ensure that a volume level restore will yield the desired results.

Things to check for are:
• Are there non-Db2 data sets on the volumes being backed up and restored? If so, is it desired that they are restored to the same point in time as the system backup?
• If forward recovery is desired after restoring the database data only, then the volumes where any archive logs, BSDSs, or Db2 system data sets reside will need to be segregated from the volumes that contain database data.
• If forward recovery is desired after restoring an entire Db2 environment to the time of a system backup, then the BSDSs and archive logs should not be on volumes contained in the system backup.
• The z/OS user catalogs where the data sets being backed up are cataloged must reside on the volumes being backed up. If database data and log segregation is
required for the desired recovery option, then the segregation also applies to the z/OS user catalogs where the database data and log data sets are cataloged.

System backup (SLB) used for application or database level recovery

Once a system backup is created and the option to Enable OBJ Restore is enabled in the backup profile, then Db2 Recovery Expert can be used to restore an entire application (group of table spaces and indexes) or individual table spaces or indexes from the system backup. When Db2 Recovery Expert restores at the application or object level, it does so at a data set level. After restoring the database data sets from a system backup, Db2 Recovery Expert can then run any forward recovery processes using the existing BSDSs and archive logs.

If application or database level recovery is the only level of recovery that will be needed, then data segregation is not important and Db2 System Analysis and Configuration is not needed.

It is important to make sure Enable OBJ Restore is set to Y prior to creating the system backup.

System backup (SLB) used for remote disaster restart or disaster recovery

A system backup can be created and shipped to a remote site for use in a disaster restart operation or disaster recovery operation.

Disaster restart is the process of restoring a system backup at the remote site and then doing an emergency restart of the Db2 subsystem. The Db2 subsystem will be restored to the point in time when the system backup was created. Db2 will backout any uncommitted changes. In essence, this is the same as recovering from a power outage.

Disaster recovery operations start with the process of restoring a system backup at the remote site, but then forward recovery processes may also be run to apply changes that occurred after the system backup was created.

In either scenario, it is not important that Db2 recovery structures (BSDSs and logs) be segregated from the database data sets. However, it is important to verify the following by doing the Db2 System Analysis and Configuration:

- Non-Db2 data sets may reside on the volumes included in the system backup. Since the processes at the remote site will restore these volumes, it is desired that these data sets are also restored to the point in time the system backup was created.
- The z/OS user catalogs where the data sets for the Db2 environment are cataloged must be on the volumes that are included in the system backup.

See “Analyzing data set isolation” on page 28 for more information.

Partial system backup (PSLB) for database or application recovery

Db2 Recovery Expert provides the capability to create a partial system backup, or PSLB. A PSLB is a backup that does not include all of the volumes where a Db2 subsystem resides. A PSLB can be used for large databases or applications having
unique backup requirements. Using a partial system backup versus a full system backup will also reduce disk utilization and allow for additional backup generations.

A PSLB can be used for application or object recovery only. A PSLB cannot be used for system recovery. Using a PSLB for application or object recovery, the data is restored at the data set level so log and database data isolation is not required. The desired application database data should be grouped on volumes as a best practice.

Backup frequency and space utilization

Once it is determined what the system backup will be used for, there are several other things to consider when configuring Db2 Recovery Expert to create the system backups.

System backup type

Db2 Recovery Expert allows for the following types of backups:

Full The system backup will contain the database data, the archive logs, and the Db2 system data sets. A Full backup can be used for system restore; application or object recovery; and disaster restart or recovery.

Data only The system backup will contain only the database data for the Db2 environment. A Data only backup can be used to restore all of the database data and then run forward recovery processes. This is done at the volume level. Or a Data only backup can be used for application or object recovery and this is performed at the data set level.

Partial The system backup will contain only data for an application or group of objects. A partial backup can only be used for application or object recovery. Restoring the data sets is done at the data set level.

Determine optimal backup frequency and retention

With the recovery objectives in mind, you will need to consider how frequently the system backups will need to be created. Using fast-replication, the CPU and I/O costs to create a backup are minimal. The impact to online Db2 availability is also insignificant so the traditional approach of first determining when a backup could be created may not necessarily hold true. Using Db2 Recovery Expert, the best approach may be to consider how long of a recovery time is most ideal for the business and then to set the backup frequency (hourly, daily, weekly, etc.) based on this.

Using fast-replication, Db2 Recovery Expert creates a system backup on disk. Having a system backup on disk can greatly reduce recovery time. Db2 Recovery Expert can maintain up to 8 generations of a system backup on disk. Db2 Recovery Expert can also automate the offloading of a system backup to tape and use a tape based system backup for recovery if needed. Again, the most ideal recovery time for the business should be considered when determining the number of generations to maintain on disk and/or tape.

If disk space is a premium for creating and maintaining system backups, then possibly the system backups could be configured to immediately offload them to tape so that the disk volumes can be used to create system backups for other Db2 subsystems.
The following scenarios show possible implementations of Db2 Recovery Expert:

- To maintain a set of SNAP or FlashCopy backups for the previous week, you could configure a profile with a SNAP or FlashCopy backup type and seven generations of full backups. This job is scheduled to run daily.
- To maintain a set of BCV backups for the previous week, you could configure a profile with a BCV backup type and eight generations of full backups. Eight generations are required to maintain one week of backups, since one target volume is always mirroring the current set of volumes. This leaves seven backups available for system restoration. This job is scheduled to run daily.
- A separate profile can be created to run once a week. This profile would create backups that can be used to restore the system to a point farther back than one week ago. Depending on space considerations, you could set the number of generations as low or high as desired.

**Fast-replication considerations**

- Consider incremental fast-replication options to reduce background copy time and resources
- Consider using space efficient fast-replication methods like EMC VDEVs to save space

---

**Analyzing data set isolation**

If the desired usage of a system backup requires any type of data set isolation, then the physical location of the data sets and the user catalogs for these data sets will need to be examined. If the use for the system backup does not require any type of data set isolation, such as application or object recovery only, then this section can be skipped.

The requirement to have data isolated for some restore operations is because Db2 Recovery Expert invokes a volume level restore for certain operations. When a volume is restored, all of the data sets will be restored as they existed at the time the SLB was created. Consideration needs to be done for non-Db2 data sets that may reside on the volumes being restored and also the user catalogs must reflect the data sets on the volumes being restored.

Db2 Recovery Expert provides a Db2 System Analysis and Configuration function that will help you in analyzing the data set placement for all of the data sets in a Db2 subsystem (see Chapter 6, “The Subsystem Setup facility,” on page 149). The Db2 System Analysis and Configuration function will also report on what type of restores and recoveries are allowed with the current configuration.

The following table summarizes data set isolation requirements based on a system backup’s usage:
### Table 2. Data set isolation requirements

<table>
<thead>
<tr>
<th>System backup usage</th>
<th>Data set isolation requirements</th>
<th>Considerations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Local site full system restore with forward recovery</td>
<td>1. User catalogs for all Db2 data sets need to be included in the system level backup.</td>
<td>1. Non-Db2 data sets may be restored</td>
</tr>
<tr>
<td></td>
<td>2. Log and BSDS data sets and their associated user catalogs need to be isolated from database data sets and their associated user catalogs.</td>
<td>2. User catalogs should not contain non-Db2 data sets if the data sets are not on volumes being backed up.</td>
</tr>
<tr>
<td>Local site full system restore with no forward recovery</td>
<td>User catalogs for all Db2 data sets need to be included in the system level backup.</td>
<td>1. Non-Db2 data sets may be restored</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2. User catalogs should not contain non-Db2 data sets.</td>
</tr>
<tr>
<td>Application or object recovery</td>
<td>User catalogs for the application or database data sets need to be included in the system level backup.</td>
<td>Only SCOPE=Data is needed.</td>
</tr>
<tr>
<td>Disaster, or remote site recovery</td>
<td>User catalogs for all Db2 data sets need to be included in the system level backup.</td>
<td>1. Non-Db2 data sets may be restored</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2. Partial system level backup cannot be used.</td>
</tr>
</tbody>
</table>

The most stringent data set isolation requirements are required when you are using a system backup to do a local site full system restore with forward recovery. To ensure the most complete and accurate system restoration, the Db2 subsystem setup should follow these recommendations:

- The user catalog(s) for the Db2 log and BSDS data sets should be separate from the user catalog(s) for Db2 objects and indexes and not reside on the same volume(s) as any other Db2 databases or Db2 database catalog(s).
- The Db2 BSDS, active log, and archive log data sets should reside on separate volumes from the Db2 database data.

These requirements ensure that your Db2 database and log data are contained on separate sets of volumes. When you restore the volumes, the user catalogs will be restored and will reflect the data and log locations as they were at the time of the backup as shown in the following figure.
The following steps describe implementing a local site full system backup with forward recovery:

1. The Db2 subsystem is discovered and analyzed so that the correct system backup methodology can be chosen for the intended recovery needs.

2. A system backup profile is created. During the profile creation process, DASD volumes used for the system backup are selected. The target backup volumes can be selected from a range of target units or an SMS storage group.

3. A system backup is created using the information provided in the backup profile to drive a storage-based fast replication process. Backups performed using the “full” option backup all volumes of the Db2 system (3a, 3b) while backups performed using the “data only” option backup only the data volumes (3b).

4. The backup is recorded in the Db2 Recovery Expert metadata repository. Recorded information includes: backup type, time, target volumes used, and data set name mappings for use in application-level recoveries.

5. Online disk volumes can be archived to tape automatically after each system backup or on demand using the System Restore and Offload ISPF menus.

### Planning for the creation of a Db2 subsystem backup

This task provides an overview of the steps necessary to create a Db2 subsystem backup.

Db2 Recovery Expert creates a system backup using information specified in system backup profiles and using DASD volume relationships specified in the volume mapping section of the system backup profile.
**Note:** The Db2 Recovery Expert libraries along with the Db2 loadlibs (SDSNLOAD and SDSNEXIT) should not reside on the volumes being backed up. This can cause contention and can cause your ISPF session to hang until the system backup completes.

The following steps describe how to perform a system backup:

1. The Db2 system is discovered and analyzed. Source volumes are identified and data set and catalog placement is analyzed to determine if the Db2 subsystem layout can accommodate the system backup methodology for the intended recovery needs.

2. All source Db2 volumes are identified and analyzed to determine if non-Db2 data resides on the volumes. Warning messages are issued when non-Db2 data is included in a Db2 system backup.

3. Source Db2 volumes are mapped to target volumes that will contain the system backup. The source to target volume mapping is done during the backup profile creation process.

4. Db2 Recovery Expert performs system backup validation checks before each backup to ensure that the backup is complete and can be used for a successful restore operation.

5. Db2 Recovery Expert invokes an appropriate storage-based fast-replication process. The backup is performed in the storage processor without using host CPU and I/O resources. The system backup is completed from a Db2 Recovery Expert system and application perspective when the storage-based fast-replication command is issued. Typically, full Db2 Recovery Expert system backups complete in seconds or less. Data consistency functions are employed to ensure that the backup data state can be used for recovery purposes. Data consistency is ensured by suspending Db2 Recovery Expert logging activity or using the appropriate storage processor consistency functions.
6. When the backup is complete, information about the backup is recorded in the Db2 Recovery Expert metadata repository. The metadata information includes an inventory of where each Db2 Recovery Expert database data set resides on the backup volumes. This information is used to restore individual data sets when performing a Db2 Recovery Expert application or object recovery operation.

**Performing a Db2 system, application, or object recovery**

Db2 Recovery Expert automates Db2 system, application, or object recovery from a system backup. System recovery is performed using the ISPF interface and application or object recovery is performed using either the ISPF or Web interface.

System recovery can be a full or data only recovery. When a full system recovery is performed, Db2 Recovery Expert will restore all data and log volumes and no Db2 log apply recovery is performed on the restored volumes. Performing a full system recovery is analogous to performing a “recover to copy” when using image copies for recovery.

Figure 4 depicts the use of a system backup for recovery of applications or objects for a Db2 environment.

---

**Figure 4. Using Db2 Recovery Expert to recover an application environment**

The following processing steps refer to Figure 4 and describe a Db2 system recovery process using a Db2 Recovery Expert-generated system backup:

1. The appropriate system backup metadata is selected from the metadata repository using the recovery criteria specified in the Restore System Display from the System Restore and Offload panels.

2. Db2 Recovery Expert invokes an appropriate, storage-based fast-replication process to perform the system restore process. The restore operation is performed in the storage processor without using host CPU and I/O resources.

3. The Db2 recovery processes begin after the volume restore process has started. Thus, the Db2 recovery process is performed in parallel with the volume restore process to minimize overall Db2 recovery time.
Data-only recovery directs Db2 Recovery Expert to restore only the data volumes from the system backup. This leaves the Db2 log data sets unaffected and available to use for Db2's recovery processes. The Intelligent Recovery Manager component of Db2 Recovery Expert then determines and executes the recovery utilities in order to bring the databases up to the point in time specified. The recovery processes include fast data set restores and running one or more of the following utilities:

- Recover Utility
- Rebuild Index Utility
- SQL Undo/Redo Utility
- DSN1COPY Utility
- Unload and Load Utility
- Check Data Utility
- Post Recovery Image Copy Utility

These processes can take place while the storage processor is restoring the data volumes in the background. The recovery process can use a point in time or recover to current to establish the end of the recovery process. Figure 5 depicts how the Intelligent Recovery Manager drives the various recovery processes in order to recover an application.

Figure 5. Db2 Recovery Expert controlled application recovery

Db2 application or object-level recovery is done by creating an application profile. You can create application profiles that will recover objects using the schema level repository (SLR) or Db2 logs. You can also create an ad-hoc specification that can be used to recover objects that were changed by a transaction. Application profiles are created and stored in the metadata repository and can be recalled for use when application recovery is required. The application profile specifies a recover to point as either current or a point in time. The application profile also describes which recovery resources to use by specifying whether to recover from disk, an offloaded tape, an image copy, or all available resources.

System and object recoveries can restore data and perform Db2 recovery operations in parallel when recovering from a system backup that resides on disk. Db2 Recovery Expert will invoke an appropriate data set fast-replication process in the storage processor. While the data is flowing from the backup volume to the source Db2 system to restore the data, Db2 recovery processes can run in parallel with the data restoration process.

The Db2 Recovery Expert parallel restore and recovery process significantly reduces overall recovery time and increases application high availability.
Planning a tape-based Db2 disaster restart methodology

A tape-based disaster restart methodology is one where a restartable Db2 system is captured on disk and transferred to a disaster recovery site using tape as a transport mechanism.

Traditional image copy based Db2 disaster recovery procedures are not used at the disaster recovery site. Instead, tapes containing a restartable Db2 system are loaded onto disk and Db2 is restarted at the disaster recovery site. The disaster recovery exercise is complete when the Db2 restart process completes.

Db2 Recovery Expert creates a restartable Db2 system while creating a system backup. Db2 Recovery Expert coordinates suspending Db2 logging activity or a storage-based consistency function with a storage-based fast-replication procedure to create a system backup that is dependent-write-consistent.

A dependent-write-consistent data state is identical to a Db2 system that has been exposed to a power failure. When a Db2 system is restarted using a system backup, the dependent-write-consistent data state that is inherent in the system backup is transformed to a transactionally-consistent data state by the Db2 restart process. Once the restart process is complete, the Db2 recovery is done.

Db2 Recovery Expert has facilities to pre-process archive logs and image copies as they are copied to tape for disaster recovery purposes. The pre-process will also create a copy of the BSDS data sets conditioned with the information on what archive logs and image copies will be transported to the disaster recovery site. The pre-processing creates a partitioned data set with the information needed to restore the conditioned BSDSs and other files needed for recovery.

The disaster recovery procedures exercised at the disaster site restore the Db2 system using the last offsite system backup, restore the conditioned BSDS data sets, restore archive logs and image copies, execute Db2 recovery processes, and start Db2. [Figure 6 on page 35] shows the steps required to transform traditional Db2 disaster recovery procedures into a tape-based disaster restart solution.
The following processing steps refer to Figure 6 and are used to implement a Db2 tape-based disaster restart solution:

1. Db2 Recovery Expert creates a system backup that has a dependent-write-consistent data state.

2. The system backup is archived to tape and one of the archive tape copies is targeted to be transported to the disaster recovery site. Tape archival options and offsite specification are provided in the System Restore and Offload panels available from the main ISPF panel.

3. Db2 archive logs and Image Copies are identified; a copy of the BSDS data sets is created and conditioned with the files to be sent to the disaster recovery site; and information is gathered and sent to the disaster recovery site to restore these files at the disaster recovery site when they are needed.

4. A disaster restart process is exercised where the last offsite system backup is restored, databases are recovered, and Db2 is restarted. The Db2 restart process transforms the dependent-write-consistent data state created in step 1 into a transactionally-consistent data state. Db2 is ready to accept new work after the restart process is complete.

**Db2 Recovery Expert and storage system integration**

Db2 Recovery Expert leverages storage system capabilities and fast-replication products to perform backup and restore operations on behalf of the Db2 system. Using storage-based fast-replication to copy data allows Db2 systems to be backed up instantaneously without using host CPU and I/O resources.

Db2 system and database recovery operations are expedited by allowing data to be restored using storage system services while Db2 recovery operations are performed in parallel. Some storage-based fast-replication products used to
support a Db2 Recovery Expert system backup approach include: IBM FlashCopy, EMC TimeFinder and Hitachi Data Systems (HDS) ShadowImage.

Db2 Recovery Expert integrates storage-based fast-replication facilities with Db2 backup and recovery processes through the use of a Data Copy Manager. The Data Copy Manager is a software component used to translate logical database backup and restore requests into physical storage system fast-replication facility requests. It uses the Db2Log Suspend operation or storage-based consistency functions to create a dependent-write consistent copy of the Db2 data.

The Data Copy Manager invokes appropriate volume and data set fast-replication facilities to leverage the underlying storage system capabilities. These requests copy the data on behalf of the Db2 systems using storage system facilities. The Data Copy Manager separates Db2 logical backup and restore operations from the physical backup processes. This allows new data copy methods and features to be integrated into the Db2 Recovery Expert infrastructure easily.

The Db2 Recovery Expert Data Copy Manager integrates with specific storage system services and fast-replication facilities through the use of copy blades. A copy blade is a logical grouping of data copy services that can be invoked to drive specific storage hardware and software facilities using appropriate application programming interfaces. Copy blades invoke specific storage system copy services like storage-based consistency functions and drive fast-replication methods to backup and restore Db2 data on behalf of the Db2 system. Copy blades are used to copy data at a storage volume level and at a data set level. Db2 Recovery Expert supports the following copy blades:

- IBM FlashCopy
- IBM DFSMSdss
- EMC TimeFinder
- HDS ShadowImage

The following figure depicts the Db2 Recovery Expert Data Copy Manager and its use of copy blades.

![Figure 7. Db2 Recovery Expert Data Copy Manager interaction with copy blades](image)

The copy blade and copy method used to perform Db2 backup and restore operations are specified when you create a system backup profile. System backup defaults should be set in consultation with your storage administrator. Copy blade usage specifications can be overridden to accommodate specific Db2 system backup requirements when creating or updating a system backup profile (see Chapter 9, “Creating system backup profiles,” on page 197).
Once the copy blade, copy method, and data consistency control mechanisms are specified in the backup profile, then Db2 Recovery Expert will drive appropriate data copy services and fast-replication facilities through its respective copy blade interfaces to perform Db2 backup or restore operations.

Copy blade selection considerations

Before configuring Db2 Recovery Expert, it is important to consult with your storage administrator to determine the type of storage processors used in your Db2 environment and the preferred fast-replication facilities to use.

Knowing the type of storage processors and available fast-replication facilities will allow you to determine which copy blade, which fast-replication method, and which data consistency mechanism to use for creating a Db2 system level backup in your environment.

IBM FlashCopy blade

The IBM FlashCopy blade provides Db2 Recovery Expert interface support for IBM FlashCopy. The FlashCopy blade uses the native IBM ANTRQST macro interface to invoke FlashCopy.

This method of invoking FlashCopy is very fast as it takes a very small amount of time to issue FlashCopy commands which create a point-in-time copy of a Db2 system at the volume level. All tracks are copied in the background for each system level backup. The Db2 Recovery Expert Log Suspend operation is used to ensure data consistency while FlashCopy commands are executed.

FlashCopy does not require the use of SMS or HSM. This reduces the complexity of the backup configuration.

FlashCopy V1 can be used to create full Db2 system level backup and restore operations. However, FlashCopy V2 is required to perform application or object-level restore functions. Application and object-level restore operations require data set FlashCopy support that is available in FlashCopy V2.

When using the FlashCopy blade, the Db2 data must reside on FlashCopy capable storage subsystems and the Db2 system backup profile must define identically sized source and target volumes. In addition, the source and target volumes must both be located in the same storage subsystem. Users can specify target volume ranges so there is no need to update a backup profile when the Db2 subsystem expands to new volumes.

FlashCopy commands issued through the FlashCopy blade interface make a backup of all the Db2 system volumes. The FlashCopy blade uses volume based copy services to create the Db2 system level backup and it uses volume or data set copy services to restore Db2 systems, application, or objects respectively. Application or object recovery will be performed through DFSMSdss. DFSMSdss will use fast-replication if possible and will use host based I/O (slow copy) if the FlashCopy background copy process is not complete.

When using the FlashCopy blade, the backup target volumes are kept offline. Db2 Recovery Expert will perform all the necessary commands to bring the volumes online when they are needed to copy the volumes to tape or to perform application recovery through DFSMSdss or FDR.
When Db2 Recovery Expert needs to bring a backup volume online temporarily, it will relabel the backup volume, vary it online, and then read the data from the backup volume. Once the backup volume is no longer needed, Db2 Recovery Expert will vary the volume offline and then relabel it to the original volume serial.

The IBM FlashCopy blade can support IBM, EMC and HDS storage processors when FlashCopy or FlashCopy emulation products are available for use. The FlashCopy blade can create system level backups for Db2 systems that are spread across heterogeneous storage systems when all storage systems are using FlashCopy compatible fast-replication products.

**EMC TimeFinder copy blade**

The EMC TimeFinder copy blade is used to invoke EMC TimeFinder copy services.

The EMC TimeFinder copy blade supports the following EMC copy methods:

- TimeFinder/Mirror
- TimeFinder/Clone Mainframe Volume Snap
- TimeFinder/Snap Mainframe Data Set Snap
- TimeFinder/Snap Virtual Devices
- EMC Enginuity Consistency Assist

Db2 Recovery Expert users should consult with their storage administrator to determine which EMC TimeFinder copy blade method is best for their environment. Storage administrators should be consulted on the use of EMC Consistency Assist technology in their environment.

**EMC TimeFinder/Mirror copy method**

Db2 Recovery Expert uses EMC TimeFinder/Mirror to make a Business Continuity Volume (BCV) backup of a Db2 subsystem. A BCV can be established as a mirror of a standard volume and synchronized with the standard volume. Once synchronization is established, then all data written to the standard volume is also written to the BCV.

When the standard and BCV pairs representing the Db2 subsystems are synchronized and Db2 Recovery Expert requests a system level backup to be created, then the currently established BCV pairs are split from their standard volumes. The data on the BCVs becomes the point-in-time system level backup. The Db2 subsystem must be on EMC capable TimeFinder/Mirror storage processors.

TimeFinder/Mirror does not require SMS or HSM usage. This reduces the complexity of the backup configuration.

Standard volumes and BCVs must be the same model type (for example, 3380 or 3390) and have the same number of cylinders (for example, 3390-3 or 3390-9). In addition, the source and target volumes must be located in the same physical Symmetrix storage subsystem. When Db2 expands to new volumes, the backup profile must be updated to add new Db2 source and BCV target units. If you have questions about your Symmetrix configuration or TimeFinder/Mirror usage, contact your EMC customer service representative.
When a backup profile is created that keeps more than one generation of BCV backups, then Db2 Recovery Expert immediately establishes the next set of BCVs to the standard volumes representing the Db2 subsystem when each backup is taken. The second set of BCVs will become the next generation system level backup. BCV copies are incremental, so only the changed tracks are copied since the last time the BCVs were used to create a backup.

TimeFinder/Mirror can use EMC Consistency Assist Technology so a Db2 log suspend operation is not required during the backup process. A Db2 system level backup is complete and usable at the time the BCVs are split. If the BCVs have not fully synchronized when the backup is requested, Db2 Recovery Expert can optionally wait for the copy process to complete before continuing.

Db2 system level restore operations can be performed immediately after the backup is made. The TimeFinder/Mirror copy blade invokes a TimeFinder BCV Restore operation to restore Db2 data. The restore operation copies only the changed tracks made to the source Db2 volumes since the backup was made.

Db2 application and object recovery use EMC Snap Dataset to restore Db2 data instantaneously. Db2 data can be restored using EMC Snap Dataset without clipping and bringing the volumes online.

BCV volumes containing a Db2 system level backup must be re-labeled and brought online before they can be offloaded to tape. Db2 Recovery Expert will perform this process automatically.

Usage Requirements:

- EMC Symmetrix 6 and higher running with Microcode 5x67 or higher
- To use Enginuity Consistency Assist (ECA), Microcode 5x67 with patch 14882 or Microcode 5x68 with patch 18954 or Microcode 5x69 or higher is required. To use ECA with SNAP VOLUME technology, the EMC SNAP library must be level 5.5 or higher.

**Note:** Db2 Recovery Expert performs a “Protected BCV restore” in order to preserve the BCV backup point when a BCV Restore operation is performed. The Protected Restore operation is not supported prior to Microcode 5x70. If any Symmetrix array is at a microcode level lower than 5x70, then a SNAP type restore will be performed to restore Db2 data.

**EMC TimeFinder/Clone copy method**

Db2 Recovery Expert uses EMC's TimeFinder/Clone Mainframe Volume Snap Facility (hereafter referred to as the SNAP utility) to create a Db2 system level backup. The SNAP utility can be used to perform fast-replication for full volumes or for data sets. The Db2 subsystem must be on EMC capable TimeFinder/Clone storage processors.

TimeFinder/Clone does not require SMS or HSM usage. This reduces the complexity of the backup configuration.

To use Db2 Recovery Expert, you must define source and target volumes to have identical volume size and model types. In addition, the source and target volumes must both be located in the same Symmetrix storage subsystem. The target volumes can be either standard volumes or BCVs. Users can specify target ranges so there is no need to update a backup profile when Db2 expands to new volumes.
TimeFinder/Clone Mainframe Volume Snap Facility can use EMC Consistency Assist Technology so a Db2 log suspend operation is not required. EMC TimeFinder/Clone Mainframe Volume Snap can be performed in phases using a phased snap so performance implications to source volumes can be timed and mitigated. TimeFinder/Clone full volume snap operations are differential so only changed tracks are copied since the last backup was created.

Db2 system restore operations need to wait until background copy processing is complete. Application and object restore operations use TimeFinder/Clone Mainframe Data Set Snap for instantaneous restore of Db2 data sets. Db2 restore operations using Data Set Snap need to wait until the system level backup background copy process is complete. Fast data set restore operations can be performed through Data Set Snap without re-labeling and bringing the backup volumes online.

**EMC TimeFinder/Snap virtual device usage**

EMC virtual devices provide for space efficient snap operations. Db2 backup target volumes do not need a full backup volume for each source Db2 volume. EMC virtual devices use a "SAVE POOL" to store the original version of source data before it is changed and after the backup has been taken. This type of backup can significantly reduce the amount of backup space that is required.

Users can specify target ranges so there is no need to update a backup profile when Db2 expands to new volumes. EMC Consistency Technology can be used so a Db2 log suspend operation is not required. The Db2 system must be on EMC capable TimeFinder/Snap storage processors with virtual device support.

TimeFinder/Snap does not require SMS or HSM usage. This reduces the complexity of the backup configuration.

The use of EMC virtual devices allows many Db2 system backup points to be created and saved on fast replication disk. However, a true disk backup never exists; only the changed tracks since the last backup are stored in the save pool. Save pools must be monitored to ensure the save pool does not fill up. The virtual device backup can be copied to tape, at which time a full backup of the Db2 system is written to tape and can be used for any recovery purpose.

Db2 system level restore operations are performed by snapping the virtual volumes back to their source volumes. Only the changed tracks since the backup was created are copied to restore the Db2 data. Application and object restore operations copy data sets from the virtual device backup to their respective source volumes with DFSMSdss using host copy services.

**HDS ShadowImage copy blade**

The HDS ShadowImage copy blade supports HDS native ShadowImage volume copy processes. The copy process is very fast so Db2 Log Suspend time is minimized.

ShadowImage fast-replication copies are incremental copies so only the changed tracks are copied since the last system level backup was created. The incremental process reduces the storage processor overhead associated with copying all the source tracks to the target device for each backup operation. The Db2 Recovery Expert Log Suspend operation is used to ensure data consistency while ShadowImage commands are executed.
The HDS ShadowImage copy blade does not require the use of SMS or HSM. This reduces the complexity of the backup configuration.

The ShadowImage copy process requires that the source and target volumes be on the same storage processor. The ShadowImage copy blade supports three backup generations. The ShadowImage copy blade allows coordinated FlashCopy and ShadowImage copy methods to be used. That is, source Db2 volumes located on HDS storage processors can use ShadowImage while other source volumes can use FlashCopy fast-replication facilities to perform a Db2 system level backup operation.

Db2 system recovery operations use ShadowImage to restore backup volumes. Application and object recovery operations are performed using DFSMSdss. DFSMSdss will use data set fast replication if it is available or it will use host based I/O (slow copy) if it is not available or if the backup background copy process is not complete.

When using the ShadowImage copy blade, the target volumes are kept offline. Db2 Recovery Expert will perform all the necessary commands to bring the volumes online when needed to copy the volumes to tape or to perform application recovery through DFSMSdss.

**Note:** Db2 Recovery Expert does not support waiting on background copy to complete.

### IBM DFSMSdss copy blade

The Db2 Recovery Expert DFSMSdss copy blade can be used to create a Db2 system level backup.

The DFSMSdss copy blade uses the ADRDSSU interface specifying fast-replication (preferred). The copy blade will drive fast-replication services if they are available and will use host based I/O copy methods if it is not. This copy blade interface can be used to drive data sets or volume based fast-replication facilities.

The Db2 system backup profile must define identical source and target volumes and model types. The source and target volumes may or may not be FlashCopy capable. If the source and target volumes are all FlashCopy capable, then the Db2 Recovery Expert Log Suspend operation is used to ensure data consistency while DFSMSdss commands are executed.

The use of DFSMSdss requires Db2 logs to be suspended for a longer period of time due to the overhead of executing the fast replication commands through the DFSMSdss interface. If any source or target volume is not FlashCopy capable, then Db2 Recovery Expert requires the Db2 system to be down to create the backup.

The DFSMSdss copy blade does not require SMS or HSM usage. This reduces the complexity of the backup configuration.

The DFSMSdss copy blade supports IBM FlashCopy on IBM storage processors and compatible FlashCopy products on EMC and HDS storage processors. It also supports SnapShot on STK or IBM Ramac storage processors. Invoking FlashCopy facilities using the ADRDSSU interface is slower than using the IBM FlashCopy blade which uses the ANTRQST interface.
When using the DFSMSdss blade, the target volumes are kept online and therefore must all have unique volume labels. The z/OS data set placement rules must be set up such that the target units will not be used for new data sets or altered by other processes since they are kept online at all times.

**Db2 32 KB table space requirements**

Beginning with Db2 V8, Db2 data sets can be defined with variable control interval sizes.

If you plan on Db2 Recovery Expert using a storage hardware function to suspend Db2 logging instead of Db2 log suspension, the Db2 data sets defined with a page size of 32 KB must have their control interval size defined as 32 KB. This ensures that when I/O to a device is stopped for backup, the control intervals of a data set are not spread across more than one track, possibly resulting in a broken page.

If Db2 Recovery Expert is going to use a storage hardware function instead of suspending the logs, 32 KB data sets with 32 KB page sizes are checked during the backup. If the CI size is not 32 KB, Db2 Recovery Expert flags the space and it is skipped. If you want to use Db2 Recovery Expert on this space, you must alter the CI size and run an IBM REORG utility on the table space.

If Db2 Recovery Expert uses the Db2 log suspend function, rather than a hardware function, there are no specific 32 KB table space requirements.
Chapter 3. Preparing to customize Db2 Recovery Expert

Before you start to customize Db2 Recovery Expert for the first time, determine all of the customization values that you need to specify during the customization process, and familiarize yourself with all of the customization tasks.

The following checklist describes each significant customization step. Use this checklist to guide you through the entire customization process.

**Tip:** Print the following checklist and the data set names and parameter values worksheets. Use the worksheets to record your values, and refer to them during the customization process.

<table>

</tbody>
</table>
Set up your environment prior to customization

Prior to beginning the customization process, ensure that your environment meets all requirements, that you have installed all prerequisite software, and that you have considered how you want to customize optional features.

Verify that your environment meets software requirements

Ensure that you are using z/OS V1.12 (5694-A01) or later.

Ensure that you are using one of the following supported versions of Db2 for z/OS:
- Db2 V10 (5605-D12)
- Db2 Value Unit Edition V10.1 (5697-P31)
- Db2 V11 (5615-D12)
- Db2 Value Unit Edition V11.1 (PID-TBD)

Verify that Db2 Recovery Expert has been installed successfully

See the Program Directory for IBM Db2 Recovery Expert for z/OS, GI10-8927 for installation instructions.

Verify that Tools Customizer has been installed successfully

Tools Customizer is a component of IBM Tools Base for z/OS (5655-V93), which is available free of charge. Tools Customizer provides a standard approach to customizing IBM Db2 for z/OS Tools.

See the Program Directory for IBM Tools Base for z/OS, GI10-8819 for installation instructions.

Verify that your environment meets security requirements

Db2 Recovery Expert requires no extra security measures outside of standard Db2 security.

If a user does not have authority to view a table within a Db2 subsystem, Db2 Recovery Expert will not allow the user to see data changes made to that table.
Similarly, undo and redo SQL that is generated from the product can be run through products such as SPUFI or QMF, and therefore also adheres to normal Db2 security for the user who runs this SQL.

You must have authorization to run the SELECT statement on the following tables:

- SYSIBM.SYSAUXRELS
- SYSIBM.SYSCOLUMNS
- SYSIBM.SYSCOPY
- SYSIBM.SYSFIELDS
- SYSIBM.SYSINDEXES
- SYSIBM.SYSKEYS
- SYSIBM.SYSKEYTARGETS
- SYSIBM.SYSTABLEPART
- SYSIBM.SYSTABLES
- SYSIBM.SYSTABLESPACE
- SYSIBM.SYXMLRELS
- SYSIBM.SYXMLSTRINGS

By default, Db2 Recovery Expert can run the REPORT utility against filtered objects. This activity is transparent to the user and can be disabled by setting the Misc Flags value on the general report panel to a value of X. If you do not disable this feature for any given run, you must have one of the following authorizations to access the REPORT utility through Db2 Recovery Expert:

- RECOVERDB privilege for the database
- DBADM or DBCTRL authority for the database
- SYSCTRL or SYSADM authority

**Adding ARY$TSOC to SYS1.PARMLIB**

Before starting the customization process you must add ARY$TSOC to the IKJTSO00 member in SYS1.PARMLIB.

You will add the program ARY$TSOC to the AUTHPGM and AUTHTSF sections of member IKJTSO00 in SYS1.PARMLIB. You can see how this member is setup by issuing the TSO PARMLIB command. This command shows the contents of the IJKTSOxx member that is active. For more information on IKJTSO00, refer to *IBM Db2 UDB for OS/390 and z/OS: Initialization and Tuning Guide. Chapter 5. Configuring Db2 Recovery Expert.*

**Create RBA Capture utility PDS library**

The Db2 Recovery Expert RBA Capture utility records the current RBA of a Db2 subsystem at regular intervals based on the store clock time. This utility is optional. It uses a started task to capture the RBAs and clock times, and stores the data in its own repository that is separate from the backup and restore system repository.

In order to use this feature you must perform the following tasks before customization:

- You must create a product parmlib data set PDS if one does not exist.
- You must create the member ARYSSID in the parmlib data set.
- You must create the contents of ARYSSID.
The member ARSSID will contain all the SSID’s of the Db2 subsystems that will be monitored by the RBA Capture utility. Each new SSID should start as a new row in the first column. ARSSID must only contain the list of SSID’s to be monitored, no other lines such as comments can be entered.

In order to support multiple LPARs, a different data set with member ARSSID will have to be created for each LPAR.

Table 3. Example of multiple LPAR support

<table>
<thead>
<tr>
<th>LPAR</th>
<th>PDS</th>
<th>Member</th>
</tr>
</thead>
<tbody>
<tr>
<td>RS22</td>
<td>anydatasetname</td>
<td>ARSSID (includes SSID’s for this LPAR)</td>
</tr>
<tr>
<td>RS23</td>
<td>anydatasetname</td>
<td>ARSSID (includes SSIDs for this LPAR)</td>
</tr>
</tbody>
</table>

You will specify the name of the PDS that contains the ARSSID member using the Tools Customizer in the Required Parameters input field Product parmlib dataset.

Undiscovered Db2 parameters

Many of the parameters that you will specify on the Tools Customizer Db2 Parameters panel may be discovered automatically when you use Db2 Recovery Expert Discover EXEC.

There are three Db2 parameters that are not discovered using the Discover EXEC. The three parameters are the Db2 version level number, the run library, and the database name where the Db2 Recovery Expert objects will be stored.

You must manually specify these parameters from the Tools Customizer Db2 Parameters panel as follows:

- Specify your version of Db2 in the Level Number field that is found under the General Db2 Information heading. You may specify 101, 111, or 112 depending on the version of Db2 that you are using.
- Specify the name of the run library for Db2 Recovery Expert in the Run Library field that is found under the Db2 Libraries heading.
- Specify the name of the database that will hold the Db2 Recovery Expert objects in the Database for Recovery Expert objects field that is found under the Recovery Expert Db2 vars heading.

Specifying Db2 load libraries in the correct order

Db2 Recovery Expert requires its Db2 load libraries to be in a specific order when they are defined in the Product Parameters panel.

There are two possible situations where the Db2 load libraries for Db2 Recovery Expert may be specified in the wrong order. The first situation is when you do not use the Db2 Recovery Expert Discover EXEC to discover product information and the second situation is when you are upgrading from Db2 Recovery Expert V2.2.

Db2 Recovery Expert requires Db2 SDSNLOAD to be defined under the load library. You define SDSNLOAD using the Db2 Libraries Load Library field from the Db2 Parameters panel.
Installing the web interface

The Db2 Recovery Expert web interface is installed using the Tools Customizer. The web interface files are unpacked using the UNPAXSH JCL job. Tools Customizer will edit and run this job.

Before starting the customization process:

• Obtain write access to the UNPAXSH path. If necessary you can update the UNPAXSH file path to use your own specific file path.
• Identify the HFS directory where the web interface files will be installed. The directory must not already exist and will be created by the UNPAXSH job. The HFS directory will need 2 MB of memory.

During the customization process you will be asked to enter the following information:

• In the HFSHTDOC variable you will specify the name that will be used for the HFS directory.
• In the MVSHTDOCs variable you will specify the name of the paxed data set.

Clearing web browser cache after upgrading or applying maintenance

It is recommended that after applying maintenance and before opening the Db2 Recovery Expert web browser interface, you clear your web browser’s cache.

Configuring the PARMLIB member

Db2 Recovery Expert uses a parameter library (PARMLIB) that provides settings to control various aspects of the backup and restore utilities. The name of the PARMLIB is ARY#PARM and it is a member of the SAMPLIB data set.

The default settings in the ARY#PARM member are suitable for most installations. If you do require a parameter change, refer to the tables in this section for information on the parameters, their settings, and the potential ramifications of changing the defaults.

To change a parameter value you must edit the ARY#PARM member.

Table 4. General parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>PARMLIB_VERSION</td>
<td>This value identifies the PARMLIB member version to Db2 Recovery Expert. This value defaults to the current version and should not be changed.</td>
<td>Do not change this parameter.</td>

<tbody>
<tr>
<td>MAX_RETURN_CODE</td>
<td>Valid values are 4/8/12/integer. Specifies the maximum return code of all EMC SNAP commands before processing stops.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Default: / (EMC default)</td>
<td></td>
</tr>
<tr>
<td>SNAP_WAIT</td>
<td>Valid values are Y(es) or N(no). If Y, the backup utility waits for the SNAP operation to complete before ending the job. If N, the backup utility can end while the SNAP operation completes the Symmetrix caches updates to the source volume until the SNAP operation is complete.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Default: N</td>
<td></td>
</tr>
<tr>
<td>SNAP_WAIT_HOURS</td>
<td>If SNAP_WAIT is Y, the number of hours to wait for the SNAP operation to complete before continuing.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Default: / (EMC default)</td>
<td></td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
<td>Notes</td>
</tr>
<tr>
<td>----------------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>------------------------</td>
</tr>
<tr>
<td>SNAP_WAIT_MINUTES</td>
<td>If SNAP_WAIT is Y, the number of minutes to wait for the SNAP operation to complete before continuing.</td>
<td>Default: / (EMC default)</td>
</tr>
<tr>
<td>SNAP_WAIT_SECONDS</td>
<td>If SNAP_WAIT is Y, the number of seconds to wait for the SNAP operation to complete before continuing.</td>
<td>Default: / (EMC default)</td>
</tr>
<tr>
<td>MAX_ADRDSSU</td>
<td>This is the maximum number of address spaces that can be spawned.</td>
<td>Default: / (EMC default)</td>
</tr>
<tr>
<td>MAX_TASKS1</td>
<td>The maximum number of individual requests that can be attached and used.</td>
<td>Default: / (EMC default)</td>
</tr>
<tr>
<td>MAX_TASKS2</td>
<td>The maximum number of individual activities that can be performed within a single request.</td>
<td>Default: / (EMC default)</td>
</tr>
<tr>
<td>DEBUG_MODE</td>
<td>Valid values are A(ll), Trace, D(ump), E(err) or X(tra). Sets the amount of information written for debugging to the ARYSNAPO DD.</td>
<td>Default: E</td>
</tr>
<tr>
<td>DEBUG_EXTENTS</td>
<td>Value values are Y(es) or N(o). Specifies whether DEBUG information about extents is to be included.</td>
<td>Default: / (EMC default)</td>
</tr>
<tr>
<td>TOLERATE_ENQ_FAILURES</td>
<td>This parameter allows a volume to be SNAPPED when exclusive serialization cannot be obtained. This parameter should be set to Y(es).</td>
<td>Default: / (EMC default)</td>
</tr>
<tr>
<td>Parameter</td>
<td>Description</td>
<td>Notes</td>
</tr>
<tr>
<td>-------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------</td>
</tr>
<tr>
<td>COPY_VOLUME_ID</td>
<td>This parameter controls whether the volume serial number of the source volume gets copied to the target volume.</td>
<td>Default: Y</td>
</tr>
<tr>
<td>PHASED_SNAP</td>
<td>If set to Y, this parameter enables phased SNAP or SNAP group processing. This will break the actual EMC SNAP VOLUME command into separate phases. The purpose of this parameter is to improve performance and lessen the impact of the SNAP VOLUME commands on the storage array.</td>
<td>Default: N</td>
</tr>
<tr>
<td>SNAP_GROUP_PDS</td>
<td>If PHASED_SNAP is Y, this parameter must contain the name of a partitioned data set. It is recommended to use an extended PDS (a PDSE). This data set will be used internally to store the phased SNAP commands it needs to execute.</td>
<td></td>
</tr>
<tr>
<td>WAIT_FORBACKGROUND_COPY</td>
<td>If set to Y, Db2 Recovery Expert will wait for background SNAPs to complete before letting the job complete. If set to Y or S, the backup will end with a copypool FASTREPLICATIONSTATE status check. If set to S, there will be a status check, but Db2 Recovery Expert will not wait for background SNAPs to complete before letting the job complete. Db2 Recovery Expert will monitor the Flash Copy backup in a separate ARYCOPY step but will not halt the completion of the job.</td>
<td>If set to S, the user will still be notified when the Flash Copy backup is completed. Default: N. Db2 Recovery Expert will not wait for the background copy to complete.</td>
</tr>
</tbody>
</table>
### Table 7. Global Snap Parameters (continued)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>WAIT_FOR_OFFLOAD</td>
<td>Valid values are Y and N. If set to Y, Db2 Recovery Expert will wait for the SLB (system-level backup) to finish the physical offload.</td>
<td>The offload is considered finished when the copypool DUMPSTATE status is ALLCOMPLETE. &quot;Waiting for offload&quot; is processed in the same step as offload itself, not in a separate step.</td>
</tr>
</tbody>
</table>

### Table 8. Parameters that affect the BCV split utility

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>BCV_WAIT_SECONDS</td>
<td>Valid values are 01-99. The number of seconds to wait between each check for BCV split completion.</td>
<td>Default: 06</td>
</tr>
<tr>
<td>WAIT_RETRIES</td>
<td>Valid values are 01-99. The number of times to check for BCV split completion.</td>
<td>Default: 99</td>
</tr>
</tbody>
</table>

### Table 9. Parameters that affect the restore utility

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>ABEND_ON_ERRORS</td>
<td>Valid values are Y(es) or N(0). Y indicates the utility will issue a z/OS abend code if errors are encountered. The abend code issued will be the value specified for USER_ABEND_RETURN_CODE.</td>
<td>Default: N</td>
</tr>
<tr>
<td>USER_ABEND_RETURN_CODE</td>
<td>Valid values are 01-99. This parameter allows you to provide a user abend code if the ABEND_ON_ERRORS parameter is set to Y. If the ABEND_ON_ERRORS parameter is set to N, the program error return code is provided.</td>
<td>Default: 08</td>
</tr>
<tr>
<td>WAIT_FOR_VOL_OFFLINE_SECONDS</td>
<td>Valid values are 01-99. The number of seconds to wait for a volume to go offline.</td>
<td>Default: 06</td>
</tr>
</tbody>
</table>
### Table 9. Parameters that affect the restore utility (continued)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>WAIT FOR VOL. OFFLINE RETRIES</td>
<td>Valid values are 01-99. The number of retries while waiting for a volume to go offline.</td>
<td>Default: 99</td>
</tr>
<tr>
<td>WAIT FOR VOL. ONLINE SECONDS</td>
<td>Valid values are 01-99. The number of seconds to wait for a volume to come online.</td>
<td>Default: 06</td>
</tr>
<tr>
<td>WAIT FOR VOL. ONLINE RETRIES</td>
<td>Valid values are 01-99. The number of retries while waiting for a volume to come online.</td>
<td>Default: 99</td>
</tr>
<tr>
<td>CLEAN_OLD_SNAP_SESSIONS</td>
<td>Valid values are Y(es) or N(o). If set to Y, inactive SNAP sessions that reside on this volume that are from other source volumes are cleaned (removed) before the restore. If set to N, inactive SNAP sessions are not removed and the restore will end with an error.</td>
<td>Default: N</td>
</tr>
<tr>
<td>FORCE_SPLIT</td>
<td>Valid values are Y(es) or N(o). For BCV profiles, the current BCV generation will be split before the restore. If this parameter is set to Y, the FORCE parameter will be added to the split call.</td>
<td>Default: Y</td>
</tr>
<tr>
<td>PERFORM_CHECKSUM</td>
<td>Valid values are Y(es) or N(o). If Y, a checksum operation will be performed on a restored volume to ensure it has not been altered since backup.</td>
<td>Default: N</td>
</tr>
<tr>
<td>CLEAR_CFSTRUCTURES</td>
<td>Valid values are Y(es) or N(o). If Y, a command is issued to clear the coupling facility structure for data sharing systems.</td>
<td>Default: Y</td>
</tr>
</tbody>
</table>
Table 9. Parameters that affect the restore utility (continued)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Db2.Utility_Suite_Installed</td>
<td>Valid values are Y(es) or N(no). Y means that the Db2 RESTORE SYSTEM utility is available for system restore. N means the RESTORE SYSTEM utility is not available therefore the RECOVER utility will be invoked.</td>
<td>Default: Y</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Table 10. Parameters that affect the offload utility

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>ABEND_ON_ERRORS</td>
<td>Valid values are Y(es) or N(no). Y indicates the utility will issue a z/OS abend code if errors are issued will be the value specified for USER_ABEND_RETURN_CODE.</td>
<td>Default: N</td>
</tr>
<tr>
<td>USER_ABEND_RETURN_CODE</td>
<td>Valid values are 01-99. This parameter allows you to provide a user abend code if the ABEND_ON_ERRORS parameter is set to Y. If the ABEND_ON_ERRORS parameter is set to N, the program error return code is provided.</td>
<td>Default: 08</td>
</tr>
<tr>
<td>LOAD_ICKDSF</td>
<td>Valid values are Y(es) or N(no). Specify Y to indicate that the utility program ICKDSF is available in the LPA and can be loaded by Db2 Recovery Expert. Specify N to indicate that the utility program ICKDSF is not available and Db2 Recovery Expert will not try to load the program on startup.</td>
<td>If the utility program ICKDSF is not loaded and is needed to re-label an offline volume to bring the volume online, then an error message will be generated instructing the user to change the value of this ARY#PARM member. Default: Y</td>
</tr>
<tr>
<td>CLIP_PREFIX</td>
<td>The prefix to use when clipping volume serials during offload processing.</td>
<td>Db2 Recovery Expert may need to temporarily clip (or change the volser of) the target volume in order to bring the target online.</td>
</tr>
</tbody>
</table>
Configuring access profiles for Db2 Recovery Expert

You can restrict the use of certain Db2 Recovery Expert functions by using access profiles.

**Note:** If you are migrating from an earlier version of Db2 Recovery Expert to version 3.2 and previously configured the access profiles for RACF or ACF2, it is not necessary to complete this task again.

To regulate user access to Db2 Recovery Expert functions, create RACF or ACF2 access profiles. This is an option for RACF users. It is required for ACF2 users. Use the information in the following table to create the profiles:

*Table 11. Access profiles for Db2 Recovery Expert*

<table>
<thead>
<tr>
<th>Function</th>
<th>Description of Authority</th>
<th>Profile</th>
<th>Access</th>
</tr>
</thead>
<tbody>
<tr>
<td>Access</td>
<td>Grants a user the authority to use Db2 Recovery Expert</td>
<td>ARY.ACCESS.ssid where ssid is a four-character Db2 subsystem name or '*'</td>
<td>READ</td>
</tr>
</tbody>
</table>

A user is not allowed to execute a Db2 Recovery Expert backup or restore utility if they are not granted READ access to the corresponding profile or if the profile does not exist. If the specific RACF Facility Class Profile or ACF2 profile does not exist, then the most granular generic profile will be applied in its place. For example, if ARY.ACCESS.ssid does not exist for a given Db2 Recovery Expert subsystem, but a generic profile name ARY.ACCESS.* exists, then the generic profile is used. Only authorization IDs with READ access to the profile are cleared by RACF or ACF2.

Setting up the Db2 Recovery Expert server to use VIPA

You can set up the Db2 Recovery Expert server to use VIPA (Virtual IP Address).

If you use VIPA, and the Db2 Recovery Expert server is moved from one LPAR to another, the server address does not need to be re-configured. It is recommended that the Db2 Recovery Expert server IP address is set up as a Distributed Dynamic VIPA rather than just a Dynamic VIPA.

Setting up a Db2 subsystem with multiple data sharing members

When adding a Db2 subsystem with multiple data sharing members, you must add each individual data sharing member and then add the group as a member. For example, if you had a Db2 data sharing subsystem EDSA that has two members EDS1 and EDS2 you would perform the following procedure when you are creating and associating Db2 entries using Tools Customizer.

1. From the Customizer Workplace panel, issue the ASSOCIATE command. The Associate Db2 Entry for Product panel opens.

2. From the Db2 Entry for Product panel:
   a. Issue the Create command. The Create a Db2 Entry panel opens. In the **Db2 subsystem ID name** field specify the SSID for the first Db2 member (EDS1). In the **Db2 group attach name** field specify the group attach name (EDSA). PF3 back to the Create a Db2 Entry panel.
   b. Issue another Create command. The Create a Db2 Entry panel opens. In the **Db2 subsystem ID name** specify the SSID for the second Db2 member.
(EDS2). In the **Db2 group attach name** field specify the group attach name (EDSA). PF3 back to the Create a Db2 Entry panel.

c. After you have performed the previous step for all members of the data sharing group, issue a final Create command. The Create a Db2 Entry panel opens. In the **Db2 subsystem ID name** field specify the group attach for the Db2 subsystem (EDSA). In the **Db2 group attach name** specify the group name (EDSA). PF3 back to the Create a Db2 Entry panel. **Note:** If the Group ID has the same name as one of the SSIDs, this step is not required.

3. When specifying the BSDS and LOADLIBS for the Db2 subsystem at the group name level (EDSA EDSA), you can use the BSDS and LOADLIBS defined for any member of the group.

**Worksheets: Gathering required data set names**

Identify and record the data set names that will be used during the customization process and make sure that requirements for certain data sets are met.

**Data set names for Db2 Recovery Expert**

Identify and record the following Db2 Recovery Expert data set names:

<table>
<thead>
<tr>
<th>Data set name</th>
<th>Description</th>
<th>Special requirements</th>
<th>Your data set name</th>
</tr>
</thead>
<tbody>
<tr>
<td>SCCQDENU</td>
<td>Metadata library for Db2 Recovery Expert</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SCCQLOAD</td>
<td>Executable load module library for Db2 Recovery Expert</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SCCQMENU</td>
<td>ISPF messages for Db2 Recovery Expert</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SCCQPENU</td>
<td>ISPF panels for Db2 Recovery Expert</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SCCQSAMP</td>
<td>Sample members for Db2 Recovery Expert</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SCCQTENU</td>
<td>Table library for Db2 Recovery Expert</td>
<td>You must have write access to this data set.</td>
<td></td>
</tr>
</tbody>
</table>

**Data set names of Db2 Recovery Expert**

Identify and record the following Db2 Recovery Expert data set names. During the customization process, you will enter the following values on panel CCQPPRD.

<table>
<thead>
<tr>
<th>Data set name</th>
<th>Description</th>
<th>Special requirements</th>
<th>Your data set name</th>
</tr>
</thead>
<tbody>
<tr>
<td>ARYADBRM</td>
<td>DBRM library for Db2 Recovery Expert</td>
<td></td>
<td></td>
</tr>
<tr>
<td>ARYALOAD</td>
<td>Executable load module library for Db2 Recovery Expert</td>
<td>You must APF authorize this data set.</td>
<td></td>
</tr>
<tr>
<td>ARYAMENU</td>
<td>ISPF messages for Db2 Recovery Expert</td>
<td></td>
<td></td>
</tr>
<tr>
<td>ARYPAPENU</td>
<td>ISPF panels for Db2 Recovery Expert</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Data set names of other libraries

Identify and record the following data set names. During the customization process, you will enter the following values on the Setup panel.

<table>
<thead>
<tr>
<th>Data set name</th>
<th>Description</th>
<th>Special requirements</th>
<th>Your data set name</th>
</tr>
</thead>
</table>
| Discover output data set    | Contains the output that is generated when you run the Db2 Recovery Expert Discover EXEC.  

The Db2 Recovery Expert Discover EXEC retrieves the metadata and values for the parameters from a previous customization of Db2 Recovery Expert.  

The default name of the data set is Db2TOOL.CCQ110.DISCOVER. You can change the default value on the Db2 Recovery Expert Settings panel or the Discover Customized Product Information panel. | You must have write access to this data set. |                |
| Data store data set         | Contains product, LPAR, and Db2 parameter values, and Db2 entry associations. Db2 Recovery Expert uses this data set to permanently store all information that is acquired about the product, Db2 subsystems, and LPAR when you customize products on the local LPAR.  

The default name of the data set is Db2TOOL.CCQ110.DATASTOR. You can change the default value on the Tools Customizer Settings panel. | You must have write access to this data set. |                |
### Data set name

<table>
<thead>
<tr>
<th>Data set name</th>
<th>Description</th>
<th>Special requirements</th>
<th>Your data set name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Product customization Library</td>
<td>Contains the customization jobs that Db2 Recovery Expert generates for Db2 Recovery Expert. To customize Db2 Recovery Expert, submit the members of the data set in the order in which they are displayed on the Finish Product Customization panel. The data set naming convention is: ( \text{hlq.}$\text{LPAR-name}.xyzvrm ) where: • ( \text{hlq} ) is the value of the Customization library qualifier field on the Tools Customizer Settings panel (CCQPSET) • ( \text{LPAR-name} ) is the four-character LPAR name • ( \text{xyzvrm} ) is the three-letter product identifier with the version, release, and modification level For example, the data set name might be Db2TOOL.PRODUCT.CUST.$MVS1$.XYZ410.</td>
<td>You must have write access to this data set.</td>
<td></td>
</tr>
</tbody>
</table>

### APF authorizing load libraries

Db2 Recovery Expert requires that the product LOAD library is APF authorized. Refer to z/OS V1R8.0 MVS System Commands for more information on how to use SETPROG to APF authorize libraries.

Include the following load libraries as part of your authorized list:

- SALALOAD
- SFECLOAD

### Worksheets: Gathering parameter values for Db2 Recovery Expert

During the customization process, you will need to provide parameter values that are specific to Db2 Recovery Expert, your versions of Db2, and for your LPARs.

Use the worksheets in this topic to record the appropriate parameter settings for your purposes, and then use these worksheets during the customization process. The worksheets are organized based on the order of the customization panels in the Db2 Recovery Expert.
Product to customize section

The parameters listed in the Product to Customize section are read-only; they contain information that was provided on other panels, by Tools Customizer, or by the Db2 Recovery Expert metadata data set.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Discovered</th>
<th>Source of this value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Product metadata library</td>
<td>No</td>
<td>This value is specified on the Specify the Product to Customize panel (CCQPHLQ).</td>
</tr>
<tr>
<td>LPAR</td>
<td>No</td>
<td>This value is supplied by Tools Customizer.</td>
</tr>
<tr>
<td>Product name</td>
<td>No</td>
<td>This value is supplied by the product metadata file.</td>
</tr>
<tr>
<td>Version</td>
<td>No</td>
<td>This value is supplied by the product metadata file.</td>
</tr>
<tr>
<td>Product customization library</td>
<td>No</td>
<td>This value is derived from the user-specified customization library qualifier on the Tools Customizer Settings panel (CCQPSET).</td>
</tr>
<tr>
<td>Use Db2 group attach</td>
<td>Yes</td>
<td>Specifying YES substitutes the Group Attach name. Specifying NO substitutes the Db2 subsystem name. The default value is NO.</td>
</tr>
</tbody>
</table>

Customization values for the Discover EXEC when recustomizing a product

Description
Use the following worksheet to identify and record the customization values for the Db2 Recovery Expert Discover EXEC. The values in this
worksheet are for extracting information from a product that has already been customized. During the customization process, you will enter these values on panel CCQPDC.

**Note:** Complete this worksheet only if you are recustomizing a product that has previously been customized by using Tools Customizer.

<table>
<thead>
<tr>

</table>
| Volser for repository files | No | Default value: (no default)  
Your value: |

Specifies the volume of the VSAM data set that contains the CLSB VSAM repository file for Recovery Expert. This field is only required to create a new repository file. A new repository file is only required if a file does not exist.

The following parameters are used in the **Create backup GDG files** job

| .Create job to build backup GDG files | No | Default value: (not automatically selected)  
Your value: |

Specify a / on the line command next to this field to generate the **Create backup GDG file** job and specify the number of backup generations to keep on disk.

| The number of backup generations | Yes | Default value: 00005  
Your value: |

Specifies the number of backup generations that will be kept on disk.

| *Create job to update control file | No | Default value: (automatically selected)  
Your value: |

The asterisk before this field indicates that the **Update Control File** job is always generated. You should run this job if you change any of the fields in the Product Control File (PCF). You can update PCF fields using either the Tools Customizer or using the ISPF interface. See the PCF table in Appendix F for more information on the fields in the PCF file.

| *Allow using member id in profiles | Yes | Default Value: (automatically selected)  
Your value: |

Specifies whether to allow the member ID value to be present in profile names.

The following parameters are used in the **Load the schema level repository** job

| .Create job to load the schema level repository | No | Default value: (not automatically selected)  
Your value: |

Specify a / on the line command next to this field to generate the **Load schema level repository** job.

The following parameters are used in the **Install browser interface** job:

| .Create job to install browser interface | No | Default value: (not automatically selected)  
Your value: |

Specify a / on the line command next to this field to generate the **Install browser interface** job; and specify the Browser HFS file location, and Browser MVS doc file location fields.

<td>The following field is used to generate the Install Verification job:</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
**Create Install Verification job**
Specify a / on the line command next to this field to generate the Install Verification job. The install verification job (IVP) verifies that Db2 Recovery Expert has been installed correctly. The IVP job uses the following ARYIN DD SYSIN parameters to determine what is to be verified:

- **ISPF** to indicate that only the ISPF interface is to be checked.
- **GUI** to indicate that only the web browser interface is to be checked.
- **Complete** to indicate that the complete product, both ISPF and web browser interface is checked.
- **SSID ssid** to enter a single SSID that is to be checked. By default all Db2 SSID's entered into the control file are checked. If the SSIDs are on different LPARS, then a separate IVP job should be created and executed on each LPAR for each Db2.

The default value is **Complete**. You can change the default value by editing this job using the ISPF editor. Select the job for editing from the Finish Product Customization panel.

### Create customized Db2 Recovery Expert jobs

This section describes each of the Db2 Recovery Expert jobs that can be generated during customization. Depending on your selections in the Product Parameters panels one or more of these jobs will be displayed in the Finish Product Customization panel. You can edit or browse the job JCL using the Edit line command in the panel.

<table>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Install verification

The install verification job (IVP) verifies that Db2 Recovery Expert has been installed correctly. The IVP job uses the following ARYIN DD SYSIN parameters to determine what is to be verified:

- **ISPF** to indicate that only the ISPF interface is to be checked.
- **GUI** to indicate that only the web browser interface is to be checked.
- **Complete** to indicate that the complete product, both ISPF and web browser interface is checked.
- **SSID ssid** to enter a single SSID that is to be checked. By default all Db2 SSID’s entered into the control file are checked. If the SSIDs are on different LPARS, then a separate IVP job should be created and executed on each LPAR for each Db2.

The default value is **Complete**. You can change the default value by editing this job using the ISPF editor.

Examples

```
//ARYIN DD * COMPLETE
//ARYIN DD * ISPF
//ARYIN DD * GUI
//ARYIN DD * SSID ssid
```

Chapter 4. Customizing Db2 Recovery Expert

Using Tools Customizer to customize Db2 Recovery Expert consists of identifying the product to customize; defining any required Db2 Recovery Expert, LPAR, and Db2 parameters; generating the customization jobs; and submitting the jobs.

Customization roadmaps describe the steps that you must complete to customize Db2 Recovery Expert. Separate roadmaps are provided for the three most common types of customizations.

Use the following table to determine which roadmap corresponds to your environment.

Table 12. Customization roadmaps

<table>
<thead>
<tr>
<th>Environment description</th>
<th>Roadmap</th>
</tr>
</thead>
<tbody>
<tr>
<td>You do not have a customized version of Db2 Recovery Expert, and you need to customize it for the first time.</td>
<td>“Roadmap: Customizing Db2 Recovery Expert for the first time&quot; on page 115</td>
</tr>
<tr>
<td>You have already customized a version of Db2 Recovery Expert, and you want to use the same parameter values to customize a different version.</td>
<td>“Roadmap: Customizing a new version of Db2 Recovery Expert from a previous customization” on page 116</td>
</tr>
<tr>
<td>You have a customized version of Db2 Recovery Expert, but you want to change one or more parameter values.</td>
<td>“Roadmap: Recustomizing Db2 Recovery Expert” on page 117</td>
</tr>
</tbody>
</table>

Roadmap: Customizing Db2 Recovery Expert for the first time

This roadmap lists and describes the steps that are required to customize Db2 Recovery Expert for the first time.

If you are customizing a previous version of Db2 Recovery Expert, see “Roadmap: Customizing a new version of Db2 Recovery Expert from a previous customization” on page 116.

Before you complete these steps, ensure that the following prerequisites have been met:
- All of the product customization steps that must be done before Tools Customizer is started are complete.
- The LPAR ISPF libraries that are required to submit the jobs are known.
- Tools Customizer is started.
- The Tools Customizer settings have been reviewed or modified, and saved.

Complete the steps in the following table to customize Db2 Recovery Expert for the first time.
Table 13. Steps for customizing Db2 Recovery Expert for the first time

Roadmap: Customizing a new version of Db2 Recovery Expert from a previous customization

This roadmap lists and describes the steps for customizing a new version of Db2 Recovery Expert based on the existing customization values of a previous version of the same product.

Use this roadmap even if the previous version of Db2 Recovery Expert was not customized by using Tools Customizer.

Before you complete these steps, ensure that the following prerequisites have been met:
- All of the product customization steps that must be done before Tools Customizer is started are complete.
- Tools Customizer is started.
- The Tools Customizer settings have been reviewed or modified, and saved.
Complete the steps in the following table to customize a new version of Db2 Recovery Expert from a previous customization.

Roadmap: Recustomizing Db2 Recovery Expert

This roadmap lists and describes the steps to change parameter values and regenerate customization jobs for Db2 Recovery Expert after you have customized it for the first time.

The new customization jobs will replace the customization jobs that were previously generated and stored in the customization library. Part of the recustomization process includes selecting or deselecting optional tasks or steps, changing the definitions of parameters that have already been defined, or both. Use the method in this roadmap instead of deleting customization jobs from the customization library.
Before you complete these steps, ensure that the following prerequisites have been met:

- All of the product customization steps that must be done before Tools Customizer is started are complete.
- Tools Customizer is started.

Complete the steps in the following table to recustomize Db2 Recovery Expert.

Table 17. Required steps for recustomizing Db2 Recovery Expert

Specifying the metadata library for the product to customize

You must specify a metadata library for the product that you want to customize.
The product metadata library contains the information that determines which tasks, steps, and parameters are required to customize Db2 Recovery Expert. This information controls what is displayed on the Product Parameters panel, the LPAR Parameters panel, and the Db2 Parameters panel.

After Db2 Recovery Expert has been SMP/E installed, the default name of the product metadata library is `high_level_qualifier.SARYDENU`, where `high_level_qualifier` is all of the segments of the data set name except the lowest-level qualifier.

1. Specify option 1 on the Tools Customizer for z/OS panel. The Specify the Product or Pack Metadata Library panel is displayed. This panel contains a list of the product metadata libraries that you specified most recently. If you are using Tools Customizer for the first time, this list is empty, as shown in the following figure:

   ![Figure 8. The Specify the Metadata Library panel](image)

2. Use one of the following methods to specify the product metadata library:
   - Type the name of a fully qualified partitioned data set (PDS) or an extended partitioned data set (PDSE) in the Product or pack metadata library field. Double quotation marks (") cannot be used around the name. Single quotation marks (' ') can be used but are not required. If you are customizing Db2 Recovery Expert for the first time, you must use this method.
   - Place the cursor in any column of the Recent Metadata Libraries list, and press Enter to populate Product or pack metadata library field. Press Enter again to select product or pack for customization.

If you are customizing Db2 Recovery Expert for the first time, the Run Discover EXEC panel is displayed. Otherwise, the Customizer Workplace panel is displayed.

   - Complete the steps that correspond to your environment:

     **Customizing Db2 Recovery Expert for the first time**
     Do not run the Db2 Recovery Expert Discover EXEC. Press End. The Customizer Workplace panel is displayed. If your environment requires associated Db2 entries, ensure that they are created and associated. If your environment does not require associated Db2 entries, skip this step, and edit Db2 Recovery Expert parameters.

     **Customizing Db2 Recovery Expert from a previous or current customization**
     Press Enter to run the Db2 Recovery Expert Discover EXEC. The
Discover Customized Product Information panel is displayed. Specify the required information for running the EXEC.

---

**Discovering Db2 Recovery Expert information automatically**

You can use the Db2 Recovery Expert Discover EXEC to discover information from a previous or current customization of Db2 Recovery Expert.

**Tip:** Using the Db2 Recovery Expert Discover EXEC to discover information from a previous or current customization saves time and reduces errors that can occur when parameters are specified manually.

Db2 Recovery Expert provides the Discover EXEC that you will run. Therefore, the information that can be discovered depends on Db2 Recovery Expert.

Parameter values that are discovered and parameter values that are specified manually are saved in the data store. If parameter values for the product that you want to customize exist in the data store, Tools Customizer issues a warning before existing values are replaced.

1. On the Customizer Workplace panel, issue the DISCOVER command. If you chose to run the Db2 Recovery Expert Discover EXEC on the pop-up panel after you specified the product to customize, skip this step.

**Tip:** You can run any Tools Customizer primary command by using either of the following methods:
- Place the cursor on the name of the primary command, and press Enter.
- Type the primary command name in the command line, and press Enter.

The Discover Customized Product Information panel is displayed, as shown in the following figure:

```
CCQPDSC    Discover Customized Product Information  16:38:37
Command ===> Scroll ===> PAGE

For the product you are customizing, the Discover EXEC retrieves product information from an already customized product. Specify the required information, and press Enter to run the Discover EXEC. Press End to cancel.

Product to Customize
   Product metadata library : ARY.WRK031C.SARYDENU  > LPAR... : RS22

*Figure 9. The Discover Customized Product Information panel*

2. Either accept the default values for the following input fields that Tools Customizer generates, or replace the default values with your own values:
Discover EXEC library
The fully qualified data set name that contains the Db2 Recovery Expert Discover EXEC.

Discover EXEC name
The name of the Db2 Recovery Expert Discover EXEC.

Discover output data set
The fully qualified data set where output from the Db2 Recovery Expert Discover EXEC is stored.

3. Either accept or change the default values in the Information for Discover EXEC fields. These fields are generated by Db2 Recovery Expert. They show the information that is required to run the Db2 Recovery Expert Discover EXEC.

4. Issue the RUN command to run the Db2 Recovery Expert Discover EXEC. Alternatively, save your information without running the Db2 Recovery Expert Discover EXEC by issuing the SAVE command. If you issue the RUN command to run the Db2 Recovery Expert Discover EXEC, the parameter information is discovered for Db2 Recovery Expert, and the Customizer Workplace panel is displayed.

The discovered parameter values for Db2 Recovery Expert replace any existing values.

The next step depends on your environment:
- If Db2 entries were not discovered, or if you need to customize Db2 Recovery Expert on new Db2 entries, create and associate the entries.
- If Db2 entries were discovered and you want to customize Db2 Recovery Expert on only these entries, define the parameters.

Related tasks:

"Creating and associating Db2 entries"
Db2 entries are optional for Db2 Recovery Expert. You can create new Db2 entries and associate them with Db2 Recovery Expert.

"Defining parameters" on page 123
To customize Db2 Recovery Expert, you must define Db2 Recovery Expert parameters, LPAR parameters, and Db2 parameters, if your customization requires Db2 entries.

Creating and associating Db2 entries
Db2 entries are optional for Db2 Recovery Expert. You can create new Db2 entries and associate them with Db2 Recovery Expert.

The list of associated Db2 entries is on the Customizer Workplace panel.
1. Issue the ASSOCIATE command on the Customizer Workplace panel. The Associate Db2 Entry for Product panel is displayed, as shown in the following figure:
2. Create Db2 entries. If you need to associate Db2 entries that are already in the master list, skip this step and go to step 3.
   a. Issue the CREATE command to create one Db2 entry, or issue CREATE \textit{nn} to create multiple Db2 entries, where \textit{nn} is the number of new entries to be created. The Create Db2 Entries panel is displayed, as shown in the following figure:

   ![Create Db2 Entries Panel](https://example.com/create_db2_entries_panel.png)

   **Figure 10. The Create DB2 Entries panel**

   To create additional entries, issue the In\textit{nn} line command, where \textit{nn} is the number of entries to be inserted, and press Enter. To cancel, press End.

   ![New Db2 Entries Panel](https://example.com/new_db2_entries_panel.png)

   **Figure 11. The New DB2 Entries panel**

   b. In the appropriate columns, specify a Db2 subsystem ID, Db2 group attach name, or Db2 data sharing member name for the Db2 entry that you want to create, and press Enter. Valid values are 1 - 4 characters. You can use symbolic characters. You cannot use blanks.

   **Tips:**
   - To insert multiple Db2 entries, specify the In\textit{nn} line command, where \textit{nn} is the number of Db2 entries to be inserted.
   - You will define specific parameters for these new Db2 entries, such as parameters that define a subsystem as primary, on the Db2 Parameters panel. This panel is displayed after you select these new Db2 entries and issue the line command to generate the jobs, after you issue the primary command to generate the jobs for all associated Db2 entries, or when you manually edit the Db2 parameters.

   The Associate Db2 Entry for Product panel is displayed, and the new Db2 entry is displayed in the master list, as shown in the following figure:
Repeat steps b and c for each Db2 entry that you want to create.

When you have created all the Db2 entries, associate them with Db2 Recovery Expert, or press End to display the Customizer Workplace panel.

3. Associate Db2 entries.
   a. Specify A against one or more Db2 entries in the master list, and press Enter to associate them with Db2 Recovery Expert.

The Customizer Workplace panel is displayed with the associated Db2 entries displayed in the associated list.

Define the parameters.

Related concepts:

"Tools Customizer terminology" on page 593

Tools Customizer uses several unique terms that you should be familiar with before you begin to use Tools Customizer.

Defining parameters

To customize Db2 Recovery Expert, you must define Db2 Recovery Expert parameters, LPAR parameters, and Db2 parameters, if your customization requires Db2 entries.

You must define the Db2 Recovery Expert parameters first for the following reasons:

- If you ran the Db2 Recovery Expert Discover EXEC, you must review the values that were discovered.
- If you select optional tasks and steps on the Product Parameters panel that affect the Db2 entry on which you will customize Db2 Recovery Expert, additional parameters might be displayed on the Db2 Parameters panel.
- If other steps must be completed in a specific sequence, customization notes on the Product Parameters panel will display the correct sequence.

Defining Db2 Recovery Expert parameters

Db2 Recovery Expert parameters are specific to Db2 Recovery Expert.
If you ran the Db2 Recovery Expert Discover EXEC, you must review the parameters that were discovered.

1. Specify E next to the Product parameters field on the Customizer Workplace panel, and press Enter. The Product Parameters panel is displayed, as shown in the following figure. If other steps must be completed in a specific sequence before you define the Db2 Recovery Expert parameters, a note labeled **Important** will display the correct sequence on this panel.

   **Figure 13. The Product Parameters panel**

You can use the following primary commands on this panel:

**SAVE** Saves the specified product or component parameter values.

**VERIFY / VERIFYOFF**

Use the VERIFY and VERIFYOFF commands to turn on and off parameter verification of product or component parameters. Before you can generate customization jobs, you must verify that all required parameters are set to a valid value. The product or component parameter status of Verify Values on the Customize Workplace panel indicates that the values have not been verified.

Enter these commands either by typing them in the command field and pressing Enter or by positioning the cursor on the command and...
pressing Enter. When VERIFY is active, VERIFYOFF is displayed so that you can toggle between the two states. By default, verification is turned on when you display the Db2 Parameters panel, and the verification state is reset to VERIFY every time you exit the Customization Workplace panel by pressing PF3.

Turning verification off is useful when you need to exit the panel before you have entered all of the required parameters, but you want to save the parameters that you have specified. When you disable verification, it is disabled only for the Product or Component Parameters Values panel.

2. Select any required tasks and steps, and specify values for any parameters. After you select a task or step with a slash (/), put the cursor in the selected field and press Enter. If tasks, steps, and parameters are required, they are preselected with a slash (/). Otherwise, they are not preselected.

All of the required parameters have default values, which you can either accept or change.

Tips:
- In the command line, specify the KEYS command, and map EXPAND to one of the function keys.
- For a detailed description of all input fields, put the cursor in the field, and press F1 or the key that is mapped to Help.
- The following elements apply to specific fields:
  - Add is displayed when parameters can have multiple values but currently have only one value. To specify multiple values in these fields, place the cursor on Add, and press Enter. Use the displayed panel to add or delete additional values.
  - List is displayed when the complete list of valid values for the fields is too long to be displayed on the panel. To see the complete list of values, place the cursor on List, and press F1 or the key that is mapped to Help.
  - More is displayed when input fields contain multiple values. To see all of the values in the field, place the cursor on More, and press Enter.
- Tools Customizer allows you to specify any number of Db2 load libraries and exit libraries, but Db2 Recovery Expert supports only five load and exit libraries in total. Any additional libraries you specify will be ignored and may cause error messages during customization.

3. Optional: Select other tasks and steps with a slash (/) and press Enter to activate the input fields. Either accept or change the default values that are displayed.

4. Press End to save your changes and exit, or issue the SAVE command to save your changes and stay on the Product Parameters panel.

The Customizer Workplace panel is displayed, and the status of the product parameters is Ready to Customize.

If the status of other parameters on the Customizer Workplace panel is Incomplete, Verify Values, or Discovered, edit these parameters.

Related tasks:
- “Defining LPAR parameters” on page 127
- LPAR parameters are parameters on the local LPAR that are required to customize Db2 Recovery Expert.
Db2 parameters are parameters for a Db2 entry.

**Db2 migration**

Db2 migration migrates the Db2 Recovery Expert objects for your version of Db2.

Ensure that the mode and levels are correct for each SSID.

Complete the following steps to migrate Db2 Recovery Expert objects.

1. Specify E next to the **Product parameters** field on the Customizer Workplace panel, and press Enter.

   ![Customizer Workplace panel](image)

   **Note:** The contents of this panel have been condensed to improve readability. Use PF7 to scroll up and PF8 to scroll down.

2. On the displayed Product Parameters panel, enter a / next to the **Db2 Migration** field to enable Db2 migration.

3. Select the following fields to include additional steps in the Db2 migration:

   - **Migrate schema-level repository**
   - **Re-create views on schema-level repository**
   - **Re-create views on system catalog**

4. Once you are satisfied with your selection, press PF3 to save and exit.

5. Run the generated job on the LPAR that is appropriate for the subsystem to migrate Db2 Recovery Expert objects.

6. Bind the Db2 Recovery Expert packages and plans. The following steps list the tasks that are required to load the table databind the packages and plans:
   a. Using Tools Customizer, update the Db2 Mode information in the Associated Db2 Entries and Parameter Status section.
b. Generate new binds jobs for the upgraded Db2 subsystem.

c. Submit the jobs. The bind step must end with a return code of 4 or less. All warnings and errors must be reviewed/corrected before continuing with the product install.

7. Update the Db2 Recovery Expert control file if necessary and recycle agent started tasks/jobs to pick up any control file changes.

8. Submit the Load the SLR job generated by Tools Customizer. The update step must end with a return code of zero. All warnings and errors must be corrected before continuing with the product install.

**Product migration**

Product migration migrates the Db2 Recovery Expert object profiles from V3.1.

Complete the following steps to migrate Db2 Recovery Expert object profiles:

1. Specify E next to the **Product parameters** field on the Customizer Workplace panel, and press Enter.

   ![TCUSTLMZ](image)

   **Note:** The contents of this panel have been condensed to improve readability. Use PF7 to scroll up and PF8 to scroll down.

   2. On the displayed Product Parameters panel, enter a / next to the **Product Migration** field to enable product migration.

   3. Specify / next to the **Migrate objects profiles from V3.1** field to generate a job that will migrate Db2 Recovery Expert object profiles from V3.1.

   4. Once you are satisfied with your selection, press PF3 to save and exit.

   5. Run the generated job to migrate Db2 Recovery Expert object profiles.

**Defining LPAR parameters**

LPAR parameters are parameters on the local LPAR that are required to customize Db2 Recovery Expert.

1. Specify E next to the **LPAR parameters** field, and press Enter. The LPAR Parameters panel is displayed, as shown in the following figure:
You can use the following primary commands on this panel:

**SAVE**  Saves the specified product or component parameter values.

**VERIFY / VERIFYOFF**

Use the VERIFY and VERIFYOFF commands to turn on and off parameter verification of LPAR parameters. Before you can generate customization jobs, you must verify that all required parameters are set to a valid value. The LPAR parameter status of Verify Values on the Customize Workplace panel indicates that the values have not been verified.

Enter these commands either by typing them in the command field and pressing Enter or by positioning the cursor on the command and pressing Enter. When VERIFY is active, VERIFYOFF is displayed so that you can toggle between the two states. By default, verification is turned on when you display the LPAR Parameters panel, and the verification state is reset to VERIFY every time you exit the Customization Workplace panel by pressing PF3.

Turning verification off is useful when you need to exit the panel before you have entered all of the required parameters, but you want to save the parameters that you have specified. When you disable verification, it is disabled only for the LPAR Parameters Values panel.

2. Specify values for all required parameters that are displayed. Many parameters have default values, which you can either accept or change.

**Tips:**

- In the command line, specify the KEYS command, and map EXPAND to one of the function keys.
- For a detailed description of all input fields, put the cursor in the field, and press F1 or the key that is mapped to Help.
- The following elements apply to specific fields:
  - **Add** is displayed when parameters can have multiple values but currently have only one value. To specify multiple values in these fields, place the cursor on **Add**, and press Enter. Use the displayed panel to add or delete additional values.
- **List** is displayed when the complete list of valid values for the fields is too long to be displayed on the panel. To see the complete list of values, place the cursor on **List**, and press F1 or the key that is mapped to Help.

- **More** is displayed when input fields contain multiple values. To see all of the values in the field, place the cursor on **More**, and press Enter.

  - Tools Customizer allows you to specify any number of Db2 load libraries and exit libraries, but Db2 Recovery Expert supports only five load and exit libraries in total. Any additional libraries you specify will be ignored and may cause error messages during customization.

The following LPAR parameters can contain 1 - 64 values:

- LPAR macro library
- Message library
- Panel library
- Skeleton library
- ISPF table input library
- ISPF user profile library
- File tailoring output library
- Link list library
- Command procedures library
- Macro library
- Link-edit library
- Load library
- Started task library name

3. Press End to save your changes and exit, or issue the **SAVE** command to save your changes and stay on the same panel.

The Customizer Workplace panel is displayed, and the status of the LPAR parameters is Ready to Customize.

If the status of other parameters on the Customizer Workplace panel is Incomplete, Verify Values, or Discovered, edit these parameters.

**Related tasks:**

"Defining Db2 Recovery Expert parameters" on page 123

Db2 Recovery Expert parameters are specific to Db2 Recovery Expert.

"Defining Db2 parameters"

Db2 parameters are parameters for a Db2 entry.

---

**Defining Db2 parameters**

Db2 parameters are parameters for a Db2 entry.

If you did not run the Db2 Recovery Expert Discover EXEC, you must create and associate one or more Db2 entries before you can define the Db2 parameters. For more information, see “Creating and associating Db2 entries” on page 121.

1. Specify E next to one or more Db2 entries in the associated list, which is in the Associated Db2 Entries and Parameter Status section on the Customizer Workplace panel, and press Enter. The Db2 Parameters panel is displayed, as shown in the following figure:
You can use the following primary commands on this panel:

SAVE  Saves the specified product or component parameter values.

VERIFY / VERIFYOFF

Use the VERIFY and VERIFYOFF commands to turn on and off parameter verification of Db2 parameters. Before you can generate customization jobs, you must verify that all required parameters are set to a valid value. The Db2 parameter status of Verify Values on the Customize Workplace panel indicates that the values have not been verified.

Enter these commands either by typing them in the command field and pressing Enter or by positioning the cursor on the command and pressing Enter. When VERIFY is active, VERIFYOFF is displayed so that you can toggle between the two states. By default, verification is turned on when you display the Db2 Parameters panel, and the verification state is reset to VERIFY every time you exit the Customization Workplace panel by pressing PF3.

Turning verification off is useful when you need to exit the panel before you have entered all of the required parameters, but you want to save the parameters that you have specified. When you disable verification, it is disabled only for the Db2 Parameters Values panel.

2. Specify values for all parameters that are displayed.
Tips:

- In the command line, specify the KEYS command, and map EXPAND to one of the function keys.
- For a detailed description of all input fields, put the cursor in the field, and press F1 or the key that is mapped to Help.
- The following elements apply to specific fields:
  - **Add** is displayed when parameters can have multiple values but currently have only one value. To specify multiple values in these fields, place the cursor on **Add**, and press Enter. Use the displayed panel to add or delete additional values.
  - **List** is displayed when the complete list of valid values for the fields is too long to be displayed on the panel. To see the complete list of values, place the cursor on **List**, and press F1 or the key that is mapped to Help.
  - **More** is displayed when input fields contain multiple values. To see all of the values in the field, place the cursor on **More**, and press Enter.
- Tools Customizer allows you to specify any number of Db2 load libraries and exit libraries, but Db2 Recovery Expert supports only five load and exit libraries in total. Any additional libraries you specify will be ignored and may cause error messages during customization.

Many parameters have default values, which you can either accept or change.

3. Press End to save your changes and exit, or issue the **SAVE** command to save your changes and stay on the same panel.

The status of the Db2 entries that you selected on the Customizer Workplace panel is Ready to Customize.

If the status of other parameters on the Customizer Workplace panel is Incomplete, Verify Values, or Discovered, edit these parameters.

**Related tasks:**
- “Defining Db2 Recovery Expert parameters” on page 123
  Db2 Recovery Expert parameters are specific to Db2 Recovery Expert.
- “Defining LPAR parameters” on page 127
  LPAR parameters are parameters on the local LPAR that are required to customize Db2 Recovery Expert.

**Generating customization jobs**

To generate customization jobs for Db2 Recovery Expert and any associated Db2 entries, issue the **GENERATEALL** command, or select one or more Db2 entries on which to customize Db2 Recovery Expert.

Generate the customization jobs by using one of the following methods.
- If you want to generate customization jobs at the product level and for any associated Db2 entries, issue the **GENERATEALL** command, and press Enter.
- If you want to generate customization jobs for specific Db2 entries, select the Db2 entries by specifying the 6 line command against them, and press Enter. The available Db2 entries are in the associated list in the Associated Db2 Entries and Parameter Status section.

**Important:** Regenerating customization jobs will replace any existing jobs, including jobs that you might have manually modified after they were generated.
If the status is Incomplete or Discover for Db2 Recovery Expert parameters, LPAR parameters, or Db2 parameters, Tools Customizer automatically starts an editing session for the types of parameters that are required. The session continues until the panel for each type of required parameter has been displayed.

If an automatic editing session is started, accept the displayed parameter values or define values for the required types of parameters, select optional parameters, tasks, or steps for your environment, and save the parameter values. Otherwise, the customization jobs are generated, and you can submit them.

**Tip:** If the customization jobs are generated, but you are not ready to submit them, you can see them later by issuing the JOBLIST command on the Customizer Workplace panel. The JOBLIST command displays the Finish Product Customization panel, which you can use to submit the jobs.

### Submitting customization jobs

Submit the customization jobs to customize Db2 Recovery Expert.

Ensure that the correct jobs are generated.

The following figure shows part of the Finish Product Customization panel. The table on this panel shows the customization jobs that are generated by Tools Customizer. They are grouped by job sequence number.
Customization jobs for Db2 entries can be submitted for customization. NO indicates the job member is not newly created/updated. It does not need to be submitted for customization.

Figure 16. The Finish Product Customization panel

The member-naming conventions depend on whether the customization jobs are for Db2 entries, and LPAR, or the product.

The New file indicates if the job member is newly created/updated. It is either YES or NO. YES indicates the job member is newly created or updated, and it needs to be submitted for customization. NO indicates the job member is not newly created/updated, it does not need to be submitted for customization.

Customization jobs for Db2 entries
- The members use the following naming convention:
  - `<job_sequence_number><job_ID><Db2_entry_ID>`

  where

  **job_sequence_number**
  - Two alphanumeric characters, A0 - Z9, that Tools Customizer assigns to a customization job. The number for the first template in the sequence is A0, the number for the second template is A1, and so on.

  **job_ID**
  - Characters 4 - 7 of the template name, if the template name...
contains five or more characters. Otherwise, only character 4 is used. Db2 Recovery Expert assigns the template name.

**Db2_entry_ID**

Two alphanumeric characters, AA - 99, that Tools Customizer assigns to a Db2 entry.

For example, the XYZBNDDb2_entry_ID_1 and XYZBNDDb2_entry_ID_2 jobs are generated from the XYZBNDDGR template, and the XYZ4Db2_entry_ID_1 and XYZ4Db2_entry_ID_2 jobs are generated from the XYZ4 template. If the jobs are generated on two Db2 entries, the following member names are listed sequentially: A0BNDGAA, A0BNDGAB, A14AA, A14AB.

**Customization jobs for an LPAR or the product**

The members use the following naming convention:

\(<job_sequence_number><job_ID>\)

where

**job_sequence_number**

Two alphanumeric characters, A0 - Z9, that Tools Customizer assigns to a customization job. The number for the first template in the sequence is A0, the number for the second template is A1, and so on.

**job_ID**

Characters 4 - 8 of the template name, if the template name contains five or more characters. Otherwise, only character 4 is used. For example, for the XYZMAKE template, the job ID is MAKE. For the XYZM template, the job ID is M. Db2 Recovery Expert assigns the template name, and it is displayed in the Template column.

For example, the XYZBNDDGR job is generated from the XYZBNDDGR template, and the XYZ4 job is generated from the XYZ4 template. The following member names are listed sequentially: A0BNDGGR, A14.

1. Submit the generated customization jobs by following the process that you use in your environment or by using the following method:
   a. Specify B or E against a customization job or the product customization library, and press Enter. An ISPF browsing or editing session is started.
   b. Browse the customization job or each member in the library to ensure that the information is correct.
   c. Run the TSO SUBMIT command.

2. Press End.

Db2 Recovery Expert is customized, and the Customizer Workplace panel is displayed. The status is Customized for the Db2 entries on which Db2 Recovery Expert was customized.

You can generate more customization jobs for other Db2 entries, view a list of customization jobs that you previously generated, or recustomize Db2 Recovery Expert.
Browsing parameters

You can browse the product or component parameters, the LPAR parameters, and the Db2 parameters in read-only mode.

1. On the Customizer Workplace panel, specify \texttt{B} next to the \textbf{Product parameters} field, the \textbf{LPAR parameters} field, or the Db2 entry that you want to browse, and press Enter. The panel that corresponds to your specification is displayed.

2. Press End to exit.

Copying Db2 entries

You can copy associated and not associated Db2 entries to other Db2 entries or to new Db2 entries.

Go to the step that applies to your environment:

- To copy an associated Db2 entry to another associated Db2 entry or to an entry that is not associated, go to step 1.
- To copy an associated Db2 entry to a new entry, go to step 2.
- To copy a Db2 entry that is not associated to a new entry, go to step 3.

1. To copy an associated Db2 entry to another associated Db2 entry or to an entry that is not associated, complete the following steps:
   a. Specify \texttt{C} against a Db2 entry in the associated list of Db2 entries on the Customizer Workplace panel, and press Enter. The Copy Associated Db2 Entry panel is displayed.
   b. Select one or more Db2 entries to which information will be copied by specifying the / line command, and press Enter. The Associated column indicates whether the Db2 entry is associated.

   \textbf{Tip:} To copy information into all of the Db2 Entries in the list, issue the \texttt{SELECT ALL} primary command, and press Enter.
   The Copy Db2 Parameter Values panel is displayed.
   c. Specify an option for copying common and product-specific Db2 parameter values. Common Db2 parameter values apply to all Db2 entries for all products that you have customized by using Tools Customizer. Product-specific Db2 parameter values apply only to the product that you are currently customizing.
      - To copy the common Db2 parameter values and the product-specific Db2 parameter values, specify option 1, and press Enter.
      - To copy only the product-specified Db2 parameter values, specify option 2, and press Enter.

   In some cases, the Db2 parameter values might contain the Db2 subsystem ID as an isolated qualifier in data set names. For example, in the DB01.DB01TEST.DB01.SANLLOAD data set name, the DB01 subsystem ID is isolated in the first and third qualifiers but is not isolated in the second qualifier. When the Db2 subsystem ID is an isolated qualifier in data set names, the Change Db2 Subsystem ID in Db2 Parameter Values panel is displayed. Otherwise, the Customizer Workplace panel is displayed.
   d. If the Change Db2 Subsystem ID in Db2 Parameter Values panel is displayed, specify an option for changing the subsystem IDs. Otherwise, skip this step.
      - To change the subsystem ID in isolated qualifiers in data set names, specify option 1, and press Enter.
• To use the same subsystem ID in all values, specify option 2, and press Enter.

The Customizer Workplace panel is displayed with the copied associated entry in the list.

2. To copy an associated Db2 entry to a new entry, complete the following steps:
   a. Specify £ against a Db2 entry in the associated list of Db2 entries on the Customizer Workplace panel, and press Enter. The Copy Associated Db2 Entry panel is displayed.
   b. Issue the CREATE command. The Create Db2 Entries panel is displayed.
   c. Specify the SSID, the group attach name, or both in the appropriate columns for each new Db2 entry, and press Enter.

   **Tip:** To add rows for additional entries, specify the \( mn \) line command, where \( mn \) is the number of entries to be created, and press Enter. The Copy Associated Db2 Entry panel is displayed with the new entries in the list. The new entries are preselected.
   d. Press Enter to complete the copy process. The Customizer Workplace panel is displayed with the copied entries in the list.

3. To copy a Db2 entry that is not associated to a new entry, complete the following steps:
   a. Issue the ASSOCIATE command on the Customizer Workplace panel. The Associate Db2 Entry for Product panel is displayed.
   b. Select one or more Db2 entries by specifying the / line command, and press Enter. The Copy a Db2 Entry panel is displayed.
   c. Specify the SSID, the group attach name, or both in the appropriate columns for the new Db2 entry, and press Enter. The Associate Db2 Entry for product panel is displayed with the copied entry in the list.
   d. If you want to associate the copied entry, specify A against it, and press Enter. The Customizer Workplace panel is displayed with the copied entries in the list.

Edit any of the parameters or generate the jobs.

**Related concepts:**

“Tools Customizer terminology” on page 593

Tools Customizer uses several unique terms that you should be familiar with before you begin to use Tools Customizer.

---

**Removing Db2 entries**

You can remove Db2 entries from the associated list.

When you remove Db2 entries from the associated list, any customization jobs for the entries are removed from the list of jobs on the Finish Product Customization panel, and they are deleted.

On the Customizer Workplace panel, specify \( R \) next to one or more Db2 entries that you want to remove, and press Enter. The selected Db2 entries are removed from the associated list and added to the master list on the Associate Db2 Entry for Product panel, and the customization jobs are deleted.

**Related concepts:**

“Tools Customizer terminology” on page 593

Tools Customizer uses several unique terms that you should be familiar with
before you begin to use Tools Customizer.

**Deleting Db2 entries**

You can delete Db2 entries from the master list.

When you delete Db2 entries from the master list, any associations and all customization jobs for products that are customized on the entries will be deleted.

1. On the Customizer Workplace panel, issue the ASSOCIATE command. The Associate Db2 Entry for Product panel is displayed.

2. Specify 0 next to one or more Db2 entries that you want to delete, and press Enter. If the entry is associated with any products, the Delete Associated Db2 Entry panel for the first Db2 entry that you selected is displayed. Otherwise, the Delete Db2 Entry panel is displayed.

3. To delete the Db2 entries, press Enter. If the Db2 entries are associated with any products in the table on the Delete Associated Db2 Entry panel, any associations and all customization jobs for the products that are customized on it are deleted. Otherwise, only the Db2 entries are deleted. If you selected multiple Db2 entries to delete, the next Db2 entry that you selected is displayed on either the Delete Associated Db2 Entry panel or the Delete Db2 Entry panel. Otherwise, the Associate Db2 Entry for Product panel is displayed.

If you selected multiple Db2 entries to delete, repeat step 3 until all selected entries are deleted. Then, continue the customization process.

**Displaying customization jobs**

You can view a list of the members that contain the customization jobs before or after you submit the jobs.

The customization jobs that you generate for one Db2 entry are also displayed when you customize Db2 Recovery Expert for another Db2 entry later.

On the Customizer Workplace panel, issue the JOBLIST command. The Finish Product Customization panel is displayed. This panel shows the list of jobs that you have previously generated. They are grouped by job sequence number. Use this panel to browse or edit the generated jobs before you submit them.

**Maintaining customization jobs**

Instead of deleting customization jobs outside of Tools Customizer, you can maintain the correct jobs for Db2 Recovery Expert by completing the steps for recustomization.

You cannot delete or rename customization jobs from the customization library by starting an ISPF browse or edit session from the Finish Product Customization panel. If you try to delete customization jobs by using this method, the CCQC034S message is issued. If you try to rename customization jobs, the CCQC035S message is issued.

If you delete or rename customization jobs from the customization library by using ISPF outside of Tools Customizer, Tools Customizer will not recognize that the jobs were deleted, and the Finish Product Customization panel will still display them. If you browse or edit jobs that were deleted from the library outside of Tools Customizer, the CCQC027S message is issued.
To maintain the correct customization jobs in the customization library, complete the steps for recustomization.

**Using Tools Customizer in a multiple-LPAR environment**

Currently, Tools Customizer supports only the local LPAR; however, you can propagate customizations to additional LPARs by using either of two different methods.

In a multiple-LPAR environment, Tools Customizer identifies the LPAR to which you are logged on. Tools Customizer uses this LPAR name for several different parameter settings, one of which is the data store. When you use the data store during the customization of Db2 Recovery Expert that is on a different LPAR, Tools Customizer issues message CCQD586S, which indicates that the product has already been customized based on values from the data store on the first LPAR. This message is issued to prevent the data store from becoming corrupted.

This behavior occurs in the following conditions:
- Tools Customizer is installed on a DASD device that is shared by multiple LPARs.
- After a product is customized by using Tools Customizer, the data store is copied to another LPAR.

To customize products running against a Db2 subsystem on an LPAR where Tools Customizer is not installed, consider using one of the following methods:

**Install one instance of Tools Customizer on one LPAR**

If you intend to reuse the customization values for all the instances of your products on all LPARs, use this method.

1. Associate all the Db2 entries in this one instance of Tools Customizer. The LPARs on which the Db2 subsystems reside do not matter.
2. Generate the customization jobs for each Db2 entry.
3. Copy the generated customization jobs to the LPAR to run against the specific Db2 entries. Some LPAR-specific edits might be required. You can make these edits in the customized jobs that you copied. Note that this situation is one of the few situations where you might need to make manual changes to the jobs that are customized by Tools Customizer.

**Install one instance of Tools Customizer on each LPAR**

If you do not want to reuse previous customization values and you want to start new customizations, use this method.

**Important:** This method will likely not be the preferred approach for most organizations because most organizations tend to use similar or identical customization values for each product instance on all LPARs.
Chapter 5. Administering client, server, and agent communications

This section describes several tasks that you might need to perform to setup and maintain Db2 Recovery Expert client, server, and agent communications.

Establishing server, client, and agent communications

The Db2 Recovery Expert server, agents, web interface client, and ISPF interface client communicate with each other using TCP/IP connections.

Client-server communication

Using Tools Customizer, you as the administrator will configure the Db2 Recovery Expert server to run on a particular host machine. In addition, you will configure the server with two TCP/IP port numbers on which to listen for incoming connection requests from instances of ISPF and Web clients. The port number for ISPF clients is specified in the **ISPF client listener port number** field of the Tools Customizer Product Parameters panel. The port number for Web clients is specified in the **Web client listener port number** field of the Tools Customizer Product Parameters panel.

To start the web interface client, each user will open a browser and enter the IP address on which the server is running, as well as the port number on which that server is configured to listen for client connections.

For the ISPF interface, each user will open the ISPF interface and then select **Administration** from the main menu. From the **Administration** menu the user will select **Specify Server Information** where they will enter the host server name and the port number on which that server is configured to listen for ISPF client connections.

Agent-server communication

In addition to configuring the server for incoming client requests, using Tools Customizer you specify a different port on which to listen for incoming connection requests from instances of the agent. This value is specified in the **Server agent-listener-port** field of the Tools Customizer Product Parameters panels.

You must configure an instance of the agent to run on every machine hosting a Db2 subsystem that is accessed by end users. When configuring each agent instance, specify the host name or IP address, and the port number on which the server is running. These are the same values that were specified in the **Server address** and **Server-agent-listener-port** of the Tools Customizer Product Parameters panel. When the agent is started, it uses this configuration information to connect to the server.

**Note:** Server and agents can be configured to connect to each other automatically. See the appendix which describes this setup process.

Maintaining the Db2 Recovery Expert server

The Db2 Recovery Expert server centrally manages and controls all Db2 Recovery Expert functions that are performed on behalf of user requests.
You must run one instance of the server to manage all of your Db2 subsystems and data sharing groups, and to support all of your Db2 Recovery Expert user clients. The server communicates with these clients and agents in order to perform recovery functions.

**Server environment**

The server must be running in order for Db2 Recovery Expert users to perform any functions against Db2 subsystems in your enterprise.

The Db2 Recovery Expert server runs as a batch job under MVS™. You can manually submit this job, schedule it to be run automatically, or run it as an MVS started task. If the server job terminates for any reason, you must restart it, or take steps to have it automatically restarted.

**Server security**

The Db2 Recovery Expert server uses RACF security.

The server requires UNIX System Services access. The user ID under which the server job runs must have an OMVS segment in its RACF profile. To check whether the ID has an OMVS segment in its profile, use the following command:

```
LU userid OMVS
```

To add an OMVS segment to an ID’s RACF profile, use the following command:

```
ADDUSER dfuid OMVS(UID(nnn))
```

**SSL support**

If your server will utilize SSL, additional permissions must be set. The user ID under which the server job runs must have a read access to CSF* resources of the CSFSERV class.

**Importing existing SSL certificate**

If you want to utilize an existing SSL certificate, the following parameters must be set in the server configuration member:

- `<ssl-key-db-dir>` should be set to the USS directory of the existing certificate database.
- `<ssl-key-db>` should be set to the name of the existing certificate database.
- `<ssl-key-db-sth-file>` should be set to the name of the existing certificate stash file.
- `<ssl-cert-label>` should be set to the label of the existing certificate.

If SSL is enabled for agent port, the same parameters must be set in the agent configuration member.

Once you have updated server configuration member you must recycle the server to implement the change.
If agent configuration member was updated you must recycle the agent to implement the change.

**Note:** To work with an imported SSL certificate owner of the server/agent must have a read access to the USS directory of the existing certificate database.

**Server output**

The primary output of the server job is log messages that provide status information about the ongoing operation of the server.

The log messages are written to the SYSPRINT DD. In addition to providing status information about the operation of the server, these messages record if and when errors occur.

In the event of exceptional conditions, additional messages might be written to the SYSOUT DD. If an abend occurs, dump information might be written to the CEEDUMP and/or SYSUDUMP DDs. This information can be used in diagnosis by product support.

**Stopping the server**

You use the following commands to stop and resume the Db2 Recovery Expert server.

The server accepts standard MVS /MODIFY and /STOP commands. From SDSF, or anywhere else that you can issue commands, you can issue these commands:

/MODIFY server-job-name,STOP SERVER
/STOP server-job-name

*Initiates a graceful server shutdown. This causes the following sequence to occur:*

1. The server stops accepting new client connections.
2. The server sends a message to all existing client connections that the server is trying to stop.
3. The server waits for all existing client sessions to end.
4. The server ends its own processing.

Any agents currently connected to the server continue running, attempting to reconnect to the server if or when it is restarted.

/MODIFY server-job-name,STOP AGENTS id

*Stops a particular agent. If no id is given, then all agents are stopped. You can determine the ID value by issuing /MODIFY server-job-name,LIST SESSIONS.*

/MODIFY server-job-name,STOP ALL

*Stops the Db2 Recovery Expert server and any agents that are currently connected to it.*

/MODIFY server-job-name,FORCE

*Initiates a server hard stop. This causes the following sequence to occur:*

1. The server immediately drops all client connections.
2. The server initiates a cancel on all running threads.
3. The server exits after the threads exit.

This is not recommended under typical circumstances.
/MODIFY server-job-name,QUIESCE
Quiesces the server. The server will continue to service existing client
connections, but will not accept any new connections.

/MODIFY server-job-name,RESUME
Resumes a quiesced server. The server again starts to accept new client
connections.

**Administrative commands (server)**

You can use these commands to perform administrative tasks related to the
client/server environment for Db2 Recovery Expert.

/MODIFY server-job-name, DISPLAY MEPL
Provides Db2 Recovery Expert module maintenance levels, compile dates,
APAR numbers, and APAR build dates and times for the server.

/MODIFY server-job-name, LIST SESSIONS
Produces a list of active client and agent sessions in the log, including the
information for these fields:
- ID
- Type (client or agent)
- Start timestamp
- Local port
- Remote IP address
- Remote port
- Sysplex name (for agent sessions, as reported in agent topology)
- Machine name (for agent sessions, as reported in agent topology)
- Locked specification count (for client sessions)
- Active request count
- State (active or stopping)

/MODIFY server-job-name, STOP SESSION session-id
/MODIFY server-job-name, FORCE SESSION session-id
Stops or forces the specified session.

/MODIFY server-job-name, LIST REQUESTS
/MODIFY server-job-name, LIST REQUESTS session-id
Produces a list of all active requests in the system or all active requests for
the specified session ID, including the information for these fields:
- ID
- Type (request type ID)
- Target location (if any)
- Auth ID (if any)
- Specification ID (if any)
- Session ID
- Session type (client or agent)

/MODIFY server-job-name, CANCEL REQUEST request-id
Cancels the specified request, where request-id is reported by LIST
REQUESTS.
/MODIFY server-job-name, LIST SPECIFICATIONS

/MODIFY server-job-name, LIST SPECIFICATIONS <session-id>

Produces a list of all locked specifications in the system or locked specifications for the specified session ID, including the information for these fields:

- ID (some unique ID for reference by UNLOCK command)
- Specification ID
- Locked timestamp

/MODIFY server-job-name, UNLOCK SPEC id

Forcibly unlocks the specified specification, where the specified ID is one reported by LIST SPECS.

/MODIFY server-job-name, LIST LOCATIONS

Produces a list of all known locations or all locations at a particular agent in the log, including the information for these fields:

- Agent session ID
- Location type
- Location name

/MODIFY server-job-name, LIST AUTHIDS client-session-id

Print out all auth IDs associated with a specified client session.

---

**Maintaining the Db2 Recovery Expert agent**

The Db2 Recovery Expert agent provides access to database and system services, in support of the Db2 Recovery Expert server and interface clients.

You must run one instance of the agent on every system or LPAR that hosts Db2 Recovery Expert subsystems or data sharing groups that you want to access with Db2 Recovery Expert. Each agent communicates with the Db2 Recovery Expert server to provide services.

**Agent environment**

The agent must be running in order for Db2 Recovery Expert users to perform any functions against Db2 subsystems on that LPAR.

The Db2 Recovery Expert agent runs as a batch job under MVS. You can manually submit this job, schedule it to be run automatically, or run it as an MVS started task. If the agent job terminates for any reason, you must restart it, or take steps to have it automatically restarted.

Resource Recovery Services (RRS) must be enabled in order for the agent to communicate with any given Db2 subsystem.

The agent also requires UNIX System Services access. The user ID under which the agent job runs must have an OMVS segment in its RACF profile. To check whether the ID has an OMVS segment in its profile, use the following command:

```
LU userid OMVS
```

To add an OMVS segment to an ID’s RACF profile, use the following command:

```
ADDUSER ddfuid OMVS(UID(nnn))
```
Agent security

The Db2 Recovery Expert agent has several levels of security considerations: APF-authorization, BPX.SERVER access, and package and plan access.

APF authorization

The Db2 Recovery Expert agent must run APF-authorized. Modify the IEAAPFx or PROGxx PARMLIB members to define the Db2 Recovery Expert load library ('ARY.IBMTAPE.SARYLOAD') as an APF-authorized library.

BPX.SERVER access

If the BPX.SERVER FACILITY class profile is not defined within RACF, the user ID under which the agent job runs must be assigned a UID=0. If BPX.SERVER is defined, the user ID must be permitted to it:

PERMIT BPX.SERVER CLASS(FACILITY) ID(userID) ACCESS(READ)

where userID is the user ID under which the agent job runs.

If BPX.SERVER is defined, the agent must also run RACF program controlled. The following RACF commands establish the required definitions for the Db2 Recovery Expert load library and other required load libraries.

For the Db2 Recovery Expert load library:

RALTER PROGRAM * ADDMEM('ARY.IBMTAPE.SARYLOAD'//NOPADCHK)

For the Language Environment® runtime libraries:

RALTER PROGRAM * ADDMEM('xxx.SCEERUN'//NOPADCHK)
RALTER PROGRAM * ADDMEM('xxx.SCEERUN2'//NOPADCHK)

where xxx is the high-level qualifier of the Language Environment data sets, typically CEE.

For each Db2 subsystem that is accessed by Db2 Recovery Expert:

RALTER PROGRAM * ADDMEM('DSN.Vxxx.SDSNEXIT'//NOPADCHK)
RALTER PROGRAM * ADDMEM('DSN.Vxxx.SDSNLOAD'//NOPADCHK)

where DSN.Vxxx.SDSNEXIT and DSN.Vxxx.SDSNLOAD name the Db2 load libraries required for accessing that subsystem.

After issuing any of the previous commands, the storage program control tables must be refreshed by issuing the following command:

SETROPTS REFRESH WHEN(PROGRAM)

Important: Some of these definitions might already be in place at your site. All of them are required.

Package and plan access

Each Db2 Recovery Expert end user must be granted EXECUTE privileges on the Db2 Recovery Expert packages and plans. Db2 Recovery Expert privileges are granted when you run SARYSAMP member ARYGRT1. See "Granting Db2 Recovery Expert privileges".

Bootstrap data set access

The Db2 Recovery Expert agent needs read access to a bootstrap data set (BSDS) of each Db2 subsystem that is accessed by Db2 Recovery Expert.

RACF passtickets

If passtickets will not be used for authentication, make sure the passticket-app-id and passticket-app-profile parameters are removed from the agent configuration file.

Otherwise, verify that you have set up passticket verification correctly. For more information on setting up passtickets, see “Authenticating the current ISPF user” on page 147.

SSL support

If your agent will utilize SSL, additional permissions must be set. The user ID under which the agent job runs must have a read access to CSF* resources of the CSFSERV class.

Agent output

The primary output of the agent job is log messages that provide status information about the ongoing operation of the agent.

The log messages are written to the SYSPRINT DD. In addition to providing status information about the operation of the agent, these messages record if and when errors occur.

In the event of exceptional conditions, additional messages can be written to the SYSPRINT DD. If an abend occurs, dump information might be written to the CEEDUMP and SYSUDUMP DDs. This information can be used in diagnosis by product support.

Stopping the agent

You use the commands in this section to stop the Db2 Recovery Expert agent.

The agent accepts standard MVS /MODIFY and /STOP commands. From SDSF (or anywhere else that you can issue commands), you can issue one of these commands:

/MODIFY agent-job-name,STOP

This initiates a graceful agent shutdown. This causes the following sequence to occur:

1. The agent stops accepting new server requests.
2. The agent waits for all existing requests to finish.
3. The agent exits.

/STOP agent-job-name

This initiates an agent hard stop. This causes the following sequence to occur:

1. The agent immediately stops accepting new server requests.
2. The agent initiates hard cancels on all running threads.
3. The agent exits as soon as the threads exit.
This is not recommended under normal circumstances.

**Administrative commands (agent)**

You can use the following commands to perform administrative tasks related to the client/agent environment for Db2 Recovery Expert.

/modify agent-job-name, display mepl
   Provides Db2 Recovery Expert module maintenance levels, compile dates, APAR numbers, and APAR build dates and times for the Agent.

/modify server-job-name, stop session session-id
/modify server-job-name, force session session-id
   Stops or forces the specified session.

/modify agent-job-name, refresh config
   Forces the agent to re-read its configuration. Agent will not re-establish a network connection to server, hence the options required for it (for example, port and address) will not be updated.

/modify agent-job-name, refresh topology
   Forces the agent to refresh the list of subsystems. As an alternative to this command, you may use the "Subsystem Monitoring Delay" installation parameter that allows to refresh the list of subsystems automatically.

For more information, see "Worksheets: Gathering parameter values for Db2 Recovery Expert" on page 67, in the Db2 Recovery Expert specific product parameters section. The Subsystem monitoring delay parameter is used in the Customize agent configuration job.

**RACF keyring and token support**

If your server/agent will utilize RACF key rings or PKCS #11 tokens for authentication, the following configuration parameters must be set in the server/agent configuration member jobs:

```xml
<ssl-key-parent> string </ssl-key-parent>
<ssl-key-location> string </ssl-key-location>
```

For SAF key rings:
- `<ssl-key-parent>` should be set to the owner of the key ring
- `<ssl-key-location>` should be set to the name of the key ring

For z/OS PKCS #11 tokens:
- `<ssl-key-parent>` should be set to the fixed value *TOKEN*
- `<ssl-key-location>` should be set to the name of the token

Once you have added the necessary configuration parameters, you must run the jobs to the PDS location used by the server/agent, and recycle the server/agent to implement the change.

**Note:** Key rings and tokens can be generated from the RACF Services Option Menu. To reach this menu, select 1.3 on the ISPF Primary Option Menu line and selecting option 7. To work with z/OS PKCS #11 token, the owner of the server/agent must be the owner of the token. Alternatively, the user must be added into the DCERTC and CRYPTO6P groups.
Authenticating the current ISPF user

Db2 Recovery Expert ISPF client can authenticate the current user by using either RACF passtickets or passwords.

Using RACF passtickets to authenticate ISPF users

The Db2 Recovery Expert ISPF client can be set up to use RACF passtickets to authenticate the current user of the ISPF client when a request is issued from the ISPF client to the server/agent.

To set up Db2 Recovery Expert to use RACF passtickets to authenticate ISPF users:

1. From the TCz Customization Product Parameters panel accept the default value of the Authentication mode parameter in the ISPF CLIST. The default value is PASSTICKET.

2. RACF passtickets are stored in the RACF PTKTDATA class. If the RACF PTKTDATA class is not active, you can activate by issuing a command similar to the following:
   SETROPTS CLASSACT(PTKTDATA) RACLIST(PTKTDATA)

3. For this type of authentication you need to define a RACF profile by issuing a command similar to the following where securedsignonapplicationkey is the Secured Signon Application Key applicable to your environment and ownerid is the user ID of the owner of the profile:
   RDEFINE PTKTDATA ARYZOS31 SSIGNON(KEYMASKED(securedsignonapplicationkey)) – APPLDATA(‘NO REPLAY PROTECTION’) OWNER(ownerid) – DATA(‘ARY for ‘)

4. Give the server access to the RACF profile by issuing a command similar to the following where userid is the user ID that needs access to the profile (to generate passtickets and to authenticate against them). This can also be a group as described in the RACF documentation:
   PE ARYZOS31 CLASS(PTKTDATA) ID(userid) AC(UPDATE)

5. Define a RACF profile by issuing a command similar to the following where ownerid is the user ID of the owner of the profile:
   RDEFINE PTKTDATA IRRPTAUTH.ARYZOS31 OWNER(ownerid)

6. Give the server access to the RACF profile by issuing a command similar to the following where userid is the user ID that needs access to the profile (to generate passtickets and to authenticate against them). This can also be a group as described in the RACF documentation:
   PE IRRPTAUTH.ARYZOS31 CLASS(PTKTDATA) ID(userid) AC(UPDATE)

7. Refresh the PTKTDATA profiles by issuing a command similar to the following:
   SETROPTS RACLIST (PTKTDATA) REFRESH

Using passwords to authenticate ISPF users

During customization you can set up the Db2 Recovery Expert V3.2 ISPF client to prompt users for their passwords when authenticating the current user of the ISPF client.
The password entered is used by the ISPF client directly when authenticating the current user against the server. It may also be saved in the user profile to avoid a prompt each time the user starts up the ISPF client.

To set up Db2 Recovery Expert to use passwords when authenticating ISPF users:

1. From the TCz Customization Product Parameters panel, set the value of the Authentication mode parameter in the ISPF CLIST to PASSWORD. You can set the parameter when you initially customize Db2 Recovery Expert or later, by rerunning the Configure Startup CLIST 2 customization job.

   **Note:** When using Multi Factor Authentication (MFA), the PASSWORD parameter should be used with the following configuration parameters:
   
   `<uppercase-auth><false></uppercase-auth>`
   `<uppercase-password><false></uppercase-password>`

   Also, please note that the Remember Password (encrypted) and Use for all locations options do not work with MFA.

2. When Authentication mode is set to PASSWORD, the ISPF interface prompts each user for their credentials the first time they launch the ISPF interface and attempt to retrieve any profiles for a given SSID. The following Enter Password panel opens when the ISPF interface is started.

   ![Enter Password Location](image)

3. Each user can save their password for future use by Db2 Recovery Expert when connecting to the specified location by specifying Y in the Remember Password field. An encrypted copy of the password is saved. In future sessions, the display of the Login panel for a location is suppressed if the password for that location is stored.

4. Each user can specify that the same password is used for any SSID to which they want to connect by specifying Y in the Use for all locations field. If this option is not selected, the ISPF user interface prompts the user for credentials if an attempt is made to use a different SSID.

5. Each user can use the Reset ISPF client passwords option to reset their password information so that it is not saved. To reset an ISPF client password:

   a. From the Db2 Recovery Expert ISPF interface main menu specify 0 (Administration) in the command line. The Administration Menu panel opens.

   b. Specify 5 (Reset ISPF client password) in the Option line. Press Enter. Your password is reset and no longer saved. If reset, you have to enter your password the next time that you access the ISPF client. A message is issued confirming that the ISPF client password is reset.
Chapter 6. The Subsystem Setup facility

In some environments in order for Db2 Recovery Expert to provide the fastest and most effective backups for Db2 subsystems, the Db2 subsystem must be configured on your local DASD according to specific guidelines. These guidelines require the segregation of the active logs and bootstrap data sets from the rest of the Db2 subsystem. They also require additional MVS user catalogs that are backed up and restored with the Db2 subsystem. Db2 Recovery Expert’s Subsystem Setup facility will help you in getting your Db2 subsystem available for the most efficient and effective backup.

About configuring a subsystem for the system backup and restore utilities

When planning to restore an entire Db2 subsystem, you should ensure that the Db2 subsystem is properly configured before you begin creating backup profiles.

These requirements ensure that your Db2 object and log data are contained on separate sets of volumes. When you restore the volumes, the user catalogs will be restored and will reflect the data and log locations as they were at the time of the backup.

Db2 Recovery Expert performs extensive validity checking for these requirements. If it detects any condition where log data and object data are not separated, Db2 Recovery Expert issues a message containing the volume name(s) that hold both types of data. The backup will still be allowed, but only full system restores will be allowed from the backup (called a “mixed data” backup). You must recover both object and log data from a mixed data backup.

You can use the Db2 Recovery Expert Subsystem Setup facility to get your Db2 subsystem(s) in optimal condition. Db2 Recovery Expert analyzes your subsystem and provides information about the volume location and aliases of user catalogs, bootstrap data sets, and active logs. It also provides detailed information about the volumes and the data sets in use by a subsystem.

If your subsystem is not correctly configured, you can use Db2 Recovery Expert to create MVS catalogs and aliases, rename or move bootstrap data sets, log data sets, and/or Db2 object data sets to the proper location.

Configuring the Db2 subsystem involves ensuring the following:

- The Db2 subsystem has two separate MVS user catalogs: one for the Db2 data and one for the Db2 log and bootstrap data sets.
- Those two MVS user catalogs are on separate volumes.
- There are separate aliases for the Db2 subsystem’s object data sets and log/bootstrap data sets.
- The MVS user catalogs for the Db2 data and for the log/BSDS each contain the appropriate aliases.
- The Db2 data and log/bootstrap data sets on the volumes associated with the Db2 subsystem are properly separated and do not contain data or catalogs that may be inappropriately back-leveled upon restoration.
• The volumes containing Db2 data do not contain other MVS data that may be inappropriately back-leveled upon restore.

Db2 Recovery Expert Subsystem Setup facility collects and displays information about the Db2 subsystem’s user catalogs, boot strap data sets, active logs, and related Db2 object data sets. It allows you to create new catalogs and aliases, move and rename log and BSDS data sets, and move and rename Db2 object data sets.

### Configuration summary for the Subsystem Setup facility

This is the general procedure to configure a Db2 subsystem using the Db2 Recovery Expert Subsystem Setup facility.

**Table 19. Subsystem Setup facility configuration summary**

</tbody>
</table>
| 10   | View the volumes in use by the subsystem (requires Db2 to be up for a new analysis). Resolve any major issues - for example:  
  • Make sure log and object data sets do not reside the same volume.  
  • Move other MVS user catalogs unrelated to the Db2 subsystem to another location.  
  • Ensure the volumes to be backed up are on Symmetrix devices. | Optimizing volumes used by the Db2 subsystem on page 173 |

### Subsystem analysis and the Subsystem Setup Information screen

The following section describes the initial analysis of the Db2 subsystem and the Subsystem Setup Information panel.

### Selecting the subsystem

1. From the Db2 Recovery Expert for z/OS Main Menu, specify 0 (Administration) and press Enter. From the System Operations Menu, specify 1 (Db2 Subsystem Analysis and Configuration) in the Option line and press Enter.
2. A panel is displayed that allows you to enter the desired Db2 subsystem ID and the backup type that will be performed on the SSID. The SSID must have been defined in the Db2 Recovery Expert Setup screens before you can proceed.
3. When you press Enter, the analysis of the subsystem begins. If the subsystem has previously been analyzed, the following window appears:
This window offers you the option to view the last previous analysis or to re-analyze the subsystem. The previous analysis is saved in the Db2 Recovery Expert repository and can be retrieved for viewing by entering N in the **Re-analyze Db2 Subsystem Info** field and pressing Enter. If you want to re-analyze the subsystem, enter Y in the **Re-analyze Db2 Subsystem Info** field and press Enter.

### Reviewing subsystem setup information

This section explains the Subsystem Setup Information screen.

When the analysis is complete, the Subsystem Setup Information screen is displayed.

```

K72A - Log 2 K72ALOG.LGCPY2.DS02 Volume RAD092
```

The fields at the top of the screen describe the status of the subsystem and the analysis data.

**Subsystem**

The Db2 subsystem analyzed.

**Active** Whether the Db2 subsystem is currently active.
Datasharing
Yes in this field indicates the subsystem is a member of a data sharing group.

Date of Last Analysis
The date that the last analysis was run.

Analysis Recommended
If Y, Db2 Recovery Expert recommends that you analyze the subsystem to update the information.

Message
This message is related to the last analysis of the subsystem. The message may be one of the following:

- **Subsystem configuration is optimal.**
- **Subsystem configuration prevents system level backup.** At least some of the Db2 subsystem data sets are not on a supported EMC Symmetrix device.
- **Subsystem configuration allows only full restore (data and logs).** Db2 Recovery Expert can back up and restore the subsystem, but log/BSDS and object data sets are mixed on the same devices. Only a full restore (both log and data volumes) will be available.
- **Other non-Db2 data will be backed up and restored.** The Db2 log and object data is properly segregated, but Db2 Recovery Expert has detected other non-Db2 data sets on one or more subsystem volumes. You can view the other data sets by using the D line command on the affected volumes.

**Note:** If any Db2 data sets detected are empty user catalogs, you should move the catalogs to a volume not being used by the subsystem. If you choose not to move the catalogs, you will have to manually unallocate them before performing a system restore.

Valid primary commands
You can use the following primary commands on this screen:

**ANALYZE**
This command gathers information about the subsystem as in the original analysis, and also removes any catalog names that were entered in the New MVS User catalog fields.

**REANALYZE**
This command gathers information about the subsystem as in the original analysis, but does not remove catalog names entered in the New MVS User catalog fields. Use this command when you wish to re-analyze the subsystem without losing your entries in the New MVS User catalog fields.

**Note:**
- The Db2 subsystem must be active to perform a subsystem analysis or reanalysis.
- Db2 Recovery Expert does not support alias levels greater than four. If alias levels greater than four are encountered, Db2 Recovery Expert may properly identify ICF catalogs for the alias but it will not be able to properly assess if all files of a system get backed up.
- Only the first 26 characters of a 4-level alias name will display on the Subsystem Setup Information panel under the list of aliases.
Separating the MVS user catalogs

The New MVS User Catalogs and Existing MVS User Catalogs sections of the Subsystem Setup Information screen allow you to review the status of your MVS user catalog. You must ensure that the MVS user catalogs are separated into two catalogs: one for logs/BSDS data sets and one for Db2 object data sets. You can define new catalogs or modify existing catalogs to accomplish this.

You can also use this section to view aliases and add new aliases to the user catalogs. You need to ensure that there are separate aliases for the Db2 subsystem's object data sets and log/boot strap data sets, and that each MVS user catalog for the Db2 data and for the log/BSDS contains the appropriate aliases.

Existing MVS user catalogs

All current MVS catalogs in use by this Db2 subsystem are listed under the Existing MVS User Catalogs used by this Db2 Subsystem heading.

<table>
<thead>
<tr>
<th>Existing MVS User Catalogs used by this Db2 Subsystem</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Data</strong> CATALOG.RSPLEX01.K72A.CAT1 Volume RAD020</td>
</tr>
<tr>
<td><strong>Log</strong> CATALOG.RSPLEX01.K72A.CAT2 Volume RAD021</td>
</tr>
<tr>
<td>Line Cmnds: (V-Volume List)</td>
</tr>
</tbody>
</table>

The types of data sets (Data/Log/Other) aliased in the catalogs are shown at left. The location of the user catalog is shown in the Volume field on the far right. If the existing MVS catalogs show that Db2 object data sets (Data on the left) and Db2 log/BSDS data sets (Data or Log on the left) are cataloged in the same catalog, you will need to separate them by creating new catalogs or changing the existing catalogs. You also need to ensure that the two catalogs are located on different volumes.

New MVS user catalogs

If necessary, you can create new MVS user catalogs on this screen using line commands or change the existing catalogs.

**Note:** You must have proper authorizations to create or update MVS user catalogs. Refer to the DFSMS: Managing Catalogs guide for your version of z/OS for information about authorizations.

Initially when you analyze a subsystem, spaces are provided next to each catalog type under the New MVS User Catalogs to be used by this Db2 Subsystem heading. You can type in the name of a new MVS user catalog for each or create them by entering the C line command.

Once the catalogs have been defined and located, the catalog names and their locations are made read-only on this screen. You can only remove them by using the ANALYZE command.

Creating a new user catalog

Use these steps to create a new user catalog.

You must create two types of user catalogs for the Db2 subsystem:

- The log/BSDS catalog catalogs the Db2 log and boot strap data sets for the Db2 subsystem.
- The Db2 data catalog catalogs the Db2 object data sets for the Db2 subsystem.
1. Enter the catalog name in the appropriate field, as shown:

   **Log/BSDS Catl** CATALOG.RSPLEX01.T9A1.CAT9  Volume
   **Db2 Data Catl** CATALOG.RSPLEX01.T9A1.CAT10  Volume

2. Press Enter. If the catalog does not exist, Db2 Recovery Expert will display a message stating it is not found. If it exists, the New MVS User Catalogs to be used by this Db2 Subsystem screen opens.

3. Specify a C next to the catalog type, as shown in the following screen:

   New MVS User Catalogs to be used by this Db2 Subsystem
   c Log/BSDS Catl                             Volume
   c Db2 Data Catl                             Volume
   Line Cmds: (C-Create, A-Add Alias, D-Dataset Disp, U-Update, V-View Alias)

4. Press Enter. The Update User Catalog Information screen opens.

   **RCVYXPRT V3R2 --- Update User Catalog Information -- 2019/01/14 17:58:13**
   **Option ==>>**
   
   **Subsystem: T9A1**
   User Catalog Name  ==> CATALOG.RSPLEX01.T9A1.CAT9
   User Catalog Volume ==> 
   
   **Data Parameters**
   Tracks or Cylinders ==> C (Tracks/Cylinders)
   Primary Quantity ==> 10
   Secondary Quantity ==> 5
   Data Buffers ==> 4
   
   **Index Parameters**
   Tracks or Cylinders ==> C (Tracks/Cylinders)
   Primary Quantity ==> 1
   Secondary Quantity ==> 1
   Index Buffers ==> 4
   
   User Catalog Aliases ==> 

5. Specify the new catalog information in the following fields:

   **User Catalog Name**
   Specify the name of the user catalog you want to create.

   **User Catalog Volume**
   Specify the volume location for the user catalog.

   **SMS Storage Class**
   Specify whether you want the catalog to be managed by SMS, enter the name of the SMS storage class to use for the catalog creation.

6. Specify the data and index information for the catalog data set that will be created in the following fields:

   **Tracks or Cylinders**
   Specify the allocation unit in T(racks) or C(ylinders).
Primary Quantity
Specify the primary allocation quantity.

Secondary Quantity
Specify the secondary allocation quantity.

Data Buffers OR Index Buffers
Specify the number of MVS buffers to be allocated to the user catalog when it is opened.

User Catalog Aliases
Optionally, you can specify up to six aliases to be managed by this catalog. You can add additional aliases later using the A line command on the Subsystem Setup Information screen.

7. Press PF3 to continue. The IDCAMS Interface Module screen opens:

```
RCVYXPR T V3R2 ------- IDCAMS Interface Module ------- 2019/01/14 18:00:52

 CAT(CATALOG.RSPLEX01.MASTER)

*************************************************************************** Bottom of Data ***************************************************************************
```

8. Specify an E in the Action field to enter an ISPF edit session and change one or more of the control cards.

9. Specify an O in the Action field to submit the job to create the catalog online. When you press Enter, the job is submitted and the results of the creation will be displayed.

10. Specify a B in the Action field to build a batch job that will create the catalog. The Build Batch Job window is displayed.
11. From the Build Batch Job window:
   a. Specify a **Y** in the **Edit Generated Job** field to view the job in an ISPF edit session after the job is generated. If you specify **N**, after the job is generated you will return to the Subsystem Setup Information window.
   b. Specify the fully qualified data set name (without quotes) where you want to save the generated job in the **Build job in Dataset/Member** field. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name. If the member does not exist, Db2 Recovery Expert will create it.
   c. Specify a valid job card for your site in the **Job Cards** field.
   d. Press Enter to generate the job. If you specified a **Y** in the **Edit Generated Job** field, an ISPF edit session opens where you can view and edit the job JCL. If you specified an **N** in the **Edit Generated Job** field, control returns to the Subsystem Setup Information window and the **New MVS User Catalogs** field is populated with the new catalog name.

**Viewing the aliases for a user catalog**

You can see the aliases in a specific user catalog by entering **V** next to the catalog. This can be accomplished on both existing and new MVS user catalogs.

1. To see a list of aliases for the catalog type **V** next to an existing or new MVS catalog as shown in the following screens:

   - **New MVS User Catalogs to be used by this subsystem**
     - Log/BSDS Cat1 CATALOG.RSPLEX01.K72A.CAT1 Volume RA0092
     - Db2 Data Cat1 CATALOG.RSPLEX01.K72A.CAT2 Volume RA0090
     - Line Cmds: (C-Create, A-Add Alias, D-Dataset Disp, U-Update, V-View Alias)

   - **Existing MVS User Catalogs used by this subsystem**
     - Log Other CATALOG.RSPLEX01.K72A.CAT1 Volume RA0092
     - Data Other CATALOG.RSPLEX01.K72A.CAT2 Volume RA0090
     - Line Cmds: (D-Dataset Display, V-View Aliases)

2. Press Enter. The Usercat Alias List Display screen opens. Each of the aliases are listed.
Adding a new catalog alias

You can add a new catalog alias using the A command.

1. Specify an A next to the catalog for which you want to add a new alias.

2. Press Enter. The Add User Catalog Aliases screen is opens.

3. Specify up to 6 new aliases in the User Catalog Aliases fields.

4. Press PF3. The IDCAMs Interface Module screen opens.
5. Specify an E in the Action field to enter an ISPF edit session and change one or more of the control cards.

6. Specify an O in the Action field to submit the job to create the aliases online. When you press Enter, the job is submitted and the results of the creation will be displayed.

7. Specify a B in the Action field to build a batch job that will create the aliases. The Build Batch Job window is displayed.

8. From the Build Batch Job window:
   a. Specify a Y in the Edit Generated Job field to view the job in an ISPF edit session after the job is generated. If you specify N, after the job is generated you will return to the Subsystem Setup Information window.
   b. Specify the fully qualified data set name (without quotes) where you want to save the generated job in the Build job in Dataset/Member field. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name. If the member does not exist, Db2 Recovery Expert will create it.
   c. Specify a valid job card for your site in the Job Cards field.
   d. Press Enter to generate the job. If you specified a Y in the Edit Generated Job field, an ISPF edit session opens where you can view and edit the job JCL. If you specified an N in the Edit Generated Job field, control returns to the Subsystem Setup Information window and the New MVS User Catalogs field is populated with the new catalog name.

Displaying the data sets currently cataloged by the MVS catalog

You can see a list of data sets that are cataloged in the user catalog.
1. To see a list of data sets type D next to an existing or new MVS catalog to see a
list of data sets that are cataloged in the user catalog.

   _New MVS User Catalogs to be used by this subsystem_
   _Log/BSDS Cat1 CATALOG.RSPLEX01.K72A.CAT1 Volume RAD092_
   _Data Cat1 CATALOG.RSPLEX01.K72A.CAT2 Volume RAD090_
   Line Cmds:(C-Create, A-Add Alias, D-Dataset Disp, U-Update, V-View Alias)___

   _Existing MVS User Catalogs used by this subsystem_
   Log Other CATALOG.RSPLEX01.K72A.CAT1 Volume RAD092
   Data Other CATALOG.RSPLEX01.K72A.CAT2 Volume RAD090
   Line Cmds: (D-Dataset Display, V-View Aliases)

2. Because Db2 Recovery Expert does not save individual data set information in
its repository, this command may require you to reanalyze the subsystem if you
have not performed a recent analysis. You are not required to perform the
analysis, however, Db2 Recovery Expert will not be able to display information
about the data sets' tracks, volume, or data type. If analysis is needed, the
following window is displayed after you enter D next to the catalog:

   Re-Analyze Subsystem?
   This command requires a current analysis to show which data sets are in use by
   this Db2. If you do not perform the analysis, all data sets will still be shown
   but will have a status of "N/A". Do you wish to perform the analysis now?  N

3. After analysis (or if you are viewing a previously saved analysis), the Usercat
Dataset Display screen is displayed. Db2 data sets related to the selected
subsystem are shown in ISPF default color blue. Non-Db2 data sets are
highlighted in the ISPF default color turquoise. Your colors may appear
different if you have changed your ISPF default colors.
4. The user catalog which you are viewing data sets for is listed at the top of the screen. The following information is provided:

**Dataset Name**
The fully qualified name of the data set.

**Tracks**
The number of tracks allocated for the data set.

**Volume**
The volume on which the data set is located, or the data set type if the data set is not physically allocated on the volume.

**Db2**
Yes in this column means that the data set is a Db2 data set for the selected Db2 subsystem.

**Logs**
Yes in this column means the data set is a Db2 active or archive log data set or a boot strap data set for the selected Db2 subsystem.

**Data**
Yes in this column means the data set is a Db2 object data set for the selected Db2 subsystem.

### Updating the new MVS user catalog

You can change the name of the catalog and also create the catalog if it does not exist.

1. Type U next to a new master catalog to change the name of the catalog and also create the catalog if it does not exist.

2. Press Enter. The Change Name of MVS User Catalog window opens.

```plaintext

_New MVS User Catalogs to be used by this subsystem
_Log/BSDS Cat1 CATALOG.RSPLEX01.K72A.CAT1 Volume RAD092
_Db2 Data Cat1 CATALOG.RSPLEX01.K72A.CAT2 Volume RAD090
Line Cmds:(C-Create, A-Add Alias, D-Dataset Disp, U-Update, V-View Alias)

160  DB2 Recovery Expert for z/OS
3. Press Enter. If the catalog does not exist, the following window appears:

```
Confirm Create of MVS User Catalog
The dataset entered for an MVS catalog does not exist. Press enter to Create this catalog.
CATALOG.RSPLEX01.B71D.CAT3
```

4. To confirm creating the new catalog, press Enter. The Update User Catalog Information screen appears. This process is the same as creating a new master catalog.

---

**Reviewing the storage copy pools for Db2 system backups**

The Storage Copy Pools section is displayed if the analysis was done for a Db2 type backup. The Db2 BACKUP SYSTEM utility requires that you have defined copy pools for your data using Db2 naming conventions.

**Note:** Refer to the IBM Db2 Utility Guide and Reference for information about system requirements for the BACKUP SYSTEM utility.

Copy pools are listed under the Storage Copy Pools heading.

```
Storage Copy Pools
Data Copy Pool DSN$RS47BDS2$DB
Log Copy Pool DSN$RS47BDS2$LG
Backup Pool SGBDS2D2
Backup Pool SGBDS2L2
Line Cnvs: (V-Volume List)
```

**Note:** Your colors may be different if you have changed your ISPF default colors.

**Data Copy Pool**
The name of the copy pool that contains the Db2 data.

**Log Copy Pool**
The name of the copy pool that contains the Db2 logs.

**Backup Pool**
The names of the backup pools that are used by the Db2 subsystem as backup targets.

If any of the listed entries are shown in red, Db2 Recovery Expert could not find the associated pool. This error must be corrected before a backup job can be successfully run.
Viewing a volume list for a copy pool

You can view a list of volumes in use by a copy pool.

1. To view the list of volumes type a V next to the copy pool on the Subsystem Setup Information display panel. Because Db2 Recovery Expert does not save individual data set information in its repository, this command may require you to reanalyze the subsystem if you have not performed a recent analysis. You are not required to perform the analysis, however, Db2 Recovery Expert will not be able to display information about the data sets' tracks, volume, or data type. If analysis is needed, the following window appears after you enter V next to the alias:

   ![Re-Analyze Subsystem?](image)

   This command requires a current analysis to show which datasets are in use by this Db2. If you do not perform the analysis, all datasets will still be shown but will have a status of "N/A". Do you wish to perform the analysis now? N

2. After analysis (or if you are not viewing a previously saved analysis), the Volume Display screen opens. The subsystem that you are viewing volumes for is listed at the top of the screen.

   ![Volume Display](image)

   Subsystem: B8E1

3. From this screen you can view the following information:

   **Volume**
   
   Specifies the volume name.

   **Data** A value of Yes in this field indicates that the volume contains object data.
DataCat
A value of Yes in this field indicates that the volume contains a user catalog that in turn contains the z/OS catalog information for object data sets.

ActLog
A value of Yes in this field indicates that the volume contains one or more active log data set(s).

ActCat
A value of Yes in this field indicates that the volume contains a user catalog that in turn contains z/OS catalog information for an active log data set.

ArcLog
A value of Yes in this field indicates that the volume contains one or more archive log data set(s).

ArcCat
A value of Yes in this field indicates that the volume contains a user catalog that in turn contains z/OS catalog information for an archive log data set.

Other
A value of Yes in this field indicates that the volume contains other non-Db2 data.

**Viewing the data sets allocated on a volume**

You can view the data sets allocated on the volume.

1. Type a D next to a volume.
   
   Because Db2 Recovery Expert does not save individual data set information in its repository, this command may require you to reanalyze the subsystem if you have not performed a recent analysis. You are not required to perform the analysis, however, Db2 Recovery Expert will not be able to display information about the data sets' tracks, volume, or data type. If analysis is needed, the following window appears after you enter D next to the volume:

   **Re-Analyze Subsystem?**

   This command requires a current analysis to show which datasets are in use by this Db2. If you do not perform the analysis, all datasets will still be shown but will have a status of "N/A". Do you wish to perform the analysis now? N

2. After analysis (or if the data was sufficiently up to date), the following screen appears:
3. The information at the top of the Volume Dataset List Display lists the Db2 subsystem ID and volume serial that you are viewing. In addition, the following fields are shown:

**Free Trks**
Specifies the number of free tracks on the volume.

**Db2 Data Trks**
Specifies the number of tracks being used by Db2 object data sets for the specified subsystem.

**Db2 Log Trks**
Specifies the number of tracks being used by Db2 log and BSDS data sets for the specified subsystem.

4. The remainder of the screen lists the data sets on the volume. Db2 data sets related to the selected subsystem are shown in ISPF default color blue. Non-Del data sets are highlighted in the ISPF default color turquoise. Your colors may appear different if you have changed your ISPF default colors.

**Dataset Name**
Specifies the data set name.

**Tracks**
Specifies the number of tracks allocated by the data set on the displayed volume.

**Volume**
If a data set can be moved to another volume, the **Volume** field contains an input line where you can enter another volume. You can move Db2 object data sets to another volume. You cannot move Db2 log or boot strap data sets or MVS user catalogs.

**Db2**
Yes in this column means that the data set is a Db2Db2 data set for the selected Db2 subsystem.

**Logs**
Yes in this column means the data set is a Db2 active or archive log data set or a boot strap data set for the selected Db2 subsystem.
### Renaming and moving the boot strap data sets

The Boot Strap Data Sets (BSDS) section allows you to rename and/or move the Db2 subsystem’s boot strap data sets, if needed. You can rename and/or move the boot strap data sets using line commands. The location of the BSDS is shown in the **Volume** field on the far right.

### Moving boot strap data sets

When separating your Db2 object and log/BSDS data, you can move the boot strap data sets (BSDS) to a new volume or a new SMS storage class by using the M line command.

The Db2 subsystem must be down to rename or move active log data sets.

1. The M line command can be entered in one of two places:
   - To move all the BSDS that are listed, specify M on the **Boot Strap Datasets** heading area line command as shown in the following example:

   ```
   m Boot Strap Datasets
   - K82C - BSDS 1 K82CLOG.BSDS01 Volume EBR900
   - K82C - BSDS 2 K82CLOG.BSDS02 Volume EBR900
   Line Cmds: (R-Rename BSDS, M-Move BSDS)
   ```

   - To move a specific BSDS, specify M in the line command next to the BSDS that you want to move as shown in the following example:

   ```
   - Boot Strap Datasets
   m K82C - BSDS 1 K82CLOG.BSDS01 Volume EBR900
   K82C - BSDS 2 K82CLOG.BSDS02 Volume EBR900
   Line Cmds: (R-Rename BSDS, M-Move BSDS)
   ```

2. Press Enter. The Boot Strap Dataset Move screen opens. The Db2 subsystem for which you are moving the BSDS is listed at the top of the screen.

   ```
   RCVYXPRV V3R2 -------- Boot Strap Dataset Move -------- 2019/01/14 18:32:35
   Option ===>
   ***********************************************************************************************
   Subsystem: K82C
   You have selected the Move Boot Strap Dataset Function. You have entered this command on a header line which will move all listed BSDS datasets to the specified volume. If the datasets are SMS managed, you will need make sure your ACS rules allow the dataset to be placed on the correct volume.
   New Volume: 
   New SMS Storage Class: ________
   Press Enter to process move. Press Cancel to cancel request.
   ```

3. To move the BSDS, provide a new location in the **New Volume** or **New SMS Storage class** field. Db2 Recovery Expert validates volumes to ensure that they are valid volumes for your site, however, SMS storage classes are not validated.
If your boot strap data sets are SMS managed, you must ensure that your automatic class selection (ACS) rules allow BSDS placement on the volumes to which you want to move the data sets.

4. Press Enter to complete the move process.

**Renaming boot strap data sets**

When separating your Db2 object and log/BSDS data, you can rename the BSDS by using the R line command.

The Db2 subsystem must be down to rename or move active log data sets.

1. The R line command can be entered in one of two places:
   - To rename all the boot strap data sets that are listed, specify R in the **Boot Strap Datasets** heading area line command as shown in the following example:

   ```
   r Boot Strap Datasets
   _ B81D - BSDS 1 B81DLOG.BSDS01 Volume EBR900
   _ B81D - BSDS 2 B81DLOG.BSDS02 Volume EBR900
   Line Cmds: (R-Rename BSDS, M-Move BSDS)
   ```

   - To rename a specific boot strap data set, specify R in the line command next to an individual BSDS as shown in the following example:

   ```
   _ Boot Strap Datasets
   r B81D - BSDS 1 B81DLOG.BSDS01 Volume EBR900
   _ B81D - BSDS 2 B81DLOG.BSDS02 Volume EBR900
   Line Cmds: (R-Rename BSDS, M-Move BSDS)
   ```

2. Press Enter. The Boot Strap Dataset Rename screen opens. The Db2 subsystem for which you are renaming the BSDS is listed at the top of the screen.

   ```
   RCVYXPR V3R2 ------- Boot Strap Dataset Rename ------- 2019/01/14 18:32:35
   Option ==>                                                                                   
   Subsystem: B81D
   You have selected the Rename Boot Strap Dataset Function. You have entered this command on a detail line which update the alias for B81DLOG.BSDS01.
   The New Boot Strap Alias will be substituted for the first node of the existing dataset name. You may use a symbolic of &SSID for substituting the Db2 subsystem name.
   New Boot Strap Alias: _______________ Ex: Db2&SSID or &SSID.Db2
   You may optionally specify the following:
   New Volume: ________
   New SMS Storage Class: ________
   Press Enter to process rename. Press Cancel to cancel request.
   ```

3. To rename the BSDS, enter an alias in the **New Boot Strap Alias** field. The new alias must exist in the new user catalog to be used for the log/BSDS data sets. For data sharing subsystems, you may want to use the symbolic &SSID in the new alias name. This variable will resolve to the data sharing group member SSID.

4. You can optionally move the BSDS during the rename by providing a new location in the **New Volume** or **New SMS Storage** class field. Db2 Recovery
Expert validates volumes to ensure that they are valid volumes for your site; however, SMS storage classes are not validated. If your boot strap data sets are SMS managed, you must ensure that your automatic class selection (ACS) rules allow BSDS placement on the volumes to which you want to move the data sets.

5. Press Enter to complete the rename process.

Renaming or moving active log data sets

The Active Log Datasets section allows you to rename and/or move the subsystem’s active log data sets. The location of the active logs is shown in the Volume field on the far right. You can rename and/or move the active logs using line commands.

Moving active logs

When separating your Db2 object and log/BSDS data, you can move the active logs to a new volume or new storage class by using the M line command.

The Db2 subsystem must be down to rename or move active log data sets.

1. The M line command can be entered in one of two places.
   - To move all the active logs that are listed enter M on the Active Logs Datasets heading area as shown in the following example:

```
m Active Log Datasets
- KB2C – Log 1 K82CLOG.LOGCOPY1.DS01 Volume EBR900
- KB2C – Log 1 K82CLOG.LOGCOPY1.DS02 Volume EBR900
- KB2C – Log 1 K82CLOG.LOGCOPY1.DS03 Volume EBR900
- KB2C – Log 2 K82CLOG.LOGCOPY2.DS01 Volume EBR900
- KB2C – Log 2 K82CLOG.LOGCOPY2.DS02 Volume EBR900
- KB2C – Log 2 K82CLOG.LOGCOPY2.DS03 Volume EBR900
Line Cmds: (R-Rename Log, M-Move Log)
```

   - To move a specific active log specify M next to the active log in the line command as shown in the following example:

```
m Active Log Datasets
- KB2C – Log 1 K82CLOG.LOGCOPY1.DS01 Volume EBR900
- KB2C – Log 1 K82CLOG.LOGCOPY1.DS02 Volume EBR900
- KB2C – Log 1 K82CLOG.LOGCOPY1.DS03 Volume EBR900
- KB2C – Log 2 K82CLOG.LOGCOPY2.DS01 Volume EBR900
- KB2C – Log 2 K82CLOG.LOGCOPY2.DS02 Volume EBR900
- KB2C – Log 2 K82CLOG.LOGCOPY2.DS03 Volume EBR900
Line Cmds: (R-Rename Log, M-Move Log)
```

2. Press Enter. The Active Log Dataset Move screen opens. The Db2 subsystem for which you are moving the active logs is listed at the top of the screen.
3. To move the active logs, provide a new location in the **New Volume** or **New SMS Storage class** field. Db2 Recovery Expert validates volumes to ensure that they are valid volumes for your site, however, SMS storage classes are not validated. If your active logs are SMS managed, you must ensure that your automatic class selection (ACS) rules allow active log data set placement on the volumes to which you want to move the active logs.

4. Press Enter to complete the move process.

### Renaming active log data sets

When separating your Db2 object and log/BSDS data, you can rename all the active logs or a single active log by using the R line command.

The Db2 subsystem must be down to rename or move active log data sets.

1. The R line command can be entered in one of two places:
   - To rename all the active logs that are listed, specify an R in the **Active Log Datasets** heading area as shown in the following example:

   ```plaintext
   R Active Log Datasets
   _ KB2C - Log 1 KB2CLOG.LOGCOPY1.DS01 Volume EBR900
   _ KB2C - Log 1 KB2CLOG.LOGCOPY1.DS02 Volume EBR900
   _ KB2C - Log 1 KB2CLOG.LOGCOPY1.DS03 Volume EBR900
   _ KB2C - Log 2 KB2CLOG.LOGCOPY2.DS01 Volume EBR900
   _ KB2C - Log 2 KB2CLOG.LOGCOPY2.DS02 Volume EBR900
   _ KB2C - Log 2 KB2CLOG.LOGCOPY2.DS03 Volume EBR900
   Line Cmds: (R-Rename Log, M-Move Log)
   ```

   - To rename a specific active log, specify an R in the line command next to an individual active log as shown in the following example:

   ```plaintext
   Option>>> Active Log Datasets
   _ KB2C - Log 1 KB2CLOG.LOGCOPY1.DS01 Volume EBR900
   _ KB2C - Log 1 KB2CLOG.LOGCOPY1.DS02 Volume EBR900
   _ KB2C - Log 1 KB2CLOG.LOGCOPY1.DS03 Volume EBR900
   _ KB2C - Log 2 KB2CLOG.LOGCOPY2.DS01 Volume EBR900
   _ KB2C - Log 2 KB2CLOG.LOGCOPY2.DS02 Volume EBR900
   _ KB2C - Log 2 KB2CLOG.LOGCOPY2.DS03 Volume EBR900
   Line Cmds: (R-Rename Log, M-Move Log)
   ```

2. Press Enter. The Active Log Dataset Rename screen opens. The Db2 subsystem for which you are renaming the active logs is listed at the top of the screen.
3. To rename the active logs, enter an alias in the **New Active Log Alias** field. The new alias must exist in the new user catalog to be used for the log/BSDS data sets. For data sharing subsystems, you may want to use the symbolic &SSID in the new alias name. This variable will resolve to the data sharing group member SSID.

4. You can optionally move the active logs during the rename by providing a new location in the New Volume or New SMS Storage class field. Db2 Recovery Expert validates volumes to ensure that they are valid volumes for your site; however, SMS storage classes are not validated. If your active log data sets are SMS managed, you must ensure that your automatic class selection (ACS) rules allow active log data set placement on the volumes to which you want to move the active logs.

5. Press Enter to complete the rename process.

### Managing aliases in the MVS user catalogs

The **Alias used with associated MVS User Catalogs** section shows the aliases currently defined in the existing MVS catalogs. You can view the data sets currently defined to an alias, merge aliases from two catalogs, or rename aliases using this section.

### Viewing the data sets for an alias

You can view the data sets that are using a particular alias.

1. To view the data sets specify a D next to the alias.

2. Because Db2 Recovery Expert does not save individual data set information in its repository, this command may require you to reanalyze the subsystem if you have not performed a recent analysis. You are not required to perform the analysis, however, Db2 Recovery Expert will not be able to display information about the data sets' tracks, volume, or data type. If analysis is needed, the following window appears after you enter D next to the alias:
3. After analysis (or if you are not viewing a previously saved analysis), the following screen appears:

```plaintext
RCVYXPR T V3R2 ------- Alias Dataset Display ------- 2019/01/14 19:22:35

4. Db2 data sets related to the selected subsystem are shown in ISPF default color blue. Non-Db2 data sets are highlighted in the ISPF default color turquoise. Your colors may appear different if you have changed your ISPF default colors.

5. The subsystem and alias that you are viewing data sets for are listed at the top of the screen. Only the first 26 characters of an alias name are displayed. The following information is provided:

**Dataset Name**
The fully qualified name of the data set.

**Tracks**
The number of tracks allocated for the data set.

**Volume**
The volume on which the data set is located, or the data set type if the data set is not physically allocated on the volume.

**Db2**
Yes in this column means that the data set is a Db2 data set for the selected Db2 subsystem.

**Logs**
Yes in this column means the data set is a Db2 active or archive log data set or a boot strap data set for the selected Db2 subsystem.

**Data**
Yes in this column means the data set is a Db2 object data set for the selected Db2 subsystem.

### Renaming aliases
You can rename aliases in the existing master catalog for Db2 object data using the R line command.

Aliases for log and boot strap data sets cannot be renamed. You can rename the boot strap and log data sets themselves using the Bootstrap Datasets and Active Log Datasets sections of the Subsystem Setup Information screen.

**Note:** The Db2 subsystem must be down to rename catalog data sets.
1. To rename an alias for a Db2 object data set, specify R next to the alias, as shown in the following example:

<table>
<thead>
<tr>
<th>Alias used with associated MVS User Catalogs</th>
</tr>
</thead>
<tbody>
<tr>
<td>R</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

2. Press Enter. The Db2 Alias (Dataset) Rename screen opens. The Db2 subsystem for which you are renaming aliases is identified in the **Subsystem** field.

3. To rename the alias, provide a new alias in the **New Data Alias** field. The alias must exist in the new user catalog before you can rename it.

4. Optionally, you can move data to new volumes or a new SMS storage class. Enter the new storage class in the **New SMS Storclas** field, or new volumes in the area at the bottom of the screen. You can add or delete volumes by entering the I or D line commands.

5. To rename the Db2 catalog data sets only, specify Y in the **Rename Catalog** field.

**Merging catalog entries**

After creating the new user catalogs, you can move an alias from one catalog to another by following these steps.

In the following example, the alias K82C will be moved from the existing MVS user catalog to the new catalog defined for Db2 data. Db2 Recovery Expert moves the entries related to that alias, defines the alias in the new catalog and deletes the alias from the old catalog. The mergecat stops the Db2 subsystem, performs the mergecat, and then restarts the subsystem.

1. Type the M(mergecat) command next to the alias, as shown:
2. Press Enter. The Build Batch Job window appears. (This job cannot be submitted online).

## Build Batch Job

<table>
<thead>
<tr>
<th>Field</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Edit Generated Job</td>
<td>Y</td>
</tr>
<tr>
<td>Build job in Dataset</td>
<td>TWUSR.DAH.TEST</td>
</tr>
<tr>
<td>Job Cards</td>
<td></td>
</tr>
</tbody>
</table>

**Job Cards:**

```plaintext
==> //JOBCARD JOB TWUSR,CLASS=A,NOTIFY=&SYSUID
==> /*
==> /*
==> /*
```

### Edit Generated Job

Enter Y to view the job in an ISPF edit session after generation. If you enter N, after the job is generated you will return to the Subsystem Setup Information screen.

### Build job in Dataset/Member

Enter the fully qualified data set name (without quotes) where you want to save the generated job. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name. If the member does not exist, Db2 Recovery Expert will create it.

### Job Cards

Enter a valid job card for your site. If you submit the job from the edit session, when the job completes the Subsystem Setup Information screen reappears.

3. From the Build Batch Job window:

   a. Specify a Y in the **Edit Generated Job** field to view the job in an ISPF edit session after the job is generated. If you specify N, after the job is generated you will return to the Subsystem Setup Information window.

   b. Specify the fully qualified data set name (without quotes) where you want to save the generated job in the **Build job in Dataset/Member** field. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name. If the member does not exist, Db2 Recovery Expert will create it.

   c. Specify a valid job card for your site in the **Job Cards** field.

   d. Press Enter to generate the job. If you specified a Y in the **Edit Generated Job** field, an ISPF edit session opens where you can view and edit the job JCL. If you specified an N in the **Edit Generated Job** field, control returns to the Subsystem Setup Information window.

---

**Alias used with associated MVS User Catalogs**

```
- KB2C CATALOG . RSPLEX01 . KB2C . CAT2 Data
- KB2CLOG CATALOG . RSPLEX01 . KB2C . CAT1 Log
- KB2CT CATALOG . RSPLEX01 . KB2C . CAT1 Data
```
Optimizing volumes used by the Db2 subsystem

The Volumes used by this Db2 Subsystem section lists all the volumes used by the specified subsystem. You can use this section to address issues such as data sets other than Db2 data sets residing on a volume.

The volumes appear in various ISPF default colors, depending on the status of the volume:

**Note:** Your colors may be different if you have changed your ISPF default colors.

**Dark blue**
- Volume is optimal.

**Light blue**
- The volume contains data other than Db2 data.

**Pink**
- Both log and object data reside on the volume.

**Red**
- The volume cannot be backed up by Db2 Recovery Expert.

**Viewing the data sets allocated on a volume**

You can view the data sets allocated on the volume.

1. Type a D next to a volume.
   - Because Db2 Recovery Expert does not save individual data set information in its repository, this command may require you to reanalyze the subsystem if you have not performed a recent analysis. You are not required to perform the analysis, however, Db2 Recovery Expert will not be able to display information about the data sets' tracks, volume, or data type. If analysis is needed, the following window appears after you enter D next to the volume:

   ![Re-Analyze Subsystem?](image)

   **Re-Analyze Subsystem?**
   
   This command requires a current analysis to show which datasets are in use by this Db2. If you do not perform the analysis, all datasets will still be shown but will have a status of "N/A". Do you wish to perform the analysis now? N

2. After analysis (or if the data was sufficiently up to date), the following screen appears:
3. The information at the top of the Volume Dataset List Display lists the Db2 subsystem ID and volume serial that you are viewing. In addition, the following fields are shown:

**Free Trks**
Specifies the number of free tracks on the volume.

**Db2 Data Trks**
Specifies the number of tracks being used by Db2 object data sets for the specified subsystem.

**Db2 Log Trks**
Specifies the number of tracks being used by Db2 log and BSDS data sets for the specified subsystem.

4. The remainder of the screen lists the data sets on the volume. Db2 data sets related to the selected subsystem are shown in ISPF default color blue. Non-Db2 data sets are highlighted in the ISPF default color turquoise. Your colors may appear different if you have changed your ISPF default colors.

**Dataset Name**
Specifies the data set name.

**Tracks**
Specifies the number of tracks allocated by the data set on the displayed volume.

**Volume**
If a data set can be moved to another volume, the Volume field contains an input line where you can enter another volume. You can move Db2 object data sets to another volume. You cannot move Db2 log or boot strap data sets or MVS user catalogs.

**Db2**
Yes in this column means that the data set is a Db2Db2 data set for the selected Db2 subsystem.

**Logs**
Yes in this column means the data set is a Db2 active or archive log data set or a boot strap data set for the selected Db2 subsystem.
Data    Yes in this column means the data set is a Db2 object data set for the selected Db2 subsystem.

Moving data sets on a volume
You can move all data sets to different volumes by using the M line command. After you identify which data sets you wish to move and the new location, Db2 Recovery Expert builds a batch job to move the data sets.

1. Type M in the line command area next to the volume, as shown:

2. Press Enter. The Db2 Dataset Move panel opens. The Db2 subsystem for which you are moving data sets is listed at the top of the screen.

3. To move the data sets, provide a new location in the New Volumes or SMS Storage class field. Db2 Recovery Expert validates volumes to ensure that they are valid volumes for your site, however, SMS storage classes are not validated. If your data sets are SMS managed, you must ensure that your automatic class selection (ACS) rules allow placement on the volumes to which you want to move the data sets.

4. To move Db2 object data sets for the selected subsystem, enter Y in the Db2 Object Data field.

5. To move other data sets not associated with the selected Db2 subsystem, enter Y in the Other Data field.

6. To build the batch job, press PF3. The Build Batch Job window opens:
7. From the Build Batch Job window:
   a. Specify a Y in the Edit Generated Job field to view the job in an ISPF edit session after the job is generated. If you specify N, after the job is generated you will return to the Subsystem Setup Information window.
   b. Specify the fully qualified data set name (without quotes) where you want to save the generated job in the Build job in Dataset/Member field. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name. If the member does not exist, Db2 Recovery Expert will create it.
   c. Specify a valid job card for your site in the Job Cards field.
   d. Press Enter to generate the job. If you specified a Y in the Edit Generated Job field, an ISPF edit session opens where you can view and edit the job JCL. If you specified an N in the Edit Generated Job field, control returns to the Subsystem Setup Information window.
Chapter 7. Using the Db2 Recovery Expert for z/OS ISPF interface

This section provides an overview of the Db2 Recovery Expert for z/OS ISPF functionality, including general information on how to use the panels.

ISPF interface overview

You can use the Db2 Recovery Expert ISPF interface to perform many of the backup and restore functions that are offered by Db2 Recovery Expert.

The backup and restore functions include:
- Creating backup profiles
- Building and submitting backup jobs
- Creating application profiles
- Building and submitting object recovery jobs
- Restoring subsystems
- Creating image copies from system level backups
- Setting up disaster recovery jobs
- Setting up subsystems to work with backup and restore utilities
- Setting up the RBA Capture Utility

Logging in to a database using the ISPF interface

You can use the Database Login window to log in to a Db2 subsystem. The Database Login window opens automatically when you first access a Db2 subsystem when creating an application profile.

1. Specify the user ID that you want to use to connect to the Db2 location in the User ID field.
2. Specify the password or password phrase for the user ID in the Password field. A password is a traditional one to eight character alphanumeric value. A password phrase is a character string that consists of mixed-case letters, numbers, and special characters including blanks. It can be up to 128 characters. Password phrases have security advantages over passwords based on their length and complexity.
3. You can optionally specify your SQL authorization ID (SQLID) if necessary in the Current SQLID (optional) field.
4. Check the Remember this password (encrypted) check box to store the password used to connect to this location for future use by Db2 Recovery Expert. The user ID and current SQLID that you specified are always remembered. In future sessions, the display of the Database Login window for a location is suppressed if the password for that location is stored.
5. Check the Use this information for all database locations check box to specify that the specified user ID, password, and current SQLID should be used (without prompting) at all other database locations accessed during the current Db2 Recovery Expert session.
6. Click Login to access the database.
7. Click the Cancel button to cancel the request and return to the previous screen.
Restriction for products running POSIX clients with TCP/IP connections

Db2 Recovery Expert uses a Portable Operating System Interface (POSIX) client with TCP/IP connections. Users should be aware that there is an IBM restriction when running POSIX clients with TCP/IP connections. For more information about this restriction, refer to:

http://www-01.ibm.com/support/knowledgecenter/SSLTBW_2.1.0/com.ibm.zos.v2r1.halu001/tso.htm

One symptom of this restriction is that if you are using Db2 Recovery Expert and IBM Db2 Query Monitor for z/OS simultaneously and you are connected to the Db2 Recovery Expert server, attempting to split the screen and go into Db2 Query Monitor to connect to a data sharing group produces an EDC8123I error.

Header fields

Every Db2 Recovery Expert ISPF panel has a set of header fields at the top of the panel.

These fields are highlighted in this panel:

```
RCVYXPR  V3R2  ------ Backup Profile Display ------  2019/01/06  20:32:53
Option  ===>   Scroll ===> CSR

Line Commands: B - Build  U - Update  C - Create  V - View  D - Delete
R - Rename

-----------------------------------------------------------------------------------
Profile Like *                  SSID Like *
Creator Like TUSER*            Row 1 of 1 >
-----------------------------------------------------------------------------------

Cmd    Name   Creator  SSID  Updt
XK72A SNAP  TUSER    K72A    U

*******************************************************************************
Bottom of Data *******************************************************************************
```

The fields are:

**RCVYXPR**

This area of the panel displays a shortened product name.

**VnRn**  The product version and release.

**Panel title**

The title of the panel. In this figure, the panel title is “Backup Profile Display”.

**Date and time**

Displays the current date and time.
Option

This line is used to enter an option or a command. The Option line may appear at the bottom if your ISPF session is configured for “Command line at the bottom”.

Scroll
The Scroll field contains the current scroll amount; you can change it by typing over the scroll amount.

Getting help

On any Db2 Recovery Expert product panel or window, you can press PF1 to access help for the function you are using. Also, when a message appears at the bottom of a panel, you can press PF1 to access additional information about the message.

Primary command help

Some Db2 Recovery Expert panels allow you to access a list of valid primary commands by entering a “?” in the Option line. For example, if you enter a ? in the Option line on the Update Backup Profile panel, the following window appears:

<table>
<thead>
<tr>
<th>Primary Command Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLEAR</td>
</tr>
<tr>
<td>VOLUME</td>
</tr>
<tr>
<td>AUTOTGT</td>
</tr>
<tr>
<td>SOURCE</td>
</tr>
<tr>
<td>TARGET</td>
</tr>
<tr>
<td>TGTCLR</td>
</tr>
<tr>
<td>TGTSEL</td>
</tr>
<tr>
<td>SRTUNIT</td>
</tr>
<tr>
<td>SRTVOL</td>
</tr>
<tr>
<td>HEADER</td>
</tr>
<tr>
<td>SAVE</td>
</tr>
</tbody>
</table>

Column display functionality

Db2 Recovery Expert's CSETUP functionality enables you to manipulate the column display.

You can:
- Rearrange report columns horizontally using the CFIX and CORDER options.
- Change the width of individual columns using the CSIZE option.
- Control the vertical ordering of columns using the CSORT option.
- Scroll horizontally between columns, in both left and right directions.
- Scroll horizontally within a single report column while other report columns remain stationary on the screen.
- Order the columns
- Generate a ruler at the top of the report columns beneath the headings.
- Display an entire row-column data element.
- The customizations, or “views”, you configure using CFIX, CORDER, CSIZE, and CSORT can be saved across sessions.
Please note the following regarding syntax presented in this section:

- Underlines indicate the minimum acceptable abbreviation for each keyword.
- Variables are shown in italicized lowercase type.
- Keyword options are separated by vertical lines ( | ).

Accessing the CSETUP primary option menu

The CSETUP primary option menu enables you to access the various CSETUP options and configure column display functions according to your display needs.

1. On any dynamic display, type CSETUP (or CSET) in the option line and press Enter. The Setup Primary Option Menu displays:

```
SETUP -------------- Setup Primary Option Menu ------- 2019/01/05 11:39:06
Command =>
            Permanent View
1 CFIX   Select columns to be fixed on the left side of the report
2 CORDER Modify the horizontal placement of columns
3 CSIZE  Customize the size of columns
4 CSORT  Select columns to sort
5 CRESET Reset column values
6 CREMOVE Remove all customization, including original defaults
7 PVIEW  Permanent View (toggle between temporary and permanent)
```

2. Type the number corresponding to the option you want to access in the Command line and press Enter. The following options are available on the Setup Primary Option Menu:

**CFIX**  Option 1, CFIX, enables you to fix and unfix columns. For more information, see "Fixing a column".

**CORDER**  Option 2, CORDER, enables you to reposition columns. For more information, see "Repositioning columns".

**CSIZE**  Option 3, CSIZE, enables you to change the displayed width of columns. For more information, see "Resizing columns".

**CSORT**  Option 4, CSORT, enables you to select one or more columns for sorting and thus modify the order of the rows displayed. For more information, see "Sorting".

**CRESET**  Option 5, CRESET, enables you to reset all customization. For more information, see "Resetting CSET customization".

**CREMOVE**  Option 6, CREMOVE, enables you to remove all customization. For more information, see "Removing CSET customization".

**PVIEW**  Option 7, PVIEW, enables you to toggle between permanent view and temporary view.
You can also directly invoke each CSETUP option by typing the corresponding command (for example, CFIX, CORDER, CSIZE, CSORT, CRESET, CREMOVE, or PVIEW) in the option line on any dynamic display and pressing Enter.

### Fixing a column

The CFIX option enables you to fix and unfix columns.

A fixed column is always located at the far left side of the display. It does not shift horizontally (as unfixed columns do) when scrolling to the left or right. INNER COLUMN SCROLLING and CEXPAND may be used on a fixed column if the column is narrower than its maximum width. Certain columns may be permanently fixed in the report and cannot be unfixed. Such a column has a fix status of P (permanently fixed). A column cannot be fixed if it is larger than the available display area. There are also restrictions for fixing columns related to the size requirements of other columns. For more information, see "Restrictions".

1. Type CFIX in the option line on any display panel and press Enter. The Define Fixed Columns panel displays.

```
CFIX ---------- Define Fixed Columns ---------- 2019/07/05 11:40:38
Option ===> Scroll ===> CSR
--------------------------------------------------------------
ROW 1 OF 6
Column Function ===> 1 (1-Fix/Unfix, 2-Order, 3-Size, 4-Sort)
Permanent View ===> Y (Y-Perm, N-Temp) Reset View ===> N (Y,N)
Device_Width : 80
Old_Fixed_Width: 5  Old_Unfixed_Width: 75
New_Fixed_Width:  New_Unfixed_Width:
--------------------------------------------------------------
Cmd New Old Len Column_Name
P  P  P  5  CMD
   = 9  SOURCE_VOLUMES
   = 8  SOURCE_DEVTYPE
   = 6  SOURCE_UNIT
   = 8  TARGET_VOLUMES
   = 44 MESSAGE_AREA
Enter: Process selections; PF3: Exit and save; CAN: Exit without save
Line Cmds: F Fix U Unfix
```

The following fields appear on the Define Fixed Columns panel:

**Column Function**

Enables you to jump to any of the CSET functions by typing in the appropriate number. The number corresponding to the current option displays in this field.

**Permanent View**

Indicates whether or not the view you define is permanent or temporary. Valid values are:

- **Y** View customizations are permanent.
- **N** View customizations are temporary.

**Reset View**

Resets all customizations.
**Device_Width**  
Shows the current display device size (screen width).

**Old_Fixed_Width**  
Shows the sum of the FIXED column widths prior to any changes in the current CFIX panel.

**Old_Unfixed_Width**  
Shows the UNFIXED area prior to any changes in the current CFIX panel. \( \text{Old_Unfixed_Width} = \text{Device_Width} - \text{Old_Fixed_Width} \).

**New_Fixed_Width**  
Shows the sum of the FIXED column widths that will result if the FIX/UNFIX changes are saved.

**New_Unfixed_Width**  
Shows the UNFIXED area that will result if the FIX/UNFIX changes are saved. \( \text{New_Unfixed_Width} = \text{Device_Width} - \text{New_Fixed_Width} \).

**Cmd**  
Field where you specify line commands. Valid line commands are F (fix) and U (unfix).

**New**  
Displays the new CFIX view settings.

**Old**  
Displays the previous CFIX view settings.

**Len**  
Shows the length of the column.

**Column_Name**  
Shows the name of the column.

2. Type F in the Cmd field next to column(s) you want to fix.
3. Type U in the Cmd field next to column(s) you want to unfix.
4. Press Enter. The changed values display in the New column next to the corresponding column(s).
5. Press PF3 to save changes and return to the display panel.

### Repositioning columns

The CORDER option enables you to reposition report columns.

If any columns are fixed, they are grouped together as the leftmost report columns. The unfixed columns are grouped together to the right of any fixed columns. CORDER does not move a column out of its group. A fixed column cannot be relocated to the right of an unfixed column. Likewise, an unfixed column cannot be relocated to the left of a fixed column.

1. Type CORDER in the option line on any display panel and press Enter. The Define Column Display Order panel displays.
The following fields appear on the Define Column Display Order panel:

**Column Function**

Enables you to jump to any of the CSET functions by typing in the appropriate number. The number corresponding to the current option displays in this field.

**Permanent View**

Indicates whether or not the CSETUP customization you define is permanent or temporary. CSETUP customization refers to the change made in the CSETUP functions CFIX, CORDER, CSIZE, and CSORT. These customizations are called views. Valid values are: Y - CSETUP customization is permanent or N - CSETUP customization is temporary.

**Reset View**

Resets all customizations.

**Cmd**

Field where you specify the number for column position.

**Fix**

Displays fixed columns. Valid values are: F - Indicates the column is fixed or P- Indicates the column is permanently fixed.

**New**

Displays the new CORDER view settings.

**Old**

Displays the previous CORDER view settings.

**Column_Name**

Shows the name of the column.

2. Type a number next to a column to specify its order.
3. Press Enter. The new column order numbers display in the New column next to each column.
4. Press PF3 to return to the display panel.

**Resizing columns**

The CSIZE option enables you to change the displayed width of columns. This function is primarily intended for non-numeric data where there are large blank areas in all (or most) rows in a given column. Although the displayed width may change, the underlying data does not change.
If a column's size is less than the column maximum, it is possible that some date is not displayed. INNER COLUMN SCROLLING and CEXPAND can be used to see data outside the display range of the resized column.

**Note:** If the minimum and maximum column widths are equal, the column cannot be resized.

1. Type CSIZE in the option line on any display panel and press Enter. The Define Column Size panel displays:

   The following fields appear on the Define Column Size panel:

   **Column Function**
   Enables you to jump to any of the CSET functions by typing in the appropriate number. The number corresponding to the current option displays in this field.

   **Permanent View**
   Indicate whether or not the view you define is permanent or temporary. Valid values are: Y - View customizations are permanent or N - View customizations are temporary.

   **Reset View**
   Resets all customizations.

   **Device_Width**
   Shows the current display device size (screen width).

   **Old_Fixed_Width**
   Shows the sum of the FIXED column widths.

   **Old_Unfixed_Width**
   Shows the UNFIXED area.

   **New_Fixed_Width**
   Shows the sum of the FIXED column widths.

   **New_Unfixed_Width**
   Shows the UNFIXED area.

   **Cmd**
   Field where you specify the number for column position.
**New** Displays the new CSIZE view settings.

**Old** Displays the previous CSIZE view settings.

**Min** Displays the minimum column length.

**Note:** If the minimum and maximum column widths are equal, the column cannot be resized.

**Max** Displays the maximum column length.

**Note:** If the minimum and maximum column widths are equal, the column cannot be resized.

**Fix** Displays fixed columns. Valid values are: F - Indicates the column is fixed or P- Indicates the column is permanently fixed.

**Column_Name**
Shows the name of the column.

2. Type the desired column size in the Cmd field next to the column you want to resize.

**Note:** The column size you specify must be between the Min and Max values shown for that column.

4. Press PF3 to return to the display panel.

**Sorting**

CSORT functionality enables you to select one or more columns for sorting and thus modify the order of the rows displayed on many of Db2 Recovery Expert's product panels.

Columns are selected by sort priority and direction. Direction is either ascending (default) or descending. When more than one column is selected for sorting, the second column only differentiates when rows have matching data in the first column. Similarly, a third column only impacts the sort when data in both the first two columns are identical.

A maximum of nine columns can be selected for sorting at one time. Internal requirements may create a smaller maximum. A message is issued if the maximum number of columns selected for sorting is exceeded.

**Note:** CSORT and SORT are synonymous.

1. Type CSORT (or SORT) in the option line on any display panel and press Enter.
   The Define Sort Columns panel displays:
The following fields appear on the Define Sort Columns panel:

### Column Function
Enables you to jump to any of the CSET functions by typing in the appropriate number. The number corresponding to the current option displays in this field.

### Permanent View
Indicate whether or not the view you define is permanent or temporary. Valid values are: Y - View customizations are permanent or N - View customizations are temporary.

### Stop Sorting
Indicates whether or not to stop sorting as specified. Valid values are: Y - Stop sorting or N - Continue sorting.

#### Cmd Field
- Specifies the lexicographic order for the column. Valid values are: A - (Default) Values are listed in ascending order, smallest to largest or D - Values are listed in descending order, largest to smallest.

### New
Displays the new CSORT view settings.

### Old
Displays the previous CSORT view settings.

### Column_Name
Shows the name of the column.

2. Type A or D in the Cmd field next to the columns on which you want to base your sort.
3. Press Enter. The new sort preferences are displayed in the New column.
4. Press PF3 to return to the display panel.

### Fastpath SORT command
The SORT command can be used as a primary (fastpath) command by typing the appropriate SORT syntax in the Option line of any report panel and pressing Enter. The functionality supports both single and multi-column sorting and enables users to specify sort order (ascending or descending) for each column in the sort.
**Syntax for single-column sorting**

The syntax for single-column sorting is as follows:

```
SORT column_identifier dir
```

Where column_identifier is either the column name or the relative column number and dir is the direction in which to sort the column data. Valid values for dir are:

- **Asc**  (Default) Sorts data in ascending order.
- **Desc** Sorts data in descending order.

**Important:**
- There must be a space between the column_identifier and its dir (if used).
- The relative column number for a column is determined based on the column's placement when visible on the screen. Thus, relative column numbers are only available for columns currently visible on the screen. Relative column numbers are determined by counting the displayed columns from left to right, with the leftmost visible column being assigned the number '1' and each successive column (reading left to right) being assigned a relative column number that is increased by 1. Hint: To quickly determine the column number, use the CNUM command to toggle on the column numbers that are assigned to each display column.
- You can sort on a column that is not displayed if you use the column name (instead of the relative column number) as the column_identifier in the SORT syntax.

**Multi-column sorting**

The syntax for multi-column sorting is as follows:

```
SORT column_identifier dir column_identifier dir
```

Where column_identifier is either the column name or the relative column number and dir is an optional indication of the direction in which to sort the column data. Valid values for dir are:

- **asc**  (Default) Sorts data in ascending order.
- **desc** Sorts data in descending order. Please note that column_identifier and dir values must all be separated by spaces. The maximum number of columns that can be sorted at once is 9.

**Usage examples**

For a report display that has three columns, all of which display on the screen:

- Column 1: Name
- Column 2: Creator
- Column 3: Status

The following examples show how you can sort these columns:

```
SORT NAME
```

Sorts display data in ascending order based on the value in the Name column (when no dir value is specified, the default sort order is ascending, thus SORT NAME and SORT NAME A are synonymous).
SORT NAME D
Sorts display data in descending order based on the value in the Name column.

SORT NAME DESC
Sorts display data in descending order based on the value in the Name column.

SORT NAME A CREATOR D
Sorts display data first in ascending order based on the value in the Name column and then sorts data in descending order based on the value in the Creator column.

SORT NAME ASC CREATOR DESC
Sorts display data first in ascending order based on the value in the Name column and then sorts data in descending order based on the value in the Creator column.

SORT 1 A
Sorts display data in ascending order based on the value in the Name column.

SORT 1 A CREATOR D
Sorts display data first in ascending order based on the value in the Name column and then sorts data in descending order based on the value in the Creator column.

SORT 3 2 1
Sorts the display data first in ascending order based on the value in the Status column, then in ascending order based on the value in the Creator column, and finally in ascending order based on the value in the Name column.

Resetting CSET customizations

The CRESET option enables you to reset all customizations.

After CRESET is issued, all fixed columns are unfixed (except for any permanently fixed columns), all selected sort columns are deselected and sorting is disabled, all column sizes are set to the initial values or maximum values if no suggested value previously existed, and original column locations are restored.

The CRESET option can be issued as a primary command:

CRESET
Resets all customizations (unfixes fixed columns, deselects selected sort columns, sorting disabled, column sizes set to initial values, original column locations restored).

Note: CRESET differs from CREMOVE in that CREMOVE sets all column sizes to their maximum values ignoring any initial, suggested sizes.

Removing CSET customizations

The CREMOVE option enables you to remove all customizations.

After you issue the CREMOVE command, all fixed columns are unfixed (except for those that are permanently fixed), all selected sort columns are deselected and sorting is disabled, all column sizes are set to their maximum values, and original column locations are restored.
The CREMOVE option can be issued as a primary command:

**CREMOVE**

Removes all customizations (unfixes fixed columns, deselects selected sort columns, sorting disabled, column sizes set to maximum values, original column locations restored).

**Note:** CREMOVE differs from CRESET in that CREMOVE sets all column sizes to their maximum values and ignoring any initial, suggested sizes.

**Column scrolling**

Column scrolling enables you to scroll horizontally between columns, in both left and right directions.

Use the following commands when viewing any dynamic display panel to scroll horizontally between columns:

**CRIGHT n**

Enables you to scroll the left side of the display window n report columns to the right.

**CLEFT n**

Enables you to scroll the left side of the display window n report columns to the left.

**Inner column scrolling**

Inner column scrolling enables you to scroll horizontally within a single report column while other report columns remain stationary on the screen. Inner column scrolling may be useful for columns that have been shortened using the CSIZE functionality. Use the following commands when viewing any dynamic display panel to scroll horizontally within a single report column:

**ICRIGHT**

Enables you to scroll to the right within one report column while the other report columns remain stationary.

**ICLEFT**

Enables you to scroll to the left within one report column while the other report columns remain stationary.

**Column numbering**

Column numbering assign a column number to each display column. The inserted column numbers are relative to the leftmost display column.

Use the following command to invoke column numbering:

**CNUM**

Enables you to toggle on/off the column numbers assigned to each display column.

**Note:**

- The leftmost displayed column is always numbered one (1) regardless of how far to the right you scroll.
- You can use column numbers when issuing the SORT fastpath command. For more information, see "Fastpath SORT command".
• Column numbers are not removed by CRESET nor CREMOVE. To remove column numbers, reissue the CNUM command.

Ruler display

The COLS command enables you to generate a ruler at the top of the report columns beneath the headings. This ruler tracks the current position within the column.

The < > symbols indicate whether there is additional column data to the left or right of the displayed data. For example:

<-5----2----5->

In this example, positions 13 through 28 are displayed. There is data both to the left and right of the currently displayed area. The COLS command can be issued by itself, as a toggle switch, or with one parameter (ON | OFF). The syntax is as follows:

COLS (ON | OFF)

  Enables you to generate a ruler at the top of the report columns to track the current position within the column.

Expanding columns

The CEXPAND command enables you to display an entire row-column data element. This command can be useful in instances when the CSIZE command has reduced a column to a width that is too narrow to display all data. Expanding columns using the CEXPAND command provides you with an alternative to inner column scrolling.

To invoke CEXPAND, place the cursor on a row-column element and issue the CEXPAND command. The cursor position determines the row-column that expands. The CEXPAND command can be issued by itself or with two parameters (row and column). The syntax is as follows:

CEXPAND (row column)

  Enables you to display an entire row-column data element where row is the number of the row and column is the number of the column (non-heading lines only) that you want to expand.

CSET restrictions

These are the restrictions that apply to CSET options.

• Total fixed column sizes cannot exceed screen width.
• Total fixed column sizes must leave enough unfixed space for the minimum allowed size for all unfixed columns. If a column is not eligible for resizing, the column's minimum size requirement is the same as its maximum size. Minimum and maximum sizes for all columns are shown in the CSIZE display.
• If a column has been resized, then its current width is treated as its smallest allowable size. When a column is resized its current size must fit on the screen completely. For example, on an 80-byte screen with no fixed columns, a 128-byte column can only be resized to 80 bytes or less (assuming no conflicting minimum size associated with the column). If there were two 10-byte fixed columns, for a total fixed area size of 20 bytes, the 128-byte column would be limited to 60 bytes or its minimum allowed size, whichever was smaller.
Chapter 8. Configuring Db2 Recovery Expert session settings and defaults

This section describes the tasks that can be performed from the ISPF Administration menu.

The tasks that can be performed include the following:
• Specifying System Backup Profile defaults
• Registering Db2 subsystems
• Specifying Server information
• Specifying IMS CLIST Information
• Resetting ISPF client passwords
• Defining Combined system level backup groups
• Removing Records from the Db2 Recovery Expert Schema Level Repository (SLR)

Note: The option to define Combined system level backup groups is not included in the Administration menu if the combined system level backup feature is not installed. This feature is installed by specifying a data set for the Tools Customizer IMS/Db2 Combined SLB VSAM repository file field.

Specifying System Backup Profile defaults

From the Backup Profile Defaults panel you can edit the default values that are used when creating system backup profiles and performing system level backup operations. Any changes that you make to these default values apply only for your user ID.

1. From the Db2 Recovery Expert main menu select Administration by entering a 0 in the command line. The Administration menu opens. Select Backup Profile Defaults by entering a 1 in the command line.
2. In the Backup Scope field specify whether the backup type defaults to full (backup both data and logs) or data only (no logs). Specify F for Full or D for Data.
3. In the Backup Generations field specify the default number of backup generations to be kept on disk. Valid values are from 1 - 99 for SNAP, FlashCopy, and DFSMSdss backups. Valid values are from 1 - 8 for BCV backups.
4. In the Offline Generations field enter the default number of offline generations you want to keep in addition to backup generations. Valid values are from 0 – 99.
5. In the Backup Method field specify the default method that will be used for all backups. You can specify one of the following methods:
   • Specify B to perform a backup to a BCV device using EMC TimeFinder/Mirror copy processing.
   • Specify S to perform a backup to any device using EMC TimeFinder Clone copy processing.
   • Specify F to perform a backup to any device using FlashCopy processing.
• Specify D to perform a backup to any device using Db2 Backup System Utilities.
• Specify L to perform a backup to any device using DFSMSdss copy processing.

6. In the **Issue Log Suspend** field specify the default value for suspending the log while performing a system backup. Specify Y to suspend the log. Specify an N to keep the log active.

7. In the **Validate Volumes** field specify whether the volumes in the backup profiles are validated against current Db2 volumes. Specify Y to indicate that all volumes will be validated. Specify N to indicate that the volumes will not be validated.

8. In the **Backup Repository** field indicate whether the Db2 Recovery Expert schema level repository (SLR) will be backed up when a job to create a system backup is built. Specify Y to indicate that the SLR will be backed up or N to indicate that the SLR is not backed up as part of the job.

9. In the **Work File Unit Device** field specify the default work file unit device that will be used when generating utility JCL. Valid values are any tape or esoteric unit.

10. Press the PF3 key to return to the **Administration** menu.

---

### Registering Db2 subsystems

From the Register Db2 Subsystems panel you can edit the Db2 subsystem information that is configured for each Db2 subsystem ID on which you plan to use Db2 Recovery Expert.

The Db2 subsystem information that you can edit from this panel:

- Includes the ZPARCH member name, the names of the bootstrap data sets, the data sets that comprise the current load library concatenation for Db2, the Db2 Recovery Expert plan names, and the Redirected Recovery Defaults.
- Is contained in the Db2 Recovery Expert Product Control File (PCF). The PCF is populated during Tools Customization. Changing the defaults in the PCF applies to all users of the specific Db2 subsystem for which you are changing the defaults.

1. From the Db2 Recovery Expert main menu select **Administration** by entering a 0 in the command line. The **Administration** menu opens. Select **Register Db2 Subsystems** by entering a 2 in the command line.

2. The **Control File Information** fields are read only. The **Current User Ind** field displays a user indicator that is specified in the CLIST used to start up the product. The **Db2 Control Dataset** field displays the name of the control data set that holds setup information.

3. Enter the subsystem ID in the **Db2 Subsystem ID** field.

4. To edit the ZPARCH, BSDS, or Load Library information, specify a 1 in the command line. The Parameters for Db2 Subsystem panel opens. From this panel you can edit one or more of the following parameters that are specific to the Db2 subsystem you are configuring:

   - In the **Db2 ZPARCHs Member** field specify the eight-character parameter module member name generated for this Db2 subsystem.
   - In the field **Db2 Bootstrap DSN #01 and #02** specify the fully qualified names of the bootstrap data sets for this Db2 subsystem.
   - In the **Db2 Loadlib1 to Loadlib5** fields specify the names of the data sets that comprise the current load library concatenation for Db2. This
concatenation is usually a subsystem-specific DSNEXIT library, the base DSNEXIT library for the current Db2 version, and the base DSNLOAD library.

5. To edit the Db2 Plans information, specify a 2 in the command line. The Db2 Plans for Db2 Subsystem panel opens. From this panel you can edit the plan names that were specified for each of the specific functions:
   - In the Plan #1 Name field specify the name of the plan that allows users to view and create backup profiles.
   - In the Plan #2 Name field enter the name of the plan that allows users to execute backup jobs.
   - In the Plan #3 Name field enter the name of the plan that allows users to run jobs that will generate recovery plans.
   - In the Plan #4 Name field enter the name of the plan that allows users to run jobs that will execute the selected recovery plan.
   - In the Plan #5 Name field enter the name of the plan that allows users to execute Log Analysis jobs.
   - In the Plan #6 Name field enter the name of the plan that allows users to execute Redirected Recovery jobs.

6. To edit the default values that are used when performing Redirected Recovery, specify a 3 in the command line. The Redirected Recovery Defaults panel opens. From this panel you can edit one or more of the following parameters that are used when performing Redirected Recovery:
   - In the Use Db2 Sort when possible field specify Y to use the Db2 Sort or N to use another sort program.
   - In the Sort program installed field specify D if DFsort is installed or S if Syncsort is installed.
   - In the Number of buffers field specify the number of buffers from 1 - 99 that can be used for the Redirected Recovery jobs.
   - In the Channel programs field specify the number of channel programs from 0 - 99 that can be used for the Redirected Recovery jobs.
   - In the Device type field specify the device type that is used for work and SYSPRINT files.
   - In the Data set type field specify the type of data set files that are included in the work and SYSPRINT files. Specify B for Basic or L for Large.
   - In the Track or cylinder field specify whether the work and SYSPRINT files are on tracks or cylinders. Specify T for tracks or C for cylinders.
   - In the Primary quantity field specify the number of primary cylinders that are used for the work and SYSPRINT files. This parameter only applies if the work and SYSPRINT files will be on disk.
   - In the Secondary quantity field specify the number of secondary cylinders that are used for the work and SYSPRINT files. This parameter only applies if the work and SYSPRINT files will be on disk.
   - In the Maximum volumes field specify the number of volumes that are used for the work and SYSPRINT files. You may specify from 1 to 255 volumes.
   - In the SMS data class field specify the SMS data class for the work and SYSPRINT files.
   - In the SMS storage class field specify the SMS storage class for the work and SYSPRINT files.
   - In the SMS management class field specify the SMS management class for the work and SYSPRINT files.
• In the **Unit device** field specify the device type for the sort work files.
• In the **Numbers of DDs** field specify the DD statements that are available for the sort work files.
• In the **Primary space** field specify the number of primary cylinders that are used for the sort work files. This parameter only applies if the files will be on disk. You can specify from 1 to 99999 cylinders.
• In the **Secondary space** field specify the number of secondary cylinders that are used for the sort work files. This parameter only applies if the files will be on disk. You can specify from 1 to 99999 cylinders.
• In the **Utility REGION size** field specify the region size that is used when running the Redirected Recovery jobs.

7. Repeat steps 3 through 6 for each Db2 subsystem that you want to change parameter information. If your Db2 subsystems are members of a data sharing group, you must enter information for each individual member of the data sharing group.

8. When you have finished editing the parameter information for each Db2 subsystem, press the PF3 key to return to the Administration menu.

### Specifying Server information

From the Server Information panel you can edit the name and port number of the Db2 Recovery Expert server to which you want to connect. Changing this value applies only to the current ISPF session (and will be returned to the default value when you log off).

1. From the Db2 Recovery Expert main menu select **Administration** by entering a 0 in the command line. The **Administration** menu opens. Select **Server Information** by entering a 3 in the command line.
2. In the **Server** field specify the host name or IP address (in dotted-decimal notation, e.g., 1.2.3.4) of the Db2 Recovery Expert server to which you want to connect.
3. In the **Port Number** field specify the IP port number of the Db2 Recovery Expert server to which you want to connect. Valid values are integers between 1 and 65535.
4. Press the PF3 key to return to the **Administration** menu.

### Specifying IMS CLIST Information

Using the IMS CLIST Information panel you can change the IMS CLIST connection information that was setup during customization and access a different version of IMS Recovery Expert during the current session.

The default CLIST information that Db2 Recovery Expert uses to connect to IMS Recovery Expert is specified during customization. Changing this value applies only to the current ISPF session (and will be returned to the default value when you log off).

1. From the Db2 Recovery Expert main menu select **Administration** by entering a 0 in the command line. The **Administration** menu opens. Select **IMS Recovery Expert for z/OS connection** by entering a 4 in the command line.
2. In the **CLIST library name** field specify the library name where the CLIST member for the version of IMS Recovery Expert to which you want to connect resides.
3. In the **CLIST member name** field specify the member name of the IMS Recovery Expert CLIST.
4. Press the PF3 key to return to the Administration menu.

**Resetting ISPF client password**

You can reset the ISPF client passwords using Option 5 from the Administration menu.

1. From the Db2 Recovery Expert main menu select Administration by entering a 0 in the command line. The Administration menu opens.
2. Select Reset ISPF client passwords by entering a 5 in the command line.
3. A message displays informing you that the ISPF client passwords were reset.
4. Press the PF3 key to return to the Administration menu.

**Defining Combined system level backup groups**

The Combined SLB Group Display panel lists the Combined System Level Backup (SLB) Groups that have been created. You use a Combined SLB Group to specify one or more Db2 and IMS subsystems that will be processed as a single unit for backup and recovery.

From Combined SLB Group Display you can create, delete, update, and view the Combined SLB Groups.

**Note:**

- The option to define system level backup groups is not included in the Administration menu if the system level backup feature is not installed. This feature is installed by specifying a data set for the Tools Customizer IMS/Db2 Combined SLB VSAM repository file field.
- For more information on working with combined SLB groups see the section Creating Combined SLB Groups in Chapter 13. Performing a combined system level backup.

1. From the Db2 Recovery Expert main menu select Administration by entering a 0 in the command line. The Administration menu opens. Select Define Combined SLB Groups by entering a 6 in the command line.
2. Specify C on any Cmd line to create a new Combined SLB Group. The Add Combined SLB Group panel opens. Enter the Combined SLB group information. Press Enter to return to the Combined SLB Group Display panel. For more information on creating Combined SLB Groups Creating Combined SLB Groups.
3. Specify D on the Cmd line next to the Combined SLB Group that you want to delete. A confirmation panel displays. Confirm that you want to delete the group. Press Enter to return to the Combined SLB Group Display panel.
4. Specify U on any Cmd line next to the Combined SLB Group that you want to update. The Update Combined SLB Group panel opens. Enter the changes that you want to make to the group. Press Enter to return to the Combined SLB Group Display panel.
5. Specify V on any Cmd line next to the Combined SLB Group that you want to view. The View Combined SLB Group panel opens. All fields displayed on this panel are read only. Press Enter to return to the Combined SLB Group Display panel.
6. Press the PF3 key to return to the Administration menu.
Removing Records from the Db2 Recovery Expert Schema Level Repository (SLR)

From the Build SLR Cleanup Job panel you can build a job that will remove records from the Db2 Recovery Expert Schema Level Repository (SLR) based on a specific time or a time range.

SLR records contain the information that is necessary to recover objects to a specific point in time. Once these records are removed from the SLR, they are no longer available for use in the recovery process.

1. From the Db2 Recovery Expert main menu select Administration by entering a 0 in the command line. The Administration menu opens. Select SLR Cleanup by entering a 7 in the command line.

   **Note:** If the combined system level backup feature is not installed, you select the SLR Cleanup option by entering a 6 in the command line.

2. In the Db2 Subsystem ID field specify the Db2 subsystem where the SLR that you want to clean resides. You can enter a question mark to see a list of all the active Db2 subsystems.

3. In the GMT or Local time field indicate whether time in the SLR records is specified using GMT or as the local time based on the Db2 database location. Specify G for GMT time or L for Local time.

4. Specify one of the following types in the Time Range Type field:
   - Specify a P for Period to delete records from the SLR using a time range that precedes the current time. If you select this option, you must specify the time span details in the Period Options fields. By default the time range is set to 60 days preceding the current date using the local database time.
   - Specify a T for Timestamp to delete records from the SLR using a specific time value. All records older than the specified time value will be deleted from the SLR. If you select this option, you specify the time in the Timestamp Options field.

5. If you specified a P in the Time Range Type field then you must specify the following Period Options parameters to set the range:
   - In the Period Type field, specify whether the preceding time span will be in years, months, weeks, days or hours. Specify Y for years, M for months, W for weeks, D for Days, or H for hours.
   - In the Period Value field, specify the number of years, months, weeks, days, or hours. You can specify a value from 1 to 999

6. If you specified a T in the Time Range Type field then you must specify the following timestamp parameter:
   - In the Timestamp field specify a time in the format YYYY - MM - DD - HH - MM - SS. All records that occur prior to this time will be deleted from the SLR.

7. In the Build job in Data Set Member field specify the data set name and the member name where the generated build job will be stored.

8. In the Job Cards field enter a valid job card for your site.

9. Press Enter to generate the JCL for cleanup job.
Chapter 9. Creating system backup profiles

This section explains how to create and maintain system backup profiles using the Db2 Recovery Expert ISPF interface.

System backup profiles contain information that is passed to Db2 Recovery Expert and incorporated into the backup job when it is built. Using Db2 Recovery Expert’s ISPF interface, you can create a system backup profile to specify the source volumes to be backed up for a subsystem and their associated target units. In addition, you set other backup options such as the backup type and the number of generations to keep in the profile. Backup profiles are reusable and editable, and are created on a per subsystem basis. You can easily rename and delete backup profiles using line commands.

If you are planning to use Db2 Recovery Expert to restore your entire system through system restore and log apply, you should ensure the subsystem is configured for the most complete and accurate restoration before you create backup profiles. Refer to the topic “About configuring a subsystem for the system backup and restore utilities” on page 149 for more information.

Profile setup

Profile setup is a validation process performed by Db2 Recovery Expert before a backup of a subsystem can be taken. This process authenticates the volumes for the subsystem, checks the locations of the user data, logs, and user catalogs, and performs other validations to ensure the backup can proceed and that the resulting backup will be usable.

A backup profile must successfully complete profile setup before a system level backup can be generated. Once a backup profile has been set up, it does not need to be set up again unless changes are made to the source or target volume configuration or unless Db2 Recovery Expert detects certain errors while building a backup job. In this case, the profile is flagged as “Setup Needed” on the Update Backup Profile panel. When building a backup job, if profile setup is needed, it is included as the first job step in the JCL.

Profile setup includes the following validations:

- Ensures all volumes in use by the Db2 subsystem are included in the backup.
- If the backup is a full backup, ensures all Db2 log volumes are also included in the backup.
- Ensures that the user catalogs in use by the Db2 subsystem are included in the backup.
- Ensures the log data sets and user data sets are on separate volumes. This includes the user catalogs for log data sets and for object data sets. If log and object data are not separated, the backup can continue but only a full restore will be allowed.
- Ensures that all source volumes are valid, online, and available for backup.
- Ensures all target volumes are valid and available for backup.
- For IBM FlashCopy backup profiles, verifies that the source and target volume are both FlashCopy capable, and reside within the same logical subsystem.
- Ensures that all source and target volumes are of the correct device type.
- Verifies that target units of a backup are not in use by any other backup profile; if so, a warning message is issued. Otherwise, the backup may destroy the data sets for another subsystem.

- Ensures that Db2 Recovery Expert control information does not reside on any volume being backed up.

- Checks that all source and target volumes are at a minimum microcode and patch level for backup.

- For EMC TimeFinder/Clone BCV backup profiles:
  - Verifies that the source volumes do not have established BCVs that are not part of the backup profile.
  - Verifies the target BCVs are not established to any volumes that are not listed as source volumes in the profile.
  - Establishes the first generation of BCVs to the source volumes and puts all other generations on hold. When those BCVs are synchronized with the source volumes, the profile is ready to be built.

- For EMC Snap and BCV backups, Db2 Recovery Expert can detect if the volumes are online to either the local or a remote system and will wait until they go offline before completing the backup. If you wish to bypass this check, add the NO-OFFLINE-CHECK control card to the job. For other backup types, Db2 Recovery Expert cannot detect if the volumes are online to other z/OS systems.

After profile setup has been successfully completed, the SSID and backup type are made read-only in the profile and cannot be changed.

Profile setup must be re-run under the following circumstances:
- If the number of backup generations changes.
- If you add, change, or delete the source or target units.
- If the backup type is changed from full to data or from data to full.
- If you specify a one-generation BCV backup, when the backup job is executed the BCVs are split, but Db2 Recovery Expert does not establish another generation because only one generation can exist. In order to use this profile to create another backup, you must re-run profile setup. This will re-establish the one and only generation and start the mirroring process so the BCVs can be split to create the next backup.
- If Db2 Recovery Expert detects certain errors while executing a backup, the profile will be flagged as “Setup Needed”. These include but are not limited to:
  - If any errors occur during the split phase of a BCV backup, the backup process will end and the profile will be flagged “Setup Needed”.
  - If any errors occur while establishing the next generation of BCVs, the profile will be marked “Setup Needed.” In this case, the backup is still valid because the split processing completed successfully. However, profile setup is needed because the next generation has not been established and therefore is not mirroring the volumes.

---

**Accessing the backup profile list**

Use these steps to access the list of backup profiles.

1. Specify 1 (System Operations) on the Db2 Recovery Expert for z/OS main menu and press Enter. From the System Operations Menu panel specify 2 (System Backup Profiles) to display the Enter Backup Profile Selection Criteria window, shown in the following example:
You can limit the profiles that are listed on the next panel by entering a profile name, profile creator name, or SSID in this window. You can use the asterisk (*) wildcard character in one or all fields to view all the profiles, all the profiles for a creator, or all the profiles for a SSID.

2. Press Enter to continue. The Backup Profile Display opens. The first time you access this panel, it will display as in the following:

---
RCVYXPRT V3R2 ------- Backup Profile Display ------- 2019/01/07 18:18:00
Option ==> Scroll ==> PAGE
Line Commands: B - Build  U - Update  C - Create  V - View  D - Delete
          R - Rename  G - Group
-----------------------------------------------
Profile Like *  SSID Like *
Creator Like *  Row 1 of 1  >
-----------------------------------------------
Cmd  Name  Creator  SSID  Updt
C  Press Enter to Create Profile

*************** Bottom of Data ***************

---
ARYR031I - No Profiles were found that match your selection criteria.
Press enter to create a new profile or change the selection criteria.
---

You can use the RIGHT and LEFT scroll commands (PF10 and PF11) to see all the available columns. You can use the UP and DOWN commands (PF7 and PF8) to scroll through the list when there are more profiles than can be displayed on one panel. The following fields are displayed on the panel:

**Cmd**  You use the **Cmd** field next to each profile enter line commands that can be used to build, update, create, view, delete and rename system backup profiles.

**Profile Like**
The profile name or mask you entered on the Enter Backup Profile Selection Criteria window appears here. You can change the name or mask to see different profiles on this panel.

**Creator Like**
The profile creator name or mask you entered on the Enter Backup Profile Selection Criteria window appears here. You can change the name or mask to see different profiles on this panel.

**SSID Like**
The Db2 subsystem ID or mask you entered on the Enter Backup Profile Selection Criteria window appears here. You can change the name or mask to see different profiles on this panel.
Row x of y
Displays the current row and the total number of rows in the profile list. Adjacent to this field is a scroll indicator: > indicates scroll right for more data; < > indicates scroll left or right for data; < indicates scroll left for more data. A plus sign (+) indicates scroll down for more data; a minus sign (-) indicates scroll up for more data.

Name
The name of the profile.

Creator
The profile creator.

SSID
The Db2 subsystem ID for which the profile was created.

Updt
This column indicates how users other than the profile creator may use the profile.

U(update)
Allows other users to update the profile.

V(iew)
Allows other users to view but not update the profile.

N(ope access)
Prevents other users from viewing or updating the profile.

Description
The profile description, if included.

Last Updated: Userid
The user ID of the last user to update the profile.

Last Updated: Timestamp
The date and time that the profile was last updated.

Created: Userid
The user ID of the creator of the profile.

Created: Timestamp
The date and time that the profile was created.

3. The Cmd line next to each profile allows you to use line commands to perform updates, build jobs, and other profile management tasks.

Creating IBM FlashCopy and EMC TimeFinder/Clone backup profiles
Db2 Recovery Expert makes IBM FlashCopy backups using the FlashCopy function, a copy service available for IBM Enterprise Storage Systems (ESS) devices. Db2 Recovery Expert makes EMC TimeFinder/Clone Volume Snap (SNAP) backups using the EMC SNAP VOLUME utility. Db2 Recovery Expert can maintain up to 99 generations of SNAP or FlashCopy backups.

When using the FlashCopy and SNAP backup methods, Db2 Recovery Expert automatically varies all target units offline when the backup is taken. These target units are exact copies of the source units they are paired with. It is not necessary or recommended to vary the target volumes back online in preparation for the next backup.

Note: When performing a system backup using IBM FlashCopy or EMC TimeFinder/Clone backup profiles that use UCB numbers as targets, Db2 Recovery Expert issues an error message (ARYS118E) if the UCB volumes are online during the backup. This is done to prevent you from accidently overwriting target
volumes. If you want Db2 Recovery Expert to overwrite the target volumes you need to vary the volumes offline and then run the backup.

1. From the Backup Profile Display panel, specify C in the Cmd line and press Enter. The Enter Backup Profile Type panel opens.

   Enter Backup Profile Type
   ARY$BPTP
   Backup Profile Type  C  (S=System, C=Combined SLB)

2. Specify S in the Backup Profile Type field. Press Enter. The Enter New Backup Profile Options panel opens.

   Enter New Backup Profile Options
   Creator                   TUSERDH
   Profile Name              
   Description              
   Db2 SSID                  E9A1 (? for system list)
   Backup Method            S  (Bcv/Snap/Flash/Db2/dfsmsdss(L))
   Source/Target Mapping    A  (Auto discover/pool mapping,
                                Stogroup discover/pool mapping,
                                Manual)
   Update Option            U  (Update, View only, No access)

3. Specify the fields on this panel as follows:

   Creator
   This field is automatically filled with your user ID as the profile creator.
   To create the profile with a different user ID, type the new ID in this field.

   Profile name
   Specify a name for the profile, up to 30 characters.

   Description
   (Optional) Specify a description of the profile.

   Db2 SSID
   Specify the Db2 subsystem for the profile. To view and select from a list of subsystems, specify a question mark (?) in the field and press Enter. The SSID Selection panel is displayed. This panel lists the available subsystems and indicates whether they are active or inactive. Select a subsystem by specifying S next to the subsystem and pressing Enter.

   Backup Method
   Specify F for FlashCopy or S for SNAP backup.

   Source/Target Mapping
   This field specifies how the source volumes are determined and how they are mapped to the target volumes. Users can specify one of the following:
- Specify A to select **Auto discover/pool mapping**. If you select this option, the source volumes are automatically discovered at run time and mapped to target volumes using a pool of target volumes (either units or SMS storage groups).
- Specify S to select **Stogroup discover/pool mapping**. If you select this option, the source volumes are discovered using SMS storage groups that are specifically entered for a Db2 system and these source volumes are mapped to target volumes using a pool of target volumes (either units or SMS storage groups).
- Specify M to select **Manual mapping**. If you select this option you manually enter the source volumes and map them to target volumes.

**Update Option**
This option controls how other users can use your profile.
- **U** allows others to update the profile.
- **V** allows others to view but not update the profile.
- **N** prevents others from viewing or updating the profile.

4. Press Enter. The Update Backup Profile panel is displayed.

The following fields will be read-only upon profile creation:

**Backup Method**
The **Backup Method** used for this profile. This field contains **S** for SNAP backup or **F** for FlashCopy backup.

**Current generation**
When you first create a profile, this field is set to zero (0). After the profile has been built and submitted, this field contains the generation that is currently mirroring Db2.

**Setup Needed**
When you create a profile, this field is set to Y. The profile setup process must be run the first time a profile is built and the resulting job submitted. Once profile setup is performed, this field will contain N when you update the profile. If you update a profile and change the
volume configuration, number of generations, or backup scope, you must run the profile setup again and this field is reset to Y.

**Incremental Generation**
This field contains the generation status of the backup that will be produced on the next execution of the profile. The value Y indicates that the backup is incremental. A value of N indicates that the backup is not incremental. When you first create a profile, this field is set to N. You can set this value to Y using the START-INCREMENTAL keyword in the system backup job. The START-INCREMENTAL keyword can only be used for FlashCopy, DFSMSdss, and Db2 type backups. This value is always set to N for SNAP backups.

5. Specify one or more of the following fields:

**Backup Scope**
Indicate if you want a full backup taken (both data and logs) or to backup data only. Note that if you specify data only and Db2 Recovery Expert detects log data on the volumes during the backup, the backup will proceed without error only if all Db2 log and data volumes have been included in the profile. In this case, the backup will be flagged as a “mixed data” backup and you will only be able to restore both the data and the logs.

**Backup Generations**
Enter the number of generations of backups you want to keep. Valid values are 1 to 99.

**Offload Options**
Enter Y in this field if you want to retain more backups than the number specified in the Backup Generations field. If you specify this option, Db2 Recovery Expert will offload older backups to another device (such as tape or other volumes). When you initially select this option, the Offload Options panel will be displayed. If you edit the profile at a later time and wish to update the offload options, type U in this field.

**Note:** If you are planning on using a system level backup to recover a Db2 subsystem at a remote site using the Db2 Recovery Expert disaster recovery feature, you must set the Offload Options field for the system level backup to Y. This will offload the system level backup to tape so that it can be transported to the remote disaster recovery site.

**Source Stogroups**
This field only appears on this panel if the Stogroup discover/pool mapping option was selected when the profile was created (specify S in the Source/Target Mapping field from the Enter New Backup Profile Options panel.) Enter Y in this field to open the Source Stogroup Selection panel where you will enter each source SMS storage group associated with the Db2 subsystem. Enter U in this field to open the Source Stogroup Selection panel where you can edit the source SMS storage groups that have been associated with the Db2 subsystem.

**Target Pool**
This field only appears on this panel if one of the auto mapping options was selected when the profile was created (specify S for Stogroup discover/pool mapping or A for Auto discover/pool mapping in the Target Mapping field from the Enter New Backup Profile Options panel.) Enter Y in this field to open the Target Pool Selection panel where you will enter a range of target volumes or a list...
of storage groups to use for backup volumes. The target volumes that you enter will be selected from at the time of the backup. You can enter a U to open the Target Pool Selection window and edit the target volumes or storage groups that have been specified.

**Issue Log Suspend**
Specify whether you want Db2 Recovery Expert to stop all logging activity on the subsystem while the backup is made. For Flash backups, log suspension is required; Db2 Recovery Expert automatically sets this field to Y. For SNAP backups, enter Y to suspend logging activity; logging will resume after the backup has completed. If the Symmetrix arrays are equipped with ECA (Enginuity Consistency Assist), you can enter N in this field to allow ECA to manage the log suspension. Note that if any of the Symmetrix devices do not support ECA, Db2 Recovery Expert will automatically suspend the log.

**Validate Db2 volumes**
If you enter Y in this field, every time the backup job is run Db2 Recovery Expert will determine what volumes the subsystem is using and ensure the volumes are included in the backup. The profile setup process will always validate volumes, among other profile setup procedures.

**Enable Obj Restore**
If you want to enable Db2 Recovery Expert’s object level recovery from backups created by this profile, type Y in this field. During backup, Db2 Recovery Expert saves information about object data sets that allows objects to be individually restored later. Refer to Chapter 11, “Recovering database objects,” on page 289 for more information about object level recovery.

**Override PARMLIB**
If you want to override default settings defined in the Db2 Recovery Expert PARMLIB member, enter Y in this field. For more information about the Override PARMLIB Options, see “Specifying PARMLIB override options” on page 249.

6. Create the source and target volume mappings. The procedure depends on whether you selected the auto mapping or manual mapping method.

**Discovering source volumes using SMS storage groups**
When creating an IBM FlashCopy, EMC SNAP, or DFMSDss backup profile, you can specify that the source volumes will be discovered automatically using SMS storage groups that are specifically entered for the Db2 system.

You will use the Source Stogroup Selection panel to enter each SMS storage group associated with the Db2 system for which you are creating a system backup.

1. Specify S to select the auto mapping option Stogroup discover/pool mapping from the Enter New Backup Profile Options panel. Press Enter. The Source Stogroups field is displayed on the Update Backup Profile panel.
2. Enter Y or U in the Source Stogroups field. The Update Backup Profile panel opens. The Target Pool Selection panel is displayed.
3. To specify a new storage group type the I line command in the blank Cmd line.
4. Specify the name of the SMS storage group in the Stogroup field.
5. When you have entered all SMS storage groups for the Db2 system, press PF3. The Update Backup Profile panel is displayed. The Source Stogroups field contains a Y.
6. You can update the SMS source storage groups at any time by entering U in the Source Stogroups field of the Update Backup Profile panel and pressing Enter. The Source Stogroup Selection panel opens. In the Cmd field you can type the I line command to add a new storage group or the D line command to delete a storage group.
7. You can delete SMS storage groups that you have specified using the D line command in the Source Stogroup Selection panel. Type the D line command in the Cmd field next to the storage group that you want to delete.

Bypassing vary processing during system backup and restore

You can bypass the VARY command processing that occurs when performing a system backup using FlashCopy or EMC Snap where the target volumes are in SMS storage groups.

When performing a system backup using FlashCopy or EMC Snap where the target volumes are in SMS storage groups, Db2 Recovery Expert varies the volumes offline, performs the fast replication, re-labels the volumes, then varies the volumes back online. At system restore time, Db2 Recovery Expert varies the Db2 source volumes offline then back online before performing the volume restores.

You can bypass the VARY command processing by setting the ARY#PARM option BYPASS_VARY to Y during customization.

During a system backup, when BYPASS_VARY is set to Y, you will not see VARY commands being issued when the target volumes are in an SMS storage group. If the target volumes are in an SMS storage group then they are online to z/OS with a unique volume serial number. When performing a system restore, you will not see the VARY commands that are issued to vary the volumes offline and back online before performing the system restore.

In addition, during a system backup, Db2 Recovery Expert will make sure no z/OS processes have any allocations on the target volumes. During a system
restoration, Db2 Recovery Expert will make sure no z/OS processes are accessing any of the Db2 source volumes that are being restored.

**Note:** In some cases when a SLB is created using Flashcopy and offload processing is requested, the offload job will fail because the job cannot find the volume(s). This is because z/OS is not aware that the VTOC has moved as result of the Flashcopy. Either of the following scenarios can be used to correct this situation:

- If `BYPASS_VARY` is set to Y, after the backup and before the offloads either manually vary the target volumes offline and then online; or vary them online again while they are already online. By doing this, z/OS will detect the new location of the VTOC.
- Change `BYPASS_VARY` to N and Db2 Recovery Expert will manually vary the volumes offline and then online after a backup to detect the new location of the VTOC.

### Using auto mapping for target volumes

When creating an IBM FlashCopy, EMC SNAP, or DFSMSdss backup profile, you can provide a target range of volumes and then allow Db2 Recovery Expert to automatically map the target volumes to source volumes during profile setup.

Once a profile is created using one of the auto mapping options, you cannot change the profile to manual mapping; you must recreate the profile and specify manual mapping.

1. Select one of the auto mapping options (specify A for Auto discover/pool mapping or S for Stogroup discover/pool mapping) from the Enter New Backup Profile Options panel. Press Enter. The Target Pool field is displayed on the Update Backup Profile panel.

2. Enter Y or U in the Target Pool field and press Enter. The Target Pool Selection panel is displayed.

```
RCVYXPRV V3R2 ------ Target Pool Selection ------ 2019/01/08 12:38:31
Option ===> Scroll ===> PAGE

Line Commands: I - Enter   D - Delete

-----------------------------------------------
Creator: TUSER    Name: S99Z SNAP BACKUP    SSID: S99Z
Share Option: U (Upd,View,No)    Description:  
-----------------------------------------------
Target Range Options  -----------------------

Enter by Unit or Stogroup ==> U (Unit/Stogroup)

------------------- Enter Target Ranges ----------  Row 1 of 1
Start  End
Cmd  Unit  Unit

******************************************************************************* Bottom of Data **********************
```

3. Specify how you will enter the target ranges. Enter S to enter by SMS storage group. Note that if you specify storage groups, all volumes that are in the storage group must be online, both during profile setup and when the backup is run. Enter U to enter the ranges by unit (unit control block). Either U or S must be selected; a combination is not allowed. If you change this field, target information entered previously will be deleted.
Note:

- For SNAP and FlashCopy profiles, if you enter target ranges by unit, the target units are required to be offline during profile setup and execution. For DFSMSdss profiles, target units must be online during profile setup and backup execution.
- Once profile setup has been successfully run on the profile, the **Enter by Unit or Stogroup** field in the profile will become read-only and cannot be changed.

4. Enter the target units or storage groups in the **Enter Target Ranges** area. You can delete and insert target ranges by using the D and I line commands.
   - If entering by units, the **Start Unit** is the starting UCB address that will be used as a target and the **End Unit** is the ending UCB address that will be used as a target. These fields can only contain valid hexadecimal characters.

   **Note:** Db2 Recovery Expert will attempt to make use of all devices in the specified range. If there are specific devices that you do not want included in the target pool, you must enter multiple ranges that omit the volumes you want to exclude.

   - If entering by SMS storage groups, enter the SMS storage groups. Each SMS storage group will be checked to see if it exists. If it does not exist, a message will be displayed. If after the message is displayed you press Enter again, the SMS storage group will be accepted, but you must make sure that the SMS storage group is created before the backup is executed.

5. When you have entered all target ranges, press PF3. The Update Backup Profile panel is displayed. The **Target Pool** field now contains Y. To update target ranges, enter U in the **Target Pool** field and press Enter. You can also include or exclude source volumes using the line commands on the Update Backup Profile panel.

6. When you have completed volume mapping, press PF3 to save your profile and exit.

**Using manual mapping for target volumes**

If you specify manual mapping, you match each source volume with a specific target volume in the profile.

When manual mapping has been specified, you must enter each source and target volume on the Update Backup Profile panel. Once a profile is created using manual mapping, you cannot change the profile to auto mapping; you must recreate the profile and specify auto mapping.

**Note:** For SNAP and FlashCopy profiles, if you enter target ranges by unit, the target units are required to be offline during profile setup and execution. For DFSMSdss profiles, target units must be online during profile setup and backup execution.

1. Determine the source volumes for the specified subsystem. You can do this in several ways:
   - To build a list of all Db2 source volumes for the SSID, enter **VOLUME** in the **Option** line on the Update Backup Profile panel. When you press Enter, Db2 Recovery Expert determines the volumes that are being used by the specified Db2 subsystem. When the scan is complete, the comprehensive list of volumes is displayed in the scrollable **Volume Mappings** area.
Each volume listed was detected by Db2 Recovery Expert to be in use by the specified Db2 subsystem. Use the **UP** and **DOWN** commands (PF7 and PF8) to scroll through the list when there are more volumes than can be displayed on one panel. You should review any messages that appear in the **Message Area**.

- To enter a range of Db2 source volumes, enter **SOURCE** in the **Option** line. When you press Enter, the Enter a Source Range window is displayed.

Enter a beginning and ending range of source units. When you press Enter, Db2 Recovery Expert scans the source volumes in the supplied range and determines if the volumes can be used. A volume list appears on the Update Backup Profile panel if the source scan is successful. If an error occurs, review the error message. You should also review any informational messages that appear in the **Message Area**. Use the **UP** and **DOWN** commands (PF7 and PF8) to scroll through the list when there are more volumes than can be displayed on one panel.

- You can manually input source volumes using the **I** line command and entering the source volume in the **Source Volumes** column.

To clear all source (and target) mappings from the profile, enter the **CLEAR** command in the **Option** line.

2. Enter one or more target volume(s) for each source volume. You can enter target units for each source volume in several ways:

- Next to each source volume, enter corresponding target unit(s) in the **Target Units** area. The target units must reside on the same array as the paired source volumes.

- You can enter **TGTSEL** in the **Option** line. The Enter Target Selection Range window is displayed.
Enter a beginning and ending range of target units. When you press Enter, a list of target volumes in the specified range is displayed:

</table>

The selection fields at the top of the panel allow you to limit the list of volumes displayed.

CUU Enter a UCB name or mask to further limit the displayed list.

SYM# If the volumes are on a Symmetrix array, you can enter a Symmetrix name or mask to further limit the displayed list.

BCV Only Enter Y in this field to limit the list to only BCVs.

Volser Enter a volume serial name or mask to further limit the displayed list.

Enter by generation The Enter by Generation field determines how the target unit fields are populated once you have made your target selections. If you enter N in the Enter by Generation field, volumes are assigned sequentially as follows:

Volume 1 - target unit 1
Volume 2 - target unit 2
Volume 3 - target unit 3
Volume 4 - target unit 4

If you enter Y in the Enter by Generation field, volumes are assigned as follows:
The following fields are on this panel:

**CUU**  The UCB of the target unit.

**SYM#**  The Symmetrix number of the target unit.

**BCV**  This column contains Y if the unit is a BCV, and N if the target unit is not a BCV.

**Volser**  The volume serial number associated with this target unit, if any.

**DevType**  The volume's device type.

**Status**  If the unit is a BCV, this field may contain the status of the target unit. NEVER indicates the target unit has never been paired in a BCV relationship. ESTAB indicates the target unit is currently established to a source unit.

**Paired Relationships**  This field contains information on any pairings that may be established for this target unit. If this target unit is paired with any source volume, the pairings are displayed in a comma separated list as AAAA-BBBB-CCCCCC, where AAAA is the CUU number, BBBB is the SYM number, and CCCCCC is the volume serial number, if one exists; if not ****** is displayed.

To select a target unit, enter S in the line command area next to the target. To block select, place a B in the first target unit and the last target unit to be selected. When you have finished selecting target units, press PF3.

- You can enter **TARGET** in the **Option** line. The Enter a Target Range window is displayed.

Enter a beginning and ending range of target units. The **Enter by Generation** field determines how the target unit fields are populated. If you enter **N** in the **Enter by Generation** field, Db2 Recovery Expert assigns volumes sequentially as follows:

Volume 1 -  target unit 1  
  target unit 3  
Volume 2 -  target unit 2  
  target unit 4

If you enter **Y** in the **Enter by Generation** field, Db2 Recovery Expert assigns volumes as follows:

Volume 1 -  target unit 1  
  target unit 3  
Volume 2 -  target unit 2  
  target unit 4

When you press Enter, the target units are mapped. If an error occurs, review the message in the **Message Area**. If no target appears in the **Target Units**
field, no target unit in the specified range could be matched to a source volume. The target and source cannot be matched if the target and source are on different Symmetrix arrays.

Successful results of the **TARGET** command are shown in the following example:

```
3. You can modify the source/target volume mappings by doing any of the following:
   * If you want to enter additional mappings (a source volume and its related target units), enter I in the line command area. To delete a mapping, enter D in the line command area.
   * To exclude a volume, enter X in the line command area next to a volume. If you exclude a volume, Db2 Recovery Expert will not include the volume in the backup. The resulting backup will be tagged as a partial backup, which cannot be used for a system restore. However, a partial backup may be used to restore individual objects if you have enabled the object restore function. To undo an excluded volume, enter U in the line command area.
   * To clear all target units from the mappings in the profile, enter the **TGTCLR** command in the **Option** line. To clear all source and target mappings from the profile, enter the **CLEAR** command in the **Option** line.
   * To display more volume mappings, you can toggle the header fields on and off by entering the **HEADER** command in the **Option** line.
   * To save the information you entered without ending your edit session, enter the **SAVE** command in the **Option** line.

4. When you have completed volume mapping, press PF3 to save your profile and exit.

**Creating an EMC BCV backup profile**

When using BCV devices for backups, Db2 Recovery Expert establishes a BCV device to each Db2 source volume during profile setup. When a backup is requested, the BCV mirror is split from the Db2 source volume. If multiple generations are being maintained, the next generation BCV mirror is then
established. The split BCV device can be used as a point-in-time backup for restore operations. Db2 Recovery Expert can maintain up to seven generations of backups using the BCV methodology.

When using the BCV backup methods, Db2 Recovery Expert will automatically vary all target units offline when the backup is taken. These target units will be exact copies of the source units they are paired with. It is not necessary or recommended to vary the target volumes back online in preparation for the next backup.

1. From the Backup Profile Display panel specify C in the **Cmd** line and press Enter. The Enter Backup Profile Type panel opens.

2. Specify S in the **Backup Profile Type** field. Press Enter. The Enter New Backup Profile Options window is displayed.

3. Specify the fields on this window as follows:

   **Creator**
   
   This field is automatically filled in with your user ID as the profile creator. To create the profile with a different user ID, type the new ID in this field.

   **Profile name**
   
   Type a name for the profile, up to 30 characters.

   **Description**
   
   (Optional) Type in a profile description.

   **Db2 SSID**
   
   Specify the Db2 subsystem for the profile in this field. To view and select from a list of subsystems, enter a question mark (?) in the field and press Enter. The SSID Selection panel is displayed. This panel lists the available subsystems and indicates whether they are active or inactive. Select a subsystem by entering S next to the subsystem and pressing Enter.
Backup Method
Enter B for BCV backup.

Source/Target Mapping
Enter M to manually enter each source to target volume mapping. M is the only valid value for BCV profiles.

Update Option
This option controls how other users can use your profile. U allows others to update the profile. V allows others to view but not update the profile. N prevents others from viewing or updating the profile.

4. Press Enter. The Update Backup Profile panel is displayed.

The following fields will be read-only upon profile creation:

Backup Method
Specifies the backup method used for this profile. This field will contain B for BCV backup.

Current generation
When you first create a profile, this field will be set to 00 and will be read only. After the profile has been built and submitted, this field will contain the generation that is currently mirroring Db2.

Setup Needed
When you create a profile, this field will be set to Y and will be read only. The profile setup process must be executed the first time a profile is built and the resulting job submitted. Once profile setup has been performed, this field will contain N when you update the profile. If you update a profile and change the volume configuration, number of generations, or backup type, re-running profile setup will be required and this field will be reset to Y.

Incremental Generation
This field contains the generation status of the backup that will be produced on the next execution of the profile. The value Y indicates
that the backup is incremental. A value of N indicates that the backup is not incremental. This value is always set to N for BCV backups.

5. Specify the following fields:

**Backup Scope**
Indicate if you want a full backup taken (both data and logs) or to backup data only. Note that if you specify data only and Db2 Recovery Expert detects log data on the volumes during the backup, the backup will proceed without error only if all Db2 log and data volumes have been included in the profile. In this case, the backup will be flagged as a “mixed data” backup and you will only be able to restore both the data and the logs.

**Backup Generations**
Enter the number of generations of backups you want to keep. Valid values are 1 to 8. The number of backup generations that will be available for restoration will be one less than the value you enter here, because one generation is always established to mirror the Db2 source volumes.

*Note:* If you specify a single (1) generation, when the backup job is executed the BCVs are split, but Db2 Recovery Expert does not establish another generation because only one generation can exist. Instead, the backup profile is marked as “Setup Needed”. In order to use this profile to create another backup, you must run profile setup. This will re-establish the one and only generation and start the mirroring process so the BCVs can be split to create the next backup.

Note that running profile setup again will destroy the backup represented by this one generation of BCVs, because the BCVs will begin mirroring the current set of Db2 source volumes once they are re-established.

**Offload Options**
Enter Y in this field if you want to retain more backups than the number specified in the Backup Generations field. If you specify this option, older backups will be offloaded to another device (such as tape or other volumes). When you initially select this option, the Offload Options window will be displayed. If you edit the profile at a later time and wish to update the offload options, type U in this field.

*Note:* If you are planning on using a system level backup to recover a Db2 subsystem at a remote site using the Db2 Recovery Expert disaster recovery feature, you must set the Offload Options field for the system level backup to Y. This will offload the system level backup to tape so that it can be transported to the remote disaster recovery site.

**Issue Log Suspend**
Specify whether you want Db2 Recovery Expert to stop all logging activity on the subsystem while the backup is made. Enter Y to suspend logging activity; logging will resume after the backup has completed. If the Symmetrix arrays are equipped with ECA (Enginuity Consistency Assist), you can enter N in this field to allow ECA to manage the log suspension. Note that if any of the Symmetrix devices do not support ECA, the log is automatically suspended.

**Validate Db2 Vols**
If you enter Y in this field, every time the backup job is run Db2
Recovery Expert will determine what volumes the subsystem is using and ensure the volumes are included in the backup. The profile setup process will always validate volumes, among other profile setup procedures.

Enable Obj Restore
If you want to enable Db2 Recovery Expert's object level recovery from backups created by this profile, type Y in this field. During backup, information is saved about object data sets that allows objects to be individually restored later. See Chapter 11, “Recovering database objects,” on page 289 for more information on recovery objects.

Source Stogroups
This field only appears on this panel if the Stogroup discover/pool mapping option was selected when the profile was created (specify S in the Source/Target Mapping field from the Enter New Backup Profile Options panel.) Enter Y in this field to open the Source Stogroup Selection panel where you will enter each source SMS storage group associated with the Db2 subsystem. Enter U in this field to open the Source Stogroup Selection panel where you can edit the source SMS storage groups that have been associated with the Db2 subsystem.

Target Pool
This field only appears on this panel if one of the auto mapping options was selected when the profile was created (specify S for Stogroup discover/pool mapping or A for Auto discover/pool mapping in the Target Mapping field from the Enter New Backup Profile Options panel.) Enter Y in this field to open the Target Pool Selection panel where you will enter a range of target volumes or a list of storage groups to use for backup volumes. The target volumes that you enter will be selected from at the time of the backup. You can enter a U to open the Target Pool Selection window and edit the target volumes or storage groups that have been specified.

Override PARMLIB
If you want to override default settings defined in the Db2 Recovery Expert PARMLIB member, enter Y in this field. For more information about the Override PARMLIB Options, see “Specifying PARMLIB override options” on page 249.

6. Specify source and target volumes.

Specifying source volumes for an EMC BCV backup profile
You can select the source volumes to be included in the BCV backup profile in one of several ways. You can select from a list, specify a range, or enter each manually.

1. On the Update Backup Profile panel, you can specify source volumes in several ways:
   - To build a list of all Db2 source volumes for the SSID, enter VOLUME in the Option line. When you press Enter, Db2 Recovery Expert determines the volumes that are being used by the specified Db2 subsystem. When the scan is complete, the comprehensive list of volumes appears in the scrollable display area.
Each volume listed was detected by Db2 Recovery Expert to be in use by the specified Db2 subsystem. Use the UP and DOWN commands (PF7 and PF8) to scroll through the list when there are more volumes than can be displayed on one panel. You should review any messages that appear in the Message Area.

- To specify a range of source volumes to back up, enter SOURCE in the Option line. When you press Enter, the Enter a Source Range window is displayed.

Enter a Source Range

Beginning Source Range  AB4D
Ending Source Range  1BCF

Enter a beginning and ending range of source units. When you press Enter, Db2 Recovery Expert retrieves a list of source volumes in the supplied range that are online and that are capable of fast replication. This list may include volumes that do not contain data or logs for the specified SSID. If an error occurs, review the error message. Use the UP and DOWN commands (PF7 and PF8) to scroll through the list when there are more volumes than can be displayed on one panel. You should also review any informational messages that appear in the Message Area.

- You can manually input source volumes using the I line command and entering the source volume in the Source Volumes column.

2. You can modify the source volume mappings by doing any of the following:

- If you want to enter additional mappings (a source volume and its related target units), enter I in the line command area. To delete a mapping, enter D in the line command area.

- To exclude a volume, enter X in the line command area next to a volume. If you exclude a volume, Db2 Recovery Expert will not include the volume in the backup. The resulting backup will be tagged as a partial backup, which cannot be used for a system restore. However, a partial backup may be used to restore individual objects if you have enabled the object restore function. To undo an excluded volume, enter U in the line command area.
• To clear all source (and target) mappings from the profile, enter the **CLEAR** command in the **Option** line.

• To display more volume mappings, you can toggle the header fields on and off by entering the **HEADER** command in the **Option** line.

• To save the information you entered without ending your edit session, enter the **SAVE** command in the **Option** line.

3. When you have completed volume mapping, press PF3 to save your profile and exit.

**Specifying target volumes for an EMC BCV backup profile**

You can select the target volumes to be included in the EMC BCV backup profile in one of several ways. You can select from a list, specify a range, or enter each manually.

For BCV backup profiles, the target units to be selected must be offline.

1. On the Update Backup Profile panel, you can enter target units for each source volume in one of several ways:

   • Next to each source volume, enter corresponding target unit(s) in the Target Units area. The target units must be the same device type and reside on the same Symmetrix arrays as the paired source volumes.

   • You can enter **AUTOTGT** in the **Option** line. This command automatically fills in target BCVs that have a relationship with the source volume. If no relationship(s) exist, the Target Units field will remain blank.

   • You can enter **TGTSEL** in the **Option** line. The Enter Target Selection Range window is displayed.

```
<table>
<thead>
<tr>
<th>Enter Target Selection Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Beginning Target Range</td>
</tr>
<tr>
<td>Ending Target Range</td>
</tr>
</tbody>
</table>
```

Enter a beginning and ending range of target units. When you press Enter, a list of target volumes in the specified range is displayed:
The selection fields at the top of the panel allow you to limit the list of volumes displayed.

**CUU**
Enter a UCB name or mask to further limit the displayed list.

**SYM#**
Enter a Symmetrix name or mask to further limit the displayed list.

**BCV Only**
Enter Y in this field to limit the list to only BCVs.

**Volser**
Enter a volume serial name or mask to further limit the displayed list.

**Enter by generation**
The *Enter by Generation* field determines how the target unit fields are populated once you have made your target selections. If you enter N in the *Enter by Generation* field, volumes are assigned sequentially as follows:

<table>
<thead>
<tr>
<th>Volume 1</th>
<th>target unit 1</th>
<th>target unit 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Volume 2</td>
<td>target unit 3</td>
<td>target unit 4</td>
</tr>
</tbody>
</table>

If you enter Y in the *Enter by Generation* field, volumes are assigned as follows:

<table>
<thead>
<tr>
<th>Volume 1</th>
<th>target unit 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Volume 2</td>
<td>target unit 2</td>
</tr>
</tbody>
</table>

The following fields are on this panel:

**CUU**
The UCB of the target unit.

**SYM#**
The Symmetrix number of the target unit.

**BCV**
This column contains Y if the unit is a BCV, and N if the target unit is not a BCV.

**Volser**
The volume serial number associated with this target unit, if any.
DevType
The volume's device type.

Status If the unit is a BCV, this field may contain the status of the target unit. NEVER indicates the target unit has never been paired in a BCV relationship. ESTAB indicates the target unit is currently established to a source unit.

Paired Relationships
This field contains information on any pairings that may be established for this target unit. If this target unit is paired with any source volume, the pairings are displayed in a comma separated list as AAAA-BBBB-CCCCCC, where AAAA is the CUU number, BBBB is the SYM number, and CCCCCC is the volume serial number, if one exists; if not ***** is displayed.

To select a target unit, enter S in the line command area next to the target. To select several target units as a block, place a B in the first target unit and the last target unit to be selected. When you have finished selecting target units, press PF3 (END).

- You can enter TARGET in the Option line. The Enter a Target Range window is displayed.

```
Enter a Target Range
Beginning Target Range  7800
Ending Target Range  7900
Enter by Generation  N
```

Enter a beginning and ending range of target units. The Enter by Generation field determines how the target unit fields are populated. If you enter N in the Enter by Generation field, Db2 Recovery Expert assigns volumes sequentially as follows:

- Volume 1 - target unit 1
- target unit 2
- Volume 2 - target unit 3
- target unit 4

If you enter Y in the Enter by Generation field, Db2 Recovery Expert assigns volumes as follows:

- Volume 1 - target unit 1
- target unit 3
- Volume 2 - target unit 2
- target unit 4

When you press Enter, the target units are mapped to the source volumes. If an error occurs, review the message in the Message Area. If no target appears in the Target Units field, no target unit in the specified range could be matched to a source volume. The target and source cannot be matched if the device types do not match or the target and source are on different Symmetrix arrays.

Successful results of the TARGET command are shown in the following example. The TARGET command was entered with the range 7800 to 7900.
2. You can modify the target volume mappings by doing any of the following:
   - If you want to enter additional mappings (a source volume and its related target units), enter I in the line command area. To delete a mapping, enter D in the line command area.
   - To exclude a volume, enter X in the line command area next to a volume. If you exclude a volume, Db2 Recovery Expert will not include the volume in the backup. The resulting backup will be tagged as a partial backup, which cannot be used for a system restore. However, a partial backup may be used to restore individual objects if you have enabled the object restore function. To undo an excluded volume, enter U in the line command area.
   - To clear all target units from the mappings in the profile, enter the TGTCLR command in the Option line. To clear all source and target mappings from the profile, enter the CLEAR command in the Option line.
   - To display more volume mappings, you can toggle the header fields on and off by entering the HEADER command in the Option line.
   - To save the information you entered without ending your edit session, enter the SAVE command in the Option line.

3. When you have completed volume mapping, press PF3 to save your profile and exit.

Creating a backup profile using the Db2 backup method

The Db2 Recovery Expert Db2 backup method uses the BACKUP SYSTEM utility to create the backup, but provides additional functionality over the standard utility. Db2 Recovery Expert validates the proper DASD configuration and can provide object recovery from the system backup, even if the underlying object data sets have moved or have been deleted. Db2 Recovery Expert also supports a full system restore from a backup (both data and logs).

Only one Db2 backup profile can be created per subsystem.
1. From the Backup Profile Display panel, specify C in the Cmd line and press Enter. The Enter Backup Profile Type panel opens.
2. Specify S in the **Backup Profile Type** field. Press Enter. The Enter New Backup Profile Options panel opens.

![Enter New Backup Profile Options](image)

3. Specify the fields on this window as follows:

- **Creator**
  
  This field is automatically filled in with your user ID as the profile creator. To create the profile with a different user ID, type the new ID in this field.

- **Profile name**
  
  Type a name for the profile, up to 30 characters.

- **Description**
  
  (Optional) Type in a profile description.

- **Db2 SSID**
  
  Specify the Db2 subsystem for the profile in this field. To view and select from a list of subsystems, enter a question mark (?) in the field and press Enter. The SSID Selection panel is displayed. This panel lists the available subsystems and indicates whether they are active or inactive. Select a subsystem by entering S next to the subsystem and pressing Enter.

- **Backup Method**
  
  Enter D for Db2 backup.

- **Target Mapping**
  
  Specify M in this field. It is the only valid value for Db2 backup profiles. Volume mapping is handled by DFSMSHsm.

- **Update Option**
  
  This option controls how other users can use your profile. The value U allows others to update the profile. The value V allows others to view but not update the profile. The value N prevents others from viewing or updating the profile.

4. Press Enter. The Update Backup Profile panel is displayed.
The following fields will be read-only upon profile creation:

**Backup Method**

The backup method used for this profile. This field will contain a D for Db2 backup.

**Current generation**

When you first create a profile, this field will be set to 00. After the profile has been built and submitted, this field will contain the generation that is currently mirroring Db2.

**Backup Generations**

This number is determined by the number of backup versions defined in the DFSMShsm backup storage group copy pool.

**Note:** If you have configured the SMS Copy Pool(s) for the Db2 data and logs to have a value of zero (0) in the Replicate Backup Versions option, Db2 Recovery Expert will also automatically set the Backup Generations field to zero (0). With this setting, a savable system backup copy is not created on disk. In order to have a copy of the system backup, you must offload the system backup copy to tape using the Offload Options field. The Offload Options field is described in the following step.

**Setup Needed**

When you create a profile, this field will be set to Y. The profile setup process must be executed the first time a profile is built and the resulting job submitted. Once profile setup has been performed, this field will contain N when you update the profile. If you update a
profile and change the volume configuration, number of generations, or backup scope, you must run the profile setup again and this field will be reset to Y.

**Issue Log Suspend**
For Db2 backups, Db2 Recovery Expert automatically sets this field to N. The Db2 BACKUP SYSTEM utility ensures that the system backup is at a consistent recoverable point; log suspension is not needed.

**Incremental Generation**
This field contains the generation status of the backup that will be produced on the next execution of the profile. The value Y indicates that the backup is incremental. A value of N indicates that the backup is not incremental. When you first create a profile, this field is set to N. You can set this value to Y using the START-INCREMENTAL keyword in the system backup job.

5. Specify the following fields:

**Backup Scope**
Indicate if you want a full backup taken (both data and logs) or to back up data only. Note that if you specify data only and Db2 Recovery Expert detects log data on the volumes during the backup, the backup will proceed without error only if all Db2 log and data volumes have been included in the profile. In this case, the backup will be flagged as a “mixed data” backup and you will only be able to restore both the data and the logs.

**Offload Options**
Enter Y in this field if you want to retain more backups than the number specified in the **Backup Generations** field. If you specify this option, Db2 Recovery Expert will offload older backups to another device (such as tape or other volumes). When you initially set this option to Y, the Offload Options screen will be displayed. You will use the Offload Options screen to set the options that will be used to offload the system backup. If you edit the profile at a later time and wish to update the offload options, type U in this field.

**Note:**
- If Db2 Recovery Expert has set the **Backup Generations** field to zero (0) based on the value defined in the storage group copy pool, and you need to create a system backup on tape, you must set the **Offload Options** to Y.
- If you are planning on using a system level backup to recover a Db2 subsystem at a remote site using the Db2 Recovery Expert disaster recovery feature, you must set the **Offload Options** field for the system level backup to Y. This will offload the system level backup to tape so that it can be transported to the remote disaster recovery site.

**Validate Db2 volumes**
If you enter Y in this field, every time the backup job is run Db2 Recovery Expert will determine what volumes the subsystem is using and ensure the volumes are included in the backup. The profile setup process will always validate volumes, among other profile setup procedures.

**Alt. Copy Pool**
Specifies whether alternate copy pool options have been specified for
In Db2 V12 and above, an alternate copy pool allows you to create system-level backups on different target volumes. A value of Y in this field specifies that alternate copy pool options have been specified. A value of N specifies that alternate copy pool options have not been specified. Type a Y or a U and press Enter to specify or update the alternate copy pool options. The Specify Alternative Copy Pool Option panel opens.

Enable Obj Restore
If you want to enable Db2 Recovery Expert object level recovery from backups created by this profile, type Y in this field. During backup, Db2 Recovery Expert saves information about object data sets that allows objects to be individually restored later. See Chapter 11, “Recovering database objects,” on page 289 for more information of recovering objects.

Override PARMLIB
If you want to override default settings defined in the Db2 Recovery Expert PARMLIB member, enter Y in this field. For more information about the Override PARMLIB Options, see “Specifying PARMLIB override options” on page 249.

6. Examine the source volume list that was created for the specified subsystem. Each source volume listed was detected by Db2 Recovery Expert to be in use by the specified Db2 subsystem. Db2 Recovery Expert obtains the volume mappings from your HSM configuration. All volumes associated with the SMS storage groups in use by Db2 will be listed. The target volumes from all the backup copy pool storage groups will also be listed and paired to source volumes. This panel shows what volumes will be backed up to which target volumes when the backup is executed. Volume mappings cannot be changed for this type of profile. Use the UP and DOWN commands (PF7 and PF8) to scroll through the list when there are more volumes than can be displayed on one panel. You should review any messages that appear in the Message Area.

7. When you have completed editing the profile, press PF3 to save your profile and exit.

Specifying alternate copy pool options
You can specify alternate copy pool and backup storage groups to use when creating a system level backup.

Note: Alternate copy pool options must be defined to DFSMS and can only be used for Db2 V12 and above.

If you choose to use alternate copy pool options, Db2 Recovery Expert system backup and restore using the Db2 backup method is impacted as follows:

- For a system backup job operation, the BACKUP SYSTEM command is generated with the keywords ALTERNATE_CP, DBBSG, and LGBSG using the values specified in the Specify Alternative Copy Pool Option panel and included in the system backup profile.
- During a system restore job, Db2 Recovery Expert will validate that the backup exists in the primary copy pool. If the backup cannot be found in the primary copy pool and an alternate copy pool has been specified in the System Backup Profile, then Db2 Recovery Expert will validate that the backup exists in the alternate copy pool.
- For a HSM OFFLOAD job, Db2 Recovery Expert will validate that the backup exists in the primary copy pool. If the backup cannot be found in the primary
copy pool and an alternate copy pool has been specified in the System Backup Profile, then Db2 Recovery Expert will validate that the backup exists in the alternate copy pool. If the backup is found, then the FRBACKUP CP command is generated using the copy pool name where the backup was found.

1. Using SMS, create an alternate copy pool, a database copy pool backup, and the log copy pool backup.
2. From the Update Backup Profile, type a Y or a U in the Alt. Copy Pool field and press Enter. The Specify Alternative Copy Pool Option panel opens.

   Specify Alternative Copy Pool Options
   ARYSBPAC
   Specify an alternate copy pool and backup storage groups.
   Note: These values will only be used for Db2 V12 and about.
   Alternate Copy Pool Name => ______________________ (1-14 characters)
   Database Copy Pool Backup => ______________ (1-8 characters)
   Log Copy Pool Backup => ______________ (1-8 characters)

3. Specify the name of the alternate copy pool that you created using SMS in the Alternate Copy Pool Name field.
4. Specify the database copy pool backup storage group that you created using SMS in the Database Copy Pool Backup field.
5. Specify the log copy pool backup storage group that you created using SMS in the Log Copy Pool Backup field.
6. Press PF3 to return to the Update Backup Profile panel.

Creating a DFSMSdss backup profile

Db2 Recovery Expert can make backups using DFSMSdss. You might want to use DFSMSdss profiles if your site does not have fast replication hardware, or if your site's hardware does not support Snap or FlashCopy but supports other fast replication through DFSMSdss.

For DFSMSdss backups, the target volumes must be online when profile setup is run and when the backup is taken. In addition, all target volumes must have their own unique volume serial.

Note:

- If fast replication is not used, the backup process may be lengthy depending on the number of volumes copied.
- If the storage array offers a fast replication utility, Db2 Recovery Expert can use the utility to create backups.

1. From the Backup Profile Display panel, specify C in the Cmd line and press Enter. The Enter Backup Profile Type panel opens.

   Enter Backup Profile Type
   ARYSBPTP
   Backup Profile Type  C  (S=System, C=Combined SLB)

2. Specify S in the Backup Profile Type field. Press Enter. The Enter New Backup Profile Options window is displayed.
3. Specify the fields on this window as follows:

**Creator**
This field is automatically filled with your user ID as the profile creator. To create the profile with a different user ID, type the new ID in this field.

**Profile name**
Type a name for the profile, up to 30 characters.

**Description**
*Optional:* Type in a profile description.

**Db2 SSID**
Specify the Db2 subsystem for the profile in this field. To view and select from a list of subsystems, enter a question mark (?) in the field and press Enter. The SSID Selection panel is displayed. This panel lists the available subsystems and indicates whether they are active or inactive. Select a subsystem by entering S next to the subsystem and pressing Enter.

**Backup Method**
Enter L to specify DFSMSdss backup.

**Source/Target Mapping**
This field specifies how the source volumes will be determined and how they will be mapped to the target volumes. Users can specify one of the following:

- Type A to specify **Auto discover/pool mapping**. If you select this option, the source volumes will be automatically discovered at runtime and mapped to target volumes using a pool of target volumes (either units or SMS storage groups).
- Type S to specify **Stogroup discover/pool mapping**. If you select this option, the source volumes will be discovered using SMS storage groups that you specifically enter for a Db2 system and these source volumes will be mapped to target volumes using a pool of target volumes (either units or SMS storage groups).
- Type M to specify **Manual** mapping. If you select this option you will manually enter the source volumes and map them to target volumes.
Update Option
This option controls how other users can use your profile. Specify the value U to allow others to update the profile. Specify the value V to allow others to view but not update the profile. Specify the value N to prevent others from viewing or updating the profile.

4. Press Enter. The Update Backup Profile panel is displayed.

5. Specify the following fields:

The following fields will be read-only upon profile creation:

Backup Method
The backup method used for this profile. This field will contain L for DFSMSdss backup.

Current generation
When you first create a profile, this field will be set to 00. After the profile has been built and submitted, this field will contain the generation that is currently mirroring Db2.

Setup Needed
When you create a profile, this field will be set to Y. The profile setup process must be executed the first time a profile is built and the resulting job submitted. Once profile setup has been performed, this field will contain N when you update the profile. If you update a profile and change the volume configuration, number of generations, or backup scope, you must run the profile setup again and this field will be reset to Y.

Incremental Generation
This field contains the generation status of the backup that will be produced on the next execution of the profile. The value Y indicates that the backup is incremental. A value of N indicates that the backup is not incremental. When you first create a profile, this field is set to N. You can set this value to Y using the START-INCREMENTAL keyword in the system backup job.

Chapter 9. Creating system backup profiles 227
Backup Scope
Indicate if you want a full backup taken (both data and logs) or to back up data only. Note that if you specify data only and Db2 Recovery Expert detects log data on the volumes during the backup, the backup will proceed without error only if all Db2 log and data volumes have been included in the profile. In this case, the backup will be flagged as a “mixed data” backup and you will only be able to restore both the data and the logs.

Backup Generations
Enter the number of generations of backups you want to keep. Valid values are 1 to 99.

Offload Options
Enter Y in this field if you want to retain more backups than the number specified in the Backup Generations field. If you specify this option, Db2 Recovery Expert will offload older backups to another device (such as tape or other volumes). When you initially select this option, the Offload Options screen will be displayed. If you edit the profile at a later time and wish to update the offload options, type U in this field.

Note: If you are planning on using a system level backup to recover a Db2 subsystem at a remote site using the Db2 Recovery Expert disaster recovery feature, you must set the Offload Options field for the system level backup to Y. This will offload the system level backup to tape so that it can be transported to the remote disaster recovery site.

Source Stogroups
This field only appears on this panel if the Stogroup discover/pool mapping option was selected when the profile was created (specify S in the Source/Target Mapping field from the Enter New Backup Profile Options panel.) Enter Y in this field to open the Source Stogroup Selection panel where you will enter all the source SMS storage groups associated with the Db2 subsystem. Enter U in this field to open the Source Stogroup Selection panel where you can edit the source SMS storage groups that have been associated with the Db2 subsystem.

Target Pool
This field only appears on this panel if one of the auto mapping options was selected when the profile was created (specify S for Stogroup discover/pool mapping or A for Auto discover/pool mapping in the Target Mapping field from the Enter New Backup Profile Options panel.) Enter Y in this field to open the Target Pool Selection panel where you will enter a range of target volumes or a list of storage groups to use for backup volumes. The target volumes that you enter will be selected from at the time of the backup. You can enter a U to open the Target Pool Selection window and edit the target volumes or storage groups that have been specified.

Issue Log Suspend
Specify whether you want Db2 Recovery Expert to stop all logging activity on the subsystem while the backup is made. For DFSMSdss backups, log suspension is required; Db2 Recovery Expert automatically sets this field to Y.

Validate Db2 volumes
If you enter Y in this field, every time the backup job is run Db2 Recovery Expert will determine what volumes the subsystem is using
and ensure the volumes are included in the backup. The profile setup process will always validate volumes, among other profile setup procedures.

**Enable Obj Restore**
If you want to enable Db2 Recovery Expert's object level recovery from backups created by this profile, type Y in this field. During backup, Db2 Recovery Expert saves information about object data sets that allows objects to be individually restored later. For more information about object level recovery, see Chapter 11, “Recovering database objects,” on page 289.

**Override PARMLIB**
If you want to override default settings defined in the Db2 Recovery Expert PARMLIB member, enter Y in this field. For more information about the Override PARMLIB Options, see “Specifying PARMLIB override options” on page 249.

6. Create the source and target volume mappings. The procedure depends on whether you selected the auto mapping or manual mapping method.

### Discovering source volumes using SMS storage groups

When creating an IBM FlashCopy, EMC SNAP, or DFSMSdss backup profile, you can specify that the source volumes will be discovered automatically using SMS storage groups that are specifically entered for the Db2 system.

You will use the Source Stogroup Selection panel to enter each SMS storage group associated with the Db2 system for which you are creating a system backup.

1. Specify S to select the auto mapping option **Stogroup discover/pool mapping** from the Enter New Backup Profile Options panel. Press Enter. The **Source Stogroups** field is displayed on the Update Backup Profile panel.

2. Enter Y or U in the **Source Stogroups** field. The Update Backup Profile panel opens. The Target Pool Selection panel is displayed.

3. To specify a new storage group type the I line command in the blank **Cmd** line.

4. Specify the name of the SMS storage group in the **Stogroup** field.

5. When you have entered all SMS storage groups for the Db2 system, press PF3. The Update Backup Profile panel is displayed. The **Source Stogroups** field contains a Y.
6. You can update the SMS source storage groups at any time by entering U in the Source Stogroups field of the Update Backup Profile panel and pressing Enter. The Source Stogroup Selection panel opens. In the Cmd field you can type the I line command to add a new storage group or the D line command to delete a storage group.

7. You can delete SMS storage groups that you have specified using the D line command in the Source Stogroup Selection panel. Type the D line command in the Cmd field next to the storage group that you want to delete.

Using auto mapping for target volumes
When creating an IBM FlashCopy, EMC SNAP, or DFSMSdss backup profile, you can provide a target range of volumes and then allow Db2 Recovery Expert to automatically map the target volumes to source volumes during profile setup.

Once a profile is created using one of the auto mapping options, you cannot change the profile to manual mapping; you must recreate the profile and specify manual mapping.

1. Select one of the auto mapping options (specify A for Auto discover/pool mapping or S for Stogroup discover/pool mapping) from the Enter New Backup Profile Options panel. Press Enter. The Target Pool field is displayed on the Update Backup Profile panel.

2. Enter Y or U in the Target Pool field and press Enter. The Target Pool Selection panel is displayed.

```
RCVYXPR V3R2 -------- Target Pool Selection ------- 2019/01/08 12:38:31
Option ===> Scroll ===> PAGE
Line Commands: I - Enter  D - Delete

---------------------------------------------------------------
Creator: TUSER     Name: S99Z SNAP BACKUP     SSID: S99Z
Share Option: U (Upd,View,No)     Description:  
---------------------------------------------------------------
Target Range Options  

Enter by Unit or Stogroup  ==> U (Unit/Stogroup)

-------------- Enter Target Ranges -------------- Row 1 of 1
Start   End
Cmd Unit  Unit

************************************************************************ Bottom of Data  **************************************************************************
```

3. Specify how you will enter the target ranges. Enter S to enter by SMS storage group. Note that if you specify storage groups, all volumes that are in the storage group must be online, both during profile setup and when the backup is run. Enter U to enter the ranges by unit (unit control block). Either U or S must be selected; a combination is not allowed. If you change this field, target information entered previously will be deleted.

Note:
- For SNAP and FlashCopy profiles, if you enter target ranges by unit, the target units are required to be offline during profile setup and execution. For DFSMSdss profiles, target units must be online during profile setup and backup execution.
• Once profile setup has been successfully run on the profile, the **Enter by Unit or Stogroup** field in the profile will become read-only and cannot be changed.

4. Enter the target units or storage groups in the **Enter Target Ranges** area. You can delete and insert target ranges by using the D and I line commands.

• If entering by units, the **Start Unit** is the starting UCB address that will be used as a target and the **End Unit** is the ending UCB address that will be used as a target. These fields can only contain valid hexadecimal characters.

**Note:** Db2 Recovery Expert will attempt to make use of all devices in the specified range. If there are specific devices that you do not want included in the target pool, you must enter multiple ranges that omit the volumes you want to exclude.

• If entering by SMS storage groups, enter the SMS storage groups. Each SMS storage group will be checked to see if it exists. If it does not exist, a message will be displayed. If after the message is displayed you press Enter again, the SMS storage group will be accepted, but you must make sure that the SMS storage group is created before the backup is executed.

5. When you have entered all target ranges, press PF3. The Update Backup Profile panel is displayed. The **Target Pool** field now contains Y. To update target ranges, enter U in the **Target Pool** field and press Enter. You can also include or exclude source volumes using the line commands on the Update Backup Profile panel.

6. When you have completed volume mapping, press PF3 to save your profile and exit.

**Using manual mapping for target volumes**

If you specify manual mapping, you match each source volume with a specific target volume in the profile.

When manual mapping has been specified, you must enter each source and target volume on the Update Backup Profile panel. Once a profile is created using manual mapping, you cannot change the profile to auto mapping; you must recreate the profile and specify auto mapping.

**Note:** For SNAP and FlashCopy profiles, if you enter target ranges by unit, the target units are required to be offline during profile setup and execution. For DFSMSdss profiles, target units must be online during profile setup and backup execution.

1. Determine the source volumes for the specified subsystem. You can do this in several ways:

• To build a list of all Db2 source volumes for the SSID, enter **VOLUME** in the **Option** line on the Update Backup Profile panel. When you press Enter, Db2 Recovery Expert determines the volumes that are being used by the specified Db2 subsystem. When the scan is complete, the comprehensive list of volumes is displayed in the scrollable **Volume Mappings** area.

Chapter 9. Creating system backup profiles 231
Each volume listed was detected by Db2 Recovery Expert to be in use by the specified Db2 subsystem. Use the **UP** and **DOWN** commands (PF7 and PF8) to scroll through the list when there are more volumes than can be displayed on one panel. You should review any messages that appear in the **Message Area**.

- To enter a range of Db2 source volumes, enter **SOURCE** in the **Option** line. When you press Enter, the Enter a Source Range window is displayed.

Enter a beginning and ending range of source units. When you press Enter, Db2 Recovery Expert scans the source volumes in the supplied range and determines if the volumes can be used. A volume list appears on the Update Backup Profile panel if the source scan is successful. If an error occurs, review the error message. You should also review any informational messages that appear in the **Message Area**. Use the **UP** and **DOWN** commands (PF7 and PF8) to scroll through the list when there are more volumes than can be displayed on one panel.

- You can manually input source volumes using the **I** line command and entering the source volume in the **Source Volumes** column.

To clear all source (and target) mappings from the profile, enter the **CLEAR** command in the **Option** line.

2. Enter one or more target volume(s) for each source volume. You can enter target units for each source volume in several ways:

- Next to each source volume, enter corresponding target unit(s) in the **Target Units** area. The target units must reside on the same array as the paired source volumes.
- You can enter **TGTSEL** in the **Option** line. The Enter Target Selection Range window is displayed.
Enter a beginning and ending range of target units. When you press Enter, a list of target volumes in the specified range is displayed:

</tbody>
</table>

The selection fields at the top of the panel allow you to limit the list of volumes displayed.

**CUU** Enter a UCB name or mask to further limit the displayed list.

**SYM#** If the volumes are on a Symmetrix array, you can enter a Symmetrix name or mask to further limit the displayed list.

**BCV Only** Enter Y in this field to limit the list to only BCVs.

**Volser** Enter a volume serial name or mask to further limit the displayed list.

**Enter by generation**

The **Enter by Generation** field determines how the target unit fields are populated once you have made your target selections. If you enter N in the **Enter by Generation** field, volumes are assigned sequentially as follows:

- **Volume 1** - target unit 1
- **Volume 2** - target unit 3

If you enter Y in the **Enter by Generation** field, volumes are assigned as follows:
The following fields are on this panel:

- **CUU** - The UCB of the target unit.
- **SYM#** - The Symmetrix number of the target unit.
- **BCV** - This column contains Y if the unit is a BCV, and N if the target unit is not a BCV.
- **Volser** - The volume serial number associated with this target unit, if any.
- **DevType** - The volume's device type.
- **Status** - If the unit is a BCV, this field may contain the status of the target unit. NEVER indicates the target unit has never been paired in a BCV relationship. ESTAB indicates the target unit is currently established to a source unit.

**Paired Relationships**

This field contains information on any pairings that may be established for this target unit. If this target unit is paired with any source volume, the pairings are displayed in a comma separated list as AAAA-BBBB-CCCCCC, where AAAA is the CUU number, BBBB is the SYM number, and CCCCCC is the volume serial number, if one exists; if not ****** is displayed.

To select a target unit, enter $ in the line command area next to the target. To block select, place a B in the first target unit and the last target unit to be selected. When you have finished selecting target units, press PF3.

- You can enter **TARGET** in the **Option** line. The Enter a Target Range window is displayed.

![Enter a Target Range](image)

Enter a beginning and ending range of target units. The **Enter by Generation** field determines how the target unit fields are populated. If you enter N in the **Enter by Generation** field, Db2 Recovery Expert assigns volumes sequentially as follows:

Volume 1 - target unit 1  
  target unit 3  
Volume 2 - target unit 2  
  target unit 4

If you enter Y in the **Enter by Generation** field, Db2 Recovery Expert assigns volumes as follows:

Volume 1 - target unit 1  
  target unit 3  
Volume 2 - target unit 2  
  target unit 4

When you press Enter, the target units are mapped. If an error occurs, review the message in the **Message Area**. If no target appears in the **Target Units**...
field, no target unit in the specified range could be matched to a source volume. The target and source cannot be matched if the target and source are on different Symmetrix arrays.

Successful results of the **TARGET** command are shown in the following example:

3. You can modify the source/target volume mappings by doing any of the following:
   
   - If you want to enter additional mappings (a source volume and its related target units), enter **I** in the line command area. To delete a mapping, enter **D** in the line command area.
   
   - To exclude a volume, enter **X** in the line command area next to a volume. If you exclude a volume, Db2 Recovery Expert will not include the volume in the backup. The resulting backup will be tagged as a partial backup, which cannot be used for a system restore. However, a partial backup may be used to restore individual objects if you have enabled the object restore function. To undo an excluded volume, enter **U** in the line command area.
   
   - To clear all target units from the mappings in the profile, enter the **TGTCLR** command in the **Option** line. To clear all source and target mappings from the profile, enter the **CLEAR** command in the **Option** line.
   
   - To display more volume mappings, you can toggle the header fields on and off by entering the **HEADER** command in the **Option** line.
   
   - To save the information you entered without ending your edit session, enter the **SAVE** command in the **Option** line.

4. When you have completed volume mapping, press PF3 to save your profile and exit.

### About offload options

Db2 Recovery Expert allows you to offload backups to tape (or another disk location if you choose). You can define various options for offloads depending on the backup method selected. When you build a backup profile and set the **Perform Offload** field to **Y**, Db2 Recovery Expert offloads the backup per your...
specifications when the job is run. You specify how many generations of backups you want to keep. Db2 Recovery Expert “rolls off” the oldest copy if required.

Setting offload options for IBM FlashCopy, EMC SNAP, EMC BCV, and DFSMSdss backups
When offloading backups to tape (or another disk location if you choose) for IBM FlashCopy, EMC BCV, EMC SNAP, and DFSMSdss backups, you can specify the backup destination, data set naming conventions, and other options to meet your site’s needs.

Offload options are set in each backup profile.

Note: If you enter offload options and later change the Offload Options field to N, the offload options all will be reset to their defaults.

1. The first time you create a profile, specify Y in the Offload Options field in the Update Backup Profile panel and press Enter. When you later edit a profile, enter U in the Offload Options field and press Enter. In either case the Offload Options panel opens:

   ![Offload Options Panel](image)

   The header fields Creator, Name, SSID, Share Option, and Description that identify the profile are read-only.

2. Specify the following fields:

   **Local Primary/Local Backup/Recovery Site Primary/Recovery Site Backup**
   To specify the backup type, enter Y in the appropriate field. At least one of the backup copy types is required. Initially, after you select the backup type and press Enter, the Offload Options screen appears for the selected backup type.

   **Note:** You must specify a backup type of Y for Remote Site Primary and optionally for Remote Site Backup if you are planning on recovering a Db2 subsystem at a remote site using the Db2 Recovery Expert disaster recovery feature.

   **Offload Generations**
   Specify how many offline backups will be kept. Note that the number
of offline generations retained is not related to the number of backup
generations specified on the Update Backup Profile panel.

Delete Aged Backup Files
If you enter \textit{Y} in this field, when the oldest generation of the backup is
rolled off, Db2 Recovery Expert will physically delete the backup data
sets for the rolled-off generation.

Compress Data
If you enter \textit{Y} in this field, the data mover utility will compress the
data when it is copied.

Data Mover
Specify which program Db2 Recovery Expert should use to move the
offline backup:
\begin{itemize}
  \item D for DFSMSdss
  \item F for FDR
  \item I for FDRINST.
\end{itemize}

Encrypt Data
Enter \textit{Y} to have the data encrypted when it is offloaded. Refer to
"About data encryption" on page 247 for information about using data
encryption. After you have set encryption options the first time, to edit
them enter \textit{U} in this field, or enter \textit{N} to not encrypt data during the
offload.

Number of tasks
Specify the number of subtasks that Db2 Recovery Expert is to use
when offloading the backups. All backup types (LP, LB, RP, RB) are
done simultaneously, so if you specify four backups to offload and
specify one task, four tape drives will be required.

Note: Set the number of tasks to 1 when using FDR-type offload and
encryption.

Use Multiple Jobs
Specify whether you want to use multiple jobs for the offload process.
Using multiple jobs can reduce the time it takes to perform the offload.
Specify \textit{Y} if you want the to use multiple jobs. After pressing Enter, the
Multijob Options panel opens. In the Multijob Options panel you
specify the LPARS and job name prefix for the multiple jobs. Specify \textit{N}
to use a single job for the offload process. Specify \textit{U} to update the
multiple job options that are used to create the multiple offload jobs.
For more information on specifying the multiple job options see
"Specifying offload multijob options."

Specifying offload multijob options
The offload multijob options are used to specify the LPARS where the multiple
offload jobs are run and to specify a prefix that is used when generating the names
for the multiple jobs.

The following considerations apply when specifying the LPARS where the offload
jobs are run:
\begin{itemize}
  \item To allow for workload balancing you can specify the same LPAR more than once
        in the LPAR list. For example, you might specify in the LPAR list:
        \begin{itemize}
          \item LPAR1
          \item LPAR2
        \end{itemize}
\end{itemize}
When defining the LPAR list, you will need to consider the total number of tape drives that are available to each LPAR and the total number of tape drives that are required for processing if the maximum number of jobs are submitted to complete the offload. To calculate the maximum number of tape drives you multiply the maximum number of jobs by the maximum number of tasks for each LPAR, and then add all the values. In the Multijob Options panel example, the maximum number of jobs is 8 (2x2+2x2).

- The main job that controls the distribution of the multiple jobs to the specified LPARs will also control the distribution of the volumes required for the recovery.

1. From the Offload Options panel specify Y or U in the Use Multiple Jobs field. Press Enter. The Multijob Options panel opens. The following is an example of the Multijob Options panel:

```
RCVYXPRT V3R2 --------- Multijob Options --------- 2019/01/13 01:04:41
Option ===>
--------------------------------------------------------------------------------
Creator: TUSER Name: T9B1 - DFSMSDSS SSID: T9B1
Share Option: U (Upd,View,No) Description:
--------------------------------------------------------------------------------
Enter the options for performing offload and restore processing:
Multijob Prefix => TSMXDX (1-6 character job prefix)
Multijob LPAR list:
<table>
<thead>
<tr>
<th>LPAR Name</th>
<th>Max Jobs (1-99)</th>
<th>Max Tasks (1-8)</th>
</tr>
</thead>
<tbody>
<tr>
<td>RS22</td>
<td>02</td>
<td>02</td>
</tr>
<tr>
<td>RS23</td>
<td>02</td>
<td>02</td>
</tr>
</tbody>
</table>
```

2. In the Multijob Prefix field specify a 1 to 6 character prefix to use when generating the job name for each of the multiple jobs. Each job name begins with this prefix and is followed by a number from 01-99. If this value is not specified, then the prefix is taken from the first 6 characters of the main job’s name. The first character specified for the Multijob Prefix option must begin with either an alphabetic character or a national symbol (#, @, or $) so that when the job name is generated it will be a valid z/OS job name.

3. In the Multijob LPAR list field specify up to four LPARs where the multiple jobs can run. Specify the following for each LPAR:
   a. Specify the LPAR name in the LPAR Name field. The LPAR name can be from 1 to 8 characters. You can specify a single asterisk (*) to indicate that all the jobs are to be run on the same LPAR as the main job.
   b. Specify a 2 digit number from 01-99 in the Max Jobs field. This number indicates the maximum number of jobs that can be submitted to run on the LPAR. The main job will submit jobs to the specified LPAR until this limit is reached. When this limit is reached, if more jobs are needed, the main job will move to the next LPAR list entry. The default value is 4.
   c. Specify a 2 digit number from 01-8 in the Max Tasks field. This number specifies the maximum number of tasks that can be created in each multijob. When the multijob is submitted, it will create as many tasks as are needed, up to this limit, to perform the offload processing. The default value is 4.

4. Press Enter. The Multijob options are saved. You will have another opportunity to modify these options when you build the offload job.
Setting offload options for Db2 backups

For Db2 backups, you can specify that HSM is used to offload the backups, or allow Db2 Recovery Expert to perform the offload. You can define options for the offloads, such as the dump class, backup destination, data set naming conventions, and other options, to meet your site's needs.

Offload options are set in each backup profile.

Note: If you enter offload options and later change the Offload Options field to N, the offload options all will be reset to their defaults.

1. The first time you create a profile, on the Update Backup Profile panel specify Y in the Offload Options field and press Enter. (When you later edit a profile, specify U in the Offload Options field and press Enter). The Choose Offload Method panel is displayed.

Choose Offload Method
Choose the method you wish to use to offload your system backups. Note: HSM dump classes must be properly configured outside of ARY when choosing HSM.

Choose offload method ==> A (H)SM or (A)RY
Press ENTER to process or PF3 to Cancel

2. Select the method you want to use to offload the Db2 backups.

H Specify H to allow HSM to offload the backups. You will need to specify HSM dump classes. When you press Enter, the Db2 Offload Options panel is displayed where you can enter the dump classes.

Specify the following fields:

Offload Generations:
Specify how many offline backups will be kept. Note that the number of offline generations retained is not related to the number of backup generations specified on the Update Backup Profile panel. Valid values are 1 to 99.
Local Primary Dump Class
Specify the HSM dump class to use for dump processing. This field may contain 1-8 alphanumeric characters.

Local Backup Dump Class
Specify the HSM dump class to use for dump processing. This field may contain 1-8 alphanumeric characters.

Remote Primary Dump Class
Specify the HSM dump class to use for dump processing. This field may contain 1-8 alphanumeric characters.

Remote Backup Dump Class
Specify the HSM dump class to use for dump processing. This field may contain 1-8 alphanumeric characters.

Note: You must specify at least one HSM dump class field. However, you can override the specified dump class using the DUMPC keywords in the offload step of the system backup job. For more information, see “Adding keywords to the system backup offload job step” on page 264.

A
Enter A to allow ARY to offload the backups. When you press Enter, the Offload Options window is displayed.

The header fields Creator, Name, SSID, Share Option, and Description that identify the profile are read-only. Specify the following fields:

Local Primary

Local Backup

Recovery Site Primary

Recovery Site Backup

To specify the backup type, enter Y in the appropriate field. At least one of the backup copy types is required. Initially, after
you select the backup type and press Enter, the Offload Options
screen appears for the selected backup type.

Note: You must specify a backup type of Y for Remote Site
Primary and optionally for Remote Site Backup if you are
planning on recovering a Db2 subsystem at a remote site using
the Db2 Recovery Expert disaster recovery feature.

Offload Generations
Specify how many offline backups will be kept. Note that the
number of offline generations retained is not related to the
number of backup generations specified on the Update Backup
Profile panel.

Delete Aged Backup Files
If you enter Y in this field, when the oldest generation of the
backup is rolled off, Db2 Recovery Expert will physically delete
the backup data sets for the rolled-off generation.

Compress Data
If you enter Y in this field, Db2 Recovery Expert will instruct
the data mover utility to compress the data when it is copied.

Data Mover
Specify which program Db2 Recovery Expert should use to
move the offline backup: D for DFSMSdss, F for FDR, or I for
FDRINST.

Encrypt Data
Enter Y to have the data encrypted when it is offloaded. Refer
[“About data encryption” on page 247] for information about
using data encryption. After you have set encryption options
the first time, to edit them enter U in this field, or enter N to
not encrypt data during the offload.

Number of tasks
Specify the number of subtasks that Db2 Recovery Expert is to
use when offloading the backups. All backup types (LP, LB, RP,
RB) are done simultaneously, so if you specify four backups to
offload and specify one task, four tape drives will be required.

Note: Set the number of tasks to 1 when using FDR-type
offload and encryption.

Setting data set options
If you plan to allow Db2 Recovery Expert to offload backups, you must set data
set names and other specifications for the offloaded data sets.
1. From the Offload Options panel, specify Y in the appropriate backup type field
(Local Primary, Local Backup, Recovery Site Primary, or Recovery Site
Backup). (When you later edit a profile, enter U in the backup type field).
When you press Enter, the Offload Options panel for the backup type opens:
The header fields Creator, Name, SSID, Share Option, and Description that identify the profile are read-only.

2. You can specify one or more of the following fields:

**Update DSN specification**
- Type Y in this field to set or change the data set specifications.

**Unit Type**
- Type in a valid UNIT where the data set(s) will be written.

**Catalog**
- Type Y to catalog the data sets. Type N to not catalog the data sets.

**Data Class**
- If your site uses SMS to manage data sets, type in the SMS data class.

**Storage Class**
- If your site uses SMS to manage data sets, type in the SMS storage class.

**Management Class**
- If your site uses SMS to manage data sets, type in the SMS management class.

**Stack Backups on Tape**
- Indicate whether you want to stack backups on a single tape when possible.

**Tape Stack Limit**
- If stacking backups, enter the number of volumes that you want Db2 Recovery Expert to stack on one tape before dismounting the tape.

**Expiration date *or* Retention period**
- If the unit type specified in the Unit Type field is a Tape device, enter either the tape expiration date in YYYYDDD format, or the tape retention period in number of days.

**Specifying data set naming conventions**
You can use the Db2 Recovery Expert Offload DSN Specification screens to construct data set names for the offloaded backups.
The Offload DSN Specification screen allows you to build data set names using variables that are resolved at run time.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Creator: USER Name: T9B1 - Db2 SSID: T9B1</td>
<td></td>
</tr>
<tr>
<td>Share Option: U (Upd,View,No) Description:</td>
<td></td>
</tr>
</tbody>
</table>

   Enter codes to create a dataset name specification:
   - Qualifier code
   - Free form literal
   - Show DSN

   Current dataset name qualifier string:

   Valid dataset name specification codes are:
   1. Volser
   2. Vcatname
   3. Subsystem ID
   4. User ID
   5. Time (HHMMSS)
   6. Date (YYYYDDD)
   7. Year (YYYY)
   8. Month (MM)
   9. Day (DD)
   10. Julian Day (DDD)
   11. Hours (HH)
   12. Minutes (MM)
   13. Seconds (SS)
   14. Timestamp
   15. Random Number
   16. GDG (+1)..(+n)
   17. Backup Type (#18,#19)
   18. Local/Recovery (L/R)
   19. Primary/Backup (P/B)
   20. Job Name
   21. Step Name
   22. Profile Creator
   23. Profile Name
   24. Substring Qualifier
   25. Use freeform literal

2. In the following fields specify codes that will be used to create a data set name:

   **Qualifier code**
   To include a qualifier, type its number in the **Qualifier code** field and press Enter. The qualifier string appears in the **Current dataset name generation qualifier string** field. You can also type the data set name or string directly in the string field.

   **Free form literal**
   After selecting the **Use Freeform literal qualifier**, you can enter an eight-character literal in this field. If you want the literal to be in its own substring, make sure to begin the literal with a period.

   **Show DSN**
   To view the string as it would be completed, enter Y in this field and press Enter.

   **Current dataset name generation qualifier string**
   This field displays the qualifier string as it was input.

3. Valid qualifiers for the data set names that you can use on the Offload DSN Specification screen are listed on the bottom half of the screen. You can use one or more of the following fields:

   **Volser** The volume serial of the data set.

   **Vcatname** The volume catalog name.

   **Subsystem ID** The Db2 subsystem ID.

   **User ID** The TSO user ID of the job builder.
Time (HHMMSS)
The current time in the format shown.

Date (YYYYDDD)
The current date in the format shown.

Year (YYYY)
The year in the format shown.

Month (MM)
The month in the format shown.

Day (DD)
The day of the month in the format shown.

Julian Day (DDD)
The Julian day.

Hours (HH)
The current time in hours.

Minutes (MM)
The current time in minutes.

Seconds (SS)
The current time in seconds.

Timestamp
The current timestamp, in format yymmmdd.hhmmss.

Random Number
A random number in format Rnnnnnn.

GDG (+1)..(+n)
If you are using GDG data sets, this variable appends (+n) to the GDG base. This must be the last qualifier code you specify for the data set name.

Backup Type (#18.#19)
The backup type. The format is x.y, where x is L for local or R for recovery and y is P for primary or B for backup.

Local/Recovery (L/R)
The backup type; L is used for local and R for recovery.

Primary/Backup (P/B)
The image copy backup type; P is used for primary and B for backup.

Job Name
The job name.

Step Name
The job step name.

Profile Creator
The profile creator ID.

Profile Name
The profile name.

Substring Qualifier
Select this option to specify one of the qualifiers and customize the substring. When you press Enter, the substring parameters window appears.
Use freeform literal
After selecting this qualifier, you can enter an eight-character literal in the Free Form literal field. If you want the literal to be in its own substring, make sure to begin the literal with a period. For example, if you enter 1 (Volser), 3 (Subsystem ID), then 14 (Timestamp), the data set name appears as:

volser.ssid.0070104.T151509

where volser and ssid resolve to values appropriate to your site.

Using the substring function
Use the Substring Qualifier function to customize substring parameters.

When you choose the Substring Qualifier data set name specification code, the Substring Parameters window is displayed.

You can choose to enter almost any of the qualifier codes and specify the string's starting position and length. For example, qualifier code 3 generates a string of "&SSID", a four-character subsystem name. However, if your site uses three-character SSIDs, option 24 can be used to specify the SSID and customize the string length, as follows:

An example of the result is shown in the following screen:
Resulting DSN using current symbolic string

Some substrings (such as time and date) require the addition of an alphanumeric or symbol in the beginning of the string.

When you select these substrings, the following window is displayed.

This screen allows you to insert an alphanumeric or symbol to make the data set node name valid. When finished, press Enter. The Offload DSN Specification screen reappears with the corrected substring.

Viewing a sample string
To view the string as it will be completed, type Y in the Show DSN field.

When you press Enter, the sample string appears, as shown in the following screen:
About data encryption

Db2 Recovery Expert allows you to encrypt the data when the backup is offloaded to tape or disk. You can specify data encryption for both DFSMSdss and FDR offloads, and customize the encryption to meet your site's needs. Data encryption is not allowed for Db2 backups that use HSM to offload data.

Setting data encryption options for DFSMSdss offloads

For DFSMSdss offloads, you can specify the type of encryption and set other options for the encryption.

Data encryption options are set in each backup profile.

Note: If you enter encryption options and later change the Offload Options field to N, all the encryption options will be reset to their defaults.

1. On the Offload Options panel, enter D in the Data Mover field and U in the Encrypt Data field, and press Enter. The following is an example of the DFSMSdss Encryption Options panel:

```
RCVYXPRV V3R2 ---- DFSMSdss Encryption Options --- 2019/01/13 12:36:06
Option ===>
------------------------------------------------------------------------
Creator: TUSER Name: T9B1 - Db2 SSID: T9B1
Share Option: U (Upd,View,No) Description:
------------------------------------------------------------------------
Keypasswd => Y (Yes/No) ICount => 00016 (1-10000) Type => C (Clraes128/clrtDes)
RSA => N (Yes/No) Type => C (Clraes128/clrtDes/Encrtdes)
Label =>
```

The header fields Creator, Name, SSID, Share Option, and Description that identify the profile are read-only.

2. Specify the following encryption options.
Note: Either Keypasswd or RSA encryption can be specified, but not both. Refer to the documentation for DFSMSdss for specific information about these encryption types and settings.

Keypasswd
Enter Y to specify the type of encryption that uses an 8 to 32 EBCDIC character key to perform encryption. The key password will be automatically generated.

ICount
If you specify a Y in the Keypasswd field, indicate how many times DFSMSdss should perform the hash algorithm in the generation of the data key.

Type
If you specify a Y in the Keypasswd field, indicate the type of encryption to perform. Enter C for CLRAES128 or D for CLR TDES.

RSA
Enter Y to specify the type of encryption that uses the label of an existing RSA public key to perform encryption.

Type
If you specify a Y in the RSA field, indicate the type of encryption to perform. Enter C for CLRAES128, D for CLR TDES, or E for ENCTDES.

Label
If you specify a Y in the RSA field, enter the label of an existing RSA public key. The label can be up to 64 characters. The first character must be alphabetic or a national character (#,$,@). The remaining characters may be alphabetic, numeric, national or a period.

Setting data encryption options for FDR offloads
For FDR offloads, you can select the type of encryption.

Data encryption options are set in each backup profile.

Note: If you enter encryption options and later change the Offload Options field to N, all the encryption options will be reset to their defaults.

1. On the Offload Options panel, enter F or I in the Data Mover field and U in the Encrypt Data field, and press Enter. The FDR Encryption Options panel opens. The following is an example of the panel:

   RCVYXPRT V3R2 ------- FDR Encryption Options ------- 2019/01/13 12:39:08
   Option ===>
   Creator: TUSER Name: T9B1 - Db2 SSID: T9B1
   Share Option: U (Upd,View,No) Description:
   Encryption Type => S (Substitute/Cipher/Aes/aes192(1)/aes256(2)/aesFast/Tdes)

   The header fields Creator, Name, SSID, Share Option, and Description that identify the profile are read-only.

2. Specify the following encryption options.
Encryption type
Indicate the type of encryption to use. Refer to the documentation for your version of FDR for specific information about these encryption types. Valid options are:
• S: Substitute
• C: CIPHER
• A: AES
• 1: AES192
• 2: AES256
• F: AESFAST
• T: for TDES

Specifying PARMLIB override options

When creating a System Backup Profile with Db2 Recovery Expert, you can override some of the default settings defined in the PARMLIB member.

Override PARMLIB options can be specified in each System Backup Profile.

Note: If you enter override PARMLIB options and later change the Override PARMLIB field to N, the override PARMLIB options will be reset to their defaults.

1. From the Update Backup Profile panel, specify Y in the Override PARMLIB field and press Enter. When you later edit a System Backup profile, enter U in the Override PARMLIB field and press Enter.

2. The Override PARMLIB Options panel opens.
The corresponding PARMLIB parameter names for these fields are as follows:

- **Archive Warnings**: ARCHIVE_WARNINGS
- **Reset Copy Pending Tablespace**: RESET_COPY_PENDING_TS
- **Reset Copy Pending Indexspaces**: RESET_COPY_PENDING_IX
- **Wait for Background Copy**: WAIT_FOR_BACKGROUND_COPY
- **Backup Work Datasets**: BACKUP_WORK_DATASETS
- **Reinit Space Efficient Volumes**: REINIT_SPACE_EFFICIENT

**Note**: The default value for each of these fields is '_' (empty). If the field is left empty, the corresponding PARMLIB value will be used.

**Archive Warnings**

If you specify Y, Db2 Recovery Expert will issue warning messages if archive log data sets are not found on volumes within the scope of the backup. Archive volumes are listed in subsystem setup and analysis. If you specify N in this field, Db2 Recovery Expert will not issue warning messages. If you leave this field empty, the ARCHIVE_WARNINGS parameter from PARMLIB will be used.

The default is Y.

**Reset Copy Pending Tablespace**

If you specify Y, Db2 Recovery Expert will reset all tablespace so that they are no longer in copy pending status after a system backup. If you leave this field empty, the RESET_COPY_PENDING_TS parameter from PARMLIB will be used.

The default is N.

**Reset Copy Pending Indexspaces**

If you specify Y, Db2 Recovery Expert will reset all indexspaces so that they are no longer in copy pending status after a system backup. If you leave this field empty, the RESET_COPY_PENDING_IX parameter from PARMLIB will be used.

The default is N.

**Wait for Background Copy**

If you specify Y, Db2 Recovery Expert will wait for background SNAPs to complete before letting the job complete.

If you specify S, Db2 Recovery Expert will monitor the Flash Copy backup in a separate ARYCOPY step but will not halt completion of the job.
If you specify N, Db2 Recovery Expert will not wait for background copy to complete. If you leave this field empty, the WAIT_FOR_BACKGROUND_COPY parameter from PARMLIB will be used.

The default is N.

**Backup Work Datasets**

If you specify Y, Db2 Recovery Expert will consider work data sets critical. An error message will be issued if critical work data sets are not included in the backup. If you specify N, Db2 Recovery Expert will not consider work data sets critical and no error message will be issued if there are not included in the backup. If you leave this field empty, the value of BACKUP_WORKDATASETS parameter from PARMLIB will be used.

The default is Y.

**Reinit Space Efficient Volumes**

If you specify Y or N, its value will override the REINIT_SPACE_EFFICIENT PARMLIB value. If you leave this field empty, the REINIT_SPACE_EFFICIENT parameter from PARMLIB will be used.

3. When you are satisfied with your specifications, press Enter.

**Note:** For more information about PARMLIB values, see “Configuring the PARMLIB member” on page 48.

---

**Message Area messages**

The following messages may appear in the Message Area of the Update Backup Profile panel. This table explains the message and actions you may take to resolve the message. In some cases, no further action is required.

<table>
<thead>
<tr>
<th>Message</th>
<th>Explanation</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Source Volume not online or not found</td>
<td>The listed source volume is either offline or not a valid volume.</td>
<td>Bring the volume online or check with your systems programmer to ensure the volume entered is a valid volume.</td>
</tr>
<tr>
<td>Source Volume cannot be a BCV Device</td>
<td>For a BCV backup, the source volumes cannot be BCV devices.</td>
<td>If the volume entered was an incorrect volume, change it to the correct volume name. If the source volume is a BCV device, you will need to move the data from the BCV device to a non-BCV device.</td>
</tr>
<tr>
<td>Source Volume is not on a Symmetrix</td>
<td>The listed source volume is not on a Symmetrix array.</td>
<td>The source volume must be on a Symmetrix. Move the source volume to a Symmetrix array.</td>

</tr>
<tr>
<td>Target Unit not found</td>
<td>The target unit entered does not exist.</td>
<td>If the target unit was entered incorrectly, correct the unit. Otherwise, check with your systems programmer to ensure the target unit entered is a valid target unit. If you plan on adding the target units to the Symmetrix before running the backup, you can disregard this message.</td>
</tr>
<tr>
<td>Target Unit specified is not a BCV Device</td>
<td>The target unit entered is not a BCV device. For a BCV backup, all target units entered must be BCV devices.</td>
<td>Select a target unit that is a BCV device.</td>
</tr>
<tr>
<td>Target Unit is not on a Symmetrix</td>
<td>Each target unit must be on a Symmetrix.</td>
<td>Select a target unit that is located on a Symmetrix array.</td>
</tr>
<tr>
<td>Target BCV target_unit is established to source_volume</td>
<td>For BCV backups, this informational message lists the source volume to which the target unit is established.</td>
<td>None required.</td>
</tr>
<tr>
<td>Target Unit is paired to source_volume</td>
<td>For SNAP type backups, this message appears if the target happens to be a BCV unit and it is currently paired to a source volume.</td>
<td>None required.</td>
</tr>
<tr>
<td>Source volume has BCV unit_name established</td>
<td>For BCV backups, this informational message displays the target unit to which the source volume is established.</td>
<td>None required.</td>
</tr>
<tr>
<td>Source Volume is not Flash capable</td>
<td>The source volume does not reside in a storage subsystem that is FlashCopy capable.</td>
<td>If the source volume was entered incorrectly, correct the volume. Or, move the source volume to a FlashCopy capable storage system. Otherwise, check with your systems programmer to ensure the source volume entered is FlashCopy capable.</td>
</tr>
<tr>
<td>Target Unit is not flash capable</td>
<td>For FlashCopy backups, the target volume cannot use FlashCopy to copy the volume.</td>
<td>If the target unit was entered incorrectly, correct the unit. Otherwise, check with your systems programmer to ensure the target unit entered is FlashCopy capable.</td>
</tr>
</tbody>
</table>
Profile management

This section describes the tasks that you can use to manage your system backup profiles.

Updating a profile

You can update your own system backup profiles or one created by another user if the profile was created with the Update option field set to Update (U).

You can update a backup profile at any time to add or delete source or target volumes, change the number of generations, and change most other settings. However, once setup has been run successfully on a backup profile, you cannot change the Db2 subsystem or the backup method when you update the profile.

1. Access the Backup Profile Display panel.
2. Specify U in the Cmd line next to the profile you want to update and press Enter.
3. The Update Backup Profile panel opens. You can then make changes to the profile.
4. Press PF3 when you have finished to save the changes. To cancel and exit without making changes, specify CAN in the Option line and press Enter.

Viewing a profile

You can view your own backup profiles or one created by another user if the profile has the Update option field set to view or update.

1. Access the Backup Profile Display panel.
2. Specify V in the Cmd line next to the profile you want to view and press Enter. The View Backup Profile panel opens. You can view profile details, but cannot make any changes.

Renaming a profile

You can use the Rename line command to change the name, creator, or description of a backup profile. You can rename profiles created under your user ID, regardless of the value assigned to the Update Option field. You can also rename a profile created by another user if the profile has the value of the Update Option field set to Update (U).

1. Access the Backup Profile Display panel.
2. Specify R in the Cmd line next to the profile that you want to rename.
3. Press Enter. The Rename Backup Profile panel opens.
4. The **Creator** field is automatically filled with the user ID that created the profile. If you have been granted permission, you can change the user ID in the **Creator** field. Permission to change the creator user ID is granted using the ADMIN_USERID parameter in the SYSPARM library.

5. To rename the profile, specify a new name in the **Profile Name** field.

6. To change the profile description, specify a new description in the **Description** field.

7. Press Enter. To cancel the rename, press PF3 on the Rename Backup Profile window.

**Deleting a profile**

You can delete profiles created under your user ID. You can also delete a profile created by another user if the profile was created with the value of the **Update Option** field set to Update (U).

If you delete a backup profile, you will also delete all backups associated with the profile.

1. Access the Backup Profile Display panel.

2. Specify 0 in the **Cmd** line next to the profile you want to delete and press Enter. The Confirm Deletion of Profile panel opens.

3. To delete the profile, specify Y in the **Delete** field and press Enter. A message appears to confirm deletion. To cancel deletion, press PF3.
Chapter 10. Creating a system backup

This section provides information about building a backup job from a backup profile and then submitting the backup job to create a system backup.

Building and submitting backup jobs

After you create a Db2 Recovery Expert backup profile you will build a backup job. Based on the values that were specified in the backup profile, Db2 Recovery Expert will generate the JCL for the backup job.

When you build the JCL for the backup job you can specify whether or not you will:

- edit the JCL that is created
- automatically run a system backup after the JCL is created
- offload the backup after it was taken
- backup the Db2 Recovery Expert repository

Note:

- After you create the backup job, you should put the job into a scheduler to create regular backups of your Db2 subsystem.
- For EMC Snap and BCV backups, Db2 Recovery Expert can detect if the volumes are online to either the local or a remote system and will wait until they go offline before completing the backup. If you wish to bypass this check, add the NO-OFFLINE-CHECK control card to the job. Db2 Recovery Expert cannot detect if the volumes are online to other z/OS systems for other backup types.
- When performing a system backup using Flash or Snap profiles that use UCB numbers as targets, Db2 Recovery Expert will issue an error message if the UCB volumes are online during the backup. This is done to prevent you from accidentally overwriting target volumes. If you want Db2 Recovery Expert to overwrite the target volumes, you need to vary the volumes offline and then run the backup.

1. Enter 1 (System Operations) on the Db2 Recovery Expert main menu and press Enter. From the Systems Operations Menu panel, specify 2 (System Backup Profiles) and press Enter. Specify selection criteria in the Enter Backup Profile selection criteria panel and press Enter. The Backup Profile Display panel opens.

2. From the Backup Profile Display panel, specify B in the Cmd line next to the profile for which you want to build the JCL and press Enter. The following panel opens:
3. Specify the following fields on this panel:

**Edit Generated Job**
Enter Y to view the job in an ISPF edit session after generation. If you enter N, after the job is generated you will return to the Backup Profile Display panel.

**Setup Job**
Enter Y if you want Db2 Recovery Expert to build JCL only for profile setup; no backup will be taken. This option can be useful if you know that volume mapping or another aspect of the backup profile has changed. Enter N to build the JCL to perform the backup. If Db2 Recovery Expert detects that setup needs to be run on this profile, this field will be set to Y.

**Perform Offload**
Enter Y to offload the backup after it has been taken. If you have not specified offload options for the backup, this field is read-only and set to N.

**Backup Repository**
Enter Y to back up the Db2 Recovery Expert repository as part of the backup job. This process uses IDCAMS to copy Db2 Recovery Expert's VSAM control files to the GDGs configured during installation. The backup files can be used to restore the Db2 Recovery Expert control information if it is lost or damaged.

**Build job in Dataset/Member**
Enter the fully qualified data set name (without quotes) where you want to save the generated job. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name. If the member does not exist, Db2 Recovery Expert will create it.

**Job Cards**
Enter a valid job card for your site.

4. When you have completed the fields, press Enter. If you specified to edit the job, an ISPF panel containing the job appears. If you did not specify to edit the job, the Backup Profile Display panel reappears.

5. Submit the build job.

Check the job log for error messages.
If the `WAIT_FOR_BACKGROUND_COPY` parmlib parameter is set to `Y` or `S`, the backup process ends with a Copypool `FASTREPLICATIONSTATE` status check.

One of the following messages will appear in the job log:

- If an error occurs while checking Copypool `FASTREPLICATIONSTATE` status: `ARYS427E` An error occurred obtaining SMS copypool information.
- If the copypool `FASTREPLICATIONSTATE` status has been checked successfully and the status is `RECOVERABLE`, message `ARYS871` will appear, indicating that the backup is recoverable.
- If the copypool `FASTREPLICATIONSTATE` status has been checked, but the status is `NONE` or `FAILED`, message `ARYS872E` will appear, indicating that the backup is non-recoverable.

**Note:** The additional monitoring provided by the `WAIT_FOR_BACKGROUND_COPY` and `WAIT_FOR_OFFLOAD` parmlib parameters is only available for Db2 profiles. FlashCopy and other backup profiles are not supported for this additional monitoring. See also: [Reviewing output from offloading a backup]

### Sample build JCL for the profile setup process

This sample job shows the JCL for the profile setup process and does not back up the Db2 Recovery Expert repository.

About incremental system backups

When building Db2 backup JCL, you can use Db2 Recovery Expert to generate incremental FlashCopy system backups. This feature is only available for Db2 V9 subsystems and later.

System requirements

The following requirements must be in place to use incremental system backup:

- The subsystem must be Db2 V9 or later
- Must be z/OS version 1 release 9 or later
- All the Db2 data must reside on volumes that are managed by DFSMSdss.
How incremental system backups work

An incremental system backup differs from an incremental Db2 image copy in that it still results in a complete system backup on each execution. An incremental system backup replaces the previous system backup, but only the changed pages are re-copied from the source to the target volumes of the previous system backup.

When an incremental system backup is first initiated, a full backup is taken and an internal relationship is tracked between the source and target volumes. On the next system backup that uses the same set of target volumes, the previous backup is replaced, and only the tracks that have changed since the previous system backup are copied to the target volumes. When an end incremental is specified on a system backup, one final incremental backup will be performed and from that point on all system backups will be full system backups.

Only one incremental FlashCopy relationship can be established to a source volume at a time. If you specify two generations of backups, every other generation is incremental; if you specify three generations, every third backup is incremental. Db2 Recovery Expert keeps track of which generation is incremental and creates the correct system backup type. Refer to the Db2 documentation for detailed information about incremental FlashCopy backups.

Starting and stopping incremental system backups

Use these steps to initiate an incremental system backup and to stop the incremental backups.

You must generate the FlashCopy, Db2, or DFSMSdss backup profile first, and then edit the JCL.

1. In the ARYIN DD, add the START-INCREMENTAL keyword after the BACKUP command, as follows:
   ```
   //ARYIN DD *
   BACKUP "POB08"."BB1A – Db2 SYSTEM BACKUP"
   START-INCREMENTAL
   */
   ```
   When this job is executed, an incremental relationship is established between the source and target volumes and a full backup. In addition, a log is established that will record which tracks have changed since this backup.

   **Note:** In the Backup Summary Report, the Backup Type field will display (Incr) after the backup type if the backup is incremental.

2. Before the next backup job is run, remove the START-INCREMENTAL keyword from the job, or rebuild the job profile without adding the keyword.

3. When you want to end the incremental backups, add the END-INCREMENTAL keyword, as follows:
   ```
   //ARYIN DD *
   BACKUP "POB08"."BB1A – Db2 SYSTEM BACKUP"
   END-INCREMENTAL
   */
   ```
   Upon execution of this job, the incremental relationship is terminated and a full system backup is taken.
Adding keywords to a system backup job

Db2 Recovery Expert allows you to edit the system backup job and add one or more keywords. Each keyword that you specify adds functionality that otherwise would not be present in the generated JCL.

1. Access the Build Backup Job panel as follows:
   a. From the Backup Profile Display panel, specify B in the Cmd line next to the backup profile for which you want to build a backup job. The Build Backup Job panel opens.
   b. Specify Y in the Edit Generated Job field. Specify any other fields that are applicable.
   c. Press Enter. The JCL for the system backup job displays in an ISPF edit session.

2. Add one or more keywords to the JCL. You add keywords to the ARYIN DD * statement following the keywords that are generated by Db2 Recovery Expert. One or more of the following keywords can be added:

**BYPASS-VOL-CHECK**

This keyword allows Db2 Recovery Expert to continue executing the system backup even after it has found that some Db2 data is not included in the backup (and no Db2 volumes were excluded). Use this keyword at your own risk.

**DEBUG**

This keyword produces extra debugging information. You should only add this keyword when directed to by technical support.

**END-INCREMENTAL**

For Flash, DFSMSdss, and Db2 type backups, this keyword ends an incremental copy process of the system backup. The next time a backup is taken and sent to this set of target volumes, the complete source volume will be copied.

**INCLUDE-ARCHIVE-VOLS**

This keyword can be added if you wish to make sure the volumes Db2 ARCHIVE LOG data sets (on disk) are copied in a system backup. For an AUTOMAP type profile, volumes containing only archive log data sets on disk are not normally included in the system backup. Adding this keyword ensures that they are included.

**MAX-TASKS**

This keyword controls how many tasks are started to complete the backup processing for operations that can be multi-tasked. You can specify a number from 1 to 8. The default is 4.

**PROMPT**

This keyword is used for BCV type backups. Adding the keyword overrides the current setting in ARY#PARM. If the current generation of BCVs has not synchronized with the source volumes, a WTOR will prompt the operator and ask what to do.

**REUSE-SHARED-TARGETS**

This keyword can be added when you are using shared target pool(s) with space efficient volumes and want to reuse a shared target volume that may already contain an existing relationship.

**SETUP**

This keyword is automatically added by Db2 Recovery Expert when it is needed. This keyword is needed the first time a backup profile is run.
or after a backup profile is edited. The presence of this keyword triggers a “setup” check to ensure a backup profile is valid. A backup is not taken when the SETUP card is present. You can add the SETUP keyword if you want additional checking to be performed.

**SNAP-TARGET-ONLINE**
This keyword is used only for SNAP type backups. Adding the keyword allows the target UCBs to be online during the backup. They remain online with unique volume serial numbers after the backup as well.

**START-INCREMENTAL**
For Flash, DFSMSdss, and Db2 type backups, this keyword starts an incremental copy process of the system backup. The next time a backup is taken and sent to this set of target volumes, only the changed tracks will be copied.

**VALIDATE-Db2-VOLS**
This keyword overrides the “Validate Db2 Volumes” setting in the backup profile. This causes Db2 Recovery Expert to always validate that the Db2 volumes are all backed up regardless of the setting in the profile.

3. Either run the job or hit PF3 to return to the Backup Profile Display panel.

---

**Adding keywords to the system backup offload job step**

Db2 Recovery Expert allows you to edit the offload job step of the system backup job and add one or more keywords. Each keyword that you specify adds functionality that otherwise would not be present in the generated JCL.

1. Access the Build Backup Job panel as follows:
   a. From the Backup Profile Display panel, specify B in the **Cmd** line next to the backup profile that for which you want to build a backup job. The Build Backup Job panel opens.
   b. Specify Y in the **Edit Generated Job** field. Specify any other fields that are applicable.
   c. Press Enter. The JCL for the system backup job displays in an ISPF edit session.

2. Search the JCL for the job step named ARYJOFFL. You add keywords for the offload step to the ARYIN DD * statement. Additional keywords are placed at the end of the keywords generated by Db2 Recovery Expert. One or more of the following keywords can be added:

   **DUMPC-LP dumpclassname**
   This keyword overrides the LP dump class that is specified in the system backup profile with the name specified in the **dumpclassname** variable.

   **DUMPC-LB dumpclassname**
   This keyword overrides the LB dump class that is specified in the system backup profile with the name specified in the **dumpclassname** variable.

   **DUMPC-RP dumpclassname**
   This keyword overrides the RP dump class that is specified in the system backup profile with the name specified in the **dumpclassname** variable.
Reviewing output from an IBM FlashCopy backup

During an IBM FlashCopy backup, Db2 Recovery Expert writes messages to the job’s DD statements. You should access and review these DD statements to determine if the backup was successful.

Reviewing output from an IBM FlashCopy backup with auto mapping to target stogroups

This topic shows sample output from an IBM FlashCopy backup taken using a backup profile that specified auto mapping of target volumes within specified stogroups.

ARYOUT DD (ARYBACK step)

This DD contains the backup profile information, control cards, and Db2 Recovery Expert messages. The following shows a sample ARYOUT DD:

Note: Some lines that generally appear as single lines appear in this sample on two lines for display purposes.

```

The Source Volumes and Flash sections of this report list the target units that now contain the backup of the associated Db2 standard volumes. The Data Types section of the report contains the following information:

- **Obj** Yes means that the volume contains object data.
- **OCat** Yes means that the volume contains a user catalog that in turn contains the z/OS catalog information for object data sets.
- **ALog** Yes means that the volume contains one or more active log data set(s).
- **ACat** Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an active log data set.
RLog  Yes means that the volume contains one or more archive log data set(s).
RCat  Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an archive log data set.

If a volume contains a mix of object data or catalogs and log data or catalogs, then Db2 Recovery Expert issues a message stating that the object and log data are not separated and a full system restore is required.

Reviewing output from an IBM FlashCopy backup with auto mapping to target units

This topic shows sample output from an IBM FlashCopy backup taken using a backup profile that specified auto mapping of target volumes with unit ranges.

Db2 Recovery Expert
Backup Volume Detail Report
Volumes and Flash sections of this report list the target units that now contain the backup of the associated Db2 standard volumes. The Data Types section of the report contains the following information:

**Obj** Yes means that the volume contains object data.

**OCat** Yes means that the volume contains a user catalog that in turn contains the z/OS catalog information for object data sets.

**ALog** Yes means that the volume contains one or more active log data set(s).

**ACat** Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an active log data set.

**RLog** Yes means that the volume contains one or more archive log data set(s).

**RCat** Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an archive log data set.

If a volume contains a mix of object data or catalogs and log data or catalogs, then Db2 Recovery Expert issues a message stating that the object and log data are not separated and a full system restore is required.

### Reviewing output from an EMC BCV backup

During an EMC BCV backup, Db2 Recovery Expert writes messages to several DD statements. You should access and review these DD statements to determine if the backup was successful.

#### ARYOUT DD

This DD contains the backup profile information, control cards, and Db2 Recovery Expert messages. The following shows a sample ARYOUT DD:

**Note:** Some lines that generally appear as single lines appear in this sample on two lines for display purposes.

ARY0001I - Db2 Recovery Expert.

Db2 Recovery Expert
Backup Volume Detail Report

<-Db2 Source Volume-> <-Split-> <-Estab-> <--------Data Types-------->
Volser  Ucb#  Sym#  Devtyp Ucb#  Sym#  Ucb#  Sym#  Obj  OcAt  ALog  ACat  RLog  RCat
------  ----  -----  -----  ----  -----  ------  ------  ----  ----  ----  ----  ----  ----  ----
ARY090  9090  0190  3390-3  90B3  01B3  N/A  N/A  Yes  Yes  No  No  No  No  No
ARY092  9092  0192  3390-3  90B5  01B5  N/A  N/A  No  No  Yes  Yes  No  No  No

The Split section of this report lists the BCV units that were mirroring the standard volumes; these volumes now contain this backup. The Estab (Establish) section of the report details the next generation BCV units that are now established to the Db2 standard volumes.
The **Data Types** section of the report contains the following information:

**Obj**  Yes indicates that the volume contains object data.

**OCat** Yes indicates that the volume contains a user catalog that in turn contains the z/OS catalog information for object data sets.

**ALog** Yes indicates that the volume contains one or more active log data sets.

**ACat** Yes indicates that the volume contains a user catalog that in turn contains z/OS catalog information for an active log data set.

**RLog** Yes indicates that the volume contains one or more archive log data sets.

**RCat** Yes indicates that the volume contains a user catalog that in turn contains z/OS catalog information for an archive log data set.

If a volume contains a mix of object data or catalogs and log data or catalogs, then Db2 Recovery Expert issues a message stating that the object and log data are not separated and a full system restore is required.

---

**Reviewing output from an EMC SNAP backup**

During an EMC SNAP backup, Db2 Recovery Expert writes messages to the job’s SYSPRINT DD as well as other DD statements. You should access and review these DD statements to determine if the backup was successful.

---

**Reviewing output from an EMC SNAP backup with manual mapping**

This topic shows sample output from an EMC SNAP backup taken using a profile that specified manual target volume mapping.

---

**ARYOUT DD**

During an EMC SNAP backup, Db2 Recovery Expert writes messages to several DD statements. You should access and review these DD statements to determine if the backup was successful.

This DD contains the backup profile information, control cards, and Db2 Recovery Expert messages. The following shows a sample SYSPRINT DD:

**Note:** Some lines that generally appear as single lines appear in this sample on two lines for display purposes.

The **Snap** section of this report lists the target units that now contain the backup of the associated Db2 standard volumes. The **Data Types** section of the report contains the following information:

- **Obj** Yes means that the volume contains object data.
- **OCat** Yes means that the volume contains a user catalog that in turn contains the z/OS catalog information for object data sets.
- **ALog** Yes means that the volume contains one or more active log data set(s).
- **ACat** Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an active log data set.
- **RLog** Yes means that the volume contains one or more archive log data set(s).
- **RCat** Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an archive log data set.

If a volume contains a mix of object data or catalogs and log data or catalogs, then Db2 Recovery Expert issues a message stating that the object and log data are not separated and a full system restore is required.

**ARYSNAPO DD**

This DD contains messages generated by the EMC SNAP Volume and Timefinder utilities. For information on these messages, refer to the EMC documentation. The following shows a portion of a sample ARYSNAPO DD:

Chapter 10. Creating a system backup 275
Reviewing output from an EMC SNAP backup with auto mapping

This topic shows sample output from an EMC SNAP backup taken using a profile that specified auto mapping of target volumes.

**ARYOUT DD**

During a SNAP backup, Db2 Recovery Expert writes messages to several DD statements. You should access and review these DD statements to determine if the backup was successful.

This DD contains the backup profile information, control cards, and Db2 Recovery Expert messages. The following shows a sample SYSPRINT DD:

**Note:** Some lines that generally appear as single lines appear in this sample on two lines for display purposes.

```
0001I - ARY0001I - Db2 Recovery Expert Starting.

ARY#REPT DD

This DD contains a summary report that describes the details of the backup, including the standard and SNAP volume information and the data types found on the backup volumes. The following shows a sample ARY#REPT DD from a SNAP backup:
Utility Executed: Backup
Profile Name: PUSER2.TEST S89Z - SNAP TO STOGROPS
Db2 Subsystem: S89Z
Db2 Version: 0810
Backup Type: Snap
Backup Contains: Object Data and Log Data
Partial Backup: No
Nbr of Controllers: 01
Lowest Microcode Level: 5x73
Nbr of Volumes: 0014
Backup RBA: 00000B2169DF
Last Checkpoint RBA: 00000B2169DF
HPGRBLP RBA: 00001A669A6B
Backup Date: 10/27/2019
Backup Time: 11:54:22
Consistency Method: EMC Consistent Snap
Supports Object Restore: Yes

The Snap section of this report lists the target units that now contain the backup of the associated Db2 standard volumes. The Data Types section of the report contains the following information:

**Obj** Yes means that the volume contains object data.

**OCat** Yes means that the volume contains a user catalog that in turn contains the z/OS catalog information for object data sets.

**ALog** Yes means that the volume contains one or more active log data set(s).

**ACat** Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an active log data set.

**RLog** Yes means that the volume contains one or more archive log data set(s).

**RCat** Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an archive log data set.

If a volume contains a mix of object data or catalogs and log data or catalogs, then Db2 Recovery Expert issues a message stating that the object and log data are not separated and a full system restore is required.
ARYSNAP0 DD

Chapter 10. Creating a system backup 279
Reviewing output from a Db2 backup

During a Db2 backup, Db2 Recovery Expert writes messages to the job's DD statements. You should access and review these DD statements to determine if the backup was successful.

ARYOUT DD (ARYBACK step)

This DD contains the backup profile information, control cards, and Db2 Recovery Expert messages. The following shows a sample ARYOUT DD:

```
ARY0001I - Db2 Recovery Expert Starting.
ARY0003I - Control Cards:
ARY0004I - BACKUP "PUSER"."TEST S89X - Db2 BACKUP"
ARY0004I - Backup profile PUSER.TEST S89X - Db2 BACKUP was read from the repository.
ARY0075I - Performing subsystem source volume validation.
ARY0076I - Subsystem source volume validation complete. All source volumes are in this profile.
ARY0039I - Volume map validation complete.
ARY0275I - Db2 checkpoint taken at RBA/LRSN 000005B44000
ARY0004I - Invoking IBM System Level Backup utility.
ARY0020I - IBM System Backup Utility Complete.
ARY0080I - Backup with timestamp 2008/10/28-10:54:38 Generation 01 was saved in the repository.
ARY0002I - Db2 Recovery Expert complete. RC=000.
```

ARY#REPT DD (ARYBACK step)

This DD contains a summary report that describes the details of the backup, including the source and target volume information and the data types found on the backup volumes. The following shows a sample ARY#REPT DD from a Db2 backup:

```

The Source Volumes and Target sections of this report list the target units that now contain the backup of the associated Db2 volumes. The Data Types section of the report contains the following information:

Obj Yes means that the volume contains object data.

OCat Yes means that the volume contains a user catalog that in turn contains the z/OS catalog information for object data sets.

ALog Yes means that the volume contains one or more active log data set(s).

ACat Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an active log data set.

RLog Yes means that the volume contains one or more archive log data set(s).

RCat Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an archive log data set.

If a volume contains a mix of object data or catalogs and log data or catalogs, then Db2 Recovery Expert issues a message stating that the object and log data are not separated and a full system restore is required.

---

**Reviewing output from a DFSMSdss backup**

During a DFSMSdss backup, Db2 Recovery Expert writes messages to several of the job’s DD statements. You should access and review these DD statements to determine if the backup was successful.

---

**Reviewing output from a DFSMSdss backup with auto mapping**

This topic shows sample output from a DFSMSdss backup taken using a backup profile that specified auto mapping of target volumes within specified stogroups.
ARYOUT DD (ARYBACK step)

This DD contains the backup profile information, control cards, and Db2 Recovery Expert messages. The following shows a sample ARYOUT DD:

Note: Some lines that generally appear as single lines appear in this sample on two lines for display purposes.

The Db2 Volume and Target sections of this report list the target units that now contain the backup of the associated Db2 standard volumes. The Data Types section of the report contains the following information:

- **Obj**: Yes means that the volume contains object data.
- **OCat**: Yes means that the volume contains a user catalog that in turn contains the z/OS catalog information for object data sets.
- **ALog**: Yes means that the volume contains one or more active log data set(s).
ACat  Yes means that the volume contains a user catalog that in turn contains 
z/OS catalog information for an active log data set.

RLog  Yes means that the volume contains one or more archive log data set(s).

RCat  Yes means that the volume contains a user catalog that in turn contains 
z/OS catalog information for an archive log data set.

Reviewing output from a DFSMSdss backup with manual mapping

This topic shows sample output from a DFSMSdss backup taken using a backup 
profile that used manual mapping of target volumes.

ARYOUT DD (ARYBACK step)

This DD contains the backup profile information, control cards, and Db2 Recovery 
Expert messages. The following shows a sample ARYOUT DD:

Note: Some lines that generally appear as single lines appear in this sample on 
two lines for display purposes.

ARY00011 - Db2 Recovery Expert Starting.
ARY00031 - Control Cards:
ARY00041 -   BACKUP "TUSERDH"."TEST S99X - DFSMSDSS MANUAL"
ARY00041 -
ARY00131 - Backup profile TUSERDH.TEST S99X - DFSMSDSS MANUAL 
was read from the repository.
ARY00751 - Performing subsystem source volume validation.
ARY00761 - Subsystem source volume validation complete.  
All source volumes are in this profile.
ARY00391 - Volume map validation complete.
ARY02751 - Checkpoint taken at RBA/LRSN 00000747E737
ARY01521 - Suspending log activity to subsystem S99X.
ARY00041 - Performing disk copy process.
ARY03561 - Task 01 - Copying source volser ARZ180 to target volser ARZ190
ARY03561 - Task 02 - Copying source volser ARZ181 to target volser ARZ191
ARY03561 - Task 03 - Copying source volser ARZ182 to target volser ARZ192
ARY03561 - Task 04 - Copying source volser ARZ183 to target volser ARZ193
ARY03561 - Task 04 - Copying source volser ARZ187 to target volser ARZ197
ARY03561 - Task 02 - Copying source volser ARZ185 to target volser ARZ195
ARY03561 - Task 03 - Copying source volser ARZ186 to target volser ARZ196
ARY03561 - Task 01 - Copying source volser ARZ184 to target volser ARZ194
ARY01521 - Resuming log activity to subsystem S99X.
ARY00841 - Backup of profile TUSERDH.TEST S99X - DFSMSDSS MANUAL has been created.
ARY00041 - Collecting dataset information for object level recovery.
ARY00041 - Dataset information collection complete.
ARY00801 - Backup with timestamp 2019/10/28-19:41:00 
   Generation 01 was saved in the repository.
ARY00021 - Db2 Recovery Expert complete. RC=000.

ARY#REPT DD (ARYBACK step)

This DD contains a summary report that describes the details of the backup, 
including the standard and DFSMS volume information and the data types found 
on the backup volumes. The following shows a sample ARY#REPT DD from a 
DFDSSsms backup:

Db2 Recovery Expert 
Backup Summary Report

**RCat**  Yes means that the volume contains a user catalog that in turn contains z/OS catalog information for an archive log data set.

### Reviewing the Restricted Objects report

The Restricted Objects report lists the objects that were in a restricted state when a system level backup was created.

As a system level backup is performed, Db2 Recovery Expert will check for any objects that are in a restricted state. The restricted statuses Db2 Recovery Expert checks for are CHKP, GRECP, LPL, RBDP, RECP, UTUT and WEP. If an object is found that is in one of these restricted states, it will be included in the Restricted Objects report. In addition, Db2 Recovery Expert will flag the object in the data repository as restricted at the time of the system backup.
An object that has been flagged as having a restricted status cannot be image copied or restored from a system level backup. If a job tries to image copy or restore an object that has been flagged as being in a restricted state, an error message is issued alerting the user to the object's status.

The Restricted Objects report displays after the System Backup report and shows all objects that were in a restricted state at the time of a system level backup. The following is a sample of a Restricted Objects report.

**Reviewing output from offloading a backup**

When offloading a backup, Db2 Recovery Expert writes messages to several of the offload job's DD statements. You should access and review these DD statements to determine if the offload was successful.

**Note:** If you created the system level backup using the Db2 backup method and discover that the offload you requested failed on one of the copy pools, you must wait to resubmit the failed offload job until the offload of the other copy pool completes.

**ARYOUT DD (ARYOFFL step)**

This DD contains the backup profile information, control cards, and Db2 Recovery Expert messages. The following shows part of a sample ARYOUT DD:

**Note:** Some lines that generally appear as single lines appear in this sample on two lines for display purposes.

ARY00011 - Db2 Recovery Expert Starting.
ARY00031 - Control Cards:
ARY00041 - OFFLOAD "PUSER","TEST S89Z - SNAP"
ARY00041 - GENERATION LAST-BACKUP
ARY00041 -
ARY01231 - Backup PUSER.TEST S89Z
SNAP generation 001 was read from the repository.
ARY00041 - Performing full volume offload.
ARY02491 - Task 01 - Offload process starting for unit 7718 (Source volser ARX100).
ARY02491 - Task 02 - Offload process starting for unit 7719 (Source volser ARX101).
ARY02791 - Task 01 - Unit 7718 with old volser ARX100 was clipped to volser ZZX100.
ARY02791 - Task 02 - Unit 7719 with old volser ARX101 was clipped to volser ZZX101.
ARY02631 - Task 01 - Unit 7718 offloaded to local primary dataset
ARY0254I - Task 01 - Offload process for unit 7718 (Source volser ARX100) complete.
ARY0263I - Task 02 - Unit 7719 offloaded to local primary dataset

ARY0254I - Task 02 - Offload process for unit 7719 (Source volser ARX101) complete.

ARY0002I - Db2 Recovery Expert complete.

**ARY#REPT DD (ARYOFFL step)**

This DD contains a summary report that describes the details of the offload, original and target volume information, and the offloaded file names. The following shows a sample ARY#REPT DD from an offload using the SNAP backup method. This report includes the same information for FlashCopy, BCV, and DFSMSdss backup methods.

```
Db2 Recovery Expert
Volume Offload Summary Report

Utility Executed:......... Offload
Profile Name:............. PUSER.TEST S89Z - SNAP
Offload Date:........... 10/23/2019
Offload Time:........... 12:49:19
Data Mover:.............. DFSMSdss
Compress:............... No
Encrypted............... No
Encryption Method....... RSA CLRAES128
Generation............... 0001
Nbr Of Volumes........... 0016
```

The following shows a sample ARY#REPT DD from an offload using the Db2 backup method.

```
Db2 Recovery Expert
Volume Offload Summary Report

Utility Executed:......... Offload
Profile Name:............. PUSER.TEST S89Z - Db2
Offload Date:........... 10/23/2019
Offload Time:........... 12:49:19
Data Mover:.............. DFSMSdss
Compress:............... No
Encrypted............... No
Encryption Method....... RSA CLRAES128
Generation............... 0001
Nbr Of Volumes........... 0016
Alternate Copy Pool:..... ALT1EC1B
Database Copy Pool Backup: SGEC1BDA
Log Copy Pool Backup:..... SGEC1BLA
```
This report contains the following information:

**Db2 Volser/Ucb#**

The Db2 volume serial and UCB of the backup before offload.

**Type**

The backup type: LP is local primary, LB is local backup, RP is remote primary, RB is remote backup.

**Offloaded to Filename**

The data set name of the offloaded backup.

**FileSeq**

The data set file sequence number.

**Volser**

The data set volume serial number.

**Job log messages**

If the `WAIT_FOR_OFFLOAD` parameter is set to Y, one of the following messages will appear in the job log:

- If the offload is completed successfully, [ARYS873I](#) Copypool DUMPSTATE status is **ALLCOMPLETE**.
- If the offload is completed but did not result in changing the copypool DUMPSTATE status, [ARYS875W](#) Copypool DUMPSTATE status is **NONE**.
- If the offload process is still running, [ARYS874I](#) The backup was not completely dumped to tape. This message may appear in the job log several times; it means the process is still in progress and Copypool DUMPSTATE status is **PARTIAL**.

When the process ends, one of the two messages above will appear.

**Note:** The additional monitoring provided by the `WAIT_FOR_BACKGROUND_COPY` and `WAIT_FOR_OFFLOAD` parmlib parameters is only available for Db2 profiles. FlashCopy and other backup profiles are not supported for this additional monitoring.
Chapter 11. Recovering database objects

This section describes how to create and maintain the application profiles and ad-hoc specifications that are used to recover Db2 subsystem objects. In addition it describes how to build the recovery jobs using the Db2 Recovery Expert ISPF interface.

Application profiles allow you to recover a Db2 subsystem's objects to a desired point in time. Ad-hoc specifications let you quickly recover objects that have been changed by one or more transactions, without having to create an application profile. Ad-hoc specifications have replaced transaction and log based application profiles. See "Creating ad-hoc recovery specifications" on page 305 for more information.

Application Recovery: Using application profiles

Application profiles contain the information that is used by Db2 Recovery Expert to recover a Db2 subsystem's objects to a desired point in time. Using Db2 Recovery Expert's ISPF interface you create application profiles specifying the objects that are to be recovered based on a set of options. You can include in an application profile individual objects or groups of objects recovered singularly or collectively.

You can view, update, rename, delete, import, export, and copy application profiles. These operations are described in "Displaying profiles and specifications" on page 290.

Application profiles

You use an application profile to recover objects using the recovery information that is contained in the Db2 Recovery Expert schema level repository (SLR).

The Db2 Recovery Expert SLR is a collection of Db2 tables that are used to archive Db2 object metadata and recovery information. Using the SLR you can recover dropped objects to a point in time or you can recover an object back to a specific version. The versioning information that Db2 Recovery Expert keeps in the SLR is updated by running the SLR update program. The SLR update program compares the objects in the Db2 catalog to the last known version of the objects in the SLR and if an object has changed, a new entry for that object is added. If kept current by frequently running the update program, the versioning information in the SLR can present a complete historical view of the object. The information tracks when every attribute of the object changes. With this information you can choose to recover an object to one of several versions.

Note: Db2 Recovery Expert no longer uses Log based or Transaction application profiles; these have been replaced by ad-hoc specifications, which you can create and manage by selecting Ad-hoc Operations from the main menu. This brings up the Ad-hoc Operations menu. The idea is to streamline the process, so you don't have to create a profile; you can just specify which objects you want to recover, from where, and for what period of time. For more on creating an ad-hoc specification, see For more detail, see "Ad-hoc Operations: Transaction"
If you have existing Transaction and Log based profiles, these have been converted to specifications, and you can manage them from the Ad-hoc Operations menu.

## Backing up objects using system backups

Db2 Recovery Expert lets you use system backups to make subsystem objects available for recovery.

**Using system level backups**

If you have used Db2 Recovery Expert to create a system level backup and enabled the object restore option, Db2 Recovery Expert will backup the entire Db2 system (including objects) at the volume level. All the volumes of Db2 are backed up very quickly with little or no effect to users of the Db2 system. You can use the system level backup to recover the Db2 objects in place of an image copy for each table space and/or index.

With a system level backup you can recover all of the Db2 objects that were included in the backup or only a subset of the objects. If you are choosing to recover only a subset of the Db2 objects that are included in the system level backup, you would create an application profile to specify the objects you wish to recover.

For example, suppose a single application on a Db2 system needed to be restored. You would probably not want to recover the whole Db2 system back to the point of failure, as all the other applications on the Db2 system are fine. In this case you would create a system level backup for the Db2 subsystem, and create an application profile that identifies the application that you will recover. In a case where an entire Db2 subsystem is one application, and that application failed, you would want to restore the entire Db2 subsystem from the system level backup.

## Displaying profiles and specifications

From the Application Profile Display and Ad-hoc Specification Display panels, you can perform all the specification or profile functions.

The first step in working with application profiles or specifications is to open one of the panels for a particular Db2 subsystem. From the Application Profile Display panel, you can do the following:

- create new profiles
- update profiles
- delete profiles
- rename profiles
- copy profiles
- import profiles
- export profiles
- view profiles
- view quiet times
- generate recovery DDL
- select recovery plans

From the Ad-hoc Specifications Display panel, you can do the following:

- update a specification
• delete a specification
• rename a specification
• copy a specification
• import a specification
• export a specification
• view a specification
• generate recovery DDL
• select recovery plans

   Enter Application Profile Selection Criteria
   Stored on SSID  *  ( ? for subsystem list)
   Name like  *
   Creator like  *

   Enter Specification Selection Criteria
   Name like  *
   Creator like  *

2. You use the Enter Application Profile Selection Criteria or Enter Specification Selection Criteria panel to filter the application profiles or ad-hoc specifications that are listed on the Application Profile Display or Specification Display panels. In the Stored on SSID field specify the Db2 subsystem where the application profiles reside. You can list all the application profiles for the Db2 system using wildcard characters in the Stored on SSID, Name like, and Creator like fields. The asterisk (*) is a wildcard character that will return all the profiles for the field where it is specified. You can use an asterisk (*) for one or all fields. To limit the profiles that are listed, enter a specific profile name, profile creator name, or SSID in one or more of the Stored on SSID, Name like, and Creator like fields. Press Enter.

   • **For Application Profiles**: The Application Profile Display panel opens. The first time you access this panel, it appears as follows:
• For Ad-hoc Specifications: The Ad-hoc Specification Display panel opens. It appears as follows:

<table>
<thead>
<tr>
<th>Cmd</th>
<th>Name</th>
<th>Creator</th>
<th>SSID</th>
<th>Updt</th>
<th>Desc</th>
<th>Userid</th>
<th>Timestamp</th>
<th>Userid</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td>__L8D0030</td>
<td>ARYTEST</td>
<td>QC18</td>
<td>N</td>
<td></td>
<td>TS5670</td>
<td>2019-06-14-05.07.05</td>
<td>TS6720</td>
</tr>
<tr>

</tr>
</tbody>
</table>

You can use the **RIGHT** and **LEFT** scroll commands (PF10 and PF11) to see all the available columns. You can use the **UP** and **DOWN** commands (PF7 and PF8) to scroll through the list when there are more profiles or specifications than can be displayed on one panel. The following fields are displayed on the panel:

**Name Like**
Specifies the profile/specification name or mask that you entered on the Enter Application profile/specification Selection Criteria panel. You can change the name or mask to modify the profile/specifications that are listed on this panel.

**Creator Like**
Specifies the profile/specification creator name or mask that you entered on the Enter Application profile/specification Selection Criteria panel. You can change the name or mask to modify the profile/specifications that are listed on this panel.

**SSID Like**
Specifies the Db2 subsystem ID or mask that you entered on the Enter
Application Profile/Specification Selection Criteria panel. You can change the name or mask to modify the profile/specifications that are listed on this panel.

**Row x of y**
Displays the current row and the total number of rows in the profile/specification list. Adjacent to this field is a scroll indicator: > indicates scroll right for more data; < > indicates scroll left or right for data; < indicates scroll left for more data. A plus sign (+) indicates scroll down for more data; a minus sign (-) indicates scroll up for more data.

**Name**  Specifies the name of the profile/specification.

**Creator**  Specifies the profile/specification creator.

**SSID**  Specifies the Db2 subsystem ID for which the profile/specification was created.

**Updt**  Specifies how users other than the profile/specification creator may use the profile.

  - **U(update)**  Allows other users to update the profile/specification.
  - **V(iew)**  Allows other users to view but not update the profile/specification.
  - **N(o access)**  Prevents other users from viewing or updating the profile/specification.

**Description**  Displays the profile/specification description, if included.

**Last Updated: Userid**  Specifies the ID of the last user to update the profile/specification.

**Last Updated: Timestamp**  Specifies the date and time that the profile/specification was last updated.

**Created: Userid**  Specifies the ID of the creator of the profile/specification.

**Created: Timestamp**  Specifies the date and time that the profile/specification was created.

**Cmd**  The **Cmd** line next to each profile/specification allows you to use line commands to perform updates, build jobs, and other profile/specification management tasks.

3. Enter one of the following commands in the **Cmd** line next to an application profile/specification:
   - To create an application profile or a ad-hoc specification, specify a **C** in any command line and press Enter. If no application profiles are listed then you can create a new profile by just pressing Enter. The **Create Application Profile panel opens. See "Creating application profiles" on page 295 for more information on creating profiles.
   - To update an application profile or a ad-hoc specification, specify a **U** in the command line next to the profile that you want to update and press Enter.
If you are updating an application profile, the Update Application Profile panel opens.
If you are updating a log based specification, the Set Log Range panel opens. From this panel, specify log range and press Enter. The Update Specification panel opens.
From this panel, you can add objects to the profile/specification; remove objects from the profile/specification; specify and update the image copy options; specify and update recovery plan options; update the profile's share option; and view object properties, versions, and include/exclude status. See “Updating an application profile” on page 301 for more information on updating profiles/specifications.
If you are updating a transaction specification, the Transaction Report Details panel opens. From this panel you can update the selection of transactions for recovery, and generate the JCL for the recovery job. You can also change the filtering options and rescan the Db2 log for additional transactions.

- To view the details of an application profile or a ad-hoc specification, enter a V in the command line next to the profile that you want to view and press ENTER.
  - If you selected to view an application profile, the View Application Profile panel opens. See “Viewing an application profile” on page 299 for more information on viewing profiles.
  - If you selected to view a log based specification, the View Specification panel opens.
  - If you selected to view a transaction specification, the View Transaction Report Details panel appears.

- To delete an application profile or an ad-hoc specification, enter a D in the command line next to the application profile/specification that you want to delete and press Enter. You can use this line command to delete one of your own application profiles/specifications or one created by another user if the profile/specification was created with a share option of view or update. See Deleting profiles and specifications for more information on deleting profiles.

- To rename an application profile or an ad-hoc specification, enter an R in the command line next to the application profile that you want to rename and press Enter. The Rename Application Profile/Specification panel opens. You can use this line command to change the name or the description in one of your own application profiles/specifications or one created by another user if the profile/specification was created with a share option of view or update. See Renaming profiles and specifications for more information on renaming profiles.

- To copy an application profile or a ad-hoc specification, enter an X in the command line next to the profile/specification that you want to copy and press Enter. The Copy Application Profile/Specification panel opens. You can use this line command to copy one of your own application profiles or one created by another user if the profile/specification was created with a share option of view or update. See Copying profiles and specifications for more information on copying profiles.

- To import an application profile, enter an M in the Cmd line next to the profile that you want to import and press Enter. The Import Application Profile panel opens. You can use this line command to import one of your own application profiles or one created by another user if the profile was created with a share option of view or update. See Importing profiles and specifications for more information on importing profiles.
• To export an application profile or a ad-hoc specification, enter an E in the command line next to the profile/specification that you want to export and press Enter. The Export Application Profile/Specification panel opens. You can use this line command to export one of your own application profiles/specifications or one created by another user if the profile/specification was created with a share option of view or update. See Exporting profiles and specifications for more information on exporting profiles.

• To perform quiet time analysis for the objects in an application profile, enter a Q in the Cmd line next to the profile and press Enter. The Log Analysis panel opens. See “Performing quiet time analysis for an object” on page 304 for more information on log analysis.

• To generate DDL that can be used to recover an object or objects in an application profile, enter a G in the Cmd line next to the profile and press Enter. The Generate DDL panel opens.

  Note: The quiet time option is available only from the Application Profile Display panel.

• To generate a recovery plan for an application profile, enter a P in the command line next to the profile for which you want to generate a recovery plan and press Enter. The Generate Recovery Plan panel opens. See “Generating object recovery plans” on page 320 for more information on generating recovery plans.

Creating application profiles and recovery jobs

Creating application profiles

From the Create Application Profile panel you create an application profile, which can be used to recover objects that have been changed by one or more transactions.

1. From the Application Profile Display panel specify a C in any Cmd line and press Enter. The following panel is displayed:

```
Create Application Profile
Creator USERID
Profile Name KB2C OBJECTS
Description
Db2 SSID KB2C (?) for system list
Share Option U (Update, View only, No access)
```

2. The Creator field is automatically filled with your user ID as the profile creator. To create the profile with a different user ID, type the new ID in this field.

3. Specify a name for the application profile in the Profile Name field. The name can consist of up to 30 characters.

4. Specify a description for the application profile in the Description field.

5. Specify the SSID where the objects included in the application profile currently reside in the Db2 SSID field. The application profile will also be stored at that SSID.
6. You control access to the application profile using the **Share Option** field. Specify **U** to allow other users to update the profile. Specify **V** to allow other users to view but not update the profile. Specify **N** to deny other users access to the profile.

7. Press Enter. The Object Types Selection panel opens. From this panel, you select the objects that are added to the profile.

**Selecting object types for profiles and specifications**

From the Object Types Selection panel, you choose the types of objects that you want to recover and include in an application profile or a log based specification. Selecting the types of objects that will be recovered is the first step to selecting specific objects.

**Note:**

- When setting up the recovery of an index space, Db2 Recovery Expert can only recover indexes when the table space data is still valid.
- Several object types may not produce recovery JCL when doing a recover to Current because they are non-data types. Non-data object types are Alias, Function, Global Variable, Procedure, Role, Sequence, Sequence Alias, Synonym, Trigger, and View. You can generate View DDL for these objects by using the DDL Generation option.

1. Enter an **S** next to each of the object types that you want to include in the profile. Pressing Enter starts the selection process for each type of object that you selected. If you entered an **S** for more than one type of object, the selection process is driven for each type of object in the order that they appear on the panel.

2. The selection process consists of filtering and selection. A filter popup panel opens automatically for each type of object that you have selected for inclusion.
in the profile. Depending on the filtering that you specify, all or a portion of the objects for a specific type that reside on the Db2 subsystem are displayed in the selection panel. From the selection panel you select the specific objects for the profile. After selection, the filter and selection panels for the next set of object types opens. Filtering and selection continues for each object type that has been selected for the profile.

Filtering the subsystem objects

You use the object type filter panel to limit the objects that are presented in the selection panels for each of the object types.

A database filter panel opens for each object type that is included in the profile or specification. Without filtering all objects found on the Db2 subsystem of that specific type are included in the selection panel.

1. The filter panel opens automatically for each type of object that is included in the profile or specification. The fields that are displayed on the filter panel for each object type varies slightly. An example of the filter panel for a Tablespace object is as follows:

```
Tablespace Filter
Creator like %
Name like ARYDB010
Wildcard: N (Yes/No) N
Include/Exclude I (Include/Exclude)
```

2. Each object filter panel includes a filter field called **Creator like**. You specify the ID of the user who created the object that you would like to include in the application profile in the **Creator like** field. You can filter for a single user ID by specifying a specific ID in the field or for several users using wildcard characters. The wildcard character % indicates a global match. For example % will include all objects of this type and b% will include all objects that begin with a "b". The wildcard character * indicates a single character match. For example abc* will include all objects that start with abc.

3. Each object filter panel includes a name field that you can use to filter on the object name. Specify the name of the object that you would like to include in the application profile in the **object name like** field. You can filter for a single object by specifying a specific name in the field or for several objects using wildcard characters. The wildcard character % indicates a global match. For example % will include all objects of this type and b% will include all objects that begin with a "b". The wildcard character * indicates a single character match. For example abc* will include all objects that start with abc.

4. Most object filter panels include the **Wildcard** field. You specify whether a wildcard character is used in the **Wildcard** field to control the display of objects in the profile. Specify an N to indicate that the objects that meet the filter criteria that is specified in the **Creator** and **object name Like** fields are searched for immediately and listed in the Selection panel that opens automatically. Specify a Y to indicate that the filtering of the objects on the Db2 subsystem occurs at run time. In this case the selection panel is not displayed. The default value for this field is N.
5. Most object filter panels include the Include / Exclude field. You can further filter the objects that are displayed in the selection panel or included in the application profile using the Include / Exclude field. Specify I to include all the objects that meet the filter criteria. Specify an E to exclude all the objects that meet the criteria. The default is to include all the objects that fit the filtering criteria.

6. After specifying the filter criteria, press Enter. The filtering process selects the objects that meet the filtering criteria and displays them in the Object Selection panel. If you specified a Y in the Wildcard field, then the filtering occurs at run time and the Update Profile Display panel opens.

Selecting the object

The Object Selection panel displays each of the objects for a particular object type that match the criteria specified in the Object Filter panel. From the Object Selection panel you will select the objects that are included in the application profile.

1. The Object Selection panel opens automatically after pressing Enter in the Object Filter panel and the Wildcard field from the Object Filter panel is set to N. An example of the Selection panel for Tablespace objects follows:

```
RCVYXprt V3R2 ------ Tablespace Selection ------- 2019/01/13 12:56:12
Command ==> Scroll ==> CSR
Line Commands: S - Select V - Versions P - Properties
-------------------------------------------------------------------------
| Database name like ARYDB% | Tablespace name like % | User | Name: | SSID | EA1A | ROW |
-------------------------------------------------------------------------
| Name                   | Part | Status  | Altered Timestamp | Created Timestamp |
```

2. Each of the filter values that you specified are displayed on the panel. You can change one or more of the filter values. If you change any one of the filter values, then the list of objects that meet the filter criteria is refreshed. The filter parameters vary depending on the type of object.

3. Each line in the display section of the panel shows the fields that are unique to the type of object. For all object types the Status field shows if the object is only in the SLR (dropped), is just in the Db2 catalog (CatOnly), or in both the SLR and the Db2 catalog (Both).

4. The overall structure of the display may vary depending on the object type. For example, for partitioned tablespaces and indexes, the display will show one line with the value ALL followed by a line for each partition. This allows you to select the ALL line or individual partitions.
5. To select an object for inclusion in the application profile, specify S in the command line to the left of the object. Press Enter. The object is selected and included in the profile. The Update Application Profile panel opens. You can select more than one object by specifying an S in multiple command lines.

6. To show all levels of the object that are in the repository, specify V in the command line to the left of the object. Press Enter. The Object Definition Levels panel opens. Each object level is displayed. Press the F3 function key to return to the Object Selection panel. An example of the Tablespace Definition levels panel is as follows:

```
RCVYXPRVT3R2 ------ Tablespace Definition Levels------ 2019/01/13 12:56:12
Command ==> Scroll ==> CSR
Database name: ARYDb231 Tablespace name: ARYBXTN
-------------------------------------------------------------------------------
Creator: USERID NAME: TESTPROF SSID EA1A
Start Timestamp + End Timestamp +
-------------------------------------------------------------------------------
Qualifier Name Create Timestamp End Timestamp
ARY231DB ARYBXTN 2019-12-09-12.24.55
```

7. To show the object and all its returned properties, specify P in the command line to the left of the object. Press Enter. The Object Properties panel opens where you can view the property information for the object. Press the F3 function key to return to the Object Selection panel. An example of the Tablespace Properties is as follows:

```
RCVYXPRVT3R2 ------ Tablespace Properties ------ 2019/01/13 12:56:12
Command ==> Scroll ==> CSR
Database name: ARYDb231 Tablespace name: ARYBXTN
-------------------------------------------------------------------------------
Creator: USERID NAME: TESTPROF SSID EA1A
-------------------------------------------------------------------------------
Altered timestamp : 2019-12-09-12.24.55.498311
Created timestamp : 2019-12-09-12.24.55.498311
Creator : USERID
DBID : 651
Implicit : N
OBID : 312
Partition count : 0
PSID : 313
Repository status : Both repository and Db2 catalog
Status : RW
Table count : 1
Tablespace count :
```

**Viewing an application profile**

From the View Application Profile panel you can view the details of a profile.

1. From the Application Profile Display panel, specify a V in the Cmd line next to the profile that you want to view and press ENTER. The View Application Profile panel opens.
2. From the View Application Profile panel you can view a list of all the objects that are included in the profile for recovery. From the View Application Profile you cannot make any changes. One or more of the following fields are displayed depending on the type of object:

**Obj Type**
The type of object is displayed as an abbreviation.

**Name**
The name of the object. Only the first 30 bytes of the object name will display. To see the full name enter a P next to the object and press Enter. The properties panel for the object opens where you can see all the property details for the object.

**Schema/Creator/DBName**
The name of the schema, creator, or database to which this object belongs. Only the first 20 bytes of the name will display. To see the full name enter a P next to the object and press Enter. The properties panel for the object opens where you can see all the property details for the object.

**Part**
The Part field is only present for table space or index objects. If the table space or index is partitioned, the partition number appears in this column. The value ALL in this column indicates that if you select that table space, all partitions will be included. A 0 in this column indicates that the table space or index is not partitioned.

**Wild Card**
The Wild Card field indicates whether the object was selected using wild cards. A Y indicates that the object was selected using a wildcard. An N indicates that a wildcard was not used.

**Inc/Exc**
The Inc/Exc field indicates whether the selected object will be included in the profile or excluded from the profile.

**Status**
The Status field shows if the object is only in the SLR (dropped), is just in the Db2 catalog (CatOnly), or in both the SLR and the Db2 catalog (Both).

**Altered Timestamp**
The Altered Timestamp field specifies the date and time that the object was altered.
Created Timestamp
The Created Timestamp field specifies the date and time that the object was created.

TB/IX/DBName
This field displays the database name where the table or index object resides. This field only applies to table and index objects.

TSName
This field displays the table space name where the table object resides.
This field only applies to table objects.

3. You can view the Share Option for the application profile. The current value is displayed. The value of U specifies that all users can update the profile. A value of V specifies that all users can view but not update the profile. A value of N specifies that no user other than you as the creator can update or view the profile.

4. To view the recovery options, enter Y in the Update Recovery Options field and press Enter. The Recovery Options panel opens. You can view recovery options, but cannot make any changes. Press PF3 to return to the View Application Profile panel.

5. To view the image copy options, enter Y in the Image Copy Options field and press Enter. The Image Copy Options panel opens. You can view all the image copy options. In addition there are several options that you can update from the panel. Press PF3 to return to the View Application Profile panel.

6. To view the versions for each object in the display list, specify V in the line next to the object and press Enter. The Definition Levels panel opens. Press PF3 to return to the View Application Profile panel.

7. To view the properties for each object in the display list, specify P in the line next to the object and press Enter. The Properties panel opens. Press PF3 to return to the View Application Profile panel.

Updating an application profile
From the Update Application Profile panel, you can add objects to the application profile; remove objects from the profile; specify and update recovery plan options; update the profile’s share option; and view object properties, versions, and include/exclude status.

1. The Update Application Profile panel opens automatically after all the objects for a profile have been selected using the Objects Types Selection panels. In addition, the Update Application Profile panel opens when Update is entered for a profile listed in the Application Profile Display panel.
2. The fields that are displayed for each object are:

**Obj Type**

The object type is displayed as an abbreviation.

**Name**

The name of the object. Only the first 30 bytes of the object name will display. To see the full name enter a P next to the object and press Enter. The properties panel for the object opens where you can see all the property details for the object.

**Schema/Creator/DBName**

The name of the schema, creator, or database to which this object belongs. Only the first 20 bytes of the name will display. To see the full name enter a P next to the object and press Enter. The properties panel for the object opens where you can see all the property details for the object.

**Part**

The Part field is only present for Tablespace or Index objects. If the tablespace or index is partitioned, the partition number appears in this column. The value ALL in this column indicates that if you select that tablespace, all partitions will be included. A value of 0 in this column indicates that the tablespace or index is not partitioned.

**Wild Card**

The Wild Card field indicates whether the object was selected with the wildcard filter function activated. A Y indicates that these objects were selected with the wildcard function active and they will be selected according to the specified filter criteria at run time. An N indicates that the objects were already selected using the Selection panel.

**Inc/Exc**

The Inc/Exc field indicates whether the selected object will be included in the profile or excluded from the profile.

**Status**

The Status field shows if the object is only in the SLR (dropped), is just in the Db2 catalog (CatOnly), or in both the SLR and the Db2 catalog (Both).

**Altered Timestamp**

The Altered Timestamp field specifies the date and time that the object was altered.
Created Timestamp
The Created Timestamp field specifies the date and time that the object was created.

TB/IX DBName
This field displays the database name where the table or index object resides. This field only applies to table and index objects.

Table TSName
This field displays the table space name where the table object resides. This field only applies to table objects.

3. You can modify the Share option for the application profile. The current value is displayed. Changing the value to Upd will allow all users to update the profile. Changing the value to View will allow all users to view but not update the profile. Changing the value to N will not allow any users other than yourself to update or view the profile.

4. To specify or update the recovery options, specify a Y in the Update Recovery Options field. Press Enter. The Recovery Options panel opens. Update the options and press F3. Control is returned to the Update Application Profile panel.

5. Specify an A in the command line next to the profile to which you want to add an object. Press Enter. The Object Types Selection panel opens. Follow the process of adding objects. When all selections are made, control is returned to the Update Application Profile panel.

6. Specify an R in the command line next to the object that you want to remove from the profile. Press Enter. The object is removed from the profile.

7. Specify a V in the command line next to the object that you want to view version information. Press Enter. The Definition Level panel that is specific to the type of object opens.

8. Type a P in the command line next to the object whose properties you want to view. Press Enter. The Properties panel that is specific to the type of object opens.

9. Type a U in the command line next to the object whose wildcard status you want to update. Press Enter.

10. Specify an I in the command line next to the object whose status you want to change to include (Inc). When the object’s status is specified as Inc, it and all its dependent objects are included in the recovery or image copy job.

11. Specify an E in the command line next to the object whose status you want to change to exclude (Exc). You use this command to exclude the object from a larger set of objects that are to be recovered or image copied. For example, if you choose to include all objects that are found in a database with the exception of one of the objects in the database, then you would select the database and specify its status as Inc, and then select one of the objects in the database and specify its status as Exc.

12. You can use the Explode command for a masked object to see the actual objects that will be included in the recovery job. A masked object is one that was added to the profile using a wild card, the include/exclude option, or other processing specification. A masked object is a placeholder in the profile and indicates that one or more actual objects will be included when the job is built. To see the actual objects for a single masked object, enter an X on the line next to the masked object. To see all the objects for each masked object in the profile, enter EXPLODE in the Option command. The Select PIT for Explode Objects panel appears. This allows you to choose a PIT (point in time). You can enter a timestamp or RBA/LRSN, or you can enter Y in the
Select **Recovery Point** field to display a selection list of possible recovery points. Make your selection, then press ENTER. The Explode Application Profile Display panel opens.

13. Press PF3 to return to the Application Profile Display panel.

### Performing quiet time analysis for an object

Using the Log Analysis panel you can find periods of time during which there is no activity for an object or set of objects that are included in a standard application profile.

1. From the Application Profile Display panel, specify Q in the **Cmd** line next to the application profile for which you want to perform log analysis looking for a quiet time. The Log Analysis panel opens.

   ![Log Analysis Panel](image)

   **Log Analysis Panel**

2. You must specify a time range within which Db2 Recovery Expert will search identifying the quiet times for an object. You can specify the time range as either **Preceding** or **Timestamp**.

   **Preceding**

   A value of **P** in the **Log Range Type** field indicates that a specific time span preceding the current time will be used to specify where to begin and where to stop reading the log to find a quiet time. If you select this option, you must specify the time span details in the **Preceding Options** fields. Specify whether the preceding time span will be in hours or minutes in the **Preceding Type** field. Specify the number of hours or minutes in the **Preceding value** field. You can specify a value from 0 to 99. You can specify that the local time for the database will be used as the base time by specifying a **Y** in the **Use database location time** field. To use the local client time you can specify an **N** in the **Use database location time**. By default the time range is set to Preceding by 1 hour using the local client time.

   **Timestamp**

   A value of **T** in the **Log Range Type** field indicates that a time value will be used to specify where to begin and where to stop reading the log to find a quiet time. If you select this option, you must specify the start and end time in the **Timestamp Options** fields. Specify the start time for the range in the **Beginning Timestamp** field and the end time for the range in the **End Timestamp** field. Timestamp values are entered as **YYYY - MM - DD - HH - MM - SS**.
3. Specify whether SYSLGRNX will be used when determining the log files to read. Db2 Recovery Expert in most cases uses the SYSLGRNX directory tables to optimize the selection of log files that must be read. Using these tables can add overhead to the analysis job, which in some situations can outweigh the savings that can be gained by using the SYSLGRNX tables. Specify a Y in the Use SYSLGRNX field to use the SYSLGRNX directory tables. Specify an N in the Use SYSLGRNX field to bypass using the SYSLGRNX directory tables.

4. The time value in the Minimum Quiet Time field specifies the minimum duration of a quiet time for it to be included in the output. The default value is set to 00:02:00 (two minutes).

5. After specifying the time range for the analysis, press Enter. All the fields are validated and if they validate successfully a Build Job dialog opens. You can choose to edit or run the log analysis job from the Build Job dialog.

Creating ad-hoc recovery specifications

This section discusses ad hoc (log based and transaction) specifications. These have replaced log based and transaction profiles in Db2 Recovery Expert V3.2.

To create an application profile, see “Creating application profiles” on page 295.

Ad-hoc Operations: Transaction specifications

Using the Create Transaction Scan Range panel, you specify the time range that is used to scan the Db2 logs for the transactions that you want to recover.

1. Select 3 (Ad-hoc Operations) from the main menu.
2. Select a subsystem from the SSID Selection panel.
3. Select 1 (Transaction Recovery) from the Ad-hoc Operations menu. The Create Transaction Scan Range panel opens.

```
RCVYXPRT V3R2 ----- Create Transaction Scan Range ----- 2019/01/13 12:56:12
Command ===> Scroll ===> CSR

Enter a time range to scan the Db2 log for transaction recovery.
Press enter from this screen to generate JCL that will scan the log and populate the repository with the information needed to recover the objects based on transaction criteria.

Log Range Type ==> P (Preceding/Timestamp/RBA/LRSN)
Preceding Options:
  Preceding Type ==> H (Hours/Minutes)
  Preceding Value ==> 01 (00-99)
Use database location time ==> Y (Yes/No)
Timestamp Options/RBA/LRSN Options:
  Beginning Timestamp ==> 2019 - 06 - 02 - 10 : 39 :48
  End Timestamp ==> 2019 - 06 - 02 - 11 : 39 :48
  Start/End RBA (URID) ==> __________________/________________
  Start/End LRSN ==> __________________/________________
```

4. In the Log Range Type field specify the type of time range within which the search for transactions will occur.
   - Specify a P for Preceding to indicate that a specific time span preceding the current time will be used to specify where to begin and where to stop reading the log to find transactions. If you select this option, you must...
specify the time span details in the **Preceding Options** fields. By default the time range is set to **Preceding** by 1 hour using the local client time.

- Specify a **T** for **Timestamp** to indicate that specific time values will be used to specify where to begin and where to stop reading the log to find transactions. If you select this option, you must specify the start and end time in the **Timestamp Options/RBA/LRSN** fields.
- Specify an **R** for **RBA** to indicate that specific RBA values will be used to specify where to begin and where to stop reading the log to find transactions. If you select this option, you must specify the RBA start and end values in the **Timestamp Options/RBA/LRSN** fields.
- Specify an **L** for **LRSN** to indicate that specific LRSN values will be used to specify where to begin and where to stop reading the log to find transactions. If you select this option, you must specify the start and end LRSN values in the **Timestamp Options/RBA/LRSN** fields.

5. If you specified a **P** in the **Log Range Type** field you must specify additional information using the **Preceding Options**. Specify whether the preceding time span will be in hours or minutes. Specify **H** for hours or **M** for minutes. Specify the number of hours or minutes in the **Preceding Value** field. You can specify a value from 0 to 99. Specify a **Y** in the **Use database location** field to indicate that the local time for the database will be used as the base time. Specify an **N** to use the local client’s time as the base time.

6. If you specified a **T** in the **Log Range Type** field you must specify the start and stop times for the range using the **Timestamp Options/RBA/LRSN** fields. Specify the beginning time for the range in the **Beginning Timestamp** field. Specify the end time for the range in the **End Timestamp** field. Timestamp values are entered as YYYY - MM - DD - HH - MM - SS.

7. If you specified an **R** in the **Log Range Type** field you must specify the start and end RBA values for the range using the **Timestamp Options/RBA/LRSN** fields. Enter the start and end RBA values in the **Start/End RBA values (URID)** field. RBAs are relative byte addresses of log records. The RBA values can be specified in full hexadecimal display format with a length of 12, such as 0001ACCDEF02, or with a length of 20, such as 000000000001ACCDEF02. You can also search for a specific Unit of Recovery Identifiers (URID). URIDs are commonly referred to as RBAs (which is the more generic term). If you wish to filter on a single URID, the start RBA can be set equal to the URID, and the end RBA left as spaces. Only that specific URID will be reported on. For example, assume you specify the first URID = 001E668838B4 on a subsystem named D91A. The JCL generated will have a section as such:

```plaintext
//DATAIN DD *
SSID =D91A
START RBA =001E668838B4
END RBA =000000000000
/*
```

**Note:** You cannot use RBAs or URIDs to define a range if your Db2 subsystem is part of a data sharing group. RBAs have no uniqueness in a data sharing context, so if you wish to use them in such an environment, you can only do so going against a specific member of the group, not the group as a whole. The **Data Sharing Mode** field should be set to **Y** when using RBAs or a URID as input and the Db2 subsystem should reflect a specific member, otherwise results are unpredictable and unsupported.

8. If you specified an **L** in the **Log Range Type** field you must specify the start and end LRSN values for the range using the **Timestamp Options/RBA/LRSN** fields. Enter the start and end LRSN values in the **Start/End LRSN** field. The
LRSN values can be specified in full hexadecimal display format with a length of 12, such as 0001ACCDEF02, or with a length of 20, such as 000000000001ACCDEF02.

9. Unless otherwise specified all the transactions that are found within the scan range are returned. To return a more specific set of transactions you can use the MFILTER command. Specify MFILTER to apply additional filtering criteria when searching for transactions within the specified time range. The Update Miscellaneous Filters panel opens. From this panel specify the additional search criteria and press PF3 to return to the Create Transaction Scan Range panel.

10. In the Use SYSLGRNX field specify whether SYSLGRNX will be used when determining the log files to read. In most cases the SYSLGRNX directory tables are used to optimize selecting which log files must be read. Using these tables can add overhead to the analysis job, which in some situations can outweigh the savings that is gained by using SYSLGRNX. Specify a Y to use SYSLGRNX directory tables. Specify an N to bypass using the SYSLGRNX directory tables.

11. Press Enter. A job is run that scans the log and discovers the transactions that ran during the specified time range. When the scan job completes the Transaction Report Details panel opens listing the transactions that were discovered. You select the transactions that are to be recovered from the Transaction Report Details panel.

**Applying additional filter criteria when scanning for transactions**

From the Update Miscellaneous Filters panel you can specify additional filtering criteria that will be applied when searching for transactions within the specified time range.

1. Select Ad-hoc Operations from the main menu, then select a subsystem from the SSID Selection panel.
2. Select Transaction Recovery.
3. Specify the MFILTER command in the Command line of the Create Transaction Scan Range panel. The Update Miscellaneous Filters panel opens:

   ![RCYYXPR Y3R2 ----- Update Miscellaneous Filters ----- 2019/01/13 12:56:12](image)

   **Commands:** CLEAR - remove all lines
   **Line Commands:** I - Insert  R - Remove  D - Duplicate
   **Transaction Filter Options:**
   - Conditional for filters ==>
   - **A - Authid**  P - Plan Name  J - Corr ID (jobname)  I - Conn ID  X - Xappl Name
   - **C - Commit T - Conn Type**  U - Uniqueness value  X - Xacctg String
   - **XU - Xuser**  L - LU Name  XW - Xworkstation Name  N - Network ID
   - **Type XI - XID**  XA - Xacctg String (all values case-sensitive)

   ![RCYYXPR Y3R2 ----- Update Miscellaneous Filters ----- 2019/01/13 12:56:12](image)

4. In the Conditional for filters field you specify the operator that is used to combine each line of filtering conditions.
5. To add a line of filtering criteria specify I in the line command.
6. Specify the filter type in the **Type** field.
   - A - Authorization ID
   - P - Plan name
   - J - Job name
   - I - Connection ID
   - T - Connection Type
   - N - Network ID (part of the LUWID)
   - LU - LU Name (part of the LUWID)
   - U - Uniqueness Value (part of the LUWID)
   - C - Commit count (part of the LUWID)
   - XP - Transaction application name
   - XU - Transaction user name
   - XW - Transaction workstation name
   - XID - Transaction ID
   - XA - Transaction accounting string

7. Next to the **Type** field specify the character value that identifies the transaction that you want to discover.

8. In the **Exclude?** field specify whether the transaction if discovered is included or excluded from the list of transactions.

9. Press Enter. The filter condition is added and a new line appears. You can repeat this process and add as many lines of filter criteria as you need.

10. To remove a line of filtering criteria specify **R** in the line command next to the filtering criteria that you want to remove.

11. To duplicate a line of filtering criteria specify **D** in the line command next to the filtering criteria that you want to duplicate.

12. Press PF3 when are finished. Control returns to the Create Transaction Scan Range panel.

**Selecting the transactions for recovery**

From the Transaction Report Details panel you select one or more transactions that you want to recover and generate the JCL for the recovery job. You can also change the filtering options and rescan the Db2 log for additional transactions.

If the Db2 Recovery Expert Program Control File (PCF) has been updated, you must also update the current list of transactions in the Transaction Report Details panel before building a recovery job for the transactions. You can update the list by running the RESCAN command.

1. The Transaction Report Details panel opens after you specify the transaction scan range when you perform a transaction process. It lists the transactions that met the filter criteria that was specified. The Transaction Report Details panel also opens when you choose to Update a transaction specification from the Ad-hoc Specification Display panel.
2. The transactions that met the original search criteria that was specified when the transaction recovery process was performed are listed in the Transaction Report Details panel. You can refresh the list of transactions by setting up new filter criteria and using the RESCAN command as follows:

   - You can use the `PFILTER` command to apply post filters. Specify `PFILTER` on the `Command` line. The Transaction Post Filters panel opens. Post filters allow you to change the beginning and end timestamp to a subset of the initial scan range. You can also add additional filters using the `MFILTER` command. When you finish specifying additional post filter criteria press Enter to return to the Transaction Report Details panel.

   - You can use the `OFILTER` command to apply object filters. Specify `OFILTER` on the `Command` line. The Transaction Object Filters panel opens. Object filters allow you to add, remove, update, include and exclude objects that were acted upon by the transaction. When you have finished selecting the objects control returns to the Transaction Report Details panel.

   - Specify RESCAN in the `Command` line. The Db2 log is re-scanned based on the new filter criteria. The list of qualifying transactions is refreshed.

3. You can view each of the actions that were performed by the transaction by specifying an `O` next to the transaction. Press Enter. The View Transaction Operations panel opens.

4. By default the transactions are listed in URID order. You can change how the transactions are listed using the `Group by` field. Specify `U` to group the transactions by the operation that is performed. Specify `O` to group the transactions by URID.

5. To include a transaction in the recovery specify an `S` next to the transaction. You can select more than one transaction. When you have finished selecting the transactions, press Enter. An asterisk appears in the command line for each transaction that you selected. To clear the selection, replace the asterisk with a blank. You can also use the `A11` command to select all the listed transactions for recovery and the `CLEAR` command to clear all the selected transactions.

6. After you have selected the transactions that are to be included in the recovery job, specify `GENERATE` in the `Command` line to view the selected transactions and build the final transaction recovery job. The Selected Transaction Operations panel opens.
7. After reviewing the transactions specify **BUILD** on the **Command** line to build the JCL for the recovery job. Press Enter. The Build Transaction Recovery Job panel opens.

8. Specify whether you want to review the job JCL before running the job by entering a Y in the **Edit Generated Job** field.

9. Specify the data set and member name for the job in the **Build job in data set** and **Member** fields.

10. Edit the job card information if necessary.

11. Press Enter. If you selected to review the JCL, the transaction recovery job JCL opens in an ISPF edit session. If you did not choose to edit the JCL, the job is run.

**Sample transaction recovery job JCL and results**

The following is a sample of a transaction recovery job:

```plaintext

Saving a transaction specification

This topic explains how to save a transaction specification, after you have recovered a transaction.

After you have completed the transaction recovery process, the Save Transaction Recovery Specification panel opens. From the Save Transaction Recovery Specification panel, you save a transaction specification, which can be used to recover objects that have been changed by one or more transactions.

To save the specification, fill in the required fields and press ENTER.
1. The **Creator** field is automatically filled with your user ID as the specification creator. To save the specification with a different user ID, type the new ID in this field.

2. Specify a name for the Specification in the **Specification Name** field. The name can consist of up to 30 characters.

3. Specify a description for the specification in the **Description** field.

4. In the **Db2 SSID** field, specify the SSID of the Db2 subsystem where the objects to be recovered currently reside. The transaction specification will also be stored at that SSID.

5. You control access to the specification using the **Share Option** field. Specify **U** to allow other users to update the specification. Specify **V** to allow other users to view but not update the specification. Specify **N** to deny other users access to the specification.

6. Press **ENTER** to save the specification or exit without saving.

**Ad-hoc Operations: Log based specifications**

This topic explains how to create a log based ad-hoc specification.

1. Select 3 (Ad-hoc Operations) from the main menu.
2. Select a subsystem from the SSID Selection panel.
3. Select 2 (Log Based Recovery) from the Ad-hoc Operations menu. The LBDR Scanned Log Ranges panel opens.

**Selecting an LBDR time range**

The LBDR Scanned Log Ranges opens when you are performing a log-based specification. From the LBDR Scanned Log Ranges panel you select the time range in the Db2 log that is searched for dropped objects.

1. The LBDR Scanned Log Ranges opens when you specify 2 (Log-Based Recovery) in the **Ad-hoc Operations Menu** panel.
2. The following fields are displayed:

   **Creator**
   
   Specifies the creator of the specification.

   **Name**  
   Specifies the name of the specification. The name of the specification is empty until you save the specification; it will be shown when the specification is updated.

   **SSID**  
   Specifies the Db2 subsystem where the objects in the specification and the Db2 log reside.

   **Start Timestamp**  
   Specifies the start time for the LBDR range.

   **End Timestamp**  
   Specifies the end time for the LBDR range.

   **LBDR ID**  
   Specifies the ID that has been assigned to the time range during the data collection.

3. To create a new time range, specify a **C** in the command line. The Create LBDR Scan Range opens. From this panel you specify a time range to scan the Db2 log for dropped objects. Press Enter. The new range is listed in LBDR Scanned Log Ranges panel.

4. To delete an existing LBDR scan range, specify a **D** next to the time range that you want to delete. Press Enter. A pop-up window requests confirmation of the deletion. Press **OK** and the time range is deleted.

5. To select the LBDR scan range for the specification, enter an **S** next to the time range that you want to use. Press **ENTER**.

6. The Object Types Selection panel opens where you select the objects that are included in the specification.

**Creating a new LBDR time range**

From the Create LBDR Scan Range panel you create a new time range that can be used to scan the Db2 logs for dropped objects.

1. The Create LBDR Scan Range panel opens when you enter a **C** next to one of the ranges in the LBDR Scanned Log Ranges panel.
2. In the Log Range Type field specify the type of time range within which the search for dropped objects will occur.
   - Specify a P for Preceding to indicate that a specific time span preceding the current time will be used to specify where to begin and where to stop reading the log to find dropped objects. If you select this option, you must specify the time span details in the Preceding Options fields. By default the time range is set to Preceding by 1 hour using the local client time.
   - Specify a T for Timestamp to indicate that specific time values will be used to specify where to begin and where to stop reading the log to find dropped objects. If you select this option, you must specify the start and end time in the Timestamp Options fields. Timestamp values are entered as YYYY-MM-DD-HH-MM-SS.

3. If you specified a P in the Log Range Type field you must specify additional information using the Preceding Options. Specify whether the preceding time span will be in hours or minutes. Specify H for hours or M for minutes. Specify the number of hours or minutes in the Preceding Value field. You can specify a value from 0 to 99. Specify a Y in the Use database location time field to indicate that the local time for the database will be used as the base time. Specify an N to use the local client's time as the base time.

4. If you specified a T in the Log Range Type field you must specify the start and stop times for the range using the Timestamp Options fields. Specify the beginning time for the range in the Beginning Timestamp field. Specify the end time for the range in the End Timestamp field. Timestamp values are entered as YYYY-MM-DD-HH-MM-SS.

5. In the Use SYSLGRNX field specify whether SYSLGRNX will be used when determining the log files to read. In most cases the SYSLGRNX directory tables are used to optimize selecting which log files must be read. Using these tables can add overhead to the analysis job, which in some situations can outweigh the savings that is gained by using SYSLGRNX. Specify a Y to use SYSLGRNX directory tables. Specify an N to bypass using the SYSLGRNX directory tables.

6. Press Enter. A job is run that will scan the log and populate the LBDR repository with the information needed to recover the object from the log. Control returns to the LBDR Scanned Log Ranges panel where you can select the range.
Selecting object types for profiles and specifications

From the Object Types Selection panel, you choose the types of objects that you want to recover and include in an application profile or a log based specification. Selecting the types of objects that will be recovered is the first step to selecting specific objects.

Note:

• When setting up the recovery of an index space, Db2 Recovery Expert can only recover indexes when the table space data is still valid.

• Several object types may not produce recovery JCL when doing a recover to Current because they are non-data types. Non-data object types are Alias, Function, Global Variable, Procedure, Role, Sequence, Sequence Alias, Synonym, Trigger, and View. You can generate View DDL for these objects by using the DDL Generation option.

1. Enter an S next to each of the object types that you want to include in the profile. Pressing Enter starts the selection process for each type of object that you selected. If you entered an S for more than one type of object, the selection process is driven for each type of object in the order that they appear on the panel.

2. The selection process consists of filtering and selection. A filter popup panel opens automatically for each type of object that you have selected for inclusion in the profile. Depending on the filtering that you specify, all or a portion of the objects for a specific type that reside on the Db2 subsystem are displayed in the selection panel. From the selection panel you select the specific objects for the profile. After selection, the filter and selection panels for the next set of object types opens. Filtering and selection continues for each object type that has been selected for the profile.
Filtering the subsystem objects
You use the object type filter panel to limit the objects that are presented in the selection panels for each of the object types.

A database filter panel opens for each object type that is included in the profile or specification. Without filtering all objects found on the Db2 subsystem of that specific type are included in the selection panel.

1. The filter panel opens automatically for each type of object that is included in the profile or specification. The fields that are displayed on the filter panel for each object type varies slightly. An example of the filter panel for a Tablespace object is as follows:

<table>
<thead>
<tr>
<th>Tablespace Filter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Creator like</td>
</tr>
<tr>
<td>Name like</td>
</tr>
<tr>
<td>Wildcard</td>
</tr>
<tr>
<td>Include/Exclude</td>
</tr>
</tbody>
</table>

2. Each object filter panel includes a filter field called Creator like. You specify the ID of the user who created the object that you would like to include in the application profile in the Creator like field. You can filter for a single user ID by specifying a specific ID in the field or for several users using wildcard characters. The wildcard character % indicates a global match. For example % will include all objects of this type and b% will include all objects that begin with a "b". The wildcard character * indicates a single character match. For example abc* will include all objects that start with abc.

3. Each object filter panel includes a name field that you can use to filter on the object name. Specify the name of the object that you would like to include in the application profile in the object name like field. You can filter for a single object by specifying a specific name in the field or for several objects using wildcard characters. The wildcard character % indicates a global match. For example % will include all objects of this type and b% will include all objects that begin with a "b". The wildcard character * indicates a single character match. For example abc* will include all objects that start with abc.

4. Most object filter panels include the Wildcard field. You specify whether a wildcard character is used in the Wildcard field to control the display of objects in the profile. Specify an N to indicate that the objects that meet the filter criteria that is specified in the Creator and object name Like fields are searched for immediately and listed in the Selection panel that opens automatically. Specify a Y to indicate that the filtering of the objects on the Db2 subsystem occurs at run time. In this case the selection panel is not displayed. The default value for this field is N.

5. Most object filter panels include the Include / Exclude field. You can further filter the objects that are displayed in the selection panel or included in the application profile using the Include / Exclude field. Specify I to include all the objects that meet the filter criteria. Specify an E to exclude all the objects that meet the criteria. The default is to include all the objects that fit the filtering criteria.

6. After specifying the filter criteria, press Enter. The filtering process selects the objects that meet the filtering criteria and displays them in the Object Selection
panel. If you specified a Y in the Wildcard field, then the filtering occurs at run

time and the Update Profile Display panel opens.

Selecting the object

The Object Selection panel displays each of the objects for a particular object type

that match the criteria specified in the Object Filter panel. From the Object Selection

panel you will select the objects that are included in the application profile.

1. The Object Selection panel opens automatically after pressing Enter in the Object

Filter panel and the Wildcard field from the Object Filter panel is set to N. An example

of the Selection panel for Tablespace objects follows:

<table>
<thead>
<tr>
<th>Command</th>
<th>Scroll</th>
</tr>
</thead>
<tbody>
<tr>
<td>S - Select</td>
<td>V - Versions</td>
</tr>
</tbody>
</table>

RCVYXPR V3R2 ------ Tablespace Selection ------ 2019/01/13 12:56:12

Creator: USERID NAME: TESTPROF SSID EA1A

Database name like ARYDB% Tablespace name like %

<table>
<thead>
<tr>
<th>Name</th>
<th>DBname</th>
<th>Part</th>
<th>Status</th>
<th>Altered Timestamp</th>
<th>Created Timestamp</th>
</tr>
</thead>
</table>

2. Each of the filter values that you specified are displayed on the panel. You can
change one or more of the filter values. If you change any one of the filter
values, then the list of objects that meet the filter criteria is refreshed. The filter
parameters vary depending on the type of object.

3. Each line in the display section of the panel shows the fields that are unique to
the type of object. For all object types the Status field shows if the object is
only in the SLR (dropped), is just in the Db2 catalog (CatOnly), or in both the
SLR and the Db2 catalog (Both).

4. The overall structure of the display may vary depending on the object type. For
example, for partitioned tablespaces and indexes, the display will show one
line with the value ALL followed by a line for each partition. This allows you
to select the ALL line or individual partitions.

5. To select an object for inclusion in the application profile, specify S in the
command line to the left of the object. Press Enter. The object is selected and
included in the profile. The Update Application Profile panel opens. You can
select more than one object by specifying an S in multiple command lines.

6. To show all levels of the object that are in the repository, specify V in the
command line to the left of the object. Press Enter. The Object Definition Levels
panel opens. Each object level is displayed. Press the F3 function key to return to the Object Selection panel. An example of the Tablespace Definition levels panel is as follows:

```
RCVYXPRT V3R2  ------ Tablespace Definition Levels------  2019/01/13  12:56:12
Command ===> Scroll ===> CSR

Database name: ARYDb231  Tablespace name: ARYBXTN

Creator: USERID  NAME: TESTPROF  SSID: EA1A
Start Timestamp +  End Timestamp +

Row 1 of 1 +

Qualifier     Name       Create Timestamp  End Timestamp
ARY231DB     ARYBXTN   2019-12-09-12.24.55
```

7. To show the object and all its returned properties, specify P in the command line to the left of the object. Press Enter. The Object Properties panel opens where you can view the property information for the object. Press the F3 function key to return to the Object Selection panel. An example of the Tablespace Properties is as follows:

```
RCVYXPRT V3R2  ------ Tablespace Properties ------  2019/01/13  12:56:12
Command ===> Scroll ===> CSR

Database name: ARYDb231  Tablespace name: ARYBXTN

DBID: 651
Implicit : N
OBID : 312
Partition count : 0
PSID : 313
Repository status : Both repository and Db2 catalog
Status : RW
Table count : 1
Tablespace count :
```

**Generating recovery DDL for an object**

From the Generate DDL panel you can update recovery options, choose a recovery point, and generate the DDL to recover the objects in an application profile.

Db2 Recovery Expert generates one recovery plan that produces a job (JCL) containing the Data Definition Language (DDL) for the selected objects and all of their dependent objects. For example, if you choose a table object, the recovery DDL for the table and any indexes, views, synonyms, aliases, data types, triggers, functions, procedures, sequences, and roles dependent on that table is generated. Db2 Recovery Expert generates the DDL to create the objects but it does not generate DROP statements if the objects already exist. The generated DDL is placed in a job that can be executed. This job fails if the selected object (for which the DDL has been generated) already exists.
You can further control the DDL generation for an object and its dependent objects using the recovery option **DDL Generation Options**.

1. From the Application Profile Display panel (for an application profile), or from the Ad-hoc Specification Display panel (for a specification), specify a G in the **Cmd** line next to an application profile or a log based specification for which you want to generate recovery DDL. The Generate DDL panel opens.

2. To update the **DDL Generation Options** or any of the recovery options, specify Y in the **Update Recovery Options** field. Press Enter. The Recovery Options panel opens. Edit the options that you want to change. Upon completion, press **PF3** to return to the Generate DDL panel. See “Generating object recovery plans” on page 320 for more information.

3. You have three options for specifying a recovery point. Select from one of the following options:
   - **Current**: To select the current recovery point, enter a 1 in the **Recovery Point** field. Any data entered in the **RBA/LRSN** or **Timestamp** fields will be cleared.
     
     **Note**: When performing redirected recovery, selecting **Current** recovers the object using the latest image copy of the object. Any recovery information that is included in the log data is not applied.

   - **RBA/LRSN**: To select a RBA/LRSN recovery point enter a 2 in the **Recovery Point** field. The value of the current RBA/LSRN is entered in the **Recovery RBA/LRSN** field. To change that value enter a Y in the **Select Recovery Point** field.

   - **Timestamp**: To select a timestamp recovery point enter a 3 in the **Timestamp** field. The current timestamp is automatically entered in the **Recovery Timestamp** field. To change that value enter a Y in the **Select Recovery Point** field.

4. Depending on your selection of recovery point options, you must enter values for one or more of the following fields:

   **Recovery RBA/LRSN**
   - If you entered a 2 in the **Recovery Point** field, you can either specify a different value in the **Recovery RBA/LRSN** field or enter a Y in the **Select Recovery Point** field where you can select the recovery point in the Recovery Point Selection panel.

   **Recovery Timestamp**
   - If you entered a 3 in the **Recovery Point** field, you can either specify a new timestamp value in the **Recovery Timestamp** field or specify a Y
in the **Select Recovery Point** field where you can select the recovery point in the Recovery Point Selection panel. The timestamp value must be entered as \textit{YYYY - MM - DD - HH - MM - SS - MMMMM}.

**Select Recovery Point**

If you entered a 3 in the **Recovery Point** field or you entered a 2 in the **Recovery Timestamp** or the **Recovery RBA/LRSN** fields by entering a Y in the **Select Recovery Point** field. Press Enter. The Recovery Point Selection panel opens where you can select an object definition level, a recovery history event, a quiet time, or an image copy data set as the recovery point.

5. After specifying the recovery point press Enter. All the fields are validated and the DDL if generated. The Recovery Plans panel opens. From this panel you can select the recovery plan and generate the JCL that can be used to recovery the object or objects in the application profile.

---

**Generating object recovery plans**

Db2 Recovery Expert will generate one or more recovery plans that you can select from to recover the objects that have been included in the application profile or log based specification.

Using the **Generate Recovery Plans** panel you can specify recovery options, choose a recovery point, and generate recovery plans that can be used to recover the objects that are included in the application profile or log based specification.

**Note:**

- If you are recovering a dropped object that is part of an implicit table space, Db2 Recovery Expert issues a warning during recovery plan generation to let you know the ZPARM parameter IMPDSDEF must be set to YES before running the recovery job. This ZPARM parameter can be dynamically changed with the Db2 SET SYSPARM command.
- Several object types may not produce recovery JCL when doing a recover to Current because they are non-data types. Non-data object types are Alias, Function, Global Variable, Procedure, Role, Sequence, Sequence Alias, Synonym, Trigger, and View. You can generate View DDL for these objects by using the DDL Generation option.

1. There are three ways to reach the **Generate Recovery Plans** panel:
   - From the **Application Profile Display** panel, specify P in the Cmd line next to the application profile for which you want to generate the recovery plans.
   - From the **Specification Display** panel, specify P in the Cmd line next to the log based specification for which you want to generate the recovery plans.
   - From the **Ad-hoc Operations** panel, select SSID, 2. **Log Based Recovery**, Set LBDR Scanned Log Range, Select objects, and press F3.

The **Generate Recovery Plans** panel opens:
2. To update the recovery options for the profile or specification, specify Y in the **Update Recovery Options** field. Press Enter. The **Recovery Options** panel opens. Edit the options that you want to change. Upon completion, press PF3 to return to the Generate Recovery Plans panel. See “Specifying recovery options” on page 322 for more information on recovery options.

3. Specify Y in the **Redirected Recovery** field to initiate redirected recovery for the objects in the application profile or log based specification. When you press ENTER, the Select Target SSID for Recovery panel will open. From this panel, you will select the target Db2 subsystem where you want to recover the objects and specify whether you will rename the object. Redirected Recovery is only available if you are recovering database, table space or table objects.

4. Specify O to create recovery plans and JCL by manually editing a sample JCL batch job, or B to generate recovery plans and JCL batch job code automatically via ISPF. When you press ENTER, if the Redirected Recovery field is set to Y, the Build Jobs Options panel opens. If Redirected Recovery is set to N, the Batch Plans Generation Options panel opens instead.

5. There are three options for specifying a recovery point. Select from one of the following options:
   - **Current**: To select the current recovery point, enter a 1 in the **Recovery Point** field. Any data entered in the RBA/LRSN or **Timestamp** fields will be cleared.
   - **RBA/LRSN**: To select a RBA/LRSN recovery point enter a 2 in the **Recovery Point** field. The value of the current RBA/LSRN is entered in the **Recovery RBA/LRSN** field.
   - **Timestamp**: To select a timestamp recovery point enter a 3 in the **Timestamp** field. The current timestamp is automatically entered in the **Recovery Timestamp** field.

6. Depending on your selection of recovery point options, you may enter values for one or more of the following fields:
   - **Recovery RBA/LRSN**: If you entered a 2 in the **Recovery Point** field, you can either specify a different value in the **Recovery RBA/LRSN** field or enter a Y in the **Select Recovery Point** field to open the Recovery Point Selection panel. From the Recovery Point selection panel, you can select an object.
definition level, a recovery history event, or a quiet time for the recovery point. You can also specify a specific image copy data set name.

**Recovery Timestamp**
If you entered a 3 in the Recovery Point field, you can either specify a new timestamp value in the Recovery Timestamp field or specify a Y in the Select Recovery Point field where you can select the recovery point in the Recovery Point Selection panel. The timestamp value must be entered as YYYY - MM - DD - HH - MM - SS - MMMMM.

**Select Recovery Point**
If you entered a 3 in the Recovery Point field or you entered a 2 in the Recovery Point field, you can change the values in the Recovery Timestamp or the Recovery RBA/LRSN fields by entering a Y in the Select Recovery Point field. Press Enter. The Recovery Point Selection panel opens where you can select an object definition level, a recovery history event, a quiet time, or an image copy data set as the recovery point.

7. After specifying the recovery point press Enter. All the fields are validated and the available recovery plans are shown in a list on the Batch Plans Generation Options panel. See [Selecting a recovery plan](#) for more information.

**Specifying recovery options**
You use the Recovery Options panel to specify the options that control the creation of the recovery JCL or DDL for the objects in an application profile or a log based specification.

**Note:** Starting with Db2 Recovery Expert V3.1 you no longer need to set recovery options that specify whether you want to use system level backups, image copies, or VSAM image copies for recovery. In the current version, Db2 Recovery Expert V3.2, Db2 Recovery Expert examines all recovery resources that are available when generating the recovery plans.

1. From the Generate Recovery Plans panel, specify Y in the Update Recovery Options field. Press Enter. The Recovery Options panel opens. In this panel use PF8 to scroll down and see all the options. Use PF7 to return to the top of the panel.
2. Specify or edit one or more the following **General Options**:

**Stop if restricted objects**
Specify Y to stop the recovery if any restricted objects are encountered. Specify N to skip the restricted object if one is encountered and continue the recovery.

**Generate Check Data Utility**
Specify an N to indicate that steps for the Check Data, Check Index and Check Lob Utilities for recovered objects should not be generated.
Include RI related objects
   Specify Y to automatically include objects that are related to the
   selected objects (due to referential integrity) in the recovery process.
   Specify N to exclude those objects. The default value is Y.

Allow LOAD from FIC recreated tables
   Specify Y to allow a LOAD from a full image copy recovery plan to
   be used for recreated tables. Specify N to prevent a LOAD from a full
   image copy recovery plan from being used for recreated tables. Using
   this recovery plan for recreated tables may fail in some cases.

Use workfiles for Undo/Redo SQL
   The Use workfiles for Undo/Redo SQL option specifies whether
   workfiles are used when running Undo/Redo SQL recovery plans.
   Specify Y to use workfiles. Specify N to use 64 bit storage. Using
   workfiles may impact performance and should only be selected when
   scanning more than 500 Db2 logs for activity.

Use Db2 System Catalog Only
   The Use Db2 System Catalog Only option specifies the status of the
   Schema Level Repository (SLR) when performing standard recovery.
   Specify Y to indicate that the SLR is not current and information
   about recovered objects should be ignored. Specify N to indicate that
   the SLR is current and information about recovered objects should be
   used.

Allow copies from previous versions
   This option allows users to select an image copy that is different from
   the current image copy version and use that image copy for the
   recovery. Specify Y to use an image copy created for versions other
   than the one being recovered.

Notify if Data Capture Changes enabled
   This option specifies whether a warning message is issued if Data
   Capture Changes is enabled on the table that is being recovered.
   Specify Y to issue the message. Specify N to prevent the message from
   being issued.

Action for unrecoverable objects
   Specify I to skip any unrecoverable objects in profile and generate
   recovery plans only for all recoverable objects. Specify C to recreate all
   unrecoverable objects that were dropped or altered, do nothing for
   existing unrecoverable objects, and generate recovery plans for
   recoverable objects. Specify L to recreate all unrecoverable objects that
   were dropped or altered, delete all data from existing unrecoverable
   objects by LOAD REPLACE, and generate recovery plans for
   recoverable objects. Specify E to abort the plan generation for the
   whole profile if any unrecoverable object is found.

Action for missing recovery resources
   This option specifies what action to take when a unrecoverable
   resource, such as a Db2 log or image copy, is detected. Specify I
   (Ignore) to prevent Db2 Recovery Expert from checking data sets for
   unrecoverable resources. Specify W (Warning) to continue recovery
   plan generation and issue a warning message for unrecoverable
   resources. Specify E (Error) to issue an error message for
   unrecoverable resources and exclude those resources from plan
   generation.

3. Specify or edit one or more the following Recover Options:
Recover Unchanged Objects
Specify whether all objects, both changed and unchanged, are included in the recovery. Specify Yes to include all objects. Specify No to exclude objects that have not changed. Excluding objects saves processing time during recovery.

Number of Tape Drives
Specify the number of tape drives that are used in the recovery.

Site
Specify the recovery site that is used for recovery. Specify D to use the subsystem default; specify L to use the local site; or R to use the recovery site.

4. The Log Read and Log Apply options are used when performing a Redirected Recovery plan or an Advanced Recover plan. Specify Y in the Update Log Options field to update the options. Press Enter. The Log Read and Log Apply Options panel opens.

5. Statistics Options: Copy statistics lets you specify whether statistics should be copied from statistics source objects to corresponding target objects. Temporary datasets required for this process will be allocated according to the parameters in the Statistics Options panel. The following options are available:
- Y - Yes
- N - No
- U - Update

If you choose Y or U, the generated job will copy or update statistics from source to target objects. Selecting U also opens the Statistics Options (Statistics data set allocation options) panel, which enables you to specify dataset allocation options such as device type, track or cylinder, and other settings.

If you choose N, the generated job will not copy statistics from source to target objects.

6. Specify or edit one or more the following Copy Options:

Image Copies after recover
Specify the image copy options that will occur after recovery. Specify N to not perform image copies after recovery; specify T to image copy only the table spaces after recovery; or specify I to image copy both table spaces and indexes after the recovery.

Local Site Primary
Specify Y to perform a local site primary image copy.

Local Site Backup
Specify Y to perform a local site backup image copy.

Remote Site Primary
Specify Y to perform a remote site primary image copy.

Remote Site Backup
Specify Y to perform a remote site backup image copy.

Number of Tape Drives
Specify the number of tape drives that will be used for image copies.

Check Pages
Specify Y to run the check utility on each page.

Use DFSMSdss concurrent copy
Specify whether concurrent copies will be performed. Specify Y to use
concurrent copy to perform the image copies. Specify N to perform the image copies without using concurrent copy.

**Automatic Image Copies**
Specifies whether image copies for the dropped objects will be created automatically from a system level backup (SLB) during the recovery plan generation.

If this option is set to Y, and image copies for dropped objects do not exist and a system level backup does exist, then image copies for these objects will be created automatically from the SLB during the recovery plan generation. The default value is Y.

Specify U to open the Automatic Image Copy Options panel where you specify or update the options that are used to create the automatic image copies.

7. Specify or edit one or more the following **Parallel Job Options**:

   **Number of parallel jobs**
   Specifies the maximum number of jobs in a parallel job group. You can specify a value from 0 to 99.

   **Number of concurrent jobs**
   Specify the maximum number of jobs that the agent processes in parallel. This represents the maximum number of jobs that can run at any given point. You can specify a value from 1 to 99.

8. Specify or edit one or more the following **Authorization Options**:

   **Generate Grants**
   Specify Y to generate authorization statements when recovering objects. Specify an N to bypass generating authorization statements when recovering objects. The value Y is the default.

9. Specify or edit one or more the following **Bind Options**:

   **Generate Binds**
   Use this option to generate package or plan bind statements. Specify N to indicate that no bind statements are to be generated. This is the default value. Specify P to indicate that bind statements are to be generated only for packages. Specify B to indicate that bind statements are to be generated for both packages and plans.

   **Bind Action**
   Specify Add to indicate that the named package does not exist, and a new package is to be created. If the package already exists, the job stops, and a diagnostic error message is returned. Specify Replace to indicate that the existing package is to be replaced by a new one with the same package name and creator. Replace is the default value for the Bind Action option.

   **Add DBRMLIB1 – 4**
   Specify the DBRM libraries to be used for the bind jobs. You can specify up to 4 DBRM libraries.

10. When generating recovery DDL for an object, Db2 Recovery Expert generates recovery DDL for the selected object and all its lower level dependent objects. You can use the **DDL generation Options** to control the generation of DDL for any object type. By specifying an N for an object type, you inhibit the generation of DDL for that type of object and all its dependent objects. You can edit the following **DDL Generation Options**:
Storage Group
Specify Y to generate DDL for Storage Group object types. Specify N to skip generating the DDL for this data type.

Database
Specify Y to generate DDL for Database object types. Specify N to skip generating the DDL for this data type.

Tablespace
Specify Y to generate DDL for Tablespace object types. Specify N to skip generating the DDL for this data type.

Table
Specify Y to generate DDL for Table object types. Specify N to skip generating the DDL for this data type.

Index
Specify Y to generate DDL for Index object types. Specify N to skip generating the DDL for this data type.

View
Specify Y to generate DDL for View object types. Specify N to skip generating the DDL for this data type.

Synonym
Specify Y to generate DDL for Synonym object types. Specify N to skip generating the DDL for this data type.

Alias
Specify Y to generate DDL for Alias object types. Specify N to skip generating the DDL for this data type.

Data Type
Specify Y to generate DDL for Data Type object types. Specify N to skip generating the DDL for this data type.

Trigger
Specify Y to generate DDL for Trigger object types. Specify N to skip generating the DDL for this data type.

Function
Specify Y to generate DDL for Function object types. Specify N to skip generating the DDL for this data type.

Procedure
Specify Y to generate DDL for Procedure object types. Specify N to skip generating the DDL for this data type.

Sequence
Specify Y to generate DDL for Sequence object types. Specify N to skip generating the DDL for this data type.

Role
Specify Y to generate DDL for Role object types. Specify N to skip generating the DDL for this data type.

Sequence Alias
Specify Y to generate DDL for Sequence Alias object types. Specify N to skip generating the DDL for this data type.

Global Variable
Specify Y to generate DDL for Global Variable object types. Specify N to skip generating the DDL for this data type.

Use SQLID for DDL
By default, the generated DDL for a recreated object uses the SQLID that was specified when the object was originally created. To override
the default you can specify a different SQLID in the SQLID for DDL field and it will be used when generating the DDL for the recreated objects.

11. Press PF3 to return to the Generate Recovery Plans panel.

Performing redirected recovery

Use redirected recovery to recover an object to a target Db2 subsystem that is the same as or different from the object's source Db2 subsystem. Redirected recovery is available for use through the Db2 Recovery Expert for z/OS web interface, or through the ISPF interface. Redirected recovery is only available if you are recovering database, table space or table objects.

Before running redirected recovery, set the redirected recovery defaults for all relevant Db2 subsystems. For more information, see “Registering Db2 subsystems” on page 192.

1. On the IBM Db2 Recovery Expert for z/OS main menu panel, enter 2 (Application Operations) on the Option line and press Enter.

2. On the Application Operations Menu panel, enter 1 (Application Profiles) on the Option line and press Enter.

3. On the Enter Application Profile Selection Criteria panel, select the Db2 subsystem where the redirected recovery application profile resides or where you will create a redirected recovery application profile.
To list only a specific redirected recovery application profile in the Application Profile display panel, use the filter criteria **Stored on SSID**, **Name Like**, and **Creator Like** fields. You can also use the filter criteria to limit the number of profiles included in the Application Profiles display list.

4. If you have not already created an application profile that defines the objects for redirected recovery, do so now. For more information, see "Creating application profiles" on page 295.

**Note:** Redirected recovery is not supported for versioned objects.

Ensure that your application profile does not contain these objects before proceeding.

5. On the Application Profile Display panel, specify a **P** in the **Cmd** line next to the redirected recovery application profile for which you want to generate the recovery plans.

6. On the Generate Recovery Plans panel, specify **Y** or **U** for the **Redirected Recovery** option to perform redirected recovery. For **Generation Method**, specify **B** to generate batch JCL by using ISPF panels; see "Building recovery plan batch jobs in ISPF" on page 363. Specify **O** to create batch JCL by editing a JCL sample; see "Building recovery plan batch jobs by editing JCL sample" on page 360.
Before pressing Enter, specify one of the following values for the **Recovery Point** option:

- Specify 1 to select the current recovery point. Selecting 1 recovers to object using the latest image copy of the object. Any recovery information that is included in the log data is not applied.

- Specify 2 to select a RBA/LRSN recovery point. Selecting 2 recovers the object to the RBA/LRSN specified in the **Recovery RBA/LRSN** field.

- Specify 3 to select a timestamp recovery point. Selecting 3 recovers the object to the timestamp specified in the **Recovery Timestamp** field.

For more information, see "Generating object recovery plans" on page 320.

7. Press Enter. The Select Target SSID for Recovery panel opens if you selected Y or U for Redirected Recovery. On the Select Target SSID for Recovery panel, select the target subsystem for the redirected recovery action by specifying S on the **Cmd** line next to the desired subsystem.

**Note:** The target subsystem can be the same subsystem as the source, or it can be a different subsystem, with the exception of LBDR profiles; for LBDR profiles, redirected recovery of dropped objects is allowed only to the same subsystem.
However, although the target subsystem may be the same version, mode and function level as a source, or different from the source, there are limitations with Redirected Recovery. If you are performing Redirected Recovery between different versions, modes or function levels, recovery may not be successful, especially when recovered objects cannot be correctly recreated on the target subsystem. For example, tablespaces created with the KEYLABEL keyword in Db2 V12 Function Level 502 or later cannot be correctly recovered on a V11 or V12 FL500 subsystem, because KEYLABEL is not supported on such a subsystem.

8. The Object Translation panel opens automatically after selecting the target subsystem from the Select Target SSID for Recovery panel. To define a new name for an object, specify an I in any Cmd line. A new line displays, where you will specify an additional source-target object relationship.

```
RCVYXPR V3R2 ------ Object Translation ------ 2019/01/13 12:56:12
Command ===>
Scroll ===>
Page
Commands: CREATE - Create object translation on base of objects
           CLEAR - Clear object translation
           Validate - Validate object translation
Line Commands: I - Insert line   R - Remove line   D - Duplicate line
******************************************************************************
Creator: USERID NAME: TESTPROF Source SSID: EA1A
         Target SSID: DB1B
Object Types: CR - Creator   DB - Database   TS - Tablespace   TB - Table
              IX - Index     VW - View     AL - Alias     VC - VCAT
              SG - Storage group   TR - Trigger
Single character wildcards:  Arbitrary string wildcards:
******************************************************************************
Obj Type Source Name  Target Name
-  SG  SGdefault     SGnew
-  DB  DBTest        DBnew
```

**Note:** You may enter VALIDATE on the Command line to identify objects in the application profile that have no translations specified for them. Objects without translations will not be recovered during redirected recovery if recovering to the same subsystem, and will be listed on the Untranslated Objects panel that displays after entering the VALIDATE command. Press PF3 to return to the Object Translation panel.

a. In the **Obj Type** field specify the type of object that you want to rename.

b. In the **Source Name** field specify the original name of the object that is being recovered.

c. In the **Target Name** field specify the new name for the object that will be used on the target Db2 subsystem.

9. Press PF3. The Redirected Recovery Options panel opens. Specify information on the Redirected Recovery Options panel. For more information, see “Specifying redirected recovery options” on page 334.

10. Press PF3 when you are satisfied with your redirected recovery options specifications. All the fields are validated and the recovery plans are generated. The Generate Recovery Plans panel opens.

11. From the Generate Recovery Plans panel you can optionally update recovery options by specifying Y in the **Update Recovery Options** field. After updating these options press PF3 and you will return to the panel.
For more information on specifying recovery options, see “Specifying recovery options” on page 322.

12. Press Enter on the Generate Recovery Plans panel. Once your request is processed the Recovery Plans panel opens.

13. Specify B on the Cmd line next to the generated redirected recovery plan to build the JCL. The Build Job panel opens.

15. Confirm that the information on the Confirm Action panel is correct and specify Y in the Continue field. Press Enter.

16. Submit the JCL to execute redirected recovery.

For more detailed information on selecting the target SSID for redirected recovery, specifying names for object translation, or specifying redirected recovery options, see the following topics:

- “Selecting the target SSID for redirected recovery”
- “Specifying object names for redirected recovery” on page 333
- “Specifying redirected recovery options” on page 334

**Selecting the target SSID for redirected recovery**

Redirected recovery allows you to recover objects to a Db2 subsystem that is different from the original subsystem where the object was stored. From the Select Target SSID for Recovery panel you select the target SSID to which the objects in the application profile are recovered.

1. From the Generate Recovery Plans panel specify a Y in the Redirected Recovery field. The Select Target SSID for Recovery panel opens.

RCVYXPRT V3R2 ------ Select Target SSID for Recovery ------ 2019/01/13 12:56:12
Command ===>
Scroll ===>
Page

Line Commands: S - Select   P - Properties   T - Status

---------------------------------------------------------------------------------------------
| Creator: USERID | NAME: TESTPROF | Source SSID: EA1A | Target SSID: DB1B |
|---------------------------------------------------------------------------------------------|
| SSID           | Status        |
| DB1A           | Active        |
| DB1B           | Active        |
| EA1B           | Active        |

| EB1B           | Active        |
| QA1A           | Active        |
---------------------------------------------------------------------------------------------

2. To view the properties of the Db2 subsystems that are listed specify P in the line command next to the SSID. The Db2 Subsystem Properties panel opens. From this panel you can view the properties of the subsystem. Press PF3 to return to the Select Target SSID for Recovery panel.

3. To view the Db2 subsystem's status properties specify T in the line command next to the SSID. The Db2 Subsystem Status panel opens. From this panel you can view the status properties of the subsystem. Press PF3 to return to the Select Target SSID for Recovery panel.

4. To select a Db2 subsystem as the target subsystem where the object will be recovered to, specify an S in the line command next to the SSID. Press Enter. An asterisk displays in the command line next to the SSID.
Note: If you are performing redirected recovery of an object across LPARS, the object is recovered on the different LPAR using the latest image copy of the source object. Any recovery information that is included in the data log is not applied.

5. Press Enter. The Object Translation panel opens. From the Object Translation panel you will specify the target name for the objects in the redirected recovery.

**Specifying object names for redirected recovery**

Redirected recovery allows you to recover an object using a name that is different from the original object name. From the Object Translation panel you specify the name that will given to the object(s) that are recovered using redirected recovery.

1. The Object Translation panel opens automatically after you select the target SSID from the Select Target SSID for Recovery panel.

2. To define a new name for an object, specify an I in any line command. A new line displays.

3. In the **Obj Type** field specify the type of object that you want to rename. You can select from the following object types:
   - CR - Creator
   - DB - Database
   - TS - Tablespace
   - TB - Table
   - IX - Index
   - VW - View
   - AL - Alias
   - VC - VCAT
   - SG - Storage Group
   - TR - Trigger

4. You can use either of the wildcard options when specifying a name in the **Source Name** or **Target Name** fields:
   - Single character wildcards
Specifies a character that is treated as a wildcard for a single character in the **Source Name** or **Target Name** field. The default characters are a question mark (?) or an underscore (_). The single wildcard character will match any single character. For example, if you enter the string ?xyz in the **Source Name** or **Target Name** field, it will match axyz, bxyz or cxyz. If you enter the string xyz_, it will match xyza, xyzb, or xyzc.

- **Arbitrary string wildcards**

  Specifies a character that is treated as a wildcard for a string of characters in the **Source Name** or **Target Name** field. The default characters are the asterisk (*) or percent sign (%). The arbitrary string wildcard character is used to search for a match with one or more characters. For example, if you enter the string *xyz in the **Source Name** or **Target Name** field, it will match firstxyz, secondxyz or thirdxyz. If you enter the string xyz%, it will match xyzfirst, xyzsecond, or xyzthird.

5. In the **Source Name** field specify the original name of the object that is being recovered.

6. In the **Target Name** field specify the new name for the object that will be used on the target Db2 subsystem.

7. To remove a line of object rename specifications, specify an **R** on the line that you want to remove.

8. To duplicate a line of object rename specifications, specify a **D** on the line that you want to duplicate.

### Specifying redirected recovery options

From the Redirected Recovery Options panel you specify or update the options that are used with redirected recovery.

1. The Redirected Recovery Options panel opens automatically after you specify object translation parameters.

   ![](RCVYXPRT V3R2 ----- Redirected Recovery Options ----- 2019/01/13 12:56:12 Command ====> Scroll ====> Page
   Creator: USERID NAME: TESTPROF Source SSID: EA1A Target SSID: DB1B
   Enter Recovery Options to associate with this Application profile:
   SYSCOPY Scan Operating Mode  ==  Z  (Local/Recover/Zparm/User)
   SYSCOPY Selection Pref  ==  LPLBRPRBFC (LPLBRPRBFC in any order)
   Log Apply  ==  N  (Yes/No)
   Detailed JCL comments  ==  Y  (Yes/No)
   Log read and log apply options
   Update Log Options  ==  Y  (Yes/No)

2. The SYSCOPY Scan Operating Mode specifies which SYSCOPY rows to consider when finding a starting point for processing. You can specify one of the following:
   - Specify **L** to scan in local mode. Local mode uses the Local Primary and Local Backup rows to find a starting point for processing. Local mode includes the LOCAL SITE keyword in the syntax.
   - Specify **R** to scan in recover mode. Recover mode uses the Recovery Primary and Recovery Backup rows to find a starting point for processing. Recover mode includes the RECOVERY SITE keyword in the syntax.
• Specify Z to scan in Zparm mode. Zparm mode detects the operating mode Db2 is running under and automatically inserts the corresponding control card. This option omits the LOCAL SITE, RECOVER SITE, and IMAGE COPY PREFERENCE control cards and uses the value found in ZPARMs on the Db2. Zparm mode is the default mode.

• Specify U to scan in user mode. User mode uses the user-specified scan preference defined in the SYSCOPY Selection Pref field to find a starting point for processing. User mode includes the IMAGE COPY PREFERENCE keyword in the syntax.

3. The SYSCOPY Selection Pref field specifies the order in which the image copy types are scanned in SYSCOPY for a starting point. This selection preference is only applied if the SYSCOPY Scan Operating Mode field is set to User. You can specify the following image copy types in any order:
   • Local Primary (LP) scans for Local Primary type image copies in SYSCOPY.
   • Local Backup (LB) scans for Local Backup type image copies in SYSCOPY.
   • Recovery Primary (RP) scans for Recovery Primary type image copies in SYSCOPY.
   • Recovery Backup (RB) scans for Recovery Backup type image copies in SYSCOPY.
   • Flash Copy (FC) uses Db2 Recovery Expert managed flash copy data sets in addition to Db2 V10 and higher flash copy data sets as image copy starting points in the processing.

4. The Log Apply field indicates whether a log apply process is bypassed and recovered data is taken only from the specified image copy. If Log Apply is set to Y (Yes), the log apply process is performed. If Log Apply is set to N (No), the log apply process is bypassed.

5. The Detailed JCL comments field specifies whether generated jobs include detailed comments describing the function of each job step in the JCL. Specify Y to include comments. Specify N to exclude comments.

6. The Log Read and Log Apply options are used when performing a Redirected Recovery plan or a Fast Recover plan. Specify Y in the Update Log Options field to update the options. Press Enter. The Log Read and Log Apply Options panel opens.

7. Press PF3 to return to the Generate Recovery Plans panel.

**Specifying statistics options**

From the Statistics Options (Statistics data set allocation options) panel, you specify or update the statistics options.

2. Specify the following **Statistics data set allocation options** options:

**Device type**
Specifies the device type that is used for the RTS utility temporary data sets.

**Track or cylinder**
Specifies the unit type (track or cylinder) for the primary and secondary quantity allocation.

**Primary quantity**
Specifies the primary quantity that is used for the allocation of temporary data sets.

**Secondary quantity**
Specifies the secondary quantity that is used for the allocation of temporary data sets.

**SMS data class**
Specifies the SMS data class that is used for the allocation of temporary data sets.

**SMS storage class**
Specifies the SMS storage class that is used for the allocation of temporary data sets.

**SMS management class**
Specifies the SMS management class that is used for the allocation of temporary data sets.

3. Press PF3 to return to the Generate Recovery Plans panel.

**Specifying Log Read and Log Apply recovery options**
From the Log Read and Log Apply options panel, you specify the options that are used when generating Advanced Recovery or Redirected Recovery plans. These include the Log read and log apply options, and the XML translate options.

1. To open the Log Read and Log Apply options panel:
   - Specify Y in the **Update log options** field on the Recovery Options panel.
   - Specify Y in the **Update log options** field on the Redirected Recovery Options panel.
Note: Log Apply cannot be disabled for LBDR profiles, because Redirected Recovery of dropped objects is allowed only with Log Apply enabled. Additionally, for source and target SSIDs on different LPARs, Log Apply must be enabled.

2. The Log Reader Copy Preference field specifies the order in which the archive and active log lists in the BSDS are to be scanned when searching for log records. Scans the archive logs first and uses archive logs when the same range exists in an archive and active log.

3. The Bypass SYSIBM.SYSLGRNX field specifies whether reading SYSIBM.SYSLGRNX is bypassed and only the Db2 logs are read. A value of Y skips reading SYSIBM.SYSLGRNX and only reads the Db2 logs. A value of N does not skip reading SYSIBM.SYSLGRNX.

4. The Continue on Errors field specifies whether errors higher than RC=4 will stop processing. A value of Y specifies that if a RC=4 occurs, it will be overridden, reported, and the job will not fail. A value of N specifies that if a RC=4 occurs, the job will fail.

5. The Number of PARALLEL log read field specifies the number of parallel log read tasks that can run at the same time. Valid values are integers 0 to 16. A value of 0 specifies that a maximum of 1 task per data sharing group member can run at the same time. A non-zero value specifies the number that is the maximum number of parallel tasks that can run at the same time. If there are more logs to read than the number of parallel tasks specified, a task to read the of parallel tasks specified, a task to read the remaining logs is launched as soon as a running task finishes. This will occur until all necessary logs have been read.

6. The Number of PARALLEL log apply field specifies the number of parallel log apply tasks that can run at the same time. Valid values are integers 1 to 10. If a single GROUP set is present in the control cards, the value in the Number of PARALLEL log apply field is used to break up the job into multiple GROUP sets and start a log apply task for each set. Valid values are:

- A value of 1 indicates a single group starts a single log apply task.
- A value of 2 to 10 indicates multiple group starts.

If there is a single GROUP, the code will internally break down the SPACE sets into a maximum of Number of PARALLEL log apply GROUP sets and
will start one log apply task per GROUP. For example, if you specify a value of 10 and there are only 5 SPACE sets, the syntax is divided into 5 GROUP sets and 5 log apply tasks.

If you specify a value of 5 for **Number of PARALLEL log apply**, the number of spaces between the groups are divided evenly and then, if there are leftovers after attempting to divide them evenly among the allotted number of GROUP sets, those leftovers go in the last GROUP set. One log apply task is then generated for each GROUP set.

7. The **Reuse VSAM Data Set** field indicates whether a VSAM data set can be reused on WRITE TO VSAM or WRITE TO BOTH jobs. If **Reuse VSAM Data Set** is set to N (No), a VSAM data set is newly allocated (with new extent structure) and the NO REUSE keyword is included in the JCL on a Job Profile build. If **Reuse VSAM Data Set** is set to Y (Yes), an existing VSAM data set will be reused (thus preserving the data set size and extent structure) and the NO REUSE keyword is excluded from the JCL on a Job Profile build.

8. The **XML translate options** are used when performing redirected recovery of a table object that includes XML and the target system is part of a data sharing environment. Specify the following options to set up redirected recovery for table objects that include XML:

**XML jobs data set**
Specifies the name of a data set where the JCL for the jobs that are required to complete the redirected recovery of table objects with XML are stored as members.

**Note:** XML objects require an automatically generated sequence number for each row. The jobs generated to this data set update the Db2 catalog for consistency with the translated XML data that includes the automatically generated sequence numbers. After recovery completes, you must manually run the jobs that are included in this data set. These jobs will use the prefix specified in the **XML jobs member prefix** field and the SSID of the LPAR member in the data sharing environment. You must update the jobs with a SYSAFF card and run on the LPAR that matches the SSID in the job name.

**XML jobs member prefix**
Specifies the prefix that is used in the automatically generated names of each member added to the XML jobs data set. Following the prefix, the generated name includes the SSID.

**XML template data set**
Specifies the name of a data set where the common job template is stored as a member during the plan generation for the redirected recovery of a table object that includes XML.

**XML template member**
Specifies the name of the member that is added to the XML template data set.

XML objects require an automatically generated sequence number for each row. The jobs generated to this data set update the Db2 catalog for consistency with the translated XML data. After recovery completes, you must manually run the jobs that are included in **XML jobs data set** data set. These jobs will use the prefix specified in the XML jobs member prefix field and the SSID of the LPAR member in the data sharing environment. You must update the jobs with a SYSAFF card and run on the LPAR that matches the SSID in the job name.

9. Press PF3 to return to the Redirected Recovery Options panel.
Selecting a recovery point

From the Recovery Point Selection panel you choose the type of recovery point. You may select an object definition level, a recovery history event, a quiet time, or an image copy data set.

1. The Recovery Point Selection panel opens when a Y is entered in the Select Recovery Point field of the Generate Recovery Plans panel.

2. Specify an S next to one of the following available recovery point types:
   - **Object Definition Levels** - Specify an S next to this field to choose an object definition level for a recovery point. Press Enter. The Object Definition Level Selection panel opens. A given object can have many versions over time. The versions are referred to as object definition levels. The available definition levels that can be used as a recovery point are listed in the Object Definition Levels panel. Object definition levels are not available for selection when using a log RBA or LRSN point in time.
   - **Recovery History Events** - Specify an S next to this field to choose a recovery history event for a recovery point. Press Enter. The Recovery History Event panel opens listing the history events available to use as a recovery point. History events for any of the selected objects are listed from the SYSIBM.SYSCOPY table, the schema repository’s SYSCOPY table, and the DLC.SYSCOPY_V1 table (if present).
   - **Quiet Times** - Specify an S next to this field to choose a quiet time range for a recovery point. Press Enter. The Quiet Times Range Selection panel opens. Each time range that is listed represents a period of inactivity for the object. Quiet times are listed from the quiet time tables.
   - **Copy with Specific Data Set Name** - Specify an S next to this field to specify the data set name of an image copy that will used for the recovery point. Press Enter. The Enter Copy Data Set Name panel opens. Specify the name of the image copy data set. Press Enter. The time for the specified image copy is entered in the Recovery Timestamp field of the Generate Recovery Plans panel.

3. Press PF3 to return to the Generate Recovery Plans panel.

Selecting an object definition level for a recovery point

Objects can have many versions over time and each version is referred to as an object definition level. From the Object Definition Levels Selection panel you can choose one of the object definition levels for a recovery point.
1. To open the Object Definition Levels Selection panel enter an **S** next to the **Object Definition Levels** field in the Recovery Point Selection panel. Press Enter. The Object Definition Levels Selection panel opens.

```

2. You can filter the displayed object definition levels using the **Start Timestamp** and **End Timestamp** fields. You can enter a specific start or end timestamp value or use a wild card character such as an asterisk which will display all the object definition level recovery points. Press Enter. The list of object definition level recovery points will vary depending on the filter criteria that you specified.

3. Enter an **S** next to the object definition level that you want to use as a recovery point. You can only choose one object definition level recovery point. Press Enter.

4. The selected recovery point is validated and saved. Control returns to the Generate Recovery Plans panel.

**Selecting a history event for a recovery point**

From the Recovery History Events Selection panel, you can choose a history event for a recovery point. History events are listed from the SYSIBM.SYSCOPY table, the schema repository’s SYSCOPY table, and the DLC.SYSCOPY_V1 table. System Level backups created by Db2 Recovery Expert are also shown as history events for any object.

1. To open the Recovery History Events Selection panel enter an **S** next to the **Recovery History Events** field in the Recovery Point Selection panel. Press Enter. The Recovery History Events Selection panel opens.
2. You can use the PF10 and PF11 function key to scroll left and right. Scrolling right will display all the fields for each event recovery point. The fields that are displayed for each recovery point are:

</table>

- **Timestamp**: This field specifies the date and time of the event.
- **Start RBA**: The start RBA of the event.
- **Database**: The name of the database.
- **Space**: The name of the space.
- **Space Type**: The type of space.
- **Type**: The type of operation. The following values may be displayed:
  - A indicates ALTER
  - B indicates REBUILD INDEX
  - D indicates CHECK DATALOG(NO) (no log records for the range are available for RECOVER utility)
  - F indicates COPY FULL YES
  - I indicates COPY FULL NO
  - P indicates RECOVER TOCOPY or RECOVER TORBA (partial recovery point)
  - Q indicates QUIESCE
  - R indicates LOAD REPLACE LOG(YES)
  - S indicates LOAD REPLACE LOG(NO)
  - V indicates REPAIR VERSIONS utility
  - W indicates REORG LOG(NO)
  - X indicates REORG LOG(YES)
  - Y indicates LOAD LOG(NO)
• Z indicates LOAD LOG(YES)
• T indicates TERM UTILITY command (terminated utility)

**Sec Type**
Displays the secondary type.

**Share**
Displays the SHRLEVEL parameter on COPY (for TYPE F or I only). The values may be:
• C for Change
• R for Reference
• Blank indicates an image copy that is not described or was migrated from Version 1 Release 1 of Db2.

**DSNUM**
Data set number within the table space.

**File Seq**
The tape file sequence number of the copy.

**Dev Type**
The device type that the copy is on.

**Data Set Name or SLB profile**
The data set name for an image copy, or the SLB profile name for an SLB.

**Site**
The site name.

**Media Type**
The media type.

**PIT RBA**
The stop location (RBA) of a point-in-time recovery.

**GroupMember**
The Db2 data sharing member name of the Db2 subsystem that performed the operation. This column is blank if the Db2 subsystem was not in a Db2 data sharing environment at the time the operation was performed.

**Note:** Only three columns contain non-empty values for SLB rows: **Timestamp**, **Start RBA**, and **Data Set Name or SLB Profile**.

3. The **Show non-consistent points** field controls whether or not events that are not suitable points of consistency for recovery are shown (for example, other than quiesce events or SHRLEVEL NONE or SHRLEVEL REFERENCE image copies.) Specify an **N** to exclude non-consistent points from the display. Specify an **Y** to include non-consistent points. Press Enter. The display of recovery points will be updated based on your specification.

4. You can also filter the recovery points that are included in the display using the **Start Timestamp** and **End Timestamp** fields. You can enter a specific start or end timestamp value or use a wildcard character such as an asterisk which will display all the event recovery points. Press Enter. The list of recovery points will vary depending on the filter criteria that you specified.

5. Enter an **S** next to the event that you would like to use as a recovery point. You can only choose one recovery point. Press Enter.

6. The selected recovery point is validated and saved. Control returns to the Generate Recovery Plans panel.
Selecting a quiet time recovery point

From the Quiet Times Range Selection panel you can choose a quiet time range for a recovery point.

Db2 Recovery Expert discovers quiet time ranges by analyzing the Db2 log to determine periods of time during which there is no activity for an object or set of objects. These quiet times can then be used for a recovery point. Quiet time ranges are saved in the quiet time tables. The default quiet time tables are SYSTOOLS.ARYQTG and SYSTOOLS.ARYQT.

1. To open the Quiet Times Range Selection panel enter an S next to the Quiet Times field in the Recovery Point Selection panel. Press Enter. The Quiet Times Range Selection panel opens.

2. You can filter the recovery points that are included in the display using the Start Timestamp and End Timestamp fields. You can enter a specific start or end timestamp value or use a wild card character such as an asterisk which will display all the event recovery points. Press Enter. The list of recovery points will vary depending on the filter criteria that you specified.

3. Enter an S next to the quiet time range that you would like to use as a recovery point. You can only choose one recovery point. Press Enter.

4. The selected recovery point is validated and saved. Control returns to the Generate Recovery Plans panel.

Recovery plan generation

Db2 Recovery Expert generates Recovery plans by following several steps. The result is a JCL job that can then be run to recover database objects. See Understanding recovery plans for more information.

User story

As a database administrator, I need to be able to determine which database objects are recoverable so that I can generate a plan to recover the ones I need.

Object selection

To begin, Db2 Recovery Expert determines the set of recoverable objects. This includes not only objects explicitly specified in a profile/specification, but also any other objects required for successful recovery. For example: tablespaces for a database; indexes, views and RI-related tables for a table. So if a table is selected in a profile, all dependent indexes and views will also be recovered. Backward relations are also tracked, if necessary. For example, if a dropped tablespace to be
recovered resided in a database that is also dropped, the database is also added to the set of recovered objects and will be recreated during the recovery.

Information about all objects and relationships between objects is retrieved from the Db2 catalog, ARY SLR repository (for application profiles) or ARY LBDR repository (for LBDR specifications). Appropriate source or sources for each object are chosen automatically.

The most important recovery options affecting this step are: **Include RI related objects (Yes/No)** and **Use DB2 System Catalog Only (Yes/No)**. Each of these options disables unnecessary retrieval of any information about some type of objects. For example, if **Use DB2 System Catalog Only (Yes/No)** is set to Y, any information for objects not residing in the Db2 catalog (but residing in other repositories) will not be retrieved. By default, all objects are retrieved from all repositories.

### Resource selection

Next, Db2 Recovery Expert obtains information about the required recovery resources, including three main types: image copies, system level backups and Db2 log data sets:

- Information about available image copies is retrieved from the Db2 catalog (table SYSIBM.SYSCOPY), ARY SLR repository (for application profiles), or ARY LBDR repository (for LBDR specifications). Appropriate source for each object is chosen automatically.
- Information about system level backups is retrieved from the ARY SLB repository and can be browsed in the *Restore System Display* panel. Only backups with **Enable Obj Restore** enabled may be used for object recovery purposes.
- Information about the Db2 log datasets is retrieved from the BSDS.

The most important recovery options affecting this step are: **Action for missing recovery resources (Ignore/Warning/Error)** and **Automatic Image Copies (Yes/No)**. The first option allows you to validate the physical existence of retrieved image copies and log data sets:

- By default (Ignore), nothing is validated. Any image copy or log data set recorded in the catalog/repository table or BSDS may be used for the recovery. If a data set doesn’t exist (e.g., if it has been deleted), it will most likely cause some errors during execution of the generated recovery job.
- If Error is selected, for each retrieved data set, Db2 Recovery Expert will determine if the data set is cataloged or if it has been un-cataloged or deleted. Data sets that have been un-cataloged or deleted will be ignored during plan generation. As a result (if no appropriate alternatives are found), some recovery methods may become blocked and some objects may be shown as unrecoverable.
- If Warning is selected, all retrieved data sets are also searched in the catalog. If a data set is not found there, it will not be ignored and still may be used for the recovery but a warning message will be shown indicating that some plans may be incorrect because of missing resources.

The **Automatic Image Copies** option is the simplest way to recover dropped objects when you are using system level backups (SLBs). By default, SLBs can be used only for existing objects (plan **Restore from SLB and Recover logonly**), but it cannot be used for dropped objects. A possible solution is to create an image copy of the dropped object from any available SLB (option **I-Image Copies** on the
**Choosing recovery methods**

Possible recovery methods are determined for every object. Different recovery methods are based on different utilities and may or may not be applicable depending on conditions such as a specified recovery point, type and parameters of recovered objects, available resources and some user-specified options. A list of applicable methods is determined for every recovered object. The same list will be shown on the Recovered Objects panel (command D-Details on the corresponding line of the Recovery Plans panel).

| RCVYXPR T3R2 -------- Recovery Plans -------- 2019/01/13 12:56:12 |
| Command ==> |
| The following is a list of objects that will be recovered. Under each object is a list of the possible recovery plans and if the plan could not be generated, the primary reason it could not be generated. |
| Show objects ==> A (All/Recoverable/Unrecoverable) |
| Line commands: P - Properties |
| Creator: USERID NAME: TESTPROF SSID EAIA |
| Database ARU0000 |
| * ARYJ0001 - The object is not eligible for data recovery. |
| * Tablespace ARY0000.ARY0000 |
| Using DSNICOPY |
| ARYJ0001 - Log processing not allowed with this method. |
| Using DSNICOPY and RECOVER LOGONLY |
| ARYJ1001 - Estimated number of CPU milliseconds: 6 |
| Using DSNICOPY of IC and redo SQL |
| ARYJ1002 - Estimated number of CPU milliseconds: 5016 |
| Using DSNICOPY of IC and undo SQL |
| ARYJ0561 - Last image copy after point in time unavailable or LOG NO even |
| Using DSNICOPY of full IC and undo SQL |
| ARYJ0581 - Full image copy after point in time unavailable or LOG NO even |
| Using RECOVER TOCOPY |
| ARYJ0601 - Log processing not allowed with this method. |
| Using RECOVER |
| ARYJ1001 - Estimated number of CPU milliseconds: 6 |
| Using RECOVER to IC and undo SQL |
| ARYJ0561 - Last image copy after point in time unavailable or LOG NO even |

The message lines starting with ARYJ in this illustration show the estimated cost, if the recovery method can be used to recover the object, or if the object cannot be recovered by this method, the condition preventing recovery. This list may be filtered to show only recoverable or only unrecoverable objects. An 'unrecoverable' object is one that cannot be recovered by any method; a 'recoverable' object can be recovered by at least one method. Next, a set of recovery plans is generated for the whole set of recoverable objects. Each plan is based on a certain recovery method. For example, IBM RECOVER is a 'base' method for the Using RECOVER plan but may also include other methods for some objects. The general rules are the following:
• If a ‘base’ method of a plan is applicable to the object, it is always used;
• If a ‘base’ method of a plan is not applicable to the object, then the best (having
  the lowest estimated cost) method of the remaining applicable methods is used.
• If a ‘base’ method of a plan is not applicable to any recovered objects, this plan
  is considered ‘unusable’ and will not be shown in the list of generated plans.

The most important recovery option affecting this step is **Action for unrecoverable objects (Ignore/Create/Load/Error)**. It determines the desired action for objects that cannot be recovered by any method:

• **By default (Error)**, plan generation for the whole profile is aborted if any unrecoverable objects are found. The **Recovery Plans Error Details** panel (very similar to the **Recovered Objects** panel) is shown instead of a list of available plans. All unrecoverable objects can be found there, along with the reasons why they are not recoverable.
• **Ignore**: plans are generated for all recoverable objects. If any unrecoverable objects exist, warning message **ARYJ133W (Unrecoverable objects are skipped)** is shown. All objects, both recoverable and unrecoverable, are shown on the **Recovered Object** screen.
• **Create**: like **Ignore**, but any dropped unrecoverable objects are recreated (without any data). It helps to prevent SQL errors when unrecoverable objects have some dependent objects (e.g. view on the unrecoverable table).
• **Load**: like **Create**, but any non-dropped unrecoverable object will be made empty by the dummy LOAD REPLACE.

**Generating recovery utilities**

Finally, recovery utilities are generated for all chosen recovery methods. Different objects recovered by the same utility may be grouped into one common call. Depending on the specified number of parallel jobs, generated utilities will be grouped into one job or several jobs that can be run in parallel.

**Selecting a recovery plan**

The Recovery Plans panel displays the recovery plans that are available to recover the object or set of objects that are included in the application profile.

**Note**: If you are recovering a dropped object that is part of an implicit table space, Db2 Recovery Expert issues a warning during recovery plan generation to let you know the ZPARM parameter IMPDSDEF parameter must be set to YES before running the recovery job. This ZPARM parameter can be dynamically changed with the Db2 SET SYSPARM command.

1. The Recovery Plans panel opens automatically when you press Enter from the Generate Recovery Plans panel and at least one recovery plan can be generated.
2. The following fields are displayed in the panel:

**Creator**
Displays the ID of the user who created the profile.

**Name**
Displays the name of the profile.

**SSID**
Displays the assigned ID for the Db2 subsystem where the objects and the profile reside.

**Plan Name**
Lists the recovery plans that can be used to recover the objects in the application profile. One of the plans that is listed is called the Recovered Objects plan. This plan lists the objects that can be recovered and each of the plans that can be used successfully to recover the object. Only the **D** line command can be used with this plan.

**Cost**
Displays the recovery plan cost. Each generated recovery plan has an associated cost. The plan with the lowest cost appears first in the list of recovery plan. You can see the detailed information that is used to calculate the cost of the plan by entering a **P** next to the recovery plan.

3. Enter a **P** next to a recovery plan to view the properties of the recovery plan. From the Recovery Plan Properties panel you can see the detailed information that is used to calculate the cost of a recovery plan. The **P** command is not a valid command for the plan with the name Recovered Objects.

4. Enter a **D** next to a recovery plan to view the details of the recovery plan. From the Recovery Plan Details panel you can see each of the objects that are included in the application profile. You can also access property information for each of the objects.

5. Enter a **V** next to a recovery plan to validate the recovery plan. You might select the validate option to check that the conditions of the plan still apply. If an error is found, the Recovery Plan Validation Error panel opens. When a successful validation occurs there is a message that makes it explicitly clear that although no validation errors were discovered, the recovery plan could have unforeseen errors that would impact a successful recovery. Such errors may include missing resources or lack or authorizations to access resources. The **V** command is not a valid command for the Recovered Objects plan. For more information, see [Recovery plan validation](#).

6. Enter a **B** next to a recovery plan to build the JCL that can be used to recover the objects in the application profile according to the properties and details of the recovery plan. The **B** command is not a valid command for the plan with the name Recovered Objects.

Build job in Data set  TEST.ARY.CNTL
Use job name as member name  N (Yes/No)
or use member prefix  RCVRJB
Generate SYSAFF  N (Yes/No)

Job Cards:

 ==> //ARYJOB JOB TEST,CLASS=A,NOTIFY=&SYSUID,MSGCLASS=X
 ==> /*
 ==> //

8. Specify one or more of the following fields and then press Enter.

**Build job in Data set**
Specify the name of a PDS data set name in which the job will be built.

**Use job name as member name**
Specify Y to use generated job names as PDS member names. When
saving generated jobs as new members in a PDS, member names will
be the same as the generated job names. Any existing members with
these names will be overwritten. Specify appropriate job names to
avoid possible loss of necessary data in existing members. Specify N to
generate member names using the member prefix in the **Use member
prefix** field.

**Use member prefix**
Suffixes for all generated jobs are sequentially increasing numbers,
regardless of their membership parallel/serial groups. For example, if
the prefix is PREFIX, the generated names will be PREFIX001, PREFIX002,
PREFIX003 and so on. This field is ignored if you specify Y in the **Use
job name as member name** field.

**Generate SYSAFF**
Specify Y to include SYSAFF on the job card. Including SYSAFF on the
job card ensures that the job runs on the same system (LPAR) as the
target Db2 system to which the objects will be recovered.

9. Enter the information. Press ENTER. The information entered in this dialog is
verified. The data set name must be a PDS with a valid member name. When
all the data has been verified, the Generate Recovery Plan JCL request is
executed. The Recovery Jobs window opens.

**Recovery plan validation**
After generating a recovery plan, you can have Db2 Recovery Expert perform
additional validation by selecting the **V - Validate** line command on the **Recovery
Plans** panel. Validation has several different purposes, including verifying
resources and detecting changed plan conditions.

**Verifying resources**
During plan validation, Db2 Recovery Expert searches the catalog for all recovery
resources used by the plan (image copy and log data sets). If a data set is deleted
or un-cataloged, an error message is displayed: **ARYW010E - The data set
DSNAME is not cataloged.** This check is similar to the validation performed at the
plan generation step if **Action for unrecoverable objects** is set to **Error** or
**Warning.** Having the plan validated at the generation stage saves time; however,
this additional validation step is available as an option.
Detection of changed conditions

Some changes affecting recovered objects may occur after a plan is generated. As a result, generated plans may become obsolete and fail to recover the object correctly. Plan validation lets you detect such changes and determine if the plan is no longer relevant. Db2 Recovery Expert makes another attempt to generate the plan under the current conditions and compares the new plan with the previously generated plan. If the two plans are completely equal (that is, they include the same objects and steps in the same order), the validation is successful, and this message appears: ARYR868I - Validation was successful for plan <Plan Name>. (Note: This does not guarantee successful execution.)

If the new plan does not include exactly the same objects and steps, the old plan is reported as invalid: ARYJ033I - PLAN IS INVALID.

Some differences between old and new plans may be unimportant. For example, two objects may be recovered in the same step but in different order. In most cases, such small changes do not prevent successful recovery by the old plan, even though they are reported by plan validation. So the "Plan is invalid" message does not necessarily mean that current plan will cause problems, just that it looks at least slightly different. On the other hand, successful validation does not guarantee that the recovery job generated for the plan will be successful. There are still some conditions that can cause a problem, such as:

- Running a recovery job by a user without required authorizations
- Objects or resources modified or dropped after the validation, during the JCL generation stage

Submitting the recovery plan job

The Recovery Plan Jobs panel displays job or jobs that can be used to recover the objects in the application profiles of the application group.

If the recovery option Number of parallel jobs is greater than 1, multiple jobs are returned. A Serial job, followed by a Parallel Job Group, followed by a second Serial job will be returned. You must submit and run the serial and parallel jobs in the order that they are listed.

Note: If you are recovering a set of objects to a prior version (existing objects must be dropped and then recreated) and one of the tables has the RESTRICT ON DROP clause active, you will have to alter that table to remove this restriction before running the recovery plan job. Upon completion of the recovery plan job you can reactivate the clause for the table.

1. The Recovery Plan Jobs panel opens after you select a recovery plan from the Recovery Plans panel and specify B to build the job. An example of the panel is shown below:
The following fields are displayed:

**Plan Name**
- Lists the name of the recovery plan for one or more jobs that have been built.

**Creator**
- Displays the ID of the user who created the application group.

**Name**
- Displays the name of the application group.

**SSID**
- Displays the assigned ID for the Db2 subsystem where the objects, the application profiles, and the group information reside.

**Recovery Plan jobs**
- Lists the jobs that have been built for this plan.

1. To browse the recovery plan job JCL, enter a B next to a recovery job. Using browse, you cannot edit or save the JCL.
2. To view and edit the recovery plan job JCL, enter a V next to a recovery job. Using view you cannot save the JCL upon exit.
3. To edit the recovery plan job JCL and save your changes upon exit, enter an E next to a recovery plan.
4. To run the recovery plan job JCL, enter an S next to the recovery job. You will not see the JCL before the job is submitted. The results of the request are written to the specified data set.
   - If there are serial and parallel jobs, it is important to submit the jobs in the order that they are listed.
   - The Statuses of Jobs panel will display after submitting a recovery plan job. See "Monitoring recovery jobs and recovered objects" for more information.

**Monitoring recovery jobs and recovered objects**

After using the S command to submit a generated recovery job, the Statuses of Jobs panel displays in the ISPF client. The Statuses of Jobs panel displays status information, return codes, start timestamps, and end timestamps for every recovery job.

The following information is available from the Statuses of Jobs panel:
- Status of a recovery job
- Objects recovered by a recovery job
- Total number of recovery steps of a recovery job
- Number of finished recovery steps of a recovery job

For example, on the following screen the first job of two jobs has finished with RC = 0.

Use the line command D to see more details for any job on this panel, including recovered objects and the number of steps required for every object. The following Statuses of Objects panel will be displayed:

**Note:** At this time, web-based UI for Db2 Recovery Expert does not include this functionality. The Statuses of Jobs panel is also not available when recovery jobs are submitted manually, for example for the batch JCL generation utility.

**Building application profiles in batch**

You can build an application profile in batch that can be used to recover objects. The objects that are to be recovered can be read from a data set or supplied inline using the ARYIN DD statement.

1. Edit the sample JCL batch job: “Sample build application profile batch job” on page 357.
2. Add the following keywords to the ARYOPT DD statement to specify the application profile location and name:
   - `MACHINE LPAR-name`
   - `SSID Db2-subsystem-ssid`
   - `OWNER application-profile-creator`
   - `NAME application-profile-name`
3. Add the REPLACE keyword to the ARYOPT DD statement to specify whether duplicate objects will be replaced if they already exist in the application profile.
Specify N to add the objects to the application profile regardless of whether they already exist in the profile. Specify Y to replace the existing objects in the application profile with the objects specified in the ARYIN DD statement. The default value is N. An example of the REPLACE keyword is:

```
REPLACE Y/N
```

4. Add the DEBUG keyword to the ARYOPT DD statement to specify whether debug tracing will be enabled. Specify Y to enable debug tracing. Specify N to disable debug tracing. The default value is N. An example of the DEBUG keyword is as follows:

```
DEBUG Y/N
```

5. Add the objects that you want to include in the application profile in the ARYIN DD statement. The format for the ARYIN DD object keywords is as follows.

```
TYPE FQ-NAME INC Y/N WILDCARD Y/N
```

- **TYPE** Specifies the type of object that is to be recovered. You can specify one of the following types:
  - SG to recover stogroup objects
  - DB to recover database objects
  - TS to recover tablespace objects
  - TB to recover table objects
  - TP to recover table partition objects
  - IX to recover index objects
  - VW to recover view objects
  - SN to recover synonym objects
  - AL to recover alias objects
  - DT to recover data type objects
  - TR to recover trigger objects
  - RT to recover function objects (see note below)
  - RT to recover procedure objects (see note below)
  - SQ to recover sequence objects
  - AQ to recover sequence alias objects
  - RO to recover role objects
  - PL to recover plan objects
  - PK to recover package objects
  - VA to recover global variable objects
  - OP to recover Auto Tool Profile objects

- **FQ-NAME** - Specifies the fully qualified name of the object.
- **INC** - Specifies whether the object will be included in the application or excluded. Specify Y to include the object. Specify N to exclude the object.
- **WILDCARD** Specifies when object filtering will occur. Specify a Y to indicate that the filtering of the objects on the Db2 subsystem occurs at run time. Specify an N to indicate that the filtering will occur when the application profile is created. The default value for this field is N.

6. Specify the recovery options as keywords in the ARYROPT DD statement. The recovery options are specified in XML format. See “Specifying recovery options for application profile batch job” on page 353 for more information on the recovery options.

7. Run the job.

---

**Note:**

- **RT** to recover function objects and procedure objects are not currently supported in Db2 Recovery Expert for z/OS. They are not supported in the recovery options.

---

352  DB2 Recovery Expert for z/OS
8. After the utility has finished successfully the application profile is included in Application Profiles panel in ISPF client with the correct list of objects included in the profile.

The following are additional examples of the ARYIN DD object keywords:

TS ARYDB012,ARYTESTR INC N WILDCARD N
TB ARYSCH01,ARY% INC Y WILDCARD Y

For the function and procedure object types, the object mask uses a different syntax, as shown in the following examples.

* Function:
  
  RT ARYSCH01,ARYFUNC (F) INC Y WILDCARD N

* Procedure:
  
  RT ARYSCH01,ARYPROC (P) INC Y WILDCARD N

**Specifying recovery options for application profile batch job**

The recovery options for the application profile batch job are specified as keywords in the ARYROPT DD statement. The recovery options are specified in XML format. You do not need to include any recovery option statements in the JCL stream unless you want to change the default values.

<recovery-options>

  <options>
    <!-- optional -->
    
    <!-- RECOVER Recovery Options -->
    
    <recover-parallel>integer</recover-parallel>
    <!-- Specifies the maximum number of jobs in a parallel job group. Valid values are 0 - 99. Default is 0. -->
    
    <recover-concurrent-max>integer</recover-concurrent-max>
    <!-- Specifies the maximum number of jobs that the agent can process in parallel. Valid values are 1 to 99. Default is 1 -->
    
    <recover-tape-units>integer</recover-tape-units>
    <!-- Specifies the number of tape drives to allocate for the recovery. Valid values are 1 to 99. Default is 0 specifying that Db2 will determine the number of tape drives to allocate. -->
    
    <recover-site>blank | L | R</recover-site>
    <!-- Specifies the site from which RECOVER should use image copies -->
    
    <recover-changed-only>Y | N</recover-changed-only>
    <!-- Y = Recover changed objects only -->
    
    <copy-scope>N | T | I</copy-scope>
    <!-- N = Do not create image copies after recovery -->
    
    <copy-option>Y | N</copy-option>
    <!-- Y = Create all objects -->
    
    <copy-mode>N | T | I</copy-mode>
    <!-- N = Restore all objects -->
    
    <copy-error-option>N | T | I</copy-error-option>
    <!-- N = Do not create an image copy after recovery -->
  
  </options>

</recovery-options>

Chapter 11. Recovering database objects 353
<copy-local-primary>Y | N</copy-local-primary>
<-- Y = Create local primary image copy, N = Do not create -->
<-- local primary image copy. The default value is N. -->

TS DB9.TS9 INC Y WILDCARD N
/*
//ARYRPOPT DD DISP=SHR,DSN=PDUSER.JCL(RECOPT)
//*/
```

Building log based specifications in batch

You can build a log based specification in batch, which can be used to recover dropped objects. The objects to be recovered can be read from a dataset or supplied inline using the ARYIN DD statement.
Building a log based specification batch job uses the same syntax used in building an application profile batch job. However, there are several fields specific to a log based specification.

1. Edit the sample JCL job.
2. Add the following keywords to the ARYOPT DD statement to specify the log based specification location and name:
   ```
   MACHINE LPAR-name
   SSID Db2-subsystem-ssid
   OWNER specification-creator
   NAME specification-name
   ```
3. Add the REPLACE keyword to the ARYOPT DD statement to specify whether duplicate objects will be replaced if they already exist in the specification. Specify N to add the objects to the application regardless of whether they already exist in the specification. Specify Y to replace the existing objects in the specification with the objects specified in the ARYIN DD statement. The default value is N. An example of the REPLACE keyword is:
   ```
   REPLACE Y
   ```
4. Add the DEBUG keyword to the ARYOPT DD statement to specify whether debug tracing will be enabled. Specify Y to enable debug tracing. Specify N to disable debug tracing. The default value is N. An example of the DEBUG keyword is as follows:
   ```
   DEBUG N
   ```
5. Add the objects that you want to include in the specification in the ARYIN DD statement. The format for the ARYIN DD object keywords is as follows.
   ```
   TYPE FQ-NAME INC Y/N WILDCARD Y/N
   ```
   - **TYPE** Specifies the type of object that is to be recovered; in the example JCL batch job, the TS type is shown. You can specify one of the following types (selecting ALL object types is not supported in batch):
     - SG to recover storgroup objects
     - DB to recover database objects
     - TS to recover tablespace objects
     - TB to recover table objects
     - TP to recover table partition objects
     - IX to recover index objects
     - VW to recover view objects
     - SN to recover synonym objects
     - AL to recover alias objects
     - DT to recover data type objects
     - TR to recover trigger objects
     - RT to recover function objects (see note below)
     - RT to recover procedure objects (see note below)
     - SQ to recover sequence objects
     - AQ to recover sequence alias objects
     - RO to recover role objects
     - PL to recover plan objects
     - PK to recover package objects
     - VA to recover global variable objects
     - OP to recover Auto Tool objects
   - **FQ-NAME** - Specifies the fully qualified name of the object.
• INC - Specifies whether the object will be included in the application or excluded. Specify Y to include the object. Specify N to exclude the object.

• WILDCARD Specifies when object filtering will occur. Specify a Y to indicate that the filtering of the objects on the Db2 subsystem occurs at run time. Specify an N to indicate that the filtering will occur when the application is created. The default value for this field is N.

6. Specify the recovery options as keywords in the ARYRPOPT DD statement. The recovery options are specified in XML format. See "Specifying recovery options for application profile batch job" on page 353 for more information on the recovery options. They work the same way in a log based specification as in an application profile.

7. Specify the options specific to log based recovery in the ARYLBDRO DD statement, as in this example:

```
//ARYLBDR0 DD *
<lbdr>
  <scan-start-timestamp> 2019-08-14-06.32.00.000000 </scan-start-timestamp>
  <scan-end-timestamp> 2019-08-14-06.32.25.000000 </scan-end-timestamp>
  <use-syslgrnx> 0 </use-syslgrnx>
</lbdr>
/*
```

Where `scan-start-timestamp` and `scan-end-timestamp` specify scan range, `use-syslgrnx` specifies whether to use SYSLGRNX directory tables or not.

If you want to avoid re-scanning logs, use the following syntax, where `lbdr-id` is the ID of the log scan:

```
//ARYLBDR0 DD *
<lbdr>
  <lbdr-id> 135 </lbdr-id>
</lbdr>
/*
```

Building LBDR specification in the batch will submit a subjob for log scanning. You can use the following JCL code to define values for this job.

Job cards:

```
//ARYJCARD DD *
//LBDRSCAN JOB 'SAMPLE',CLASS=A,MSGCLASS=X,
//      NOTIFY=&SYSUID,REGION=0M
/*JOBPARM S=RS27
/*
```

Skeleton library:

```
//ARYSLIB DD DISP=SHR,DSN=RSQA.ARY320.IBMTAPE.SARYSLIB
```

Load library:

```
//ARYLOAD DD DISP=SHR,DSN=RSQA.ARY320.IBMTAPE.SARYLOAD
```

8. Run the job.

9. After the utility has finished successfully the log based specification is included in the **Ad-hoc Specification Display** panel in ISPF.

The following are additional examples of the ARYIN DD object keywords, using the TS and TB object types:

```
TS ARYDB012.ARYTESTR INC N WILDCARD N
TB ARYSCH01.ARY% INC Y WILDCARD Y
```

For the function and procedure object types, the object mask uses a different syntax, as shown in the following examples.

- Function:
Sample build log based specification batch job

The following is a sample of the build log based specification in batch job.

```plaintext
//ARYOPGEN JOB , 'SAMPLE', CLASS=A, MSGCLASS=X,
//NOTIFY=&SYSUID, REGION=0M
/*JOBPARM S=RS27
/*
//STEP01 EXEC PGM=ARYJOGEN
//STEPLIB DD DISP=SHR, DSN=RSQA.ARY320.IBMTAPE.SARYLOAD
//DB2PARMS DD DISP=SHR, DSN=RSQA.ARY320.IBMTAPE.CONTROL

//ARYSLIB DD DISP=SHR, DSN=RSQA.ARY320.IBMTAPE.SARYSLIB
```

Building recovery plan batch jobs by editing JCL sample

You can build a job in batch to generate the recovery plans that can be used to recover the objects in an application profile. You must create the application profile with the required objects and recovery options by using the ISPF interface or the batch utility before running this utility. After the utility has finished, the generated jobs are placed in the data set you specified in the option ARYJCLO.

1. Edit the sample JCL job.

2. Add the following keywords to the ARYOPT DD statement to specify location and name of the application profile for which you will build the recovery plan job.

   ```plaintext
   MACHINE LPAR-name
   SSID Db2-subsystem-ssid
   OWNER application-profile-creator
   NAME application-profile-name
   ```
3. Add the keyword TS or LRSN to the ARYOPT DD statement to specify the recovery point. Specify TS to indicate that the recovery point will be a timestamp. Specify LRSN to indicate that the recovery point will be LRSN. If neither TS or LRSN is specified, the recovery point in time (PIT) will be to current.

4. Add one or more PLAN keywords to the ARYOPT DD statement to specify a list of recovery plans. This keyword is optional. If PLAN is not specified only the recovery plan RECOVER will be generated. Each PLAN keyword is on a separate line and should be specified in the order of preference for use. The first matched plan encountered will be used. If PIT=CURRENT then the PLAN option is ignored and only the RECOVER plan is generated. If the specified plan does not exist, the appropriate error message with the list of available plans is issued. An example of a PLAN keyword:

   PLAN PLAN-REDIRECTED-RECOVERY

This following table lists the recovery plans that can used in the PLAN keyword.

<table>
<thead>
<tr>
<th>Recovery plan</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PLAN-DSN1COPY</td>
<td>Using DSN1COPY</td>
</tr>
<tr>
<td>PLAN-DSN1COPY-AND-LOGONLY</td>
<td>Using DSN1COPY and RECOVER LOGONLY</td>
</tr>
<tr>
<td>PLAN-DSN1COPY-OF-IC-AND-REDO</td>
<td>Using DSN1COPY of IC and redo SQL</td>
</tr>
<tr>
<td>PLAN-DSN1COPY-OF-IC-AND-UNDO</td>
<td>Using DSN1COPY of IC and undo SQL</td>
</tr>
<tr>
<td>PLAN-DSN1COPY-OF-FULLIC-AND-UNDO</td>
<td>Using DSN1COPY of full IC and undo SQL</td>
</tr>
<tr>
<td>PLAN-RECOVER-TOCOPY</td>
<td>Using RECOVER TOCOPY</td>
</tr>
<tr>
<td>PLAN-RECOVER</td>
<td>Using RECOVER</td>
</tr>
<tr>
<td>PLAN-RECOVER-TO-IC-AND-UNDO</td>
<td>Using RECOVER to IC and undo SQL</td>
</tr>
<tr>
<td>PLAN-RECOVER-TO-FULLIC-AND-UNDO</td>
<td>Using RECOVER to full IC and undo SQL</td>
</tr>
<tr>
<td>PLAN-LOAD</td>
<td>Using LOAD</td>
</tr>
<tr>
<td>PLAN-LOAD-FULLIC-AND-REDO</td>
<td>Using LOAD from full IC and redo SQL</td>
</tr>
<tr>
<td>PLAN-LOAD-FULLIC-AND-UNDO</td>
<td>Using LOAD from full IC and undo SQL</td>
</tr>
<tr>
<td>PLAN-UNDO-SQL</td>
<td>Using undo SQL</td>
</tr>
<tr>
<td>PLAN-SLB</td>
<td>Using Restore from System Level Backup</td>
</tr>
<tr>
<td>PLAN-SLB-AND-LOGONLY</td>
<td>Using Restore from System Level Backup and RECOVER LOGONLY</td>
</tr>
<tr>
<td>PLAN-RECOVER-WITH-BACKOUT</td>
<td>Using RECOVER with BACKOUT</td>
</tr>
<tr>
<td>PLAN-DDLONLY</td>
<td>Using DDL only</td>
</tr>
<tr>
<td>PLAN-REDIRECTED-RECOVERY</td>
<td>Recover to alternate object and Log Apply</td>
</tr>
<tr>
<td>PLAN-ADVANCED-RECOVER</td>
<td>Standard recovery or dropped object recovery</td>
</tr>
</tbody>
</table>

   Note: This plan has fewer limitations than Undo/Redo SQL plans.

5. Add the JOBPREFIX keyword to the ARYOPT DD statement to specify a prefix that will be added to the job name for generated JCL (up to 4 characters). By default the prefix ARYJ will be used. An example of the JOBPREFIX keyword:

   JOBPREFIX RCV
6. Add the ARJCLO keyword to the ARJOPT DD statement to specify the partitioned data set where the generated jobs are saved. This partitioned data set file must be created before the job is run. An example of the ARJCLO keyword:

```
ARJCLO PD.USER
```

7. You must add job card information as a keyword to the ARJCARD DD statement. An example of the job card keyword is:

```
//ARYJOB JOB ,'Db2 RECOVERY EXPERT',MSGCLASS=H,
// REGION=0M,NOTIFY=&SYSUID
/*JOBPARM SYSAFF=RS27
```

8. Run the job.

9. After the job is run, the generated jobs will be in the partitioned data set that you specified in the ARJCLO keyword.

## Sample Build Recovery Plan in Batch job

The following is a sample of the Build Application Profile in Batch job.

```
//ARYRPGEN JOB PDUSER,CLASS=A,NOTIFY=&SYSUID,
// MSGCLASS=X,REGION=0M
/*JOBPARM SYSAFF=RS27
//*******************************************************************************/
// SET RGN=0M
// SET TME=1440
// SET PRM=’RPTOPTS(OFF),POSIX(ON),ENVAR(_CEE_ENVFILE=DD:ENV)’

//ARYSBSSD DD DISP=SHR,DSN=RSQA.ARY320.IBMTAPE.SYSBACK.SSIDS
```

362 DB2 Recovery Expert for z/OS
Building recovery plan batch jobs in ISPF

You can build a batch job interactively, using ISPF panels to generate recovery plans that can be used to recover the objects in an application profile. You must create the application profile with the required objects and recovery options by using the ISPF interface or the batch utility before performing the steps below. The generated jobs are placed in the data set you specified in the option ARYJCLO.

1. From the main menu, select Application Operations.
2. Select Application Profiles.
3. Select an Application Profile by filling in the fields in the Enter Application Profile Selection Criteria panel.
4. From the Application Profile Display panel, select the profile you want to use as the basis for a recovery plan. Enter P next to the profile name, then press ENTER.
5. At the Generate Recovery Plans panel, specify B for Generation Method, to generate the plan via ISPF instead of by editing the sample JCL. This is a useful option if you have application profiles with large numbers of objects and you want to avoid errors caused by timeouts or lack of memory. It also lets you generate recovery plans in parallel. For more information on the Generate Recovery Plans panel, see “Generating object recovery plans” on page 320. For information on redirected recovery, see “Performing redirected recovery” on page 328. When you have completed the settings on the Generate Recovery Plans panel, press ENTER.
6. If you set the Redirected Recovery field to N, the Batch Plans Generation Options panel lets you specify one or more recovery plans to include in your batch job. Enter S next to each plan you want to include. You can use the ALL, CLEAR, and DEFAULT commands to select all plans, clear all selections, or choose a default group of plans to include in your recovery job.

Note: If the Redirected Recovery option was set to Y, then the only plan generated in the JCL will be PLAN-REDIRECTED-RECOVERY, and the Batch Plans Generation Options panel is not displayed. When you are not performing a redirected recovery, there may be more than one plan added to the generated JCL job for each plan you select in the panel. For example, selecting RECOVER will generate PLAN-RECOVER and PLAN-RECOVER-TOCOPY entries. For more information on these options, see “Understanding recovery plans” on page 535. Fill in the Batch Plans Generation Options panel and press ENTER.
7. After the job is run, the generated jobs will be in the partitioned data set that you specified in the ARYJCLO keyword.

Build Jobs Options panel

The Build Jobs Options panel lets you specify options for batch jobs.

From this panel, you specify the data set, member, and job cards for a recovery batch job. There are two sections on this panel:
• Options for the batch utility
• Options for the recovery JCL

```
RCVYXPRT V3R2          Build Jobs Options          2019/09/27  03:50:07
Command ==>

Creator: USERID Name: TESTPROF SSID: EA1A

Options for the batch utility
Build job in Data set USERID.ARY.CNTL
   Member   ARYMEM
Job Cards:
===> //ARYJOB JOB USERID,CLASS=A,MSGCLASS=X,MSGLEVEL=(1,1),
===>   // USER=&SYSUID,NOTIFY=&SYSUID,REGION=0M
===> //*
===> /*
Options for the recovery JCL
Build job in Data set USERID.ARY.CNTL
Use job name as member name Y (Yes/No)
   Generate SYSAFF N (Yes/No)
Job Cards:
===> //ARYJOB JOB USERID,CLASS=A,MSGCLASS=X,MSGLEVEL=(1,1),
===>   // USER=&SYSUID,NOTIFY=&SYSUID,REGION=0M
===> //*
===> /*
```

Options for the batch utility

The Options for the batch utility section specifies the data set, member and job cards for a batch job. This set of options is used by the ISPF client for a JCL job that runs the batch utility.

Fields

These fields let you specify the data set, member, and job cards:

• In the Build job in Data set field, specify the fully qualified data set name where you want to save the generated job. This data set must exist and can be sequential or a partitioned data set (PDS).
• If the data set is a PDS, enter a member name in the Member field. If the member does not exist, Db2 Recovery Expert creates it.
• In the (several) lines of Job Cards, specify the job card information.

Options for the recovery JCL

The Options for the recovery JCL section specifies the data set, member name and prefix, and job cards, and lets you generate SYSAFF on the job card. This set of options is used by the batch utility (JOBPREFIX, ARYJCLO and USEMEMBER statements) for generated recovery JCL jobs.

Fields

• Build job in Data set: Specify the name of a PDS data set name in which the job will be built.
• Use job name as member name: Specify Y to use generated job names as PDS member names. When saving generated jobs as new members in a PDS, member names will be the same as the generated job names. Any existing members with these names will be overwritten. Specify appropriate job names to avoid possible loss of necessary data in existing members. Specify N to generate member names using the member prefix in the Use member prefix field.
• Use member prefix: Specifies the prefix that will be used with a unique, automatically generated 3-digit suffix to create the new member name. The
suffix consists of two parts: group number (1 digit, counting from 0); and job number in a group (two digits). For example, generated names may be:

- PREFX001 - 1st job of group 0
- PREFX101 - 1st job of group 1
- PREFX102 - 2nd job of group 1
- PREFX201 - 1st job of group 2 and so on.

Group number may be used to submit jobs manually in the correct order, because submitting the whole group automatically is not supported in batch. This field is ignored if you specify Y in the Use job name as member name field.

- **Generate SYSAFF**: Specify Y to include SYSAFF on the job card. Including SYSAFF on the job card ensures that the job runs on the same system (LPAR) as the target Db2 system to which the objects will be recovered.
- In the (several) lines of Job Cards, specify the job card information.
Chapter 12. Recovering Db2 objects and IMS applications

The coordinated application recovery feature of Db2 Recovery Expert and IMS Recovery Expert helps you to recover the Db2 objects and IMS databases that are used in an application to the same consistent point in time.

Consistent in this case means that there are no updates or transactions in-flight to any object or database in the application. Identifying times where all the Db2 objects and IMS databases used by the application are in a consistent state can be a difficult task especially in a high availability environment.

Coordinated application recovery streamlines the process of recovering applications that use both Db2 objects and IMS databases. You can use the coordinated application recovery feature to analyze the logs in both Db2 and IMS to find quiet times for the objects and databases in an application; provide the times when the objects and databases are consistent across both IMS and Db2; and build the job that can be used to recover the application.

Coordinated application recovery involves the following tasks:

- Connect Db2 Recovery Expert and IMS Recovery Expert.
- Use Db2 Recovery Expert to create an application profile that can be used to recover the Db2 objects that are used in the application.
- Use IMS Recovery Expert to create a job profile that can be used to recover the IMS databases that are used in the application.
- Use either Db2 Recovery Expert or IMS Recovery Expert to create a coordinated recovery profile that references the Db2 application profile and the IMS job profile.
- Associate the Db2 application profile with the coordinated recovery profile.
- Associate the IMS job profile with the coordinated recovery profile.
- Run a log analysis job to discover intersecting quiet times for the Db2 objects and the IMS applications.
- Build the coordinated recovery job.

Connecting Db2 Recovery Expert and IMS Recovery Expert

For each coordinated recovery profile that you build, you can specify that Db2 Recovery Expert connect to a default or a specific instance of IMS Recovery Expert.

Db2 Recovery Expert links to IMS Recovery Expert by using the CLIST information that is specified in the user settings option.

A default value for the CLIST connection information to IMS Recovery Expert is specified during customization. If you want Db2 Recovery Expert to connect to a different instance of IMS Recovery Expert, you must specify overriding CLIST information to use for the current session.

1. Specify 0 on the Db2 Recovery Expert main menu and press Enter. From the Administration Menu panel specify 4 in the command line. The IMS CLIST Information panel opens.
2. In the **CLIST library name** field, specify the name of the library that contains the CLIST member for the specific instance of IMS Recovery Expert.

3. In the **CLIST member name** field, specify the CLIST member name for the instance of IMS Recovery Expert.

4. Press Enter. For the duration of the current session, Db2 Recovery Expert uses the specified CLIST information to connect to IMS Recovery Expert.

---

### Setting up and managing the coordinated recovery process

From the Coordinated Recovery Profile Display panel you are able to perform all the functions that apply to coordinated application recovery.

Db2 Recovery Expert and IMS Recovery Expert use a coordinated recovery profile to identify the Db2 objects and IMS databases that need to be recovered. You identify the Db2 objects that need to be recovered by associating a Db2 application profile to the coordinated recovery profile and you identify the IMS databases that need to be recovered by associating an IMS job profile to the coordinated recovery profile.

The coordinated recovery profile information is saved into a VSAM repository (CPROFILE) that is shared between both products regardless of whether they share the rest of the repository data sets. Each coordinated recovery profile can access the CPROFILE data set to read and update coordinated recovery profile information. The data set is allocated in both IMS and Db2 CLISTs and in the Db2 agents during customization.

The first step in the coordinated recovery process is to open the Coordinated Recovery Profile Display panel. All the coordinated recovery profiles that have been created are listed. From the Coordinated Recovery Profile Display panel you can perform the following functions:

- Update coordinated recovery profiles
- Create coordinated recovery profiles
- View existing coordinated recovery profiles
- Delete coordinated recovery profiles
- Rename coordinated recovery profiles
- Produce a report of Db2 object and IMS job quiet times
- Build a coordinated recovery job

   Specify 3 for Coordinated Application Profiles and press Enter. The Enter Coordinated Recovery Profile Selection Criteria panel opens.
2. You use the Enter Coordinated Recovery Profile Selection Criteria panel to identify the profiles that will be listed on the Coordinated Recovery Profile Display panel. You can list all the profiles by using wildcard characters in the **Profile Like** and **Creator Like** fields. The asterisk (*) wildcard character returns all the profiles for the field where it is specified. You can use an asterisk (*) for one or all fields. To limit the profiles that are listed, enter a specific profile name or profile creator name in the **Profile Like**, and **Creator Like** fields. Press Enter. The Coordinated Recovery Profile Display panel opens. The following panel shows the Coordinated Recovery Profile Display panel is displayed when you access it for the first time:

```
RCVYXPRV V3R2 ------ Coordinated Recovery Profile Display ------ 2019/01/13 12:56:12
Option ====> Scroll ====
Line Commands: U - Update  C - Create  V - View  D - Delete
                  R - Rename  B - Build Recov Job  Q - Quiet Time Report

Profile Like *
Creator Like *

-- Row 1 of 1  >

Cmd Name     Creator     Updt
C  Press Enter to Create Profile

***************************************************************************** Bottom of Data ****************************************************************************

***************************************************************************** ARY031I - No Profiles were found that match your selection criteria. |
          Press enter to create a new profile or change the selection criteria. |
*****************************************************************************
```

3. You can use the **UP** and **DOWN** commands (PF7 and PF8) to scroll through the list when there are more profiles than can be displayed on one panel. The following fields are displayed on the panel:

**Profile Like**

This field displays the coordinated recovery profile name or mask that you entered on the Enter Coordinated Recovery Profile Selection Criteria panel. You can change the name or mask, press Enter, and the list of coordinated recovery profiles is updated based on the criteria that you specified.

**Creator Like**

This field displays the coordinated recovery profile creator name or mask that you entered on the Enter Coordinated Recovery Profile Selection Criteria panel. You can change the name or mask, press Enter, and the list of coordinated recovery profiles is updated based on the criteria that you specified.
Row x of y
Displays the current row and the total number of rows in the profile list. Adjacent to this field is a scroll indicator: > indicates scroll right for more data; < > indicates scroll left or right for data; < indicates scroll left for more data. A plus sign (+) indicates scroll down for more data; a minus sign (-) indicates scroll up for more data.

Cmd
The Cmd line next to each profile allows you to use the following line commands:
• U to update a coordinated recovery profile
• C to create a coordinated recovery profile
• V to view a coordinated recovery profile
• D to delete a coordinated recovery profile
• R to rename a coordinated recovery profile
• B to build a coordinated recovery job
• Q to run a log analysis job to discover Db2 object and IMS application quiet times

Name
The name of the coordinated recovery profile.

Creator
The user ID of the person who created the coordinated recovery profile.

Updt
This column indicates how users other than the profile creator may use the profile.

U(Update)
Allows other users to update the profile.

V(view)
Allows other users to view but not update the profile.

N(no access)
Prevents other users from viewing or updating the profile.

Description
An optional description that may have been entered when the coordinated recovery profile was created.

Last Upd Userid
The user ID of the person who last updated the coordinated recovery profile.

Last Updated Timestamp
The time that the coordinated recovery profile was last updated.

Created Userid
The user ID of the person who created the coordinated recovery profile.

Created Timestamp
The time that the coordinated recovery profile was created.

4. Enter one of the following commands in the Cmd line next to a profile:
• To create a coordinated recovery profile, specify C in any Cmd line and press Enter. If no profiles are listed, you can create a profile by pressing Enter. The Create Coordinated Recovery Profile panel opens. From this panel you name the coordinated recovery profile, associate a Db2 application profile, and associate an IMS job profile. See “Creating coordinated recovery profiles” on page 371 for more information.
To update a coordinated recovery profile, specify U in the **Cmd** line next to the profile that you want to update and press Enter. The Update Application Profile panel opens. From this panel you can add a Db2 application profile or an IMS job profile if you have not done so, or you can change the Db2 application profile or IMS job profile that have been associated with the coordinated recovery profile. See “Updating the coordinated recovery profile” on page 373 for more information on updating coordinated recovery profiles.

To view the details of a coordinated recovery profile, specify V in the **Cmd** line next to the profile that you want to view and press Enter. The View Coordinated Recovery Profile panel opens. You can use this line command to view one of your own profiles or one created by another user if the profile has a share option of view or update. See “Viewing a coordinated recovery profile” on page 375 for more information on viewing coordinated recovery profiles.

To delete a coordinated recovery profile, specify D in the **Cmd** line next to the profile that you want to delete and press Enter. You can use this line command to delete one of your own coordinated recovery profiles or one created by another user if the profile has a share option of update. See “Deleting a coordinated recovery profile” on page 376 for more information on deleting coordinated recovery profiles.

To rename a coordinated recovery profile, specify R in the **Cmd** line next to the profile that you want to rename and press Enter. The Rename Coordinated Recovery Profile panel opens. You can use this line command to change the name or the description in one of your own coordinated recovery profiles or one created by another user if the profile has a share option of update. See “Renaming a coordinated recovery profile” on page 376 for more information on renaming coordinated recovery profiles.

To produce a quiet time analysis for the coordinated recovery profile, specify Q in the **Cmd** line next to the profile and press Enter. The Log Analysis panel opens. See “Performing quiet time analysis for a coordinated recovery” on page 377 for more information on log analysis.

To build the coordinated recovery jobs, specify B in the **Cmd** line next to the profile and press Enter. The Recovery Point Selection panel opens. See “Building the coordinated recovery jobs” on page 379 for more information.

---

**Creating coordinated recovery profiles**

You create a coordinated recovery profile from the Coordinated Recovery Profile Display panel.

After creating the coordinated recovery profile, you must associate a Db2 application profile and an IMS job profile to provide the information necessary to recover the Db2 objects and IMS databases that are used within the application that you are recovering.

1. From the Coordinated Recovery Profile Display panel specify a C in any **Cmd** line and press Enter. The following panel is displayed:
2. The **Creator** field is automatically filled with your user ID as the profile creator. To create the profile with a different user ID, type the new ID in this field.

3. In the **Profile Name** field, specify a unique name for the coordinated recovery profile.

4. In the **Description** field, specify a description of the coordinated recovery profile.

5. In the **Share Option** field, specify what type of access other users will have to this profile. Specify **U** to allow other users to update the profile. Specify **V** to allow other users to view but not update the profile. Specify **N** to deny other users access to the profile.

6. Press Enter. The Add Profiles to Coordinated Profile panel opens. From this panel you associate the Db2 application profile and the IMS job profile with the coordinated recovery profile.

---

**Associating a Db2 and an IMS profile to the coordinated recovery profile**

You must associate one Db2 application profile and one IMS job profile with the coordinated recovery profile.

The Db2 application profile that you associate with the coordinated recovery profile contains the information required to recover the Db2 objects used by the application. The IMS job profile that you associate with the coordinated recovery profile contains the information required to recover the IMS databases used by the application. You can associate only one Db2 application profile and one IMS job profile with a coordinated recovery profile.

**Note:** Once a Db2 application profile or IMS job profile is associated with a coordinated recovery profile, it cannot be associated with another coordinated recovery profile.

1. The Add Profiles to Coordinated Profile panel opens automatically as the second step of creating a coordinated recovery profile. The Add Profiles to Coordinated Profile panel also opens when you specify **A** in the command line next to a coordinated recovery profile from the Update Coordinated Recovery Profile panel.
2. To associate a Db2 application profile with the coordinated recovery profile, specify Y in the Add Db2 profile field. If you have already associated a Db2 application profile to this coordinated recovery profile, this field is not available. Press Enter. The Enter Application Profile Selection Criteria panel opens.
   a. Specify the SSID location for the Db2 system where the objects reside.
   b. Use the Name Like and the Creator Like fields to filter the objects that are listed on the Application Selection Profile panel. Press Enter.
   c. The Application Profile Selection panel opens. From this panel select the Db2 application profile that you want to associate with the coordinated recovery profile. From this panel you can also create, delete, update, rename and view Db2 application profiles. See “Displaying profiles and specifications” on page 290 for more information on how to perform these functions. Press Enter.
   d. Because you can add only one type of profile at a time to the coordinated recovery profile, after adding a Db2 application profile control returns to the Update Coordinated Recovery Profile panel. If you have not associated the IMS job profile, you start the process from the Update Coordinated Recovery Profile panel.

3. To associate an IMS job profile with the coordinated recovery profile, specify Y in the Add IMS profile field. If you have already added an IMS object recovery profile to this coordinated recovery profile, this field is not available. Press Enter. The Enter Applications Profile Like to Display panel opens.
   a. Use the Profile Like, Creator Like and the SSID Like fields to filter the objects that are listed on the Application Profile Selection panel. Press Enter.
   b. The Application Profile Selection panel opens. From this panel select the IMS job profile that you want to associate with the coordinated recovery profile. From this panel you can also create, delete, update, rename and view IMS application profiles. See the section on working with IMS job profiles in the IMS Recovery Expert for z/OS User Guide for more information. Press Enter.
   c. Because you can only add one type of profile at a time to the coordinated recovery profile, after adding an IMS profile control returns to the Update Coordinated Recovery Profile panel. If you have not associated the Db2 application profile, you start the process from the Update Coordinated Recovery Profile panel.

4. Press F3 to return to the Coordinated Recovery Profile Display panel.

---

### Updating the coordinated recovery profile

From the Update Coordinated Recovery Profile panel you can associate a Db2 application profile or IMS job profile to the coordinated recovery profile if one has not already been assigned. From this panel you can also change the Db2 application profile or IMS job profile that has been selected, or disassociate either of the profiles from the coordinated recovery profile.
1. The Update Coordinated Recovery Profile panel opens automatically after you associate either a Db2 application profile or an IMS job profile. You can also open the Update Coordinated Recovery Profile by specifying a U in the Cmd line next to a coordinated recovery profile that is listed in the Coordinated Recovery Profile Display panel.

2. The fields that are displayed for each profile are:
   
   **Creator**
   Specifies the user ID of the person who created the coordinated recovery profile.

   **Name**
   Specifies the name of the coordinated recovery profile.

   **Type**
   Identifies whether the profile is an IMS job profile or a Db2 application profile.

   **SSID**
   The Db2 or IMS subsystem ID for which the IMS job or Db2 application profile was created.

   **Profile Name**
   Specifies the name of the IMS job profile or the Db2 application profile.

   **Profile Creator**
   Specifies the user ID of the person who created the IMS job profile or the Db2 application profile.

   **LPAR**
   Identifies the LPAR that is associated with the IMS or Db2 subsystem.

3. You can modify the **Share option** for the coordinated recovery profile. The current value is displayed. Changing the value to **Upd** allows all users to update the profile. Changing the value to **View** allows all users to view but not update the profile. Changing the value to **N** prevents users other than yourself to update or view the profile.

4. Specify A in the Cmd line to add either a Db2 application profile or an IMS job profile. Press Enter. The Add Profiles to Coordinated Profile panel opens. Follow the process of adding a Db2 application profile or an IMS job profile. When all selections are made, control is returned to the Update Application Profile panel.

5. Specify D in the Cmd line of the Db2 application profile or an IMS job profile that you want to disassociate from the coordinated recovery profile. Press Enter. TheDb2 application profile or an IMS job profile is disassociated from the coordinated recovery profile. The delete command only disassociates the Db2 application profile or an IMS job profile from the coordinated recovery profile,
it does not delete the profile from the repository. The disassociated profile will
still be available from either the Db2 application profile or IMS job profile
display.

6. To change the Db2 application profile or IMS job profile, first delete the profile
from the coordinated recovery profile, then add the new profile.
7. Press F3 to return to the Coordinated Recovery Profile Display panel.

Viewing a coordinated recovery profile

From the View Coordinated Recovery Profile panel you can view the IMS job
profile and the Db2 application profile that are associated with a coordinated
recovery profile. You can view coordinated recovery profiles that you created,
regardless of the share option. You can also view a profile created by another user
if the profile has a share option of view or update.

1. From the Coordinated Recovery Profile Display panel specify a V in the Cmd
line next to the profile that you want to view and press Enter. The View
Coordinated Recovery Profile panel opens.

2. The fields that are displayed for each application profile listed are:

Creator
    Specifies the user ID of the person who created the coordinated
    recovery profile.

Name
    Specifies the name of the coordinated recovery profile.

Share Option
    The current value of the share option is displayed. The value of U
    specifies that all users can update the profile. A value of V specifies
    that all users can view but not update the profile. A value of N
    specifies that no user other than you as the creator can update or view
    the profile.

Description
    Displays a description of the profile that was added when the profile
    was created.

Type
    Identifies whether the profile is an IMS job profile or a Db2 application
    profile.

SSID
    The Db2 or IMS subsystem ID for which the IMS job or Db2
    application profile was created.

Profile Name
    Specifies the name of the IMS job profile or the Db2 application profile.
Profile Creator
Specifies the user ID of the person who created the IMS job profile or the Db2 application profile.

LPAR Identifies the LPAR that is associated with the IMS or Db2 subsystem.

3. Press F3 to return to the Coordinated Recovery Profile Display panel.

Renaming a coordinated recovery profile
You can rename coordinated recovery profiles that you created, regardless of the share option. You can also rename a profile that was created by another user if the profile has a share option of update.
1. From the Coordinated Recovery Profile Display panel specify R in the Cmd line next to the coordinated recovery profile that you want to rename. The Rename Coordinated Recovery Profile opens.

```
Existing Profile:

Creator TUSER
Profile Name TEST2
Description

New Profile:

Creator TUSER
Profile Name TEST2
Description
```

2. The New Profile Creator field is automatically filled with the user ID that created the profile. If you have been granted permission, you can change the user ID in the New Profile Creator field. Permission to change the creator user ID is granted using the ADMIN_USERID parameter in the SYSPARM library.
3. To rename the profile, specify a new name in the New Profile Name field.
4. To change the profile description, specify a new description in the New Profile Description field.
5. Press Enter. The profile is renamed. Control is returned to Coordinated Recovery Profile Display panel.
6. To cancel the rename, press PF3 on the Rename Coordinated Recovery Profile panel and return to the Coordinated Recovery Profile Display panel.

Deleting a coordinated recovery profile
You can delete coordinated recovery profiles that you created regardless of the share option. You can also delete a coordinated recovery profile that was created by another user if the profile has a share option of update.

1. From the Coordinated Recovery Profile Display panel specify D in the Cmd line next to the coordinated recovery profile that you want to delete and press Enter. The following panel is displayed to confirm profile deletion:
2. To delete the profile, specify Y in the **Delete** field and press Enter. A message appears to confirm the deletion. Control returns to the Coordinated Recovery Profile Display panel.

3. To cancel the deletion, specify N in the **Delete** field and press Enter or press PF3. Control returns to the Coordinated Recovery Profile Display panel.

### Performing quiet time analysis for a coordinated recovery

From the Log Analysis panel you can build a job that when run searches the Db2 and IMS logs for periods of time when both the Db2 objects and the IMS database have no activity.

The Log Analysis job coordinates and displays the quiet times that you can use to recover the Db2 objects and the IMS database to a consistent point in time. You only need to build and run the Log Analysis job if you are interested in using intersecting quiet times for Db2 objects and IMS databases recovery points.

1. From the Coordinated Recovery Profile Display panel specify Q in the **Cmd** line next to the coordinated recovery profile for which you want to look for Db2 object and IMS job quiet times. The Log Analysis panel opens.

```
RCVYXPR V3R2  ------ Log Analysis ------ 2019/01/13  12:56:12
Command ===>  

Creator: USERID NAME: TESTPROF                     SSID EA1A

Log Range Type  ==> T (Preceding/Timestamp)

Preceding Options:
  Preceding Type  ==> H (Hours/Minutes)
  Preceding Value  ==> 01 (00-99)
  Use database location time  ==> Y (Yes/No)

Timestamp Options
  Beginning Timestamp  ==> 2019 - 11 - 23 - 14 : 50 : 56
  End Timestamp  ==> 2019 - 11 - 23 - 15 : 50 : 56

Minimum Quiet Time  ==> 00 : 02 : 00 (hh:mm:ss)
```

2. In the **Log Range Type** field specify a time range within which Db2 Recovery Expert and IMS Recovery Expert will search the logs for the Db2 objects and IMS database quiet times. Specify P to indicate that a time span preceding the current time identifies the start and stop points in the log. Specify T to indicate that a time value identifies the start and stop points in the log. By default the time range is set to **Preceding** by one hour based on the local client time.

3. If you selected a **Log Range Type** of P you specify the time span details in the following **Preceding Options** fields:

   a. In the **Preceding Type** field, specify whether the preceding time span is in hours (H) or minutes (M).
b. In the **Preceding Value** field, specify the number of hours or minutes in the time span. You can specify a value from 0 to 99.

c. In the **Use database location time** field, specify whether the time span is based on the time where the database is located or the local client time. Specify **Y** to use the local time for the database as the base time. Specify **N** to use the local client time as the base time.

4. If you selected a **Log Range Type** of **Y** you specify the time span details in the following **Timestamp Options** fields:

   a. Specify the start time for the range in the **Beginning Timestamp** field in the format of `YYYY - MM - DD - HH : MM : SS`.
   b. Specify the end time for the range in the **End Timestamp** field in the format of `YYYY - MM - DD - HH : MM : SS`.

5. In the **Minimum Quiet Time** field, specify the minimum duration for a quiet time to be included in the output or accept the default value which is 00:02:00 (two minutes).

6. After specifying the time range for the analysis, press Enter. All the fields are validated and if they validate successfully the Build Job panel opens. You can choose to edit or run the log analysis job from the **Build Job** panel.

---

**Building the quiet time analysis job**

Use these steps to build a quiet time analysis job that will find quiet times for the objects in the Db2 application profile as well as for the databases that are in the IMS job profile.

1. From the Coordinated Recovery Profile Display panel, specify Q next to the coordinated recovery profile for which you want to perform a quiet analysis. The Log Analysis panel opens. Specify the options to use for the quiet time analysis. Press Enter. The Build Job panel is displayed.

```
Build Job for TUSER.K82B - TEST

Edit Generated Job  Y  (Yes/No)
Build job in Dataset  TUSER.CRPQT.TEST
Member             TESTCRP

Job Cards:
==> //OJOBCRD JOB TUSER,CLASS=A,NOTIFY=&SYSUID
==> //*
==> //*
==> //*

Press ENTER to process or PF3 to Cancel
```

2. In the **Edit Generated Job** field specify whether you want to view the generated job JCL in an ISPF editor before saving and running the job. Specify **Y** to view the job in an ISPF edit session. Specify **N** to bypass viewing the generated job JCL.

3. In the **Build job in Dataset** specify the fully qualified data set name (without quotation marks) where you want to save the generated job. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name in the **Member** field. If the member does not exist, Db2 Recovery Expert creates it.

4. In the **Job Cards** field specify a valid job card for your site.

5. Press Enter. One of the following results occurs:
Building the coordinated recovery jobs

After creating the coordinated recovery profile that includes a Db2 application profile and an IMS job profile and optionally running a log analysis to find quiet times, you must build a Db2 object recovery job and an IMS database recovery job that in conjunction will be used to perform the coordinated recovery.

The following steps outline the process of building the coordinated recovery jobs:

1. Select a common recovery point for both the Db2 objects and the IMS databases
2. Generate the Db2 recovery plans
3. Select the Db2 recovery plan
4. Build and run the Db2 recovery job
5. Build and run the IMS recovery job

Selecting the recovery point

The first step in building the coordinated recovery jobs is to select a consistent point in time for both the Db2 objects and the IMS databases that can be used as the recovery point.

1. From the Coordinated Recovery Profile Display panel specify B in the Cmd line next to the coordinated recovery profile for which you want to build the recovery jobs. The Recovery Point Selection panel opens.

2. To select a recovery timestamp specify $ next to one of the following recovery point types:

   - Select Current to specify that recovery will be to the current point, meaning the time when the recovery jobs are run. A confirmation panel opens. When a coordinated recovery to current is performed the Db2 and IMS recovery jobs are generated with the job step to start the databases after performing the recovery commented out. After completion of the Db2 and IMS
recoveries, you will edit the JCL to remove the comments from the steps of the job to start the Db2 and IMS databases and resubmit the job to start the databases. Do not start the recovered databases until both recovery jobs complete successfully. Specify Y in the Confirm field to indicate that you understand the message and you want to proceed with the build process. Specify N to return to the Select Recovery Point panel to choose another type of recovery point.

- Select User Timestamp to specify a timestamp for the recovery. Press Enter. The Select Recovery Timestamp panel opens. Specify the timestamp to which you want to recover. The format of the timestamp that you enter is YYYY-MM-DD-HH:MM:SS:MMMMMM.

- Quiet Time range - If you ran a log analysis for the coordinated recovery profile and any quiet times were identified these ranges are available for selection. Each quiet time range that was discovered is displayed as a start timestamp YYYY-MM-DD-HH:MM:SS:MMMMMM and an end timestamp in the same format. If you did not run log analysis no quiet time ranges are displayed.

**Generating the Db2 object recovery plans**

Db2 Recovery Expert generates one or more recovery plans that you can select from to recover the Db2 objects that have been included in the coordinated recovery profile.

The way that the recovery jobs are generated for Db2 objects differs from how recovery jobs are generated for IMS databases. Db2 Recovery Expert does all the analysis on the different recovery options from the user interface and then generates the JCL for the plan that you select. IMS Recovery Expert determines the way to recover the databases at execution time based on the recovery options defined in the IMS job profile. For a coordinated recovery, you first generate the Db2 object recovery plans and select one to use to build the Db2 object recovery job. You then build the IMS database recovery job.

**Note:** If you are recovering a dropped object that is part of an implicit table space, Db2 Recovery Expert issues a warning during recovery plan generation to let you know the ZPARM parameter IMPDSDEF must be set to YES before running the recovery job. This ZPARM parameter can be dynamically changed with the Db2 SET SYSPARM command.

1. The Generate Recovery Plans opens automatically after you select a recovery point from the Select Recovery Point panel.
2. To update the recovery options for the Db2 application profile, specify Y in the **Update Recovery Options** field. Press Enter. The Recovery Options panel opens. Edit the options that you want to change. Upon completion, press PF3 to return to the Generate Recovery Plans panel. See “Generating object recovery plans” on page 320 for more information.

3. When you are ready to generate the recovery plans, press Enter. All the fields are validated and the recovery plans are generated. The Recovery Plans panel opens where you select the recovery plan.

### Selecting the Db2 object recovery plan

The Recovery Plans panel displays the recovery plans that can be used to recover the Db2 objects that are included in the coordinated recovery job. You can select the plan that is most advantageous for your recovery environment.

**Note:** If you are recovering a dropped object that is part of an implicit table space, Db2 Recovery Expert for z/OS issues a warning during recovery plan generation to let you know the ZPARM parameter IMPDSDEF must be set to YES before running the recovery job. This ZPARM parameter can be dynamically changed with the Db2 SET SYSPARM command.

1. The Recovery Plans panel opens when at least one recovery plan can be generated.

   ![Recovery Plans Panel](image)

   - **RCVYXPRF**
   - **V3R2** ------ Recovery Plans ------- 2019/01/13 12:56:12
   - **Command ===>**
   - **Line Commands:** V - Validate P - Properties D - Details B - Build JCL
   - **Creator:** USERID NAME: TESTPROF SSID EA1A
   - **Plan Name** Cost
     - Using RECOVER 52.60
     - Recovered objects n/a

2. The following fields are displayed in the panel:

   **Creator**
   - Displays the ID of the user who created the Db2 application profile.

   **Name**
   - Displays the name of the Db2 application profile.

   **SSID**
   - Displays the assigned ID for the Db2 subsystem where the objects and the profile reside.

   **Plan Name**
   - Lists the recovery plans that can be used to recover the objects in the Db2 application profile. One of the plans that is listed is called the Recovered Objects plan. This plan lists the objects that can be recovered and each of the plans that can be used successfully to recover the object. Only the D command can be used with this plan.

   **Cost**
   - Displays the recovery plan cost. Each generated recovery plan has an associated cost. The plan with the lowest cost appears first in the list of recovery plan. You can see the detailed information that is used to calculate the cost of the plan by specifying P next to the recovery plan and pressing Enter.
3. Specify P next to a recovery plan to view the properties of the recovery plan. From the Recovery Plan Properties panel you can see the detailed information that is used to calculate the cost of a recovery plan. The P command is not a valid command for the Recovered Objects plan.

4. Specify D next to a recovery plan to view the details of the recovery plan. From the Recovery Plan Details panel you can see each of the objects that are included in the application profile. You can also access property information for each of the objects.

5. Specify V next to a recovery plan to validate the recovery plan. You might select the validate option to check that the conditions of the plan still apply. If an error is found, the Recovery Plan Validation Error panel opens where you are given more information about the error. When a successful validation completes a message is issued that acknowledges the successful validation but does caution that although no validation errors were discovered, the recovery plan could have unforeseen errors that would impact a successful recovery. Such errors may include missing resources or lack or authorizations to access resources. The V command is not a valid command for the Recovered Objects plan.

6. Enter a B next to a recovery plan to build the JCL that can be used to recover the objects in the application profile according to the properties and details of the recovery plan. The B command is not a valid command for the plan with the name Recovered Objects.

   Build job in Data set TEST,ARY,CNTL
   Use job name as member name N (Yes/No)
   or use member prefix RCVRJB
   Generate SYSAFF N (Yes/No)

   Job Cards:
   >>> /ARYJOB JOB TEST,CLASS=A,NOTIFY=&SYSUID,MSGCLASS=X
   >>> */
   >>> //

8. Specify one or more of the following fields and then press Enter.

   Build job in Data set
   Specify the name of a PDS data set name in which the job will be built.

   Use job name as member name
   Specify Y to use generated job names as PDS member names. When saving generated jobs as new members in a PDS, member names will be the same as the generated job names. Any existing members with these names will be overwritten. Specify appropriate job names to avoid possible loss of necessary data in existing members. Specify N to generate member names using the member prefix in the Use member prefix field.

   Use member prefix
   Specifies the prefix that will be used with a unique, automatically generated suffix to create the new member name. For example, if the prefix is PREFIX, the generated names will be PREFIX001, PREFIX002, PREFIX003 and so on. This field is valid only if you specify N in the Use job name as member name field.

   Generate SYSAFF
   Specify Y to include SYSAFF on the job card. Including SYSAFF on the job card ensures that the job runs on the same system (LPAR) as the target Db2 system to which the objects will be recovered.
9. Enter the data set information. The data set name must be a PDS with a valid member name. Press Enter. The information entered is verified. When all the data has been verified, the Generate Recovery Plan JCL job is run. The Recovery Plan Jobs panel opens.

Submit the recovery plan job

The Recovery Plan Jobs panel displays the recovery plan job or jobs that you can use to recover the Db2 objects associated with the coordinated recovery profile.

If the recovery option **Number of parallel jobs** is greater than 1, multiple jobs are returned. A Serial job, followed by a Parallel Job Group, followed by a second Serial job will be returned. You must submit and run the serial and parallel jobs in the order that they are listed.

**Note:** If you are recovering a set of objects to a prior version (existing objects must be dropped and then recreated) and one of the tables has the RESTRICT ON DROP clause active, you will have to alter that table to remove this restriction before running the recovery plan job. Upon completion of the recovery plan job you can reactivate the clause for the table.

1. The Recovery Plans Jobs panel opens after you select a recovery plan from the Recovery Plans panel and select **B** to build the job. An example of the panel is shown below:

```
RCVYXPR T V3R2  ------- Recovery Plans Jobs ------- 2019/01/13 12:56:12
Command ===>
Line Commands: B - Browse   E - Edit   V - View   S - Submit
Plan Name: Using Recover
---------------------------------------------------------------
Creator: USERID  NAME: TESTPROF                             SSID EAIA
---------------------------------------------------------------
_Recovery Job Group_
  _Serial Job 1 - Test.ARY.CNTL (ARYA01)_
  _Parallel Job Group_
    _Parallel Job 1 - Test.ARY.CNTL (ARYB01)_
    _Parallel Job 2 - Test.ARY.CNTL (ARYB02)_
    _Parallel Job 3 - Test.ARY.CNTL (ARYB03)_
    _Parallel Job 4 - Test.ARY.CNTL (ARYB04)_
  _Serial Job 2 - Test.ARY.CNTL (ARYC01)_
```

2. The following fields are displayed:

**Plan Name**

Lists the name of the recovery plan for one or more jobs that have been built.

**Creator**

Displays the ID of the user who created the application profile.

**Name**

Displays the name of the application profile.

**SSID**

Displays the assigned ID for the Db2 subsystem where the objects and the profile reside.

**Recovery Plan jobs**

Lists the jobs that have been built for this plan.
3. To browse the recovery plan job JCL, specify B next to a recovery job. Using browse, you cannot edit or save the JCL. Press Enter. The job JCL is displayed in the ISPF editor. Press PF3 to return to the Recovery Plan Jobs.

4. To view and edit the recovery plan job JCL, specify V next to a recovery job. Using view you cannot save the JCL when you exit. Press Enter. The job JCL is displayed in the ISPF editor. Press PF3 to return to the Recovery Plan Jobs.

5. To edit the recovery plan job JCL and save your changes upon exit, specify E next to a recovery plan. Press Enter. The job JCL is displayed in the ISPF editor. Press PF3 to return to the Recovery Plan Jobs.

6. To run the recovery plan job JCL, specify S next to the recovery job. The job is submitted and run. The results of the job are written to the specified data set. If there are serial and parallel jobs, it is important to submit each of the jobs in the order that they are listed.

7. The next step in coordinated recovery is to generate the IMS database recovery job. Press PF3 on each panel until the Build job for nameofimsprofile panel opens.

**Building the coordinated recovery job for IMS objects**

Use the Build job for nameofimsprofile panel to build the JCL for the recovery of the IMS databases. The Recovery Point and Recovery Timestamp are the same as was chosen for the recovery of the Db2 objects.

1. From the Recovery Plans Jobs panel, after you have built the coordinated recovery job for the Db2 objects, press PF3 to navigate back through several panels to open the Build job for nameofimsprofile panel.

   ![RCVYXPRX V3R2 Build Job for IMS.PROFILE](image)

   **Recovery Point**
   - 1 (1 Current, 2 Timestamp, 3 PIT, 4 RPID

   **Recovery Timestamp**

   **Edit Generated Job**
   - Y (Yes/No)

   **Edit Recovery Options**
   - N (Yes/No)

   **Build Job in Dataset**

   **Member**

   **Job Cards**
   - `==>/OBJREST Job PDSUSC, CLASS=A, NOTIFY=&SYSUID`
   - `==>/`
   - `==>/`
   - `==>/`

2. The type of recovery point that you selected is listed in the Recovery Point field. If you selected to specify a timestamp, it is listed in the Recovery Timestamp field. This is the same setting that you selected for the Db2 object recovery job.

3. Enter Y in the Edit Generated Job to view the job in an ISPF edit session after generation. If you enter N, you cannot edit the jobs JCL before it is stored in the data set.

4. To update the recovery options for the IMS job profile, specify Y in the Update Recovery Options field. Press Enter. The Recovery Options panel opens. Edit the options that you want to change. Upon completion, press PF3 to return to the Build job for nameofimsprofile panel. See the section on recovering IMS databases in the IMS Recovery Expert for z/OS publication for more information on the recovery options.
5. In the **Build job in Dataset** field specify a fully qualified data set name (without quotation marks) where you want to save the generated job. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name in the **Build job in Member** field. If the member does not exist, it is created.

6. In the **Job Cards** field specify a valid job card for your site

7. When you are ready to generate the IMS recovery job, press Enter. All the fields are validated and the recovery job is built. The job is stored in the data set that you specified.
Chapter 13. Recovering objects using application groups

Using application groups, you can define a prioritized grouping of application profiles that can be utilized in various recovery operations. You can restore applications with other available assets, and additionally, prioritize the recovery of applications according to a user-defined group.

Displaying application groups

From the Application Group Display panel you are able to perform all the application group functions.

The first step in working with application groups is to open the Application Group Display panel for a particular Db2 subsystem. From the Application Group Display panel you can perform the following functions:

- create new profiles
- update profiles
- delete profiles
- rename profiles
- view profiles
- select recovery plans

   Enter Application Group Selection Criteria
   Stored on SSID  *  (? for subsystem list)
   Name like      *
   Creator like   *

2. You use the Enter Application Group Selection Criteria panel to filter the application groups that are listed on the Application Group Display panel. In the Stored on SSID field specify the Db2 subsystem where the application groups reside. You can list all the application groups for the Db2 system using wildcard characters in the Stored on SSID, Name like, and Creator like fields. The asterisk (*) is a wildcard character that returns all the application groups for the field where it is specified. You can use an asterisk (*) for one or all fields. To limit the application groups that are listed, enter a specific group name, group creator name, or SSID in one or more of the Stored on SSID, Name like, and Creator like fields. Press Enter. The Application Group Display panel opens. The first time you access this panel, it will appear as follows:
You can use the **RIGHT** and **LEFT** scroll commands (PF10 and PF11) to see all the available columns. You can use the **UP** and **DOWN** commands (PF7 and PF8) to scroll through the list when there are more groups than can be displayed on one panel. The following fields are displayed on the panel:

**Name Like**
The application group name or mask you entered on the Enter Application Group Selection Criteria panel appears here. You can change the name or mask to see different groups on this panel.

**Creator Like**
The application group creator name or mask you entered on the Enter Application Group Selection Criteria panel appears here. You can change the name or mask to see different groups on this panel.

**SSID Like**
The Db2 subsystem ID or mask you entered on the Enter Application Group Selection Criteria panel appears here. You can change the name or mask to see different groups on this panel.

**Row x of y**
Displays the current row and the total number of rows in the group list. Adjacent to this field is a scroll indicator: > indicates scroll right for more data; < > indicates scroll left or right for data; < indicates scroll left for more data. A plus sign (+) indicates scroll down for more data; a minus sign (-) indicates scroll up for more data.

**Name**
The name of the application group.

**Creator**
The ID of the user who created the application group.

**SSID**
The Db2 subsystem ID where the application group, application profiles and the objects for recovery reside.

**Updt**
Specifies how users other than the creator may use the application group. A value of U allows other users to update the profile. A value of V allows other users to view but not update the profile. A value of N prevents other users from viewing or updating the application group.

**Description**
The application group description, if included.

<table>
<thead>
<tr>

**************************************************** Bottom of Data *****************************************************
Last Updated: Userid
The ID of the last user to update the application group.

Last Updated: Timestamp
The date and time that the application group was last updated.

Created: Userid
The user ID of the creator of the application group.

Created: Timestamp
The date and time that the application group was created.

3. Enter one of the following commands in the line next to an application group:

- To create a new application group, enter a C in any line and press Enter. If no application groups are listed then you can create a new group by just pressing Enter. The Create Application Group panel opens. Complete the process of creating the application group by selecting the profiles that will be included in the group. When you have completed the process, the Update Application Group panel opens. See “Creating application groups” on page 390 for more information on creating application groups.

- To update an application group, enter a U in the line next to the application group that you want to update and press Enter. The Update Application Group panel opens. From this panel you can add profiles to the group; remove profiles from the group; change a profile's priority in the group; view the profiles assigned to the group; specify and update the image copy options; specify and update recovery plan options; and update the group's share option. See “Updating application groups” on page 390 for more information on updating application groups.

- To view the details of an application group, enter a V in the line next to the application group that you want to view and press Enter. The View Application Group panel opens. You can use this line command to view one of your own application group profiles or one created by another user if the profile was created with a share option of view or update. See “Viewing application groups” on page 392 for more information on viewing application groups.

- To delete an application group, enter a D in the line next to the application group that you want to delete and press Enter. You can use this line command to delete one of your own application groups or one created by another user if the application group was created with a share option of view or update. See “Deleting an application group” on page 393 for more information on application groups.

- To rename an application profile, enter an R in the line next to the application group that you want to rename and press Enter. The Rename Application Group panel opens. You can use this line command to change the name or the description in one of your own application groups or one created by another user if the application group was created with a share option of view or update. See “Renaming application groups” on page 393 for more information on renaming application groups.

- To generate a recovery plan for an application group, enter a P in the line next to the application group for which you want to generate a recovery plan and press Enter. The Generate Recovery Plan panel opens. See “Generating application group recovery plans” on page 394 for more information on generating application group recovery plans.
Creating application groups

From the Create Application Group panel you can create an application group. The process of creating a new application group includes creating the group; and then associating individual application profiles with the group.

1. From the Application Group Display panel specify a $C$ in any Cmd line and press Enter. The following panel is displayed:

```
Create Application Group
Creator USERID
Group Name APPGRPTW
Description
Db2 SSID EB1A (? for system list)
Share Option U (Update, View only, No access)
```

2. The Creator field is automatically filled with your user ID as the group creator. To create the group with a different user ID, type the new ID in this field.
3. Specify a name for the application group in the Group Name field. The name can consist of up to 30 characters.
4. Specify a description for the application group in the Description field.
5. Specify the SSID where the application profiles included in the application group currently reside in the Db2 SSID field. The application group information is also be stored at that SSID.
6. You control access to the application group using the Share Option field. Specify U to allow other users to update the group. Specify V to allow other users to view but not update the group. Specify N to deny other users access to the group.
7. Press Enter. The group is added. The Update Application Group panel opens. The next step in creating an application group is to add application profiles to the group.

Updating application groups

From the Update Application Group panel you can add profiles to the group; remove profiles from the group; change a profile's priority in the group; view the profiles assigned to the group; specify and update the image copy options; specify and update recovery plan options; and update the group's share option.

1. The Update Application Group panel opens automatically after you first create the group. In addition, the Update Application Profile panel opens when Update is entered for a group listed in the Application Group Display panel.
2. You can modify the Share option for the application group. Changing the value to **Upd** will allow all users to update the group. Changing the value to **View** will allow all users to view but not update the group. Changing the value to **N** will not allow any users other than yourself to update or view the group.

3. To specify or update the image copy options, specify a **Y** in the Update IC Options field. Press Enter. The Image Copy Options panel opens. Update the options and press PF3. Control is returned to the Update Application Group panel.

4. To specify or update the recovery options, specify a **Y** in the Update Recovery Options field. Press Enter. The Recovery Options panel opens. Update the options and press PF3. Control is returned to the Update Application Group panel.

5. To add a profile to the group specify an **I** in any command line. You can also add a profile to the group by specifying **ADD** on the Command line. Press Enter. The Enter Application Profile Selection Criteria panel opens. From this panel you can filter the profiles that are listed for selection. Press Enter. The Application Profile Selection panel opens. From this panel you select the profiles that will be included in the group. When all selections are made, press Enter and control returns to the Update Application Group panel.

6. The fields that are displayed for each application profile that is included in the application group are:

   **Name**  Specifies the name of the application profile.

   **Creator**  Specifies the ID of the user who created the profile.

   **SSID**  Specifies the SSID where the profile resides.

   **Priority**  Specifies the priority that has been assigned the profile within the application group.

7. Each application profile that is included in a group can be assigned a priority. The priority dictates the order in which the objects in a profile are recovered. Recovery of the objects in the profile with the highest priority is performed first, followed by the profile with the next highest priority. A value of zero assigns the highest priority. You can set the priority in one of the following ways:
   - Tab to the **Priorities** column and type a number.
   - Specify the **PRIORITIES** command in the command line. Priority is assigned to the profiles in increments of 5 starting with the first profile in the list.
8. To reorder the profiles in the list specify an M in the command line next to the profile that you want to move and press Enter. You can choose to move the profile one position before or after the current position. Press Enter.

9. Specify an R in the command line next to the profile that you want to remove from the group. Press Enter. The profile is removed from the group.

10. Specify a V in the command line next to a profile to view the objects that will be recovered by that profile. Press Enter. The View Application Profile panel opens. Press PF3 to return to the Update Application Group panel.

11. Specify a U in the command line next to a profile to update that profile. Press Enter. The Update Application Profile panel opens. You can make updates to the application profile. Press PF3 to return to the Update Application Group panel.

12. Press PF3 to return to the Application Group Display panel.

---

**Viewing application groups**

You can view application groups created under your user ID, regardless of the share option. You can also view a group created by another user if the group was created with a share option of view or update.

1. From the Application Group Display panel specify a V in the Cmd line next to the group that you want to view and press Enter. The View Application Group panel opens.

   ![View Application Group Panel]

   **RCVYXPRTR V3R2**  ------- View Application Group ------- 2019/01/13 12:56:12
   Command ==>  Scroll ==> CSR

   Commands: EXPLODE
   Line Commands: V - View

   ---

   Creator: USERID NAME: TESTPROF  SSID EA1A
   Share Option N (Upd, View, No) Description:
   View Image Copy Options N (Yes/No) View Recovery Options N (Yes/No)
   ----------------------------------------------- Row 1 of 1 +

   Name    Creator    SSID    Priority
   APPGRP1  USER1     EA1A  0005
   APPGRP2  USER2     EA1A  0005

   ![View Application Group Panel]

2. From the View Application Group panel you can view a list of all the application profiles that are included in the group. From the View Application Group panel you cannot make any changes. The following fields are displayed for each application profile that is included in the group:

   **Name** Specifies the name of the profile.

   **Creator**

   Specifies the ID of the user who created the profile.

   **SSID** Specifies the SSID of the Db2 subsystem where the group information and the objects in the application profiles reside.

   **Priority**

   Specifies the priority that has been assigned to the profile within the group. The priority indicates the order in which each profile is processed for recovery.

3. You can view the **Share Option** for the application group. The current value is displayed. The value of **U** specifies that all users can update the profile. A
value of V specifies that all users can view but not update the profile. A value of N specifies that no user other than you as the creator can update or view the profile.

4. To view the recovery options, enter Y in the **Update Recovery Options** field and press Enter. The Recovery Options panel opens. You can view recovery options, but cannot make any changes. Press PF3 to return to the View Application Group panel.

5. To view the image copy options, enter Y in the **Image Copy Options** field and press Enter. The Image Copy Options panel opens. You can view all the image copy options. In addition there are several options that you can update from the panel. Press PF3 to return to the View Application Group panel.

6. To view the objects that are included in each profile, specify V in the line next to the profile and press Enter. The View Application Profile panel opens. Press PF3 to return to the View Application Group panel.

7. Press PF3 to return to the View Application Group panel.

### Deleting an application group

You can delete application groups created under your user ID, regardless of the share option. You can also delete a group created by another user if the group was created with a share option of update.

1. From the Application Group Display panel specify a D in the **Cmd** line next to the group that you want to delete and press Enter. The Confirm Deletion of Group panel opens:

   ![Confirm Deletion of Group Panel](image)

   2. To delete the group, specify Y in the **Delete** field and press Enter. A message appears to confirm deletion.

### Renaming application groups

You can rename application groups created under your user ID, regardless of the share option. You can also rename a group created by another user if the group was created with a share option of update.

1. From the Application Group Display panel specify an R in the **Cmd** line next to the group that you want to rename and press Enter. The Rename Application Group panel opens.
2. The **New Application Group Creator** field is automatically filled with the user ID that created the group. If you have been granted permission, you can change the user ID in the **New Application Group Creator** field. Permission to change the creator user ID is granted using the `ADMIN_USERID` parameter in the `SYSPARM` library.

3. To rename the group, specify a new name in the **New Application Group Name** field.

4. To change the group description, specify a new description in the **New Application Group Description** field.

5. Press Enter. The group is renamed. Control is returned to Application Group Display panel.

**Generating application group recovery plans**

Db2 Recovery Expert will generate one or more recovery plans that you can select from to recover the objects that have been included in each application profile of an application group.

Using the Generate Recovery Plans panel you will specify recovery options, choose a recovery point, and generate the recovery plans that can be used to recover the objects that are included in the application profiles of the group.

**Note:** If you are recovering a dropped object that is part of an implicit table space, Db2 Recovery Expert issues a warning during recovery plan generation to let you know the `ZPARM` parameter `IMPDSDEF` must be set to `YES` before running the recovery job. This `ZPARM` parameter can be dynamically changed with the `Db2 SET SYSPARM` command.

1. From the Application Group Display panel specify a `P` in the **Cmd** line next to the group for which you want to generate the recovery plans. The Generate Recovery Plans panel opens.
2. To update the recovery options for the group, specify Y in the Update Recovery Options field. Press Enter. The Recovery Options panel opens. Edit the options that you want to change. Upon completion, press PF3 to return to the Generate Recovery Plans panel. See “Specifying recovery options” on page 322 for more information on recovery options.

3. You have three options for specifying a recovery point. Select from one of the following options:

- **Current**: To select the current recovery point, enter a 1 in the Recovery Point field. Any data entered in the Recovery RBA/LRSN or Recovery Timestamp fields is cleared.

  **Note**: When performing redirected recovery, selecting Current recovers the object using the latest image copy of the object. Any recovery information that is included in the log data is not applied.

- **RBA/LRSN**: To select a RBA/LRSN recovery point enter a 2 in the Recovery Point field. The value of the current RBA/LSRN is entered in the Recovery RBA/LRSN field. To change that value enter a Y in the Select Recovery Point field.

- **Timestamp**: To select a timestamp recovery point enter a 3 in the Recovery Point field. The current timestamp is automatically entered in the Recovery Timestamp field. To change that value enter a Y in the Select Recovery Point field.

4. Depending on your selection of recovery point options, you must enter values for one or more of the following fields:

**Recovery RBA/LRSN**

If you entered a 2 in the Recovery Point field, you can either specify a different value in the Recovery RBA/LRSN field or enter a Y in the Select Recovery Point field where you can select the recovery point in the Recovery Point Selection panel.

**Recovery Timestamp**

If you entered a 3 in the Recovery Point field, you can either specify a new timestamp value in the Recovery Timestamp field or specify a Y in the Select Recovery Point field where you can select the recovery point in the Recovery Point Selection panel. The timestamp value must be entered as YYYY - MM - DD - HH - MM - SS - MMMMMM.

**Select Recovery Point**

If you entered a 3 in the Recovery Point field or you entered a 2 in the Recovery Point field, you can change the values in the Recovery Timestamp or the Recovery RBA/LRSN fields by entering a Y in the...
Select Recovery Point field. Press Enter. The Recovery Point Selection panel opens where you can select an object definition level, a recovery history event, a quiet time, or an image copy data set as the recovery point.

5. After specifying the recovery point press Enter. All the fields are validated and the recovery plans are generated. The Recovery Plans panel opens.

Selecting a recovery plan for the application group

The Recovery Plans panel displays the recovery plans that are available to recover the objects that are in the applications profiles associated with the application group.

Note: If you are recovering a dropped object that is part of an implicit table space, Db2 Recovery Expert issues a warning during recovery plan generation to let you know the ZPARM parameter IMPDSDEF parameter must be set to YES before running the recovery job. This ZPARM parameter can be dynamically changed with the Db2 SET SYSPARM command.

1. The Recovery Plans panel opens automatically when you press Enter from the Generate Recovery Plans panel and at least one recovery plan can be generated.

2. The following fields are displayed in the panel:

- **Creator** Displays the ID of the user who created the application group.
- **Name** Displays the name of the application group.
- **SSID** Displays the ID for the Db2 subsystem where the objects, profiles and group information resides.
- **Plan Name** Lists the recovery plans that can be used to recover the objects in the profiles of the application group. One of the plans that is listed is called the Recovered Objects plan. This plan lists the objects that can be recovered and each of the plans that can be used successfully to recover the object. Only the D line command can be used with this plan.
- **Cost** Displays the recovery plan cost. Each generated recovery plan has an associated cost. The plan with the lowest cost appears first in the list of recovery plan. You can see the detailed information that is used to calculate the cost of the plan by entering a P next to the recovery plan.

3. Enter a P next to a recovery plan to view the properties of the recovery plan. From the Recovery Plan Properties panel you can see the detailed information.
that is used to calculate the cost of a recovery plan. The P command is not a valid command for the plan with the name Recovered Objects.

4. Enter a D next to a recovery plan to view the details of the recovery plan. From the Recovery Plan Details panel you can see each of the objects that are included in the application profiles of the group. You can also access property information for each of the objects.

5. Enter a V next to a recovery plan to validate the recovery plan. You might select the validate option to check that the conditions of the plan still apply. If an error is found, the Recovery Plan Validation Error panel opens. When a successful validation occurs there is a message that makes it explicitly clear that although no validation errors were discovered, the recovery plan could have unforeseen errors that would impact a successful recovery. Such errors may include missing resources or lack or authorizations to access resources. The V command is not a valid command for the Recovered Objects plan.

6. Enter a B next to a recovery plan to build the JCL that can be used to recover the objects in the application profile according to the properties and details of the recovery plan. The B command is not a valid command for the plan with the name Recovered Objects.

7. Press Enter. The Build Job panel opens.

Build job in Data set TEST.ARY.CNTL
Use job name as member name N (Yes/No)
   or use member prefix RCVRJB
   Generate SYSAFF N (Yes/No)
Job Cards:

==>

8. Specify one or more of the following fields and then press Enter.

Build job in Data set
   Specify the name of a PDS data set name in which the job will be built.

Use job name as member name
   Specify Y to use generated job names as PDS member names. When saving generated jobs as new members in a PDS, member names will be the same as the generated job names. Any existing members with these names will be overwritten. Specify appropriate job names to avoid possible loss of necessary data in existing members. Specify N to generate member names using the member prefix in the Use member prefix field.

Use member prefix
   Specifies the prefix that will be used with a unique, automatically generated 3-digit suffix to create the new member name. The suffix consists of two parts: group number (1 digit, counting from 0); and job number in a group (two digits). For example, generated names may be:

   PREFIX001 - 1st job of the group 0
   PREFIX101 - 1st job of the group 1
   PREFIX102 - 2nd job of the group 1
   PREFIX201 - 1st job of the group 2 and so on.

   Group number may be used to submit jobs manually in the correct order, because submitting the whole group automatically is not supported in batch.
This field is ignored if you specify Y in the **Use job name as member name** field.

**Generate SYSAFF**

Specify Y to include SYSAFF on the job card. Including SYSAFF on the job card ensures that the job runs on the same system (LPAR) as the target Db2 system to which the objects will be recovered.

9. Enter the data set information. Edit the job card if necessary. Press Enter. The information entered is verified. The data set name must be a PDS with a valid member name. When all the data has been verified, the Generate Recovery Plan JCL request is executed. The Recovery Jobs window opens.

## Submitting the recovery plan job

The Recovery Plan Jobs panel displays job or jobs that can be used to recover the objects in the application profiles of the application group.

If the recovery option **Number of parallel jobs** is greater than 1, multiple jobs are returned. A Serial job, followed by a Parallel Job Group, followed by a second Serial job will be returned. You must submit and run the serial and parallel jobs in the order that they are listed.

**Note:** If you are recovering a set of objects to a prior version (existing objects must be dropped and then recreated) and one of the tables has the RESTRICT ON DROP clause active, you will have to alter that table to remove this restriction before running the recovery plan job. Upon completion of the recovery plan job you can reactivate the clause for the table.

1. The Recovery Plan Jobs panel opens after you select a recovery plan from the Recovery Plans panel and specify **B** to build the job. An example of the panel is shown below:

```
RCVYXPRT  V3R2  -------  Recovery Plans Jobs -------  2019/01/13  12:56:12
Command  ===>
Line Commands:  B - Browse  E - Edit  V - View  S - Submit

Plan Name: Using Recover
---------------------------------------------------------------
Creator: USERID  NAME: TESTPROF  SSID EA1A

_ Recovery Job Group_
  _ Serial Job 1 - Test.ARY.CNTL (ARYA01)_
  _ Parallel Job Group_
    _ Parallel Job 1 - Test.ARY.CNTL (ARYB01)_
    _ Parallel Job 2 - Test.ARY.CNTL (ARYB02)_
    _ Parallel Job 3 - Test.ARY.CNTL (ARYB03)_
    _ Parallel Job 4 - Test.ARY.CNTL (ARYB04)_
  _ Serial Job 2 - Test.ARY.CNTL (ARYC01)_
```

The following fields are displayed:

**Plan Name**

Lists the name of the recovery plan for one or more jobs that have been built.

**Creator**

Displays the ID of the user who created the application group.
**Name**  Displays the name of the application group.

**SSID**  Displays the assigned ID for the Db2 subsystem where the objects, the application profiles, and the group information reside.

**Recovery Plan jobs**
Lists the jobs that have been built for this plan.

2. To browse the recovery plan job JCL, enter a B next to a recovery job. Using browse, you cannot edit or save the JCL.

3. To view and edit the recovery plan job JCL, enter a V next to a recovery job. Using view you cannot save the JCL upon exit.

4. To edit the recovery plan job JCL and save your changes upon exit, enter an E next to a recovery plan.

5. To run the recovery plan job JCL, enter an S next to the recovery job. You will not see the JCL before the job is submitted. The results of the request are written to the specified data set.

If there are serial and parallel jobs, it is important to submit the jobs in the order that they are listed.

The Statuses of Jobs panel will display after submitting a recovery plan job. See “Monitoring recovery jobs and recovered objects” on page 350 for more information.
Chapter 14. Performing a Combined System Level Backup

You can use the Combined System Level Backup (Combined SLB) feature to create a system level backup that includes a combination of one or more Db2 and IMS subsystems. The backup is created in a single process with a consistent recovery point for all subsystems in the backup.

Subsystems in the Combined SLB can consist of one or more Db2 subsystem(s), one or more IMS subsystem(s), or a combination of both. Data consistency for all volumes included in the Combined SLB is provided using storage-based consistency.

**Note:** Log suspend is not available for Combined SLB.

You can perform a Combined SLB with the group option. Combined SLB subsystems do not have to be in the same data sharing group. When a Combined SLB Group contains only Db2 subsystems, then only Db2 Recovery Expert programs are run. When the Combined SLB group contains both IMS subsystems and Db2 subsystems, both Db2 Recovery Expert and IMS Recovery Expert programs are run.

Planning for a Combined SLB

A Combined SLB can contain backup data for multiple IMS subsystems, multiple Db2 subsystems, or a combination of both allowing you to create a single backup that contains multiple, related subsystems. The subsystems included in a Combined SLB do not have to be in the same data sharing group.

Before configuring Db2 Recovery Expert for Combined SLB, you must understand your environment and your intended use for a Combined SLB.

A Combined SLB can be used for the following purposes:

**Disaster Recovery**

- A Combined SLB can provide a coordinated and transactionally consistent point of recovery for multiple subsystems at the disaster recovery site without requiring additional recovery assets (such as archive logs).
- Since a Combined SLB can contain both IMS subsystems and Db2 subsystems, you can more quickly recover related IMS and Db2 systems from a single backup without creating multiple backups and performing coordinated recovery between IMS and Db2.
- When a Combined SLB is used for disaster recovery, the recovery is done using the backup only. No forward or log recovery is performed.

**Local Database Recovery**

- A Combined SLB can be used with existing application profiles to perform local object recovery.
- By using a Combined SLB as the basis of object recovery, multiple objects across related subsystems (IMS and Db2) can be more quickly recovered to a consistent point in time.
- When an object is recovered, a Combined SLB will be used if it best meets the recovery criteria.
Local Subsystem Restore

- A Combined SLB can be used to perform a local subsystem restore.
- All subsystems in the Combined SLB are recovered; no individual subsystem recovery is allowed.
- When a Combined SLB is used for local recovery, the recovery is done using the backup only; no forward or log recovery is performed.

Combined SLB can operate within Db2 Recovery Expert or IMS Recovery Expert independently, or across both products. A Combined SLB can contain IMS subsystems, Db2 subsystems, or a combination of both. However, the ability to create a Combined SLB that contains both IMS and Db2 subsystems depends upon the mode of operation for which the feature is installed. Before you configure the Combined SLB option, you must first choose between local or shared mode:

Local Mode
Combined SLB operates within Db2 Recovery Expert or IMS Recovery Expert independently. You can create a Combined SLB that contains subsystems that are related to the product you are using (IMS or Db2). In this mode, you can use Combined SLB to back up multiple subsystems that are related but not limited to the same data sharing group.

Shared Mode
Combined SLB operates across Db2 Recovery Expert and IMS Recovery Expert. A Combined SLB can contain a combination of IMS and Db2 subsystems. The profiles and backups that are used for Combined SLB are available from either product regardless of the product that was used to create them. A Combined SLB can contain a combination of IMS and Db2 subsystems, IMS subsystems only, or Db2 subsystems only. In shared mode, the repository data sets used by Db2 Recovery Expert and IMS Recovery Expert must be shared. This allows access to information from both products. If repositories are not shared, then shared mode is not available.

If you use both Db2 Recovery Expert and IMS Recovery Expert, then it is recommended that you configure the Combined SLB option for shared mode, even if you do not currently intend to create Combined SLB groups that contain both IMS and Db2 subsystems. By choosing shared mode, you ensure that your environment is configured appropriately if you choose to create Combined SLB groups that contain both IMS and Db2 subsystems in the future.

Configuring Combined SLB
After you customize Db2 Recovery Expert, you can activate the Combined SLB option.

1. Update the ARYSYSGR member in the SAMPLIB library, and submit the job. This job creates the VSAM control file used by Db2 Recovery Expert, which contains the Combined SLB group information. You can find instructions in the member.

2. Edit your Db2 Recovery Expert invocation CLIST, member ARYV320 in SAMPLIB, and specify the repository data set name created by ARYSYSGR in the RBRGROUP() variable. This variable identifies (to the ISPF interface) the name of the VSAM data set to use for storing Combined SLB groups, and activates the Combined SLB feature.
After you perform these steps, the Combined SLB feature is active for Db2 Recovery Expert in local mode. To enable Combined SLB in shared mode, perform these additional steps:

1. Edit your IMS invocation CLIST, member BSYV220 in SBSYSAMP, and specify the same data set name in the RBRGROUP() variable as specified in ARYV320 above. The RBRGROUP repository must be shared between Db2 Recovery Expert and IMS Recovery Expert to activate shared mode.

2. The repository data set names used by Db2 Recovery Expert and IMS Recovery Expert must be shared. If you currently use both Db2 Recovery Expert and IMS Recovery Expert, and you are not using shared repositories, see "Creating shared repositories." The following variables in the ARYV320 and BSYV220 CLISTs must specify the same data set names:
   - Db2CNTFL
   - RBBRPROF
   - RBBPBMAP
   - RBBRPCAT
   - RBBRSBACK
   - RBBRBSVOL
   - RBBRBSSSID
   - RBBRPOBJS
   - RBBREPT
   - RBBROFFL
   - RBBROVER
   - RBRGROUP

3. The following variables and the related repositories are not shared:
   - RBBRSBOBJ: This repository is used by both Db2 Recovery Expert and IMS Recovery Expert, but the structure of this repository is different; each product specifies its own unique repository data set.
   - RBBARCH: This repository is used by only IMS Recovery Expert.
   - RBBRSRBA: This repository is used by Db2 Recovery Expert only.
   - RBBBCPRF: This repository is used by both Db2 Recovery Expert and IMS Recovery Expert, but it is specified only in the Db2 Recovery Expert ARYV320 CLIST.

Creating shared repositories

If Db2 Recovery Expert and IMS Recovery Expert are currently installed, and you are not sharing the repository data sets, then you must convert your repositories and share them between the two products to activate the Combined SLB option.

If both products are installed and you are already using shared repositories, or if you are currently only using Db2 Recovery Expert, then you do not need to perform these steps.

1. Edit and submit the ARYCSLBS member in SAMPLIB. Instructions for editing this member are contained in the member. This job first backs up your existing Db2 Recovery Expert and IMS Recovery Expert repositories that must be shared. Then, it allocates a new set of shared repository data sets and populates them with the contents of the individual product repository data sets.
2. Edit your IMS Recovery Expert and Db2 Recovery Expert product invocation CLISTs, and change the variable names listed below to the names of the newly created shared repository data sets created in step 1. The variables that reference the shared repositories are:
   - Db2CNTFL
   - RBRBPROF
   - RBRBPMAP
   - RBRBPCAT
   - RBRSBACK
   - RBRSBVOL
   - RBRSSSD
   - RBRPOBJS
   - RBRBREPT
   - RBRBOFFL
   - RBRMOVER l
   - RBRGROUP

**Creating Combined SLB groups**

The first step in setting up Combined SLB functions is to create one or more Combined SLB groups. Combined SLB groups define the subsystems that are included in the system level backup.

A Combined SLB group can contain one or more Db2 subsystem(s), one or more IMS subsystem(s), or a combination of both.

**Note:**
All IMS subsystems that are included in a Combined SLB group must be defined to the product. For information on how to define an IMS subsystem to the product, see "Connecting Db2 Recovery Expert and IMS Recovery Expert" on page 367.

When defining Combined SLB groups, you must follow these rules:
- The Combined SLB group name cannot duplicate an existing SSID or data sharing group name.
- An SSID (individual subsystem or data sharing group) can only be included in one Combined SLB group. When an SSID is included in a Combined SLB group, it is marked as selected and cannot be included in any other Combined SLB group.
- When the selected SSID is part of a data sharing group, the SSID associated with the data sharing group is used (not the individual SSIDs). However, the individual SSIDs that are part of the data sharing group are marked as a part of the Combined SLB group, and cannot be included in any other Combined SLB group.

1. Specify 0 (Administration) on the **Option** line of the Db2 Recovery Expert main menu panel (ARY$MAIN) and press Enter.
2. On the Administration Menu panel, specify 6 (Define Combined SLB Groups) on the Option line and press Enter.

3. On the Combined SLB Group Display panel, specify C in the Cmd field to define a new group and press Enter.
4. On the Add Combined SLB Group panel, specify the name of the group and a description of the group. Press Enter to add SSIDs to this group.

5. On the Subsystem Selection panel, all defined subsystems that are available for inclusion in the group are displayed. The following fields are displayed:

- **Cmd** Specify $ on the Cmd line next to a subsystem to select it for inclusion in the group. Subsystems that are already part of a Combined SLB group are marked with X and cannot be selected.

- **SSID** The name of the defined subsystem.

- **Type** The type of subsystem. Values are either IMS or Db2.

- **CSLB Group**
  
  If the subsystem is already included in a Combined SLB group, this column indicates the Combined SLB group name.

- **DShare Group**
  
  If the subsystem is part of a data sharing group, this column indicates the data sharing group name. If the subsystem is Db2, this column only displays a value when one of the data sharing group members is active on the LPAR to which you are logged in.

6. To select subsystems to include in the group, specify $ on the Cmd line next to the subsystem(s) you want to include. You can page up and down the list to select multiple entries. When you have selected subsystems, press PF3 to process them.
On the Add Combined SLB Group panel, the subsystems that you selected are included in the group. If any of the subsystems were part of a data sharing group, the data sharing group Member name is included, and the Type is IMSGRP.

You can create as many Combined SLB groups as you need for your environment. When you have one or more Combined SLB groups created, you are ready to use the Combined SLB option.

Creating system profiles for Combined SLB groups

When you have one or more Combined SLB groups defined, you can create a Combined System Level Backup (SLB) profile for the group.

1. Specify 1 (System Operations) on the Option line of the Db2 Recovery Expert main menu panel (ARY$MAIN) and press Enter.

2. On the System Operations Menu panel, specify 2 (System Backup Profiles) on the Option line and press Enter.

Figure 22. System Operations Menu panel (ARY$SYMN)
3. On the Enter Backup Profile Selection Criteria panel, specify selection criteria and press Enter.

```

*******************************************************************************

Figure 27. Update Backup Profile panel (ARY$BPSU): Combined SLB
```

7. When you return to the Update Backup Profile panel, you can complete defining the Combined SLB profile as you would any other backup profile. **For more information about this process, see Chapter 9, “Creating system backup profiles,” on page 197.** Note that the **Issue Log Suspend** field is set to N and cannot be changed. The log suspend process is not available for a Combined SLB profile due to the probability of elongated system ENQ times while attempting to quiesce all subsystems to a consistent point in time.

8. When viewing backup profiles, if you have a profile associated with a Combined SLB group and want to know what subsystems are in the group, specify G on the **Cmd** line next to the profile, and press Enter.
9. On the ARY$CGXD panel, all subsystems (currently defined to the Combined SLB group) and their types are displayed. When you have created the Combined SLB backup profile, it can be processed like any other backup profile. For more information about using this profile to create a system level backup (SLB), see Chapter 10, “Creating a system backup,” on page 255.

**Using system restore and offload with Combined SLB**

When you have created a backup for a Combined SLB group, you can utilize the system restore and offload interface to manage the backup.

1. Specify 1 (System Operations) on the Option line of the Db2 Recovery Expert main menu panel (ARY$MAIN) and press Enter.

2. On the System Operations Menu panel (ARY$SYMN), specify 3 (System Level Backup Operations) on the Option line and press Enter.

3. On the Restore System Display panel, if you specify J (Object Report) or I (Image Copies) on the Cmd line next to a Combined SLB and press Enter, a list of backup points is displayed. For more information about these options, see “Viewing a list of backups” on page 415.
of subsystems in the backup is displayed.

Figure 30. Combined SLB SSID List panel (ARY$CGSS)

4. On the Combined SLB SSID List panel, you can select one or more subsystems for processing and press Enter. The requested function is performed against those subsystems.

When you specify I (Image Copy), only Db2 subsystems are available for selection. If the Combined SLB contains IMS subsystems and you want to perform image copies for them, you must perform this from the IMS Recovery Expert ISPF interface.

When you select a backup that is associated with a Combined SLB group, the only available option is to recover all subsystems in the backup to the time of the backup.

Figure 31. Combined SLB Restore panel (ARY$RESC)

5. Press Enter. The Build Restore Job panel is displayed.

Figure 32. Build Restore Job panel (ARY$BLDR): Combined SLB

Using application profiles with Combined SLB

To use existing or new application profiles with the Combined SLB feature, no changes are necessary.
Actions related to application profiles are performed at the individual subsystem (i.e. SSID). If a recovery is performed and a Combined SLB best meets the recovery criteria, it will be used to recover the database.

Creating disaster recovery profiles for Combined SLB groups

When you have defined one or more Combined SLB groups, you can create a disaster recovery profile for the group.

1. Specify 1 (System Operations) on the Option line of the Db2 Recovery Expert main menu panel (ARY$MAIN) and press Enter.

2. On the System Operations Menu panel (ARY$SYMN), specify 4 (Disaster Recovery Profiles) on the Option line and press Enter.

3. On the Enter Disaster Recovery Profile Selection Criteria panel, specify disaster recovery profile selection criteria and press Enter.

4. On the Disaster Recovery Profile Display panel, specify C on the Cmd line of any row to create a new Combined SLB disaster recovery profile. Press Enter.

5. On the Enter DR Profile Type panel, specify C in the DR Profile Type field and press Enter.
6. On the Enter New Disaster Recovery Profile Data panel, specify the information associated with this profile and press Enter.

![Figure 36. Enter New Disaster Recovery Profile Data panel (ARY$CDC1): Combined SLB](image)

On the Update Disaster Recovery Profile panel, when creating a disaster recovery profile for a Combined SLB group, the only recovery option is to recover all of the subsystems to the point of the backup. As a result, the profile only allows you to select whether you want to use the local or remote site backups for recovery, and whether you want to use the multijob option for performing the restore.

When a build is performed against a disaster recovery profile for a Combined SLB group, the #REPOJOB and xxxx#JC1 jobs are the only jobs created. The #REPOJOB redefines and reloads the repository data sets. The xxxx#JC1 job performs the restore of the Combined SLB. No other recovery processing is performed.

### Performing Db2 system analysis and configuration

The Analysis and Configuration option is not affected by the Combined SLB option.

The Systems Analysis and Configuration option is not affected by the Combined SLB option (i.e. SSID). A Combined SLB group cannot be used as the target for this function.

### Using coordinated application profiles with Combined SLB

To use existing or new coordinated application profiles with the Combined SLB feature, no changes are required.
Actions related to coordinated application profiles are performed at the individual subsystem (i.e. SSID). If a recovery is performed and a Combined SLB best meets the recovery criteria, it will be used to recover the Db2 objects and IMS databases.
Chapter 15. Restoring a subsystem

This section explains how to restore a Db2 subsystem that has been backed up by Db2 Recovery Expert.

Before you restore the subsystem

Db2 Recovery Expert maintains a list of valid system restore points from which you can choose in the event you need to restore a subsystem.

When you restore a subsystem, you will be restoring data and logs, or data only. The type of restore depends on the type of backup specified in the backup profile and whether Db2 Recovery Expert detected mixed data during the backup. Mixed data occurs when Db2 Recovery Expert detected that your Db2 data and the logs are located on the same volumes. If this happens, Db2 Recovery Expert still makes the backup, but if you choose this backup as a recovery point, you must restore both the data and the logs. Note that any logging or transactions that were performed after that recovery point will be lost.

If the backup was a data only backup, you can restore the data only so long as Db2 Recovery Expert did not detect mixed data.

If the backup was a data and log backup, you can restore both data and logs, or you can choose to restore data only as long as Db2 Recovery Expert did not detect mixed data during the backup. If the logs were not mixed in with the data, you can restore the data and the logs to the restore point, and then apply logs to bring it up to current or (another later recovery point). If the subsystem is a member of a data sharing group, and you are restoring data only, you can choose an RBA/LRSN to restore to after the data has been restored.

Note: When a backup is on both DASD and tape, Db2 Recovery Expert will use the DASD copy by default for the restore. Add the keyword 'FROM-OFFLOAD' to force Db2 Recovery Expert to perform the restore from the tape copy.

Db2 Recovery Expert can keep track of timestamps and their associated RBAs with the RBA Capture utility. You can use this feature to easily select a recovery point related to a particular time of day. The RBA Capture utility is optionally installed and configured when you customize Db2 Recovery Expert. The utility must run as a started task in each LPAR where you want to capture data.

Note: When performing a system restore all MVS user catalogs being used by Db2 must be unallocated. Some monitoring products (such as Query Monitor) are constantly allocating Db2 data sets. This causes the MVS user catalogs to get re-allocated after Db2 Recovery Expert has unallocated them. If the MVS user catalogs are never freed, the system restore will fail. In order to prevent this, you must stop any products that are monitoring or accessing Db2 before running a system restore.

Viewing a list of backups

Db2 Recovery Expert only lists valid backups; if a backup failed and cannot be used to restore the subsystem, the invalid backup will not appear on the Restore System Display.
1. Specify 1 (System Operations) in the Option line on the Db2 Recovery Expert for z/OS main menu and press Enter. The System Operations Menu opens. Specify 3 (System Level Operations Menu) and press Enter. The Restore System Display panel opens:

```
RCVYXPRT V3R2 ------- Restore System Display ------- YYYY/MM/DD HH:MM:SS
Option => Scroll => PAGE

Line Commands:  S-Select for Restore  D-Delete  V-View  O-Offload
                J-Object Report  H-Health Check  I-Image Copies
                G-Group Display

Db2 Subsystem ID * Datasharing group *
------------------------------------------------------------------------------
Select a row from the list of recovery points displayed below. To enter an RBA/LRSN and have a recovery point automatically selected for you, enter the RESTORE primary command followed by a Db2 subsystem ID.
------------------------------------------------------------------------------

</table>

You can limit the display by entering an SSID name or mask in the Db2 Subsystem ID field, or by entering a group name or mask in the Datasharing Group field.

2. By default, all SSIDs are listed. You can limit the display by entering an SSID name or mask in the Db2 Subsystem ID field.

3. Use the RIGHT and LEFT scroll commands (PF10 and PF11) to see all the available columns. Use the UP and DOWN commands (PF7 and PF8) to scroll through the list when there are more backups than can be displayed on one panel. There is a two-line detail for each backup that contains the following information:

- **Date** The backup date.
- **Time** The time the backup was taken in hh:mm:ss format.
- **Data Only** If the backup profile specified a data only backup, this field contains Yes. If both logs and data were specified, this field contains No.
- **Mixed Data** This field contains Yes if Db2 Recovery Expert detected log data sets on the same volume(s) as the data. If this value is yes, Db2 Recovery Expert must restore both the logs and the data.
On Disk
This field contains Yes if this backup has been not been offloaded from its original location. If Yes, the restore will be accomplished using the backup on disk.

On Offload
This field contains Yes if the backup has been offloaded using the Db2 Recovery Expert offload process (see “Creating backup profiles”). If the On Disk field contains No, the restore will be accomplished using the offloaded backup.

Obj Rcvr
This field contains Yes if object restore was enabled for the backup.

Partial Backup
This field contains Yes if the backup taken was a partial backup; not all volumes associated with the subsystem were included in the backup. This backup cannot be used for a system restore; however, it can be used for object restoration if the object restore function was enabled for the backup.

Type
The type of backup: BCV, SNAP, FlashCopy, DFSMSdss, or Db2.

Nbr Vols
The number of volumes that were backed up.

Run by Userid
The TSO user ID of the executor of the backup job.

Profile Name
The profile name used to create the backup.

Profile Creator
The TSO user ID of the profile creator.

Gen Nbr
The generation number for this backup.

Job Name
The backup job name.

Job Number
The backup job number.

RBA/LRSN
The RBA or LRSN of the backup. This is the point in time at which the subsystem will be restored.

Viewing the summary report from the backup
Use the V line command next to a restore point to view the summary report produced when the backup was performed.

This is the same report from the ARY#REPT DD described in the topics about reviewing output from the various backup types.

Offloading a backup
If offload options were set for the backup in the backup profile, you can use the O line command to offload a backup listed on the Restore System Display panel.

1. To offload a backup, enter O next to the backup. The Build Offload job window opens.
Build Offload Job

Edit Generated Job Y (Yes/No)

Build job in Dataset TUSER.TEST

Member Offload Job Member

Job Cards:

```bash
>> //OFFLJOB JOB TUSER,CLASS=A,NOTIFY=&SYSUID
>> /*
>> /*
>> /*
```

2. Specify one or more of the following fields:

**Edit Generated Job**

Enter Y to view the job in an ISPF edit session after generation. If you enter N, after the job is generated you will return to the Restore System Display panel.

**Build job in Dataset/Member**

Enter the fully qualified data set name (without quotes) where you want to save the generated job. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name. If the member does not exist, Db2 Recovery Expert will create it.

**Job Cards**

Enter a valid job card for your site.

3. Press Enter to build the offload job.

### Deleting backups

Use the D line command next to a backup to delete a backup from the list. A confirmation window appears; you must enter Y in the Delete field and press Enter to delete the backup. This command deletes all backups (both on disk and offloaded to tape).

### Viewing an object list from a backup

Use the J line command next to a backup to view a list of objects that were included in the backup. You can use this feature if object restore was enabled when the backup profile was created.

The object report lists all the objects that have their data sets completely contained in the system backup. If the selected backup is a full system backup (no volumes were excluded), then all the table spaces and index spaces in the system will be listed.

**Note:** Db2 Recovery Expert will not restore an object that was in a restricted state at the time of the system backup. If you try to restore an object that was in a restricted state at the time the system backup was performed, an error message will be produced informing you of the restricted status of the object. You can confirm that the object was in a restricted state using the Restricted Objects report that is produced at system backup time.

1. Enter J next to the backup on the Restore System Display. The Build Object Report Job window is displayed.
2. Specify the following fields on this window:

**Edit Generated Job**
Enter Y to view the job in an ISPF edit session after generation. If you enter N, after the job is generated you will return to the Restore System Display.

**Build job in Dataset/Member**
Enter the fully qualified data set name (without quotes) where you want to save the generated job. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name. If the member does not exist, Db2 Recovery Expert will create it.

**Job Cards**
Enter a valid job card for your site.

3. Press Enter. If you specified to edit the job, the generated job is displayed in an edit session.

4. Submit the job. When the job has completed, messages are written to several DDs.

**ARYOUT DD**
This DD contains messages produced during the job execution.

ARY00011 -Db2 Recovery Expert.
ARY00031 - Control Cards:
ARY00041 - OREPORT "PUSER\"."TEST S89Z - SNAP"

420  DB2 Recovery Expert for z/OS
Using the health check function

Use the H line command to run a "health check" on any system backup to check if the objects on the backup can be recovered.

A health check report can be run against any system level backup. You can build the report online or in batch. The health check report determines the objects that may be unrecoverable after a system restore is performed, before you actually run the system restore.

Health check will find objects on which a LOG NO utility was performed after the RBA/LRSN of the system level backup and before the RBA/LRSN you want to restore the system to. Because the log cannot be applied across the LOG NO utility point, an image copy will be necessary to recover those objects.

The specific events that are reported on are the following events in SYSCOPY:
• CHECK LOG NO
• LOAD REPLACE LOG NO
• REORG LOG NO
• LOAD LOG NO
• Modify Recovery

Restriction: Starting with Db2 V9, table spaces can be defined as LOG NO. If DML is performed against data in a table defined as LOG NO, and a system restore is performed to a point after the DML was performed, the space will be unrecoverable if a valid image copy does not exist. However, this situation will not appear in the health check report, because it is not possible to determine if and when DML was performed on this space.

Note: An index defined as COPY YES will appear in the health check Recoverable Objects report if an image copy of the index is found. If an image copy is not
found, or is invalidated by a REBUILD INDEX utility, the index will not appear in the Unrecoverable Objects report because it can be rebuilt.

For health checks generated in batch, the associated image copy data sets can optionally be validated to determine if they still exist and can be opened. For a multi-volume data set on tape, only the first volume is validated.

**Running the health check report online**

Follow these steps to run the health check report online.

1. Enter H next to the backup on the Restore System Display. The Health Check Options window is displayed.

   ![Health Check Options](image)

   - **Build Online or Batch**: Enter O for online.
   - **Validate IC Datasets**: Enter Y if you want to check each image copy data set to ensure it still exists. This option is only available when running the job in batch. For image copies on tape, only the first volume serial will be tested for existence.
   - **Roll Forward to RBA/LRSN**: Enter an RBA/LRSN that you would like to restore to using the selected System Level Backup. A Health Check report will be generated that will show all objects that will be in Recovery Pending status after the System Restore is performed. If an Image Copy is available to restore an object, the Image Copy dataset will be listed as well.

2. Specify the following fields on this window:

   - **Build Online or Batch**: Enter O for online.
   - **Validate IC Datasets**: Enter Y in this field if you want to check each image copy data set to ensure it still exists. This option is only available when running the job in batch. For image copies on tape, only the first volume serial will be tested for existence.
   - **Roll Forward to RBA/LRSN**: Enter an RBA/LRSN that you would like to restore the system to from the selected system level backup. The health check report generated will show any object that had a LOG NO utility performed between the RBA of the system level backup and the roll forward RBA. If an object can be recovered using an available image copy, that information will be contained in the report.

   **Note**: The RBA/LRSN of the system level backup is used as a starting point for the report and the Roll Forward to RBA/LRSN is used as an ending point of the report. The report may include objects that are not contained in the system level backup.

3. Press Enter. The Health Check Report is displayed as follows:
The report appears in two sections. The first section shows any table spaces that had a utility with LOG NO performed on them, but that are recoverable to the selected recovery point. The second section lists the table spaces that will be unable to be recovered due to an execution of a LOG NO utility, and lists the event that caused them to be unrecoverable.

**Running the health check report in batch**

Follow these steps to run the health check report in batch and optionally specify to validate image copy data sets.

1. Enter H next to the backup on the Restore System Display. The Health Check Options window is displayed.

   **Build Online or Batch**
   Enter B for batch.

   **Validate IC Datasets**
   Enter Y in this field if you want to check each image copy data set to
ensuring it still exists. This option is only available when running the job in batch. For image copies on tape, only the first volume serial will be tested for existence.

**Roll Forward to RBA/LRSN**

Enter an RBA/LRSN that you would like to restore the system to from the selected system level backup. The health check report generated will show any object that had a LOG NO utility performed between the RBA of the system level backup and the roll forward RBA. If an object can be recovered using an available image copy, that information will be contained in the report.

**Note:** The RBA/LRSN of the system level backup is used as a starting point for the report and the Roll Forward to RBA/LRSN is used as an ending point of the report. The report may include objects that are not contained in the system level backup.

3. Press Enter. The following window is displayed:

![Build Health Check Report Job](image)

4. Specify the following fields on this window:

**Edit Generated Job**

Enter Y to view the job in an ISPF edit session after generation. If you enter N, after the job is generated you will return to the Restore System Display.

**Build job in Dataset/Member**

Enter the fully qualified data set name (without quotes) where you want to save the generated job. This data set must exist and can be sequential or a PDS. If the data set is a PDS, enter a member name. If the member does not exist, Db2 Recovery Expert will create it.

**Job Cards**

Enter a valid job card for your site.

5. Press Enter to build the job. If you specified to edit the generated job, an ISPF window containing the job appears. If you did not specify to edit the job, the Restore System Display is displayed.

6. Submit the job. The job output is placed in two DD statements.

**ARYOUT DD:**

This DD contains messages produced during the job execution.

- RBR00011 - Db2 Recovery Expert for z/OS Starting. Version 02.02.001
- ARY0003I - Control Cards:
  - ARY0004I - HEALTH-CHECK
  - ARY0004I - SSID KB2C
ARY#REPT DD:

This DD contains the health check report.

The report appears in two sections. The first section lists the objects that are recoverable to the selected recovery point because a valid image copy was found. The second section lists the table spaces that will be unable to be recovered to the selected recovery point, and lists the reasons why the table space cannot be recovered.

</table>
Restoring a subsystem: Data only

If both data and logs were backed up, you can choose to restore only the data if desired. In addition, if the backup was configured for data only, you can only restore the data.

When restoring data only, Db2 Recovery Expert generates three separate JCL members that must be executed in order. Follow these general steps to restore the subsystem:

Note: You must have installation SYSADM authority to perform these steps, because Db2 restarts in ACCESS (MAINT) mode during this procedure.

1. Build the restore job from the desired backup. Refer to "How to build the restore jobs - data only" for details.

2. If not already stopped, stop Db2. If the subsystem is a non-data sharing subsystem, a step was included in the restore job to stop the subsystem. If the subsystem is a data sharing group, all members of the data sharing group must be manually stopped before continuing.

3. If the restored system is non-data sharing subsystem, the user must validate that the generated RBA represents the beginning of a log record before proceeding with the restore. To do this follow this procedure:
   a. Use the RBA from the job and subtract x'8000' from this value.
   b. Submit a DSN1LOGP utility with RBASTART(RBA from previous step) RBAEND(RBA from job) SUMMARY(YES).
   c. In the SYSSUMRY output, look for message DSN1213I, and use the RBA from this message as the SYSPITR for the conditional restart job.

If you specified to validate the image copies, the far right column of the report shows the status of the image copy data sets.
4. Submit the conditional restart job.
5. Submit the restore system job.
6. Restart Db2. Upon restart, you will receive a WTOR as follows:
   XXXX CONDITIONAL RESTART RECORD INDICATES
   TRUNCATION AT RBA XXXXXX. REPLY Y OR N

   You must reply to the WTOR with Y. Db2 will restart in ACCESS(MAINT)
   mode.
7. Submit the log restore job. The Db2 subsystem is now restored to the selected
   point in time (PIT).
8. Stop Db2 and restart it normally to remove ACCESS(MAINT) mode.

Building the restore jobs - data only
Use these steps to build a data only restore job.
1. Select a recovery point to which to restore. The Restore Options window is
   displayed.

   Restore Options
   Restore Only Data  Y  (Yes/No)
   Resolve Recover/Rebuild Pending Objects  N  (Yes/No)
   Select a Recovery Point  N  (Yes/No)
   Recover to RBA/LRSN  0000000000000B21C000

   Select whether to Restore Data and Logs or Data only. If
   restoring Data and Logs you will not be able to select a
   Timestamp Recovery Point or change the Recover to RBA/LRSN.
   If doing a Data only restore you will have the option of
   building a job that will resolve all the objects in either
   Recover pending or Rebuild pending status.

   Restore Only Data
   To restore only the data from the backup, enter Y here.

   Resolve Recover/Rebuild Pending Objects
   Enter Y in this field if you would like an additional step generated
   after the Log Apply step that will generate a separate job to resolve
   RECOVER-pending or REBUILD-pending objects. This job can be
   executed after the restore job to identify all objects in
   RECOVER-pending or REBUILD-pending status and create JCL to
   execute a RECOVER or REBUILD utility for those objects.

   Select a Recovery Point
   Enter Y in this field if you want to select a recovery point based on a
   timestamp.

   Recover to RBA/LRSN
   This field defaults to the recovery RBA/ LRSN associated with the
   backup. If you are restoring data only, you can leave this field as is
   and the subsystem will recover to that point in time. You can also
   enter an RBA/LRSN greater than that of the backup; in that case, Db2
   Recovery Expert will apply logs to bring the subsystem up to that
   point in time.
**Note:** When an RBA is entered for a non-data sharing subsystem, Db2 Recovery Expert rounds the RBA to the nearest 4K multiple. The checkpoint restart requires the RBA to be a multiple of 4K.

2. Once your recovery point has been established, press Enter on the Restore Option window. The Build Restore Job window opens:

```
Build Restore Job

Edit Generated Job  Y  (Yes/No)
Edit Recovery Options N  (Yes/No)
Edit Multijob Options Y  (Yes/No)

Build job in Dataset  TUSER.ARY.TEST
Member               Conditional Restart Member
Member               Restore System Member
Member               Log Restore Member
Member               Recover/Rebuild Pending Member

Job Cards:
=> //RJOBCRD JOB TUSERDH,CLASS=A,NOTIFY=&SYSUID
=> ///
```

Db2 Recovery Expert builds the following JCL members:

**Conditional restart**
This job contains the SYSPITR keyword to specify the restoration point.

**Restore system**
This job invokes the System Backup and Restore Services utilities to restore all of the data volumes to the recovery point.

**Log Restore**
This job restores the logs to the specified RBA/LRSN using the RESTORE SYSTEM LOGONLY utility.

**Recover/Rebuild Pending Member**
If the Resolve Recover/Rebuild Pending Objects option was selected, this member name will be used to build the recover and/or rebuild pending job. This job is generated in batch as the last step of the log restore job; the member name entered in this field will be used to hold the job after the log restore job is submitted.

3. Optionally, you can edit the JCL that is generated by specifying Y in the **Edit Generated Job** field. The generated JCL will open in a text editor ISPF panel where you can make changes before the job is submitted.

4. Optionally, you can edit the recovery options by specifying Y in the **Edit Recovery Options** field. Press Enter. The Recovery Options panel is displayed.
The following describes the fields on this panel:

**Objects Per Step**
Enter the number of objects that you want to be placed in each recovery step. You may enter a number between zero (0) and ninety nine (99). A value of zero indicates that all objects will be placed in one step.

**Validate IC Options**
Enter a Y in this field if you want to check each image copy data set to see if it still exists. For image copies on tape, only the first volume serial will be tested for existence. Specify an N if you do not want to check the image copy data sets.

**Reuse (IBM recover)**
Enter Y to specify that the RECOVER utility is to logically reset and reuse Db2-managed data sets without deleting and redefining them. If you enter N, Db2-managed data sets are deleted and redefined.

**Utility ID**
Enter a 1 to 16 character utility ID to be used to uniquely identify the utility to Db2.

**Parallel Tasks**
If you want the utility to process objects in parallel from backups on tape, enter the maximum number of objects to be processed in parallel.

**Number of Tape Units**
If specifying processing in parallel, indicate the maximum number of tape drives to be dynamically allocated.

**Edit Rebuild IX Options**
When indexes are included in the objects to be recovered, Db2 Recovery Expert chooses to either recover or rebuild the index, depending on the index and the type of recovery. Enter Y in this field to set options for REBUILD INDEX.

**Online Rebuild Index**
(Db2 V9 and higher) Type Y in this field to specify that the REBUILD INDEX should be performed online. You can specify the options for the online rebuild by entering Y in the Edit Online Rbld opts field.
Edit Online Rbld opts

( Db2 V9 and higher ) To set options for an online REBUILD INDEX, type Y in this field and press Enter.

5. Optionally, set options for an online REBUILD INDEX by entering Y in the Edit Online Rbld opts field. When you press Enter, the following panel is displayed:

![Panel with options](image)

The following describes the fields on this panel:

**Sharelevel**
Indicate the level of access applications will have during the RELOAD phase of the online index rebuild. Type R for reference (applications can read but not write data). Type C for change (applications can read and write data).

**Drain Wait**
Specify the number of seconds that the utility waits when draining the space. The time specified is the aggregate time for objects to be checked during the REBUILD INDEX. This overrides the values specified by IRLMRWT and UTIMOUT. If the keyword is not specified or 0 is specified, then regular draining using the IRLMRWT value will be used. Acceptable values can be from 0 to 1800 seconds.

**Retry**
Specify the maximum number of retries that can be attempted. Values can be from 0 to 255. If this field is left blank, the utility will use the value of the utility multiplier system parameter UTIMOUT.

**Retry Delay**
Specify the minimum duration in seconds between retries. Values can be from 1 to 1800. The value must be an integer. If you do not specify a value, REBUILD INDEX uses the Drain Wait value x Retry value.

**Maxro**
If Sharelevel is set to Change, set the maximum amount of time for the last iteration of log processing. During that iteration, applications have read-only access. Valid values are blank, an integer to specify the number of seconds, or DEFER to specify that iterations of log processing can continue indefinitely. The default is the value of the lock timeout system parameter IRLMKWT. If you type DEFER, you should also enter C in the Longlog field.

**Longlog**
If Sharelevel is set to Change, specify what action to take if log reading is not catching up quickly enough to the applications’ writing of the log. Db2 sends a message to the console, then takes the action...
you specify. Type C to continue the online REBUILD INDEX until the
time on the JOB statement expires. Type T to terminate the online
REBUILD INDEX after the delay specified by the Delay parameter.
Type D to drain the write claims after the delay specified by the Delay
parameter, forcing the final iteration of log processing.

**Delay** If Sharelevel is set to Change, specify the minimum interval between
the time that the online REBUILD INDEX sends the LONGLOG
message to the console and the time that the online REBUILD INDEX
performs the action specified by the LONGLOG parameter. Enter an
integer value.

6. Optionally, you can select to use multiple jobs for the restore process. In the
**Edit Multijob Options** you can:

- Specify N to bypass updating the options that are used to control a multiple
  job restore process. If you selected to perform the offload of the system
  level backup using multiple jobs, then the restore process has already been
  set up to use multiple jobs. Specifying N in this case merely bypasses
  changing those options, it does not change the fact that multiple jobs will
  be used. After pressing Enter you will continue generating the build job.
- Specify Y to update or change the options that are used to control a
  multiple job restore process. If you selected to perform the offload of the
  system level backup using multiple jobs, and you do not want to perform
  the restore using multiple jobs then you can specify Y in this field and turn
  off the multiple jobs option in the Restore Multijob Options panel. If you
  did not select to use multiple jobs for the offload and you would like to use
  multiple jobs for the restore, you can specify Y and turn on the multiple
  jobs option in the Build Restore Multijob Options panel. After pressing
  Enter the Build Restore Multijob Options panel opens. The following is an
  example of the Build Restore Multijob Options panel.

```
RCVYXPRT V3R2  --------- Build Restore Job  ---------- YYYY/MM/DD HH:MM:SS
--------- Multijob Options ---------

Option ==>------------------------------------------------------------------------
Creator: TUSER    Name: T9B1 - DFSMSDSS     SSID: T9B1
Share Option: U (Upd,View,No)    Description:------------------------------------------------------------------------

Enter the options for performing offload and restore processing:
Use Multijobs ==> Y (Y/N)     Multijob Prefix ==> TSMXDX (1-6 character job prefix)

Multijob LPAR list:
   LPAR Name  Max Jobs (1-99)  Max Tasks (1-8)
   RS22       02               02
   RS23       02               02
```

7. You can update one or more of the following Multijob options:

a. In the **Multijob Prefix** field specify a 1 to 6 character prefix that will be
   used to generate a job name for each of the multiple jobs. Each job name
   will begin with this prefix followed by a number from 01-99. If this value
   is not specified, then the prefix is taken from the first 6 characters of the
   main job’s name. The first character specified for the Multijob Prefix option
   must begin with either an alphabetic character or a national symbol (#, @,
   or $) so that when the job name is generated it will be a valid z/OS job
   name.
b. You specify the LPARS where you want the multiple jobs to run in the **Multijob LPAR list** fields. When specifying the LPARS for the multiple job restore:

- To allow for workload balancing you can specify the same LPAR more than once in the LPAR list. For example, you might specify in the LPAR list:
  - LPAR1
  - LPAR2
  - LPAR3
  - LPAR1
- When defining the LPAR list, you will need to consider the total number of tape drives that are available to each LPAR and the total number of tape drives that are required for processing if the maximum number of jobs are submitted to complete the offload. To calculate the maximum number of tape drives you multiple the maximum number of jobs by the maximum number of tasks for each LPAR, and then add all the values. In the Multijob Options panel example, the maximum number of jobs is 8 (2x2+2x2).
- The main job that controls the distribution of the multijobs to the specified LPARs will also control the distribution of the volumes required for the recovery.

c. Specify the LPAR name in the **LPAR Name** field. The LPAR name can be from 1 to 8 characters. You can specify a single asterisk (*) to indicate that all the jobs are to be run on the same LPAR as the main job.

d. Specify a 2 digit number from 01-99 in the **Max Jobs** field. This number indicates the maximum number of jobs that can be submitted to run on the LPAR. The main job will submit multiple jobs to the specified LPAR until this limit is reached. When this limit is reached, if more jobs are needed, the main job will move to the next LPAR list entry. The default value is 4.

e. Specify a 2 digit number from 01-8 in the **Max Tasks** field. This number specifies the maximum number of tasks that are to be created in each multijob. When the multijob is submitted, it will create as many tasks as are needed, up to this limit, to perform offload or restore processing. The default value is 4.

8. Press Enter.

9. Submit the jobs.

10. Optionally, if you specified to recover or rebuild objects in pending status, submit the job contained in the member that you specified on the Build Restore Job window. When you submit this job, the RECOVER or REBUILD build jobs are executed.

**Sample restore jobs**

Sample restore jobs are shown in this topic.

**Conditional restart job for non data-sharing environment**

The following shows a sample conditional restart job for a non data-sharing environment:

```sql
//TUSERRS JOB TUSERDH,CLASS=A,NOTIFY=&SYSUID
/ * 
/ * 
/ * 
```
Conditional restart job for data-sharing environment

The following shows a sample conditional restart job for a data-sharing environment:

```plaintext
//TUSERRS JOB TUSERDH,CLASS=A,NOTIFY=SYSUID

Restoring a subsystem: Data and logs

You can restore data and logs if both data and logs were successfully backed up. Also, if the backup specified data only, but Db2 Recovery Expert detected mixed data when the backup job was run, you must restore both data and logs.

These are the general steps to restore both data and logs. For restoring data and logs, Db2 Recovery Expert generates only one JCL member. Follow these general steps to restore the subsystem:

1. **Build the restore job from the desired backup.** Refer to “Building the restore job - data and logs” for details.
2. If not already stopped, stop Db2.
3. Submit the restore system JCL.
4. Restart Db2.

Building the restore job - data and logs

Use these steps to build a restore job for data and logs.

1. Select a recovery point to which to restore. The Restore Options window is displayed.

   Restore Options
   
   Select whether to Restore Data and Logs or Data only. If restoring Data and Logs you will not be able to select a Timestamp Recovery Point or change the Recover to RBA/LRSN.
   
   If doing a Data only restore you will have the option of building a job that will resolve all the objects in either Recover pending or Rebuild pending status.

   **Restore Only Data**
   
   To restore data and logs, enter N.

   **Resolve Recover/Rebuild Pending Objects**
   
   Leave this field set to N; you cannot resolve recover or rebuild pending objects when restoring data and logs.

   **Select a Recovery Point**
   
   Leave this field set to N; you cannot select a recovery point when restoring data and logs.
Recover to RBA/LRSN

This field defaults to the recovery RBA/LRSN associated with the backup. You cannot change this field.

2. Press Enter. The Build Restore Job window appears:

```
Build Restore Job
Edit Generated Job Y (Yes/No)
Build job in Dataset TUSER.TEST
Member RESSYS Restore System Member

Job Cards:
===> //TUSERFF JOB TUSER,CLASS=A,NOTIFY=&SYSUID
===> /*
===> */
===> */
===> */
Press ENTER to process or PF3 to Cancel
```

One JCL member is generated when restoring data and logs. The following is a sample generated restore job:

```
000001 //TUSERFF JOB TUSER,CLASS=A,NOTIFY=&SYSUID
000002 /*
000003 /*
000004 /*
000005 /*
000006 //** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * *
000007 /*
000008 /* Profile: PUSER.TEST KB2C - SNAP AUTO *
000009 /* Job: 01 of 01 *
000010 /* Desc: *
000011 /* User: TUSER *
000012 /* Date: Tuesday October 28, 2019 *
000013 /* Time: 21:33:11.12 *

000040 /* respond Yes to the WTOR: *
```
Adding keywords to a system restore job

Db2 Recovery Expert allows you to edit a system restore job and add one or more keywords. Each keyword that you specify adds functionality that otherwise would not be present in the generated JCL.

1. Access the Build Restore Job panel as follows:

   a. Specify 1 (System Operations) in the Option line of the Db2 Recovery Expert main menu. From the System Operations Menu specify 3 (System Level Backup Operations) and press Enter. The Restore System Display panel opens.

   b. Specify $ in the Cmd line next to the system backup job to which you want to add keywords. The Restore Options panel opens. Specify or change options. Press Enter. The Build Restore Job panel opens.
c. Specify Y in the **Edit Generated Job** field. Specify any other fields that are applicable.

d. Press Enter. The JCL for the system backup job displays in an ISPF edit session.

2. Add one or more keywords to the JCL. You add keywords to the ARYIN DD * statement following the keywords that are generated by Db2 Recovery Expert. You can add one or more of the following keywords:

**DEBUG**

This keyword produces extra debugging information. You should only add this keyword when directed to by technical support.

**FCFRR**

This keyword can be used when performing a system restore using space efficient flash devices. FCFRR must be specified for fast replication to be used during the flash copy restore. This parameter is honored only for restores using DFSMSdss as the copy method on space efficient devices. For all other copy methods the presence of this keyword is ignored.

**FROM-OFFLOAD**

If the system backup that is used for the restore is on disk and tape, the restore is performed from the TAPE (or OFFLOAD) copy.

**LOCALSITE**

The restore job detects if it is running at the LOCAL or REMOTE site by looking at DSNZPARMs. This keyword overrides that detection and directs Db2 Recovery Expert to use LOCAL SITE resources for the recovery.

**MAX-TASKS**

This will control how many tasks are started to complete the restore processing for operations that can be multi-tasked. You can specify a number from 1 to 8. The default is 4.

**REMTESITE**

The restore job detects if its running at the LOCAL or REMOTE site by looking at DSNZPARMs. This keyword overrides that detection and directs Db2 Recovery Expert to use REMOTE SITE resources for the recovery.

**RESTART**

This keyword is used when a system restore from tape fails after some volumes have been restored. Db2 Recovery Expert restarts where it left off and continues the restore.

**RESTORE-LOGS**

If the system backup that is used for the restore contains the LOGS (either archive or active), this keyword causes the volumes containing the log data to be restored. This keyword is included automatically based on the options chosen when building the system restore JCL.

**RESTORE-TO-VOLSERS**

This keyword can be added to the system restore job at the disaster recovery site. It is required if your UCBs at the disaster recovery site do not match the UCBs at your local site. More specifically, if the UCBs at the disaster recovery site are not formatted with the same VOLSERS as were used at your local site (the case for most customers) this keyword is needed. Otherwise, it can be removed.
REMOTE-RESTORE

This keyword is added to the disaster recovery system restore job. It specifies that the system restore job that Db2 Recovery Expert is running is a disaster recovery system restore job.

3. Either run the job or press PF3 to return to the Application Profiles Display panel.

Selecting a recovery RBA based on a timestamp

You may be able to choose your recovery point from a list of timestamps and their associated RBAs.

For non-data sharing subsystem, your site must be running Db2 Recovery Expert’s RBA Capture utility in order to use this feature. However, if your site was not running the utility but the subsystem you wish to restore is a data sharing subsystem, Db2 Recovery Expert can calculate a recovery LRSN based on a given timestamp without requiring the RBA Capture utility.

1. After you choose a backup to restore, the Restore Options window appears.

2. On the Restore Options window, enter Y in the Select a Recovery Point field and press Enter. The following window appears:

```
Select Time / RBA information to display

Display Timestamp / RBA Captured Data: Y (Yes/No)
Display Archive Logs times / RBAs:       Y (Yes/No)
Display Checkpoint times / RBAs:         Y (Yes/No)
Timestamp to Db2 LRSN Utility:           N (Yes/No)
```

On this window, you can choose either to display information from the RBA Capture utility or use the timestamp to LRSN conversion feature.

Selecting a recovery RBA using the RBA Capture utility

If you are using Db2 Recovery Expert’s RBA Capture utility, timestamps and their associated RBAs are tracked and stored in a VSAM repository.

If you select a backup to restore and then choose to select a recovery point, Db2 Recovery Expert displays all the RBAs captured from the date and time of the backup to either the current point in time OR to the date and time of the next backup that was taken.

1. To view the RBA Capture utility data, type Y in one or more of these fields:

   **Display Timestamp / RBA Captured Data**
   Y in this field displays the timestamps and associated RBAs captured at the specified intervals while the Db2 subsystem was active.

   **Display Archive Logs times / RBAs**
   Y in this field displays the timestamps and the RBAs and/or LRSNs at the start and end of the archive logs.

   **Display Checkpoint times / RBAs**
   Y in this field displays the timestamps and associated log RBAs and/or LRSNs recorded at start and end checkpoints.

2. Type N in the Timestamp to Db2 LRSN utility field. Press Enter. The Subsystem Time/Timestamp Display appears:
**Captured Timestamp/RBA section:**

This section contains information about the RBA at the specified timestamp.

**Active** Yes indicates the subsystem was active at that timestamp.

**Log Timestamp**

This is the store clock time at which Db2 Recovery Expert captured the RBA. The first timestamp captured probably will not be at an exact minute boundary, because the first RBA is captured at the time the task is started. However, successive timestamps should be on minute boundaries (such as 22:24:00.00).

**Log RBA/Log LRSN**

The log RBA and/or LRSN captured at the store clock time.

**Log Bytes**

The number of bytes that have been added to the log since the previous interval; blank if no changes have been made to the log.

**Tip:** If Log Bytes is blank, this represents a quiet time for the subsystem and therefore might be a good recovery point for that subsystem.

### Archive Log Records

<table>
<thead>
<tr>
<th>Start Time</th>
<th>End Time</th>
<th>Log RBA</th>
<th>Log LRSN</th>
</tr>
</thead>
<tbody>
<tr>
<td>01/06/2019-12:07:37.70</td>

</table>

---

**Chapter 15. Restoring a subsystem**
Log Timestamp
This is the store clock time at which the log records at the start and end of the archive log were created.

Log RBA/Log LRSN
The start or end log RBA and/or LRSN when the log records were created at the start and end of the archive log.

Check Point Records
This section displays the timestamps and associated log RBAs and/or LRSNs recorded at start and end checkpoints.

Start/End
The start and end timestamps for the beginning of the checkpoint record and the ending of the checkpoint record.

Log Timestamp
This is the store clock time associated with the RBA at the start or end of the checkpoint record.

Log RBA/Log LRSN
The start or end log RBA and/or LRSN captured at the store clock time.

Chkp Type
The type of checkpoint.

3. To select a recovery point, specify S next to the record and press Enter.
4. When you have selected an RBA, press PF3 to return to the Restore Options window. The selected RBA is inserted into the Recover to RBA/LRSN field.

Using the timestamp to LRSN conversion window
This feature can be used for data sharing subsystems when you are restoring data only. You can enter a timestamp in either GMT or local time; Db2 Recovery Expert then determines the appropriate restore LRSN based on the timestamp.

1. Type Y in the Timestamp to Db2 LRSN Utility field and press Enter. The Timestamp to LRSN Conversion Utility window opens. Each of the fields default to the current date and time in local time, and the LRSN of the selected backup.

<table>
<thead>
<tr>
<th>Timestamp to LRSN Conversion Utility</th>
</tr>
</thead>
<tbody>
<tr>
<td>Timestamp is in GMT or Local Time</td>
</tr>
<tr>
<td>L (Gmt/Local)</td>
</tr>
<tr>
<td>Date to Recover</td>
</tr>
<tr>
<td>2019 - 01 - 13 (CCYY - MM - DD)</td>
</tr>
<tr>
<td>Time to Recover</td>
</tr>
<tr>
<td>22 : 17 : 16 (HH : MM : SS)</td>
</tr>
<tr>
<td>Generated LRSN</td>
</tr>
<tr>
<td>C39790F98670</td>
</tr>
</tbody>
</table>

2. Enter the desired time format in the Timestamp is in GMT or Local Time field.
3. Enter the desired date and time in the Date to Recover and the Time to Recover fields. You must enter values in all fields of the date and time before pressing Enter. Db2 Recovery Expert validates the date; if it is invalid, an error message is issued.
4. Press Enter. The appropriate LRSN based on the timestamp appears in the Generated LRSN field. The Date and Time to Recover fields become read only,
and the Timestamp is in GMT or Local Time field changes to the Recover System to Generated LRSN field. This field defaults to Y. If you change it to N and press Enter, the field changes back to the Timestamp is in GMT or Local Time field, allowing you to modify the timestamp.

5. To accept the LRSN, enter Y in the Recover System to Generated LRSN field and press Enter. The Restore Options window reappears. The Recover RBA/LRSN field is populated with the LRSN retrieved via the conversion utility.

### Restarting a failed restore job

If a job fails while restoring a Db2 subsystem from tape, you may be able to restart the restore job using a **RESTART** parameter. This parameter allows Db2 Recovery Expert to bypass restoring volumes from tape that were successfully restored in the previous job.

The **RESTART** parameter can only be used for jobs that are restoring Db2 subsystems from tape. This parameter is not required; if you resubmit the restore job without adding **RESTART**, the restore job will start from the beginning and all volumes will be restored.

1. Open the restore job that failed in an edit session.
2. In the **ARYREST** step, find the **ARYIN** DD. Add the **RESTART** parameter anywhere after the **RESTORE** command, as shown in the following example:

   ```
   //ARYIN   DD *
   RESTORE PUSER."K82C - SNAP BACKUP"
   GENERATION 01
   DATE 10/31/2019
   TIME 15:13:14
   RESTART
   /*
   /*
   3. Save the job and resubmit it. Db2 Recovery Expert restore skips the tape restore for volumes that were previously successfully restored. Messages will appear in the restore report listing the volumes that were bypassed.

### Reviewing restore reports

Db2 Recovery Expert produces several different reports when a subsystem is restored. This section describes the reports; they are output to the DDs of each job. Except where indicated, the DDs are the same whether the restore is a data only restore or a full restore.

#### Conditional restart job report (data only restores)

The Conditional restart job report appears in the **SYSPRINT** DD of the conditional restart job for a data only restore. This report mostly contains messages from the **DSNJU003** change log inventory utility.

The following is an example of the report:

```plaintext
RELEASE LEVEL OF BSDS - ACTIVE=2.3 AND ABOVE ARCHIVE=2.3 AND ABOVE DDNAME=SYS
RELEASE LEVEL OF BSDS - ACTIVE=2.3 AND ABOVE ARCHIVE=2.3 AND ABOVE DDNAME=SYS
CRESTART CREATE,ENDRBA=0000FE910000,FORWARD=YES,BACKOUT=YES
DSNJ408I   DSNJRJFCK CHECKPOINT RBA FOUND, RBA = 0000FE909C8E, TIME = 23:00:26 OCTOB
DSNJ411I   DSNJRJCR CRESTART CREATE FOR CRCRID = 0018, DDNAME = SYSUT1
DSNJ408I   DSNJRJFCK CHECKPOINT RBA FOUND, RBA = 0000FE909C8E, TIME = 23:00:26 OCTOB
```
Restore job report

This topic provides sample restore job reports.

**ARY#REPT DD**

The following summary report appears in the ARY#REPT DD of the restore job. This DD lists the volume details of the restore. The following is a sample of the ARY#REPT DD for a restore using BCV backups:

```
Db2 Recovery Expert
Restore Summary Report

Utility Executed:........... Restore
Profile Name:............... PUSER.TEST K72A - BCV
Db2 Subsystem:............... K72A
Db2 Version:............... Vvvv
Restore Type:............... BCV
Restored:................... Object Data Only
Nbr of Controllers:....... 01
Lowest Microcode Level:... 5x73
Nbr of Volumes:............ 0001
Backup RBA:................. 0000FE909C28
```

```
Db2 Recovery Expert
Restore Volume Detail Report

<--Db2 Source Volume--> <-Split-> <-Restore->

------ ---- ---- ------ ---- ---- ----
ARY090 9090 0190 3390-3 90B3 0000 90B3 01B3
```

**ARYOUT DD**

The following report appears in the ARYOUT DD of the restore job. This DD contains information about the backup profile used to make the backup, control cards, and ARY messages. The following is a sample of the ARYOUT DD for a restore using BCV backups:

ARY0001I - Db2 Recovery Expert Starting. Version 02.02.001
ARY0003I - Control Cards:
ARY0004I - RESTORE "PUSER","TEST K72A - BCV"
ARY0004I - GENERATION 01
ARY0004I - DATE 10/30/2019
ARY0004I - TIME 17:44:32
ARY0004I -
ARY0123I - Backup PUSER.TEST K72A - BCV generation 01 was read from the repository.
ARY0013I - Backup profile PUSER.TEST K72A - BCV was read from the repository.
ARY0150I - EMC API version 05.08.00. API patch level 0001. SCF patch level 0001.
ARY0038I - Performing profile volume map validation.
ARY0146I - Removing volser ARYO92 from this restore. It contains only log data.
ARY0039I - Volume map validation complete.
ARY0135I - Profile PUSER.TEST K72A - BCV has been marked as "Setup Needed".
ARY0137I - Varying volumes offline.
ARY0136I - Disconnecting user catalogs.
ARY0137I - User catalog CATALOG.RSPLEX01.K72A.CAT1 disconnected.
ARY0137I - User catalog CATALOG.RSPLEX01.K72A.CAT2 disconnected.
ARY0138I - Restoring volumes.
ARY0115I - Standard unit 9090 (volser ARY090) was restored from BCV unit 90B3.
ARY0137I - Varying volumes online.
ARY0002I - Db2 Recovery Expert complete. RC=000.

ARYSNAPO

The following report appears in the ARYSNAPO DD of the restore job. This DD contains messages generated by the EMC SNAP VOLUME and Timefinder utilities. For information on these messages, see the EMC documentation.

ARY@SNPC - EMC Snap Cleanup Messages:

Chapter 15. Restoring a subsystem 447
Log restore report (data only restores)

This topic provides sample reports from the log restore job.

The log restore job uses RESTORE SYSTEM LOGONLY syntax to apply the logs. The output is placed in a SYSPRINT DD. The following is a sample of the output:

******************************************************************************
** TOP OF DATA **************************************************************
DSNU000I DSNUGUTC - OUTPUT START FOR UTILITY, UTILID = TWUSR.TWUSRBD
DSNU1044I DSNUGTIS - PROCESSING SYSIN AS EBCDIC
DSNU050I DSNUGUTC - RESTORE SYSTEM LOGONLY
DSNU1604I !B81D DSNUVARL - RESTORE SYSTEM PHASE
  LOG APPLY STARTED AT LOG POINT = X'00000076A090'.
DSNU1628I DSNUVBRD - RESTORE SYSTEM PHASE
  LOG APPLY COMPLETED, ELAPSED TIME = 00:00:00.
DSNU010I DSNUGBAC - UTILITY EXECUTION COMPLETE, HIGHEST RETURN CODE=0
******************************************************************************

RECOVER and REBUILD job output

Output generated from the RECOVER and REBUILD jobs is shown in this topic.
**SYSPRINT DD (RCVRFRIC step)**

The following is an example of the output from the SYSPRINT DD in the RCVRFRIC step of the RECOVER and REBUILD job.

```
DSNU000I DSNUGUTC - OUTPUT START FOR UTILITY, UTILID = PDBOB.RJOBCRD
DSNU1044I DSNUGTTT - PROCESSING SYIN AS EBCDIC
DSNU050I DSNUGUTC - RECOVER TABLESPACE RIDB.RITS1 PARALLEL(4)
                    TAPEUNITS(2) REUSE LOCALSITE

Chapter 16. Creating image copies from system level backups

You can use Db2 Recovery Expert to make Db2 image copies from system level backups if object restore is enabled when the backup job was built.

After the backup is complete, you can select an existing application profile, or create a new application profile, to specify which objects to copy. You can have the image copies registered in the Db2 system catalog table SYSIBM.SYSCOPY, therefore allowing the image copies to be used by several Db2 utilities that can process Db2 image copies.

Note:
- DFSMSdss version 1.8 or higher is required to create an image copy from a system level backup.
- In some cases image copies created from a system level backup are not in page order. If the image copy is not in page order it may not work with the IBM UNLOAD utility.

You can make image copies of table spaces and indexes defined with COPY YES that were included in the backup.

A backup taken using any method can be used to create the image copies. In most cases, a backup offloaded to tape can also be used; however, if the profile used FDR to offload the backup, that offloaded backup cannot be used to make image copies.

All image copies will be for a single partition. If a non-partitioned object has grown to multiple data sets, all data sets will be included in the image copy.

The image copies are registered as SHRLEVEL CHANGE copies. The start RBA will be recorded as the HPGRBLP RBA value associated with a system backup. Db2 maintains this RBA in the header page of DSNDB01; every log record lower then this RBA or LRSN has been applied and externalized to disk. The PIT_RBA will be set to the backup RBA associated with the system backup. No log records past this value are applied to the table spaces and indexes in the system backup.

Db2 Recovery Expert will not create an image copy for objects that were in a restricted state at the time of the system backup. If you try to create an image copy for an object that was in a restricted state at the time the system backup was performed, an error message will be produced informing you of the restricted status of the object. You can confirm that the object was in a restricted state using the Restricted Objects report that is produced at system backup time.

Selecting or creating the application profile

This topic describes how to specify or create an application profile when creating Db2 image copies from a system level backup.

1. On the Restore System Display panel, enter the I line command next to the backup and press Enter. The Enter Application Profile Selection panel is displayed:
You can limit the profiles that are listed on the next panel by entering a profile name, profile creator name, or SSID in this window. You can use wildcards for one or all fields; an asterisk (*) is the only supported wildcard character.

**Note:** You can change the SSID on this window to see profiles on different subsystems, but you can only use a profile that was created for the subsystem on which the backup was taken.

2. Press Enter. The Application Profile Selection panel is displayed.

3. On the Application Profile Selection panel, select the profile using the S line command. When you press Enter, the Build Image Copy Job window is displayed.
**Setting image copy options**

This topic describes how to set image copy options such as backup type, data set naming specifications, and whether the copy is to be recorded in SYSCOPY.

1. On the Build Image Copy Job window, enter Y in the **Edit Image Copy Options** field and press Enter. The Image Copy Option panel opens. The following is an example of the panel:
2. Enter the fields as follows:

**Update DSN Specification**
Type Y in this field to set or change the data set specifications.

**Backup Type**
Specify the type of image copy to create. Valid values are LP (local primary), LB (local backup), RP (remote primary), or RB (remote backup). If the backup offloaded to tape is used to create an image copy, make sure the system level backup was performed for the corresponding backup copy type, by verifying that the appropriate field is set on the Offload Options panel for Backup Profile.

**Unit Type**
Type in a valid unit where the data set will be written.

**Catalog**
Type Y to catalog the data set. Type N to not catalog the data set.

**Register in SYSCOPY**
Type Y to have the image copy registered in SYSIBM.SYSCOPY.

**All Parts in one Copy**
Type Y to specify that when creating an image copy from a system level backup, all partitions of a partitioned object (table or index space) will be placed in the same image copy data set. The image copy row that is logged will indicate that all partitions are in the same copy as well. Type N to specify that each partition of a partitioned object (table or index space) will be placed in its own image copy. Specifying Y in this field will reduce the number of image copy data sets that are created.

**Data Class**
If your site uses SMS to manage data sets, type in the SMS Data Class.
Storage Class
If your site uses SMS to manage data sets, type in the SMS Storage Class.

Management Class
If your site uses SMS to manage data sets, type in the SMS Management Class.

Number of tasks
Specify the number of subtasks that Db2 Recovery Expert is to use when creating the image copies.

Work Volumes
Specify the work volumes used during the creation of the image copies. At least one must be specified, but up to six volumes can be specified.

Note: If Db2 has striping on, you must use SMS managed work volumes.

Work Storage Class
If the work volume(s) specified are SMS-managed, specify an SMS storage class.

Process Dependent Indexes
Specify whether the indexes on selected objects are copied. Specify Y to include all indexes on selected objects in the image copy if they are defined as COPY YES. Specify N to exclude the indexes from the image copy.

Process RI
Specify whether related objects are included in the image copy. Specify Y to include all related table spaces including RI table spaces, LOB table spaces and XML table spaces. Specify N to exclude the related objects from the image copy.

Enter the following fields if the unit type is a tape device:

Stack Copies on Tape
Indicate whether you want to stack image copies on a single tape when possible.

Tape Stack Limit
If stacking image copies, enter the number of image copies that you want Db2 Recovery Expert to stack on one tape before dismounting the tape.

Expiration date *or* Retention period
Enter either the tape expiration date in YYYYDDD format, or the tape retention period in number of days.

Maximum Tapes
The maximum number of tapes for each image copy.

3. When you have finished entering image copy options, press PF3 (END). The Build Image Copy Job window is displayed.

Specifying data set naming conventions
You can use Db2 Recovery Expert Image Copy DSN Specification panel to construct data set names for the image copies.
The Image Copy DSN Specification screen allows you to build data set names using variables that are resolved at run time.

If you do not specify a data set mask using this screen, the DSN defaults to the following mask:

&UID..&SSID..&DB..&SN..ICOPY

When you type Y in an Update DSN Specification field, the screen appears.

<table>
<thead>
<tr>
<th>Valid dataset name specification codes are:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Database 10. Year (YYYY)</td>
</tr>
<tr>
<td>2. Space Name 11. Month (MM)</td>
</tr>
<tr>
<td>5. Vcatname 14. Hours (HH)</td>
</tr>
<tr>
<td>8. Time (HHMMSS) 17. Timestamp</td>
</tr>
<tr>
<td>9. Date (YYYYDDD) 18. Random Number</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

Qualifier code
To include a qualifier, type its number in the Qualifier code field and press Enter. The qualifier string appears in the Current dataset name generation qualifier string field. You can also type the data set name or string directly in the string field.

Free form literal
After selecting the Use Freeform literal qualifier, you can enter an eight-character literal in this field. If you want the literal to be in its own substring, make sure to begin the literal with a period.

Show DSN
To view the string as it would be completed, enter Y in this field and press Enter.

Current dataset name generation qualifier string
This field displays the qualifier string as it was input.

Valid qualifiers for the data set names that you can use on the Offload DSN Specification screen are listed on the bottom half of the screen and are:

Database
The database name of the object being copied.

Space Name
The table space or index space name being copied.

Partition
The partition number of the object being copied.
Volser  The volume serial of the data set.

Vcatname  The volume catalog name.

Subsystem ID  The Db2 subsystem ID.

User ID  The TSO user ID of the job builder.

Time (HHMMSS)  The current time in the format shown.

Date (YYYYDDD)  The current date in the format shown.

Year (YYYY)  The year in the format shown.

Month (MM)  The month in the format shown.

Day (DD)  The day of the month in the format shown.

Julian Day (DDD)  The Julian day.

Hours (HH)  The current time in hours.

Minutes (MM)  The current time in minutes.

Seconds (SS)  The current time in seconds.

Timestamp  The current timestamp, in format yymmdd.hhmmss.

Random Number  A random number in format Rnnnnnn.

GDG (+1)..(+n)  If you are using GDG data sets, this variable appends (+n) to the GDG base. This must be the last qualifier code you specify for the data set name.

Backup Type (#18.#19)  The backup type. The format is x.y, where x is L for local or R for recovery and y is P for primary or B for backup.

Local/Recovery (L/R)  The backup type; L is used for local and R for recovery.

Primary/Backup (P/B)  The image copy backup type; P is used for primary and B for backup.

Job Name  The job name.

Step Name  The job step name.

Profile Creator  The profile creator ID.
Profile Name
The profile name.

Substring Qualifier
Select this option to specify one of the qualifiers and customize the substring. When you press Enter, the substring parameters window appears.

Use freeform literal
After selecting this qualifier, you can enter an eight-character literal in the Free Form literal field. If you want the literal to be in its own substring, make sure to begin the literal with a period. For example, if you enter 1 (Volser), 3 (Subsystem ID), then 14 (Timestamp), the data set name appears as:

\[ \text{volser.ssid.D070104.T151509} \]

where \text{volser} and \text{ssid} resolve to values appropriate to your site.

Using the substring function
Use the Substring Qualifier function to customize substring parameters.

When you choose the Substring Qualifier data set name specification code, the Substring Parameters window is displayed.

You can choose to enter almost any of the qualifier codes and specify the string's starting position and length. For example, qualifier code 3 generates a string of "&SSID", a four-character subsystem name. However, if your site uses three-character SSIDs, option 24 can be used to specify the SSID and customize the string length, as follows:

An example of the result is shown in the following screen:
Resulting DSN using current symbolic string

Some substrings (such as time and date) require the addition of an alphanumeric or symbol in the beginning of the string.

When you select these substrings, the following window is displayed.

This screen allows you to insert an alphanumeric or symbol to make the data set node name valid. When finished, press Enter. The Offload DSN Specification screen reappears with the corrected substring.

Viewing a sample string

To view the string as it will be completed, type Y in the Show DSN field.
When you press Enter, the sample string appears. The following is an example of the sample string as it may appear in the panel:

```
Using the following sample data as input:
&JOBNAME = 'JOBNAME'
&STEPNAME = 'STEPNAME'
&SSID = 'SSID'
&VOLSER = 'VOLSER'
&CATNAME = 'CATNAME'
&LOCREM = 'L'
&PRIBAC = 'P'
&DB = 'DATABASE'
&PROFCTR = 'PDUSER2'
&PROFNAME = 'S89Z OBJE
&SN = 'SPACENAM'
&PART = 'PART'

The date/time fields are set to the current time.
```

The generated dataset would be:
```
* DATABASE.SPACENAM.T210215 *
```

---

### Creating an image copy from the last created system-level backup

Db2 Recovery Expert can create image copies from the last created system-level backup (SLB) for a Db2 subsystem. After generating the JCL to create image copies for a selected system-level backup, you can edit the generated JCL directing Db2 Recovery Expert to use the last backup.

1. Use the Db2 Recovery Expert ISPF interface to generate the JCL that will create image copies for a selected system-level backup.
2. Edit the control cards in the JCL. In the ARYIN DD add the LAST-BACKUP control cards. There are two options for the LAST-BACKUP control card:
   - To use the last backup of a particular backup profile, specify GENERATION LAST-BACKUP.
   - To use the last backup for a particular Db2 SSID (regardless of profile name), specify LAST-BACK-UP SSID directly following the IMAGE-COPY card.

The LAST-BACKUP card must follow either the IMAGE-COPY card or the GENERATION card.

#### Example #1

Generated JCL control cards that do not use the LAST-BACKUP card:

```
//ARYIN DD *
IMAGE-COPY "PDUSER","TEST EA1A FLASH BACKUP"
    GENERATION 01
    DATE 02/28/2019
    TIME 17:41:17
    MAX-TASKS 02
```

#### Example #2

Edited JCL control cards that use the last backup for a Db2 SSID (any profile name):

```
//ARYIN DD *
IMAGE-COPY LAST-BACKUP ssid
    MAX-TASKS 02
    etc.
```

#### Example #3

Edited JCL control cards that use the last backup for a specified profile:
Restarting an image copy from a system level backup job

You can use the RESTART keyword to restart a job that failed during the creation of an image copy from a system level backup. The RESTART keyword enables you to restart the job where it ended without having to rerun the entire job or analyze the output to see what has been run and successfully copied.

To drive the restart processing you will add the RESTART keyword to the end of the control card statements that are generated by Db2 Recovery Expert in the ARYIN DD statement. When this keyword is present, Db2 Recovery Expert will search SYSIBM.SYSCOPY to see if any image copies of the selected type (LP, LB, RP, RB) were created from the selected system backup in a previous run. If so, a message will be produced saying it was image copied in a previous run and the current copy will be skipped. The RESTART keyword will only work if the image copies are being registered in SYSIBM.SYSCOPY. If the RESTART keyword is not added, the processing will remain unchanged. A new image copy will be created for each table or index space specified regardless of whether one had been created in a previous run or not.

Example

The following is an example of the RESTART control card:

```
//ARY#PARM DD DISP=SHR,
// DSN=ARY.TST0310.SAMPLIB.EDITED(ARY#PARM)
//ARYIN DD *
IMAGE-COPY "CSKATE"."IPZ Db2"
GENERATION 01
DATE 02/28/2019
TIME 18:54:22
MAX-TASKS 01
COPY-TYPE LP
COPY-UNIT SYSDA
COPY-MASK "CSKATE.&DB..&SN..P&PART..T&TIME."
COPY-CATALOG
COPY-REGISTER
COPY-STOR-CLASS BOZOCLAS
COPY-STACK 999
COPY-MAX-TAPES 100
COPY-WORK-VOLSER WRK01
COPY-WORK-STORCLASS WRKCLASS
TABLESPACE ICTEST.SEG16K
INDEXSPACE ICTEST.IX16KS
RESTART
/*
```

Adding keywords to the image copy job

Db2 Recovery Expert allows you to edit the job that creates an image copy from a system level backup and add one or more keywords. Each keyword that you specify adds functionality that otherwise would not be present in the generated JCL.

1. Access the Build Restore Job panel as follows:
a. Specify 1 in the **Option** line of the Db2 Recovery Expert main menu and press Enter. From the System Operations Menu, specify 3 (System Level Backup Operations) and press Enter. The Restore System Display panel opens.

b. Specify 1 in the **Cmd** line next to the system backup job that you want to image copy. The Enter Application Profile Selection Criteria panel opens.

c. Specify the profile selection criteria and press Enter. The Application Profile Display panel opens.

d. Specify 5 in the **Cmd** line next to the profile that you want to use to build the image copy job. The Build Image Copy Job panel opens.

e. Specify Y in the **Edit Generated Job** field. Specify any other fields that are applicable.

f. Press Enter. The JCL for the system backup job displays in an ISPF edit session.

2. Add one or more keywords to the JCL. You add keywords to the ARYIN DD * statement following the keywords generated by Db2 Recovery Expert. You can add one or more of the following keywords:

   **DEBUG**
   This keyword produces extra debugging information. You should only add this keyword when directed to by technical support.

   **MAX-TASKS**
   This keyword controls how many tasks are started to complete the image copy processing for operations that can be multi-tasked. You can specify a number from 1 to 8. The default is 4.

   **FROM-OFFLOAD**
   If the system backup that is used to create the image copy is on disk and tape, the restore is performed from the tape (or OFFLOAD) copy. If the system backup is only on disk, this keyword is ignored and the objects are restored from disk.

   **RESTART**
   This keyword is added if a previous run of the job abends. When included Db2 Recovery Expert restarts, creating image copies for only those objects that were not successfully created in the previous run.

3. Either run the job or press PF3 to return to the Restore System Display panel.
Chapter 17. Recovering a Db2 database subsystem using the Db2 Recovery Expert disaster recovery feature

In case of a disaster that renders a Db2 subsystem unusable, you can restore the subsystem at a remote site if you have implemented the disaster recovery feature of Db2 Recovery Expert.

Db2 Recovery Expert allows you to configure your disaster recovery strategy to restore from either Db2 image copies or system-level backups.

Implementing the disaster recovery feature of Db2 Recovery Expert is a multiple step process. Each of the following steps apply whether you are restoring a Db2 subsystem using either a system level backup or Db2 image copies:
1. Offload system level backup to tape or create Db2 image copies.
2. Create one or more disaster recovery profiles at the local site.
3. Build the JCL for each recovery job.
4. Run the disaster recovery profile jobs on a regular basis.
5. Transport the tapes that contain the jobs and all data sets required for recovery to the remote site.
6. When necessary, run the recovery jobs at the remote site.

Planning a disaster recovery strategy

The first step to implementing the Db2 Recovery Expert disaster recovery feature is to decide whether you will recover your Db2 subsystem at the remote site using either a Db2 Recovery Expert system level backup or Db2 image copies.

If you select to use a system level backup, you will use Db2 Recovery Expert to create the system level backup and then you will use that system level backup to restore your Db2 subsystem at the disaster recovery site. This should speed the recovery at the disaster recovery site because the system level backup is a volume level copy of all the Db2 data sets. This volume copy can be restored quicker and easier then restoring your Db2 subsystem from image copies. Another advantage to this method includes the ability to apply log changes to recover all Db2 objects to the latest available point at the disaster recovery site with one "read" of the log. If you choose this method, you will create a system level backup using Db2 Recovery Expert and offload that backup to tape. You will then build a recovery job profile using Db2 Recovery Expert that specifies you are using a system level backup. The recovery job that is created from the profile will be run at the local site and it will create the jobs that you will run at the disaster recovery site to restore your Db2 system at the volume level. The recovery job will also create copies of the archive logs that will be used for the restore.

If you select to use Db2 image copies, you will need to create the image copies of all the Db2 objects that are needed to restore the Db2 subsystem. You will then build a disaster recovery profile using Db2 Recovery Expert that specifies you are using your own Db2 image copies of the data sets needed for the restore. The recovery job that is created from the profile will be run at the local site and can create, if you choose, copies of the archive logs.
Independent of the way that you choose, you should plan and practice your recovery procedures before a disaster strikes.

Recovery steps at the local site overview

Preparing to recover your subsystem at a remote site begins with creating disaster recovery profiles at the local site, building the profiles, executing the jobs on a regular basis and ensuring that the necessary data sets are sent to the remote site.

- Setting up for your disaster recovery strategy. This includes:
  - Offloading a system level backup to tape if you have chosen to restore your Db2 system using a system level backup.
  - Creating Db2 image copies if you have chosen to restore your Db2 system using image copies.
- Creating disaster recovery profiles

One primary profile should be created for each Db2 system that includes forcing a checkpoint and forcing the active log to archive, and has the "Only run Archive Log Update Process" field set to N. When built, this job does one of the following:

  - If you are using the system level backup method, this job ensures that a system level backup exists for the specified subsystem and copies the Db2 Recovery Expert repository to the disaster recovery PDS, along with IDCAMs statements to create the Db2 Recovery Expert repository at the disaster recovery site. This job should be run after the Db2 Recovery Expert job that offloads a system level backup to tape.
  - If you are using the image copy method, this job ensures that image copies are cataloged and deletes and redefines the VCAT-defined catalog spaces. Because this process can take some time, this job should be run at off-peak times, perhaps nightly, and should be run immediately after a job that takes image copies of the Db2 catalog.

A secondary profile should be created that has the "Only run Archive Log Update Process" field set to Y, and does not force a checkpoint or force the active log to archive. This job should be run periodically throughout the day to keep the recovery information up to date as much as possible.

- Building the disaster recovery profile in batch

When built, the primary profile produces a disaster recovery batch job. Depending on the type of recovery the job:

  - For the system level backup method:
    1. restores the Db2 Recovery Expert repository at the disaster recovery site.
    2. restores the Db2 volumes from the most recent offloaded system backup.
    3. copies the archive logs.
    4. rebuilds the BSDS. The PDS that contains the disaster recovery jobs and control records will contain the contents of the BSDS. This eliminates the need to mount tapes at the recovery site to build the BSDS.

  - For the image copy method:
    1. searches the catalog and finds all appropriate image copies.
    2. catalogs the image copy data sets.
    3. copies the archive logs.
    4. rebuilds the BSDS. The PDS that contains the disaster recovery jobs and control records will contain the contents of the BSDS. This eliminates the need to mount tapes at the recovery site to build the BSDS.

- Ensure the disaster recovery batch jobs are executed on a regular basis.
The disaster recovery batch jobs should be inserted into a job scheduler or otherwise run on a regular basis. The primary job should be run at off-peak times, perhaps nightly, and should be run immediately after a job that takes image copies of the Db2 catalog or a job that offloads a system level backup. The secondary job should be run periodically throughout the day to keep the recovery information up to date as much as possible.

- Ensure that corresponding necessary data sets are sent to the remote site

The necessary recovery data sets should be placed on tape and shipped to a remote site. These include:

- The recovery PDS. The disaster recovery batch jobs' output is generated to a PDS. At a minimum, this PDS contains two disaster recovery jobs and other necessary members to be used at the recovery site.

- One of the following:
  - System level backups that have been taken and offloaded by Db2 Recovery Expert.
  - Image copy data sets for the Db2 catalog, application data sets, and archive log data sets. You can create a list of the names and the volsers of the archive log copy data sets and the Db2 catalog copies by executing the following query in SPUFI:
    
    ```sql
    SELECT * FROM ARY.DR_IMAGE_COPY_V11;
    SELECT * FROM ARY.ARCHIVES_V11;
    ```

    If image copies are not cataloged, you could query SYSIBM.SYSCOPY to retrieve the volsers of the necessary data sets.

---

**Setting up for your chosen recovery strategy**

You can use Db2 Recovery Expert to recover a Db2 subsystem from either a system level backup or from Db2 image copies. In either case you must set up the recovery media depending on what strategy you choose.

Select one of the following tasks for more information on setting up for your recovery strategy:

- Setting up for system level backup recovery
- Setting up for Db2 image copy recovery

**Offloading the system level backup to tape**

If your chosen disaster recovery strategy is to restore your remote Db2 subsystem from a system level backup, you must first offload the system level backup to tape.

There are two ways to offload your system level backup to tape:

- Offloading during the creation of the system level backup. This is an option that you can select when you create the system level backup profile.
- Offloading as a stand-alone task. This option generates a task that allows you to perform an offload to tape at any time. It is dependent on a previously successful execution of a system level backup.

**Offloading the system level backup to tape during the creation of the system level backup**

You can select to offload your system level backup to tape as part of or during the creation of the system level backup.
If you choose this option, you will specify that a system level backup will be
ofloaded to tape when you create the system level backup profile. For more
information on creating system level backup profiles see “About offload options”
on page 235.

Offloading the system level backup to tape as a stand alone task
If you have chosen to backup your remote Db2 subsystem with a system level
backup, that system level backup must be offfloaded to tape.

One way to offfload your system level backup to tape is to build a batch job that
will offfload the system level backup. You can build the batch job using the System
Restore and Offload panel of the ISPF interface. You can select the system level
backup from the System Restore and Offload panel and run the job when required.

1. Open the ISPF interface Db2 Recovery Expert main menu display panel.
   Specify 1 for System Operations. The System Operations menu opens. Specify 3
for System Level Backup Operations. The Restore System Display panel opens.

2. The Restore System Display panel shows a list of valid system recovery points
from which you can choose in the event that you need to restore a subsystem.
   Enter V (View Reports) next to the system level backup that you want to
offload to tape. The Backup Report Display panel opens showing the details for
the system level backup.

   **Backup Report Display**

   Utility Executed: Backup
   Profile Name: PAOLOR6.D9C1
   Db2 Subsystem: D9C1
   Db2 Version: Vvvv
   Backup Type: IBM System Level Backup
   Backup Contains: Object Data and Log Data

Setting up for Db2 image copy recoveries

If your chosen disaster recovery strategy is to restore your remote Db2 subsystem from Db2 image copies, you must create the Db2 image copies that will be used.

The traditional Db2 disaster recovery restore the Db2 system from a periodic dump, and then recovers more Db2 data using image copies and archive logs transferred to the remote site on an ongoing basis. The following lists what should be available at the remote site for a Db2 Recovery Expert image copy recovery:

- Dump the entire Db2 system at the local site. In most cases you would copy everything periodically with a DFSMSdss™ volume dump and send it to the recovery site.

- Create image copies of the user table spaces, the Db2 catalog, and the Db2 directory. In most case you would run the COPY utility with RECOVERYDDN set to tape.

- Force archiving to create a consistent set of archive log and BSDS lists. Consider the use of the -ARCHIVE LOG command to force archiving. Consider also issuing the -SET LOG LOGLOAD(0) or -SET LOG CHKTIME(0) command before issuing the -ARCHIVE LOG command so that you have the checkpoint on the truncated active log. Although there is no need to stop Db2 or even to quiesce during this procedure, MODE(QUIESCE) has some advantages. It simplifies restart since there will be no indoubt or inflight URs. There still may be incommit URs and pending writes. It may also make it possible to establish a coordinated quiesce point in IMS or CICS®. Once the message DSNJ139I LOG OFFLOAD TASK ENDED is issued, you can release the batch job to run your DSNJU004 report. 3.

- Integrated catalog facility (ICF) catalog EXPORT and list. Synchronize ICF catalog backup with the cataloging of image copies and archive logs.

- Create Image copies of user page sets. In most cases you would run the COPY utility with RECOVERYDDN set to tape. If you have a lot of changes to the Db2 catalog and the Db2 directory in the daytime, you should also have frequent image copies of them. COPYTOCOPY allows you to create additional image copies any time after the original has been created.

- Archive logs. In most cases you will probably be using dual archive logging. The second archive log (in most cases sent directly to tape via the install option) is intended as a backup or can be sent to the recovery site in preparation for disaster recovery.

- Create a BSDS list report. You will use the report to determine the fully qualified name of the archive log that you need to restore from and the RBA that you will
need to give in the CRESTART statement of DSNJU003. Your system should usually schedule a search for the message DSNJ139I LOG OFFLOAD TASK ENDED. Once the message is issued, you can release the batch job to run your DSNJU004 report.

Creating disaster recovery profiles

The second step in preparing for remote site disaster recovery is to create one or more disaster recovery profiles.

The accuracy of your disaster recovery depends on how you define your disaster recovery profiles. Db2 Recovery Expert uses the contents of a disaster recovery profile to build a disaster recovery profile job. The disaster recovery profile job will be run at the disaster recovery site to recover a Db2 subsystem. You will create one or more disaster recovery profiles for each Db2 subsystem that you want to recover.

With Db2 Recovery Expert you can either recover your Db2 system to the point in time that the system backup was taken, or to some chosen point after the system backup was taken if you have the archive logs available at the disaster recovery site.

Ultimately, to ensure a complete and accurate recovery, you may need to build several disaster recovery profiles and ensure that the jobs produced from the profile are executed on a regular basis at the local site.

1. Specify 1 (System Operations) on the Db2 Recovery Expert for z/OS main menu and press Enter. From the System Operations Menu, specify 4 (Disaster Recovery Profiles) and press Enter. The Enter Disaster Recovery Profile Like to Display panel opens. From this window you can limit the disaster recovery profiles that are listed on the Disaster Recovery Profile Display window.

2. Using one or more of the fields Profile Like, Creator Like, or SSID fields, enter a profile name, creator name, or a subsystem ID name. You can use wildcard characters such as the "*" as a mask.

3. Press Enter. The Disaster Recovery Profile Display panel opens. The Disaster Recovery Profile Display panel lists the profiles that meet the selection criteria.
4. To create a new profile, specify C in the **Cmd** field and press Enter. The Enter New Disaster Recovery Profile Data window opens.

![Enter New Disaster Recovery Profile Data](image)

5. Specify a profile name, description, and update option on this panel. Refer to the following field descriptions for information.

**Creator**
This field is automatically filled in with your user ID as the profile creator. To create the profile with a different user ID, type the new ID in this field.

**Profile Name**
Type a name for the profile. Up to 30 characters can be used.

**Description**
*Optional:* Type descriptive information for the profile.

**Db2 SSID**
Type in the Db2 SSID for the profile.

**Update option**
This option controls how other users can use this recovery profile.
- Type U to allow other users to update the profile.
- Type V to allow other users to view but not update the profile.
- Type N to prevent other users from viewing or updating the profile.

6. Press Enter. The Update Disaster Recovery Profile screen opens.
You will use the fields on the Update Disaster Recovery Profile panel to set the options for this disaster recovery profile. Each of the fields are described as follows:

**Disaster Recovery Method**
Specify the type of backup that will be used to recover the subsystem at the remote site.
- **I**: Use Db2 image copies to restore the subsystem. If you specify this option, you will need to ensure that the image copies are taken and sent to the remote site. All Db2 catalog and directory spaces plus all application spaces must be image copied.
- **S**: Select this option to use a Db2 Recovery Expert system level backup to restore the subsystem. If you select this option, you will need to offload the system level backup that will be used for the restore to tape. You can offload the system level backup to tape in one of two ways. You can set offload options when you create the profile for the system level backup. This will perform the offload to tape as the last step of system level backup execution job. You can also build a batch job that can be run to offload the system level backup to tape when required.

**Archive Logs used at DR**
Specify whether archive logs are to be copied for use at the disaster recovery remote site. If selected, Db2 Recovery Expert can recover the Db2 system to a point in time that occurs after the system level backup. Selecting this option also allows the original archive logs to be left at the local site where they can be available for local recoveries or other processing while the copies are sent to the recovery site.
• C: Db2 Recovery Expert will copy the local archive logs (both 1 and 2) to use at the disaster recovery site. If this option is selected, the fields Copy Localsite Logs, Unit for copying Archive Logs, DR Archive Log Prefix 1, and DR Archive Log Prefix 2 become available. Selecting this option allows the original archive logs to be left at the local site where they can be available for local recoveries or other processing while the copies are sent to the recovery site.

• 1: If using dual logging, Db2 Recovery Expert will use the local copy of the first archive log.

• 2: If using dual logging, Db2 Recovery Expert will use the local copy of the second archive log.

Copy Localsite Logs
If you specified to copy the local archive logs, this field tells Db2 Recovery Expert which logs to copy:
• 1: Only copy archive log 1.
• 2: Only copy archive log 2.
• B: Copy both archive logs 1 and 2.
• C: Create 2 copies from 1 archive log; Db2 Recovery Expert will create recovery site 1 and recovery site 2 logs from the local archive log 1.

Force a checkpoint before Archiving
Type Y to force a checkpoint before archiving the logs. Db2 Recovery Expert issues a SET LOG LOGLOAD (0) command when this field is set to Y. Setting this field to Y will cause the Db2 checkpoint records to be included in the last archive being sent to the disaster recovery site.

Force the Active log to Archive
This field allows you to force an ARCHIVE LOG command. The current active log is archived when this field is set to Y. For a data sharing group, each member’s logs are archived individually. If a member of a data sharing group is excluded via the Process Datasharing Subsystems field, that member’s log is not archived.

Only run Archive Log Update Process
This value is set to N when creating a primary profile. You would set this value to Y in a secondary profile. When set to Y the recovery job will optionally copy the archive logs and back up and rebuild the BSDS.

Process Datasharing Subsystems
This field allows you to choose how to process archive log sub tasks for data sharing group members.
• A: Process all data sharing group members on all LPARs.
• S: Process only the SSID under which the recovery profile is being built. This profile must also be generated under this SSID. If you choose this setting, you should ensure that only one of the profiles built for the data sharing group forces a checkpoint and archives the active log. The other profiles should have the "Only run Archive Log Update Process" field set to Y. This avoids duplicating work already done by the disaster recovery job on other subsystems.
• L: Process only the data sharing group members on the current LPAR (under which the profile is being built). If you are building profiles separately for the other LPARs in the data sharing group, then only one of the profiles needs to force a checkpoint and archive the active
log. The other profiles should have the “Only run Archive Log Update Process” field set to Y. This avoids duplicating work already done by the disaster recovery job on other subsystems.

**Archive Logs needed at DR**
Specify the number of days and/or hours of archive logs needed. This value is computed from the time the job is built at the local site. The recommended value for this field is (the longest duration between image copies at your site) X 2. Example: If weekly image copies are the longest duration, then enter 14 in this field (7 days x 2).

**Copy Archive Logs to DASD**
Specify the number of days and/or hours of archive logs that should be copied to DASD from tape at the recovery site. Logs from the last x days and y hours are copied. Using this field can reduce or eliminate contention on the archive log tape during recovery. The recommended value for this field is the longest duration between image copies at your site. Example: If weekly image copies are the longest duration, then enter 7 in this field.

**Unit for copying Archive Logs**
Enter the tape or DASD unit device to be used to copy the archive logs.

**Archive Logs Expiration date**
Specify the expiration for the archive logs. You can specify the date in the form of YYYYDDD or YYDDD. If you specify an expiration date for the archive logs, then you will not specify any value in the Archive Logs Retention period field.

**Archive Logs Retention period**
Specify the retention period for the archive logs. You can specify the retention period as a four digit number representing the number of days to keep the Archive logs. If you specify a retention period for the archive logs, then you will not specify any value in the Archive Logs Expiration date field.

**DR Archive Log Prefix 1**
**DR Archive Log Prefix 2**
Specify the archive log prefix 1 and 2 that the new archive logs will have at the recovery site. Note that if the subsystem is a member of a data sharing group, you must have "&SSID" somewhere in the archive log prefix.

**Image Copies (or SLB) used at DR**
Specify which image copies or system level backups are to be cataloged at the recovery site. L is local primary and local backup. R is recovery primary and recovery backup.

**Catalog x days of Image Copies at DR**
Specify how many days of image copies back from current are to be cataloged at the recovery site. The recommended value for this field is the longest duration between z/OS catalog backups.

**Use Multijob for DR Restore**
Specify whether you want to use multiple jobs for the disaster recovery restore process. Using multiple jobs can reduce the time it takes to perform the restore process. You can:
- Specify Y if you want the restore process to use multiple jobs. If you used multiple jobs to offload the system level backup that is being used for the restore, then the options that were in use when the
backup was offloaded will be used for the restore. If the offload was not done using multiple jobs, then default values are used for multijob options. To update or change the options you must specify U.

- Specify N to use a single job for the restore process.
- Specify U to update the multijob options that are used to create the multiple restore jobs. After pressing Enter, the Build Restore Multijob Options panel opens where you specify the LPARS where you want the jobs to run and the job name prefix for the multiple jobs.

**External Subsystem**

Specify a value in this field if you are creating a disaster recovery profile that will be used to recover both a Db2 subsystem and an IMS subsystem to a coordinated point in time. Specify the IMS system ID that will be recovered in combination with the Db2 subsystem.

**Allocation parameters**

- **Management class**: Specify the Management class to use when copying the archive logs from tape to disk. Leave blank to use the default value.
- **Storage class**: Specify the Storage class to use when copying the archive logs from tape to disk. Leave blank to use the default value.
- **Data class**: Specify the Data class to use when copying the archive logs from tape to disk. Leave blank to use the default value.
- **Device type**: Specify the Device type to use when copying the archive logs from tape to disk.

7. When you finish specifying the disaster recovery profile fields, press the PF3 key. The Update Disaster Recovery Profile panel closes. A message is issued that your profile was created. The next step in setting up the disaster recovery for your Db2 subsystem is to create a secondary profile. If you are not setting up a secondary profile for the Db2 subsystem, then you will now build the disaster recovery profile job.

**Specifying the restore multijob options**

The restore multijob options are used to specify the LPARS where the multiple restore jobs are run and to specify a prefix that is used when generating the names for the multiple jobs.

1. From the Update Disaster Recovery Profile panel specify Y or U in the **Use Multijob for DR Restore** field. Press Enter. The Build Restore Job Multijob Options panel opens.
2. Specify whether you want to use multiple jobs for the restore process. Using multiple jobs can reduce the time it takes to perform the restore. Specify Y if you want to use multiple jobs. Specify N to use a single job for the restore process. If you select to use a single job for the restore, press Enter and return to the build Restore Job panel. If you select to perform the restore process using multiple jobs you must also specify a prefix to use for the job names and the LPARs where the jobs can run.

3. In the Multijob Prefix field specify a 1 to 6 character prefix that will be used to generate a job name for each of the multiple jobs. Each job name will begin with this prefix followed by a number from 01-99. If this value is not specified, then the prefix is taken from the first 6 characters of the main job’s name. The first character specified for the Multijob Prefix option must begin with either an alphabetic character or a national symbol (#, @, or $) so that when the job name is generated it will be a valid z/OS job name.

4. You specify the LPARs where you want the multiple jobs to run in the Multijob LPAR list fields. When specifying the LPARs for the multiple job restore:
   - To allow for workload balancing you can specify the same LPAR more than once in the LPAR list. For example, you might specify in the LPAR list:
     - LPAR1
     - LPAR2
     - LPAR3
     - LPAR1
   - When defining the LPAR list, you will need to consider the total number of tape drives that are available to each LPAR and the total number of tape drives that are required for processing if the maximum number of jobs are submitted to complete the offload. To calculate the maximum number of tape drives you multiply the maximum number of jobs by the maximum number of tasks for each LPAR, and then add all the values. In the Multijob Options panel example, the maximum number of jobs is 8 (2x2+2x2).
   - The main job that controls the distribution of the multijobs to the specified LPARs will also control the distribution of the volumes required for the recovery.

5. Specify the LPAR name in the LPAR Name field. The LPAR name can be from 1 to 8 characters. You can specify a single asterisk (*) to indicate that all the jobs are to be run on the same LPAR as the main job.

6. Specify a 2 digit number from 01-99 in the Max Jobs field. This number indicates the maximum number of jobs that can be submitted to run on the
LPAR. The main job will submit multiple jobs to the specified LPAR until this limit is reached. When this limit is reached, if more jobs are needed, the main job will move to the next LPAR list entry. The default value is 4.

7. Specify a 2 digit number from 01-8 in the Max Tasks field. This number specifies the maximum number of tasks that are to be created in each multijob. When the multijob is submitted, it will create as many tasks as are needed, up to this limit, to perform offload or restore processing. The default value is 4.

8. Press Enter.

Renaming the disaster recovery profile

You can use the Rename line command to change the name, creator, or description of a disaster recovery profile.

You can rename profiles created under your user ID, regardless of the value assigned to the Update Option field. You can also rename a profile created by another user if the profile has the value of the Update Option field set to Update (U).

1. From the Disaster Recovery Profile Display panel specify R in the Cmd line next to the profile that you want to rename. Press Enter. The Rename Disaster Recovery Profile panel opens.

2. The New Profile Creator field is automatically filled with the user ID that created the profile. If you have been granted permission, you can change the user ID in the New Profile Creator field. Permission to change the creator user ID is granted using the ADMIN_USERID parameter in the SYSPARM library.

3. To rename the profile, specify a new name in the New Profile Name field.

4. To change the profile description, specify a new description in the New Profile Description field.

5. Press Enter. The profile is updated.

Creating a secondary disaster recovery profile

Creating a secondary disaster recovery profile is only necessary if you are using the continuous archive log transfer method of recovery. Only a primary profile is needed for a consistent point-in-time recovery.

The secondary disaster recovery profile must be built using nearly the same specifications as those used in the primary profile with the following exceptions:

- Force a checkpoint before Archiving: This value should be set to N in the secondary profile.
- Force the Active log to Archive: This value should be set to N in the secondary profile.
- Only run Archive Log Update Process: The value in this field must be set to Y in the secondary profile.

The following screen shows the settings for a secondary profile:
Creating application recovery jobs

If you have elected to restore a Db2 system using Db2 image copies, you need to be sure that you have created recovery jobs for all of the applications.

There are many options for creating the recovery jobs. The jobs can be created using Db2 Recovery Expert application profiles. See Chapter 11, “Recovering database objects,” on page 289 for more information. The jobs can also be created using the Db2 Automation Tool. There is also recovery JCL created during the profile build process. This JCL is automatically shipped to the remote site when the PDS created by building profiles is shipped.

Building disaster recovery jobs

After you define a disaster recovery profile, you must build from the profile a series of jobs that can be used to restore a Db2 subsystem at a remote site.

The process of building the jobs from the primary disaster recovery profile should be a regularly scheduled batch job. Disaster recovery profile jobs can only be built using the batch build process.

The build should be scheduled as frequently as you want to establish a point of consistency for recovery. This can be daily or weekly depending on recovery objectives. The output from the build job is a PDS containing the JCL necessary to recover the Db2 subsystem at the remote site.

Note: A PDS/E should be used to hold the output from the build jobs. This eliminates the need to frequently compress the output data set.

If you have selected to restore your Db2 system from system level backup, when the primary profile is built, Db2 Recovery Expert performs the following tasks:
1. Restores the Db2 Recovery Expert repository at the disaster recovery site.
2. Restores the Db2 volumes from the most recent offloaded system backup.
3. Copies the archive logs.
4. Rebuilds the BSDS for use at the disaster recovery site. The PDS that contains the disaster recovery jobs and control records will contain the contents of the BSDS. This eliminates the need to mount tapes at the recovery site to build the BSDS.

If you have selected to restore your Db2 system from Db2 image copies, when the primary profile is built, Db2 Recovery Expert performs the following tasks:
1. Searches the catalog and finds all appropriate image copies that will be needed at the recovery site.
2. Generates control cards to catalog the image copies at the DR site.
3. Creates the copies and the archive logs to be used at the DR site if requested in the profile.
4. Generates an updated BSDS for use at the DR site with the copied archive log names and stores the resulting file in the PDS to be shipped to the recovery site. The PDS that contains the DR jobs and control records will contain the contents of the BSDS. This eliminates the need to mount tapes at the recovery site to build the BSDS. Also, the BSDS is updated with the new archive log name created if the archive logs were copied.
5. Generates IDCAMS control cards to delete all table space and index space data sets and to create all user-defined table spaces at the DR site. It uses the current table space and index space data set attributes to ensure that the data sets are created with the same attributes at the DR site. The PDS is now ready to be shipped to the recovery site along with the application image copies and the newly created copies of the archive logs.

**Note:** A copy of the BSDS is created prior to any updates by Db2 Recovery Expert. The original BSDS is never updated by Db2 Recovery Expert.

The PDS is now ready to be shipped to the recovery site along with the application image copies and the newly created copies of the archive logs.
1. From the Disaster Recovery Profile Display panel, specify B in the **Cmd** line next to the profile for which you want to build a recovery job and press Enter. The Build Job panel opens.

```
Build Job for TUSER.TEST

Build Online or Batch B (Batch)
Edit Generated Job Y (Yes/No)

Build job in Dataset TUSER.DAH.TEST
   Member TESTRBRD

Job Cards:
=> //OBJREST JOB TUSER,CLASS=A,NOTIFY=&SYSUID
=> //*
=> //*
=> //*
```

2. Complete the fields on this panel.

**Build Online or Batch**
For disaster recovery profiles, **B(atch)** is the only option allowed.

**Edit Generated Job**
Enter **Y** if you want to edit the job after it has been generated. The job
appears in an edit session after it has been generated. If you type N, after job generation the Disaster Recovery Profile Display screen reappears.

**Build job in Dataset**  
Enter the fully qualified data set name (without quotes) where you want to save the generated job. This data set must already exist.

**Note:** Multiple subsystems’ disaster recovery jobs can be generated to the same PDS. The Db2 SSID prefixes all recovery job members.

**Member**  
If the data set to hold the generated job is a PDS, enter a member name for the job output here. If the member does not exist, Db2 Recovery Expert will create it.

**Job Cards**  
Enter a valid job card for your site.

3. When you finish entering data in this panel, press Enter. The following panel opens:

```
Build Job for TUSER.TEST
You have selected your job to be built in batch mode. The batch generation JCL will be stored in dataset TUSER.DAH.TEST
Please specify in the dataset below where you want the JCL built by the batch module to be placed.
Build job in Dataset TUSER.DAHz.TEST
Jobcard data to be used on the generated job:
=> //JOBCARD JOB TUSER,CLASS=A,NOTIFY=&SYSUID
=> /*
=> /*
=> /*
```

4. From the Build Job panel, type in the data set name (and member name, if the data set is a PDS) to hold the utility job that will be generated by the batch JCL job. You must also enter a valid job card to be included in the utility JCL. Press Enter to process the job.

**Note:** During the build process, user-defined spaces that are migrated generate a message and a return code 12. You can add a parameter to the ARY@BULD EXEC statement to define an alternate return code value for any user defined table spaces or index spaces that are migrated. This does not affect any objects defined in the catalog or directory (DSNDB06 and DSNDB01); if these objects are migrated, the return code 12 cannot be overridden. To use this feature, add the following to the ARY@BULD program EXEC statement:

```
PARM='USERMIG=nn'
```

Where `nn` is the return code.

For example, to set the return code to "06" when user spaces are migrated:
```
//ARY@BULD EXEC PGM=ARY@BULD,REGION=0000M,PARM='USERMIG=06'
```

5. Ship the disaster recovery PDS that is created to the remote disaster recovery site.
Sample JCL generated from a system level backup primary profile

This section shows a sample of the JCL that is generated from system level backup primary profile. When this job is run at the local site, it will generate the jobs that can be used to recover a Db2 subsystem at a remote site.

```/* * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * */
/* */
/* Step: ARY@BULD */
/* */
/* Desc: This job will generate the JCL for DR profile */
/* PAOLOR6.D9CGIC in a batch mode. */
/* The generated job will be placed in data set */
/* PAOLOR6.SLB.JCL. */
/* */
/* Return Codes: */
/* */
/* (00) - Disaster Recovery Jobs built successfully */
/* (12) - Problem occurred during the DR build process */
/* */
/* ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** */
/* Run ARY DR Build */
/* ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** */

```
Sample JCL generated from an image copy primary profile

This section shows a sample of the JCL that is generated from an image copy primary profile. When this job is run at the local site, it will generate the jobs that can be used to recover a Db2 subsystem at a remote site.

```plaintext
//** * Step: ARY@BULD *
//** * Desc: This job will generate the JCL for DR profile
//** PAOLR6.D9CGIC in a batch mode. *
//** The generated job will be placed in data set *
//** PAOLR6.IC.JCL. *
//** *
//** Return Codes: *
//** *
//** (00) - Disaster Recovery Jobs built successfully *
//** (12) - Problem occurred during the DR build process
//** *
//** * Run ARY DR Build *
//** *
ARY@BULD EXEC PGM=ARY@BULD,REGION=006M
//STEPLIB DD DISP=SHR,DSN=ARY.V2R1M0.SARYLOAD
// DD DISP=SHR,DSN=vvv.SDSNEXIT
// DD DISP=SHR,DSN=vvv.SDSNLOAD
//Db2PARMS DD DISP=SHR,DSN=ARY.db2PARMS.CONTROL
//ARYBPROF DD DISP=SHR,DSN=ARY.PROFILES
//ARYBOFFL DD DISP=SHR,DSN=ARY.OFFOPTS
//ARYBMAP DD DISP=SHR,DSN=ARY.PROFILE.MAPS
//ARYBCAT DD DISP=SHR,DSN=ARY.PROFILE.CATS
//ARYBACK DD DISP=SHR,DSN=ARY.SYSBACK
//ARYBOBJ DD DISP=SHR,DSN=ARY.SYSBACK.OBJS
//ARYBVOLO DD DISP=SHR,DSN=ARY.SYSBACK.VOLS
//ARYBSSD DD DISP=SHR,DSN=ARY.SYSBACK.SSIDS
//ARYBREPT DD DISP=SHR,DSN=ARY.BREPORT
//ISPFILE DD DISP=SHR,DSN=PAOLOR6.IC.JCL
//ISPLOG DD SYSOUT=*,DCB=(RECFM=VA,LRECL=125,BLKSIZE=129)
```
Building the secondary profile

The process of building the secondary disaster recovery profile should be a regularly scheduled batch job.

When the secondary profile is built, the disaster recovery batch job that is produced simply updates the archive log and backs up and rebuilds the BSDS. The build should be scheduled as often as practical to achieve the goal of adding the archive logs to the recovery list as soon as they are created. You should specify that the output of the secondary profile build be directed to the same PDS as was specified for the associated primary profile build.
Note: Disaster recovery profiles can only be built using the batch build process.

Recovering at the remote site from system level backups

This task details the steps that are required to recover a Db2 subsystem at a remote using the contents of the Db2 Recovery Expert system level backup disaster recovery PDS.

The following steps describe and also show real job output for a successful system level restore using Db2 Recovery Expert.

1. Ensure that the following preparatory steps are completed:
   - The z/OS catalog is available (or has already been restored) at the recovery site.
   - In the disaster recovery example that follows, we assume that the volumes at the remote site have been initialized with the same volume serial numbers (VOLID) as the ones used at the local site.

2. The first job to run at the disaster recovery site is job ssid#JC1. This job performs the following steps:
   a. Defines the Db2 Recovery Expert data repository files. The following is a sample of the JCL:

```
//** ............................................. *** ........................*** **
//** Disaster Recovery Define Product VSAM Repository Files **
//** Return Codes: 0 - Successful **
//** ........................*** ................... *** ........................*** **
//** REPODEFN EXEC PGM=IDCAMS,REGION=006M
//** SYSPRINT DD SYSOUT=* 
//** SYSIN DD DISP=SHR,DSN=PAOLOR6.ARYJOBS.D9C1.DR(ARYREPOC)
//**
```

   b. Loads the Db2 Recovery Expert data repository files required for disaster recovery processing. The following shows a sample of the JCL:

```
//** ............................................. *** ........................*** **
//** Disaster Recovery Load Repository Records **
//** Return Codes: 0 - Successful **
//** ........................*** ................... *** ........................*** **
//** REPOLOAD EXEC PGM=ARY#YMCR,REGION=006M
//** STEPLIB DD DISP=SHR,DSN=RSDM0.ARY220.IBMTAPE.SARYLOAD
//** DD DISP=SHR,DSN=RST.E_MAC.MFE700.LINKLIB
//** DD DISP=SHR,DSN=RSRTE.VENDOR.FDR5467.LOAD
//** Db2PARMS DD DISP=SHR,DSN=RSTEST.ARY320.CONTROL
//** ARYBPROF DD DISP=SHR,DSN=RSTEST.ARY320.PROFILES
//** ARYBPROP DD DISP=SHR,DSN=RSTEST.ARY320.OFFOPTS
//** ARYBPMAP DD DISP=SHR,DSN=RSTEST.ARY320.PROFILE.MAPS
//** ARYBPCAT DD DISP=SHR,DSN=RSTEST.ARY320.PROFILE.CATS
//** ARYSBACK DD DISP=SHR,DSN=RSTEST.ARY320.SYSBACK
//** ARYSB0BJ DD DISP=SHR,DSN=RSTEST.ARY320.SYSBACK.OBJS
//** ARYSB0VL DD DISP=SHR,DSN=RSTEST.ARY320.SYSBACK.VOLS
//** ARYSB0SD DD DISP=SHR,DSN=RSTEST.ARY320.SYSBACK.SSIDS
//** ARYBREPT DD DISP=SHR,DSN=RSTEST.ARY320.BREPORT
//** ARY#RPOI DD DISP=SHR,DSN=PAOLOR6.ARYJOBS.D9C1.DR(ARYREPOD)
```
The following shows the output from the system backup offload job run at the local site.

Db2 Recovery Expert for z/OS Backup Summary Report

SBOX5S DA02 0000 3390-9 PAOLOR6.D9C1.D066.OFFLOD1.P.SBOX7A
SBOX5T DB02 0000 3390-9 PAOLOR6.D9C1.D066.OFFLOD1.P.SBOX7B
c. Invokes the Db2 Recovery Expert job to restore the volume backups from tape. The following shows the JCL that is run for this step:

```
/*
** Step: ARYREST
** Desc: This step will invoke the System Restore job.
** When this job is complete, Db2 can be restarted. If you did not restore the Db2 logs, you will need to respond Yes to the WTOR:
** XXXX CONDITIONAL RESTART RECORD INDICATES TRUNCATION AT RBA XXXXXXXXXX.
**
**ARYREST EXEC PGM=ARY@MAIN,REGION=006M,COND=(4,LT)
** STEPLIB DD DISP=SHR,DSN=RSTEST.ARY320.IBMTAPE.SARYLOAD
** DD DISP=SHR,DSN=RSTEST.EMC.MFE700.LINKLIB
** DD DISP=SHR,DSN=RSTEST.VENDOR.FDR5467.LOAD
** Db2PARMS DD DISP=SHR,DSN=RSTEST.ARY320.CONTROL
** ARYBPROF DD DISP=SHR,DSN=RSTEST.ARY320.PROFILES
** ARYBOFFL DD DISP=SHR,DSN=RSTEST.ARY320.OFFOPTS
** ARYBPMAP DD DISP=SHR,DSN=RSTEST.ARY320.PROFILE.MAPS
** ARYBCAT DD DISP=SHR,DSN=RSTEST.ARY320.PROFILE.CATS
** ARYSBACK DD DISP=SHR,DSN=RSTEST.ARY320.SYSBACK
** ARYSBOBJ DD DISP=SHR,DSN=RSTEST.ARY320.SYSBACK.OBJS
** ARYSBVOL DD DISP=SHR,DSN=RSTEST.ARY320.SYSBACK.VOLS
** ARYSBSGD DD DISP=SHR,DSN=RSTEST.ARY320.SYSBACK.SSID5
** ARYBREPT DD DISP=SHR,DSN=RSTEST.ARY320.BREPORT
** ARY#REPT DD SYSDUMP
** ARYSNAP DD SYSDUMP
** ARY#PARM DD DISP=SHR,DSN=RSTEST.ARY220.IBMTAPE.SARYSAMP(ARY#PARM)
** ARYIN DD
** RESTORE "PAOLOR6","D9C1 FULL MODE Db2"
** GENERATION 02
** DATE 03/06/2019
** TIME 13:09:35
```
Note: There are two keywords that you might want to add to the ARYIN DD * statement:

- **RESTORE-TO-VOLSERS**: You should add this keyword if your UCBs at the disaster recovery site do not match the UCBs at your local site. More specifically, if the UCBs at the disaster recovery site are not formatted with the same VOLSERS as were used at your local site (the case for most customers) this keyword is needed. Otherwise, it can be removed.
- **RESTORE-LOGS**: If the system backup being used for restore contains the LOGS (either archive or active), adding this keyword will cause the volumes containing the log data to be restored. You would add this keyword if you do not want to apply any additional log records after the system backup.

The following shows the output from this step that restores the volume’s backups from tape:

ARYS001I - Db2 Recovery Expert for z/OS Starting. Version V3R2
ARYS162I - Parmlib used for this execution
ARYS003I - Control Cards:
ARYS004I - RESTORE PAOLOR6.D9C1
ARYS004I - GENERATION 02
ARYS004I - DATE 03/06/2019
ARYS004I - TIME 13:09:40
ARYS004I - RECOVERY-SITE
ARYS004I - FROM-OFFLOAD
ARYS123I - Backup PAOLOR6.D9C1 generation 02 was read from the repository.
ARYS013I - Backup profile PAOLOR6.D9C1 was read from the repository.

ARYS137I - Varying volumes online.
ARYS004I - Restoring volumes from offloaded backup...
ARYS277I - Task 02 - Volser SBOX5B was restored from PAOLOR6.D9C1.D066.OFFLOD1.
ARYS277I - Task 01 - Volser SBOX5I was restored from PAOLOR6.D9C1.D066.OFFLOD1.
ARYS277I - Task 02 - Volser SBOX5J was restored from PAOLOR6.D9C1.D066.OFFLOD1.
.. 
ARYS277I - Task 02 - Volser SBOX5T was restored from PAOLOR6.D9C1.D066.OFFLOD1.
ARYS277I - Task 01 - Volser SBOX5U was restored from PAOLOR6.D9C1.D066.OFFLOD1.
ARYS277I - Task 02 - Volser SBOX5V was restored from PAOLOR6.D9C1.D066.OFFLOAD.
ARYS002I - Db2 Recovery Expert for z/OS complete. RC=000.

d. Issues IDCAMS DELETE to delete all BSDS and active log data sets. The following is a sample of the input JCL:

```/*
* Disaster Recovery Delete Noscratch Db2 BSDS and Active Log Datasets
* Return Codes: 0 - Successful
*/
/*
* D9C1DELC EXEC PGM=IDCAMS,REGION=006M
//SYSPRINT DD SYSOUT=* //SYSOUT DD SYSOUT=* //SYSIN DD DISP=SHR,DSN=PAOLOR6.ARYJOBS.D9C1.DR(D9C1DELC)
/*
*/
The following steps show the output from deleting the BSDS and log data sets.
IDCAMS SYSTEM SERVICES DELETE ('DB9CL.D9C1.BSDS01')
IDC0550I ENTRY (D) DB9CL.D9C1.BSDS01.DATA DELETED
IDC0550I ENTRY (I) DB9CL.D9C1.BSDS01.INDEX DELETED
IDC0550I ENTRY (C) DB9CL.D9C1.BSDS01 DELETED
IDC0001I FUNCTION COMPLETED, HIGHEST CONDITION CODE WAS 0
DELETE ('DB9CL.D9C1.BSDS02')
IDC0550I ENTRY (D) DB9CL.D9C1.BSDS02.DATA DELETED
IDC0550I ENTRY (I) DB9CL.D9C1.BSDS02.INDEX DELETED
IDC0550I ENTRY (C) DB9CL.D9C1.BSDS02 DELETED
IDC0001I FUNCTION COMPLETED, HIGHEST CONDITION CODE WAS 0
DELETE ('DB9CL.D9C1.LOGCOPY1.DS01')
IDC0550I ENTRY (D) DB9CL.D9C1.LOGCOPY1.DS01.DATA DELETED
IDC0550I ENTRY (I) DB9CL.D9C1.LOGCOPY1.DS01 DELETED
IDC0001I FUNCTION COMPLETED, HIGHEST CONDITION CODE WAS 0

```

e. Define the Db2 active log and BSDS data sets with the proper allocations. The following is a sample of the input JCL:

```/*
* Disaster Recovery Allocate Db2 Data sets
* 1. Boot Strap Data sets
* 2. Active Logs
* Return Codes: 0 - Successful
*/
/*
* D9C1ALLC EXEC PGM=IDCAMS,REGION=006M
//SYSPRINT DD SYSOUT=* //SYSOUT DD SYSOUT=* //SYSIN DD DISP=SHR,DSN=PAOLOR6.ARYJOBS.D9C1.DR(D9C1ALLC)
/*
*/
The following statements show the output of defining the active logs and BSDS data sets.
IDCAMS SYSTEM SERVICES
DEFINE CLUSTER -
  (NAME ('DB9CL.D9C1.BSDS01')REUSE -
  RECORDSIZE(4089) 4089) -
  FREESPACE(0 20) -
```
f. Rebuilds the BSDS from the 80-byte record file, placing it back into 4089-byte records. The following is a sample of the input JCL:

```plaintext
/* ** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * */
/* */ Disaster Recovery Rebuild Boot Strap Dataset into 4000 byte recs *
/* */ Return Codes: 0 - Successful *
/* */ ** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * */

/D9C1RBSR EXEC PGM=ARY@YRBS,REGION=006M
/STEPLIB DD DISP=SHR,DSN=RSDEMO.ARY220.IBMTAPE.SARYLOAD
   DD DISP=SHR,DSN=RSRTE.EMC.MFE700.LINKLIB
   DD DISP=SHR,DSN=RSRTE.VENDOR.FDR5467.LOAD
//BSDSI IN DD DISP=SHR,DSN=PAOLOR6.ARYJOBS.D9C1.DR(D9C1BSDS)
//BSDS#OUT DD DSN=&BSDS,DISP=(NEW,PASS,DELETE),
   UNIT=3390,SPACE=(TRK,(10,10),RLSE),
   DCB=(RECFM=V,LRECL=4093)

/* */
g. Restores the BSDS by placing the 4089-byte records into a VSAM file. The following sample shows the input JCL:

```plaintext
/* ** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * */
/* */ Disaster Recovery Copy Boot Strap Data set into VSAM data sets *
/* */ Return Codes: 0 - Successful *
/* */ ** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * */

/D9C1CPBS EXEC PGM=IDCAMS
/SYSPRINT DD SYSOUT=*  
/SYSOUT DD SYSOUT=*  
//BSDS1 DD DSN=&BSDS,DISP=(OLD,DELETE,DELETE)  
//BSDS1 DD DISP= SHR, DSN= D9C1LOG.BSDS01  
//BSDS2 DD DISP= SHR, DSN= D9C1LOG.BSDS02  
//SYSIN DD *
   REPRO INFILE(BSDS1) OUTFILE(BSDS1) REUSE 
   REPRO INFILE(BSDS1) OUTFILE(BSDS2) REUSE
/* */
```

The following steps show the IDCAMS output for the restore of the BSDS.

IDCAMS SYSTEM SERVICES
REPRO INFILE(BSDS1) OUTFILE(BSDS1) REUSE
IDC0005I NUMBER OF RECORDS PROCESSED WAS 777
IDC0001I FUNCTION COMPLETED, HIGHEST CONDITION CODE WAS 0
REPRO INFILE(BSDS1) OUTFILE(BSDS2) REUSE
IDC0005I NUMBER OF RECORDS PROCESSED WAS 777
IDC0001I FUNCTION COMPLETED, HIGHEST CONDITION CODE WAS 0
IDC0002I IDCAMS PROCESSING COMPLETE. MAXIMUM CONDITION CODE WAS 0
h. Creates a conditional restart. The following is a sample of the input JCL:

```c
/*
/** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * */
/**
/* Disaster Recovery Create Conditional Restart Control Record */
/**
/* Return Codes: 0 - Successful */
/**
/** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * */
/*
//D9C1CRCR EXEC PGM=DSNJU003,REGION=006M
//STEPLIB DD DISP=SHR,DSN=RSDMO.ARY220.IBMTAPE.SARYLOAD
// DD DISP=SHR,DSN=RSDMO.EMC.MFE700.LINKLIB
// DD DISP=SHR,DSN=RSDMO.VENDOR.FDR5467.LOAD
// DD DISP=SHR,DSN=DSN.IDS2.SDSNEXIT
// DD DISP=SHR,DSN=RSDMO.VENDOR.FDR5467.LOAD
//SYSPRINT DDSYSOUT**
//SYSUT1 DD DISP=SHR,DSN=19B2LOG.BSDS01
//SYSUT2 DD DISP=SHR,DSN=19B2LOG.BSDS02
//SYSIN DD DISP=SHR,DSN=PAOLOR6.ARYJOBS.D9C1.DR(D9C1CRCR)
/*
```

The following statements show the conditional restart record creation output.

```
DSNJNVB CONVERSION PROGRAM HAS RUN DDNAME=SYSUT1
DSNJNVB CONVERSION PROGRAM HAS RUN DDNAME=SYSUT2
CRESTART CREATE,SYSPIK=C20ECC61FA97,FORWARD=YES,BACKOUT=YES
DSNJ40B1 DSNJFCK CHECKPOINT RBA FOUND,
   RBA = 0000126F8B90, TIME = 22:45:09 MAR
DSNJ411I DSNJRCR CRESTART CREATE FOR CRCRID = 0006, DDNAME = SYSUT1
DSNJ40B1 DSNJFCK CHECKPOINT RBA FOUND,
   RBA = 0000126F8B90, TIME = 22:45:09 MAR
DSNJ411I DSNJRCR CRESTART CREATE FOR CRCRID = 0006, DDNAME = SYSUT2
DSNJ2Z5I CRESTART OPERATION COMPLETED SUCCESSFULLY
DSNJ200I DSNJU003 CHANGE LOG INVENTORY UTILITY
   PROCESSING COMPLETED SUCCESSFULLY
```

**Note:** Notice that this is a different type from the image copy disaster recovery method. It is a SYSPITR (system point in time record).

i. Prints the contents of the BSDS. The following is a sample of the input JCL:

```c
/*
/** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * */
/**
/* Disaster Recovery Print the Boot Strap Dataset */
/**
/* Return Codes: 0 - Successful */
/**
/** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * */
/*
//D9C1PRNT EXEC PGM=DSNJU004,REGION=006M
//STEPLIB DD DISP=SHR,DSN=RSDMO.ARY220.IBMTAPE.SARYLOAD
// DD DISP=SHR,DSN=RSDMO.EMC.MFE700.LINKLIB
// DD DISP=SHR,DSN=RSDMO.VENDOR.FDR5467.LOAD
// DD DISP=SHR,DSN=DSN.IDS2.SDSNEXIT
// DD DISP=SHR,DSN=RSDMO.VENDOR.FDR5467.LOAD
//SYSPRINT DD SYSOUT**
//SYSUT1 DD DISP=SHR,DSN=19B2LOG.BSDS01
/*
```

j. Uncatalogs the tape archive logs. The following is a sample of the input JCL:

```c
/*
/** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * */
/**
/* Disaster Recovery Uncatalog Archive Logs on Tape */
/**
/* Return Codes: 0 - Successful */
/**
/*
```
k. Copies the uncataloged tape archive logs to DASD and catalogs them. This step speeds the recoveries at the disaster recovery site because the tape logs will be copied to disk and all recoveries that apply the log will use the disk copy instead of the tape copy. The following is a sample of the input JCL:

```sql
*>&*
D9C1DELA EXEC PGM=IDCAMS,REGION=006M
SYSPRINT DD SYSOUT=*  
SYSSUT DD SYSOUT=*  
SYSSIN DD DISP=SHR,DSN=PAOLOR6.ARYJOBS.D9C1.DR(D9C1DELA)
*/

k. Copies the uncataloged tape archive logs to DASD and catalogs them. This step speeds the recoveries at the disaster recovery site because the tape logs will be copied to disk and all recoveries that apply the log will use the disk copy instead of the tape copy. The following is a sample of the input JCL:

```sql
3. Change your remote site DSNZPARM settings as follows:
   a. Change RESTART to DEFER.
   b. Set the site as local or recovery.
   c. Change the SYSADM and SYSOPR user IDs to the user ID that will be recovering the Db2 catalog.

4. Delete the structures in the XCF.

Note:
- If you are RESTORING two members in a data sharing environment, deleting the LCA and LOCK structures in the coupling facility is very important.
- Db2 Recovery Expert automatically resets the CF structures before RESTORE in data sharing.

5. Start Db2 using the new reassembled DSNZPARMs. It is recommended that Db2 be started with ACCESS(MAINT). In a data sharing member, ensure that you start all the Db2 members.

6. Reply to conditional restart message. For each Db2 subsystem, reply Y to the outstanding message. The following statements show the responses to a CRCR outstanding message:

```
448 DSN2451 -D9C2 CONDITIONAL RESTART RECORD INDICATES TRUNCATION AT LRSN C20D7649C742. REPLY Y TO CONTINUE, N TO CANCEL
R 448,Y
```

7. Run job ssid#JC2. This job executes the IBM RESTORE SYSTEM LOGONLY utility. Since the Db2 object data sets were restored from the system level backup, this utility applies log records to all objects in the system to restore them to the most recent point available at the disaster recovery site. The following is a sample of the input JCL:

```sql
490 DB2 Recovery Expert for z/OS
```
Chapter 17. Recovering a Db2 database subsystem using the Db2 Recovery Expert disaster recovery feature

8. Run job ssid#JC3. This job is used to force application table spaces to start in RW mode. This job starts all application table spaces in the Db2 subsystem with read-write access. While optional, we recommend this job. If any table space is not in RW mode, the recovery will fail. The following is a sample of the input JCL:

```sql
/*
** Desc:         
** User:  PAOLOR6 
** Date:  Monday June 14, 2019 
** Time:  14:14:15.21 
**
** EXEC PGM=DSNUTILB,REGION=066M,PARM=(I9A2,) 
*/

STEPLIB DD DISP=SHR,DSN=DSN.IDS2.SDSNEXIT

//UPRINT DD SYSOUT=*
//SYSIN DD *
  RESTORE SYSTEM LOGONLY */
```

This job is an optional Disaster Recovery job. This job is to be run after the Db2 Subsystem has been started and the Db2 Catalog and Directory have been recovered.

This step will start all spaces in the entire Db2 subsystem in RW (Read Write) mode. If any spaces have an invalid status pending, the recovery of that object will fail and your recovery job will be terminated.

Ensure that the your application recovery job will not fail and require a utility restart.
9. If you started Db2 with ACCESS MAINT, stop Db2 and restart it using normal access. You need to do this for each member in a data sharing environment.

## Contents of a system level backup disaster recovery PDS

If you are restoring a Db2 subsystem using a system level backup, when the disaster recovery job that was created is built in batch and submitted, the following members are generated and appear in the specified output PDS.

<table>

</table>
| ssidDELA    | Contains the control cards to delete the archive logs (with the NOSCRA
| | CH option) from the recovery site z/OS catalog. Those logs are on tape and will be copied to DASD, then cataloged. | This member is used by job ssid#JC1.                                                          |
| ssidDELC    | Contains the control cards to uncatalog the active logs and BSDS at the disaster site if they exist. | This member is used by job ssid#JC1.                                                          |
| ssidSTRF    | Contains the control cards for starting application table spaces in the Db2 subsystem with RW access. | This member is used by job ssid#JC3.                                                          |
| ssid2BSDS   | Contains a copy of the bootstrap data set in 80 byte records.                 | This member is used by job ssid#JC1. This is for the second Db2 member, ssid2.                 |

Recovering at the remote site using Db2 image copies

This task details the steps that are required to recover a Db2 subsystem at a remote using the contents of the Db2 Recovery Expert Db2 image copies disaster recovery PDS.

The following steps describe and also show real job output for a successful image copy restore using Db2 Recovery Expert.

1. Ensure that the following preparatory steps are completed:
   - If an ICF catalog does not already exist at the recovery site, run the job DSNTIJCA to create a user catalog.
   - Use the access method services import command to import the ICF catalogs.
   - Restore Db2 libraries. Include Db2 load libraries, SMP libraries, user program libraries, user DBRM libraries, CLISTS, SDSNSAMP, or where the installation jobs are, JCL for user-defined table spaces.

   **Note:** These steps have most likely been completed as part of restoring the operating system and libraries. They are restated here only as a reminder.

2. The first job to run at the disaster recovery site is job ssid#JC1. This job performs the following steps:
   a. Defines the Db2 Recovery Expert data repository files. The following is a sample of the JCL:
b. Loads the Db2 Recovery Expert data repository files required for disaster recovery processing. The following shows a sample of the JCL:

```plaintext
/** * Disaster Recovery Load Repository Records * */
/** * Return Codes:  0 - Successful * */
/** * */
/** REPOLOAD EXEC PGM=ARY#YMCR,REGION=006M */
```

c. Issues IDCAMS DELETE to delete all index space and table space data sets from the z/OS catalog. The following is a sample of the JCL generated by Db2 Recovery Expert:

```plaintext
/** * Disaster Recovery Delete Noscratch Db2 Data sets * */
/** * Return Codes:  0 - Successful * */
/** * */
/** D9CIDELEC EXEC PGM=IDCAMS,REGION=006M */
d. Recreate the Db2 catalog VSAM files. All VSAM and non-VSAM catalog files, log files, BSDS, and user VCAT-defined objects are created with the proper allocations. The following is a sample of the JCL generated by Db2 Recovery Expert:

```plaintext
//** ************************************************************
//** Disaster Recovery Allocate Db2 Data sets
//** 1. Db2 Catalog and Directory Spaces
//** 2. Boot Strap Datasets
//** 3. Active Logs
//** 4. User Defined VCAT Spaces
//**
//** Return Codes: 0 - Successful
//**
//** ************************************************************
//**
//**D9C1ALLC EXEC PGM=IDCAMS,REGION=06M
//SYSPRINT DD SYSOUT**
//SYSOUT DD SYSOUT**
//SYSSN DD DISP=SHR,DSN=PAOLO06.IC.JCL(D9C1ALLC)
DEFINE CLUSTER -
  ( NAME ('DB9CL.D9C1.BSDS01') -
  REUSE -
  RECORDSIZE(4080 4089) -
  FREESPACE(0 20) -
  KEYS(4 0) -
  CONTROLINTERVALSIZE(04096) -
  STORAGECLASS(DB9CL0G1) -
  MANAGEMENTCLASS(MCDb22) -
  VOLUMES(SBOXE) -
  TRACKS(000000078,000000002) -
  SHAREOPTIONS(2 3) -
  DATA -
  ( NAME ('DB9CL.D9C1.BSDS01.DATA') ) -
  INDEX -
  ( NAME ('DB9CL.D9C1.BSDS01.INDEX') ) -
  ...
```

e. Catalog all the image copies from the last \( n \) number of days (as specified in the disaster recovery profile). The following is a sample of the JCL generated by Db2 Recovery Expert:

```plaintext
//** ************************************************************
//** Disaster Recovery Catalog Image Copies
//** 1. Make sure all image copies needed at DR are cataloged
//**
//** Return Codes: 0 - Successful
//**
//** ************************************************************
//**
//**D9C1CATL EXEC PGM=IDCAMS,REGION=006M
```
f. Rebuilds the BSDS from the 80-byte record file, placing it back into 4089-byte records. The following is a sample of the JCL generated by Db2 Recovery Expert:

```
//*** ************************************************************
//*** Disaster Recovery Rebuild Boot Strap Dataset into 4080 byte recs *
//*** Return Codes: 0 - Successful *
//*** ************************************************************
//D9C1RBSR EXEC PGM=ARY@YRBS,REGION=006M
//STEPLIB DD DISP=SHR,DSN=ARY.V2R1M0.SARYLOAD
//BSDS#IN DD DISP=SHR,DSN=PAOLOR6.IC.JCL(D9C1BSDS)
//BSDS#OUT DD DSN=&BSDS,DISP=(NEW,PASS,DELETE),
//       UNIT=3390,SPACE=(TRK,(10,10),RLSE),
//       DCB=(RECFM=V,LRECL=4093)
```

g. Restores the BSDS by placing the 4089-byte records into a VSAM file. The following is a sample of the JCL generated by Db2 Recovery Expert:

```
//*** ************************************************************
//*** Disaster Recovery Copy Boot Strap Dataset into VSAM data sets *
//*** Return Codes: 0 - Successful *
//*** ************************************************************
//D9C1CPBS EXEC PGM=IDCAMS
//SYSPRINT DD SYSOUT=*  
//SYSOUT DD SYSOUT=*
//BSDSI DD DSN=&BSDS,DISP=(OLD,DELETE,DELETE)
//BSDS1 DD DISP=SHR,DSN=DB9CL.D9C1.BSDS01
//BSDS2 DD DISP=SHR,DSN=DB9CL.D9C1.BSDS02
//SYSN DD *
//       REPRO INFILE(BSDSI) OUTFILE(BSDS1) REUSE
//       REPRO INFILE(BSDSI) OUTFILE(BSDS2) REUSE
```

h. Creates a conditional restart. The following is a sample of the JCL generated by Db2 Recovery Expert:

```
//*** ************************************************************
//*** Disaster Recovery Create Conditional Restart Control Record *
//*** Return Codes: 0 - Successful *
//*** ************************************************************
//D9C1CRCR EXEC PGM=DSNJU003,REGION=006M
//STEPLIB DD DISP=SHR,DSN=ARY.V2R1M0.SARYLOAD
// DD DISP=SHR,DSN=DB9C9.SDSNEXIT
// DD DISP=SHR,DSN=DB9C9.SDSNLOAD
//SYSPRINT DD SYSOUT=*
//SYSUT1 DD DISP=SHR,DSN=DB9CL.D9C1.BSDS01
//SYSUT2 DD DISP=SHR,DSN=DB9CL.D9C1.BSDS02
//SYSN DD DISP=SHR,DSN=PAOLOR6.IC.JCL(D9C1CRCR)
```

i. Prints the contents of the BSDS.
** Start Db2 using the new recovery site

```c
//SYSUT1 DD DISP=SHR,DSN=DB9CL.D9C1.BSDS01
**
```

j. Uncatalog the tape archive logs.

```c
//SYSOUT DD SYSPRINT**
**
```

k. Copy the uncataloged tape archive logs to DASD and catalog them. This step speeds the recoveries at the disaster recovery site because the tape logs will be copied to disk and all recoverers that apply the log will use the disk copy instead of the tape copy. The following is a sample of the JCL generated by Db2 Recovery Expert:

```c
//SYSIN DD DISP=SHR,DSN=PALOR6.IC.JCL(D9C1DELA)
**
```

3. Change your remote site DSNZPARM settings as follows:

a. Change RESTART to DEFER.

b. Set the site as local or recovery.

c. Change the SYSADM and SYSOPR user IDs to the user ID that will be recovering the Db2 catalog.

**Note:** You can create a disaster recovery DSNZPARMS member at the local site with the necessary settings for the recovery site, and maintain it in the local site SDSNEXIT library for the subsystem. When the z/OS catalog is restored at the recovery site, this ZPARMS member will already be on site and contain the proper settings for disaster recovery.

4. Start Db2 using the new reassembled DSNZPARMS. It is recommended that Db2 be started with ACCESS(MAIN). In a data sharing member, ensure that you start all the Db2 members.
**Note:** When restoring Db2 9 subsystems using the image copy method, Db2 must be started with ACCESS(MAINT). For all other restorations, we recommend that Db2 be started with ACCESS(MAINT).

5. Reply to conditional restart message. For each Db2 subsystem, reply Y to the outstanding message. The following statements show the replies to a CRCR outstanding message:

```
448 DSNJ245I -D9C2 CONDITIONAL RESTART RECORD INDICATES TRUNCATION
AT LRSN C2007649C742. REPLY Y TO CONTINUE, N TO CANCEL
R 448,Y
```

6. Run job ssid#JC2. This job is used to force application table spaces to start in read-write (RW) mode. This job starts all application table spaces in the Db2 subsystem with read-write access. While optional, we recommend this job. If any table space is not in RW mode, the recovery will fail. The following is a sample of the JCL generated by Db2 Recovery Expert:

```
/** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * *
/*
/** Step: *
/**
/** Desc: This job is an optional Disaster Recovery job. This job is to be run after the Db2 Subsystem has been recovered. *
/** started and the Db2 Catalog and Directory have been recovered. *
/**
/** This step will start all spaces in the entire Db2 subsystem in RW (Read Write) mode. If any spaces have an invalid status pending, the recovery of that object will fail and your recovery job will be terminated. Starting all spaces in RW mode will ensure that the application recovery job will not fail and require a utility restart. *
/**
/**
/** *
/** EXEC PGM=IKJEFT1A,REGION=006M
//STEPLIB DD DSD=DB9C9.SDSNEXIT
// DD DSD=DB9C9.SDSNLOAD
//SYSTSIN DD DSD=P9LOR6.TC.JCL(D9C1STRF)
```

7. Run the job in member ssid#JC3. For the image copy method, we recover the Db2 objects from image copies via many steps. The first steps of this job restore the Db2 system catalog, followed by Db2 application objects. You may have your own application recovery jobs created that already take issues like tape stacking in the backups into account. In this case, you would only want to run the first few steps of this job, which recover the Db2 catalog and directory. The following is a sample of the JCL from member ssid#JC3:

```
/** * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * *
/*

</table>

Recovering both Db2 and IMS subsystems

You can use Db2 Recovery Expert along with IMS Recovery Expert to perform a remote site disaster recovery of both Db2 and IMS subsystems to a common point in time.

In order to use this feature, you will create a disaster recovery profile for a Db2 system using Db2 Recovery Expert and a disaster recovery profile for an IMS system using IMS Recovery Expert. The Db2 profile will specify the IMS system name that is to be recovered to a common point in time and the IMS profile will specify the Db2 system.

When disaster recovery processing is performed at the disaster recovery site, a common recovery point will be determined depending on the availability of a system level backup (SLB) and archives of both subsystems at the disaster recovery site. Db2 Recovery Expert will modify the recovery JCL to use the common timestamp.
Setting up the IMS and Db2 disaster recovery profiles

You will create the IMS and Db2 disaster recovery profiles in the same way as you would create a non-combined IMS or Db2 disaster recovery profile using the Update Disaster Recovery Profile panel. There is one difference and that is the value specified in the External Subsystem field.

In the Db2 Recovery Expert Update Disaster Recovery Profile panel (ARY$DPRU), you will specify the IMS system that will be recovered with the Db2 system in the External Subsystem field.

In the IMS Recovery Expert Update Disaster Recovery Profile panel (BSY$DPRM), you (or the administrator who is creating the profile) will specify the Db2 system that will be recovered with the IMS system in the External Subsystem field.

The following is an example of the Db2 Recovery Expert Update Disaster Recovery Profile panel:

```
RCVYXPRT V3R2 ---- Update Disaster Recovery Profile ---- 2019/01/14 16:17:27
Option ===>
CREATOR: TWUSER  NAME: TEST  DESCRIPTION:

```

Creating the recovery job at the local site

When you build the recovery job for a combined Db2 and IMS disaster recovery, Db2 Recovery Expert adds a member in the recovery PDS that identifies the Db2 subsystem that is to be recovered in combination with an IMS system.

Db2 Recovery Expert will create a member called “xxxxTIME” in the recovery PDS where “xxxx” is the SSID of the Db2 subsystem that will be recovered. In addition, IMS Recovery Expert will create a xxxxTIME member in its recovery PDS where “xxxx” is the SSID of the IMS subsystem that will be recovered. You must ensure that both subsystems are using the same recovery PDS.

The xxxxTIME member for both subsystems will include the following information:

- Timestamp of the highest archive log that was copied
- Timestamp of the SLB that was selected for restoring the system
- Indication whether the system is data-sharing or not (by either using Db2= or RBA=)
• Data set name of the control file used by this system.
• Each earlier SLB that matches the profile selection criteria, in case Db2 Recovery Expert will have to fall back.

An example of the contents of the db2-ssidTIME member:

```
000002 Db2=2011206 12545.417312
000003 SLB=2011203 191829.85000
000004 CTL=Ary.TST0220.CONTROL
000005 BACKUP=01,07/19/2019,19:18:22
000006 BACKUP=01,07/16/2019,11:57:00
```

During the execution of the disaster recovery preparation job, an additional disaster recovery job is generated for the Db2 subsystem and placed in the recovery PDS with the member name db2-ssid#JC0.

**Note:** A similar job with the member name imss-ssid#JC0 is generated when IMS Recovery Expert executes the disaster recovery preparation job and it is also placed in the same recovery PDS.

The job in member db2-ssid#JC0 for the Db2 subsystem includes a step called COORDDR that will determine the coordinated disaster recovery timestamp as well as modify the disaster recovery JCL and control cards to support the recovery of the IMS and Db2 subsystems to this timestamp. When the disaster recovery preparation job is executed for a non data-sharing Db2 subsystem, additional steps to rebuild the BSDS and the Db2 Recovery Expert repository are generated.

The following is a sample of the JCL for the COORDDR step:

```
//COORDDR EXEC PGM=ARY#CDR,REGION=006M
//STEPLIB DD DISP=SHR,DSN=BRSRTE.WRK022X.LOADLIB
// DD DISP=SHR,DSN=RSRTE.EMC.MFE700.LINKLIB
// DD DISP=SHR,DSN=RSRTE.EMC.MFE700.LINKLIB
// DD DISP=SHR,DSN=RSRTE.EMC.MFE700.LINKLIB
// DD DISP=SHR,DSN=RSRTE.VENDOR.FDR5467.LOAD
//SYSPRINT DD SYSOUT=* * * * *
//ARY@MSGS DD SYSOUT=* * * * *
//ARY@CNTL DD *
PDBAT.TEST.PDS
E9A1
DATA
```

**Running the recovery jobs at the disaster recovery site**

In the recovery PDS, there are two jobs that must be run at the recovery site. The job associated with the Db2 system is called db2 ssid#JC0. The job associated with the IMS system is called imss ssid#JC0. You run these two jobs at the remote site to determine the recovery timestamp and modify the recovery procedures and JCL to use this timestamp.

1. Run the db2 ssid#JC0 job. The db2 ssid#JC0 job will invoke the ARY#CDR program to determine the most current timestamp that may be used for recovery of both the IMS and Db2 subsystems. The time that will be used depends on the availability of recovery assets at the disaster recovery site.

In some situations, the SLB that was selected for recovery during the preparation job will not be good as a starting point for disaster recovery. This might happen if the selected recovery timestamp is earlier than that of the SLB. If this happens, ARY#CDR will have to select an earlier SLB and modify the recovery process to use it.

The following is a sample of the ARY#CDR output:
Coordinated DR recovery for the following systems is starting:
Subsystem=IAA  Highest archive:  2011156.124046.101344
SLB timestamp:  2011155.112233.440000
Subsystem=E9A1 Highest archive:  2011202.125425.417312
SLB timestamp:  2011203.191829.850000

Selected coordinated recovery point: 2011156.124046.101344
Selected SLB will be used for recovery of SSID=IAA
Selected SLB cannot be used for recovery of SSID=E9A1
An earlier backup was found for SSID=E9A1, Date=07/19/2019, Time=11:57:00

Updating timestamp in recovery JCL for IAA
System recovery timestamp was updated for IAA

Updating CRCR timestamp for E9A1
The following conditional restart recovered was read for E9A1
CRESTART CREAT,SYSPITR=C7E694749B60000, FORWARD=YES, BACKOUT=YES
Updating restore SLB for SSID=E9A1
System restore backup information was updated for E9A1

ARY#VCDR finished successfully, recovery procedures may proceed

2. After a timestamp for recovery is selected, the following members are modified:
   - db2ssid#JC1 – This member includes the JCL to perform the SLB restore for Db2.
   - imsssid#JC1 – This member includes the JCL to perform the SLB restore for IMS.

3. Run the imsssid#JC0 job. This job will invoke program BSY#CDR which will update the IMS recovery jobs in the disaster recovery PDS with the common timestamp that is to be used for recovery.

4. After a timestamp is selected and all jobs and control cards are modified to use it, both the db2ssid#JC1 and imsssid#JC1 jobs are run. These jobs restore the Db2 Recovery Expert repository and the IMS Recovery Expert repository, and then perform a system recovery from the system level backup. To properly identify the system level backup, the repository must be restored to the time when the disaster recovery preparation job ran. If the configuration is such that Db2 and IMS are using different repositories, both the db2ssid#JC1 and imsssid#JC1 jobs must be executed. Users may choose to run these jobs in parallel.
   In configurations where the repository is shared between the IMS and the Db2 systems, both the db2ssid#JC1 and imsssid#JC1 jobs also must be run. Both will restore the same repository to different points in time. Each of these jobs has the time when the job was generated. Submit the one that was generated earlier, and after successful completion, submit the other job.

5. The recovery process continues from this point using Db2 Recovery Expert for Db2 recovery and IMS Recovery Expert for IMS recovery.

Running timestamp determination process in simulate mode

At the local site, you can run the coordinated disaster recovery timestamp determination process in simulate mode to preview the recovery timestamp. This process of running the ARY#CDR program using the SIMULATE parameter allows you to review the timestamp, and does not result in any data set changes.

1. Edit the Db2 member Db2ssid#JC0 in the recovery PDS and update the COORDDR step to run in simulate mode as shown below:

   //COORDDR EXEC PGM=ARY#CDR, PARM='SIMULATE', REGION=006M
2. Remove all other steps from the JCL.

3. Submit the JCL. A successful execution in simulate mode will complete with the return code RC=4. After the job has completed a report with the recovery timestamp selection is displayed in the generated output.
Chapter 18. Using the RBA Capture utility

The Db2 Recovery Expert RBA Capture utility records the current RBA of a Db2 subsystem at regular intervals based on the system clock time. You can set the utility to capture the RBAs at intervals anywhere from 1 to 60 minutes. The RBA and its corresponding time is written to a VSAM file. This information is then readily available for use in determining which RBA you need to restore the subsystem to in order to get the SSID restored to a particular time.

This utility is optional. It uses a started task to capture the RBAs and clock times, and stores the data in its own repository that is separate from the backup and restore system repository. You can have an unlimited number of subsystems monitored by the started task, as long as they are on the same LPAR.

The RBA Capture utility is optionally installed and configured when you customize Db2 Recovery Expert. At that time, you will specify a PDS library that will contain a member for each LPAR where the RBA Capture utility will run. The member for each LPAR will contain Db2 SSIDs that will be monitored by the utility. In order to capture timestamps and RBAs, the utility ARYRBASP must run as a started task in each LPAR. The Db2 administrator is responsible for starting the ARYRBASP task.

Viewing the utility output

The output from the RBA Capture utility is viewable in two ways:

• When you select a backup to restore - if the RBA Capture utility was active while the backup was being taken, you can access a list of RBAs and timestamps that are relevant to the backup and may be used as restore points.

• You can view RBAs and timestamps captured in individual DDs in the started task output data sets. One DD is created per subsystem. The following information is a partial DD for a subsystem:
The DD for each subsystem contains the following information:

**RBA Timestamp**
This is the store clock time at which Db2 Recovery Expert captured the RBA. The first timestamp captured probably will not be at an exact minute boundary, because the first RBA is captured at the time the task is started. However, successive timestamps should be on minute boundaries (such as 22:24:00.00).

**Active**
Contains Yes if the subsystem was active and No if the subsystem was not active.

**High RBA**
The log RBA captured at the store clock time.

**High LRSN**
If the subsystem is a data sharing subsystem, this column contains the log LRSN captured at the store clock time.

**Log Bytes**
The number of bytes that have been added to the log since the previous interval. Blank if no changes have been made to the log.

**Tip:** If Log Bytes is blank, this represents a quiet time for the subsystem and therefore might be a good recovery point for that subsystem.
**Modify commands**

You can use the following modify commands to manage the RBA Capture utility started task.

*Table 24. Modify commands for RBA Capture utility*

<table>
<thead>
<tr>
<th>Command</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>/s taskname</td>
<td>Starts the ARYRBASP task.</td>
</tr>
<tr>
<td>/p taskname</td>
<td>Ends the ARYRBASP task.</td>
</tr>
<tr>
<td>Note: The RBA Capture task will wait until the next RBA Capture interval before shutting down completely. This may take up to 60 minutes.</td>
<td></td>
</tr>
<tr>
<td>/f taskname,PARM=nn</td>
<td>Changes the interval at which the RBAs are captured. Valid values for nn are 1-60, in minutes.</td>
</tr>
<tr>
<td>/f taskname,A,ssid</td>
<td>Adds the specified subsystem to those being monitored by the task. RBAs will be captured for this subsystem beginning immediately after the modify command is processed.</td>
</tr>
<tr>
<td>/f taskname,R,ssid</td>
<td>Suspends the capturing of RBAs for the specified subsystem.</td>
</tr>
</tbody>
</table>

**Managing the repository**

If you want to periodically remove older RBA capture information from the repository, you will run the RBA Capture Cleanup job ARYRBACL that was created using Tools Customizer. Edit the PARM in the EXEC statement to specify the number of days of information you want to keep. When you submit this job, records that are older than the number of days specified will be deleted, or you can optionally unload the records to a GDG.
Chapter 19. Using the Db2 Recovery Expert web interface

From the main window of the Db2 Recovery Expert web interface you can recover an object using the schema level repository; recover data and dropped objects using Db2 logs; recover one or more transactions; perform log analysis; perform a system restore; and view previously saved recovery, system restore, and log analysis actions.

Opening the web interface, setting preferences, and starting advisors

From the main page of the web interface you can access all the recovery functionality including setting up your environment preferences, and accessing each of the advisors.

1. Open a web browser. Access the Db2 Recovery Expert web interface using the web address (URL) that was distributed by the administrator who installed Db2 Recovery Expert.

2. You can access the online help system by clicking the Help button in the top bar of the window. A side bar will open displaying information describing the general use of the web interface.

3. You can control how Db2 Recovery Expert handles specific situations using the Preferences notebook. Click the Preferences button in the top bar of the window. The Preferences notebook opens. Select one or more of the following tabs:
   - Select the General page to specify the options that control whether the messages are displayed, whether the database location or local time will be used, and whether recovery method information is displayed.
   - Select the Warnings page to specify whether certain types of warnings will be displayed.
   - Select the Limits page to specify size limits when downloading lists of objects or excessively large output files.
   - Select the Job Cards page to specify the default values that will be used for generated job cards and any JES control statements.
   - Select the Quiet Time Tables page to explicitly specify which tables are used to store the quiet time data for an object.
   - Select the Logging page to specify where logging information should be routed and what components will produce log output.

4. Click the Logs button to open the Logs window where you can view the logging information that has been generated. Each log entry includes a start time and the content of the log entry.

5. The Messages pane displays the status of running or completed tasks that you have initiated using any of the advisors. Click the Messages button to open the Messages window. You can delete messages that display in the pane using the Delete icon that appears in the top right corner of the pane.

6. To recover data objects using information from the schema level repository (SLR), click the Recovery Advisor tab to open the Recovery Advisor. The Welcome page of the Recovery Advisor opens. It presents an overview of the recovery process.

7. To generate DDL for an object or recover a dropped object using the Db2 log, click the Log Based Recovery tab to open the Log Based Recovery Advisor.
The Welcome page of the Log Based Recovery Advisor opens. It presents an overview of the log based recovery process.

8. To recover one or more transactions, click the Transaction Recovery tab to open the Transaction Recovery Advisor. The Welcome page of the Transaction Recovery Advisor opens. It presents an overview of the transaction recovery process.

9. To discover periods of inactivity for an object that can be used as recovery points, click the Log Analysis tab to open the Log Analysis Advisor. The Welcome page of the Log Analysis Advisor opens. It presents an overview of the log analysis process.

10. To restore a Db2 subsystem from a Db2 Recovery Expert system level backup, click the System Restore tab to open the System Restore Advisor. The Welcome page of the System Restore Advisor opens. It presents an overview of the Db2 subsystem restore process.

11. While working in each advisor you will use the Back and Next buttons located in the lower right hand corner of the window to navigate through the steps of the advisor.

12. You can access online help for each advisor using the Help button located in the lower right hand corner of the window.

13. You can close an advisor using the Close button located in the lower right hand corner of the window.

14. While using any of the advisors you can save your work in progress and return to it later. Saving your work can help you be more efficient as some steps in a recovery process can be time consuming. To save your work click the Save button located on the bottom right hand side of the window to create a recovery specification. You can create a recovery specification at any point in each of the advisor steps. To return to your work, click the Specifications tab to open the Specifications window which displays all the specifications that you can access.

Managing message information

The Messages pane displays the status of running or completed tasks initiated by the current user on the server.

You can choose to display the Messages pane with every advisor by selecting the Display the message pane on each advisor page check box that is included on the General page of the Preferences notebook. You can also access the Messages pane using the Messages tab.

1. Messages are displayed with the following information:

   Status  Identifies the status of the job.
   
   Running  The task is running.
   
   Success  The task finished successfully.
   
   Warning  The task ended with a warning.
   
   Failed  The task ended with an error.
   
   Cancelled  The task was cancelled.
Abandoned

The task was abandoned. This status is used only when you have submitted a job, tried to cancel it, but the job does not end before the expiration of a time out period. In this case, Db2 Recovery Expert abandons the job—it might continue running, but Db2 Recovery Expert no longer tracks it.

Location

The location (database and server) of the task. For example, Db2A on MVS1.

Specification

The name of the saved specification, if any, that the task was saved to.

Type

The type of task.

- Recovery plan generation
- Recovery plan validation
- Recovery plan execution
- Log analysis
- Point in time conversion (This is a job submitted during recovery plan generation on a non-data sharing system, where you specified either a timestamp or log RBA as the point in time for the recovery. This job converts the specification to a point in time; when the job finishes, recovery plan generation continues.)

Timestamp

The timestamp of the task when it was initiated.

Description

A description of the task.

2. To cancel a message, select the message and click the cancel icon.
3. To delete a message, select the message and click the delete icon.

Specifying the General preferences

Use the General page of the Preferences notebook to control many product-wide options in Db2 Recovery Expert.

You can choose to specify one or more of the following preferences:

Display the message pane on each advisor page

Check this check box to display the message pane at the bottom of each advisor page. The messages pane displays the status of running or completed tasks.

Timestamp values

Specify how the timestamp values that you use in the Recovery Advisor, Log Analysis Advisor, Transaction Advisor, or Log Based Recovery Advisor are initialized. If your database and client are in different time zones, this feature allows you to select either the database time zone or the client time zone as the default time zone. Select either of the following options:

- Use database location time
- Use local time

Display recovery method information

Select this check box to view explanations of why a generated recovery plan is available or unavailable. If you select the Display recovery method
information check box, each object within the **Recovered Objects** folder expands and lists the possible recovery options. If a specific recovery method is not available for that object, a red circle appears to the left of the recovery option. By default, the **Display recovery method information box** is not selected.

**Use on-demand retrieval of recovery plans**
Select this check box to retrieve generated recovery plans only when needed. If this option is not selected, generated recovery plans are retrieved at the time they are created.

**Reset passwords**
Click the **Reset passwords** button to reset all passwords currently remembered by Db2 Recovery Expert to null.

---

**Specifying the Warnings preferences**

Use the **Warnings** page of the **Preferences** notebook to control many product-wide warnings in Db2 Recovery Expert.

You can choose to specify one or more of the following preferences:

**Skip the pattern warning**
Select this check box to suppress the warning that is issued when you expand a pattern on the **Objects** window of the **Recovery Advisor**, the **Log Based Recovery Advisor**, or the **Log Analysis Advisor**.

**Skip the RECOVER warning**
Select this check box to suppress the warning that one or more steps in a recovery plan generated by the **Recovery Advisor** will use the **RECOVER** utility.

**Skip the Undo/Redo SQL warning**
Select this check box to suppress the warning that one or more steps in the recovery plan generated by the **Recovery Advisor** will use Undo or Redo SQL.

---

**Specifying the Limits preferences**

Use the **Limits** page of the **Preferences** notebook to specify the maximum limit for the number of items that can be displayed in a list, the maximum number of transactions that can be displayed, and the maximum size of a file that can be downloaded without confirmation.

You can choose to specify one or more of the following preferences:

**Filter trigger**
Specify the maximum number of items to display before you are prompted to supply a filter that reduces the number of items to display.

**Number of transactions trigger**
Specify the maximum number of transactions to display without issuing a warning message that the number of retrieved transactions exceeds the specified display limit.

**Output file size trigger**
Specify the maximum size of a file (in bytes) that can be downloaded without confirmation of the file download because of excessive size.
Specifying the Job Cards preferences

Use the Job Cards page of the Preferences notebook to specify the default values that are used for all generated job cards and any JES control statements that you want included in the jobs generated by Db2 Recovery Expert.

The job card information specified in the preferences is used by Db2 Recovery Expert as the basis for each job card in a generated job. You should specify any job card information and JES control statements necessary to successfully run jobs at your installation. The following is an example of a job card:

```plaintext
//ARYJOB JOB, 'Db2 RECOVERY EXPERT', MSGCLASS=H,
//REGION=0M, NOTIFY=&SYSUID
```

Specifying the Quiet Time Tables preferences

Use the Quiet Time Tables page of the Preferences notebook to specify which tables are used to store quiet time data.

By default, the Use the following tables for quiet time data check box is not checked. If unchecked, Db2 Recovery Expert uses the default names for the tables. The default quiet time table names are specified in the Product Control File during the customization process for each SSID. The quiet time tables are used when performing quiet time analysis, retrieval, and validation.

You select the Use the following tables for quiet time data check box if you want to override the default quiet time tables for all SSIDs. You can enter alternate quiet time table names in one or more of the following text boxes:

- Report table creator
- Report table name
- Quiet time table creator
- Quiet time table name

Specifying the Logging preferences

Use the Logging page of the Preferences notebook to turn logging on and select the components that will log data.

Select the components that will produce log output. You can select more than one component:

- Messages
- XML requests/responses
Chapter 20. Performing common advisor tasks

This section describes several tasks that you can perform while using any of the advisors.

Logging in to a database

From any advisor you can use the Database Login window to log in to the Db2 subsystem location that you selected.

1. Specify the user ID that you want to use to connect to the Db2 location in the User ID field.
2. Specify the password for the user ID in the Password field.
3. You can optionally specify your SQL authorization ID (SQLID) if necessary in the Current SQLID (optional) field.
4. Check the Remember this password (encrypted) check box to store the password used to connect to this location for future use by Db2 Recovery Expert. The user ID and current SQLID that you specified are always remembered. In future sessions, the display of the Database Login window for a location is suppressed if the password for that location is stored.
5. Check the Use this information for all database locations check box to specify that the specified user ID, password, and current SQLID should be used (without prompting) at all other database locations accessed during the current Db2 Recovery Expert session.
6. Click Login to access the database.
7. Click the Cancel button to cancel the request and return to the previous screen.

Saving advisor settings for future use

You can save the recovery information that you specify in each of the advisors for future use. After saving, the information is referred to as a specification. You can access saved specifications using the Specifications Advisor. Using saved recovery specifications can help you improve your efficiency and reduce the time it takes to generate recovery plans.

Saving a specification

You use the Save Specification window to save a specification.

There is no requirement to save current advisor settings as a persistent specification. If you choose to save the settings, the specification is stored in Db2 at the selected location. The specification is then accessible through the Specifications Advisor. If a specification has previously been saved, its properties are shown by default. Access to a specification is controlled by a sharing option that is assigned to the specification when it is created.

1. Using the Recovery Advisor, the Log Based Recovery Advisor, the Transaction Recovery Advisor, the Log Analysis Advisor, or the System Restore Advisor, click the Save button. The Save Specification window opens.
2. The Location field displays the SSID of the Db2 database where the specification will be saved. This is a read only field.
3. The **Owner** field displays your user ID or the user ID of the person who originally saved the specification. You can specify a new user ID for the owner. When you change the owner field, the save operation becomes a save as operation.

4. The **Name** field displays the name of an existing specification or is empty if this is a new specification. For new specifications, enter a name for the specification in the **Name** field. You can specify a new name for the specification. When you change the name field, the save operation becomes a save as operation.

5. The **Description** field displays a description of an existing specification or is empty if this is a new specification. For new specifications, enter a description for the specification in the **Description** field. You can change the description of an existing specification.

6. If your primary or secondary authorization ID matches the owner of the specification, you have ownership of (and full access to and use of) the specification. For all other users, their access is controlled by the selection made in the **Sharing** group of radio buttons:
   - Select **Other users have no access** radio button to prevent any other user from accessing the specification.
   - Select **Other users can copy the specification** radio button to allow other users to copy the specification.
   - Select **Other users can use/modify the specification** radio button to allow other users to use and modify the specification.

7. Click **OK** to save the specification. Control returns to the advisor window from which the save was invoked.

### Using the Specification Advisor

Using the **Specification Advisor** you can open, copy, rename, import, export, and delete specifications.

1. Open the **Specification Advisor** by selecting the **Specifications** tab from the web interface.

2. The **Specification Advisor** opens with a list of the available specifications. You can filter the list of specifications that are displayed using the following **Filters** fields:

   - **Location**
     Specifies the Db2 location where the specification that you want to use resides. Use the pull-down list to select a location.

   - **Creator(s) like**
     Specifies a filter for the creator of the specification. You can use a mask followed by a percent sign as a wild card when filtering, for example, TDSM% will filter on all names that begin with TDSM.

   - **Owner(s) like**
     Specifies a filter for the owner of the specification. You can use a mask followed by a percent sign as a wild card when filtering, for example, TDSM% will filter on all names that begin with TDSM.

   - **Name(s) like**
     Specifies a filter for the name of the specification. You can use a mask followed by a percent sign as a wild card when filtering, for example, TDSM% will filter on all names that begin with TDSM.

3. After specifying or changing the filter information, click the **Refresh** button to update the list of specifications that are displayed in the **Specifications** pane.
4. To open a specification, select the specification and click the **Open** icon. The specification is opened in the advisor that was originally used to create the specification. Db2 Recovery Expert verifies that you are authorized to open the selected specification. If not, the open operation fails. If you are only authorized to copy the specification, a message displays explaining this, and asks you if you want to make a copy. If the specification is in use (that is, there is a task currently running for it), the specification opens to the point where that task was initiated. If the specification is in use by a different user, the open operation fails, and a message displays explaining why, and asks you if you want to make a copy of the specification.

5. To rename a specification, select the specification and click the **Rename** icon. The Rename Specification window displays. Use this window to specify your rename information. When renaming a specification, Db2 Recovery Expert first verifies that you are authorized to use (not just copy) the specification. If not, the rename operation fails. If you are only authorized to copy the specification, a message displays explaining this, and asks you if you want to make a copy instead of renaming it. If the specification is in use by a different user, the rename operation fails, and a message displays explaining why, and asks you if you want to make a copy of the specification.

6. To copy a specification, select the specification and click the **Copy** icon. The Copy Specification window displays. Use this window to specify your copy information. When copying a specification, Db2 Recovery Expert first verifies that you are authorized to use or copy the specification. If not, the copy operation fails.

7. To export a specification, select the specification and click the **Export** icon. The Export Specification window is a standard "File Save As" window, allowing you to export the selected specification to a local file on the client computer. Specifications are saved in XML files. When exporting a specification, Db2 Recovery Expert first verifies that you are authorized to use or copy the specification. If not, the export operation fails.

8. To import a specification, select the specification and click the **Import** icon. The import operation displays a standard "File Open" window, allowing you to select a local file from the client computer containing an exported specification. The exported specification is opened, as if opened from the database.

9. To delete a specification, select the specification and click the **Delete** icon. A prompt opens to confirm the delete operation. Click **OK** and the specification is deleted.

When deleting a specification, Db2 Recovery Expert first verifies that you are authorized to use (not just copy) the specification. If not, the delete operation fails. If the specification is in use by a different user, the delete operation fails, and a message displays explaining why. If the specification is in use by the current user, a message displays explaining that there is a task running that must be cancelled before the specification can be deleted, and asking if the user wishes to cancel the task.

10. To leave the **Specification** advisor, select another advisor.

### Copying a specification

You use the Copy Specification window to copy specifications. In order to copy a specification, your user ID must have been granted copy sharing permission when the specification was saved.

1. From the **Specification Advisor**, select the specification that you want to copy. Click the **Copy** icon. The Copy Specification window opens.
2. The **Old owner** field displays the ID of the current owner of the specification. This is a read-only field.

3. The **Old name** field displays the current name of the specification. This is a read-only field.

4. Specify a new owner ID in the **New owner** field.

5. Specify a new name for the specification in the **New name** field.

6. Click **OK**. The specification is copied. Control returns to the advisor and the newly copied specification appears in the list of specifications.

### Renaming a specification

You use the Rename Specification window to rename a specification. In order to rename a specification, your user ID must have been granted use or modify sharing permission when the specification was saved.

1. From the **Specification Advisor**, select the specification that you want to rename. Click the **Rename** icon. The Rename Specification window opens.

2. The **Old owner** field displays the ID of the current owner of the specification. This is a read-only field.

3. The **Old name** field displays the current name of the specification. This is a read-only field.

4. Specify a new owner ID in the **New owner** field.

5. Specify a new name for the specification in the **New name** field.

6. Click **OK**. The specification is renamed. Control returns to the advisor and the renamed specification appears in the list of specifications.

### Viewing the properties of a selected object

The **Recovery Advisor**, the **Log Analysis Advisor**, and the **Log Based Recovery Advisor** each has a step where you select one or more objects for recovery or analysis. When selected, the object’s properties are listed in the **Properties** pane.

When you select an object from the **Available Objects** list in the **Objects** window of the **Recovery Advisor**, the **Log Analysis Advisor**, or the **Log Based Recovery Advisor** window, the **Properties** pane is populated with detailed information for the selected object. The properties listed vary by object selected, but the list of possible properties are:

- Action on LOB column check error (R | I)
- The maximum number of exceptions to be reported only (nn)
- The scope of rows to be checked (P | X | A | R)
- Status to verify whether to continue processing when in a restricted state (Y | N)
- Maximum number of objects to copy in parallel (nn)
- Number of tape drives to allocate for objects processed in parallel (nn)
- Copy table spaces only or table spaces and indexes (TS | TP)
- Create local site primary copy (Y | N)
- Create local site backup copy (Y | N)
- Create recovery site primary copy (Y | N)
- Create recovery site backup copy (Y | N)
- Use DFSMSdss concurrent copy (Y | N)
- Check pages for validity (Y | N)
• Reset page RBAs to zero (Y | N)
• The direction of log processing (F | B)
• Reuse existing Db2-managed data sets (Y | N)
• The scope of indexes to be rebuilt (A | P)
• Sort and build index keys in parallel (Y | N)
• Reuse existing Db2-managed data sets (Y | N)
• Apply log records only (Y | N)
• Maximum number of objects to restore in parallel (nn)
• The site from which RECOVER should use image copies (location)
• Recover to a particular image copy (IC)
• The access with which to start the space(es) (UT | RW)
• Whether to stop the space(es) before restarting (Y | N)

Point in time conversion job

In some cases, Db2 Recovery Expert generates and submits a batch job during recovery plan generation to perform log analysis to convert timestamps and log RBAs.

This job is required when you specify either a timestamp or a log RBA as the point in time for the recovery, when running against a non-data sharing subsystem. The job performs log analysis to convert from the timestamp that you specified to the corresponding log RBA, or vice versa.

The JCL for the job is automatically generated, using the job cards that you specified on the Generation Options window. You do not have any further opportunity to review or customize this JCL before execution. Db2 Recovery Expert automatically submits and monitors the job, and when it finishes, the point in time information is read from the job output and passed into the rest of the recovery plan generation process, which continues as usual. Messages reporting the progress and status of this job are displayed on the main Db2 Recovery Expert window.

Depending on how you originally chose the point in time, this job might not be required. For example, if you browse recovery history events or quiet times as the source for selecting the point in time, then both timestamp and log RBA information are already available (although only one or the other is displayed in the user interface). In this case, Db2 Recovery Expert automatically uses both pieces of information, and does not require the point in time conversion job.

Exporting job JCL or results

From the Export window you can specify whether the build JCL or the job results from any of the advisors will be exported to a z/OS data set or to a local file.

Before you begin you must ensure that data set parameters (for example record length) allow for writing of JOB output to the data set.

1. From each advisor’s JCL window click the Export button.
2. Select one of the following radio buttons:
   • Select the Export to a z/OS data set radio button to direct the recovery JCL to a z/OS data set. If you select this option you must specify the name for the data set in the Data set name field.
Select the Export to a local file radio button to direct the recovery JCL to a local file. Use the Browse button to search the local directories and select the file.

3. Click OK. The recovery JCL is exported and control returns to the advisor's Recovery Plan window.

No recovery plans generated

You might encounter a situation where Db2 Recovery Expert does not generate any recovery plans. This information explains why that might occur.

Understanding why you do not have any viable recovery plans or cannot recover an object as expected requires an understanding of how Db2 Recovery Expert attempts to perform a recovery using the available resources and supported utilities.

Resources

Image copies (IC), active logs, and archive logs provide the application data to be recovered. Image copies are recorded in the Db2 System Catalog (DSC) and optionally in the Schema Level Repository (SLR). Logs are recorded only in the Boot Strap Data Set (BSDS). Regular SLR updates preserve information that would otherwise be lost from the DSC when objects are dropped or altered. Frequent image copies, especially after any successful recovery or significant update, reduce potential conflicts with un-logged updates and other limitations with log processing.

Utilities

- RECOVER, REBUILD INDEX, LOAD, and DSN1COPY are Db2 utilities.
- RESTORE DATASET is a DFSMSdss function command.
- Log Analysis is included with Db2 Recovery Expert to generate redo and undo SQL.

No objects to recover error (ARYZ017E)

If you encounter error message ARYZ017E informing you of a no objects to recover error, you must ensure that you have selected objects that can be recovered. Certain object types such as plans, packages, and Automation Tool profiles are used only to select other recoverable object types. These object types themselves are never directly recovered. This type of indirect selection can result in no objects to recover. Common issues with indirect selection include:
- a plan that uses only a pack list, that has no direct dependencies
- a storage group that is not used by any table space partitions or index partitions

Unrecoverable objects error (ARYZ018E)

If you encounter error message ARYZ018E informing you of an unrecoverable objects error, there are many possible reasons that Db2 Recovery Expert could generate this message. To resolve this situation, you must understand what Db2 Recovery Expert is attempting to do and determine what factor is preventing Db2 Recovery Expert from generating a recovery plan.

Recovery methods
The recovery methods are described by:
1. The utility that is used to acquire the beginning data.
2. The resource for the data that is used.
3. The second utility, if necessary, that is required to modify the data.
4. The direction of log processing that is required to modify the data. (redo or undo SQL)
5. The location of the starting point for the log range.
6. The location of the point in time (PIT) that you specified.

The following table outlines the possible recovery methods that are examined by Db2 Recovery Expert:

Table 25. Possible recovery methods

</tbody>
</table>
The recovery point in time (PIT) always affects which methods are relevant for each object, and is typically compared with the most recent image copies both before and after the PIT. If the last image copy is incremental, then a full image copy before the PIT is required.

The log range required for a recovery method cannot contain objects with any of the following parameters:

- CHECK DATA with LOG(NO)
- LOAD with LOG(NO)
- REORG with LOG(NO)
- RECOVER with TOCOPY or TOLOGPOINT

Constraints

- Recreated tables are not supported by RECOVER, RESTORE, or Undo SQL from current.
- DSN1COPY does not support user-managed spaces defined as NOREUSE.
- Image copies created with the CONCURRENT option are supported only by RECOVER and RESTORE.
- Image copies created without the CONCURRENT option are supported by every utility except RESTORE.
- RECOVER might not require a last image copy if the object is newer than the oldest recorded log, otherwise the full image copy must be recorded in the DSC.
- LOAD uses only full image copies to avoid duplicate rows from partially updated windows on incremental copies.
- Log Analysis does not support:
  - Tables that have a user defined data type.
  - Column names, table name, or creator that cannot be translated into EBCDIC (CCSID 37)
  - Objects that are LOG NO or have a related object that is LOG NO.
  - Dropped objects with XML columns
  - Cloned tables.
- REBUILD is used as the first utility only when the parent table is not being recovered, and only when recovering to current.
- The utilities used for recovery are typically either un-logged or limit log processing. Frequent image copies help to ensure a recoverable environment.
Chapter 21. Recovering a Db2 object using the schema level repository

The Recovery Advisor helps you to recover dropped or versioned Db2 objects using the information in the Db2 Recovery Expert schema level repository (SLR). The SLR is a collection of Db2 tables that are used to archive Db2 object metadata and recovery information. Using the SLR you can recover dropped objects to a point in time. In addition you can recover objects back to a specific version.

The versioning information that Db2 Recovery Expert keeps in the SLR is updated by running the SLR update program. The SLR update program compares the objects in the Db2 catalog to the last known version of the objects in the SLR and if an object has changed, a new entry for that object is added. If kept current by frequently running the update program, the versioning information in the SLR can present a complete historical view of the object. The information tracks when any attribute of the object is changed. You therefore have the opportunity to recover an object to one of several versions.

Note: Running the SLR update program can be resource intensive. If you are only interested in recovering an object to just before it was dropped and not interested in recovering an object to a specific version, you can use the Log Based Recovery Advisor to recover a dropped object using the Db2 log.

Using the Recovery Advisor

This section provides an overview of the process for recovering one or more Db2 objects using the Recovery Advisor. The Recovery Advisor helps you build a job to recover one or more objects using the Db2 Recovery Expert schema level repository for recovery information.

2. Click Next. The Location window opens. You use the Location window to select the Db2 subsystem where the objects that you want to recover reside.
3. Click Next. The Objects window opens. You use the Objects window to select the objects that you want to recover.
4. Click Next. The Point in Time window opens. You use the Point in Time window to specify the point in time to which you want to recover the selected objects.
5. Click Next. The Recovery Plan window opens. Click Generate to retrieve a list of possible recovery plans for the objects. When retrieving the recovery plans you can specify whether you will perform in-place recovery, redirected recovery, or DDL recovery. You will also specify options that will be used when generating the recovery plans. The recovery plans are retrieved and listed in the Plans pane.
6. Select a recovery plan from the list of plans and click Next.
7. The JCL window opens displaying the JCL that will be used for the recovery job. From this window you can edit the JCL.
8. Click **Next** to run the job. When the job completes, the Result window opens and displays the results of the job. Select the recovery job whose results you want to review.

9. When you have finished reviewing the results, click **Close**. You return to the Results window of the advisor, where you can choose to save or delete the results.

---

**Opening the Recovery Advisor**

Each of the advisors in the web interface opens with a Welcome window.

1. Click the **Recovery Advisor** tab from the main page of the web interface. The Welcome window of the **Recovery Advisor** opens. This window presents an overview of the object recovery process using this advisor.

2. The **Skip this Welcome page in the future** check box (which by default is not selected) allows you to suppress the display of the Recovery Advisor Welcome window in the future. This applies only for new object recovery specifications; when a saved specification is opened, the Welcome window is always omitted.

3. On each window of the **Recovery Advisor**, you can use one or more of the following controls to navigate through the process:

   - **Back** Move back one window in the object recovery process.
   - **Next** Move ahead one window in the object recovery process.
   - **Save** Save the recovery process and selections up to this point in a specification. (This opens a new window for naming and saving the specification.)
   - **Close** End the recovery process without saving it and close the **Recovery Advisor**. All work and selections up to this point are lost.
   - **Help** Connect to the IBM Db2 Recovery Expert online help system.

4. After you have reviewed the information on the Welcome window, click **Next**. The Location window opens.

---

**Selecting a Db2 subsystem location**

Use the Location window of the **Recovery Advisor** to select the Db2 subsystem on which the objects that you want to recover reside.

The locations displayed on this window are discovered automatically through communication between the Db2 Recovery Expert server and all running database agents. If there are several attached agents, the discovery process can take some time.

The Db2 subsystems available for your use are fetched when the agent starts. To refresh this list, right-click anywhere in the **Locations** pane. A **Refresh Location** option appears that you can select to refresh the list of subsystems. Additionally, an administrator can use SDSF (System Display and Search facility) to issue a `/MODIFY <agent-job-name>,REFRESH TOPOLOGY` command after having started or stopped a Db2 subsystem.

1. Drill down to the Db2 subsystem that contains the objects that you want to recover by expanding the elements in the **Locations** pane. The locations presented are organized in different ways. If you think of the locations by physical organization (that is, what system, and then what subsystem on that system), you can drill down through z/OS Systems. If you think of the
locations in the abstract (that is, a simple list of subsystems), you can drill down through z/OS Subsystems or z/OS Data Sharing Groups.

2. Select the Db2 subsystem. The properties of the Db2 subsystem display in the Properties pane. Depending on the location that you selected, you might see only a portion of the properties listed below:
   - Version
   - Mode
   - Highest log RBA
   - Subsystem ID
   - Active?
   - System restore
   - System services address space
   - Database services address space
   - Distributed data facility address space
   - IP address
   - IP address V6
   - Host name
   - Port number
   - Resync port number
   - Data sharing group attachment name
   - Data sharing group name
   - Data sharing member name

3. When you select a Db2 subsystem, the status of the Db2 subsystem displays in the Status pane. The status information that might be listed is:
   - Db2 restart RBA
   - Db2 restart time
   - Last checkpoint
   - Log copy 1
   - Log copy 2
   - Log high offloaded RBA
   - Log high written RBA
   - Number of logs awaiting offload

4. Click Next. If a connection to that location has not yet been established during the Db2 Recovery Expert session, a connection is established now.

5. If this is the first time during the Db2 Recovery Expert session that you have selected this location, and if login information has not been previously stored, the Database Login window displays. Enter the login information and click OK.

6. The Objects window opens.

---

**Selecting objects for recovery**

You use the Objects window of the Recovery Advisor to select the objects that you want to recover.
The first time you expand each high level element in the list of available objects (for example, Storage Groups, Databases, Table Spaces), the number of matching objects is determined. If this number exceeds the threshold specified in user preferences, a filter dialog is displayed.

**Important:** When you are selecting objects for recovery, remember that any recovery plan might include undo or redo SQL. You must ensure that there is a primary, or unique, key on the tables for which you are generating SQL. Without a primary key, you might not get the results that you want because of the inability to uniquely identify rows that were changed by the original SQL.

1. The **Available objects** list displays the objects that are available for recovery on the Db2 subsystem that you selected. The objects are organized by object type. You drill down to the desired object and select it. The objects appear in different colors to identify their locations:

   - **Black** In both the repository and the Db2 catalog
   - **Blue** In the Db2 catalog only
   - **Red** In the repository only

2. In the **Available Objects** pane, you can also right-click a table space, a database, or a table partition node to display a menu with commands that you can use to change the display status. This gives you a convenient way to reset or check object statuses from within Db2 Recovery Expert. The available commands are **Display**, **Start**, and **Stop**. Selecting any of the options displays another dialog that allows you to perform the selected operation on the selected object.

3. When you select an object, its properties display in the **Properties** pane. The **Repository Status** field in the **Properties** pane also identifies an object's location. Each of the properties that are listed in the Properties pane vary by object type.

4. Click the **Include** button to add the object to the list of objects to recover. The object appears in the **Selected objects** list. You can continue to add objects to the **Selected objects** list until you have selected all of the objects that you want to recover. To remove an object from the **Selected objects** list, click the **Remove** button. To remove all the objects from the list, click the **Remove All** button.

5. You can use the **Exclude** button to exclude an object from a larger set of objects that are to be recovered. For example, if you choose to include all objects that are found in a database with the exception of one dependent object, then you would select the database using the **Include** button; and then select one of the dependent database objects and using the **Exclude** button move it to the **Selected objects** list.

6. You can use the **Filter** button to vary the display of objects as they appear in the **Available objects** list. The **Available objects** list displays the objects organized by object type. This organizational scheme is consistent throughout the tree. To vary the objects displayed beneath each object type on any level, select the object type and press the **Filter** button. You can also open the object type filter window by right clicking on the object type and selecting **Create Filter** from the menu. A filter window opens where you can specify the filter criteria. In addition you can modify and remove filters by right clicking on an object type and selecting from the menu either **Modify filter** or **Remove filter**.

The available object types are as follows:

- Storage Groups
- Databases
- Table Spaces
7. You can define a pattern that will match multiple objects that will be selected for recovery at the time the recovery job is run. To define a pattern, select the node labeled Pattern under the type of object you wish to select and click the Include button. A popup window opens, specific to the type of object that you selected. Specify the pattern and click OK. The object type pattern will appear in the Selected objects list. When you expand a pattern in the Selected objects list, you can see all matching objects that are found in the repository or currently exist in the Db2 subsystem.

8. Click Next. The Point in Time window opens.

**Specifying a point in time**

You use the Point in Time window of the Recovery Advisor to specify the point in time to which you want to recover the selected objects.

1. Select one of the following radio buttons:
   - Select the **Current** radio button to specify that you will recover the selected objects to the current date and time. You would select this option when you want to recover data that is logically consistent but has a physical error or other corruption in how it is stored.

   **Note:** When performing redirected recovery, selecting Current recovers the object using the latest image copy of the source object. Any recovery information that is included in the log data is not applied.

   - Select the **Timestamp** radio button to specify a time value as the point to which the objects will be recovered. You would select this option when you want to recover previous versions of the selected objects, or when data has become logically inconsistent and you can identify a prior timestamp when the data was consistent. If you choose this option, you will select a specific time using the date and time icon. You can also browse for recovery point options using the browse button.

   - Select the **Log RBA** radio button to specify that an RBA from the log will be used as the point to which the objects will be recovered. Select this option when data has become logically inconsistent and you can identify a prior log RBA when the data was consistent. If you choose this option, you can specify
a specific RBA in the adjacent text box. You can also browse for RBA point options using the browse button. This option is only available for non-data sharing environments.

- Select the LRSN radio button to specify that a LRSN will be used as the point to which the objects will be recovered. Select this option when data has become logically inconsistent and you can identify a prior LRSN when the data was consistent. If you choose this option, you can specify a specific LRSN in the adjacent text box. You can also browse for LRSN point options using the browse button. This option is only available for data sharing environments.

2. If you choose the browse button for help in selecting a timestamp value, a log RBA value, or a LRSN value:
   - Click the browse button next to the Timestamp radio button to open the Select Point in Time window. From this window you can select a time value to which the dropped objects can be restored. You can choose from a list of available object level definitions, recovery history events, or quiet times. When control returns to the Point in Time page, the selected recovery point is displayed in the Timestamp text box.
   - Click the browse button next to the Log RBA radio button to open the Select Point in Time window. From this window you can select the RBA to which the dropped objects will be restored. You can choose from a list of available object definition levels, recovery history events, or quiet times. When control returns to the Point in Time page, the selected recovery point is displayed in the Log RBA text box.
   - Click the browse button next to the LRSN radio button to open the Select Point in Time window. From this window you can select the LRSN to which the dropped objects will be restored. You can choose from a list of available recovery history events or quiet times. When control returns to the Point in Time page, the selected recovery point is displayed in the LRSN text box.

Selecting an object level, history event, or quiet time recovery point

From the Select Point in Time window of the Recovery Advisor you can choose the type of recovery point that will be used to recover the objects. The types of recovery points from which you can select are object definition levels, recovery history events or quiet times. You can also specify a specific image copy data set name.

1. From the Point in Time page of the Recovery Advisor select the browse button to the right of the Timestamp radio button, the Log RBA radio button, or the LRSN radio button. The Select Point in Time window opens.

2. Select one of the following radio buttons:
   - **Object Definition Levels** - Select this radio button to choose an object definition level for a recovery point. A given object can have many versions over time. The versions are referred to as object definition levels. The available definition levels that can be used as a recovery point are listed in the Levels text box. **Object Definition levels** are not available for selection when using a log RBA or LRSN point in time.
   - **Recovery History Events** - Select this radio button to choose a history event for a recovery point. History events for any of the selected objects are listed from the SYSIBM.SYSCOPY table, the schema repository's SYSCOPY table, and the DLC.SYSCOPY_V11 table (if present). The history events available to use as a recovery point are listed in the Events text box.
- **Quiet Times** - Select this radio button to choose a quiet time for a recovery point. The available quiet times available to use as a recovery point are listed in the **Quiet time found** text box. Quiet times are listed from the quiet time tables. The default quiet time tables are SYSTOOLS.SYSQTG and SYSTOOLS.SYSQT. You can change the quiet times tables location using the **Quiet Time Tables** page of the **Preferences** notebook.

- **Copy with Specific Data Set Name** – Select this radio button to specify the data set name of an image copy that is used for the recovery point. Specify the data set name in the **Data Set Name** field or use the **Find** button to search for the data set.

3. The number of elements listed in the **Levels**, **Events**, and **Quiet Times** text boxes is limited by the **Filter trigger** value specified on the **Limits** page of the **Preferences** notebook. If the number of elements to be listed exceeds this value, the **Point in Time Filter** window opens. From this window you can specify a timestamp range that will filter the elements that are displayed. You can also filter the items that are listed in the **Levels** text box, the **Events** text box, and the **Quiet times** text box at any time using the **Filter** button.

4. At any time, you can click the **Refresh** button to refresh the list of elements.

5. If you selected:

   - **Recovery History Events** - You can show events that are not points of consistency. You can use the **Show events that are not points of consistency** check box to control whether or not events that are not suitable points of consistency for recovery are shown (for example, other than quiesce events or SHRLEVEL NONE or SHRLEVEL REFERENCE image copies). By default, the check box is not selected, so only points of consistency are shown.

   - **Quiet Times** - You can run a quiet time report on demand, updating the quiet time tables, and providing more quiet times from which to select. To run a quiet time report, click the **Run New Report** button. The **Log Analysis Advisor** opens, allowing you to run a quiet time report. After the report runs, click **Refresh** to display any additional quiet times discovered.

6. Click **OK**. Control returns to the **Point in Time window**. The following recovery points are specified depending on your selection:

   - For **Object Definition Levels**, the **Level End Timestamp** from the selected row is entered in the **Timestamp** edit box. If there is no **Level End Timestamp**, that is, you selected a level which still exists, the point in time selection is changed to **Current**.

   - For **Recovery History Events**, the timestamp from the selected event is entered in the **Timestamp** edit box.

   - For **Quiet Times**, the midpoint of the **Start Timestamp** and **End Timestamp** from the selected quiet time is entered in the **Timestamp** edit box, or the **End RBA\LRSN** value is entered in the **Log RBA/LRSN**.

---

**Understanding recovery plans**

Recovery plans are the jobs that can be run to recover Db2 objects.

When you generate a recovery plan, a request is made to the Db2 Recovery Expert server to complete the recovery set by expanding patterns and also searching containment and other types of relationships. All objects that are found are added automatically to the recovery set, without your confirmation.

Further analysis is then performed to determine additional relationships such as RI constraints, and XML and LOB relationships.
While RI relationships for each selected table are determined, Db2 Recovery Expert creates a list of relationships (by referential constraints), each referring to a list of tables.

If the composite list of tables includes any that were not previously in the recovery set, the Select Related Tables window displays.

This Recovery Plans window shows the relationships found, along with the tables to which they refer. By default, all relationships (and tables) are selected for inclusion in the recovery set. You can clear any relationship or any table in a relationship. Clearing individual tables in a relationship might result in the partial inclusion of relationships, which will be reflected on the window.

**Note:** Use caution if you decide to remove related objects from the recovery set. Removing objects that were automatically selected might result in incorrect recoveries or recoveries that fail.

To ensure that you do not recover a table that you do not want, you must deselect each occurrence of the table under any constraint that might include it. If you select a constraint because you do not want a table that is under that constraint, you might still recover that table because it might exist under another constraint.

Another request is made to the server to continue generating recovery plans, using the augmented recovery set. After the plans are generated, they are displayed on the Plans window.

The jobs that initially appear in the Plans window have generic job names. To view the actual names used in the recovery process, you must generate the JCL by selecting a plan and either viewing the JCL or running the recovery. If you specify parallel jobs in the Recovery Plan Generation Options window, you see serial and parallel jobs within each plan folder. Upon generating the JCL, the same job name is generated for all serial jobs. For parallel jobs, the last character in the job name is incremented and a unique name is generated for each job in the parallel job folder.

A message displaying the status of the task is displayed in the **Messages** pane of the main window, while it is running and after it has ended. You can monitor the task and open the related specification from there.

The following is a list of recovery plans that can be used to perform an object recovery. Not all recovery plans are available for all objects. Depending on the objects or subsystems that you select, you see different available plans.

- Using DSN1COPY
- Using DSN1COPY and RECOVER LOGONLY
- Using DSN1COPY of IC and redo SQL
- Using DSN1COPY of IC and undo SQL
- Using DSN1COPY of full IC and undo SQL
- Using RECOVER TOCOPY
- Using RECOVER
- Using RECOVER to IC and undo SQL
- Using RECOVER to full IC and undo SQL
- Using Advanced Recovery
- Using LOAD
- Using LOAD from full IC and redo SQL
• Using LOAD from full IC and undo SQL
• Using undo SQL
• Using REBUILD INDEX
• Using DFSMSdss RESTORE DATASET
• Using DFSMSdss RESTORE DATASET with RECOVER LOGONLY
• Using DFSMSdss RESTORE DATASET and redo SQL
• Using DFSMSdss RESTORE DATASET and undo SQL
• Using DDL only (Drop)
• Using Restore from System Level Backup
• Using Restore from System Level Backup and RECOVER LOGONLY
• Using Restore of VSAM dataset only
• Using Restore of VSAM dataset and RECOVER LOGONLY

Generating recovery plans for XML and LOB columns

Db2 Recovery Expert can generate recovery plans for most objects defined with LOB and XML columns using Undo/Redo SQL for Db2 on version 9 and higher. This section describes the instances when Db2 Recovery Expert can be used to generate recovery plans for objects containing LOB and/or XML columns—and when it cannot.

Db2 Recovery Expert can produce a recovery plan for any object containing a LOB column regardless of whether or not
• The object was dropped
• The object requires Undo/Redo SQL

Note: For recovery plans that involve an image copy with subsequent Undo/Redo SQL, both the base table space and the associated LOB spaces need to have image copies with the same RBA/LRSN. The last image copy prior to the recovery point must have the same RBA for both the base table space and the associated LOB space(s).

Advanced Recovery recovery plans are not subject to this restriction. Advanced recovery can recover dropped LOB/XML spaces with image copies with different RBAs/LRSNs.

Db2 Recovery Expert can produce a recovery plan for any object containing an XML column that has not been dropped, even if Undo/Redo SQL is required for that object.

Db2 Recovery Expert can produce a recovery plan for any dropped object containing a table defined with an XML column if all of the following are true:
• The dropped object is recovered to an image copy point.
• An image copy exists for both the base table space and the auxiliary table space.
• Both the image copies of the base table space and the auxiliary table space have the same RBA/LRSN.

Note: After the recovery is executed, the objects will be recovered to the full image copy; however, inserts cannot be performed on the XML table.
Db2 Recovery Expert does not produce a recovery plan for any dropped object containing a table with an XML column and where Undo/Redo SQL is required to recover the object to the requested recovery point.

Viewing recovery method information

Db2 Recovery Expert can generate several recovery plans for you to choose from to recover an object. Each of these plans use different methods for recovering the object. You can display the reasons why a recovery method is or is not available for the objects that you want to recover.

To enable this feature check the Display recovery method information check box that is found on the General page of the Preferences notebook. By default, the Display recovery method information box is unchecked. A folder named Recovered Objects will be included when with the recovery plans that are generated to recover the objects. You will expand this folder to see the recovery methods that will be used to recover the objects.

When you select a recovery method in the list of recovery methods for a specific object information about the recovery method is displayed in the Properties pane. If a specific recovery method is not available for that object, a red circle appears next to the recovery option. An explanation appears in a popup and in the Properties pane informing the user of the reason the object cannot be recovered using that specific method. If a recovery method is available for an object, a green circle appears next to the recovery option, and information about why the object can be recovered using that specific method is displayed in the Properties pane.

The following is a list of possible reasons why a recovery method will not work for an object. Not all explanations apply to all types of recovery plans. For more information, review the messages section of the user’s guide.

- ARYJ040I - The object is not eligible for data recovery.
- ARYJ041I - Recreating the clone table would conflict with the existing base table.
- ARYJ042I - The method uses only DDL with no data recovery.
- ARYJ043I - The method does not support this object type.
- ARYJ044I - The index is dependent on data recovery.
- ARYJ045I - The method does not allow recreated tables.
- ARYJ046I - The method does not support this point in time.
- ARYJ047I - DSN1COPY does not support NOREUSE data sets.
- ARYJ048I - REDO/UNDO SQL does not support GENERATED ALWAYS columns.
- ARYJ049I - REDO/UNDO SQL does not support non-EBCDIC identifiers.
- ARYJ050I - REDO/UNDO SQL does not support distinct types.
- ARYJ051I - REDO/UNDO SQL does not support the first data set of a non-partitioned space.
- ARYJ052I - Table space method supersedes recovering all tables.
- ARYJ053I - Redo SQL does not support a recreated table from a previous table space version.
- ARYJ054I - This method is not enabled in the product control file.
- ARYJ055I - Last image copy before point in time unavailable.
- ARYJ056I - Last image copy after point in time unavailable.
- ARYJ057I - Full image copy before point in time unavailable.
- ARYJ058I - Full image copy after point in time unavailable.
- ARYJ059I - LOG NO event between current and point in time.
- ARYJ060I - Log processing not allowed with this method.
- ARYJ061I - Log processing required with this method.
- ARYJ062I - Log processing not supported for NOT LOGGED intervals.
- ARYJ063I - Full image copy has been deleted from SYSIBM.SYSCOPY.
- ARYJ064I - Concurrent copy excluded from this method.
- ARYJ065I - Concurrent copy required with this method.
- ARYJ066I - REDO/UNDO SQL requires Db2 V9 or higher for LOB column support.
- ARYJ067I - RECOVER does not support COPY NO indexes.
- ARYJ068I - This method must provide the lowest total cost.
- ARYJ069I - REDO/UNDO SQL does not support IMPLICITLY HIDDEN columns.
- ARYJ070I - System Backup Recovery Services is disabled in the PCF.
- ARYJ071I - System backup usable for object restore was not found.
- ARYJ072I - Load does not support XML columns.
- ARYJ073I - Load does not support LOB table spaces.

## Calculating recovery plan cost

Each generated recovery plan has an associated cost. In Db2 Recovery Expert recovery plan cost is a relative unit of measure to assist you in identifying the most efficient plan. The plan with the lowest estimated cost appears as the first plan on the list.

When you click on a recovery plan in the Plans pane, detailed cost information about the plan appears in the Properties pane. Plan properties include estimates of CPU time, tape mounts, and page I/Os. Compare the estimated cost for each plan to help you identify the most efficient plan using your preferred recovery method.

The following estimated cost information is generated for each recovery method.
- Estimated number of CPU milliseconds
- Estimated number of disk allocations
- Estimated number of disk page copies
- Estimated number of tape drive allocations
- Estimated number of tape page copies
- Estimated relative cost of the recovery plan
- Log point
- Plan name

## Viewing and editing relative cost parameters

Two parameters that are specified during customization affect the calculation of the cost estimates that are associated with generated recovery plans. The two parameters are:

**UPDATE ARY COST ECPU**

A relative factor used to determine the elapsed CPU time for each recovery plan. The default value is 010.00.
UPDATE ARY COST ETPM
A relative factor used to determine the elapsed time for tape mounts. The
default value is 120.00.

These parameters are easily customized to give Db2 Recovery Expert users a more
accurate cost estimate of recovery in their own shops.

When specifying relative cost parameters using Tools Customizer, the values
supplied must conform to the following rules:
• The values must be numeric.
• The values must be in the form nnn.nn. (Use leading/trailing zeros where
  necessary.)
• The values must begin in column 27.

To see the current values of these parameters, run SAMPLIB job ARYSj003. This
job reports on the contents of the Product Control File.

Generating and running recovery plans

From the Recovery Plan window of the Recovery Advisor you can generate
possible recovery plans for the selected objects.

You can generate a list of all available recovery plans for an object and then choose
to run the plan that is most advantageous. When the Recovery Plan window
initially opens, the list of plans is empty.

Note:
• If you are recovering a dropped object that is part of an implicit table space, Db2
  Recovery Expert issues a warning during recovery plan generation to let you
  know the ZPARM parameter IMPDSDEF must be set to YES before running the
  recovery job. This ZPARM parameter can be dynamically changed with the Db2
  SET SYSPARM command.
• If you are recovering a set of objects to a prior version (existing objects must be
dropped and then recreated) and one of the tables has the RESTRICT ON DROP
clause active, you will have to alter that table to remove this restriction before
running the recovery plan job. Upon completion of the recovery plan job you
can reactivate the clause for the table.

1. When the Recovery Plan window initially opens, the list of plans is empty.
   From the Recovery Plan window click the Generate button to generate a list
   of recovery plans.

2. The Recovery Plan Generation Options window opens. From this window you
   specify the type of recovery that you will perform and the options that are
   used to generate the recovery plans. After specifying the options you initiate
   the search for all available recovery plans based on the options that you
   specified. When the search has completed the recovery plans are returned and
   listed in the Plans pane of the Recovery Plan window.

3. One plan for each possible recovery strategy is listed in the Plans pane. When
   you select a plan, properties that estimate the cost of the plan are displayed in
   the Properties pane. The cost of running a recovery plan is calculated based
   on the size of the data sets and the method of recovery. Viewing the
   properties of each plan will help you choose the most efficient plan. You can
   modify the default values used for these estimates when customizing Db2
   Recovery Expert during installation.
4. You can expand each plan in the Plans pane to review its steps. When you select a step, descriptive properties for the step appear in the Properties pane.

5. You can expand each step in the plan to display the objects that are included in the list. The properties for each object are displayed in the Properties pane.

6. If you enabled parallel jobs, a folder named Serial Job Group is included in the Plans pane. This folder includes the initial job that will be run to check status, a Parallel Job Group folder that will contain the jobs to run in parallel, and a final job for utilities that cannot run in parallel. You enable parallel jobs using the Parallel Jobs page of the Recovery Plan Generation Options.

7. In addition to the recovery plans, the Plans pane includes a folder named Recovered Objects. This folder lists all the objects that will be recovered using the selected plan. If you set your preference to display recovery methods, each object within the Recovered Objects folder can be expanded and the possible recovery methods are listed.

8. If you select a plan and click the Validate button, you can verify whether the conditions that applied when a plan was generated still apply. For example, checking for the existence of expected image copy data sets. The existence of expected Db2 objects is also checked to verify that objects that were dropped at the time of generation are still dropped and objects that existed still exist. This validation is not a full simulation, that is, it is not a guarantee that the plan will run successfully. Some resources might appear to exist but actually do not, such as a cataloged tape that is not physically available, or you may not have authorization to access some resources. The message displayed upon successful validation makes it explicit that there is no guarantee of success.

9. After reviewing the recovery plans, select the one that you want to run and click Next. The JCL Parameters window opens.

10. From the JCL Parameters window specify one or more of the following fields and click OK:
- Edit the Job card for to suit your environment.
- Select the Generate SYSAFF check box to add SYSAFF to the job card. Including SYSAFF on the job card ensures that the job runs on the same system (LPAR) as the target DB2 system to which the objects will be recovered.
- In the In-stream data set delimiter (DLM) field you can specify a greater than 80 character line delimiter.

**Note:**
- Depending on the type of plan chosen, various warnings might be displayed before proceeding with the recovery. For a plan including at least one step that uses undo or redo SQL generated by log analysis, a warning displays identifying possible issues with a successful recovery. This warning is displayed even when recovering to a current or a known point of consistency.
- When you are selecting a recovery plan you must ensure that there is a primary or unique key on the tables for which you are generating SQL. Without a primary key, you cannot get the results that you want due to the inability to uniquely identify rows that were changed by the original SQL.

11. The JCL window opens displaying the JCL for the recovery job. From this window you can edit, export, or run the job.

12. Click Run to run the JCL for the recovery plan. The results of the job are returned and listed in the Result window.
13. To view the results of the job, select the job from the Jobs pane and click the View button. The Job Results window opens displaying the job results.

14. To delete the job, select the job from the Jobs pane and click the Delete button.

**Specifying recovery plan options**

From the Recovery Plan Options window you specify the type of recovery that will be performed and the options that will be used to generate the recovery plans. Several sets of options are presented to you depending on the type of recovery that you want to perform.

1. Select the type of recovery:
   - To perform an in-place recovery, clear the **Generate DDL only** and **Generate Redirected Recovery** check boxes. An in-place recovery recovers an object to a target Db2 subsystem that is the same as the object's original source Db2 subsystem.
   - To perform an in-place DDL only recovery, check the **Generate DDL only** check box. An in-place DDL only recovery recovers only the DDL for the object to a target Db2 subsystem that is the same as the object's original source Db2 subsystem.
   - To perform a Redirected Recovery, check the **Generate Redirected Recovery** check box. A Redirected Recovery recovers an object to a target Db2 subsystem that is different from the object's original source Db2 subsystem.
   - To perform a DDL only Redirected Recovery, check the **Generate DDL only** and the **Generate Redirected Recovery** check boxes. A DDL only Redirected recovery recovers only the DDL for an object to a target Db2 subsystem that is different from the object's original source Db2 subsystem.

2. If you are performing an in-place or a Redirected Recovery, click the General tab and specify the following options:
   - Objects that are in a restricted state might require manual intervention to successfully recover without causing unwanted results. Specify what you want Db2 Recovery Expert to do if it encounters objects in a restricted state (for example, read-only objects or table spaces with COPY pending) by selecting one of the following radio buttons:
     - **Stop the recovery if objects in a restricted state are encountered.** This is the recommended option as well as the default.
     - **Proceed with the recovery, if possible, even if objects are in a restricted state.**
   - The Check Data utility checks table spaces for violations of referential and table check constraints and it reports information about the violations that it detects. The **Generate Check Data utility** check box is selected by default. If you do not want to check data during the recovery process then you should turn this utility off by clearing the **Generate Check Data utility** check box. Checking the table space data will consume resources. Your recovery performance is improved if the Check Data utility is not running.
   - Objects that have been selected for recovery may be related to additional objects as a result of referential integrity. Select the **Include RI related objects** check box to include the additional objects in the recovery.
   - The LOAD from full IC recovery plan may be used to recover many types of objects. If you want to use this plan to recover recreated tables, you must select the **Allow LOAD from full IC for recreated tables** check box. It should be noted that in some cases using this plan for recreated tables may fail.
The **Use workfiles for Undo/Redo SQL** option specifies whether workfiles are used when running Undo/Redo SQL recovery plans. Select the **Use workfiles for Undo/Redo SQL** check box to use workfiles. Clear the **Use workfiles for Undo/Redo SQL** check box to use 64 bit storage. Using workfiles may impact performance and should only be selected when scanning more than 500 Db2 logs for activity.

The **Use Db2 System Catalog Only** option specifies the status of the Schema Level Repository (SLR) when performing standard recovery. Select the **Use Db2 System Catalog Only** check box to indicate that the SLR is not current and information about recovered objects should be ignored. Clear the **Use Db2 System Catalog Only** check box to indicate that the SLR is current and information about recovered objects should be used.

The **Allow copies created for other versions to be used for recovery** option allows users to select an image copy that is different from the current image copy version and use that image copy for the recovery. Select the **Allow copies from previous versions** check box to allow the use of previous image copy versions.

The **Ignore unrecoverable objects** option specifies whether unrecoverable objects in a profile are ignored when generating recovery plans. Select the check box to generate recovery plans for all objects in the profile that are recoverable and ignore all objects in the profile that are unrecoverable. Clear the check box to indicate that if any objects in the profile are unrecoverable, then no recovery plans are generated and an error message listing the unrecoverable objects is issued.

The **Notify if Data Capture Changes enabled** option specifies whether a warning message is issued if Data Capture Changes is enabled on the table that is being recovered. Select the check to issue the message. Clear the check box to prevent the message from being issued.

The **Action for missing recovery resources** option specifies what action to take when a unrecoverable resource, such as a Db2 log or image copy, is detected. Specify I (Ignore) to prevent Db2 Recovery Expert from checking data sets for unrecoverable resources. Specify W (Warning) to continue recovery plan generation and issue a warning message for unrecoverable resources. Specify E (Error) to issue an error message for unrecoverable resources and exclude those resources from plan generation.

3. If you are performing an in-place recovery, click the **RECOVER; Copy; Parallel Jobs; DDL Options; and Log Apply and Log Read** tabs to specify the recovery options.

4. If you are performing a Redirected Recovery, click the **Copy; Parallel Jobs; DDL Options; Log Apply and Log Read; and Redirected Recovery** tabs to specify the recovery options.

5. If you are specifying a DDL only Redirected Recovery, click the **DDL Options and Redirected Recovery** tabs to specify the recovery options.

6. If you are performing a DDL only in-place recovery, click the **DDL Options** tab to specify the recovery options.

7. Click **OK**. The recovery plans are generated and control returns to the Recovery Plan window.

**Specifying recovery plan options for the RECOVER utility**

You use the **RECOVER** page of the Recovery Plan Generation Options notebook to specify the parameters that are used with the **RECOVER** utility.

Specify values for the following fields:
Number of tape drives to allocate for objects processed in parallel (TAPEUNITS)
Select this option and provide a numeric value to set the number of tape drives to allocate for objects processed in parallel. The default value is zero which specifies that Db2 will determine the number of tape drives to allocate.

The site from which RECOVER should use image copies
Select this option and provide a site from which RECOVER should use image copies. The default value is Subsystem default which means however the subsystem is configured.

Recover unchanged objects
Select this check box to include all changed and unchanged objects in the recovery. Clear the check box to exclude unchanged objects from the recovery. Excluding unchanged objects will save processing time during the recovery. The default value is to include all changed and unchanged objects.

Specifying recovery plan options for the COPY utility
You use the Copy page of the Recovery Plan Generation Options notebook to specify the parameters that are used with the COPY utility.

Specify the parameters to use with the COPY utility
Select one of the following radio buttons to control whether or not Db2 Recovery Expert generates an image copy at the end of the recovery:
- Select the Do not create image copies after recovery radio button to bypass creating any image copies after recovery. This is the default selection.
- Select the Copy table spaces only radio button to create an image copy of only the table spaces after the recovery.
- Select the Copy table spaces and indexes radio button to create image copies of COPY YES indexes as well as of table spaces after the recovery.

If you selected either Copy table spaces only or Copy table spaces and indexes you must also specify the type of copies that you want to create. You can select one or more of the following:
- Create local site primary copy
- Create local site backup copy
- Create recovery site primary copy
- Create recovery site backup copy

Number of tape drives to allocate for objects processed in parallel (TAPEUNITS)
Specify in this text box the number of tape drives to allocate for objects processed in parallel. The default value for TAPEUNITS is 0 which specifies that Db2 will determine the number of tape drives to allocate.

Check pages for validity (CHECKPAGE)
Select this check box to verify that all pages are valid when using COPY.

Use DFSMdss concurrent copy (CONCURRENT)
Select this check box to use DFSMdss concurrent copy.

Specifying recovery plan options for running parallel jobs
Use the Parallel Jobs page of the Recovery Plan Generation Options notebook to specify the options for running parallel jobs.
These options specify the number of parallel processing jobs that are allowed and the maximum number of concurrent jobs that can be submitted at any given time. Examples of utilities that can be run in parallel are recoveries to independent table space groups and DSN1COPY and RECOVER utilities.

**Tip:** If you do not want to run parallel jobs, set the number of parallel jobs requested to 0, then the entire recovery will use a single JOB.

Based on the information that you enter, Db2 Recovery Expert evaluates the objects that have been selected for recovery to determine if their recovery can be spread across several jobs. This allows multiple recovery jobs to be submitted at once. During the recovery process, the generated JCL has an initial JOB for status checks to prepare for recovery and DDL to recreate objects. The maximum number of requested JBOS follow to process independent groups of objects. Utilities that cannot run parallel are included in the final job.

**Note:** Db2 Recovery Expert performs an analysis to determine which utilities run in parallel and which do not.

To set the parallel utilities, enter a number in the following boxes:

**Number of parallel jobs for data recovery**
In this text box specify the maximum number of jobs in a parallel job group.

**Specify maximum number of concurrent jobs**
In this text box specify the maximum number of jobs that the agent processes in parallel. This represents the maximum number of jobs that can run at any given point.

**Specifying recovery plan DDL options**
The DDL Options page of the Recovery Plan Generation Options notebook specifies the options that are used when generating just DDL for an object or set of objects. These options include those that effect whether authorization statements are generated, whether DDL is generated for specific object types, and the options that will control binding the DDL jobs.

The following options apply to authorizations:

**Grants**
Check this check box to generate authorization statements when recovering objects.

Using the DDL Options you control whether DDL will be generated for an object and the object’s dependent objects. When generating DDL for an object, Db2 Recovery Expert generates recovery DDL for the selected object and all its lower level dependent objects. By not selecting an object type, you can inhibit the generation of DDL for those dependent objects of a specific object type. To control the generation of DDL select one or more of the following check boxes:

**Storage Groups**
Check this check box to generate DDL for Storage Group object types.

**Databases**
Check this check box to generate DDL for Database object types.

**Indexes**
Check this check box to generate DDL for Index object types.
Aliases
Check this check box to generate DDL for Alias object types.

Functions
Check this check box to generate DDL for Function object types.

Synonyms
Check this check box to generate DDL for Synonym object types.

Sequences
Check this check box to generate DDL for Sequence object types.

Roles
Check this check box to generate DDL for Role object types.

Table Spaces
Check this check box to generate DDL for Tablespace object types.

Tables
Check this check box to generate DDL for Table object types.

Views
Check this check box to generate DDL for View object types.

DataTypes
Check this check box to generate DDL for Data Type object types.

Stored Procedures
Check this check box to generate DDL for Procedure object types.

Triggers
Check this check box to generate DDL for Trigger object types.

Sequence Aliases
Check this check box to generate DDL for Sequence Alias object types.

Global Variables
Check this check box to generate DDL for Global Variable object types.

The following options apply to binding packages and plans:

Binds
Check this check box to generate package or plan bind statements. Once checked, the supporting bind option become available.

Packages
Select this radio button to indicate that bind statements are to be generated only for packages. This option is only available when the Binds check box is selected.

Packages and Plans
Select this radio button to indicate that bind statements are to be generated for packages and plans. This option is only available when the Binds check box is selected. This option is only available when the Binds check box is selected.

Add
Select this radio button to indicate that the named package does not exist, and that a new package is to be created. If the package already exists, execution stops, and a diagnostic error message is returned. This option is only available when the Binds check box is selected.

Replace
Select this radio button to indicate that the existing package is to be replaced by a new one with the same package name and creator. This option is only available when the Binds check box is selected.
DBRM Library 1 – 4
Specify the DBRM libraries to be used for the bind jobs. You can specify up to 4 DBRM libraries. This option is only available when the Binds check box is selected.

SQLID for DDL
By default, the generated DDL for a recreated object uses the SQLID that was specified when the object was originally created. To override the default you can specify a different SQLID in the SQLID for DDL field and it will be used when generating the DDL for the recreated objects.

Specifying Log Read and Log Apply recovery options
The Log Read and Log Apply page of the Recovery Plan Generation Options notebook specifies the options that are used when generating Advanced Recovery or Redirected Recovery plans.

Log Reader Copy Preference
Includes the LOG_COPY_PREFERENCE keyword in the syntax. Specifies the order in which the archive and active log lists in the BSDS are to be scanned when searching for a log to satisfy a need for log records. Scans the archive logs first and uses archive logs when the same range exists in an archive and active log. You will use the drag and drop function to change the scan order. Click on the archive or active log type and drag it to the new position for scanning.

Number of PARALLEL log read
Specifies the number of parallel log read tasks that can run at the same time. Valid values are integers, 0-16. A value of 0 specifies that a maximum of 1 task per data sharing group member can run at the same time. A non-zero value specifies the number that is the maximum number of parallel tasks that can run at the same time. If there are more logs to read than the number of parallel tasks specified, a task to read the remaining logs is launched as soon as a running task finishes. This will occur until all necessary logs have been read.

Number of PARALLEL log apply
Specifies the number of parallel log apply tasks that can run at the same time. Valid values are integers, 1-10. If a single GROUP(...) set is present in the control cards, the value in the Number of PARALLEL log apply field is used to break up the job into multiple GROUP(...) sets and start a log apply task for each set. Valid values are

- 1: A single group starts a single log apply task.
- 2-10: If there is a single GROUP(...) , the code will internally break down the SPACE(...) sets into a maximum of Number of PARALLEL log apply GROUP(...) sets and will start one log apply task per GROUP(...).

For example, if you specify a value of 10 and there are only 5 SPACE(...) sets, Db2 Recovery Expert divides the syntax into 5 GROUP(...) sets and 5 log apply tasks.

If you specify a value of 5 for Number of PARALLEL log apply, the number of spaces between the groups are divided evenly and then, if there are leftovers after attempting to divide them evenly among the allotted number of GROUP(...) sets, those leftovers go in the last GROUP(...) set. One log apply task is then generated for each GROUP(...) set.

Bypass SYSIBM.SYSLGRNX Proc
Indicates whether reading the reading of SYSIBM.SYSLGRNX is bypassed
and only the Db2 logs are read. A value of Y skips reading SYSIBM.SYSLGRNX and only reads the Db2 logs. A value of N does not skip reading SYSIBM.SYSLGRNX.

**Continue on Errors**
Causes most errors to be ignored and the processing to continue. If this option is specified and errors higher than RC=4 are encountered, they will be overridden, a RC=4 will be reported, and the job will not fail. I/O errors and other serious issues (out-of-memory, for instance) will not be ignored and will still cause aborts.

**Reuse VSAM Data Set**
Indicates whether a VSAM data set can be reused on WRITE_TO_VSAM or WRITE_TO_BOTH jobs. If Reuse VSAM Data Set is set to N (No), a VSAM data set is newly allocated (with new extent structure) and the NO_REUSE keyword is included in the JCL on a Job Profile build. If Reuse VSAM Data Set is set to Y (Yes), an existing VSAM data set will be reused (thus preserving the data set's size and extent structure) and the NO_REUSE keyword is excluded from the JCL on a Job Profile build.

**Note:** Log Apply cannot be disabled for LBDR profiles, because Redirected Recovery of dropped objects is allowed only with Log Apply enabled. Additionally, for source and target SSIDs on different LPARs, Log Apply must be enabled.

**Specifying recovery plans Redirected Recovery options**
The Redirected Recovery Options page of the Recovery Plan Generation Options notebook specifies the options that are used when generating plans to recover an object to a target Db2 subsystem that is different than the original source Db2 subsystem.

**Object Translation**
You use the Object Translation fields to specify the new name for each object that is part of the redirected recovery. Click the Add icon to insert a row in the table. From the Object Type field, select the type of object that you are recovering. In the Source Name field specify the original name of the object that is being recovered. In the Target Name field specify the new name for the object that will be used on the target Db2 subsystem.

**Note:** If you are performing redirected recovery of an object across LPARs, the object is recovered on the different LPAR using the latest image copy of the source object. Any recovery information that is included in the data log is not applied.

**Single character wildcards**
Specifies a string of up to 8 characters that can include the question mark "?" or underscore "_" wildcard characters. The string is used to search for a match to values specified in the Source Name or Target Name fields. The wildcard character "?" or "_" will match any single character. For example, if you enter the string ?xyz, it will match axyz, bxyz or cxyz. If you enter the string xyz_, it will match xyza, xyzb, or xyzc.

**Arbitrary string wildcards**
Specifies a string of up to 8 characters, that includes the asterisk "*" or percent sign "%" wildcard characters. The string is used to search for a match to the values specified in the Source Name or Target Name fields. The wildcard character "*" or "%" will match one or more characters. For example, if you enter the string *xyz, it will match firstxyz, secondxyz or thirdxyz. If you enter the string xyz%, it will match xyzfirst, xyzsecond, or xyzthird.
Log Apply
The Log Apply field indicates whether a log apply process is bypassed and recovered data is taken only from the specified image copy. If Log Apply is selected, the log apply process is performed. If Log Apply is clear, the log apply process is bypassed.

Detailed JCL Comments
Specifies whether generated jobs include detailed JCL comments describing the function of each job step. Select the check box to include comments. Clear the check box to exclude comments.

SYSCOPY Scan Operating Mode
Specifies which SYSCOPY rows to consider when finding a starting point for processing. Valid values are:
- **Zparm** (Default) Detects the operating mode Db2 is running under and automatically inserts the corresponding control card. This option omits the LOCALSITE, RECOVERSITE, and IMAGECOPY_PREFERENCE control cards and uses the value found in the ZPARMs on the Db2.
- **Local** Refers to the Local Primary and Local Backup rows to find a starting point for processing. Includes the LOCAL_SITE keyword in the syntax.
- **Recover** Uses the Recovery Primary and Recovery Backup rows to find a starting point for processing. Includes the RECOVERY_SITE keyword in the syntax.
- **User** Uses the user-specified scan preference defined in the SYSCOPY Selection Preference field to find a starting point for processing. Includes the IMAGE_COPY_PREFERENCE keyword in the syntax.

SYSCOPY Selection Preference
Specifies the order in which the image copy types will be scanned in SYSCOPY for a starting point. This selection preference is only applied if the SYSCOPY Scan Operating Mode is set to User. You will use the drag and drop function to change the scan order. Click on the image copy type and drag it to the new position for scanning. The image copy types are:
- **Local Primary** Scans for Local Primary type image copies in SYSCOPY.
- **Local Backup** Scans for Local Backup type image copies in SYSCOPY.
- **Recovery Primary** Scans for Recovery Primary type image copies in SYSCOPY.
- **Recovery Backup** Scans for Recovery Backup type image copies in SYSCOPY.
- **Flash Copy** Uses Db2 Recovery Expert managed flash copy data sets in addition to Db2 V10 and higher flash copy data sets as image copy starting points in the processing.

Note: The following applies with the default order:
- Scans first for Local Primary type image copies, then for Local Backup type image copies. Local Primary type image copies are used when identically time-stamped SYSCOPY rows are detected.
- Allows the SYSCOPY scan program to pick an Recovery Backup if it comes up first while scanning SYSCOPY backwards for a starting point.

XML Options
The XML options are used when performing redirected recovery of a table object that includes XML and the target system is part of a data sharing environment.
**XML jobs data set**
Specifies the name of a data set where the JCL for the jobs that are required to complete the redirected recovery of table objects with XML are stored as members.

**Note:** XML objects require an automatically generated sequence number for each row. The jobs generated to this data set update the Db2 catalog for consistency with the translated XML data that includes the automatically generated sequence numbers. After recovery completes, you must manually run the jobs that are included in this data set. These jobs will use the prefix specified in the XML jobs member prefix field and the SSID of the LPAR member in the data sharing environment. You must update the jobs with a SYSAFF card and run on the LPAR that matches the SSID in the job name.

**XML jobs member prefix**
Specifies the prefix that is used in the automatically generated names of each member added to the XML jobs data set. Following the prefix, the generated name includes the SSID.

**XML template data set**
Specifies the name of a data set where the common job template is stored as a member during the plan generation for the redirected recovery of a table object that includes XML.

**XML template member**
Specifies the name of the member that is added to the XML template data set.

**Use RTS Copy Utility**
The RTS Copy Utility uses a set of temporary data sets when copying statistics from a source object to the corresponding target objects. The Use RTS Copy Utility options are used to set the RTS Copy Utility data set allocation options.

**Device type**
Specifies the device type that is used for the RTS utility temporary data sets.

**Space unit**
Specifies the unit type for the primary and secondary quantity allocation.

**Primary quantity**
Specifies the primary quantity that is used for the allocation of temporary data sets.

**Secondary quantity**
Specifies the secondary quantity that is used for the allocation of temporary data sets.

**SMS data class**
Specifies the SMS data class that is used for the allocation of temporary data sets.

**SMS storage class**
Specifies the SMS storage class that is used for the allocation of temporary data sets.

**SMS management class**
Specifies the SMS management class that is used for the allocation of temporary data sets.
Viewing the recovery job JCL

From the JCL window of the Recovery Advisor, you can view, edit, export, and run the JCL that is generated for the recovery job.

1. The JCL window opens when you select a plan and click Next from the Recovery Plan window.
2. From JCL window you can review the JCL for the recovery plan job. You can also edit the JCL in the window. You can use the Undo button to reset the contents of the Statements pane to the JCL statements that were originally generated. The Undo button is disabled unless and until you modify the JCL.
3. To export the JCL to either a z/OS data set or a local file, click Export. The Export window opens where you specify data set or file information.
4. To run the recovery job click Run. The recovery job is run and the results are returned in the Result window.

RECOVER Utility Warning window

The RECOVER Utility Warning window alerts you that at least one step in the recovery plan uses the RECOVER utility.

Using the RECOVER utility in a recovery plan can result in inconsistent data because the RECOVER utility recovers to a point in time regardless if the point in time is a point of consistency for the object. This can cause inconsistent data because of changes that do not get incorporated. Those changes could have occurred after the point in time or occurred before the point in time but were eventually rolled back after the point in time.

You should attempt to recover to a point of consistency, if possible.

Reviewing the recovery process results

The Job Results window displays the details of a recovery job. You can display all the results or specify that only the results from selected steps and DD statements display.

While the recovery job is running, a message displays its ongoing status on the Messages pane of the advisor window. When the submitted job completes, the status changes in the Messages pane to “Successful” or “Warning” if an error occurred.

A return code of 2 is an acceptable return code while running certain recovery plans. If the Generate General Report step of a recovery plan does not have anything to report because there were no inserts, deletes, or updates, then the step results in an RC=2. A return code of 2 is acceptable for the recovery plan DSN1COPY and redo SQL.

A return code of 4 can also be an acceptable return code while running certain recovery plans. A RC=4 can be acceptable for the following reasons:

• A recover utility completes and leaves the indexes in rebuild pending
• A LOAD-type recovery where the table space to be loaded is empty and the load commands include the RESUME keyword
• Redo or undo SQL statements are applied to tables containing duplicate rows, and you bypass the resulting +100 SQLCODE

1. Select the job that you want to display from the Job drop-down menu.
2. Select the step name that you want to display from the Step name drop-down menu or select ALL to view all steps in the Job Results window.

3. Select the DD name that you want to display from the DD name drop-down menu or select ALL to view all DD's from the selected step in the Job Results window.

4. Click Export if you want to export the JCL to a z/OS data set or a local file. The Export window opens. Specify the export information and click OK. Control returns to the Job Results window.

5. When you have finished reviewing the job, click Close to close the window and return to the Results window.

---

**Recovering Db2 objects specified by pattern**

Instead of explicitly selecting all of the objects to be recovered, you can instead specify name patterns to select a set of objects.

The recovery process is the same as for any Db2 object up to when the Objects window opens.

1. From the Objects window you drill down to the type of object you want, and then select Pattern. Click the Include button. An Add Pattern window specific to the type of object selected displays.

2. On the Add Pattern window, you enter the pattern that you want and click OK. The specified pattern is added to the list of selected objects, in the same way as explicitly specified objects.

**Important:** If you save a recovery specification which includes one or more patterns, the patterns are expanded each time the specification is used, at the time it is used (that is, the pattern is saved with the specification, not the list of matching objects of the pattern at the time it was created).

You can expand a selected pattern to see what objects it matches. The exact set of matching objects that will be recovered cannot be determined yet (because you have not yet selected a point in time), so a message displays explaining that this list is not necessarily the exact matching list. When you click OK, the Objects window shows the expanded pattern. You cannot deselect any of the expanded items - the pattern as a whole is selected for recovery.

3. Click Next when you are done adding objects. The recovery process then proceeds the same as for any Db2 object.

---

**Recovering Db2 objects specified by Db2 Automation Tool profile**

If Db2 Automation Tool is installed and profiles have been created, you can use those profiles to quickly select groups of administratively related objects for recovery when using the client/server interface.

**Note:**
- Db2 Recovery Expert automatically includes RI related objects. This occurs regardless of the new Automation Tool setting to automatically include RI related objects.
- Even though Db2 Automation Tool can create many types of profiles, Db2 Recovery Expert can only recognize and use profiles that contain table spaces and indexes. For more information on using Db2 Automation Tool profiles, see the Db2 Automation Tool User’s Guide.
The recovery process is the same as for any Db2 object up to when the Objects window opens.

1. The Available objects tree select Object Profiles. Expand Object Profiles to display the defined Automation Tool profiles (subject to filtering, as with the other high-level element types). Select a profile and click the right arrow to select its contents for recovery.

   This specifies that all of the table spaces and indexes in the profile should be recovered. This evaluation is performed at the time that the recovery JCL is generated, so that the most current contents of the profile are used if the contents change over time.

   Additionally, you can expand a displayed profile to display its contents. This allows you to select only a subset of the profile for recovery, or to use the profile as a starting point to find the objects of interest for recovery (for example, by drilling down through a listed profile to its contents).

2. You can select additional profiles to recover, as well as any other supported type of object by selecting elsewhere in the Available objects tree.

3. Click Next when you are done adding objects. The recovery process then proceeds the same as for any Db2 object.

### Restarting a failed job

If a recovery job submitted by Db2 Recovery Expert encounters an error, you can review the JCL and the output, make corrections as required, and resubmit the job.

The first indication you have of a failed job is a message displayed in the Messages pane of the main window with a status of Failed.

1. Select the message in the Messages pane and click Open or double-click the message to display the Results window.

2. Select the job you want to review and click View. The Recovery Job Results window opens.

3. Determine why the job failed. To determine why the job failed, you will most likely use:
   - The Recovery Job Results
   - The submitted JCL (click View JCL)
   - Other external resources

   The Recovery Job Results and the Recovery JCL windows can be open at the same time, and you can freely switch between the two or arrange them to be visible simultaneously to aid in determining why the job failed.

   **Important:** If the generated JCL consisted of more than one job, the Recovery JCL window displays with a hierarchical tree structure that identifies the jobs individually.

4. Click Restart.
   - If the generated JCL consisted of one job, the View JCL and Recovery Job Results windows close, and the job is submitted.
   - If the generated JCL consisted of more than one job, the Restart Recovery window displays. You then select which jobs to rerun, and click Run. The Restart Recovery, View JCL, and Recovery Job Results windows all close and the jobs are submitted.
Chapter 22. Recovering dropped objects using the Db2 log

The Log Based Recovery Advisor simplifies the recovery process for dropped objects by reading Db2 log records when recreating the object's image eliminating the need to update the schema level repository.

Using the Log Based Recovery Advisor

This section provides an overview of the process for recovering one or more Db2 objects using the Log Based Recovery Advisor. The Log Based Recovery Advisor helps you build a job to recover one or more objects using the Db2 log records for recovery information.

1. Access the Db2 Recovery Expert web interface.
2. Click the Log Based Recovery tab from the main window of the web interface. The Welcome window opens. This window presents an overview of the log based object recovery process.
3. Click Next. The Location window opens. From this window you select the Db2 subsystem where the objects that are to be recovered reside.
4. Click Next. The Range window opens. From this window you specify the date and time range within which Db2 Recovery Expert will search for dropped objects.
5. Click Next. The Objects window opens. From this window you select the objects that you want to recover.
6. Click Next. The Point in Time window opens. From this window you choose the recovery point for the object or objects. You can select a recovery point from an object definition level or a recovery history event.
7. Click Next. The Recovery Plan window opens. From this window you can generate a list of all available recovery plans for an object and then choose to run the plan that is most advantageous. You can also choose to generate a single plan that will produce a job (JCL) containing the Data Definition Language (DDL) for the selected objects and all of their dependent objects.
8. Click Next. The JCL window opens displaying the JCL that will be used for the recovery job. From this window you can edit the JCL.
9. Click Next to run the job. When the job completes, the Result window opens and displays the results job.

Opening the Log Based Recovery Advisor

The Log Based Recovery Advisor opens with a Welcome window.

1. Click the Log Based Recovery tab from the main page of the web interface. The Welcome window of the Log Based Recovery Advisor opens. This window presents an overview of the log based dropped object recovery process using this advisor.
2. The Skip this Welcome page in the future check box (which by default is not selected) allows you to suppress the display of the Log Based Recovery Advisor Welcome window in the future. This applies for new log based dropped objects settings only; when a saved specification is reopened, the Welcome window is always omitted.
3. On each window of the Log Based Recovery Advisor, you can use one or more of the following controls to navigate through the process:
4. After you have reviewed the information on the Welcome window, click Next. The Location window opens.

Selecting the Db2 subsystem

You use the Location window of the Log Based Recovery Advisor to select the Db2 subsystem where the dropped object or objects that you want to recover reside.

The locations displayed on this window are discovered automatically through communication between the Db2 Recovery Expert server and all running database agents. If there are several attached agents, the discovery process may take some time.

The Db2 subsystems available for your use are fetched when the agent starts. To refresh this list, right-click anywhere in the Locations pane. A Refresh Location option appears that you can select to refresh the list of subsystems. Additionally, an administrator can use SDSF (System Display and Search facility) to issue a /MODIFY <agent-job-name>,REFRESH TOPOLOGY command after having started or stopped a Db2 subsystem.

1. Drill down to the Db2 subsystem that contains the objects that you want to recover by expanding the elements in the Locations pane. The locations presented are organized in different ways. If you think of the locations by physical organization (that is, what system, and then what subsystem on that system), you can drill down through the folder z/OS Systems. If you think of the locations in the abstract (that is, a simple list of subsystems), you can drill down through the folders z/OS Subsystems or z/OS Data Sharing Groups.

2. Select the Db2 subsystem. If a connection to that location has not yet been established during the Db2 Recovery Expert session, a connection is established now.

3. If this is the first time during the Db2 Recovery Expert session that you have selected this location, and if login information has not been previously stored, the Database Login window opens. Enter the login information and click OK.

4. The properties of the Db2 subsystem that you selected display in the Properties pane of the Location window. Depending on the location that you selected, you might see only a portion of the properties listed below:
   - Version
   - Mode
   - Highest log RBA
   - Subsystem ID
   - Active?
   - System restore
   - System services address space
• Database services address space
• Distributed data facility address space
• IP address
• IP address V6
• Host name
• Port number
• Resync port number
• Data sharing group attachment name
• Data sharing group name
• Data sharing member name

5. The status of the Db2 subsystem displays in the Status pane of the Location window. Depending on the Db2 subsystem that you selected, the status information that might be listed is:
• Db2 restart RBA
• Db2 restart time
• Last checkpoint
• Log copy 1
• Log copy 2
• Log high offloaded RBA
• Log high written RBA
• Number of logs awaiting offload

6. Click Next. The Range window opens.

**Selecting a time range to search for dropped objects**

From the Range window of the Log Based Recovery Advisor you specify the range within the Db2 log that will be searched to locate dropped objects.

1. Select one of the following radio buttons:

   • Select the **Preceding** radio button to indicate that you want to scan for dropped objects starting with the current time and go backwards through the log for a specified number of hours or minutes. In the first drop down box, specify a number for the hours or minutes that you want to go back. In the second drop down box, specify whether you want to go back using hours or minutes. By default the time range is set to **Preceding** by 1 hour using the local time. You can choose to use database time by setting this option in the Preferences window.

   • Select the **Date/Time from** radio button to specify the actual start and stop date and time that will be used to scan the log for dropped objects. Select the start time from the first drop down menu and select the end time from the second drop down menu.

   • Select the **Previously scanned log range from** radio button to select a time range that has been previously used. You can select the browse button to see a list of available time ranges. The Scanned Log Ranges window opens. From this window you select a previously scanned range. Click OK. Control returns to the Range window.

2. Check the Use SYSLGRNX check box to specify whether SYSLGRNX is used when determining the log files to read. In most cases, the SYSLGRNX directory tables are used to optimize selecting which log files must be read. Using these
tables may add overhead to the analysis job, which in some situations can outweigh the savings that is gained by using SYSLGRNX. If you do not want to use SYSLGRNX, clear the check box.

3. Click **Next**. The Objects window of the **Log Based Recovery Wizard** opens.

### Selecting or deleting a previously scanned log range

The Scanned Log Ranges window displays the previously scanned log ranges that you can use to look for dropped objects.

A new scanned log range is created automatically each time a scan is initiated and completed from the **Range** window. When a user specifies either a preceding time or a date/time range on the Range window and clicks **Next**, a confirmation dialog is displayed. If the user clicks **OK** in the confirmation page, the scan for objects proceeds and a new, previously scanned log range is created. From the Scanned Log Ranges window you can select a previously scanned log range or you can delete a previously scanned log range.

1. Select a previously scanned log range from the list of available entries.
2. Once a scanned log range is selected you can:
   - Click the **OK** button to select the scanned log range. Control returns to the **Range** page.
   - Click the **Delete** button to remove the scanned log range from the list. The Scanned Log Ranges page remains open until you click either the **OK** button to select an existing range or the **Cancel** button. In either case, control then returns to the **Range** window.

### Selecting dropped objects for recovery

You use the Objects window of the **Log Based Recovery Advisor** to select the dropped objects that you want to recover.

The first time you expand each high level element in the list of available objects (for example, Storage Groups, Databases, Table Spaces), the number of matching objects is determined. If this number exceeds the threshold specified in user preferences, a filter dialog is displayed.

1. The **Available objects** list displays each of the dropped objects that were found in the Db2 log within the specified time range. The dropped objects are organized by object type. You drill down to the desired object and select it. The objects appear in different colors to identify their locations:
   - **Black**: In both the repository and the Db2 catalog
   - **Blue**: In the Db2 catalog only
   - **Red**: In the repository only

2. In the **Available Objects** pane, you can also right-click a table space, a database, or a table partition node to display a menu with commands that you can use to change the display status. This gives you a convenient way to reset or check object statuses from within Db2 Recovery Expert. The available commands are **Display**, **Start**, and **Stop**. Selecting any of the options displays another dialog that allows you to perform the selected operation on the selected object.

3. To specify that all the objects in the **Available Objects** list are included for recovery, click **Include all**. All the objects display in the **Selected objects** list.

4. To recover a single object, drill down and select the object from the **Available Objects** list. When you select an object, its properties display in the **Properties**
pane. The Repository Status field in the Properties pane also identifies the location of the object. Each of the properties that are listed vary by object type.

5. With the object selected, click the Include button to add the object to the list of objects to recover. The object displays in the Selected objects list. You can continue to add objects to the Selected objects list until you have selected all of the objects that you want to recover. To remove an object from the Selected objects list, click Remove. To remove all the objects from the list, click Remove All.

6. You can use the Exclude button to exclude a dropped object from a larger set of objects that are to be recovered. For example, if you choose to include all objects that are found in a database with the exception of one dependent object, then you would select the database using the Include button and then select one of the dependent database objects and using the Exclude button move it to the list of Selected objects.

7. You can use the Filter button to vary the display of objects as they appear in the Available objects list. The Available objects list displays the dropped objects organized by object type. This organizational scheme is consistent throughout the tree. To vary the objects displayed beneath each object type on any level, select the object type and press the Filter button. You can also open the object type filter window by right clicking on the object type and selecting Create Filter. A filter window opens where you specify the filter criteria. In addition you can modify and remove filters by right clicking on an object type and selecting from the menu either Modify filter or Remove filter. The available object types are as follows:
   - Storage Groups
   - Databases
   - Table Spaces
   - Tables
   - Indexes
   - Views
   - Synonyms
   - Aliases
   - Data types
   - Triggers
   - Functions
   - Stored Procedures
   - Sequences
   - Roles
   - Plans
   - Packages
   - Global Variables
   - Automation Tool Object Profiles

Note: Db2 Recovery Expert will not automatically recover a dropped related Table when recovering a dropped Trigger or dropped Data type. You must manually select related Tables for dropped object recovery.

8. You can define a pattern that will match multiple objects that will be selected for recovery at the time the recovery job is run. To define a pattern, select the node labeled Pattern under the type of object you wish to select and click the Include button. A popup window opens that is specific to the type of object...
that you selected. Specify the pattern and click **OK**. The object type pattern displays in the **Selected objects** list. When you expand a pattern in the **Selected objects** list, you can see all matching objects that are found in the repository or currently exist in the Db2 subsystem.

**Important:** When you are selecting objects for recovery, remember that any recovery plan might include undo or redo SQL. You must ensure that there is a primary, or unique, key on the tables for which you are generating SQL. Without a primary key, you might not get the results that you want because of the inability to uniquely identify rows that were changed by the original SQL.

9. Click **Next**. The Point in Time window opens.

### Selecting a recovery point

From the Point in Time window of the **Log Based Recovery Advisor** you can specify the point to which a dropped object or objects will be recovered. You can choose a specific time, a log RBA for a non-data sharing system, a LRSN for a data sharing system, a specific time and a log RBA for a non-data sharing system, or a specific time and a LRSN LRSN for a data sharing system.

1. Select one of the following radio buttons:

   - Select the **Timestamp** radio button to specify a time value as the point to which the dropped objects will be recovered. You would select this option when you want to recover previous versions of the selected objects, or when data has become logically inconsistent and you can identify a prior timestamp when the data was consistent. If you choose this option, you will select a specific time using the date and time icon. You can also browse for recovery point options using the browse button.

   - Select the **Log RBA** radio button to specify that an RBA from the log will be used as the point to which the dropped objects will be recovered. Select this option when data has become logically inconsistent and you can identify a prior log RBA when the data was consistent. If you choose this option, you will specify a specific RBA in the adjacent text box. You can also browse for RBA point options using the browse button. The **Log RBA** radio button is only available for non-data sharing systems.

   - Select the **LRSN** radio button to specify that a LRSN will be used as the point to which the objects will be recovered. Select this option when data has become logically inconsistent and you can identify a prior LRSN when the data was consistent. If you choose this option, you can specify a specific LRSN in the adjacent text box. You can also browse for LRSN point options using the browse button. This option is only available for data sharing environments.

   - Select the Timestamp and Log RBA radio button to specify that both time and RBA information are used to determine the point to which the objects are recovered. This option is selected by default for non-data sharing systems. If selected, the DB2 log is examined to discover whether a timestamp or RBA point is the latest and most advantageous recovery point that is available.

   - Select the Timestamp and LSRN radio button to specify that both time and LSRN information are used to determine the point to which the objects are recovered. This option is selected by default for data sharing systems. If selected, the DB2 log is examined to discover whether a timestamp or a LSRN point is the latest and most advantageous recovery point that is available.
2. If you choose to use the browse button for help in selecting a timestamp value or a log RBA value:
   - Click the browse button next to the Timestamp radio button to open the Select Point in Time window. From this window you can select a time value to which the dropped objects will be restored. You can choose from a list of available object level definitions or recovery history events. When control returns to the Point in Time page, the selected recovery point is displayed in the Timestamp text box.
   - Click the browse button next to the Log RBA radio button to open the Select Point in Time window. From this window you can select the RBA to which the dropped objects will be restored. You can choose from a list of available object level definitions or recovery history events. When control returns to the Point in Time page, the selected recovery point is displayed in the Log RBA text box.
   - Click the browse button next to the LRSN radio button to open the Select Point in Time window. From this window you can select the LRSN to which the dropped objects will be restored. You can choose from a list of available object level definitions or recovery history events. When control returns to the Point in Time page, the selected recovery point is displayed in the LRSN text box.

Selecting a definition level or history event recovery point

From the Select Point in Time window of the Log Based Recovery Advisor you can select a recovery point from a list of previously discovered points. The types of recovery points from which you can select are object definition levels and recovery history events.

1. From the Point in Time window of the Log Based Recovery Advisor select the browse button to the right of the Timestamp radio button, the Log RBA radio button, or the LRSN radio button. The Select Point in Time window opens.

2. Select one of the following radio buttons:
   - **Object Definition Levels** - Select this radio button to choose an object definition level for a recovery point. A given object can have many versions over time. The versions are referred to as object definition levels. The available definition levels that can be used as a recovery point are listed in the Levels text box. Object Definition levels are not available for selection when using a log RBA recovery point.
   - **Recovery History Events** - Select this radio button to choose a history event for a recovery point. History events for any of the selected objects are listed from the SYSIBM.SYSCOPY table, the schema repository’s SYSCOPY table, and the DLC.SYSCOPY_V11 table (if present). The history events available to use as a recovery point are listed in the Events text box. You can show events that are not points of consistency. You use the Show events that are not points of consistency check box to control whether or not events that are not suitable points of consistency for recovery are shown (for example, other than quiesce events or SHRLEVEL NONE or SHRLEVEL REFERENCE image copies). By default, the check box is not selected, so only points of consistency are shown.
   - **Copy with Specific Data Set Name** – Select this radio button to specify the data set name of an image copy that is used for the recovery point. Specify the data set name in the Data Set Name field or use the Find button to search for the data set.
3. The number of elements listed in the Levels and Events text boxes is limited by the Filter trigger value specified on the Limits page of the Preferences notebook. If the number of elements to be listed exceeds this value, the Point in Time Filter window opens. From this window you can specify a timestamp range that will filter the elements that will be displayed. You can also filter the items that are listed in the Levels text box or the Events text box at any time using the Filter button.

4. At any time, you can click the Refresh button to refresh the list of elements.

5. Click OK. Control returns to the Point in Time window.

---

**Generating dropped object recovery plans**

From the Recovery Plan window of the Log Based Recovery Advisor you can generate all the possible recovery plans for the selected object and then choose to run the plan that is most advantageous.

**Note:**

- If you are recovering a dropped object that is part of an implicit table space, Db2 Recovery Expert issues a warning during recovery plan generation to let you know the ZPARM parameter IMPDSDEF must be set to YES before running the recovery job. This ZPARM parameter can be dynamically changed with the Db2 SET SYSPARM command.

- If you are recovering a set of objects to a prior version (existing objects must be dropped and then recreated) and one of the tables has the RESTRICT ON DROP clause active, you will have to alter that table to remove this restriction before running the recovery plan job. Upon completion of the recovery plan job you can reactivate the clause for the table.

1. When the Recovery Plan window initially opens, the list of plans is empty. From the Recovery Plan window click the Generate button to generate a list of recovery plans.

2. The Recovery Plan Generation Options window opens. From this window you specify the type of recovery that you want to perform and the options that are used to generate the recovery plans. You can specify that you will generate full recovery plans or your can specify that you will generate just the DDL for object recovery. Depending on your selection you specify the options that are used when generating the recovery plans. After specifying the options you initiate the search for all available recovery plans based on the options that you specified. When the search has completed the recovery plans are returned and listed in the Plans pane of the Recovery Plans window.

3. The recovery plans that are available for the object are listed in the Plans pane. When you select a plan, properties that estimate the cost of the plan are displayed in the Properties pane. The cost of running a recovery plan is calculated based on the size of the data sets and the method of recovery. Viewing the properties of each plan will help you choose the most efficient plan. You can modify the default values used for these estimates when customizing Db2 Recovery Expert during installation.

4. You can expand each plan in the Plans pane to review its steps. When you select a step, descriptive properties for the step appear in the Properties pane.

5. You can expand each step in the plan to display the objects that are included in the list. The properties for each object are displayed in the Properties pane.

6. In addition to the recovery plans, the Plans pane includes a folder named Recovered Objects. This folder lists all the objects that will be recovered using
the selected plan. If you set your preference to display recovery methods, each object within the **Recovered Objects** folder can be expanded and the possible recovery methods are listed.

7. If you select a plan and click the **Validate** button, you can verify whether the conditions that applied when a plan was generated still apply. For example, checking for the existence of expected image copy data sets. The existence of expected Db2 objects is also checked to verify that objects that were dropped at the time of generation are still dropped and objects that existed still exist. This validation is not a full simulation, that is, it is not a guarantee that the plan will run successfully. Some resources might appear to exist but actually do not, such as a cataloged tape that is not physically available, or you may not have authorization to access some resources. The message displayed upon successful validation makes it explicit that there is no guarantee of success.

8. After reviewing the recovery plans, select the one that you want to run and click **Next**. The JCL Parameters window opens where you can make changes to your default Job card information and specify a greater than 80 character line delimiter. Edit the Job card and click **OK**.

9. The JCL window opens displaying the JCL for the recovery job. From this window you can edit, export, or run the job.

10. Click the **Run** to run the JCL for the recovery plan. The results job is returned and listed in the **Result** window.

11. To view the results of the job, select the job from the **Jobs** pane and click the **View** button. The Job Results window opens displaying the job results.

12. To delete the job, select the job from the **Jobs** pane and click the **Delete** button.

### Specifying recovery plan options for dropped objects

From the Recovery Plan Options window you specify the type of recovery that will be performed and the options that will be used to generate the recovery plans. Several sets of options are presented to you depending on the type of recovery that you want to perform.

1. Select the type of recovery:
   - To perform an in-place recovery, clear the Generate DDL only check box. An in-place recovery will recover an object to a target Db2 subsystem that is the same as the object's original source Db2 subsystem.
   - To perform an in-place DDL only recovery, check the **Generate DDL only** check box. An in-place DDL only recovery will recover only the DDL for the object to a target Db2 subsystem that is the same as the object's original source Db2 subsystem.

2. Specify the recovery options as follows:
   - If you are performing an in-place recovery click the Copy, Recover, Parallel Jobs, and DDL Options tabs to specify the recovery options.
   - If you are performing a DDL only in-place recovery, click the **DDL Options** tab to specify the recovery options.

3. Click **OK**. The recovery plans are generated and control returns to the Recovery Plan window.

### Specifying recovery plan options for the COPY utility

You use the **Copy** page of the Recovery Plan Generation Options notebook to specify the parameters that are used with the COPY utility.
Specify the parameters to use with the COPY utility
Select one of the following radio buttons to control whether or not Db2 Recovery Expert generates an image copy at the end of the recovery:

- Select the **Do not create image copies after recovery** radio button to bypass creating any image copies after recovery. This is the default selection.
- Select the **Copy table spaces only** radio button to create an image copy of only the table spaces after the recovery.
- Select the **Copy table spaces and indexes** radio button to create image copies of COPY YES indexes as well as of table spaces after the recovery.

If you selected either **Copy table spaces only** or **Copy table spaces and indexes** you must also specify the type of copies that you want to create. You can select one or more of the following:

- Create local site primary copy
- Create local site backup copy
- Create recovery site primary copy
- Create recovery site backup copy

Number of tape drives to allocate for objects processed in parallel (TAPEUNITS)
Specify in this text box the number of tape drives to allocate for objects processed in parallel. The default value for TAPEUNITS is 0 which specifies that Db2 will determine the number of tape drives to allocate.

Check pages for validity (CHECKPAGE)
Select this check box to verify that all pages are valid when using COPY.

Use DFSMdss concurrent copy (CONCURRENT)
Select this check box to use DFSMdss concurrent copy.

Specifying recovery plan options for the RECOVER utility
You use the RECOVER page of the Recovery Plan Generation Options notebook to specify the parameters that are used with the RECOVER utility.

Specify values for the following fields:

Number of tape drives to allocate for objects processed in parallel (TAPEUNITS)
Select this option and provide a numeric value to set the number of tape drives to allocate for objects processed in parallel. The default value is zero which specifies that Db2 will determine the number of tape drives to allocate.

The site from which RECOVER should use image copies
Select this option and provide a site from which RECOVER should use image copies. The default value is **Subsystem default** which means however the subsystem is configured.

Recover unchanged objects
Select this check box to include all changed and unchanged objects in the recovery. Clear the check box to exclude unchanged objects from the recovery. Excluding unchanged objects will save processing time during the recovery. The default value is to include all changed and unchanged objects.
Specifying Parallel Jobs recovery plan generation options
You will use this page of the Recovery Plan Generation Options window to specify the options that will be used when generating DDL for dropped object recovery. These options include those that effect running parallel jobs.

Number of parallel jobs for data recovery
Specifies the maximum number of jobs in a parallel job group. You can specify a value from 0 to 99.

Specify the maximum number of concurrent jobs
Specifies the maximum number of jobs that the agent processes in parallel. This represents the maximum number of jobs that can run at any given point. You can specify a value from 1 to 99.

Specifying recovery plan DDL options
You will use this page of the Recovery Plan Generation Options window to specify the options that will be used when generating DDL for dropped object recovery. These options include those that effect whether authorization statements are generated, whether DDL is generated for specific object types, and the options that will control binding the DDL jobs.

The following options apply to authorizations:

Grants
Check this check box to generate authorization statements when recovering objects.

When generating recovery DDL for an object, Db2 Recovery Expert will generate recovery DDL for the selected object and all its lower level dependent objects. Using the DDL Options you can control whether DDL will be generated for an object and the object's dependent objects. By not selecting an object type, you can inhibit the generation of DDL for those dependent objects of a specific object type.

The following options apply to object types:

Storage Groups
Check this check box to generate DDL for Storage Group object types.

Databases
Check this check box to generate DDL for Database object types.

Indexes
Check this check box to generate DDL for Index object types.

Aliases
Check this check box to generate DDL for Alias object types.

Functions
Check this check box to generate DDL for Function object types.

Synonyms
Check this check box to generate DDL for Synonym object types.

Sequences
Check this check box to generate DDL for Sequence object types.

Roles
Check this check box to generate DDL for Role object types.

Table Spaces
Check this check box to generate DDL for Table Space object types.

Tables
Check this check box to generate DDL for Table object types.
Views
Check this check box to generate DDL for View object types.

Data Types
Check this check box to generate DDL for Data Type object types.

Stored Procedures
Check this check box to generate DDL for Stored Procedure object types.

Triggers
Check this check box to generate DDL for Trigger object types.

Sequence Aliases
Check this check box to generate DDL for Sequence Alias object types.

Global Variables
Check this check box to generate DDL for Global Variable object types.

The following options apply to binding packages and plans:

Binds
Check this check box to generate package or plan bind statements. Once checked, the supporting bind option become available.

Packages
Select this radio button to indicate that bind statements are to be generated only for packages. This option is only available when the Binds check box is selected.

Packages and Plans
Select this radio button to indicate that bind statements are to be generated for packages and plans. This option is only available when the Binds check box is selected. This option is only available when the Binds check box is selected.

Add
Select this radio button to indicate that the named package does not exist, and that a new package is to be created. If the package already exists, execution stops, and a diagnostic error message is returned. This option is only available when the Binds check box is selected.

Replace
Select this radio button to indicate that the existing package is to be replaced by a new one with the same package name and creator. This option is only available when the Binds check box is selected.

DBRM Library 1 – 4
Specify the DBRM libraries to be used for the bind jobs. You can specify up to 4 DBRM libraries. This option is only available when the Binds check box is selected.

SQLID for DDL
By default, the generated DDL for a recreated object uses the SQLID that was specified when the object was originally created. To override the default you can specify a different SQLID in the SQLID for DDL field and it will be used when generating the DDL for the recreated objects.

---

**Reviewing the dropped object recovery plan JCL**

From the JCL window of the Log Based Recovery Advisor you can view, edit, export or run the JCL that is generated for the dropped object recovery job.

1. The JCL window opens when you select Next from the Recovery Plan window.
2. From this window you can review the JCL for the recovery plan job. You can also edit the JCL in the window. You can use the Undo button to reset the contents of the Statements pane to the JCL statements that were originally generated. The Undo button is disabled unless and until you modify the JCL.

3. To export the JCL to either a z/OS data set or a local file, click Export. The Export window opens where you will specify data set or file information.

4. After reviewing and editing the dropped object recovery job JCL, click Run to run the recovery plan JCL. The results of the job are returned in the Result window.

Selecting the dropped object recovery job for review

The Result window of the Log Based Recovery Advisor displays a list of completed dropped object recovery jobs.

1. To review the result details of a log analysis job, select a job from the list and click View. The Log Based Recovery Job Results window displays. From this window you can review the details of the job results. After reviewing, you will return to the Results window.

2. After returning from the Log Based Recovery Job Results window, you can choose another job from the list and review the result details.

3. To delete a job from the Results window, select the job from the Jobs list and click Delete.

4. To save your log based dropped object recovery process and information, click the Save button.

Reviewing a dropped object recovery job results

The Job Results window displays the details of a dropped object recovery job. You can display all the results or specify that only the results from selected steps and DD statements display.

1. Select the job that you want to display from the Job drop-down menu.

2. Select the step name that you want to display from the Step name drop-down menu or select ALL to view all steps in the job Log Analysis Job Results window.

3. Select the DD name that you want to display from the DD name drop-down menu or select ALL to view all DD's from the selected step in the Log Analysis Job Results window.

4. Click Export if you want to export the JCL to a z/OS data set or a local file. The Export window opens. Specify the export information and click OK. Control returns to the Job Results window.

5. When you have finished reviewing the job, click Close to close the window and return to the Results window.
Chapter 23. Using the Transaction Recovery Advisor

The Transaction Recovery Advisor guides you through the steps necessary to set up a job that can be used to undo the operations of one or more transactions.

The Transaction Recovery Advisor searches the Db2 log for the transaction that needs to be backed out using an extensive set of user defined filter criteria. The final job JCL includes the undo SQL that can be used to back out the transaction and restore the objects to the point in time before the transaction was applied.

Opening the Transaction Recovery Advisor

Each advisor in the web interface opens with a Welcome window.

1. Click the Transaction Recovery Advisor tab from the main page of the web interface. The Welcome window of the Transaction Recovery Advisor opens. This window presents an overview of the transaction recovery process using this advisor.

2. The Skip this Welcome page in the future check box (which by default is not selected) allows you to suppress the display of the Transaction Recovery Advisor Welcome window in the future. This applies only for new transaction recovery specifications; when a saved specification is opened, the Welcome window is always omitted.

3. On each window of the Transaction Recovery Advisor, you can use one or more of the following controls to navigate through the process:
   - Back   Move back one window in the transaction recovery process.
   - Next   Move ahead one window in the transaction recovery process.
   - Save   Save the recovery process and selections up to this point in a specification. (This opens a new window for naming and saving the specification.)
   - Close  End the recovery process without saving it and close the Transaction Recovery Advisor. All work and selections up to this point are lost.
   - Help   Connect to the IBM Db2 Recovery Expert online help system.

4. After you have reviewed the information on the Welcome window, click Next. The Location window opens.

Selecting the Db2 subsystem location

You use the Location window of the Transaction Recovery Advisor to select the Db2 subsystem where the Db2 log will be examined looking for the transaction or transactions that you want to back out.

The locations displayed on this window are discovered automatically through communication between the Db2 Recovery Expert server and all running database agents. If there are several attached agents, the discovery process can take time.

The Db2 subsystems available are fetched when the agent starts. To refresh this list, right-click anywhere in the Locations pane. A Refresh Location option appears that you can select to refresh the list of subsystems. Additionally, an administrator
can use SDSF (System Display and Search facility) to issue a /MODIFY <agent-job-name>,REFRESH TOPOLOGY command after having started or stopped a Db2 subsystem.

1. Drill down to the Db2 subsystem that contains the transactions that you want to recover by expanding the elements in the **Locations** pane. The locations presented are organized in different ways. If you think of the locations by physical organization (that is, what system, and then what subsystem is on that system), you can drill down through z/OS Systems. If you think of the locations in the abstract (that is, a simple list of subsystems), you can drill down through z/OS Subsystems or z/OS Data Sharing Groups.

2. Select the Db2 subsystem. The properties of the Db2 subsystem display in the **Properties** pane. Depending on the location that you selected, you might see only a portion of the properties listed below:
   - Version
   - Mode
   - Highest log RBA
   - Subsystem ID
   - Active?
   - System restore
   - System services address space
   - Database services address space
   - Distributed data facility address space
   - IP address
   - IP address V6
   - Host name
   - Port number
   - Resync port number
   - Data sharing group attachment name
   - Data sharing group name
   - Data sharing member name

3. When you select a Db2 subsystem, the status of the Db2 subsystem displays in the **Status** pane. The status information that might be listed is:
   - Db2 restart RBA
   - Db2 restart time
   - Last checkpoint
   - Log copy 1
   - Log copy 2
   - Log high offloaded RBA
   - Log high written RBA
   - Number of logs awaiting offload

4. Click **Next**. If a connection to that location has not yet been established during the Db2 Recovery Expert session, a connection is established now.

5. If this is the first time during the Db2 Recovery Expert session that you have selected this location, and if login information has not been previously stored, the Database Login window displays. Enter the login information and click **OK**.

6. The Filters page opens.
Selecting the transaction recovery range

From the Filters window of the Transaction Recovery Advisor you specify the parameters that define the range of time in the log that will be analyzed looking for the transaction(s) that you want to recover.

1. Select one of the following Log Range fields:
   - Select the Preceding radio button to specify that the log range parameters will be a range of hours or minutes preceding the current time. Select the number of hours or minutes from the drop down boxes. By default the time range is set to Preceding by 1 hour using the local time. You can choose to use database time by setting this option in the Preferences window.
   - Select the Date/Time from radio button to specify a specific date and time as the log range parameters. Use the drop down calendar to select a date and time for the beginning and ending range parameters.
   - Select either the Start/End RBA (URID) radio button or the Start/End LRSN radio button and specify the values as follows:
     - Select Start/End RBA (URID) to specify a set of starting and ending RBA values to define the search range. RBAs are relative byte addresses of log records. The RBA values can be specified in full hexadecimal display format with a length of 12, such as 0001ACCDEF02, or with a length of 20, such as 000000000001ACCDEF02.
       You can also search for a specific Unit of Recovery Identifiers (URID). URIDs are commonly referred to as RBAs (which is the more generic term). If you wish to filter on a single URID, the start RBA can be set equal to the URID, and the end RBA left as spaces. Only that specific URID will be reported on. For example, assume you specify the first URID = 001E668838B4 on a subsystem named D91A. The JCL generated will have a section as such:

     //DATAIN DD *  
     SSID =D91A  
     START RBA =001E668838B4  
     END RBA =000000000000
     */

     Note: You cannot use RBAs or URIDs to define a range if your Db2 subsystem is part of a data sharing group. RBAs have no uniqueness in a data sharing context, so if you wish to use them in such an environment, you can only do so going against a specific member of the group, not the group as a whole. The Data Sharing Mode field should be set to Y when using RBAs or a URID as input and the Db2 subsystem should reflect a specific member, otherwise results are unpredictable and unsupported.

     - Select Start/End LRSN to specify a set of starting and ending RBA values LRSN values that will be used to define the search range. LRSNs are log recording timestamps associated with log records. These values must be entered in full hexadecimal display format with a length of 12, such as B877232DEDD0, or with a length of 20, such as 00B877232DEDD0000000.

2. Clear the Use SYSLGRNX check box to specify that the SYSLGRNX directory tables should not be used to optimize which log files are read. Db2 Recovery Expert typically uses the SYSLGRNX directory tables to optimize which log files must be read. You may choose not to use SYSLRNX if errors occur when trying to use it, or if the overhead of using it will likely outweigh the savings it provides.
3. Without additional filtering all transactions that are found within the specified time range are selected for recovery. You can apply additional filtering using the Additional filters options.

### Selecting one or more transactions for recovery

From the Transactions window you select one or more transactions that you want to recover.

1. The Transactions/Operations pane lists each of the transactions that were found within the search range. To further filter the list of transactions you can apply a post filter. Click the Post filters add icon. The Add post filter window opens. Specify additional filtering using the Post filter type drop down menu. Depending on your selection you are prompted for additional values. Click OK.

2. The post filter that you specified is applied and listed in the Post filters pane. The list of transactions is refreshed.

3. You can see additional information about a transaction by clicking the expand arrow for the transaction. The additional information includes the transaction timestamp, the objects impacted by the transaction, the transaction creator and the operation(s) performed by the transaction.

4. Click on the transaction to select it for recovery. You can highlight and select more than one transaction using the CTRL key when clicking. When you have selected the transactions click Next. The undo SQL for each transaction is generated.

### Reviewing the Undo SQL

From the Undo SQL window you can view the undo SQL that has been generated to recover one or more transactions. From this window you can also edit the SQL.

1. To edit the SQL place your cursor in the text box and type the changes.

2. To reload the original undo SQL click the Reload button.

3. To save the undo SQL, click the Save button.

4. To undo your most recent edits, click the Undo button.

5. Click Next to generate the JCL for the transaction recovery job.

### Submitting the transaction recovery job

From the JCL window you can review, edit, or export the JCL that will be used to recover one or more transactions. If the JCL looks correct you can submit and run the job.

1. From this window you can review the JCL for the recovery plan job. You can also edit the JCL in the window. To edit the JCL, type your changes directly in the JCL window. You can use the Undo button to reset the contents of the Statements pane to the JCL statements that were originally generated. The Undo button is disabled unless and until you modify the JCL.

2. To export the JCL to either a z/OS data set or a local file, click Export. The Export window opens where you will specify data set or file information.

3. After reviewing and making any edits, click Run to run the recovery job. Results are returned in the Results window.
Reviewing the transaction recovery job results

The Transaction Recovery Results window displays a list of the transaction recovery jobs that have been run. After selecting a specific job you can display all the results or specify that only the results from selected steps and DD statements display.

1. Select the job that you want to display from the Jobs drop-down menu. Click the View button. The Job Results window opens.

2. Select the step name that you want to display from the Step name drop-down menu or select ALL to view all steps in the job window.

3. Select the DD name that you want to display from the DD name drop-down menu or select ALL to view all DD's from the selected step in the job window.

4. To select a different job to view, select the job name that you want to display from the Job drop-down menu. The job results are refreshed.

5. Click Export to export the information. The Export window opens. Specify the export information and click OK. Control returns to the Results window.

6. When you have finished reviewing the job, click Close to close the window and return to the Results window.
Chapter 24. Searching the Db2 log to find object inactivity

Using the Db2 Recovery Expert Log Analysis Advisor you can perform an analysis of the Db2 log to determine periods of time during which there is no activity for an object or set of objects. These quiet times can then be used for a recovery point.

Using the Log Analysis Advisor

This section provides an overview on using the Log Analysis Advisor. The Log Analysis Advisor helps you build a job that can be run to find an object's quiet times.

1. Access the Db2 Recovery Expert web interface.
2. Click the Log Analysis tab from the main page of the web interface. The Welcome window opens. This window presents an overview of the log analysis process.
3. Click Next. The Location window opens. From this window you will select the Db2 subsystem whose log will be used for analysis.
4. Click Next. The Range window opens. From this window you will specify the date and time range that will be used for the analysis.
5. Click Next. The Objects window opens. From this window you will select the object or objects for which you want to discover periods of inactivity or quiet times.
6. Click Next. The JCL window opens. On this window, you can review the generated log analysis JCL. You also edit or customize the JCL. Any changes that you make to the JCL appear in italics with a different color.
7. Click Run to run the job. The job is submitted and runs at the server. The JCL window displays while the job is running and you can continue to wait, or save and close the specification (as with all long running tasks). When the job completes, a Results window opens and displays the results job.
8. Select the job and click View to display the Log Analysis Job Results window. From this window, you can export the entire job or the portion of the job that appears in the Log Analysis Job Results window.

Opening the Log Analysis Advisor

Each of the advisors in the web interface opens with a Welcome window.

1. Click the Log Analysis tab from the main page of the web interface. The Welcome window of the Log Analysis Advisor opens. This window presents an overview of the log analysis process using this advisor.
2. The Skip this Welcome page in the future check box (which by default is not selected) allows you to suppress the display of the Log Analysis Advisor Welcome window in the future. This applies for new log analysis only; when a saved specification is reopened, the Welcome window is always omitted.
3. On each window of the Log Analysis Advisor, you can use one or more of the following controls to navigate through the process:
   - **Back** Move back one window in the log analysis process.
   - **Next** Move ahead one window in the log analysis process.
Selecting the Db2 subsystem location

You use the Location window of the Log Analysis Advisor to select the Db2 subsystem where the object or objects that will be analyzed for inactivity reside.

The locations displayed on this window are discovered automatically through communication between the Db2 Recovery Expert server and all running database agents. If there are several attached agents, the discovery process can take a long time.

The Db2 subsystems available for log analysis are fetched when the agent starts. To refresh this list, right-click anywhere in the Locations pane. A Refresh Location option appears that you can select to refresh the list of subsystems. Additionally, an administrator can use SDSF (System Display and Search facility) to issue a /MODIFY <agent-job-name>,REFRESH TOPOLOGY command after having started or stopped a Db2 subsystem.

1. Drill down to the Db2 subsystem that contains the objects that you want to analyze by expanding the elements in the Locations pane. The locations presented are organized in different ways. If you think of the locations by physical organization (that is, what system, and then what subsystem is on that system), you can drill down through z/OS Systems. If you think of the locations in the abstract (that is, a simple list of subsystems), you can drill down through z/OS Subsystems or z/OS Data Sharing Groups.

2. Select the Db2 subsystem. The properties of the Db2 subsystem display in the Properties pane. Depending on the location that you selected, you might see only a portion of the properties listed below:
   - Version
   - Mode
   - Highest log RBA
   - Subsystem ID
   - Active?
   - System restore
   - System services address space
   - Database services address space
   - Distributed data facility address space
   - IP address
   - IP address V6
   - Host name
   - Port number
   - Resync port number
   - Data sharing group attachment name
3. When you select a Db2 subsystem, the status of the Db2 subsystem displays in the Status pane. The status information that might be listed is:
   - Db2 restart RBA
   - Db2 restart time
   - Last checkpoint
   - Log copy 1
   - Log copy 2
   - Log high offloaded RBA
   - Log high written RBA
   - Number of logs awaiting offload

4. Click Next. If a connection to that location has not yet been established during the Db2 Recovery Expert session, a connection is established now.

5. If this is the first time during the Db2 Recovery Expert session that you have selected this location, and if login information has not been previously stored, the Database Login window displays. Enter the login information and click OK.

6. The Range of log data page opens.

Selecting the log analysis range

From the Range window of the Log Analysis Advisor you specify the parameters that define the range of time in the log that will be analyzed for object inactivity.

1. Specify the log range parameters in one of the following ways:
   - Select the Preceding radio button to specify that the log range parameters will be a range of hours or minutes preceding the current time. Select the number of hours or minutes from the drop down boxes. By default the time range is set to Preceding by 1 hour using the local time. You can choose to use database time by setting this option in the Preferences window.
   - Select the Date/Time from radio button to specify a specific date and time as the log range parameters. Use the calendar icons to select a date and time for the beginning and ending range parameters.
   - Select the Previously scanned log range from radio button to choose a time range that was previously defined. Click the browse button to the right to open the Scanned Log Ranges window. Select the log range that you want use. Click OK.

2. Clear the Use SYSLGRNX check box to specify that the SYSLGRNX directory tables should not be used to optimize which log files are read. Db2 Recovery Expert typically uses the SYSLGRNX directory tables to optimize which log files must be read. You may choose not to use SYSLRNX if errors occur when trying to use it, or if the overhead of using it will likely outweigh the savings it provides.

3. Use the arrows in the Minimum quiet time box to specify the minimum duration of a quiet time for it to be included in the output. This may reduce the amount of quiet time information that is saved. By default, this is set to 00:02:00 (two minutes).

4. After you select a range of log data, click Next. The Objects window opens.
Selecting objects for analysis

You use the Objects window of the Log Analysis Advisor to specify the objects for which you want to find quiet times in the database logs.

The first time you expand each high level element in the list of available objects (for example, Storage Groups, Databases, Table Spaces), the number of matching objects is determined. If this number exceeds the threshold specified in user preferences, a filter window is displayed.

1. The Available objects list displays the objects that reside on the selected Db2 database. The objects are organized by object type. You drill down to the desired object and select it. The objects appear in different colors to identify their locations:
   - **Black** In both the repository and the Db2 catalog
   - **Blue** In the Db2 catalog only
   - **Red** In the repository only

2. In the Available Objects pane, you can also right-click a table space, a database, or a table partition node to display a menu with commands that you can use to change the display status. This gives you a convenient way to reset or check object statuses from within Db2 Recovery Expert. The available commands are **Display**, **Start**, and **Stop**. Selecting any of the options displays another window that allows you to perform the selected operation on the selected object.

3. When you select an object, its properties display in the Properties pane. The Repository Status field in the Properties pane also identifies an object’s location. Each of the properties that are listed vary by object type.

4. Click the **Include** button to add the object to the list of objects to analyze. The object appears in the Selected objects list. You can continue to add objects to the Selected objects list until you have selected all of the objects that you want to be included in the log analysis. To remove an object from the Selected objects list, click the **Remove** button. To remove all the objects from the list, click the **Remove All** button.

5. You can use the **Exclude** button to exclude an object from a larger set of objects that are to be analyzed. For example, if you choose to include all objects that are found in a database with the exception of one dependent object, then you would select the database using the **Include** button and then select one of the dependent database objects and using the **Exclude** button move it to the Selected objects list.

6. You can use the **Filter** button to vary the display of objects as they appear in the Available objects list. The Available objects list displays the objects organized by object type. This organizational scheme is consistent throughout the tree. To vary the objects displayed beneath each object type on any level, select the object type and press the Filter button. You can also open the object type filter window by right clicking on the object type and selecting Create Filter from the menu. A filter window opens where you can specify the filter criteria. In addition you modify and remove filters by right clicking on an object type and selecting from the menu either **Modify filter** or **Remove filter**. The available object types are as follows:
   - Storage Groups
   - Databases
   - Table Spaces
   - Tables
7. You can define a pattern that will match multiple objects that will be selected for recovery at the time the recovery job is run. To define a pattern, select the node labeled Pattern under the type of object you wish to select and click the Include button. A popup window opens, specific to the type of object that you selected. Specify the pattern and click OK. The object type pattern will appear in the Selected objects list. When you expand a pattern in the Selected objects list, you will see all matching objects that are found in the repository or currently exist in the Db2 subsystem.

8. Click Next. The JCL window opens.

---

**Submitting JCL for a log analysis**

From the JCL window of the Log Analysis Advisor you can view, edit, run, and export the JCL that is generated for the log analysis job.

**Important:** For you to access output data sets from the jobs that are submitted, those data sets must be defined as SYSOUT data sets using a SYSOUT class that specifies the output should be "held". Db2 Recovery Expert generates output data sets to //DDNAME DD SYSOUT=* . This causes the SYSOUT class specified by the MSGCLASS parameter to be used on the job card. Db2 Recovery Expert includes MSGCLASS=H on the default job card that it generates (H is usually used for held output, though your site can be different). If you customize or modify the job cards for the generated jobs, you must specify a SYSOUT class which causes the output to be held.

1. The JCL window opens displaying the JCL that will be used to run the log analysis job.

2. You should review the JCL. If necessary you can edit the JCL in the window. You can use the **Find** button to locate a string of text in the JCL. You can use the **Undo** button to reset the contents of the **Statements** pane to the JCL statements that were originally generated. The **Undo** button is disabled unless and until you modify the JCL.

3. To export the JCL to either a z/OS data set or a local file, click **Export**. The **Export** window opens where you will specify data set or file information.

4. When you are ready to submit the job, click **Run** to run the job.

**Note:** If you make any changes to the JCL and click **Run** or **Export**, a popup window opens to ask if you want to save your changes. From here, you
5. The JCL window displays while the log analysis job is running. During this time, you can continue to wait, cancel, or save and close the specification (as with all long running tasks) as follows:

- Click **Yes** to save your changes and continue with your request.
- Click **No** to run the job or export your JCL without saving your changes.
- Click **Cancel** to abort the request without saving your changes.

6. After the log analysis job runs, the Results window opens displaying a list of the log analysis jobs that have completed.

**Selecting the log analysis job for review**

The Results window of the Log Analysis Advisor displays a list of completed log analysis jobs.

1. To review the result details of a log analysis job, select a job from the list and click **View**. The Log Analysis Job Results window displays. From this window you may review the details of the job results. After reviewing you will return to the Results window.

2. After returning from the Log Analysis Job Results window, you may choose another job from the list and review the result details.

3. To delete a job from the Results window, select the job from the Jobs list and click **Delete**.

4. To save your log analysis process and information, click the **Save** button.

**Reviewing a log analysis job results**

The Log Analysis Job Results window displays the details of a log analysis job. You can display all the results or specify that only the results from selected steps and DD statements display.

The quiet times that are discovered as a result of running the job are recorded in the quiet time tables and available to be used as recovery points.

1. Select the job that you want to display from the **Job** drop-down menu.

2. Select the step name that you want to display from the **Step name** drop-down menu or select **ALL** to view all steps in the job Log Analysis Job Results window.

3. Select the DD name that you want to display from the **DD name** drop-down menu or select **ALL** to view all DD’s from the selected step in the Log Analysis Job Results window.

4. Click **Export** to export the information. The Export window opens. Specify the export information and click **OK**. Control returns to the Log Analysis Job Results window.

5. When you have finished reviewing the job, click **Close** to close the window and return to the Results window.
Chapter 25. Restoring a Db2 subsystem

The System Restore Advisor helps you to restore a Db2 subsystem from a system-level backup created using the Db2 Recovery Expert ISPF interface.

Preparing to restore a Db2 subsystem

Db2 Recovery Expert maintains a list of valid system level backups that you may choose from in the event you need to restore a Db2 subsystem. When you restore a subsystem through the System Restore Advisor, you may be restoring data and logs or data only. The type of restore depends on the type of system level backup that was created and whether Db2 Recovery Expert detected mixed data during the backup.

Mixed data occurs when Db2 Recovery Expert detects, while creating the system level backup, that your Db2 data and logs are located on the same volumes. If this happens, Db2 Recovery Expert still makes the backup, but if you choose this backup as a recovery point, you must restore both the data and the logs.

There are three types of system level backups that may be created by Db2 Recovery Expert and used to restore a Db2 subsystem:

- If the system level backup was a data only backup, you can restore the data only so long as Db2 Recovery Expert did not detect mixed data.
- If the system level backup was a data and log backup, you can restore both data and logs, or you can choose to restore data only as long as Db2 Recovery Expert did not detect mixed data during the backup.
- If the logs were not mixed in with the data, you can restore the data volumes to the backup point, and then apply logs to bring it up to current or any point after the backup time. This point can be an RBA for non data sharing, or a timestamp or LRSN for data sharing.

Db2 Recovery Expert can keep track of timestamps and their associated RBAs with the RBA Capture utility. You can use this feature to easily select a recovery point related to a particular time of day. The RBA Capture utility is optionally installed and configured when you customize Db2 Recovery Expert. The utility must run as a started task in each LPAR where you want to capture data.

Using the System Restore Advisor

This section provides an overview of the process for recovering a single Db2 subsystem using the System Restore Advisor.

As you progress through the System Restore Advisor, you can save your work and return to it later for any subsystem that is not currently being restored. Click Save at the bottom of any window in the advisor to save your work. This differs from the Recovery Advisor, the Log Based Recovery Advisor, and the Log Analysis Advisor where the work in progress is automatically saved at the target SSID.

1. Access the Db2 Recovery Expert web interface and click the System Restore tab from the main page of the web interface. The Welcome window of the System Restore Advisor opens. The Welcome window gives an overview of the advisor.
2. Click Next. The Location window opens. The Location window displays the available Db2 subsystems that you can restore. Select a subsystem from the list.

3. Click Next. The Backups window opens. The Backups window displays a list of the valid system level backups that can be used to recover the Db2 subsystem that you selected. On the Backups window, select a recovery point from the list of system level backups.

4. Click Next. The Options window opens. From the Options window you select the type of restore that you will perform. You can choose to restore both data and logs; or only data.

5. Click Next. The JCL window opens. From the JCL window you can view, edit, export, or run the JCL for the restore job. You should review the JCL statements, make any necessary changes, then click Run to run the system restore job.

6. When the job completes, the system restore job is returned and listed in the Results window. Select the job and click the View button to view the details of the system restore job. Select the Delete button to delete the job results.

7. When you have finished reviewing the results, click Close. You return to the Results window, where you can choose to save or delete the results job.

---

**Opening the System Restore Advisor**

The System Restore Advisor opens with a Welcome window.

1. Click the System Restore tab from the main page of the web interface. The Welcome window of the System Restore Advisor opens. This window presents an overview of the Db2 subsystem restore process using this advisor.

2. The Skip this Welcome page in the future check box (which by default is not selected) allows you to suppress the display of the System Restore Advisor Welcome window in the future. This applies for new system restore settings only; when a saved specification is reopened, the Welcome window is always omitted.

3. On each window of the System Restore Advisor, you can use one or more of the following controls to navigate through the process:

   - Back: Move back one window in the system restore process.
   - Next: Move ahead one window in the system restore process.
   - Save: Save the system restore process and selections up to this point in a specification. (This opens a new window for naming and saving the specification.)
   - Close: End the system restore process without saving it and close the System Restore Advisor. All work and selections up to this point are lost.
   - Help: Connect to the IBM Db2 Recovery Expert online help system.

4. After you have reviewed the information on the Welcome window, click Next. The Location window opens.

---

**Selecting the Db2 subsystem**

From the Location window of the System Restore Advisor you will select the Db2 subsystem on which you want to perform a system restore.

The locations displayed on this window are discovered automatically through communication between the Db2 Recovery Expert server and all running database agents. If there are several attached agents, the discovery process can take time.
The Db2 subsystems available for recovery are fetched when the agent starts. To refresh the list of subsystems, right-click anywhere in the Locations pane and select the Refresh Location button. Additionally, an administrator can use SDSF (System Display and Search facility) to issue a /MODIFY <agent-job-name>,REFRESH TOPOLOGY command after having started or stopped a Db2 subsystem.

1. Only those subsystems that have an associated backup are displayed in the Locations pane. Drill down to the Db2 subsystem that you want to recover by expanding the elements in the Locations pane. The locations presented are organized in different ways. If you think of the locations by physical organization (that is, what system, and then what subsystem on that system), you can drill down through z/OS Systems. If you think of the locations in the abstract (that is, a simple list of subsystems), you can drill down through z/OS Subsystems or z/OS Data Sharing Groups.

2. Select the Db2 subsystem. The properties of the Db2 subsystem display in the Properties pane. Depending on the location that you selected, you might see only a portion of the properties listed below:
   - Version
   - Mode
   - Highest log RBA
   - Subsystem ID
   - Active?
   - System restore
   - System services address space
   - Database services address space
   - Distributed data facility address space
   - IP address
   - IP address V6
   - Host name
   - Port number
   - Resync port number
   - Data sharing group attachment name
   - Data sharing group name
   - Data sharing member name

3. When you select a Db2 subsystem, the status of the Db2 subsystem displays in the Status pane. The status information that might be listed is:
   - Db2 restart RBA
   - Db2 restart time
   - Last checkpoint
   - Log copy 1
   - Log copy 2
   - Log high offloaded RBA
   - Log high written RBA
   - Number of logs awaiting offload

4. Click Next. If a connection to that location has not yet been established during the Db2 Recovery Expert session, a connection is established now.
5. If this is the first time during the Db2 Recovery Expert session that you have selected this location, and if login information has not been previously stored, the Database Login window displays. Enter the login information and click OK.

6. The Backups page opens.

**Selecting a recovery point**

The Backups window of the System Restore Advisor displays a list of the valid recovery points for the Db2 subsystem that you have selected for recovery.

Only valid system level backups are listed in the Backups pane. If a backup failed and cannot be used to restore the Db2 subsystem, it does not appear on this window. You can use the Refresh button at any time to see if a new system level backup has been created while you are using the System Restore Advisor. This regenerates the list of backups that are available to you for the system restore.

1. Select a backup recovery point from the list of available system level backups. When you select a recovery point, the properties are retrieved and displayed in the Properties pane. The following is a list of possible properties:

   **Date/Time**
   The date and the time the backup was taken in yyyy-mm-dd-hh:mm:ss format.

   **Data Only**
   This field contains true if the backup profile specified a data only backup. In this case, only the volumes that contained Db2 table spaces or index spaces were backed up.

   **Mixed Data**
   This field contains true if Db2 Recovery Expert detected log data sets on the same volume(s) as the data. If this value is true, Db2 Recovery Expert must restore both the logs and the data.

   **On Disk**
   This field contains true if this backup is still on disk. If true, the restore will be accomplished using the backup on disk.

   **On Offload**
   This field contains true if the backup has been offloaded using Db2 Recovery Expert's offload process (see 'Creating backup profiles'). If the On Disk field contains false, the restore will be accomplished using the offloaded backup.

   **Type**
   The type of backup: dss, snap, db2-backup, flash-copy, BCV.

   **Number Volumes**
   The number of volumes that were backed up.

   **Run by Userid**
   The TSO user ID of the executor of the backup job.

   **Profile Name**
   The profile name used to create the backup.

   **Profile Creator**
   The TSO user ID of the profile creator.

   **Generation Number**
   The generation number for this backup.
Job Name
The backup job name.

Job Number
The backup job number.

RBA/LRSN
The RBA or LRSN of the backup if restoring both logs and data. This is
the point in time in which the subsystem was backed up.

2. (Optional) Click View Details to open the Backup Details window. This
window contains the Backup Summary Report and the Backup Volume Detail
Report for the selected recovery point.

Note: If the backup was offloaded, the Backup Details window also contains
the Volume Offload Report and Backup Details.

3. (Optional) Click Offload to open the Offload JCL window. From this window,
you can Run or Export the JCL statements.

Note: The offload process will copy the process from disk to tape. The backup
profile that was used to create this system level backup must have offload
options specified in order to create the offload JCL.

4. (Optional) Click Delete to delete the backup. A popup window opens to
confirm that you want to delete the selected backup. Click Yes to delete the
backup or No to cancel the task and return to the Backups window.

Note: If you delete a backup from the list, refresh the list before proceeding to
the next screen.

5. After you select a recovery point, click Next. The Options window opens.

Selecting the type of restore to perform

From the Options window of the System Restore Advisor, you choose whether the
system restore will include both data and logs; or only data.

Your choice in this window is dependent on the system level backup that you
selected in the Backups window. If you selected a backup that was configured to
backup both data and logs, then you can choose to restore only the data, or you
can choose to restore the data and the logs. If the backup was configured for data
only, you can only choose to restore the data. In either case, when you choose to
restore data only, you must also select either a RBA recovery point if your Db2
subsystem is a non-data sharing environment or an LRSN recovery point if your
Db2 subsystem is a data sharing environment.

1. Select one of the following Options radio buttons:
   • Click Restore data and logs radio button to restore both data and logs from
     the backup.
   • Click Restore data only radio button to restore only data from the backup.
     The Recover to RBA/LRSN text box becomes available. If you are restoring
data only, you must also select an RBA or LRSN recovery point. Click the
browse button next to the Recover to RBA/LRSN text box to select a RBA or
LRSN recovery point. The Select Time/RBA window opens. From this
window you select a RBA recovery point if your Db2 subsystem is a non-data sharing environment or an LRSN recovery point if your Db2
subsystem is a data sharing environment. Click OK. Control returns to the
Options window.

2. Click Next. The JCL window opens.
Selecting a RBA or LRSN recovery point

From the Select Time/RBA window you will start the process of selecting a RBA or LRSN recovery point that can be used when performing a data only system restore.

If the Db2 subsystem that you are restoring is a non-data sharing environment than you will be able to select a RBA as the recovery point that can be used when restoring the Db2 system. The RBA recovery points available for selection are discovered by the Db2 Recovery Expert RBA Capture utility. RBA recovery points are only available if the RBA Capture utility was installed and configured during the customization of Db2 Recovery Expert. In addition, the RBA Capture utility must be running as a started task in each LPAR for which it will be collecting data.

If the Db2 subsystem that you are restoring is a data sharing environment than you will be able to select a LRSN as the recovery point that can be used when restoring the Db2 system. The LRSN recovery point is calculated based on a date and time value that you submit.

1. Select the Recover to RBA/LRSN browse button on the Options window. The Select Time/RBA information window opens.
2. If the Db2 subsystem that you are restoring is a non-data sharing environment, the RBA Capture utility radio button is selected. You can check one or more of the following check boxes to control the content that is displayed in the next window that opens:
   - Display timestamp / RBA captured data
   - Display archive logs times / RBAs
   - Display checkpoint times / RBAs
3. If the Db2 subsystem that you are restoring is a data sharing environment, the Timestamp to Db2 LRSN utility radio button is selected.
4. Click OK. Depending on your selection, the Subsystem Timestamp/RBA window or the Timestamp to LRSN Conversion Utility window opens.
5. After you have selected the RBA or LRSN recovery point, your selection information is placed in the Recover to RBA/LRSN text box. Click OK. The JCL window opens.

Selecting a RBA recovery point

The Subsystem Timestamp/RBA window displays the RBA values that can be used as a recovery point.

The RBA Capture utility tracks and stores timestamps and their associated RBAs in a VSAM repository. Based on the backup that you selected, this window displays all the RBAs captured from the date and time of the backup to either the current point in time or to the date and time of the next backup that was taken.

1. Open the Subsystem Timestamp/RBA window by selecting Recover to RBA/LRSN from the Select Time/RBA information window.
2. If you selected the Display timestamp / RBA captured data check box from the Select Time/RBA information window, the Captured timestamp/RBA pane displays the timestamps and associated RBAs captured at the specified intervals while the Db2 subsystem was active. It contains the following columns:
   - **Active** Yes indicates the subsystem was active at that timestamp.
Log Timestamp
This is the store clock time at which Db2 Recovery Expert captured the RBA. The first timestamp captured probably will not be at an exact minute boundary, because the first RBA is captured at the time the task is started. However, successive timestamps should be on minute boundaries (such as 22:24:00.00).

Log RBA
The log RBA captured at the store clock time.

Log LRSN
The log LRSN captured at the store clock time.

Log Bytes
The number of bytes that have been added to the log since the previous interval; blank if no changes have been made to the log.

Tip: If Log Bytes is blank, this represents a quiet time for the subsystem and therefore might be a good recovery point for that subsystem.

3. If you selected the Display archive logs times / RBAs check box from the Select Time/RBA information window, the Archive log records pane displays the timestamps and the RBAs and/or LRSNs at the start and end of the archive logs. It contains the following columns:

Start timestamp
The start timestamps for the RBAs at the start of the archive logs.

End timestamp
The end timestamp for the RBAs at the end of the archive logs.

Start RBA
The log RBA captured at the start of the store clock time.

End RBA
The log RBA captured at the end of the store clock time.

Start LRSN
The log LRSN captured at the start of the store clock time.

End LRSN
The log LRSN captured at the end of the store clock time.

4. If you selected the Display checkpoint times / RBAs check box from the Select Time/RBA information window, the Check point records pane displays the timestamps and associated log RBAs recorded as start and end checkpoints. It contains the following columns:

Start timestamp
The start timestamps for the RBAs at the start of the archive logs.

End timestamp
The end timestamp for the RBAs at the end of the archive logs.

Start RBA
The log RBA captured at the start of the store clock time.

End RBA
The log RBA captured at the end of the store clock time.

Start LRSN
The log LRSN captured at the start of the store clock time.
**Checkpoint type**

The type of checkpoint.

5. Select the RBA that you want to use as a recovery point.

6. Click OK. The log RBA of the selected row is copied into the Recover to RBA/LRSN text field on the Select Time/RBA information window.

**Converting a timestamp to a LRSN recovery point**

On the Timestamp to LRSN Conversion Utility window, you specify the time zone, date, and time that Db2 Recovery Expert will use to generate a LRSN recovery point.

This feature may be used for data sharing subsystems when you are restoring data only, it is not available for non-data sharing locations.

1. From the **Timestamp is in** drop down menu select the time zone.
2. Enter a date in the format `year-month-day` in the **Date** text box.
3. Enter the time in the format `hh:mm:ss` in the **Time** text box. Example: 18.37.29
4. Click **Convert**. Db2 Recovery Expert determines the appropriate restore LRSN based on the timestamp and places the result value in the **Generated LRSN** field.
5. Click **OK** to return to the Options window. The generated LRSN is copied into the Recover RBA/LRSN text field on the Options window.

**Submitting JCL for a data only system restore**

This section describes the JCL window of the System Restore Advisor when you are performing a data only restore of the Db2 subsystem.

The JCL used for a data only restore is different than the JCL that is generated for a data and log system restore. For a data only restore Db2 Recovery Expert generates three serial jobs that will be run to restore the Db2 subsystem. The three jobs include a conditional restart job, a restore system job, and a log restore job.

The job called **Conditional Restart** contains the SYSPITR keyword to specify the restoration point. The job called **Restore System** restores all of the data volumes to the recovery point. The job called **Log Apply** restores the logs to the specified RBA/LRSN using the RESTORE SYSTEM LOGONLY utility.

You can edit the JCL of each job before running the job group. The JCL can then be submitted for execution or exported to either a z/OS data set or a local file.

**Note:** You must have installation SYSADM authority to perform these steps, because Db2 restarts in ACCESS (MAINT) mode during this procedure.

1. The **Statements** pane in the JCL window displays a folder named **Serial Job Group** that contains the three jobs that will be used for the system restore. Click on each job listed in the serial job group folder and the JCL for that job displays. For each job, review the JCL, and make any changes. You can use the **Find** button to find strings of text in the JCL statements. You can use the **Undo** button to reset the contents of the **Statements** window to the JCL statements that were originally generated by Db2 Recovery Expert. Undo is not available unless you modify the JCL.

2. At any time you can click the **Export** button to export the JCL to a z/OS data set or a local file. The Export window opens. Specify the data set or file name. Click **OK**. Control returns to the JCL window.
3. After you have reviewed each job in the job group, click **Run** to run the job group. If you make any changes to the JCL and click **Run** or **Export**, a popup window opens to ask if you want to save your changes. Select one of the following responses:
   - Click **Yes** to save your changes and continue with your request.
   - Click **No** to run the job or export your JCL without saving your changes.
   - Click **Cancel** to abort the request without saving your changes.

4. The first two serial jobs, **ARYJOB1** and **ARYJOB2**, run. These jobs stop the Db2 subsystem that you selected to restore and then invoke the Db2 Recovery Expert system restore job.

   **Note**: For a data sharing subsystem, each member of the group must be manually stopped and started.

5. Before the final job runs, Db2 Recovery Expert generates a Reply Y for a WTOR message. A response of Y is required to complete the final job and is automatically generated by the agent. The related WTOR appears in the **Messages** pane of the web interface window. The final serial job **ARYJOB3** runs.

6. After the restore job runs, the Review System Restore Job Results window displays.

7. Stop Db2 and restart it normally.

---

### Submitting JCL for a data and logs system restore

This section describes the JCL window of the System Restore Advisor when you are performing a data and logs restore of the Db2 subsystem.

The JCL used for a data and logs restore is different than the JCL that is generated for a data only system restore. For a data and logs restore Db2 Recovery Expert generates a single job. The JCL for this job displays when the window opens. You can edit, run, or export the JCL to a z/OS data set or a local file.

To edit, run or export the JCL:

1. Review the JCL and make any changes by editing the text in the **Statements** pane. You can use the **Find** button to locate a string of text within the JCL. You can use the **Undo** button to reset the JCL to the JCL statements that were originally generated by Db2 Recovery Expert. **Undo** is not available unless you modify the JCL.

2. At any time you can click the **Export** button to export the JCL to a z/OS data set or a local file. The Export window opens. Specify the data set or file name. Click **OK**. Control returns to the JCL window.

3. After reviewing the JCL statements, click **Run** to run the job. If you make any changes to the JCL and click **Run** or **Export**, a popup window opens to ask if you want to save your changes. Select one of the following responses:
   - Click **Yes** to save your changes and continue with your request.
   - Click **No** to run the job or export your JCL without saving your changes.
   - Click **Cancel** to abort the request without saving your changes.

4. When the job completes, the Results window opens.
Selecting the system restore job for review

The Results window of the System Restore Advisor displays a list of completed system restore jobs.

To select a system restore job for review:
1. To review the result details of a system restore job, select a job from the list and click View. The System Restore Job Results window displays. From this window you may review the details of the job results. After reviewing, you will return to the Results window.
2. After returning from the System Restore Job Results window, you can choose another job from the list and review the result details.
3. To delete a job from the Results windows, select the job from the Jobs list and click Delete.
4. To save your system restore process and information, click the Save button.

Reviewing a system restore job results

The System Restore Job Results window displays the details of a system restore job. You can display all the results or specify that only the results from selected steps and DD statements display.

To view the details of the job:
1. Select the job that you want to display from the Job drop-down menu.
2. Select the step name that you want to display from the Step name drop-down menu or select ALL to view all steps in the job System Restore Job Results window.
3. Select the DD name that you want to display from the DD name drop-down menu or select ALL to view all DD’s from the selected step in the System restore Job Results window.
4. Click Export if you want to export the JCL to a z/OS data set or a local file. The Export window opens. specify the export information and click OK. Control returns to the System Restore Job Results window.
5. When you have finished reviewing the job, click Close to close the window and return to the Results window.

Restarting a failed restore job

If a restore job submitted by Db2 Recovery Expert encounters an error, you can review the JCL and the output, make corrections as required, and resubmit the job.

The first indication you have of a failed job is a message displayed in the Messages pane of the main window with a status of Failed.
1. Select the message in the Messages pane and click Open or double-click the message to display the Results window.
2. Select the job you want to review and click View. The System Restore Job Results window opens.
3. Determine why the job failed. To determine why the job failed, you will most likely use:
   • The System Restore Job Results
   • The submitted JCL (click View JCL)
   • Other external resources
The System Restore Job Results and the System Restore JCL windows can be open at the same time, and you can freely switch between the two or arrange them to be visible simultaneously to aid in determining why the job failed.

**Important:** If the generated JCL consisted of more than one job, the System Restore JCL window displays with a hierarchical tree structure that identifies the jobs individually.

4. Click **Restart**.
   - If the generated JCL consisted of one job, the System Restore JCL and System Restore Job Results windows close, and the job is submitted.
   - If the generated JCL consisted of more than one job, the Restart Restore window displays. You then select which jobs to rerun, and click **Run**. The Restart Restore, System Restore JCL, and System Restore Job Results windows all close and the jobs are submitted.

The Submit JCL window of the specification displays, just as when you initially ran the System Restore.

**System restore JCL (review results) window**

If any of the jobs in the job group have failed, or were not run, the View JCL dialog includes a **Restart** button to restart selected jobs after optionally changing the JCL. Clicking the **Restart** button brings up a dialog that displays all of the jobs in the job group with the failed/not run jobs automatically selected.

The following fields and controls are available:

**Jobs panel**
The jobs panel shows the jobs that ran for the system restore. In the case of a data only restore, you see three serial jobs generated: conditional restart, restore system, and log apply. If you ran a data and logs restore, the job panel does not appear, and you only see the job in the Statements window.

**Statements**
In this panel, you can review and edit the JCL. If you ran a data and logs restore, there is only one job and the JCL appears in this window. If you ran a data only restore, there are three different sets of JCL. Select a job from the Jobs panel to review and edit the JCL.

**Restart**
Restarts the failed job (or jobs). This button only appears when the system restore resulted in one or more failed/not run jobs.

**Run**
Runs the job again. This button only appears if the job ran successfully.

**Export**
Exports the results to a data set or local file.

**Close**
Closes the window.

**Find**
Locate a string of text.

**Undo**
Reset the contents of the window to the JCL statements that were originally run by Db2 Recovery Expert. Undo is not available unless you modify the JCL.

**Restart System Restore window**
The Restart System Restore window displays all of the jobs in the job group with the failed/not run jobs automatically selected. When you click **Run**, only the selected jobs run.
The following fields and controls are available:

**Jobs**  
This panel shows all of the job for the system restore. Failed/not run jobs are automatically selected. Click the check boxes to the left of the jobs to select or deselect the jobs to be run.

**Run**  
Runs the selected Jobs.

**Cancel**  
Cancels the action and closes the Restart System Restore window.
Chapter 26. Tools Customizer reference

Before you use Tools Customizer, you should understand the Tools Customizer terminology and the data sets that Tools Customizer uses during customization.

Tools Customizer terminology and data sets

Before you use Tools Customizer, you should understand the Tools Customizer terminology and the data sets that Tools Customizer uses during customization.

Tools Customizer terminology

Tools Customizer uses several unique terms that you should be familiar with before you begin to use Tools Customizer.

Products and components

How an IBM Tool is packaged determines whether it is referred to as a product or as a component in the Tools Customizer documentation and interface. An IBM Tool that is ordered as a stand-alone entity (that is, not as part of a solution pack) is referred to as a product. An IBM Tool that is part of a solution pack is referred to as a component. Some IBM Tools are available in both formats; therefore, the same IBM Tool can be referred to as a product or as a component depending on how it is packaged.

Db2 entry

You can customize Db2 Recovery Expert on one or more Db2 entries. A Db2 entry can be any of the following items:

Db2 subsystem

A distinct instance of a relational database management system (RDBMS) that is not part of a data sharing group. An example of a Db2 subsystem name is DB01.

Db2 group attach name

Db2 Recovery Expert does not support Db2 group attach names.

Db2 data sharing member

A Db2 subsystem that is assigned by the cross-system coupling facility (XCF) to a data sharing group. An example of a Db2 data sharing member name is DB02.

Tools Customizer maintains the following lists of Db2 entries:

Associated list

The list of Db2 entries that are associated with Db2 Recovery Expert. If the product to be customized requires Db2 entries, you can customize Db2 Recovery Expert only on Db2 entries that are in the associated list. When you customize Db2 Recovery Expert, this list is displayed in the Db2 Entries, Associations, and Parameter Status section of the Customizer Workplace panel.

You can add and copy Db2 entries to the associated list. When you add or copy Db2 entries to the associated list, the entries are associated with Db2 Recovery Expert.

Master list
The list of all Db2 entries that are defined but are not associated with Db2 Recovery Expert. Tools Customizer obtains information about these Db2 entries either from entries that were created manually or from the customizations of other products that were discovered. If you remove a Db2 entry from the associated list, the Db2 entry is added to the master list. When you create a new Db2 entry, it is added to the master list, and when you associate the new entry with Db2 Recovery Expert, it is removed from the master list and added to the associated list. The master list is displayed on the Associate a Db2 Entry for Product panel.

If the associated list does not have the Db2 entries on which you want to customize Db2 Recovery Expert, you can associate existing entries from the master list to the associated list.

You can create new Db2 entries and copy existing entries to the master list.

**High-level qualifier**

The high-level qualifier is considered to be all of the qualifiers except the lowest level qualifier. A high-level qualifier includes a mid-level qualifier.

**Product parameters**

Parameters that are specific to Db2 Recovery Expert. These parameters are defined by Db2 Recovery Expert and are stored in a data member that is defined by Db2 Recovery Expert.

**LPAR parameters**

Parameters on the local LPAR that are required to customize Db2 Recovery Expert. These parameters are defined by Tools Customizer and are stored in an LPAR parameter data member.

**Db2 parameters**

Parameters for a Db2 entry. These parameters are defined by Tools Customizer and are stored in a Db2 parameter data member.

**Status type**

**Product, LPAR, and Db2 entry status type**

After you specify the product that you want to customize, the product, the LPAR, and the Db2 entries have a status. The status is partly based on whether required parameters are defined. For some products, LPAR parameters or Db2 parameters might not be required. In these cases, the status is Not Required.

To customize Db2 Recovery Expert, all of the required parameters must be defined.

If required parameters for the the product parameters, LPAR parameters, or Db2 parameters are not defined, the status of the parameters is Incomplete. Define values for parameters by manually editing them or by generating the customization jobs and specifying values for all of the required parameters that are displayed on the panels.

When values for all of the required parameters are defined, the status is Ready to Customize. Customization jobs can be generated only when all of the required parameters are defined and the status is Ready to Customize or Customized for the product parameters, LPAR parameters, and Db2 parameters for the Db2 entries on which Db2 Recovery Expert will be customized.
The following table shows the meaning of the status types. Each status is defined differently for each type of parameter.

*Table 26. Status types for the product, the LPAR, and the Db2 entries*

<table>
<thead>
<tr>
<th>Status</th>
<th>Product</th>
<th>LPAR</th>
<th>Db2 entries</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incomplete</td>
<td>The required product parameters are not defined.</td>
<td>The required parameters are not defined.</td>
<td>The required parameters are not defined.</td>
</tr>
<tr>
<td>Discovered</td>
<td>The product parameter definitions were discovered by using the product Discover EXEC.</td>
<td>N/A</td>
<td>N/A</td>
</tr>
<tr>
<td>Ready to Customize</td>
<td>The required product, is Ready to Customize or Customized for the LPAR and at least one associated Db2 entry. You can generate the customization jobs.</td>
<td>The required LPAR parameters are defined or LPAR parameters are not required.</td>
<td>The required Db2 parameters are defined or Db2 parameters are not required.</td>
</tr>
<tr>
<td>Verify Values</td>
<td>The required product or component parameter values are defined but they either have not been verified or verification is not enabled on the Product or Component Parameters panel.</td>
<td>The required LPAR parameter values are defined, but they either have not been verified or verification is not enabled on the LPAR Parameters panel.</td>
<td>The required Db2 parameter values are defined, but they either have not been verified or verification is not enabled on the Db2 Parameters panel.</td>
</tr>
<tr>
<td>Customized</td>
<td>The jobs are customized on the local LPAR.</td>
<td>The jobs are customized for the product or for all of the associated Db2 entries on the local LPAR.</td>
<td>The jobs are customized for the Db2 entry.</td>
</tr>
<tr>
<td>Errors in</td>
<td>N/A</td>
<td>N/A</td>
<td>Errors occurred while the customization jobs were being generated.</td>

<tr>
<td>Customization</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Not Required</td>
<td>N/A</td>
<td>LPAR parameters are not required.</td>
<td>Db2 parameters are not required.</td>
</tr>
</tbody>
</table>

**Related tasks:**

“Creating and associating Db2 entries” on page 121
Db2 entries are optional for Db2 Recovery Expert. You can create new Db2 entries and associate them with Db2 Recovery Expert.

“Copying Db2 entries” on page 135
You can copy associated and not associated Db2 entries to other Db2 entries or to new Db2 entries.

“Removing Db2 entries” on page 136
You can remove Db2 entries from the associated list.
Data sets that Tools Customizer uses during customization

Tools Customizer uses several unique data sets during the customization process. Familiarize yourself with these data sets before you begin to use Tools Customizer.

Several different data sets are required to customize Db2 Recovery Expert with Tools Customizer. These data sets are supplied by Db2 Recovery Expert, supplied by Tools Customizer, or allocated by Tools Customizer.

Db2 Recovery Expert provides the following data sets:

Metadata library
Contains the metadata for the product to be customized. Tools Customizer uses the metadata to determine which tasks, steps, and parameters to display on the Product Parameters panel, the LPAR Parameters panel, and the Db2 Parameters panel. This data set also contains the templates that Tools Customizer uses to generate the customization jobs.

The metadata library naming convention is `high_level_qualifier.SARYDENU`, where `high_level_qualifier` is all of the segments of the data set name except the lowest-level qualifier.

You specify the metadata library on the Specify the Metadata Library panel. READ access to this data set is required.

Discover EXEC library
Contains the Db2 Recovery Expert Discover EXEC. When you customize Db2 Recovery Expert, you can use the Discover EXEC to automatically retrieve and store product information, such as parameter values from an already customized product. Tools Customizer saves the discovered information in the data store.

The default name of the data set is the high-level qualifier for the metadata library plus a lowest-level qualifier. For Db2 Recovery Expert, the lowest-level qualifier is SARYDENU. You can change the default value on the Discover Customized Product Information panel. EXECUTE access to this data set is required.

Tools Customizer provides the following data sets:

Tools Customizer metadata library
Contains the metadata for the Db2 and LPAR parameters that are required to customize Db2 Recovery Expert. Tools Customizer uses the metadata to determine which parameters to display on the Db2 Parameters panel and the LPAR Parameters panel. In addition, Tools Customizer uses information in the metadata library to determine whether additional Db2 and LPAR parameters need to be displayed on these panels. As you customize different products, different Db2 and LPAR parameters might need to be defined.

The default name of the data set is `Db2TOOL.CCQ110.SCCQDENU`. You can change the default value on the Tools Customizer Settings panel. READ access to this data set is required.

Tools Customizer table library
Stores information about jobs that are customized. Job information that is stored includes a description of the job, its member name and template name, the SSID, and when the job was generated.

The default name of the data set is `Db2TOOL.CCQ110.SCCQTENU`. WRITE access to this data set is required.
Tools Customizer requires that the following data sets exist during the customization process. If the data sets do not exist, Tools Customizer automatically allocates them.

**Discover output data set**
Contains the output that is generated when you run the Db2 Recovery Expert Discover EXEC. The Db2 Recovery Expert Discover EXEC retrieves the metadata and values for the parameters from a previous customization of Db2 Recovery Expert.

The default name of the data set is Db2TOOL.CCQ110.DISCOVER. You can change the default value on the Tools Customizer Settings panel or the Discover Customized Product Information panel. WRITE access to this data set is required.

**Data store data set**
Contains product, LPAR, and Db2 parameter values, and Db2 entry associations. Tools Customizer uses this data set to permanently store all information that is acquired about the product, Db2 subsystems, and LPAR when you customize products on the local LPAR.

The default name of the data set is Db2TOOL.CCQ110.DA TAST OR. You can change the default value on the Tools Customizer Settings panel. WRITE access to this data set is required.

**Customization library**
Contains the customization jobs that Tools Customizer generates for Db2 Recovery Expert.

Tools Customizer checks whether a customization library name was specified for more than one instance of the same version of the same product. If the same customization library name is specified for more than one product of the same version, the CCQD123E message is issued to prevent you from overwriting previously generated customization jobs. Ensure that you specify unique qualifier for the customization library for each instance of the product.

To customize Db2 Recovery Expert, submit the members of the data set in the order in which they are displayed on the Finish Product Customization panel.

The data set naming convention is hlq.$LPAR_name$.xyzvrm, where:
- hlq is the value of the **Customization library qualifier** field on the Tools Customizer Settings panel (CCQPSET)
- LPAR_name is the four-character LPAR name
- xyzvrm is the three-letter product identifier with the version, release, and modification level

For example, the data set name might be Db2TOOL.PRODUCT:CUST.$MVS1$.XYZ410.

WRITE access to this data set is required.

Tools Customizer allocates the data sets for the discover output, the data store, and the customization library with the attributes that are shown in the following table:
Table 27. Data set attributes for allocating the Discover output, data store, and customization library data sets

<table>
<thead>
<tr>
<th>Data set</th>
<th>Organization</th>
<th>Record format</th>
<th>Record length</th>
<th>Block size</th>
<th>Data set name type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Discover output data set</td>
<td>PO</td>
<td>Variable block</td>
<td>16383</td>
<td>32760</td>
<td>LIBRARY</td>
</tr>
<tr>
<td>Data store data set</td>
<td>PO</td>
<td>Variable block</td>
<td>16383</td>
<td>32760</td>
<td>LIBRARY</td>
</tr>
<tr>
<td>Product customization library</td>
<td>PO</td>
<td>Fixed block</td>
<td>80</td>
<td>32720</td>
<td>LIBRARY</td>
</tr>
</tbody>
</table>

Restrictions:
- Multiple users cannot simultaneously share the discover output data set, data store data set, Tools Customizer metadata library, and metadata library.
Appendix A. Db2 Recovery Expert Product Control File (PCF)

The section includes a table that identifies the fields that are in the Product Control File (PCF), specifies the corresponding name of the field in the Tools Customizer (TCz) and/or ISPF panel, specifies the Tools Customizer (TCz) parameter group (Db2, LPAR, or PRODUCT) where the PCF field is specified, and identifies whether you can update the field using the ISPF interface.

Appendix B. Recovery utilities

Recovery Expert uses a number of utilities in the recovery JCL. They are documented in this appendix.

Removing entries from the schema level repository (SLR)

Periodically you should remove, or clean, entries from the schema level repository (SLR). In general, SLR entries should be kept as long as a recovery resource (archive log, image copy) is available.

You must run a batch job to clean and remove entries from the SLR. A sample of the batch job is included as a SARYSAMP member named ARYSLRCL. You can specify that only the entries that fall within a specified time range be removed. The current default is 60 days, but that value can be changed by editing the SYSIN DD statement parameters.

The following is a sample of one of the DELETE commands found under the SYSIN DD statement:

```
//SYSIN DD *
DELETE
FROM #CREATOR.ARYAUXRELS
WHERE ARY_INSERTDTS < (CURRENT TIMESTAMP - 60 DAYS);
```

To change the time range, replace the number 60 with a specified number of days. The smallest range specification is 1 day. The largest range could encompass multiple years, for example 730 days would encompass two years. As you will notice in the sample job there are numerous DELETE statements. You will need to change the time range in each of the statements with the same time range value.

There are some DELETE statements that are specific to Db2 V10 and Db2 V11 that will need to be uncommented. Before running the job, scan the DELETE statements and uncomment the ones that apply to your version of Db2.

In addition, before running this job you also need to make edits to the JCL stream to reflect values that are specific to your environment. Details regarding these edits are documented in the beginning of the JCL stream.

Removing entries from the schema level repository (SLR) after a system clone

After performing a Db2 system clone you should clear the schema level repository (SLR) tables. You must run a batch job to clean and remove the SLR tables. A sample of the batch job is included as a SARYSAMP member named ARYCLONE. This job removes all entries that were in the SLR tables.

The following is a sample of the DELETE commands found under the SYSIN DD statement:

```
//SYSIN DD *
DELETE
FROM #CREATOR.ARYROUTINES
--
//SYSIN DD *
```
DELETE
FROM #CREATOR.ARYVIEWS
--
//SYSIN DD *
DELETE
FROM #CREATOR.ARYVIEWDEP

You do not need to make any changes to the SYSIN DD DELETE statements. Before running this job you do need to make edits to the JCL stream to reflect values that are specific to your environment. Details regarding these edits are documented in the beginning of the JCL stream.

Limiting logs scanned during Log Based Data Recovery

Performing image copies on a Db2 system catalog and user directory can improve the Log Based Data Recovery (LBDR) process. Having a recent image copy of the system catalog and user directory spaces limits the number of logs scanned by the LBDR process. This can prevent failures due to archive logs no longer being available while the LBDR scan is performed.

Sample JCL jobs that can be used to create the image copies are included in SARYSAMP. The SARYSAMP member ARYICSYA should be used if you are running on Db2 V10. The SARYSAMP member ARYICSYB should be used if you are running on Db2 V11.

There are no edits that need to be made to the SYSIN DD statements. Before running this job you do need to make edits to the JCL stream to reflect values that are specific to your environment. Details regarding these edits are documented in the beginning of the JCL stream.

DSN1COPY SYSXLAT generate utility

The function UTGENA in the ARY#UTIL utility is used to generate DSN1COPY SYSXLAT control statements.

The input (SYSIN) consists of simple control statements that are used to generate the utility control statements (SYSXLAT).

SYSIN inputs

The SYSIN input consists of control statements that are used to generate the utility control statements (SYSXLAT).

- SYSIN records are Ireci=80.
- All controls start in column one.
- Blank lines are not accepted.

The first SYSIN control statement indicates the type of SYSXLAT controls to be generated. The control statements are INDEX and TABLE. INDEX will indicate the SYSXLAT controls are for an index and TABLE indicates the controls are for one or more tables.

Long index and table names are continued by filling the first statement through column 72 and then continuing on the next statement starting in column 6. Columns 1-4 of the continued record must contain the OBID value of the preceding continued statement. Column 5 must contain a comma. The continued text is
TABLE controls

The SYSIN statement immediately following the TABLE statement is the database OBID translate statement. The format is old_obid,database_name. Example: 0006,DSNDB06.

The SYSIN statement immediately following the database statement is the table space PSID translate statement. The format is old_psid,tablespace_name. Example: 0009,SYSDBASE.

The SYSIN statements following the table space statement are table OBID translate statements. The format is old_obid,creator.name. Example: 0019,SYSIBM.SYSTABLES.

INDEX controls

The SYSIN statement immediately following the INDEX statement is the old index object id values. The format is old_dbbid,old_isobid,old_obid. Example: 0006,0008,0052.

The SYSIN statement immediately following the old index object id statement is the index name.

SYSXLAT output

The SYSXLAT output control statements follow the formatting rules required by the DSN1COPY utility.

Sample JCL

The following is sample JCL used to execute the utility:

```bash
//UTGENA EXEC PGM=ARY#UTIL,PARM='UTGENA,SS1A'
//STEPLIB DD DISP=SHR,DSN=ARY.IBMTAPE.LOADLIB
// DD DISP=SHR,DSN=DSN.Vxxx.SDSNLOAD
//SYSOUT DD SYSOUT=
//SYSPRINT DD SYSOUT=
//SYSUDUMP DD SYSOUT=
//Db2PARMS DD DISP=SHR,DSN=ARY.V0110.CONTROL
//*/
//SYSXLAT DD SYSOUT=*,LRECL=80,RECFM=FB
//*/
//SYSIN DD *
TABLE
0006,DSNDB06
0009,SYSDBASE
0019,SYSIBM.SYSTABLES
*/
```

Appendix B. Recovery utilities
Using the Db2 Recovery Expert Cloning Tool interface module

The Db2 Recovery Expert Cloning Tool interface module (ARY#VOLS) writes to a file the mapping and catalog information for a system level backup (SLB) so that it can be used by the Db2 Cloning Tool. The ARY#VOLS program can gather and report information about an SLB that was stored on disk or has been offloaded to tape.

Sample JCL for ARY#VOLS

The program ARY#VOLS is a member of SAMPLIB. The following is an example of the JCL:

```plaintext
//ARY#VOLS EXEC PGM=ARY#VOLS,PARM=(EA1A,0000000000370A8A0A76,OFFLOAD)
//STEPLIB DD DISP=SHR,DSN=TSINB.ARYLOADLIB
// DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.SARYLOAD
//ARYBPROF DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.PROFILES
//ARYBOFFL DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.OFFOPTS
//ARYBPMAP DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.PROFILES.MAPS
//ARYBPCAT DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.PROFILES.CATS
//ARYBSBACK DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.SYSBACK
//ARYSBOBJ DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.SYSBACK.OBJS
//ARYSBVOL DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.SYSBACK.VOLS
//ARYSBSSD DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.SYSBACK.SSIDS
//ARYBREPT DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.BREPORT
//ARYPOBJS DD DISP=SHR,DSN=RSQA.ARY310.IBMTAPE.OBJECTS
//BACKINFO DD DSN=TSINB.ARY.VOLS.OUTPUT,
// DISP=(NEW,CATLG,DELETE),
// UNIT=3390,SPACE=(CYL,(1,5)),
// DCB=(RECFM=FB,LRECL=80,BLKSIZE=8000)
//SYSOUT
```

Removing entries from the Quiet Time Analysis tables

Periodically you should remove, or clean, entries from the Quiet Time analysis tables ARYQTG and ARYQT. In general, Quiet Time analysis table entries should be kept as long as a recovery resource (archive log, image copy) is available. You can run a batch job to clean and remove entries from the Quiet Time Analysis tables.

Sample batch job to clean Quiet Time Analysis tables

The following is a sample of the batch job JCL that is included as a SARYSAMP member named ARY#QTCL that can be used to clean and remove entries from the Quiet Time Analysis tables:

```plaintext
//ARY#QTCL JOB Parameters
//**********************************************************************
//* 5655-W78 *
//* (c) Copyright Rocket Software, Inc. 2015 All Rights Reserved. *
//* *
//* JOB NAME = ARY#QTCL *
//* *
//* DESCRIPTION: THIS JCL WILL EITHER REPORT OR DELETE ROWS FROM *
//* THE QUIET TIME ANALYSIS TABLES ARYQTG AND ARYQT *
//* THAT ARE OLDER THAN THE SPECIFIED RETENTION *
//* PERIOD NUMBER OF DAYS. *
//* *
//* NOTES: *
//* 1) ADD A VALID JOB CARD FOR YOUR INSTALLATION *
//* 2) CHANGE SSID TO THE SSD OF THE SUBSYSTEM YOU ARE PROCESSING. *
//* 3) CHANGE 9999 TO THE NUMBER OF DAYS FOR THE RETENTION PERIOD. *
```
Before running the job you must edit the JCL stream to reflect values that are specific to your environment as follows:

- Specify a valid and active Db2 subsystem identifier as the first positional parameter on the job JCL “EXEC PARM=” card.
- Specify the number of retention days as the second positional parameter on the job JCL “EXEC PARM=” card. The retention period is calculated based on the current date (date the utility is run) minus the number of retention days. Any quiet table rows that were created outside of that retention period will be reported or deleted. To change the time range, replace the number 9999 with a value from 0 to 9999.
- Specify whether you will report on or delete the quiet time table rows as the third positional parameter on the job JCL “EXEC PARM=” card. Specify REPORT to produce a list of qualifying rows to be removed from both the ARYQTG and ARYQT tables. Report is the default value. No table rows are deleted if Report is specified. It is recommended that you run the utility in Report mode, inspect the report and then decide if your retention period will yield the expected results. Run the utility and specify DELETE to actually delete the qualifying rows from both the ARYQTG and ARYQT tables.
- Change #SARYLOAD to the name of the product load library.
- Change #DSNEXTIT to the name of the Db2 User Exit library.
- Change #DSNLOAD to the name of the Db2 Load Library.
- Change #SARYCNTL to the name of the Product Control file.
- Change #REPORT on the SYSPRINT DD statement to the data set name that will be used for the report output and verify that UNIT=SYSDA is valid. You can also use a SYSOUT=* on this DD statement. You must include a valid SYSPRINT DD statement or the program will terminate with a RC=12.

**Sample output in Report mode**

The following is a sample of the output when the utility is run in REPORT mode:

```c
//** 4) CHANGE REPORT TO DELETE IF YOU WISH TO DELETE FROM THE * QUIET TIME TABLES ALL ROWS OLDER THAN THE RETENTION PERIOD * SPECIFIED. KEEP REPORT IF YOU WISH TO INCLUDE IN A REPORT * ALL THE ROWS OF THE QUIET TIME TABLES OLDER THAN THE * THE RETENTION PERIOD. *
//** 5) CHANGE #SARYLOAD TO THE NAME OF THE PRODUCT LOAD LIBRARY *
//** USED FOR IBM Db2 RECOVERY EXPERT FOR Z/OS. *
//** 6) CHANGE #DSNEXTIT TO THE NAME OF THE DB2 USER EXIT LIBRARY *
//** 7) CHANGE #DSNLOAD TO THE NAME OF THE DB2 LOAD LIBRARY *
//** 8) CHANGE #SARYCNTL TO THE NAME OF THE PRODUCT CONTROL FILE *
//** USED FOR IBM Db2 RECOVERY EXPERT FOR Z/OS. *
//** 9) CHANGE #REPORT TO THE DATA SET NAME YOU WISH TO USE *
//** FOR THE REPORT OUTPUT AND VERIFY UNIT=SYSDA IS VALID. *
//** YOU COULD ALSO USE A SYSOUT=* DEFINITION ON THIS DD CARD. *
//**
//*******************************************************************************/
/* ARY#QTCL EXEC PGM=ARY#QTCL,PARM=(SSID,9999,REPORT)
/* STEPLIB DD DISP=SHR,DSN=#SARYLOAD
// DD DISP=SHR,DSN=#DSNEXTIT
// DD DISP=SHR,DSN=#DSNLOAD
// Db2PARMS DD DISP=SHR,DSN=#SARYCNTL
//*SYSPRINT DD SYSOUT=* 
//*SYSPRINT DD DSN=#REPORT,
// DISP=(NEW,CATLG,DELETE),
// UNIT=SYSDA,SPACE=(TRK,(5,5)),
// DBC=(RECFM=VBA,LRECL=133,BLKSIZE=0) 
*******************************************************************************/
```
Reorganizing system backup VSAM repository files

It is recommended that you periodically reorganize the VSAM repository files for system backups volumes and system backups objects.

In the event of space issues with the VSAM repositories containing information about system backup volumes (Db2TOOL.ARY320.SYSBACKJ.VOLS) or information about objects that were backed up (Db2TOOL.ARY320.SYSBACK.OBJS), it is recommended that you reorganize the VSAM repositories file. VSAM repository files can be reorganized using the ARYRORG1 and ARYRORG2 SAMPLIB members.

Note: This is also recommended proactively and on a regular basis if System Level Backups are frequently used and such issues are to be expected. The regularity with which VSAM repository files should be reorganized depends upon the environment in use.

ARYRORG1

Use the following ARYROG1 SAMPLIB member to reorganize the system backup objects VSAM repository file (Db2TOOL.ARY320.SYSBACK.OBJS):

```/*
// JOB NAME = RBRRORG1
/*
```
// DESCRIPTION: THIS JCL WILL REORG THE SYSTEM BACKUPS OBJECTS  *
// VSAM REPOSITORY FILE.  *
// NOTES:  *
// 1) ADD A VALID JOB CARD FOR YOUR INSTALLATION  *
// 2) CHANGE 'DATALVL' TO THE HIGH LEVEL QUALIFIER  *
// YOU USED FOR THE REPOSITORY FILES.  *
// 3) CHANGE '#VOLSER' TO THE VOLUME SERIAL YOU WANT THESE DATASETS  *
// ALLOCATED ON OR REMOVE IT FOR SMS PLACEMENT.  *
//**********************************************************************
// REPRO SYSBACK.OBJS VSAM REPO DATASET TO A FLAT FILE  *
//**********************************************************************
// REPRO1 EXEC PGM=IDCAMS,COND=(4,LT)
// SYSPRINT DD SYSOUT=*  
// SYSOUT DD SYSOUT=*  
// KSDS DD DISP=SHR, DSN=DATALVL.SYSBACK.OBJS  
// FLAT DD DISP=(NEW, CATLG, DELETE),  
// DCB=(RECFM=VB, LRECL=2630, BLKSIZE=26300),  
// UNIT=SYSALLDA, SPACE=(CYL,(3,3), RLSE),  
// DSN=DATALVL.SYSBACK.OBJS.FLAT  
// SYSIN DD *  
SET MAXCC = 0  
REPRO INFILE(KSDS) OUTFILE(FLAT)  
/*  
**********************************************************************
// REPRO FLAT FILE INTO SYSBACK.OBJS VSAM REPO FILE  *
//**********************************************************************
// REPRO2 EXEC PGM=IDCAMS,COND=(4,LT)
// SYSPRINT DD SYSOUT=*  
// SYSOUT DD SYSOUT=*  
// FLAT DD DISP=SHR, DSN=DATALVL.SYSBACK.OBJS.FLAT  
// SYSIN DD *  
DELETE 'DATALVL.SYSBACK.OBJS'  
SET MAXCC = 0  
DEFINE CLUSTER  
( NAME ('DATALVL.SYSBACK.OBJS')  
VOLUMES (#VOLSER)  
CYLINDERS (15 75)  
SHAREOPTIONS (3 3)  
INDEXED  
REUSE )  
DATA ( NAME ('DATALVL.SYSBACK.OBJS.DATA'))  
INDEX ( NAME ('DATALVL.SYSBACK.OBJS.INDEX'))  
REPRO INFILE(FLAT)  
OUTDATASET('DATALVL.SYSBACK.OBJS') REUSE  
/*  
///

ARYRORG2

Use the following ARYRORG2 SAMPLIB member to reorganize the system backup volumes VSAM repository file:

/*  
/* JOB NAME = RBRRORG2  
/*  
/* DESCRIPTION: THIS JCL WILL REORG THE SYSTEM BACKUPS VOLUMES  
/* VSAM REPOSITORY FILE.  
*/

Appendix B. Recovery utilities 615
REPORTING AVAILABLE SLB BACKUPS AT THE DISASTER RECOVERY SITE

You can use Db2 Recovery Expert to list the available SLB backups for all systems at the disaster recovery site.

Use the JCL found in the ARY#RPTD SAMPLIB member to generate a report listing the available SLB backups at the disaster recovery site.

The following is a sample of the JCL included as a SAMPLIB member named ARY#RPTD that can be used to generate the report:
Running the JCL found in ARY#RPTD will produce the following report:

<table>
<thead>
<tr>
<th>Date</th>
<th>Time</th>
<th>On/offload</th>

</table>
Appendix C. Automatic discovery for server agent communication

You can use automatic discovery to enable communication between the Db2 Recovery Expert server and agents.

Note: In versions prior to Db2 Recovery Expert V3.1, automatic discovery was frequently used to ease the manual effort required to configure each individual user client to communicate with the server and agents. In V3.1 and later versions, automatic discovery is no longer needed because with the web interface it is no longer necessary to configure each individual user client. Support is still available for automatic discovery between the server and agents.

Server notifications

When the server starts, it begins sending notifications on the network that is up and running. These notifications include the port numbers on which it is listening for incoming client and agent connections.

The notifications are sent by using IP multicasting. Briefly, multicasting is similar in concept to broadcasting, where a message is potentially sent to every destination address on a network. With multicasting, however, instead of sending messages to every address on a network, messages are sent only to addresses which register interest in those particular messages. In the case of Db2 Recovery Expert, the client and agent register interest in the messages sent by the server, so the server notifications are routed to them.

There are a wide variety of options related to the use of multicasting in IP network software and hardware. In some cases, it is possible that because of software or hardware configuration, multicast packets are not forwarded from the machine on which the server is running to the machines on which one or more clients or agents are running. You must consult your network administrator and configuration documentation to ensure that appropriate forwarding of multicast packets is enabled.

The exact configuration process to use these server notifications differs between client-server and agent-server connections.

Agent-server connections

You can specify the server-address configuration option using Tools Customizer. If you omit the server-address configuration option, the agent listens for server notifications on the network. When a notification for a server is received, the agent uses the information in the notification to connect to that server.

If you specify a value for the server-address configuration option, the agent attempts to connect to that address, and does not perform any automatic server discovery.

Automatic discovery allows the administrator to change which machine the server runs on without requiring changes in the agent configuration files.

Automatic discovery options

Additional server and agent configuration options are available to fine
tune the automatic server discovery process, particularly in the case where a site is running more than one server.

**Note:** To modify the agent and server configuration options, you must manually edit the agent and the server configuration files. The member name of the server configuration file is ARYCFG5. By default, ARYCFG5 is a member of Db2TOOL.ARY320.JCLLIB. The member name of the agent configuration file is ARYCFGA. ARYCFGA is a member of Db2TOOL.ARY320.JCLLIB.

**Description**

In the server configuration file, you can specify a value for the `description` configuration option. This value is a free form text description of that instance of the server. This description value can help provide additional information for choosing between multiple available servers. The description is not used by the agent.

**Community string**

The function of the community string is similar to that of the description, in that it allows differentiation between multiple instances of the server. The community string, however, is not visible to any users and is used only by the agent. Typically, the community string is a shorter, keyword value, rather than free form text. Although, there are no restrictions on the format of the value specified.

The community string is specified with the `community-string` configuration option in both the server and agent configuration files. When the agent performs automatic server discovery, if the `server-address` configuration option is omitted, it waits until it receives a notification from a server with a matching community string value. The agent ignores any other server notifications.

The community string allows multiple servers and agents to run on a single network with each agent connecting to the desired server.

**Multicast options**

Several options that are related to multicasting are available in the server and agent configuration files.

The **Multicast IP address** text box specifies the global multicast address to which the server sends its notifications and on which the agent and client register interest. The default value is 236.1.2.3. The default value is for IPv4 and you should not change this default unless there is a conflict with another application on your network or you are using an IPv6 stack.

- If there is a conflict with another application on your network, you can specify a different **Multicast IP address** but you must ensure that you specify the same address in both the server and agent configuration files.

- If you are using an IPv6 stack, you can specify an IPv6 address in the **Multicast IP address** text box for the agent configuration file. You must also specify the same address in the server configuration file using the option **Multicast-address-v6**.
To disable multicasting on the server, remove or clear the contents of the `<multicast-address>` and/or the `<multicast-address-v6>` parameters.

Similarly, the Multicast port number field specifies the port to which the server sends its notifications. The default value is 19845. If a conflict occurs, you can specify a different port, ensuring that the same value is specified everywhere.

Specify the local network interface as follows:

- If you are using an IPv4, you use the Multicast-interface option. It is a server-only configuration option and specifies the IPv4 local network interface address on which the server notifications are sent. If this parameter is set to *, the notifications are sent on all IPv4 interfaces.

- If you are using an IPv6 stack you use the Multicast-interface-v6 option. It is also a server-only configuration option that specifies the IPv6 local network interface address on which the server notifications are sent. If this parameter is set to *, notifications are sent on all IPv6 interfaces.

The multicast-ttl option is also a server-only configuration option. It specifies how far from the server machine the multicast notifications are propagated over the network. The default value is 5 subnets or routers. Do not specify a value greater than is necessary to reach all interested agents and clients, as it unnecessarily increases network traffic beyond this region.

The multicast-delay option is a server-only configuration option and specifies how frequently in seconds the server sends notifications. The smaller this value is, the more responsive clients and agents are. That is, the shorter amount of time they must wait for notifications. The smaller the value is, however, the more network traffic is generated by the server. The default value is 1 second.
Appendix D. Db2 Recovery Expert files and file sizes

Db2 Recovery Expert creates and uses many files and data sets dynamically for internal and temporary use. If these files are improperly sized, B37 ABENDS can occur.

Many data sets that are required for internal and temporary Recovery Expert processing space are dynamically allocated by Db2 Recovery Expert. Because these files are dynamically allocated, they are not readily apparent within the JCL. Almost all of these files are for internal use only, and are not documented or supported for external usage.

All files that are allocated as NEW are written to the SYSOUT DD named CFILES. You can browse that DD to view these allocations. If overrides become necessary due to B37 or D37 errors, this DD can be useful in allocating larger files.

These dynamic allocations are based on internal array sizing when possible. This means that Db2 Recovery Expert attempts to determine the proper size of these data sets based on internal arrays which are to be externalized to the files. In many cases, it is not possible to determine the exact size of dynamically allocated data sets. This can cause a B37-type ABEND on the file. A B37 ABEND (meaning any n37 type ABEND; it could also be D37 or similar) can occur if the initial file size allocation can be satisfied by your system, but more space is actually required for all records. Again, not all dynamically allocated file sizes can be exactly ascertained.

If a B37 ABEND occurs on a dynamically allocated data set, the system will generate a message indicating which file caused the failure. This message is included in your job log and is not controlled by Recovery Expert, but rather by the operating system. If these B37s become frequent, contact your product administrator to notify IBM as the calculations may need to be modified to prevent recurrences.

You can attempt to re-run the job by hard coding a proper JCL DD statement for the failing data set in the failing job step. Because the file names are user-modifiable, it is not possible to document what they will be. The DSNAMES provided in the examples merely identify a component of the internally built data set name. The definitive DSNAME must come from the B37 ABEND message. The name identified there must be the same DSNAME used on any hard-coded JCL DD allocation unless the data set is a temporary data set. In that case, any unique temporary name will do (for example, & TEMPF1). The DDNAMEs are fixed in the JCL, and therefore, these can be used in conjunction with the B37 job log output to correctly add a hard-coded JCL DD statement.

B37 ABEND errors

This list will help you determine where your B37 ABEND is occurring.

Follow this list according to failing step number and the program that is executed. Again, this list is intended only for an extremely sporadic occurrence of B37s. If they become frequent, contact IBM customer support.

Appendix D. Db2 Recovery Expert files and file sizes 625
Correcting B37 ABEND errors in the JCL

You should use the information from "B37 ABEND errors" to correct the error, according to the example found in this topic.

Suppose you got a D37 abend on file SQLOUT in STEP6 of the detail report process. The D37 abend pointed to dsname = USERXX.SQLOUT:JOB1.
1. You look up the current file allocation for data set 'USERXX.SQLOUT:JOB1' and see it was allocated with 100 tracks primary and secondary.
2. You could delete that file and then re-run that step of the job (and any subsequent steps) by adding this DD statement to the JCL step (STEP 6) with a larger allocation amount as such:

   //SQLOUT DD DSN=USERXX.SQLOUT:JOB1,
   // DCB=(LRECL=80,BLKSIZ=23440,RECFM=FB),
   // DISP=(NEW,CATLG,DELETE),UNIT=SYSDA,
   // SPACE=(TRK,(200,200),RLSE)

This hard-coded JCL DD statement will prevent any use of Recovery Expert’s dynamic allocation process for that data set only. In general, B37s should not occur on temporary data sets as they should be based on permanent data set allocations. However, if they do occur, these data sets will not exist after the ABEND, so base your larger file allocations on similarly allocated permanent data sets. You can also search out the DD CFILES for information on all newly allocated (DISP=NEW...) data sets in the job log.

The VSAM file (DD ROWDATA) can also be overwritten this way by creating it on your own and hard coding this DD in the JCL as DISP=SHR only. IDCAMS can be used to create this file, but must be done so using these exact specifications:

```
DEFINE CLUSTER (NAME(vsam.file.name) -
    REUSE -
    VOLUMES(volume1,volume2,volume3) - (optional)
    SHAREOPTIONS(1,3)) -
DATA (NAME(vsam.file.name.DAT) -
    TRACKS(primary secondary) -
    KEYS(180) -
    BUFFERSPACE(36864) -
    FREESPACE(2010) -
    SHR(1,3) -
    CONTROLINTERVALSIZE(4096) -
    SPANNED -
    RECORDSIZE(200 36864) -
INDEX (NAME(vsam.filename.IDX) -
    TRACKS(primary secondary) -
    SHR(1,3))
```

The DD CFILES in your job log will contain information on the original allocation size of this file. The file names must adhere to the naming conventions.

Notes:
1. All files created in the general report are used in the detail report.
2. Some permanent files have associated temporary files for sorting or other purposes. Those files are identified here. Where temporary files are used, they are identified with the permanent files:
   - REFILE (temporary file is DD REFILES)
   - ROWDATA (temporary files are DD TEMPROWD, TEMPROWS, SORTIN, SORTOUT)
   - EDICT (temporary file DD EDICT)
   - PLOGD (temporary file DD PLOGD)
   - FRMTFILx (temporary file DD TFRMFIL)

3. Rounding assumptions: 1 track of DASD = 47,000 bytes, 15 track per cylinder.

---

Correcting B37 errors using a sample job

You can use a sample member ARYSJ001 to correct for B37 allocation errors by rerunning part of the configuration for Recovery Expert.

If you repeatedly encounter a B37 abend when you select recovery plan JCL to be generated, you can create a more lasting correction by running the sample member ARYSJ001 after editing it to increase the data set allocations for FTW (file tailoring work), ICF (image copy file), and RDA (recovery data set allocation).

These data set allocations are initially set to allocate cylinders with a default value of one for both the primary and secondary quantities. You should adjust the quantities according to your needs, using the following information:

The approximate number of JCL lines that the data sets will hold on a 3390 DASD device as follows:

- \(340 = \text{number of 80-byte records/27200 half-track block}\)
- \(680 = 340 \times 2 \text{ number of 27200 block/track}\)
- \(10200 = 680 \times 15 \text{ number of tracks/cylinder}\)
- \(163200 = 10200 \times 16 \text{ number of cylinders in the data set}\)

After you determine your size requirements,

1. Edit ARYSJ001 to increase the data sets accordingly.
2. Rerun the sample job to allocate the data sets with the new quantities.

Files used in Log Analysis processing

These are the files created by Log Analysis processing. This information should help in sizing the files should a B37 ABEND occur.

**DD REFILE**

This file holds an internal snapshot of log records. One record per log record matching filter criteria. Length = fixed, 70 bytes. Example: If 1,000 transactions are expected to be found in the log, 1,000 REFILE records will be needed. 1,000 * 70 bytes = 70,000 bytes of space required. Therefore, 2 tracks are sufficient.
DD CATFILE

This file holds Db2 catalog information for each table reported on. CATFILE is VB, LRECL=400. It holds one record per table reported on, therefore, 5 tracks is usually sufficient.

DD EXTFILE

This file holds log records that are read in the general report and that can be used exclusively in the detail report. If the general report determines that this file cannot be used exclusively by the detail report (that is, the detail report will have to read more Db2 logs), than this file will hold one record to indicate that condition to the detail report. Assuming the file can be used by the detail report, it will hold all Db2 log records matching the filter criteria in the general report.

Example 1: If 1,000 transactions are expected to be found, and a single table of fixed length 100 bytes is being filtered on, this file will need to be allocated to handle the maximum amount of all these transactions: (1,000 * (100 + 80)) = 180,000 bytes.

Attention: 80 is an approximate length of log record header information. Therefore, a 4 track space allocation is sufficient. Example 2: There are many tables filtered on, and the expected number of transactions returned is 500,000, and the largest table row length is 200 bytes. To handle the maximum case, this is the formula: (500,000 * (200 + 80)) = 140,000,000 bytes, so approximately a 3,000 track space allocation would be needed, or 200 cylinders.

DD URIDF

This file holds one record per unit of work reported on. Its size is totally dependent on the log data, like EXTFILE. If your site typically has few transactions per unit of work, this file's size could be large, like the EXTFILE. If your site typically has many transactions per unit of work, the size of this file could be smaller than the EXTFILE. URIDF is VB, LRECL=1300.

DD ROWDATA

This VSAM file holds multiple row images of each row reported on in the general report. The multiple row images reflect either the row’s current image, pre-change image, or post-change image. Current images are not present in log-forward mode, however, for simplicity in this example, assume three row images exist for every log record. This file has 18 bytes of header information per record. To best size this file do this:

1. Determine the number of log records returned (this will be the total number of UPDATEs, INSERTs, and DELETEs from both committed and rollback activity). Assume total number = 5,000.
2. Determine the largest maximum row length of any tables in the result set. Assume maximum row length = 200 bytes.
3. Apply this formula:
   
   \( (5,000 \times (200 + 18)) \times 3 = 3,270,000 \text{ bytes} \)

   Therefore, 70 tracks is sufficient.
DD EDICT

This file will hold compression dictionary information in a log-forward process only. It will not be present in log-backward mode. This file is used only if compressed data is found in the logs. Assume a maximum of 65,000 bytes per table space or partition of compressed data. Example: If 10 table spaces (all non-partitioned) are in your general report result set, a maximum of 650,000 bytes would be needed (65,000 * 10). A space allocation of 14 tracks is sufficient.

DD PLOGD

This file holds all the log records needed to materialize full row images for every log record reported on by the general report. A general rule is that this file must be allocated at least as large as the DD ROWDATA VSAM file (the data component), though it is not a VSAM file itself. Beyond that, it is impossible to determine in advance how many log records will be used in materializing full row images. Another useful guideline here is that if after the general report is run, the DD EXTFILE has more than one record in it, the DD PLOGD file can be allocated with the same space allocation as the DD EXTFILE.

DD FRMTFILx

This file contains the displayable column data for each row affected by each log record reported on in the general report. (Where x represents different letters depending on the current sort of the file. This file should be sized the same for each value of x.) This is another unpredictable file size for any given run of Log Analysis Services. A general rule here is to make the space allocation for this file at least as large as the DD PLOGD file.

DD SQLOUT

This file holds the generated Undo/Redo SQL, if any was requested. This is a fixed length, 80 byte file which can be used as input to IBM’s Db2 SPUFI application. It should be sized at least as large as the DD PLOGD file.
Appendix E. Troubleshooting

Use these topics to diagnose and correct problems that you experience with Db2 Recovery Expert.

How to look up message explanations

You can use several methods to search for messages and codes.

Searching an information center

In the search box that is located in the top left toolbar of any Eclipse help system, such as the IBM Information Management Software for z/OS Solutions Information Center, enter the number of the message that you want to locate. For example, you can enter DFS1065A in the search field.

Use the following tips to help you improve your message searches:

• You can search for information on codes by entering the code; for example, enter -327.
• Enter the complete or partial message number. You can use wild cards (* or ?) in the message number to broaden your search; for example, DFS20??I.

The information center contains the latest message information for all of the information management products that are included in the information center.

Searching for messages on the Web

You can use any of the popular search engines that are available on the Web to search for message explanations. When you type the specific message number or code into the search engine, you will be presented with links to the message information in IBM information centers.

Using LookAt

LookAt is an online facility that you can use to look up explanations for most of the IBM messages you encounter, as well as for some system abends and codes. Using LookAt to find information is faster than a conventional search because in most cases LookAt goes directly to the message explanation.

You can use LookAt from the following locations to find IBM message explanations for z/OS elements and features, z/VM®, VSE/ESA, and Clusters for AIX® and Linux:

• The Internet. You can access IBM message explanations directly from the LookAt Web site at http://www.ibm.com/eserver/zseries/zos/bkserv/lookat/.

• Your z/OS TSO/E host system. You can install code on your z/OS or z/OSe systems to access IBM message explanations, using LookAt from a TSO/E command line (for example, TSO/E prompt, ISPF, or z/OS UNIX System Services running OMVS).

• Your Microsoft Windows workstation. You can install code to access IBM message explanations on the z/OS Collection (SK3T-4269) using LookAt from a Microsoft Windows command prompt (also known as the DOS command line).
Your wireless handheld device. You can use the LookAt Mobile Edition with a handheld device that has wireless access and an Internet browser (for example, Internet Explorer for Pocket PCs, Blazer, or Eudora for Palm OS, or Opera for Linux handheld devices). Link to the LookAt Mobile Edition from the LookAt Web site.

You can obtain code to install LookAt on your host system or Microsoft Windows workstation from a disk on your z/OS Collection (SK3T-4269) or from the LookAt Web site (click Download, and select the platform, release, collection, and location that suit your needs). More information is available in the LOOKAT.ME files available during the download process.

### Determining maintenance levels of Db2 Recovery Expert

Identifying maintenance levels for Db2 Recovery Expert modules may help you more accurately troubleshoot problems.

To determine maintenance levels you can issue the DISPLAY MEPL command from the Db2 Recovery Expert ISPF interface. The DISPLAY MEPL command runs a batch job which provides Db2 Recovery Expert module maintenance levels, compile dates, APAR numbers, and APAR build dates and times.

1. Enter the DISPLAY MEPL command on the command line of the Db2 Recovery Expert ISPF interface main panel (RCVYXPR).
2. On the DISPLAY MEPL panel, enter a PDS name, member, and job card information.
3. Press ENTER to submit the job.
4. Send the job output to product support.

### Installing Db2 Recovery Expert V3.2 on a new Db2 subsystem

This topic explains how to install Db2 Recovery Expert V3.2 on a new Db2 subsystem.

#### Use Cases: Reinstalling Db2 Recovery Expert V3.2 and installing for the first time

Before you install, it's important to make sure that your user ID has read permission to the CSFSERV resource class. See RACF Permission requirements for details. You may have to ask your RACF administrator or team to set up read permission for you.

If you have previously installed Db2 Recovery Expert V3.2 and want to reinstall it with a new Db2 subsystem, you will need to generate one or more jobs in Tools Customizer, then execute the jobs in order to migrate your existing database objects from an earlier maintenance level. For more information, see Reinstalling Db2 Recovery Expert V3.2.

If you have never installed Db2 Recovery Expert V3.2 before, you will not have existing database objects to migrate. Follow the steps described in Installing Db2 Recovery Expert V3.2 for the first time.

Once you have installed Db2 Recovery Expert V3.2, it's a good idea to run an Installation Verification Program (IVP) to confirm that the installation was successful. See Verifying Db2 Recovery Expert V3.2 installation for a sample IVP, and also for a series of steps that provide additional verification that Db2 Recovery
Expert V3.2 has been installed successfully.

**Reinstalling Db2 Recovery Expert V3.2**

This topic discusses how to reinstall Db2 Recovery Expert V3.2 successfully.

Follow this task if Db2 Recovery Expert V3.2 was previously installed and you want to reinstall with a new Db2 subsystem. For an existing Recovery Expert environment, you will need to generate jobs in Tools Customizer, then execute the jobs, in order to migrate your existing database objects from an earlier maintenance level. For example, for an environment created before APAR PI35099 was issued, apply PI35099, then run the "Alter existing Recovery Expert objects for APAR PI35099" job. The following is a list of jobs you may need to run. In each case, if the APAR listed as not been applied at your site, apply the APAR (for example, PI57597), then run the job itself (for example, B96312AF):

- B64920AF - Alter existing Recovery Expert objects for APAR PI35099
- B74920AF - Alter existing Recovery Expert Auto Tool objects for APAR PI35099
- B86380AF - Alter existing Recovery Expert objects for PI56483
- B96312AF - Alter existing Recovery Expert objects for PI57597
- C16910AF - Alter existing Recovery Expert objects for PI80997
- C27120AF - Alter existing Recovery Expert objects for PI86756
- C67197AF - Recovery Expert repository migration for PI91823 part 1
- C77798AF - Recovery Expert repository migration for PI91823 part 2

Next, proceed with the steps used for a first-time installation. See [Installing Db2 Recovery Expert V3.2 for the first time](#).

After installing, verify the installation: [Verifying Db2 Recovery Expert V3.2 Installation](#).

**Installing Db2 Recovery Expert V3.2 for the first time**

Db2 Recovery Expert has never been installed before.

For a new Recovery Expert environment, select the following options in Tools Customizer:

- Create Recovery Expert objects for DB2
- Drop the Recovery Expert database
- Create Recovery Expert database
- Create views on schema-level repository
- Create views on system catalog

In the example above, **Drop the Recovery Expert database** will drop all objects except views on system catalog. 'Create views on system catalog' should be disabled if ARYVDSC views already exist and are correct.

If you want to drop all views, run the following commands. In this example, CREAT0R is the creator of the views to be dropped; replace it with the user ID that created the views at your site.

```
DROP VIEW CREAT0R.ARYVDSCYR00; COMMIT;
DROP VIEW CREAT0R.ARYVDSCAR00; COMMIT;
DROP VIEW CREAT0R.ARYVDSCBK00; COMMIT;
DROP VIEW CREAT0R.ARYVDSCBP00; COMMIT;
DROP VIEW CREAT0R.ARYVDSCC200; COMMIT;
DROP VIEW CREAT0R.ARYVDSCCA00; COMMIT;
```
Note: It is generally not necessary to select the Create indexes on DB2 catalog option in Tools Customizer.

Verifying Db2 Recovery Expert V3.2 installation

Once customization is complete, it's a good idea to run an Installation Verification Program or job (IVP). More information can be found in the Knowledge Center page on the Product to Customize section of the Parameters Worksheet. Scroll down to Create Install Verification job for the steps required to generate and run the IVP.
To run the IVP against a specific SSID, update the ARYIN DD with the following code, where DBT1 is an example SSID:

```
//ARYIN DD
* SSID DBT1
/*
```

The following is a complete example of the JCL code for an IVP:

```
//ARYIVP JOB (3,3932), 'DB2RECPX', CLASS=3, MSGCLASS=S,
// NOTIFY=&SYSUID
/*JOBPARM S=MSYS
/*
/*
/*
/****************************(tcz-info)****************************
//*
/* Product metadata lib: DBS.DB2RECPX.MSYS.SARYDENU
/* Original template name: ARYIVP
/* Desc: Install Verification
/* Use group attach: YES
/* Customization library: DBS.DB2RECPX.MSYS.$MSYS$.ARY320A3
/* Customized by: AA5710
/* Customized timestamp: 20190323090448857
/* Data store data set: DBS.DB2RECPX.MSYS.DATASTOR
/* LPAR name: MSYS
/****************************(end-tcz-info-15)****************************
/*
/* 5655-W78 *
/** (c) Copyright Rocket Software, Inc. 2019 All Rights Reserved. *
/** *
/** DESCRIPTION: THIS JCL WILL PERFORM THE INITIAL VERIFICATION *
/** PROCEDURE. *
/** *
/****************************(end-tcz-info-15)****************************
/** *
//ARY#IVP EXEC PGM=ARY0IVP
//STEPLIB DD DISP=SHR,
// DSN=SYS1.DB2RECPX.MSYS.SARYLOAD
//DB2PARMS DD DISP=SHR,
// DSN=DBS.DB2RECPX.MSYS.CONTROL
//SYSOUT DD SYSOUT=* 
//ARYOUT DD SYSOUT=* 
//ARYCIN DD DISP=SHR,
// DSN=DBS.DB2RECPX.MSYS.SARYCLST(ARYV320)
//ARYIN DD *
COMPLETE 
/*
/*
```

**Note:** The IVP does not need to be run for each LPAR. It's usually better to run them for the entire SYSPLEX. This allows information to be accessed across the LPARs, requiring less tailoring of started tasks and CLIST.

You can also verify that the install was successful by running the following steps:
1. Pick a test tablespace to use for verification testing and take a full image copy of it.
2. Create an application profile with the object from step 1 above (option 2, 1).
3. Add the tablespace object and save the application profile.
4. Use the P line command to build the recovery plans, recovering the object to 1-Current.
5. Build the **Using Recover** recovery plan.
6. Run the job and verify that it has completed successfully.
RACF Permission requirements

The user ID running the IVP must have read permission to the key database and other CSFSERV resources such as CSF1DVK, CSF1GAV, CSF1TRD, CSF1QF, and CSF1GKP. You might have to ask your RACF administrator to grant read permission to your user ID so that you can run the IVP successfully. If you see error [ARYX184E] this most likely means that your user ID does not have the necessary read permission. The IBM Knowledge Center gives an example set of commands to perform RACF administrator tasks that include granting a user ID read access to the CSFSERV resource class.
Appendix F. Messages and Codes

This appendix documents the messages and error codes issued by Tools Customizer and Db2 Recovery Expert. Messages are presented in ascending numerical and alphabetical order.

Tools Customizer messages

Use the information in these messages to help you diagnose and solve Tools Customizer problems.

CCQC002I • CCQC010S

Explanation: The product was not customized on one or more of the Db2 entries that were selected.
System action: None.
User response: Press PF3 to see the Db2 entries on which the product was not customized. The status of these Db2 entries is Errors in Customization.

CCQC003W The edit session was started automatically because values for required parameters are missing or must be verified.

Explanation: If product, LPAR parameters, or Db2 parameters are not defined or if parameter definitions must be verified, an editing session for the undefined or unverified parameters starts automatically.
System action: None.
User response: Define values for all required product, LPAR parameters, or Db2 parameters.

CCQC006E The jobs could not be generated for the group_attach_name Db2 group attach name.

Explanation: The customization jobs could not be generated for the specified Db2 group attach name.
System action: Processing stops.

CCQC007E The jobs could not be generated for the subsystem_ID Db2 subsystem.

Explanation: The customization jobs could not be generated for the specified Db2 subsystem.
System action: Processing stops.

CCQC008E The jobs could not be generated for the member_name Db2 member.

Explanation: The customization jobs could not be generated for the specified Db2 member.
System action: Processing stops.

CCQC009S The jobs were not generated for the DB2 entries.

Explanation: One or more errors occurred while customization jobs were being generated for the selected Db2 entries.
System action: Processing stops.

CCQC010S The template_name template could not be accessed in the library_name metadata library.

Explanation: The specified template could not be accessed because the user does not have RACF access to the data set, the data set has incorrect data characteristics, or the data set is not cataloged.
System action: Processing stops.
User response: Ensure that you have RACF access to the data set, that the characteristics are correct according to the specifications of the product that you are customizing, and that the data set is cataloged. If the problem persists, contact IBM Software Support.
The template_name template could not be written to the library_name customization library.

**Explanation:** The specified template could not be accessed because the user does not have RACF access to the data set, the data set has incorrect data characteristics, or the data set is not cataloged.

**System action:** Processing stops.

**User response:** Ensure that you have RACF access to the data set, that the characteristics are correct according to the specifications of the product that you are customizing, and that the data set is cataloged. If the problem persists, contact IBM Software Support.

The job card was generated with default values because the JOB keyword was missing.

**Explanation:** Default values were used to generate the job card because the JOB keyword was not specified in the first line of the job card.

**System action:** The job card was generated with default values.

**User response:** No action is required. To generate the job card with your own values, add the JOB keyword in the first line of the job card.

The job card was generated with the default value for the programmer name because the specified programmer name exceeded 20 characters.

**Explanation:** Default values were used to generate the job card because the specified programmer name contained too many characters.

**System action:** The job card was generated with default values.

**User response:** No action is required. To generate the job card with your own values, add a valid programmer name in the job card. A valid programmer name is 1 - 20 characters.

The job card was generated with default values because the JOB keyword was not followed by a space.

**Explanation:** Default values were used to generate the job card because a space did not follow the JOB keyword.

**System action:** The job card was generated with default values.

**User response:** No action is required. To generate the job card with your own values, add a space after the JOB keyword in the job card.

The template_name template in the library_name metadata library contains the following file-tailoring control statement: statement_name. This control statement is not valid in a template_type template.

**Explanation:** The template_type template cannot contain the specified type of file-tailoring control statement.

**System action:** Processing stops.

**User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

The )DOT file-tailoring control statement exceeded the number of allowed occurrences for the template_name template in the library_name metadata library.

**Explanation:** The )DOT file-tailoring control statement can occur only a limited number of times in the specified template.

**System action:** Processing stops.

**User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

The nested )DOT file-tailoring control statements exceeded the number of allowed occurrences in the template_name template in the library_name metadata library.

**Explanation:** Nested )DOT file-tailoring control statements can occur only number times.

**System action:** Processing stops.

**User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

The template_name template in the library_name metadata library is not valid because it does not contain any data.

**Explanation:** The specified template is missing required data.

**System action:** Processing stops.

**User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

The template_name template in the library_name metadata library is not valid because an )ENDDOT file-tailoring control statement is missing.

**Explanation:** A )ENDDOT file-tailoring control statement is required in the specified template.

**System action:** Processing stops.

**User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.
1. Complete the following steps:
   1. Specify the ISPFTTRC command, and press Enter.
   2. Issue the Tools Customizer command that issues the error.
   3. Specify the ISPFTTRC command, and press Enter. The ISPF file tailoring trace data set is created. It adheres to the following naming convention: TSO_ID.ISPF.TRC, where TSO_ID is the TSO user ID that is being used.

   If the problem persists, gather the following information and contact IBM Software Support.
   - A screen capture of the Tools Customizer error.
   - Ensure that the complete error message is displayed by pressing PF1.
   - The Tools Customizer trace data set. It adheres to the following naming convention: TSO_ID.CCQ.TRC, where TSO_ID is the TSO user ID that is running Tools Customizer.
   - The ISPF file tailoring trace data set.

2. CCQC021S The template_name template in the library_name metadata library is not valid because the template must start with the parameter_name job card parameter.
   
   **Explanation:** The specified template must start with the specified job card parameter.
   
   **System action:** Processing stops.
   
   **User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

3. CCQC022S The parameters used in a )DOT file-tailoring control statement exceeded the number of allowed parameters in the template_name template. The template is in the library_name metadata library. The error occurs in )DOT section section_number.
   
   **Explanation:** A )DOT file-tailoring control statement can contain only a limited number of parameters.
   
   **System action:** Processing stops.
   
   **User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

4. CCQC023S The )DOT file-tailoring control statement must include the table_name table name in the template_name template. The template is in the library_name metadata library. The error occurs in )DOT section section_number.
   
   **Explanation:** The )DOT file-tailoring control statement is missing a required table name.
   
   **System action:** Processing stops.
   
   **User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

5. CCQC024S ISPF file tailoring failed for the template_name template in the library_name metadata library.
   
   **Explanation:** An error occurred during ISPF file tailoring for the specified template.
   
   **System action:** Processing stops.
   
   **User response:** Review the Tools Customizer-generated trace data set and the ISPF file tailoring trace data set. To create an ISPF file tailoring trace data set, complete the following steps:
   1. Run Tools Customizer until the error is about to occur.
   
   **System action:** Processing stops.
   
   **User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

6. CCQC025I Customized jobs do not exist because they have not been generated.
   
   **Explanation:** The list of customized jobs cannot be displayed because the product has not been customized for any Db2 entries.
   
   **System action:** None.
   
   **User response:** Complete the steps to customize a product. Customized jobs are generated when all required product, LPAR parameters, and Db2 parameters are defined and at least one Db2 entry on which to customize the product has been selected.

7. CCQC026S The value of the "customized" attribute for the parameter_name parameter in the library_name metadata library template does not match the value that was previously specified. The value is value_name, and the previously specified value is value_name.
   
   **Explanation:** The value for the "customized" attribute for a parameter must match the value that was previously specified.
   
   **System action:** Processing stops.
   
   **User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

8. CCQC027S The job_name customization job was not found in the library_name customization library.
   
   **Explanation:** The selected customization job does not exist in the customization library.
   
   **System action:** Processing stops.
   
   **User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.
Contact IBM Software Support.

**CCQC028S**  The library_name customization library was not found.

**Explanation:** The customization library does not exist.

**System action:** Processing stops.

**User response:** See [Gathering diagnostic information](#).
Contact IBM Software Support.

**CCQC029I**  The customization jobs were generated for Product_name.

**Explanation:** The customization jobs were generated for the specific product.

**System action:** None.

**User response:** No action is required.

**CCQC030S**  The customization jobs cannot be generated because at least one DB2 entry must be associated with this product.

**Explanation:** The product that you are customizing requires at least one Db2 entry to be associated with it before customization jobs can be generated.

**System action:** None.

**User response:** Associate a Db2 entry with the product that you are customizing, and regenerate the jobs.

**CCQC031I**  The jobs were generated for the associated DB2 entries.

**Explanation:** The customization jobs were generated for the Db2 entries that are associated with the product.

**System action:** None.

**User response:** No action is required.

**CCQC032S**  The customization jobs were not generated for Product_name.

**Explanation:** A severe error occurred while the jobs were being generated for the specified product.

**System action:** None.

**User response:** See [Gathering diagnostic information](#).
Contact IBM Software Support.

**CCQC033S**  The customization_library_name has no customized jobs.

**Explanation:** The specified customization library cannot be browsed or edited because it is empty.

**System action:** None.

**User response:** Generate customization jobs for the specified library, and browse or edit the library again.

**CCQC034S**  The specified operation is not allowed.

**Explanation:** Issuing commands against customization jobs from the customization library from an ISPF browse or edit session that was started on the Finish Product Customization panel is restricted.

**System action:** None.

**User response:** To make changes to customization jobs, follow the steps for recustomization.

**CCQC035E**  Before you generate customization jobs, edit the product parameters to select one or more tasks or steps, and then issue the G line command or the GENERATEALL command again.

**Explanation:** One or more tasks or steps must be selected before customization jobs can be generated.

**System action:** None.

**User response:** Edit the product parameters to select one or more tasks or steps. Then, issue the G line command or the GENERATEALL command again.

**CCQC036E**  Before you exit the Product Parameters panel, you must select one or more tasks or steps to generate customization jobs or issue the CANCEL command.

**Explanation:** One or more tasks or steps must be selected to generate customization jobs or the CANCEL command must be issued before you can exit the Product Parameters panel.

**System action:** None.

**User response:** Select one or more tasks or steps, or issue the CANCEL command.

**CCQC037W**  The customization information was not found.

**Explanation:** To use the JOBLIST command, the customization jobs must be regenerated by using the GENERATEALL command or the G line command.

**System action:** None.

**User response:** Issue the GENERATEALL command or the G line command to generate the customization jobs.

**CCQC038W**  The customization information cannot be accessed because the customization_member customization member is being used.

**Explanation:** The customization member that was specified on NNN is currently being used.
System action: None.
User response: Determine why the customization member is in use, release it, and redo the work.

Explanation: The VERIFY/VERIFYOFF command is not active in Generate mode.

System action: None.
User response: No action is required.

Explanation: The VERIFY/VERIFYOFF command is not active in Generate mode because all values saved in Generate mode must already have been verified.

System action: Processing continues.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the warning.

Explanation: While determining if the specified environment index member is valid, the PL/I XML parser issued an exception warning code.

System action: Processing continues.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the warning.

Explanation: While determining if the specified environment index member is valid, the PL/I XML parser issued an exception error code.

System action: Processing continues.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified environment index member contains an unknown element.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified environment index member contains an unknown element.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: Content was found in an element that cannot contain content.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified environment index member is not valid. The element_name element is unknown.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified environment index member is not valid. The element_name element must occur at least minimum_number times.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified environment index member is not valid. The element_name element cannot occur more than maximum_number times.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified environment index member is not valid. Content is required for the element_name element, but content was not found.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified environment index member is not valid. Content is required for the element_name element, but content was not found.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified environment index member is not valid. Content is required for the element_name element, but content was not found.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified environment index member is not valid. Content is required for the element_name element, but content was not found.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified environment index member contains too many characters.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified element does not occur enough times in the environment index member.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified element contains too many characters.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified element occurs too many times in the environment index member.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified element occurs too many times in the environment index member.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified element occurs too many times in the environment index member.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified element contains too many characters.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

Explanation: The specified element contains too many characters.

System action: Processing stops.

Explanation: The specified element contains too many characters.

System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.
CCQD008S The XML structure of the member_name environment index member is not valid. The attribute_name attribute in the element_name element cannot occur more than maximum_number times.

Explanation: The specified attribute occurs too many times in the environment index member.

System action: Processing stops.

User response: See "Gathering diagnostic information" and Contact IBM Software Support.

CCQD009S The XML structure of the member_name environment index member is not valid. The attribute_name attribute in the element_name element must occur at least minimum_number times.

Explanation: The specified attribute does not occur enough times in the environment index member.

System action: Processing stops.

User response: See "Gathering diagnostic information" and Contact IBM Software Support.

CCQD010S The XML structure of the member_name environment index member is not valid. Content is not allowed for the attribute_name attribute in the element_name element, but content was found.

Explanation: Content was found in an attribute that cannot contain content. The name of the attribute and the name of the element that contains it are indicated in the message text.

System action: Processing stops.

User response: See "Gathering diagnostic information" and Contact IBM Software Support.

CCQD011S The XML structure of the member_name environment index member is not valid. Content is required for the attribute_name attribute in the element_name element, but content was not found.

Explanation: An attribute does not contain required content. The name of the attribute and the name of the element that contains it are indicated in the message text.

System action: Processing stops.

User response: See "Gathering diagnostic information" and Contact IBM Software Support.

CCQD012S The XML structure of the member_name environment index member is not valid. The content length for the element_name element exceeds maximum_number characters.

Explanation: An element contains too many characters. The name of the element and the maximum number of allowed characters are indicated in the message text.

System action: Processing stops.

User response: See "Gathering diagnostic information" and Contact IBM Software Support.

CCQD013S The XML structure of the member_name environment index member is not valid. The attribute_name attribute in the element_name element is unknown.

Explanation: The environment index member contains an unknown attribute. The name of the unknown attribute and the name of the element that contains it are indicated in the message text.

System action: Processing stops.

User response: See "Gathering diagnostic information" and Contact IBM Software Support.

CCQD050S The following LPAR serial number is duplicated in the environment index member: serial_number.

Explanation: The environment index member contains duplicate LPAR serial numbers. The duplicate serial number is indicated in the message text.

System action: Processing stops.

User response: See "Gathering diagnostic information" and Contact IBM Software Support.

CCQD051S The following DB2 serial number is duplicated in the environment index member: serial_number.

Explanation: The environment index member contains duplicate Db2 serial numbers. The duplicate serial number is indicated in the message text.

System action: Processing stops.

User response: See "Gathering diagnostic information" and Contact IBM Software Support.

CCQD052S The following Db2 group attach name is duplicated in the environment index member: group_attach_name.

Explanation: The environment index member contains duplicate group attach names.

System action: Processing stops.

User response: See "Gathering diagnostic information" and Contact IBM Software Support.
CCQD053S  The reference to the following DB2 subsystem for a Db2 group attach name is duplicated in the environment index member: subsystem_ID.

Explanation: The environment index member contains duplicate references to a Db2 subsystem for a Db2 group attach name.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQD100W  The member_name product index member is not valid. The PL/I XML parser issued the following exception warning code: code_number.

Explanation: While determining if the product index member is valid, the PL/I XML parser issued the specified exception warning code.

System action: Processing continues.

User response: See the [Enterprise PL/I for z/OS Programming Guide](#) for more information about the specified exception warning code.

CCQD054S  The reference to the following DB2 subsystem for the LPAR_name LPAR is duplicated in the environment index member: subsystem_ID.

Explanation: The environment index member contains duplicate references to a Db2 subsystem for an LPAR. The duplicate subsystem ID is indicated in the message text.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQD055S  The following Db2 group attach name was not found in the environment index member: group_attach_name.

Explanation: A group attach name that is referenced by a Db2 member does not exist in the environment index member.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQD056S  The following LPAR was not found in the environment index member:

LPAR_name.

Explanation: The LPAR does not exist in the environment index member.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQD057S  The following LPAR is duplicated in the environment index member: LPAR_name.

Explanation: The environment index member contains duplicate LPARs. The name of the duplicate LPAR name is indicated in the message text.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.
The XML structure of the member_name product index member is not valid.
Content is required for the element_name element, but content was not found.

Explanation: The specified element does not contain required content.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

The XML structure of the member_name product index member is not valid. The content length for the element_name element exceeds maximum_number characters.

Explanation: The specified element contains too many characters.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

The XML structure of the member_name product index member is not valid. The element_name element cannot occur more than maximum_number times.

Explanation: The specified element occurs too many times in the product index member.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

The XML structure of the member_name product index member is not valid. The element_name element must occur at least minimum_number times.

Explanation: The specified element does not occur enough times in the product index member.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

The XML structure of the member_name product index member is not valid. The attribute_name attribute in the element_name element cannot occur more than maximum_number times.

Explanation: An attribute occurs too many times. The name of the attribute and the element that contains it are indicated in the message text.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

The XML structure of the member_name product index member is not valid. Content is not allowed for the attribute_name attribute in the element_name element, but content was found.

Explanation: An attribute contains content. The name of the attribute and the name of the element that contains it are indicated in the message text.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

The XML structure of the member_name product index member is not valid. The content length for the element_name element exceeds maximum_number characters.

Explanation: The specified element contains too many characters.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.
CCQD113S The XML structure of the member_name product index member is not valid. The attribute_name attribute in the element_name element is unknown.

Explanation: The specified attribute in the product index member is unknown.
System action: Processing stops.
User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQD118S The content of the member_name product index member is not valid. The configuration_ID configuration ID for the configuration-name configuration name is not unique.

Explanation: The specified pack ID could not be found in the metadata library.
System action: Processing stops.
User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQD120S The content of the member_name product index member is not valid. The pack ID pack_ID that is referenced by product prefix product_prefix in the metadata library library_name could not be found.

Explanation: The specified pack environment member contains an unknown element.
System action: Processing continues.
User response: See the [Enterprise PL/I for z/OS Programming Guide](#) for more information about the specified exception warning code.

CCQD300W The member_name product environment member is not valid. The PL/I XML parser issued the following exception warning code: code_number.

Explanation: A different product or component is using the specified customization library.
System action: Processing stops.
User response: See the [Enterprise PL/I for z/OS Programming Guide](#) for more information about the specified exception warning code.

CCQD301S The XML structure of the member_name product environment member is not valid. The element_name element is unknown.

Explanation: The specified product environment member contains an unknown element.
System action: Processing stops.

CCQD312S • CCQD356S

User response: See [Gathering diagnostic information](#)
Contact IBM Software Support.

**CCQD312S** The XML structure of the **member_name** product environment member is not valid. The content length for the **element_name** element exceeds **maximum_number** characters.

Explanation: The specified element contains too many characters.

System action: Processing stops.

User response: See [Gathering diagnostic information](#)
Contact IBM Software Support.

**CCQD313S** The XML structure of the **member_name** product environment member is not valid. The **attribute_name** attribute in the **element_name** element is unknown.

Explanation: The specified attribute in the product environment member is unknown.

System action: Processing stops.

User response: See [Gathering diagnostic information](#)
Contact IBM Software Support.

**CCQD350I** The **subsystem_ID** Db2 subsystem is already associated with this product.

Explanation: The specified Db2 subsystem cannot be added for the product to be customized because it already exists in the product environment in the data store.

System action: None.

User response: Ensure that the Db2 subsystem is specified correctly. If the problem persists, contact IBM Software Support.

**CCQD354E** The **member_name** Db2 member for the **group_attach_name** Db2 group attach name is already associated with this product.

Explanation: The specified Db2 member for the group attach name cannot be added for the product to be customized because it already exists in the product environment in the data store.

System action: None.

User response: Ensure that the Db2 group attach name is specified correctly. If the problem persists, contact IBM Software Support.

**CCQD355E** The **group_attach_name** Db2 group attach name is already associated with this product.

Explanation: The specified Db2 group attach name cannot be added for the product to be customized because it already exists in the product environment in the data store.

System action: Processing stops.

User response: Ensure that the Db2 group attach name is specified correctly. If the problem persists, contact IBM Software Support.

**CCQD356S** The **library_name** metadata library is already associated with the maximum number of allowed Db2 entries for this product.

Explanation: The specified metadata library cannot be associated with more Db2 entries because it is already associated with the number of Db2 entries that are allowed.

System action: Processing stops.

User response: Delete an associated Db2 entry, and associate the specified library with another Db2 entry again.
CCQD357I  The subsystem_ID Db2 subsystem is unassociated with this product.

Explanation:  The specified Db2 SSID was unassociated with the product that you are customizing.

System action:  Processing continues.

User response:  No action is required.

CCQD358I  The member_name Db2 member for the group_attach_name Db2 group attach name is unassociated with this product.

Explanation:  The specified Db2 member for the Db2 group attach name was unassociated with the product that you are customizing.

System action:  Processing continues.

User response:  No action is required.

CCQD359I  The group_attach_name Db2 group attach name is unassociated with this product.

Explanation:  The specified Db2 group attach name was unassociated with the product that you are customizing.

System action:  Processing continues.

User response:  No action is required.

CCQD360S  The library_name metadata library is not associated with the specified Db2 subsystem subsystem_ID.

Explanation:  The specified Db2 subsystem and metadata library are not associated with each other.

System action:  None.

User response:  Ensure that the Db2 subsystem and the metadata library are associated. If the problem persists, contact IBM Software Support.

CCQD361S  The library_name metadata library is not associated with the specified DB2 data sharing group member member_name for the group_attach_name Db2 group attach name.

Explanation:  The specified Db2 data sharing group member for the group attach name and metadata library are not associated with each other.

System action:  None.

User response:  Ensure that the Db2 data sharing group member for the group attach name and the metadata library are associated. If the problem persists, contact IBM Software Support.

CCQD362S  The library_name metadata library is not associated with the specified group_attach_name Db2 group attach name.

Explanation:  The specified Db2 group attach name and metadata library are not associated with each other.

System action:  None.

User response:  Ensure that the Db2 group attach name and the metadata library are associated. If the problem persists, contact IBM Software Support.

CCQD400W  The customization parser issued the code_number warning code while it parsed the product customization member member_name. See the PL/I programming guide for more information about this XML parser continuable exception code.

Explanation:  While determining if the specified member is valid, the PL/I XML parser issued an exception warning code.

System action:  Processing stops.

User response:  See the Enterprise PL/I for z/OS Programming Guide for more information about the warning.

CCQD401S  The customization parser issued the code_number error code while it parsed the product customization member member_name. See the PL/I programming guide for more information about this XML parser terminating exception code.

Explanation:  While determining if the specified member is valid, the PL/I XML parser issued an exception error code.

System action:  Processing stops.

User response:  See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

CCQD500W  The data_set_name data store data set was not found.

Explanation:  Tools Customizer could not find the specified data store data set.

System action:  None.

User response:  No action is required.
CCQD501W  The data_set_name data store data set was not found, so it was created.

Explanation:  Tools Customizer created the specified data set because it could not be found.
System action:  None.
User response:  No action is required.

CCQD502E  The data_set_name data store data set is not writable.

Explanation:  Tools Customizer cannot write to the specified data set.
System action:  None.
User response:  Ensure that the data set is writable.

CCQD503E  The data_set_name data store data set could not be opened with the disposition_type disposition.

Explanation:  Tools Customizer could not open the data set with the specified disposition.
System action:  Processing stops.
User response:  Ensure that you have WRITE authority access to this data set.

CCQD504E  The data_set_name data store data set could not be opened with the option_name option.

Explanation:  Tools Customizer could not open the data set with the specified option.
System action:  Processing stops.
User response:  Ensure that you have WRITE authority access to this data set.

CCQD505E  The data store data set data_set_name already exists in a different volume.

Explanation:  Tools Customizer could not create the specified data set because the specified data set already exists in a different volume. Data store data set names must be unique.
System action:  Processing stops.
User response:  Specify a different data store data set name.

CCQD510I  The DB2 SSID and Db2 group attach name were created.

Explanation:  The Db2 SSID and Db2 group attach name were created and saved in the data store.
System action:  None.
User response:  No action is required.

CCQD511E  The DB2 entry already exists in the list of Db2 entries to be associated.

Explanation:  The Db2 entry cannot be added because it already exists in the list of Db2 entries to be associated.
System action:  None.
User response:  Specify a different Db2 entry.

CCQD512S  An error occurred while a DB2 entry was being created.

Explanation:  A severe error occurred while a Db2 entry was being created.
System action:  Processing stops.

CCQD513E  The specified DB2 entry already exists and is associated with the current product on the Customizer Workplace panel.

Explanation:  The Db2 entry cannot be added because it already exists, and it is already associated with the product to be customized.
System action:  None.
User response:  Press F3 to go to the Customizer Workplace panel to see the Db2 entry, or specify a different Db2 entry.

CCQD514E  A value is required for a DB2 subsystem, a Db2 group attach name, or both before they can be created.

Explanation:  Required information is missing. A Db2 subsystem, a Db2 group attach name, or both must be specified.
System action:  None.
User response:  Specify a Db2 subsystem, a Db2 group attach name, or both.

CCQD515E  The specified DB2 entry already exists in the list of Db2 entries and is already associated with the current product.

Explanation:  The Db2 entry has already been created and associated with the product that you want to customize.
System action:  None.
User response:  Specify a different Db2 entry.
CCQD516E  The specified DB2 entry already exists in the list of DB2 entries on the Associate DB2 Entry with Product panel but is not associated with the current product.

Explanation: The DB2 entry exists, but it must be associated with the product to be customized.

System action: None.

User response: On the Customizer Workplace panel, issue the ASSOCIATE command to associate the DB2 entry with the product.

CCQD517S  An error occurred while a DB2 entry was being copied.

Explanation: A severe error occurred while a DB2 entry was being copied.

System action: Processing stops.

CCQD518E  A value is required for a DB2 subsystem, a DB2 group attach name, or both before they can be copied.

Explanation: Required information is missing. A DB2 subsystem, a DB2 group attach name, or both must be specified.

System action: None.

User response: Specify a DB2 subsystem, a DB2 group attach name, or both.

CCQD519I  The DB2 entry was copied.

Explanation: The DB2 entry was copied and saved in the Tools Customizer data store.

System action: None.

User response: No action is required.

CCQD520S  The DB2 entry was copied to the list of DB2 entries but was not associated because the product is already associated with the allowed number of DB2 entries.

Explanation: The DB2 entry was not completely copied because a product can be associated with only 1200 DB2 entries.

System action: Processing stops.

User response: Remove a DB2 entry from the list, and copy the specified DB2 entry again.

CCQD521E  Line_command is not a valid line command.

Explanation: The specified line command is not valid. Valid line commands are on the panel.

System action: Processing stops.

User response: Specify a valid line command.

CCQD522E  The subsystem_ID DB2 subsystem ID occurs more than once in the list. Each row must be unique.

Explanation: The specified DB2 subsystem ID can be used only once.

System action: Processing stops.

User response: Specify a different DB2 subsystem ID.

CCQD523E  The group_attach_name DB2 group attach name occurs more than once in the list. Each row must be unique.

Explanation: The specified DB2 group attach name can be used only once.

System action: Processing stops.

User response: Specify a different DB2 group attach name.

CCQD524E  The member_name DB2 member for the DB2 group attach name occurs more than once in the list. Each row must be unique.

Explanation: The specified DB2 member for the DB2 group attach name can be used only once.

System action: Processing stops.

User response: Specify a different DB2 member for the DB2 group attach name.

CCQD525I  The DB2 entries were created.

User response: No action is required.

CCQD526E  The subsystem_ID DB2 subsystem ID occurs more than once in the list. Each DB2 subsystem ID must be unique.

Explanation: The specified DB2 subsystem ID can be used only once.

System action: Processing stops.

User response: Specify a different DB2 subsystem ID.
CCQD527I  DB2 group attach names cannot be created during the copy process.
Explanation: The ability to create Db2 group attach names is not available during the copy process.
System action: None.
User response: Create Db2 group attach names by issuing the CREATE command on the Customizer Workplace panel.

CCQD528E  The metadata_library metadata library is already associated with number Db2 entries. The maximum number of associated Db2 entries for this metadata library is 256.
Explanation: A metadata library can be associated with a maximum of 256 Db2 entries. The specified metadata library is already associated with 256.
System action: Processing stops.
User response: Remove an existing association between the specified metadata library and a Db2 entry, and associate the specified the metadata library with another entry.

CCQD529I  At least one row is required.

CCQD560E  The subsystem_ID Db2 subsystem already exists and is associated with the current product on the Customizer Workplace panel.
Explanation: The specified Db2 subsystem exists and is associated with the product that you are customizing.
System action: None.
User response: Specify another Db2 subsystem.

CCQD561E  The member_name Db2 member for the group_attach_name Db2 group attach name already exists and is associated with the current product on the Customizer Workplace panel.
Explanation: The specified Db2 data sharing group for the Db2 group attach name exists and is associated with the product that you are customizing.
System action: None.
User response: Specify another Db2 subsystem.

CCQD562E  The group_attach_name Db2 group attach name already exists and is associated with the current product on the Customizer Workplace panel.
Explanation: The specified Db2 group attach name exists and is associated with the product that you are customizing. The subsystem is in the table on the Customizer Workplace panel.
System action: None.
User response: Specify another Db2 group attach name.

CCQD563E  A value is required for a DB2 subsystem, a Db2 group attach name, or both before they can be created.
Explanation: A Db2 subsystem, a Db2 group attach name, or both are not specified so one or both of them cannot be created.
System action: None.
User response: Specify a value for the Db2 subsystem, the Db2 group attach name, or both.

CCQD565E  The subsystem_ID Db2 subsystem already exists in the list of Db2 entries and is already associated with the current product.
Explanation: The specified subsystem is already associated.
System action: None.
User response: Specify a different Db2 subsystem.

CCQD566E  The member_name Db2 member for the group_attach_name Db2 group attach name already exists in the list of Db2 entries and is already associated with the current product.
Explanation: The specified Db2 member is already associated.
System action: None.
User response: Specify a different Db2 member.

CCQD567E  The group_attach_name Db2 group attach name already exists in the list of Db2 entries and is already associated with the current product.
Explanation: The specified Db2 group attach name is already associated.
System action: None.
User response: Specify another Db2 group attach name.

CCQD568I  product_name is not associated with a DB2 entry.
Explanation: The product that you are trying to customize is not associated with a Db2 entry. Before a
product can be customized, it must be associated with at least one Db2 entry.

**System action:** None.

**User response:** Associate one or more Db2 entries with the product.

---

**CCQD569I** The *product_name* product configuration is not associated with a Db2 entry.

**Explanation:** The configuration for the specified product is not associated with a Db2 entry.

**System action:** None.

**User response:** Associate one or more Db2 entries with the configuration.

---

**CCQD577W** The *mode_name* Db2 mode of the *subsystem_ID* Db2 subsystem is not supported by the product.

**Explanation:** The product does not support the specified Db2 mode.

**System action:** None.

**User response:** Specify a supported Db2 mode.

---

**CCQD578W** The *mode_name* Db2 mode of the *member_name* Db2 member for the *group* Db2 group is not supported by the product.

**Explanation:** The product does not support the specified Db2 mode.

**System action:** None.

**User response:** Specify a supported Db2 mode.

---

**CCQD579W** The *mode_name* Db2 mode of the *group_name* Db2 group attach name is not supported by the product.

**Explanation:** The product does not support the specified Db2 mode.

**System action:** None.

**User response:** Specify a supported Db2 mode.

---

**CCQD580S** The *subsystem_ID* Db2 subsystem was copied to the list of Db2 entries but was not associated because the product is already associated with the allowed number of Db2 entries.

**Explanation:** The copied Db2 subsystem was not associated with the product because the product is associated with the maximum number of Db2 entries.

**System action:** None.

**User response:** Remove an associated Db2 entry and associate the product with the copied Db2 subsystem.

---

**CCQD581S** The *member_name* Db2 member for the *group_attach_name* Db2 group attach name was copied to the list of Db2 entries but was not associated because the product is already associated with the allowed number of Db2 entries.

**Explanation:** The copied Db2 member for the Db2 group attach name was not associated with the product because the product is associated with the maximum number of Db2 entries.

**System action:** None.

**User response:** Remove an associated Db2 entry and associate the product with the copied Db2 member.

---

**CCQD582S** The *group_attach_name* Db2 group attach name was copied to the list of Db2 entries but was not associated because the product is already associated with the allowed number of Db2 entries.

**Explanation:** The copied Db2 group attach name was not associated with the product because the product is associated with the maximum number of Db2 entries.

**System action:** None.

**User response:** Remove an associated Db2 entry and associate the product with the copied Db2 group attach name.

---

**CCQD583I** The *from_Db2* Db2 subsystem was copied to the *to_Db2* Db2 subsystem.

**System action:** None.

**User response:** No action is required.

---

**CCQD584I** The *member_name* DB2 member for the *group_attach_name* DB2 group attach name is copied to the *subsystem_ID* DB2 subsystem.

**Explanation:** The specified Db2 member was copied.

**System action:** None.

**User response:** No action is required.

---

**CCQD585I** The *group_attach_name* Db2 group attach name cannot be copied because a Db2 member is required.

**Explanation:** The specified Db2 group attach name was not copied because a Db2 member was missing.

**System action:** None.

**User response:** No action is required.
The current LPAR is \texttt{LPAR\_name}, but the data store contains information about the LPAR\_name LPAR. You must use the LPAR\_name LPAR to customize the product.

**Explanation:** The LPAR that is stored in the data store data set must be used to customize the product.

**System action:** Processing stops.

**User response:** Use the LPAR that is stored in the data store data set.

The level\_number Db2 level of the subsystem\_name Db2 subsystem is not supported by the product.

**Explanation:** The product does not support the specified Db2 level.

**System action:** Processing continues.

**User response:** Specify a supported level of Db2.

The level\_number Db2 level of the member\_name Db2 member of the group\_name Db2 group is not supported by the product.

**Explanation:** The product does not support the specified Db2 level.

**System action:** Processing continues.

**User response:** Specify a supported level of Db2.

The level\_number Db2 level of the group\_name Db2 group attach name is not supported by the product.

**Explanation:** The product does not support the specified Db2 level.

**System action:** Processing continues.

**User response:** Specify a supported level of Db2.

The subsystem\_ID Db2 subsystem was deleted.

**User response:** No action is required.

The member\_name Db2 member for the group\_attach\_name Db2 group attach name was not deleted.

**Explanation:** An internal error occurred while the specified Db2 member was being deleted.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information.

Contact IBM Software Support.

The member\_name Db2 member for the group\_attach\_name Db2 group attach name was not deleted.

**Explanation:** An internal error occurred while the specified Db2 member was being deleted.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information.

Contact IBM Software Support.

The group\_attach\_name Db2 group attach name was not deleted.

**User response:** No action is required.

The member\_name product customization member is not valid. The PL/I XML parser issued the following exception warning code: code\_number.

**Explanation:** While determining if the XML structure of the product customization member is valid, the PL/I XML parser issued an exception warning code.

**System action:** Processing continues.

**User response:** See the Enterprise PL/I for z/OS Programming Guide for more information about the exception warning code.

The member\_name product customization member is not valid. The PL/I XML parser issued the following exception error code: code\_number.

**Explanation:** While determining if the XML structure of the product customization member is valid, the PL/I XML parser issued an exception error code.

**System action:** Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the exception error code.

**CCQD602S**  The XML structure of the member_name product customization member is not valid. The element_name element is unknown.

Explanation: The data store member contains an unknown element.

System action: Processing stops.

User response: See Gathering diagnostic information.
Contact IBM Software Support.

**CCQD603S**  The XML structure of the member_name product customization member is not valid. Content is not allowed for the element_name element, but content was found.

Explanation: The specified element cannot contain content.

System action: Processing stops.

User response: See Gathering diagnostic information.
Contact IBM Software Support.

**CCQD604S**  The XML structure of the member_name product customization member is not valid. Content is required for the element_name element, but content was not found.

Explanation: The specified element is missing required content.

System action: Processing stops.

User response: See Gathering diagnostic information.
Contact IBM Software Support.

**CCQD605S**  The XML structure of the member_name product customization member is not valid. The content length for the element_name element exceeds maximum_number characters.

Explanation: The specified element contains too many characters.

System action: Processing stops.

User response: See Gathering diagnostic information.
Contact IBM Software Support.

**CCQD606S**  The XML structure of the member_name product customization member is not valid. The element_name element cannot occur more than maximum_number times.

Explanation: The specified element occurs too many times.

System action: Processing stops.

User response: See Gathering diagnostic information.
Contact IBM Software Support.

**CCQD607S**  The XML structure of the member_name product customization member is not valid. The element_name element must occur at least minimum_number times.

Explanation: The specified element does not occur enough times.

System action: Processing stops.

User response: See Gathering diagnostic information.
Contact IBM Software Support.

**CCQD608S**  The XML structure of the member_name product customization member is not valid. The attribute_name attribute in the element_name element cannot occur more than maximum_number times.

Explanation: The specified attribute occurs too many times.

System action: Processing stops.

User response: See Gathering diagnostic information.
Contact IBM Software Support.

**CCQD609S**  The XML structure of the member_name product customization member is not valid. The attribute_name attribute in the element_name element must occur at least minimum_number times.

Explanation: The specified attribute does not occur enough times.

System action: Processing stops.

User response: See Gathering diagnostic information.
Contact IBM Software Support.

**CCQD610S**  The XML structure of the member_name product customization member is not valid. Content is not allowed for the attribute_name attribute in the element_name element, but content was found.

Explanation: The specified attribute cannot contain content.

System action: Processing stops.
CCQD611S • CCQD801S

User response: See [Gathering diagnostic information](#). Contact IBM Software Support.

**CCQD611S** The XML structure of the *member_name* product customization member is not valid. Content is required for the *attribute_name* attribute in the *element_name* element, but content was not found.

Explanation: The specified attribute does not contain required content.

System action: Processing stops.

User response: See [Gathering diagnostic information](#). Contact IBM Software Support.

**CCQD612S** The XML structure of the *member_name* product customization member is not valid. The content length for the *element_name* element exceeds maximum_number characters.

Explanation: The specified element contains too many characters.

System action: Processing stops.

User response: See [Gathering diagnostic information](#). Contact IBM Software Support.

**CCQD613S** The XML structure of the *member_name* product customization member is not valid. The *attribute_name* attribute in the *element_name* element is unknown.

Explanation: The specified attribute in the data store member is unknown.

System action: Processing stops.

User response: See [Gathering diagnostic information](#). Contact IBM Software Support.

**CCQD614S** The content of the *member_name* product customization member is not valid. The value of the *element_name* element is not valid. The value is *value_name*.

Explanation: The specified value is not valid.

System action: Processing stops.

User response: See [Gathering diagnostic information](#). Contact IBM Software Support.

**CCQD700W** The *member_name* Db2 data member is not valid. The PL/I XML parser issued the following exception warning code: code_number.

Explanation: While determining if the XML structure of the Db2 data member is valid, the PL/I XML parser issued an exception warning code.

System action: Processing continues.

User response: See [the Enterprise PL/I for z/OS Programming Guide](#) for more information about the exception warning code.

**CCQD701S** The *member_name* Db2 data member is not valid. The PL/I XML parser issued the following exception error code: code_number.

Explanation: While determining if the XML structure of the Db2 data member is valid, the PL/I XML parser issued an exception error code.

System action: Processing continues.

User response: See [the Enterprise PL/I for z/OS Programming Guide](#) for more information about the exception error code.

**CCQD750W** The *value_number* value in the Db2 parameter *parameter_name* was skipped because only maximum_number values are allowed.

Explanation: The specified value was skipped because it exceeds the number of allowed values in the Db2 parameter.

System action: Processing continues.

User response: No action is required. To stop this message from being issued, remove the extra values from the Db2 parameter.

**CCQD800W** The *member_name* LPAR data member is not valid. The PL/I XML parser issued the following exception warning code: code_number.

Explanation: While determining if the XML structure of the LPAR data member is valid, the PL/I XML parser issued an exception warning code.

System action: Processing continues.

User response: See [the Enterprise PL/I for z/OS Programming Guide](#) for more information about the exception warning code.

**CCQD801S** The *member_name* LPAR data member is not valid. The PL/I XML parser issued the following exception error code: code_number.

Explanation: While determining if the XML structure of the LPAR data member is valid, the PL/I XML parser issued an exception error code.

System action: Processing continues.

User response: See [the Enterprise PL/I for z/OS Programming Guide](#) for more information about the exception error code.
For more information about the exception error code.

**CCQD850W** The value number value in the LPAR parameter parameter name was skipped because only maximum number values are allowed.

Explanation: The specified value was skipped because it exceeds the number of allowed values in the LPAR parameter.

System action: Processing continues.

User response: No action is required. To stop this message from being issued, remove the extra values from LPAR parameter.

**CCQD851I** The subsystem ID Db2 subsystem is copied to the member name Db2 member for the group attach name Db2 group attach name.

User response: No action is required.

**CCQD852I** The member name Db2 member for the group attach name Db2 group attach name is copied to the member name Db2 member for the group attach name Db2 group attach name.

User response: No action is required.

**CCQD854I** The member name Db2 member for the group attach name Db2 group attach name is copied to multiple Db2 entries.

User response: No action is required.

**CCQD900W** The member name product data member is not valid. The PL/I XML parser issued the following exception warning code: code number.

Explanation: While determining if the XML structure of the product data member is valid, the PL/I XML parser issued an exception warning code.

System action: Processing continues.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the exception warning code.

**CCQD901S** The member name product data member is not valid. The PL/I XML parser issued the following exception error code: code number.

Explanation: While determining if the XML structure of the product data member is valid, the PL/I XML parser issued an exception error code.

System action: Processing continues.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the exception warning code.

**CCQD950W** The value number value in the product parameter parameter name was skipped because only maximum number values are allowed.

Explanation: The specified value was skipped because it exceeds the number of allowed values in the product parameter.

System action: Processing continues.

User response: No action is required. To stop this message from being issued, remove the extra values from product parameter.

**CCQD960I** The subsystem ID Db2 subsystem was changed to the member name Db2 member for the group attach name Db2 group attach name.

User response: No action is required.

**CCQD961I** The member name Db2 member for the group attach name Db2 group attach name was changed to the subsystem ID Db2 subsystem.

User response: No action is required.

**CCQD962I** The member name Db2 member for the group attach name Db2 group attach name was changed to the member name Db2 member for the group attach name Db2 group attach name.

User response: No action is required.

**CCQD963E** The DB2 group attach name cannot be blank when the Db2 subsystem ID is blank.

Explanation: A Db2 group attach name, Db2 subsystem ID, or both must be specified.

System action: Processing stops.

User response: Specify a Db2 group attach name, Db2 subsystem ID, or both.

**CCQE000S** The specified message field name or message message ID was not found.

Explanation: An error occurred while displaying a message field name or the specified message.

System action: Processing stops.

User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQE001E  An incorrect trace level was specified.
Valid trace levels are 0 - 4.
Explanation: A wrong trace level was specified. Valid trace levels are 0 - 4.
System action: Processing stops.
User response: Specify a valid trace level 0 - 4.

CCQF028E  An asterisk was improperly specified in a filter argument.
Explanation: An asterisk, which is treated as data, is embedded in the filter arguments. A generic filter argument is specified by placing the asterisk in the last nonblank position of the argument. No rows match the filter arguments, so all rows will be shown.
System action: Processing stops.
User response: Specify a valid filter argument.

CCQF029I  More Db2 entries are associated with the specified product. All Db2 entries are listed.
System action: None.
User response: No action is required.

CCQF080I  The customized jobs for the product that you are customizing are stored in this data set.
System action: None.
User response: No action is required.

CCQF081I  The JCL must be browsed or edited.
Explanation: You can either browse or edit the JCL.
System action: None.
User response: No action is required.

CCQF082E  The sort command command has an invalid sort field or order. The valid fields are list-of-column-names. The valid sort orders are A (for ascending) or D (for descending).
Explanation: An invalid sort field or order was specified.
System action: Processing stops.
User response: Specify a valid sort field or order.

CCQF083E  The sort-command command is missing a sort field.
Explanation: A sort field must be specified.
System action: Processing stops.
User response: Specify a valid sort field.

CCQF084E  The sort-command command has more than two sort fields specified.
Explanation: The specified sort command included more than two sort fields. The sort command can have up to two fields specified.
System action: Processing stops.
User response: Specify only one or two sort fields.

CCQF085E  A sort order was specified incorrectly in the sort-command command. A sort order can be specified only after a field name.
Explanation: Valid orders are A (for ascending) or D (for descending).
System action: Processing stops.
User response: Specify a valid sort order after a field name.

CCQF086E  The sort-command command has an invalid sort field. The valid fields are list-of-the-table-column-names.
Explanation: An invalid sort field was specified.
System action: Processing stops.
User response: Specify a valid sort field.

CCQF087E  The sort-command command has an invalid sort order. The valid orders are A (for ascending) or D (for descending).
Explanation: An invalid sort order was specified.
System action: Processing stops.
User response: Specify a valid sort order.

CCQF088E  No row match the specified filter argument. All rows are shown.
Explanation: No rows match the selected values.
System action: Processing stops.
User response: Specify a matched value for filtering.
Type the search arguments to filter objects. A generic filter argument is a search argument of the form AA*.

**Explanation:** In a generic filter argument, only the characters up to the asterisk (*) are compared. The * must be placed in the last nonblank position of the argument. Asterisks embedded in the argument are treated as data.

**System action:** None.
**User response:** No action is required.

To show the panel instructions section, specify a slash (/). To hide the panel instructions section, remove the slash.

**System action:** None.
**User response:** No is action required.

To show the Products to Customize section, specify a slash (/). To hide the Products to Customize section, remove the slash. The Product to Customize section can be shown or hidden only on the Customizer Workplace panel.

**System action:** None.
**User response:** No is action required.

To show the Usage Notes section, specify a slash (/). To hide the Usage Notes section, remove the slash. The Usage Notes section can be shown only on the Product Parameters, LPAR Parameters, and Db2 Parameters panels.

**System action:** None.
**User response:** No action is required.

The specified values have been saved.

**System action:** None.
**User response:** No action is required.

Displays the Panel Display Options panel. Use this panel to select which information to display on panels.

**System action:** None.
**User response:** No action is required.

The fully qualified name of the data set into which you want to copy the current user profile. If the data set name exceeds 42 characters, enclose the name in quotation marks. ALTER or UPDATE authorization to this data set is required.

**System action:** None.
**User response:** No action is required.

The volume name in which the data set will reside. If left blank, the volume name will be decided by the system.

**System action:** None.
**User response:** No action is required.

To show the panel instructions section, specify a slash (/). To hide the panel instructions section, remove the slash.

**System action:** None.
**User response:** No is action required.

**CCQH001W** The specified option option_name is not valid.

**Explanation:** The option that was specified is not a valid option on the panel.

**System action:** Tools Customizer stops.
**User response:** Specify a valid option on the panel.

Before you customize a product, verify your user settings.

**Explanation:** The user settings must be verified before a product can be customized.

**System action:** Tools Customizer stops.
**User response:** Verify the user settings.

Check the user settings. One or more current values are not valid.

**Explanation:** One or more of the values in the user settings is not valid.

**System action:** Tools Customizer stops.
**User response:** Ensure that the specified values for the user settings are valid.

Before you use Tools Customizer, you must select option 0 to verify your user settings.

**Explanation:** The user settings must be changed before a product can be customized.

**System action:** Tools Customizer stops.
**User response:** Change the user settings.
You must select option 0 to change your user settings.

Explanation: User settings must be changed before a product can be customized.

System action: Tools Customizer stops.

User response: Change the user settings.

The XML structure of the member_name Db2 parameter metadata member is not valid. The PL/I XML parser issued the following exception warning code: code_number.

Explanation: While determining if the Db2 parameter metadata member is valid, the PL/I XML parser issued an exception warning code.

System action: Processing continues.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the exception warning code.

The XML structure of the member_name Db2 parameter metadata member is not valid. The PL/I XML parser issued an exception error code: code_number.

Explanation: While determining if the Db2 parameter metadata member is valid, the PL/I XML parser issued an exception error code.

System action: Processing stops.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the exception error code.

The XML structure of the member_name Db2 parameter metadata member is not valid. The element_name element is unknown.

Explanation: The specified element in the Db2 parameter metadata member is unknown.

System action: Processing stops.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the specified element.

The XML structure of the member_name Db2 parameter metadata member is not valid. The element_name element cannot occur more than maximum_number times.

Explanation: The specified element contains too many characters.

System action: Processing stops.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the specified element.

The XML structure of the member_name Db2 parameter metadata member is not valid. The element_name element must be at least minimum_number characters.

Explanation: The specified element does not contain enough characters.

System action: Processing stops.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the specified element.

The XML structure of the member_name Db2 parameter metadata member is not valid. The attribute_name attribute in the element_name element cannot occur more than maximum_number times.

Explanation: The specified attribute does not occur enough times.

System action: Processing stops.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the specified attribute.
Explanation: The specified attribute occurs too many times.

System action: Processing stops.

CCQI009S The XML structure of the member_name Db2 parameter metadata member is not valid. The attribute_name attribute in the element_name element must occur at least minimum_number times.

Explanation: The specified attribute did not occur enough times.

System action: Processing stops.

CCQI010S The XML structure of the member_name Db2 parameter metadata member is not valid. Content is not allowed for the attribute_name attribute in the element_name element, but content was found.

Explanation: The specified attribute cannot have content.

System action: Processing stops.

CCQI011S The XML structure of the member_name Db2 parameter metadata member is not valid. Content is required for the attribute_name attribute in the element_name element, but content was not found.

Explanation: The specified attribute is missing required content.

System action: Processing stops.

CCQI012S The XML structure of the member_name Db2 parameter metadata member is not valid. The content length for the element_name element cannot exceed maximum_number characters.

Explanation: The specified element contains too many characters.

System action: Processing stops.

CCQI013S The XML structure of the member_name Db2 parameter metadata member is not valid. The attribute_name attribute in the element_name element is unknown.

Explanation: The specified attribute in the Db2 parameter metadata member is unknown.

System action: Processing stops.

CCQI014S The content of the member_name Db2 parameter metadata member is not valid because the value of the element_name element is incorrect. The value is value_name.

Explanation: The specified value of the element is not a valid value.

System action: Processing stops.

CCQI015S The content of the DB2 parameter metadata member is not valid because the value of the attribute_name attribute in the element_name element is incorrect. The value of the attribute is value_name.

Explanation: The specified value of the attribute is not a valid value.

System action: Processing stops.

CCQI016S The content of the DB2 parameter metadata member is not valid because the data type of the element_name element is incorrect. The value is value_name.

Explanation: The specified data type is not a valid data type.

System action: Processing stops.

CCQI017S The content of the DB2 parameter metadata member is not valid because the data type of the attribute_name attribute in the element_name element is incorrect. The value of the attribute is value_name.

Explanation: The specified data type is not a valid data type.

System action: Processing stops.

CCQI050S  The member_name Db2 parameter metadata member was not found in the data_set_name data set.

Explanation: Tools Customizer could not find the specified Db2 parameter metadata member.

System action: Processing stops.

User response: See Gathering diagnostic information.

Contact IBM Software Support.

CCQI051S  The parameter_name LPAR parameter in the template_name template does not have associated metadata in the member_name LPAR parameter metadata member.

Explanation: The specified template does not contain metadata for an LPAR parameter. The name of the LPAR parameter metadata member, the name of the LPAR parameter, and the name of the template are indicated in the message text.

System action: Processing stops.

User response: See Gathering diagnostic information.

Contact IBM Software Support.

CCQI052S  The parameter_name product parameter in the template_name template does not have associated metadata in the member_name product parameter metadata member.

Explanation: The specified template does not contain metadata for a product parameter. The name of the product parameter metadata member, the name of the product parameter, and the name of the template are indicated in the message text.

System action: Processing stops.

User response: See Gathering diagnostic information.

Contact IBM Software Support.

CCQI053E  The following metadata data set could not be opened: data_set_name.

Explanation: Tools Customizer could not open the specified LPAR metadata data set.

System action: Processing stops.

User response: Ensure the metadata data set was specified correctly.

CCQI054S  The CCQ$$Db2 Db2 parameter metadata member was not found in the Tools Customizer metadata data set.

Explanation: Tools Customizer could not find the specified Db2 parameter metadata member in the specified Tools Customizer metadata data set.

System action: Processing stops.

User response: See Gathering diagnostic information.

Contact IBM Software Support.

CCQI055S  The CCQ$$LPR LPAR parameter metadata member was not found in the data_set_name data set.

Explanation: Tools Customizer could not find the specified LPAR parameter metadata member.

System action: Processing stops.

User response: See Gathering diagnostic information.

Contact IBM Software Support.

CCQI056S  The member_name product parameter metadata member was not found in the data_set_name data set.

Explanation: The product parameter metadata member was not found in the specified data set.

System action: Processing stops.

User response: See Gathering diagnostic information.

Contact IBM Software Support.

CCQI057I  Product_name does not have any Db2 parameters.

Explanation: Db2 parameters are not required to customize the specified product.

System action: Processing continues.

User response: No action is required.

CCQI058I  Product_name does not have any LPAR parameters.

Explanation: LPAR parameters are not required to customize the specified product.

System action: Processing continues.
User response: No action is required.

Explanation: Associated metadata is missing for the specified Db2 parameter in a task.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI061S The parameter_name LPAR parameter in the task_description task condition does not have associated metadata in the member_name LPAR parameter metadata member.

Explanation: Associated metadata is missing for the specified LPAR parameter in a task.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI062S The parameter_name product parameter in the task_description task condition does not have associated metadata in the member_name product parameter metadata member.

Explanation: Associated metadata is missing for the specified product parameter in a task.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI063S The parameter_name Db2 parameter in the task_description task and the step_description step does not have associated metadata in the member_name Db2 parameter metadata member.

Explanation: Associated metadata is missing for the specified Db2 parameter in a task and step.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI064S The parameter_name LPAR parameter in the task_description task and the step_description step does not have associated metadata in the member_name LPAR parameter metadata member.

Explanation: Associated metadata is missing for the specified LPAR parameter in a task and step.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

**CCQI069S**  
Product metadata does not support multiple configurations, but the template_name product template contains the parameter_name parameter. Enable multiple configurations support for this product, and try again.

**Explanation:** The specified template contains a parameter for multiple configurations, but the product is not enabled to support multiple configurations.

**System action:** Processing stops.

**User response:** Enable multiple configurations support, and try again.

---

**CCQI073S**  
The XML structure of the member_name Db2 parameter member_name is not valid. The default length for the parameter_name parameter element exceeds the length of the parameter. The default length is default_length, and the specified length is specified_length. The default length will be truncated accordingly.

**Explanation:** The specified length cannot be shorter than the default length.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information.
Contact IBM Software Support.

---

**CCQI074S**  
The XML structure of the member_name LPAR parameter metadata member is not valid. The following value of the attribute_name attribute in the element_name element already exists: value_name.

**Explanation:** The specified value already exists for an attribute.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information.
Contact IBM Software Support.

---

**CCQI075S**  
The XML structure of the member_name product parameter metadata member is not valid. The following value of the attribute_name attribute in the element_name element already exists: value_name.

**Explanation:** The specified value already exists for an attribute.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information.
Contact IBM Software Support.

---

**CCQI076S**  
The XML structure of the member_name Db2 parameter metadata member is not valid. The parameter_name parameter refers to the section-name section. This section was not found in the Db2 parameter metadata member.

**Explanation:** The specified value already exists for an attribute.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information.
Contact IBM Software Support.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI077S The XML structure of the member_name LPAR parameter metadata member is not valid. The parameter_name parameter refers to the section-name section. This section was not found in the LPAR parameter metadata member.

Explanation: The specified parameter refers to a section that is not in the LPAR parameter metadata member.

System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI078S The XML structure of the member_name product parameter metadata member is not valid. The parameter_name parameter refers to the section-name section. This section was not found in the product parameter metadata member.

Explanation: The specified parameter refers to a section that is not in the product parameter metadata member.

System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI080S The content of the member_name Db2 parameter metadata member is not valid because the value of the attribute_name attribute in the element_name element is incorrect. The value of the attribute is value_name.

Explanation: The specified value for an attribute in the Db2 parameter metadata member is not valid.

System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI081S The content of the member_name LPAR parameter metadata member is not valid because the value of the attribute_name attribute in the element_name element is incorrect. The value of the attribute is value_name.

Explanation: The specified value for an attribute in the LPAR parameter metadata member is not valid.

System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI082S The content of the member_name product parameter metadata member is not valid because the value of the attribute_name attribute in the element_name element is incorrect. The value of the attribute is value_name.

Explanation: The specified value for an attribute in the product parameter metadata member is not valid.

System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI088I The command command is not active in BROWSE mode.

Explanation: The specified command can be entered only in Edit mode.

System action: Processing continues.
User response: Put the panel in Edit mode and reissue the command.

CCQI089I The command command is already active.

System action: Processing continues.
User response: No action required.

CCQI090S The product-defined Db2 parameter parameter_name in the member_name parameter metadata member references the section_ID section ID, but this ID does not exist in either the parameter metadata member or the Db2 parameter metadata member.

Explanation: A section that does not exist in the parameter metadata member or the Db2 parameter metadata member is referenced by the specified Db2 parameter.

System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI091S The product-defined LPAR parameter in the member_name parameter metadata member references the section_ID section ID, but this ID does not exist in either the parameter metadata member or the LPAR parameter metadata member.

Explanation: A section that does not exist in the parameter metadata member or the LPAR parameter metadata member is being referenced by the specified LPAR parameter.
CCQI092S  The overridden DB2 parameter  
 parameter_name in the member_name  
 parameter metadata member does not exist in the Db2 parameter metadata member.  

Explanation:  The specified parameter does not exist.  
System action:  Processing stops.  
User response:  See Gathering diagnostic information  
Contact IBM Software Support.  

CCQI093S  The overridden LPAR parameter  
 parameter_name in the member_name  
 parameter metadata member does not exist in the LPAR parameter metadata member.  

Explanation:  The specified parameter does not exist.  
System action:  Processing stops.  
User response:  See Gathering diagnostic information  
Contact IBM Software Support.  

CCQI094S  The CCQ$$PRD product customization  
 parameter metadata member was not found in the data_set_name data set.  

Explanation:  The specified data set must contain the CCQ$$PRD product customization parameter metadata member  
System action:  Processing stops.  
User response:  See Gathering diagnostic information  
Contact IBM Software Support.  

CCQI100S  The XML structure of the member_name  
 LPAR parameter metadata member is not valid. The PL/I XML parser issued the following exception error code:  
 code_number.  

Explanation:  While determining if the LPAR parameter metadata member is valid, the PL/I XML parser issued an exception error code.  
System action:  Processing stops.  
User response:  See the Enterprise PL/I for z/OS Programming Guide for more information about the exception warning code.  

CCQI101S  The XML structure of the member_name  
 LPAR parameter metadata member is not valid. The element_name element is unknown.  

Explanation:  The specified element in the LPAR parameter metadata member is unknown.  
System action:  Processing stops.  
User response:  See Gathering diagnostic information  
Contact IBM Software Support.  

CCQI102S  The XML structure of the member_name  
 LPAR parameter metadata member is not valid. Content is not allowed for the element_name element, but content was found.  

Explanation:  The specified element cannot contain content.  
System action:  Processing stops.  
User response:  See Gathering diagnostic information  
Contact IBM Software Support.  

CCQI103S  The XML structure of the member_name  
 LPAR parameter metadata member is not valid. Content is required for the element_name element, but content was not found.  

Explanation:  The specified element requires content.  
System action:  Processing stops.  
User response:  See Gathering diagnostic information  
Contact IBM Software Support.  

CCQI104S  The XML structure of the member_name  
 LPAR parameter metadata member is not valid. Content is required for the element_name element, but content was not found.  

Explanation:  The specified element requires content.  
System action:  Processing stops.  
User response:  See Gathering diagnostic information  
Contact IBM Software Support.  

CCQI105S  The XML structure of the member_name  
 LPAR parameter metadata member is not valid. The content length for the element_name element cannot exceed maximum_number characters.  

Explanation:  The specified element contains too many characters.
CCQI106S  The XML structure of the member_name LPAR parameter metadata member is not valid. The content length for the element_name element must be at least minimum_number characters.

Explanation:  The specified element does not contain enough characters.

System action:  Processing stops.
User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQI107S  The XML structure of the member_name LPAR parameter metadata member is not valid. The element_name element must occur at least minimum_number times.

Explanation:  The specified element does not occur enough times.

System action:  Processing stops.
User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQI108S  The XML structure of the member_name LPAR parameter metadata member is not valid. The attribute_name attribute in the element_name element cannot occur more than maximum_number times.

Explanation:  The specified attribute occurs too many times.

System action:  Processing stops.
User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQI109S  The XML structure of the member_name LPAR parameter metadata member is not valid. The attribute_name attribute in the element_name element must occur at least minimum_number times.

Explanation:  The specified attribute did not occur enough times.

System action:  Processing stops.
User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQI110S  The XML structure of the member_name LPAR parameter metadata member is not valid. Content is not allowed for the attribute_name attribute in the element_name element, but content was found.

Explanation:  The specified attribute cannot have content.

System action:  Processing stops.
User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQI111S  The XML structure of the member_name LPAR parameter metadata member is not valid. Content is required for the attribute_name attribute in the element_name element, but content was not found.

Explanation:  The specified attribute is missing required content.

System action:  Processing stops.
User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQI112S  The XML structure of the member_name LPAR parameter metadata member is not valid. The content length for the element_name element cannot exceed maximum_number characters.

Explanation:  The specified element contains too many characters.

System action:  Processing stops.
User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQI113S  The XML structure of the member_name LPAR parameter metadata member is not valid. The attribute_name attribute in the element_name element is unknown.

Explanation:  The specified attribute in the LPAR parameter metadata member is unknown.

System action:  Processing stops.
User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQI114S  The content of the member_name LPAR parameter metadata member is not valid because the value of the element_name element is incorrect. The value is value_name.

Explanation:  The specified value for an element in the
CCQI115S  LPAR parameter metadata member is not valid.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI116S  The content of the member_name LPAR parameter metadata member is not valid because the value of the attribute_name attribute in the element_name element is incorrect. The value of the attribute is value_name.
Explanation: The specified value for an attribute in the LPAR parameter metadata member is not valid.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI117S  The content of the member_name LPAR parameter metadata member is not valid because the data type of the element_name element is incorrect. The value is value_name.
Explanation: The specified data type value for an element in the LPAR parameter metadata member is not valid.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI118S  The XML structure of the member_name LPAR parameter metadata member is not valid. The element_name attribute in the element_name parameter contains duplicate values for the element_name element. The duplicate value is value_name.
Explanation: An element contains the specified duplicate value.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI119S  The XML structure of the member_name discover metadata member is not valid. The element_name attribute in the element_name parameter contains duplicate values for the element_name parameter. The duplicate value is value_name.
Explanation: An element contains the specified duplicate value.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI120S  The XML structure of the member_name Db2 parameter metadata member is not valid. The element_name attribute in the parameter_name parameter contains duplicate values for the element_name element. The duplicate value is value_name.
Explanation: An element contains the specified duplicate value.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI121S  The XML structure of the member_name product customization parameter metadata member is not valid. The element_name attribute in the parameter_name parameter contains duplicate values for the element_name element. The duplicate value is value_name.
Explanation: An element contains the specified duplicate value.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI122S  The XML structure of the member_name discover metadata member is not valid. The element_name attribute in the element_name parameter contains duplicate values for the element_name parameter. The duplicate value is value_name.
Explanation: An element contains the specified duplicate value.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI123S  The XML structure of the member_name discover metadata member is not valid. The element_name attribute in the element_name parameter contains duplicate values for the element_name parameter. The duplicate value is value_name.
Explanation: An element contains the specified duplicate value.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI124S  The XML structure of the member_name product customization parameter metadata member is not valid. The element_name attribute in the parameter_name parameter contains duplicate values for the element_name parameter. The duplicate value is value_name.
Explanation: An element contains the specified duplicate value.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQI200W The XML structure of the member_name information metadata member is not valid. The PL/I XML parser issued the following exception warning code: code_number.

Explanation: While determining if the information metadata member is valid, the PL/I XML parser issued an exception warning code.
System action: Processing continues.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQI201S The XML structure of the member_name information metadata member is not valid. The PL/I XML parser issued the following exception error code: code_number.

Explanation: While determining if the information metadata member is valid, the PL/I XML parser issued an exception error code.
System action: Processing stops.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the exception warning code.

CCQI202S The XML structure of the member_name information metadata member is not valid. The element_name element is unknown.

Explanation: The specified element in the information metadata member is unknown.
System action: Processing stops.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQI203S The XML structure of the member_name information metadata member is not valid. Content is not allowed for the element_name element, but content was found.

Explanation: The specified element cannot contain content.
System action: Processing stops.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQI204S The XML structure of the member_name information metadata member is not valid. Content is required for the element_name element, but content was not found.

Explanation: The specified element requires content.
System action: Processing stops.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQI205S The XML structure of the member_name information metadata member is not valid. The content length for the element_name element cannot exceed maximum_number characters.

Explanation: The specified element contains too many characters.
System action: Processing stops.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQI206S The XML structure of the member_name information metadata member is not valid. The content length for the element_name element must be at least minimum_number characters.

Explanation: The specified element does not contain enough characters.
System action: Processing stops.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQI207S The XML structure of the member_name information metadata member is not valid. The element_name element must occur at least minimum_number times.

Explanation: The specified element does not occur enough times.
System action: Processing stops.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQI208S The XML structure of the member_name information metadata member is not valid. The attribute_name attribute in the element_name element cannot occur more than maximum_number times.

Explanation: The specified attribute occurs too many times.
System action: Processing stops.
CCQI209S • CCQI217S

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI209S The XML structure of the *member_name* information metadata member is not valid. The *attribute_name* attribute in the *element_name* element must occur at least *minimum_number* times.

Explanation: The specified attribute did not occur enough times.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI210S The XML structure of the *member_name* information metadata member is not valid. Content is not allowed for the *attribute_name* attribute in the *element_name* element, but content was found.

Explanation: The specified attribute cannot have content.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI211S The XML structure of the *member_name* information metadata member is not valid. Content is required for the *attribute_name* attribute in the *element_name* element, but content was not found.

Explanation: The specified attribute is missing required content.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI212S The XML structure of the *member_name* information metadata member is not valid. The content length for the *element_name* element cannot exceed *maximum_number* characters.

Explanation: The specified element contains too many characters.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI213S The XML structure of the *member_name* information metadata member is not valid. The *attribute_name* attribute in the *element_name* element is unknown.

Explanation: The specified attribute in the information metadata member is unknown.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI214S The content of the *member_name* information metadata member is not valid because the value of the *element_name* element is incorrect. The value is *value_name*.

Explanation: The specified value for an element in the information metadata member is not valid.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI215S The content of the *member_name* information metadata member is not valid because the value of the *attribute_name* attribute in the *element_name* element is incorrect. The value is *value_name*.

Explanation: The specified value for an attribute in the information metadata member is not valid.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI216S The content of the *member_name* information metadata member is not valid because the data type of the *element_name* element is incorrect. The value is *value_name*.

Explanation: The specified data type value for an element in the information metadata member is not valid.

System action: Processing stops.

User response: See [Gathering diagnostic information](#) Contact IBM Software Support.

CCQI217S The content of the *member_name* information metadata member is not valid because the data type of the *attribute_name* attribute in the *element_name* element is incorrect. The value is *value_name*.
Explaination: The specified data type value for an attribute in the information metadata member is not valid.

System action: Processing stops.

CCQI218S The content of the member_name information metadata member is not valid. The length of the value_name value that of the attribute_name attribute is longer than the value_name value of the attribute_name attribute.

Explaination: The first specified value cannot be longer than the second specified value.

System action: Processing stops.

CCQI219S The content of the member_name information metadata member is not valid. The value_name value of the attribute_name attribute contains the value_name value.

Explaination: The first specified value cannot be longer than the second specified value.

System action: Processing stops.

CCQI220S The XML structure of the member_name information metadata member is not valid. Content for the attribute_name attribute in the element_name element exceed maximum_number characters.

Explaination: The specified attribute contains too many characters.

System action: Processing stops.

CCQI223S The XML structure of the member_name information metadata member is not valid. The value that is specified for the Db2 Level already exists. The value is value_name.

Explaination: The specified value already exists.

System action: Processing stops.

User response: Specify a different Db2 mode. If the problem persists, contact IBM Software Support.

CCQI224S The XML structure of the member_name information metadata member is not valid. The value that is specified for the Db2 Mode already exists. The value is value_name.

Explaination: The specified value already exists.

System action: Processing stops.

User response: Specify a different Db2 mode. If the problem persists, contact IBM Software Support.

CCQI225S The information metadata member was not found in the data_set_name data set.

Explaination: Tools Customizer could not find the information metadata member in the specified data set.

System action: Processing stops.

User response: If this message was issued on the Specify the Metadata Library (CCQPHLQ) panel, specify the product metadata library. The name of this library is hlq.SARYDENU.

Do not specify the Tools Customizer metadata library, which is hlq.SCQDENU.

If the problem persists, identify the name of the Tools Customizer trace data set and contact IBM Software Support.

CCQI225E The member_name member was not accessible in the data_set_name data set.

Explaination: The specified member could not be accessed in the data set.

System action: Processing stops.

User response: Specify the correct metadata library.

CCQI225S The information metadata member was not found in the library_name component metadata library that is part of the library_name pack metadata library. The name of the pack is pack_name.

Explaination: The specified component metadata library does not contain the information metadata member.

System action: Processing stops.

User response: Specify the correct metadata library.

CCQI225S The library_name Tools Customizer metadata library is not current. Update the metadata library on the Tools Customizer Settings panel.

Explaination: The specified metadata library is not current.

System action: Processing stops.
User response: Specify a current metadata library on the Tools Customizer Settings panel.

**CCQI300W**  The XML structure of the `member_name` sequence metadata member is not valid. The PL/I XML parser issued the following exception warning code: `code_number`.

Explanation: While determining if the sequence metadata member is valid, the PL/I XML parser issued an exception warning code.

System action: Processing continues.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the exception warning code.

**CCQI301S**  The XML structure of the `member_name` sequence metadata member is not valid. The PL/I XML parser issued the following exception error code: `code_number`.

Explanation: While determining if the sequence metadata member is valid, the PL/I XML parser issued an exception error code.

System action: Processing stops.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the exception error code, and contact IBM Software Support.

**CCQI302S**  The XML structure of the `member_name` sequence metadata member is not valid. The `element_name` element is unknown.

Explanation: The specified element in the sequence metadata member is unknown.

System action: Processing stops.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the exception error code, and contact IBM Software Support.

**CCQI303S**  The XML structure of the `member_name` sequence metadata member is not valid. Content is not allowed for the `element_name` element, but content was found.

Explanation: The specified element cannot contain content.

System action: Processing stops.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the exception error code, and contact IBM Software Support.
CCQI309S  The XML structure of the member_name sequence metadata member is not valid. The attribute_name attribute in the element_name element must occur at least minimum_number times.

Explanation: The specified attribute does not occur enough times.

System action: Processing stops.

CCQI310S  The XML structure of the member_name sequence metadata member is not valid. Content is not allowed for the attribute_name attribute in the element_name element, but content was found.

Explanation: The specified attribute cannot contain content.

System action: Processing stops.

CCQI311S  The XML structure of the member_name sequence metadata member is not valid. Content is required for the attribute_name attribute in the element_name element, but content was not found.

Explanation: The specified attribute is missing required content.

System action: Processing stops.

CCQI312S  The XML structure of the member_name sequence metadata member is not valid. The content length for the element_name element cannot exceed maximum_number characters.

Explanation: The specified element contains too many characters.

System action: Processing stops.

CCQI313S  The XML structure of the member_name sequence metadata member is not valid. The attribute_name attribute in the element_name element is unknown.

Explanation: The specified attribute in the sequence metadata member is unknown.

System action: Processing stops.

CCQI314S  The content of the member_name sequence metadata member is not valid because the value of the element_name element is incorrect. The value is value_name.

Explanation: The specified value for an element in the sequence metadata member is not valid.

System action: Processing stops.

CCQI315S  The content of the member_name sequence metadata member is not valid because the value of the attribute_name attribute in the element_name element is incorrect. The value is value_name.

Explanation: The specified value for an attribute in the sequence metadata member is not valid.

System action: Processing stops.

CCQI316S  The content of the member_name sequence metadata member is not valid because the data type of the element_name element is incorrect. The value is value_name.

Explanation: The specified data type value for an element in the sequence metadata member is not valid.

System action: Processing stops.

CCQI317S  The content of the member_name sequence metadata member is not valid because the data type of the attribute_name attribute in the element_name element is incorrect. The value is value_name.

Explanation: The specified data type value for an attribute in the sequence metadata member is not valid.

System action: Processing stops.

The XML structure of the **member_name** parameter metadata member is not valid. The PL/I XML parser issued the following exception error code: `code_number`.

**Explanation:** While determining if the parameter metadata member is valid, the PL/I XML parser issued an exception error code.

**System action:** Processing stops.

**User response:** See the Enterprise PL/I for z/OS Programming Guide for more information about the exception warning code.

The XML structure of the **member_name** parameter metadata member is not valid. The **element_name** element is unknown.

**Explanation:** The specified element in the parameter metadata member is unknown.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information Contact IBM Software Support.

The XML structure of the **member_name** parameter metadata member is not valid. Content is not allowed for the **element_name** element, but content was found.

**Explanation:** The specified element cannot contain content.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information Contact IBM Software Support.

The XML structure of the **member_name** parameter metadata member is not valid. Content is required for the **element_name** element, but content was not found.

**Explanation:** The specified element requires content.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information Contact IBM Software Support.

The XML structure of the **member_name** parameter metadata member is not valid. The content length for the **element_name** element cannot exceed **maximum_number** characters.

**Explanation:** The specified element contains too many characters.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information Contact IBM Software Support.

The XML structure of the **member_name** parameter metadata member is not valid. The content length for the **element_name** element must be at least **minimum_number** characters.

**Explanation:** The specified element does not contain enough characters.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information Contact IBM Software Support.

The XML structure of the **member_name** parameter metadata member is not valid. The **attribute_name** attribute in the **element_name** element must occur at least **minimum_number** times.

**Explanation:** The specified attribute does not occur enough times.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information Contact IBM Software Support.

The XML structure of the **member_name** parameter metadata member is not valid. The **attribute_name** attribute in the **element_name** element cannot occur more than **maximum_number** times.

**Explanation:** The specified attribute occurs too many times.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information Contact IBM Software Support.

The XML structure of the **member_name** parameter metadata member is not valid. The **attribute_name** attribute in the **element_name** element must occur at least **minimum_number** times.

**Explanation:** The specified attribute does not occur enough times.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information Contact IBM Software Support.
CCQI410S The XML structure of the \texttt{member_name} parameter metadata member is not valid. Content is not allowed for the \texttt{attribute_name} attribute in the \texttt{element_name} element, but content was found.

Explanation: The specified attribute cannot have content.

System action: Processing stops.

User response: See \href{Gathering diagnostic information}{Gathering diagnostic information} Contact IBM Software Support.

CCQI411S The XML structure of the \texttt{member_name} parameter metadata member is not valid. Content is required for the \texttt{attribute_name} attribute in the \texttt{element_name} element, but content was not found.

Explanation: The specified attribute is missing required content.

System action: Processing stops.

User response: See \href{Gathering diagnostic information}{Gathering diagnostic information} Contact IBM Software Support.

CCQI412S The XML structure of the \texttt{member_name} parameter metadata member is not valid. The content length for the \texttt{element_name} element cannot exceed \texttt{maximum_number} characters.

Explanation: The specified element contains too many characters.

System action: Processing stops.

User response: See \href{Gathering diagnostic information}{Gathering diagnostic information} Contact IBM Software Support.

CCQI413S The XML structure of the \texttt{member_name} parameter metadata member is not valid. The \texttt{attribute_name} attribute in the \texttt{element_name} element is unknown.

Explanation: The specified attribute in the parameter metadata member is unknown.

System action: Processing stops.

User response: See \href{Gathering diagnostic information}{Gathering diagnostic information} Contact IBM Software Support.

CCQI414S The content of the \texttt{member_name} parameter metadata member is not valid because the value of the \texttt{element_name} element is incorrect. The value is \texttt{value_name}.

Explanation: The specified value for an element in the parameter metadata member is not valid.

System action: Processing stops.

User response: See \href{Gathering diagnostic information}{Gathering diagnostic information} Contact IBM Software Support.

CCQI415S The content of the \texttt{member_name} parameter metadata member is not valid because the value of the \texttt{attribute_name} attribute in the \texttt{element_name} element is incorrect. The value is \texttt{value_name}.

Explanation: The specified value for an attribute in the parameter metadata member is not valid.

System action: Processing stops.

User response: See \href{Gathering diagnostic information}{Gathering diagnostic information} Contact IBM Software Support.

CCQI416S The content of the \texttt{member_name} parameter metadata member is not valid because the data type of the \texttt{element_name} element is incorrect. The value is \texttt{value_name}.

Explanation: The specified data type value for an element in the parameter metadata member is not valid.

System action: Processing stops.

User response: See \href{Gathering diagnostic information}{Gathering diagnostic information} Contact IBM Software Support.

CCQI417S The content of the \texttt{member_name} parameter metadata member is not valid because the data type of the \texttt{attribute_name} attribute in the \texttt{element_name} element is incorrect. The value is \texttt{value_name}.

Explanation: The specified data type value for an attribute in the parameter metadata member is not valid.

System action: Processing stops.

User response: See \href{Gathering diagnostic information}{Gathering diagnostic information} Contact IBM Software Support.

CCQI420S The XML structure of the \texttt{member_name} parameter metadata member is not valid. The \texttt{element_name} element is unknown for the overridden Db2 parameter.

Explanation: The specified element contains too many characters.

System action: Processing stops.

User response: See \href{Gathering diagnostic information}{Gathering diagnostic information} Contact IBM Software Support.
The XML structure of the member_name parameter metadata member is not valid. The element_name element is unknown for the overridden LPAR parameter.

Explanation:
System action: Processing stops.

The XML structure of the member_name parameter metadata member is not valid. The attribute_name attribute in the element_name element is unknown for the overridden Db2 parameter.

Explanation:
System action: Processing stops.

The XML structure of the member_name parameter metadata member was not found in the data_set_name data set.

Explanation: Tools Customizer could not find the specified product parameter metadata member.
System action: Processing stops.

The data_set_name data store data set does not exist.

Explanation: The specified data store data set does not exist.
System action: Processing continues.
User response: Ensure that the data store data set exists.

The data_set_name data store data set cannot be opened by using the disposition_type disposition.

Explanation: The specified data store data set could not be opened with the specified disposition.
System action: Processing continues.

The data_set_name data store data set cannot be opened by using the option-type option.

Explanation: The specified data store data set was unable to be opened with the specified option.
System action: Processing stops.

The XML structure of the member_name product customization parameter metadata member was not found in the data_set_name data set.

Explanation: Tools Customizer could not find the specified product parameter metadata member.
System action: Processing stops.

The XML structure of the member_name product customization parameter metadata member is not valid. The PL/I XML parser issued the following exception warning code: code_number.

Explanation: While determining if the product customization parameter metadata member is valid, the PL/I XML parser issued an exception warning code.
System action: Processing continues.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the warning.

The XML structure of the member_name product customization parameter metadata member is not valid. The PL/I XML parser issued the following exception error code: code_number.

Explanation: While determining if the product customization parameter metadata member is valid, the PL/I XML parser issued an exception error code.
System action: Processing continues.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the warning.

The XML structure of the member_name product customization parameter metadata member contains an unknown element.

Explanation: The specified product customization parameter metadata member contains an unknown element.
System action: Processing continues.
User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the warning.

CCQI611S  The XML structure of the member_name product customization parameter metadata member is not valid. Content is required for the attribute_name attribute in the element_name element, but content was not found.

Explanation:  The specified attribute does not contain required content.
System action:  Processing stops.
User response:  See Gathering diagnostic information Contact IBM Software Support.

CCQI612S  The XML structure of the member_name product customization parameter metadata member is not valid. The content length for the attribute_name attribute in the element_name element cannot exceed maximum_number characters.

Explanation:  The specified attribute contains too many characters.
System action:  Processing stops.
User response:  See Gathering diagnostic information Contact IBM Software Support.

CCQI613S  The XML structure of the member_name product customization parameter metadata member is not valid. The attribute_name attribute in the element_name element is unknown.

Explanation:  The specified product customization parameter metadata member contains an unknown attribute.
System action:  Processing stops.
User response:  See Gathering diagnostic information Contact IBM Software Support.

CCQI614S  The XML structure of the member_name product customization parameter metadata member is not valid. The value of the element_name element is not valid. The value is value_name.

Explanation:  The specified value of the element is not a valid value.
System action:  Processing stops.
User response:  See Gathering diagnostic information Contact IBM Software Support.

CCQI615S  The XML structure of the member_name product customization parameter metadata member is not valid. The value of the attribute_name attribute for the element_name element is not valid. The value is value_name.

Explanation:  The specified value of the attribute is not a valid value.
System action:  Processing stops.
User response:  See Gathering diagnostic information Contact IBM Software Support.

CCQI616S  The XML structure of the member_name product customization parameter metadata member is not valid. The data type of the element_name element is 'not valid. The value of the element is value_name.

Explanation:  The specified data type is not a valid data type.
System action:  Processing stops.
User response:  See Gathering diagnostic information Contact IBM Software Support.

CCQI617S  The XML structure of the member_name product customization parameter metadata member is not valid. The data type of the attribute_name attribute for the element_name element is not valid. The value of the attribute is value_name.

Explanation:  The specified data type is not a valid data type.
System action:  Processing stops.
User response:  See Gathering diagnostic information Contact IBM Software Support.

CCQI650S  The XML structure of the member_name product customization parameter metadata member is not valid. The following value of the attribute_name attribute in the element_name element already exists: value_name.

Explanation:  The specified value for an attribute already exists.
System action:  Processing stops.
User response:  See Gathering diagnostic information Contact IBM Software Support.
CCQI651S The XML structure of the member_name product customization parameter metadata member is not valid. The parameter_name parameter refers to the following section, which was not found in the member_name product customization parameter metadata member: section-name.

Explanation: The specified section is not in the product customization parameter metadata member.

System action: Processing stops.

User response: See Gathering diagnostic information | Contact IBM Software Support.

CCQI652S The member_name product customization metadata member not valid. The default length for the element_name parameter element exceeds the length of the parameter. The default length is default_length, and the specified length is specified_length. The default length will be truncated accordingly.

Explanation: The specified length cannot be shorter than the default length.

System action: Processing stops.

User response: See Gathering diagnostic information | Contact IBM Software Support.

CCQI653S The content of the member_name product customization parameter metadata member is not valid. The value of the attribute_name attribute in the element_name element is not valid. The value of the attribute is value_name.

Explanation: The specified value of the attribute is not a valid value.

System action: Processing stops.

User response: See Gathering diagnostic information | Contact IBM Software Support.

CCQI700W The XML structure of the member_name solution pack metadata member is not valid. The PL/I XML parser issued the following exception warning code: code_number.

Explanation: While determining if the specified solution pack metadata member is valid, the PL/I XML parser issued an exception error code.

System action: Processing continues.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the warning.

CCQI701S The XML structure of the member_name solution pack metadata member is not valid. The PL/I XML parser issued the following exception error code: code_number.

Explanation: While determining if the specified solution pack metadata member is valid, the PL/I XML parser issued an exception error code.

System action: Processing stops.

User response: See the Enterprise PL/I for z/OS Programming Guide for more information about the error.

CCQI702S The XML structure of the member_name solution pack metadata member is not valid. The element_name element is unknown.

Explanation: The specified solution pack metadata member contains an unknown element.

System action: Processing stops.

User response: See Gathering diagnostic information | Contact IBM Software Support.

CCQI703S The XML structure of the member_name solution pack metadata member is not valid. Content is not allowed for the element_name element, but content was found.

Explanation: Content was found in an element that cannot contain content.

System action: Processing stops.

User response: See Gathering diagnostic information | Contact IBM Software Support.

CCQI704S The XML structure of the member_name solution pack metadata member is not valid. Content is required for the element_name element, but content was not found.

Explanation: The specified element does not contain required content.

System action: Processing stops.

User response: See Gathering diagnostic information | Contact IBM Software Support.

CCQI705S The XML structure of the member_name solution pack metadata member is not valid. The content length for the element_name element cannot exceed maximum_number characters.

Explanation: The specified element does not contain required content.

System action: Processing stops.

User response: See Gathering diagnostic information | Contact IBM Software Support.
CCQI706S  The XML structure of the member_name solution pack metadata member is not valid. The element_name element cannot occur more than maximum_number times.

Explanation: The specified element occurs too many times.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI707S  The XML structure of the member_name solution pack metadata member is not valid. The element_name element must occur at least minimum_number times.

Explanation: The specified element does not occur enough times.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI708S  The XML structure of the member_name solution pack metadata member is not valid. The attribute_name attribute in the element_name element cannot occur more than maximum_number times.

Explanation: The specified attribute occurs too many times.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI709S  The XML structure of the member_name solution pack metadata member is not valid. The attribute_name attribute in the element_name element must occur at least minimum_number times.

Explanation: The specified attribute does not occur enough times.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI710S  The XML structure of the member_name solution pack metadata member is not valid. Content is not allowed for the attribute_name attribute in the element_name element, but content was found.

Explanation: The specified attribute cannot have content.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI711S  The XML structure of the member_name solution pack metadata member is not valid. Content is required for the attribute_name attribute in the element_name element, but content was not found.

Explanation: The specified attribute is missing content.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI712S  The XML structure of the member_name solution pack metadata member is not valid. The content length for the attribute_name attribute in the element_name element cannot exceed maximum_number characters.

Explanation: The specified attribute contains too many characters.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI713S  The XML structure of the member_name solution pack metadata member is not valid. The attribute_name attribute in the element_name element is unknown.

Explanation: The specified attribute in the solution pack metadata member is unknown.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI714S  The XML structure of the member_name solution pack metadata member is not valid because the value of the element_name element is incorrect. The value is value_name.
CCQI715S • CCQI753S

Explanation: The specified value of the element is not a valid value.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI715S The XML structure of the member_name solution pack metadata member is not valid because the value of the attribute_name attribute in the element_name element is incorrect. The value of the attribute is value_name.
Explanation: The specified value of the attribute is not a valid value.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI715S The XML structure of the member_name solution pack metadata member is not valid because the data type of the element_name element is incorrect. The value is value_name.
Explanation: The specified data type is not a valid data type.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI715S The XML structure of the member_name solution pack metadata member is not valid because the data type of the element_name element is incorrect. The value is value_name.
Explanation: The specified data type is not a valid data type.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI750S The solution pack metadata member was not found in the library_name metadata library.
Explanation: Tools Customizer could not find the solution pack metadata member in the specified library.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI751S The version in the library_name solution pack metadata library is different than the version in the library_name component metadata library. The name of the pack is pack_name, and the name of the component is component_name.
Explanation: The version in the solution pack metadata library does not match the version in the component metadata library.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI752S The release in the library_name solution pack metadata library is different than the release in the library_name component metadata library. The name of the pack is pack_name, and the name of the component is component_name.
Explanation: The release in the solution pack metadata library does not match the release in the component metadata library.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQI753S The modification level in the library_name solution pack metadata library is different than the modification level in the library_name component metadata library. The name of the pack is pack_name, and the name of the component is component_name.
Explanation: The modification level in the solution pack metadata library does not match the modification level in the component metadata library.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQ008S  The XML structure of the member_name discover parameter metadata member is not valid. The attribute_name attribute in the element_name element cannot occur more than maximum_number times.

Explanation:  The specified attribute occurs too many times.

System action:  Processing stops.

User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQ009S  The XML structure of the member_name discover parameter metadata member is not valid. The attribute_name attribute in the element_name element must occur at least minimum_number times.

Explanation:  The specified attribute does not occur enough times.

System action:  Processing stops.

User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQ010S  The XML structure of the member_name discover parameter metadata member is not valid. Content is not allowed for the attribute_name attribute in the element_name element, but content was found.

Explanation:  The specified attribute cannot contain content.

System action:  Processing stops.

User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQ011S  The XML structure of the member_name discover parameter metadata member is not valid. Content is required for the attribute_name attribute in the element_name element, but content was not found.

Explanation:  The specified attribute requires content.

System action:  Processing stops.

User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQ012S  The XML structure of the member_name discover parameter metadata member is not valid. The content length for the attribute_name attribute in the element_name element in the cannot exceed maximum_number characters.

Explanation:  The specified attribute contains too many characters.

System action:  Processing stops.

User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQ013S  The XML structure of the member_name discover parameter metadata member is not valid. The attribute_name attribute in the element_name element is unknown.

Explanation:  The specified attribute is unknown.

System action:  Processing stops.

User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQ014S  The content of the member_name discover parameter metadata member is not valid because the value of the element_name element is incorrect. The value is value_name.

Explanation:  The specified value for an element in the discover parameter metadata member is not valid.

System action:  Processing stops.

User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQ015S  The content of the member_name discover parameter metadata member is not valid because the value of the attribute_name attribute in the element_name element is incorrect. The value is value_name.

Explanation:  The specified value for an attribute in the discover parameter metadata member is not valid.

System action:  Processing stops.

User response:  See Gathering diagnostic information
Contact IBM Software Support.

CCQ016S  The content of the member_name discover parameter metadata member is not valid because the data type of the element_name element is incorrect. The value is value_name.

Explanation:  The specified data type value for an element in the discover parameter metadata member is not valid.

System action:  Processing stops.

User response:  See Gathering diagnostic information
Contact IBM Software Support.
**CCQO017S** The content of the member_name product parameter metadata member is not valid because the data type of the attribute_name attribute in the element_name element is incorrect. The value is value_name.

**Explanation:** The specified data type value for an attribute in the product parameter metadata member is not valid.

**System action:** Processing stops.

**User response:** See Gathering diagnostic information. Contact IBM Software Support.

**CCQO050S** The data_set_name Discover REXX EXEC data set could not be initialized or was not found.

**Explanation:** Tools Customizer could not find or could not initialize the specified Discover REXX EXEC data set.

**System action:** Processing stops.

**User response:** Ensure that the Discover REXX EXEC is specified correctly.

**CCQO051W** The data_sharing_group_ID data sharing group ID cannot contain more than four characters.

**Explanation:** The specified data sharing group ID contains too many characters.

**System action:** Processing continues.

**User response:** Ensure that the specified data sharing group ID does not exceed four characters.

**CCQO052S** The REXX_EXEC_name Discover REXX EXEC was not found in the data_set_name Discover data set.

**Explanation:** Tools Customizer could not find the Discover REXX EXEC in the specified data set.

**System action:** Processing stops.

**User response:** Ensure that the Discover data set was specified correctly.

**CCQO053W** The LPAR_name LPAR name cannot contain more than eight characters.

**Explanation:** The specified LPAR name contains too many characters.

**System action:** Processing continues.

**User response:** Ensure that the specified LPAR name does not exceed eight characters.

**CCQO054W** The subsystem_ID Db2 SSID cannot contain more than four characters. The record was not processed.

**Explanation:** The specified Db2 SSID contains too many characters.

**System action:** Processing continues.

**User response:** Ensure that the specified Db2 SSID does not exceed four characters.

**CCQO055W** The parameter_name Db2 group attach name parameter is in the record_name Discover record, but a Db2 group attach name was not specified. The record was not processed.

**Explanation:** The Discover record contains a data sharing group parameter, but a Db2 group attach name was not specified.

**System action:** Processing continues.

**User response:** Ensure that information is specified correctly on the Discover Customized Product Information panel.

**CCQO056W** The parameter_name parameter in the record_name Discover record did not have a Db2 group attach name or a Db2 SSID. The record was not processed.

**Explanation:** The Discover record did not have a Db2 group attach name or a Db2 subsystem ID in the Db2 parameter.

**System action:** Processing continues.

**User response:** Ensure that information is specified correctly on the Discover Customized Product Information panel.

**CCQO057W** The Discover EXEC could not find the parameter_name parameter in the metadata for the product to be customized. The record was not processed.

**Explanation:** The specified parameter could not be found in the metadata for the product to be customized.

**System action:** Processing continues.

**User response:** Ensure that information is specified correctly on the Discover Customized Product Information panel.
### CCQO058W
The parameter name parameter in the record type Discover record does not start with CCQ_LPR_, CCQ_Db2_, or CCQ_PRD_. The record was not processed.

**Explanation:** The parameter in the record does not start with CCQ_Db2_, CCQ_LPAr_, or CCQ_PRD_.

**System action:** Processing continues.

**User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

### CCQO059W
The parameter product parameter cannot contain more than 72 characters. The record was not processed.

**Explanation:** The specified product parameter contains too many characters.

**System action:** Processing continues.

**User response:** Ensure that the specified product parameter does not exceed 72 characters.

### CCQO060W
The record name Discover record from the REXX EXEC output must start with the following record type: record_type. The record was not processed.

**Explanation:** A Discover record from the REXX EXEC output must start with the specified Db2 record type.

**System action:** Processing continues.

**User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

### CCQO061I
If you do not have a previously customized version of the product, do not run the Discover EXEC. Press END to go to the Customizer Workplace panel.

**Explanation:** This message is issued when you customize a product for the first time. It prompts you to use the Discover EXEC to discover data from a previous customization of the specified product.

**System action:** Processing continues.

**User response:**

**Tip:** Using the Discover EXEC saves time and reduces errors that can occur when parameters are specified manually. If you want to use the Discover EXEC, specify the required information on the Discover Customized Product Information panel. Otherwise, press End to continue without discovering data from a previous customization of the product.

### CCQO062W
The Discover EXEC could not find the following parameter name parameter in the Db2 metadata. The record was not processed.

**Explanation:** The specified parameter is missing in the Db2 metadata.

**System action:** Processing continues.

**User response:** If this parameter is required, contact IBM Software Support.

### CCQO064W
The Discover-record Discover record did not have a parameter name. The record was not processed.

**Explanation:** A parameter name was missing in the Discover record.

**System action:** Processing continues.

**User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

### CCQO065W
The value for the parameter name parameter is ignored because it has more than maximum_number characters, which is the maximum length that is defined in the metadata. The value is parameter_value.

**Explanation:** The specified value exceeded the maximum allowed length, which was defined in the metadata. Tools Customizer truncated the extra characters.

**System action:** Processing continues.

**User response:** See [Gathering diagnostic information](#) Contact IBM Software Support.

### CCQO066W
The record name Discover record from the Discover REXX EXEC output does not have a parameter value. The record was not processed.

**Explanation:** The Discover record was missing a parameter value from the Discover EXEC output.

**System action:** Processing continues.

**User response:** Ensure that information was specified correctly on the Discover Customized Product Information panel.

### CCQO067W
The parameter name parameter is defined in the metadata to support one value, but more than one value was found. The last value was used.

**Explanation:** The definition of the parameter in the metadata supports one value, but more than one value was specified. Only the last value was used.
System action: Processing continues.
User response: Ensure that information was specified correctly on the Discover Customized Product Information panel.

CCQO068W  The value of the parameter_name parameter is ignored because the parameter is defined as internal=true. The value is value_name.
Explanation: The specified value of the parameter is ignored because it is defined as internal=true.
System action: Processing continues.
User response: Ensure that information was specified correctly on the Discover Customized Product Information panel.

CCQO069W  The Discover EXEC did not find the parameter_name parameter in the LPAR metadata. The record was not processed.
Explanation: The specified parameter is missing from the LPAR metadata.
System action: Processing continues.
User response: Ensure that information was specified correctly on the Discover Customized Product Information panel.

CCQO070W  The record_type Discover record contains an incorrect delimiter between the Environment section and the Data section. The record was not processed.
Explanation: Tools Customizer found an incorrect delimiter between the Environment section and the Data section.
System action: None.
User response: No action is required.

CCQO071W  The member_name member could not be found in the data_set_name Discover data set.
Explanation: Tools Customizer could not find the specified Discover data set.
System action: None.
User response: No action is required.

CCQO072S  The member_name discover metadata member was not found in the data_set_name metadata data set.
Explanation: Tools Customizer could not find the specified metadata member in the data set.
System action: Processing stops.

User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQO073E  The member_name discover metadata member is not valid because the default length for the element_name parameter element exceeds the length of the parameter. The default length is default_length, and the specified length is specified_length. The default length will be truncated accordingly.
Explanation: The default length for the specified parameter element is longer than the parameter.
System action: Processing continues.
User response: No action is required.

CCQO074S  The content of the member_name discover metadata member is not valid. The value of the attribute_name attribute in the element_name element is not valid. The value of the attribute is value_name.
Explanation: The specified value is not valid.
System action: Processing stops.
User response: See Gathering diagnostic information
Contact IBM Software Support.

CCQO075W  The configuration_ID configuration ID in the record_name Discover record is incorrect. The record was not processed.
Explanation: The specified configuration ID is not correct.
System action: Processing continues.
User response: No action is required.

CCQO076W  The configuration_ID configuration ID cannot contain more than maximum_number characters. The record was not processed.
Explanation: The specified configuration ID contains too many characters.
System action: Processing continues.
User response: No action is required.

CCQO077S  The discover metadata member was not found in the data_set_name component data set that is part of the data_set_name pack.
Explanation: The discover metadata member was not found in the specified component data set.
System action: Processing stops.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQO78I Additional configurations were discovered and saved in the data store. All Db2 entries associated with this configuration are listed.

System action: None.
User response: No action is required.

CCQO80I Product_name does not support the Discover process.

Explanation: The specified product does not support the Discover process.

System action: None.
User response: No action is required.

CCQP000E The value of the mode_name Db2 mode is not valid for the level_name Db2 level.

Explanation: The specified Db2 mode is not valid for the Db2 level.

System action: Processing stops.
User response: Specify a valid Db2 mode for the Db2 level.

CCQP001E The value of the mode_name Db2 mode is missing.

Explanation: The specified Db2 mode is not defined.

System action: Processing stops.
User response: Specify a valid value for the Db2 mode.

CCQP002E The value of the mode_name Db2 level is missing.

Explanation: The specified Db2 level is not defined.

System action: Processing stops.
User response: Specify a valid Db2 level.

CCQP003E The value of the level_name Db2 level is not valid.

Explanation: The specified Db2 level does not have a valid name.

System action: Processing stops.
User response: Specify a valid value for the Db2 level.

CCQP004S The parameter_name parameter does not exist in the CCQ$$Db2 Db2 parameter metadata member.

Explanation: The CCQ$$Db2 Db2 parameter metadata member does not contain the specified parameter.

System action: Processing stops.
User response: See Gathering diagnostic information.
Contact IBM Software Support.

CCQP005E The value of the subsystem_ID Db2 SSID is missing.

Explanation: The specified Db2 SSID is not defined.

System action: Processing stops.
User response: Specify a valid value for the Db2 SSID.

CCQP006E The value of the group_attach_name Db2 group attach name is missing.

Explanation: The specified Db2 group attach name is not defined.

System action: Processing stops.
User response: Specify a valid Db2 group attach name.

CCQQ000E Specify a valid metadata library. Each qualifier of the library must start with an alphabetic character and must be 1-8 alphanumeric characters. The library name must be 1-44 characters.

Explanation: The metadata library was not specified in the correct format. The high-level qualifier must contain alphanumeric characters, and the first character cannot be numeric. The name cannot contain wildcard characters, such as asterisks (*) and percent signs (%).

System action: Tools Customizer prompts for the correct library name.
User response: Specify a library in the correct format. If the message was issued on the Specify the Metadata Library (CCQPHLQ) panel, specify the product metadata library. The name of this library is hlq.SARYDENU.

Do not specify the Tools Customizer metadata library, which is hlq.SCCQDENU.

CCQQ001E The data_set_name data set name that was specified for the metadata library was not found.

Explanation: The data set does not exist, or the data set name was written in the incorrect format. The high-level qualifier must contain alphanumeric characters, and the first character cannot be numeric. The name cannot contain wildcard characters, such as
asterisks (*) and percent signs (%).

**System action:** Tools Customizer prompts for the correct data set name.

**User response:** Specify a data set name in the correct format.

---

**CCQQ002E** The data set name that was specified for the `library_name` metadata library cannot be opened.

**Explanation:** Tools Customizer could not open the data set.

**System action:** Tools Customizer prompts for an available data set.

**User response:** Ensure that the specified data set is available for Tools Customizer to open it.

---

**CCQQ003E** The data set name that was specified for the metadata sample library is not valid. The data set must be in the following format: HLQ.SxxxSAMP.

**Explanation:** The specified data set name was not specified in the correct format.

**System action:** None.

**User response:** Specify the data set name in the following format: HLQ.SxxxSAMP, where xxx is the three-character prefix for the product.

---

**CCQQ004E** The data set name that was specified for the metadata library is not valid because the data set is empty.

**Explanation:** The specified data set is empty.

**System action:** Tools Customizer prompts for an available data set.

**User response:** Ensure that the specified data set is available for Tools Customizer to open it.

---

**CCQQ011E** The `library_name` metadata library for the component that is part of the `library_name` pack was not found in the catalog. The name of the pack is `pack_name`, and the name of the component is `component_name`.

**Explanation:** The specified metadata library is not in the catalog.

**System action:** None.

**User response:** Specify another metadata library.

---

**CCQQ012E** The `library_name` metadata library for the component that is part of the `library_name` pack cannot be opened.

**Explanation:** The specified metadata library cannot be opened.

**System action:** None.

**User response:** Ensure that the name of the library is specified correctly.

---

**CCQS000I** Tools Customizer is being invoked for the first time or the previous ISPF session ended before Tools Customizer was exited. In both cases, the fields on this panel are populated with default values. Review these default values or specify new values to be used to customize products or packs.

**Explanation:** When you customize a stand-alone product or a solution pack for the first time, or when an ISPF session unexpectedly ends before the ISPF profile is saved, you must specify or review your Tools Customizer user settings.

**System action:** Processing stops.

**User response:** Review and accept the default settings, or specify new settings.

---

**CCQS001E** The following command is not valid: `command_name`.

**Explanation:** The specified command is not a valid command on the panel.

**System action:** Processing stops.

**User response:** Specify a valid command.

---

**CCQS002W** The discover data set could not be found.

**Explanation:** Tools Customizer could not find the specified data set.

**System action:** The data set will be allocated, and processing continues.
CCQS003W  The data_set_name Discover data set was not found so it was created.
Explanation: Tools Customizer could not find the specified data set.
System action: Processing continues.
User response: Ensure that the data set name is specified correctly.

CCQS004I  The settings were saved.
Explanation: The settings that you changed were saved.
System action: Processing continues.
User response: No action is required.

CCQS006W  The length of a qualifier for the data_set_name customization library data set exceeds 26 characters.
Explanation: The qualifier for the customization library data set is too long. The qualifier cannot exceed 26 characters.
System action: Processing continues.
User response: Specify a qualifier that is 26 characters or less.

CCQS007E  The discover data set data_set_name could not be opened with the option-type option.
Explanation: The specified option could not open the Discover data set.
System action: None.
User response: Specify a data set to which you have WRITE access.

CCQS008E  The Discover data set data_set_name exists on a different volume.
Explanation: The specified Discover data set must exist on the same volume as where it was created.
System action: Processing continues.
User response: Specify a different Discover data set name.

CCQS010E  The customization library qualifier is not valid.
Explanation: The customization library qualifier that was specified is not valid.
System action: None.
User response: Specify a valid qualifier for the customization library.

CCQS011E  The group attach option is not valid.
Explanation: The group attach option that was specified is not valid.
System action: None.
User response: Specify a valid option for the group attach option.

CCQS012E  The Tools Customizer metadata library is not valid.
Explanation: The metadata library that was specified is not a valid data set.
System action: None.
User response: Specify a valid data set for the metadata library.

CCQS013E  The Discover data set is not valid.
Explanation: The Discover data set that was specified is not a valid data set.
System action: None.
User response: Specify a valid Discover data set.

CCQS014E  The data store data set is not valid.
Explanation: The data set that was specified is not a valid data set.
System action: None.
User response: Specify a valid data store data set.

CCQS015E  Tools Customizer is already running.
Explanation: A session of Tools Customizer is already running in your environment. Only one Tools Customizer session is allowed.
System action: None.
User response: The trace data set is being used. Free the trace data set, and start Tools Customizer again.

</tbody>
</table>
CCQS027E  The customization library data set
  data_set_name could not be created
  because the requester does not have
  ALTER authority on this data set.
Explanation:  To create the customization library data set,
  ALTER authority on the data set must be granted.
System action:  Processing stops.
User response:  Ensure that ALTER authority for the
  specific customization library data set is granted, or
  specify a different high-level qualifier for the
  customization library data set on the Tools Customizer
  Settings panel.

CCQS029E  The customization library data set is not
  valid. Enter a valid data set name or use
  the Tools Customizer default:
  data_set_name.
Explanation:  The specified data set is invalid.
System action:  Processing stops.
User response:  Specify a valid data set name.

CCQS030E  The following command is not a valid
  CREATE statement: command_statement.
Explanation:  The specified CREATE command
  statement is invalid because it contains blanks or
  alphabetic characters.
System action:  Processing stops.
User response:  Specify a valid CREATE command
  statement. The correct syntax is CREATE nn, where nn
  is 1 - 99.

CCQS031E  The following command is not a valid
  CREATE statement: command_statement.
  The number that can be specified with
  the CREATE command is 1 - 99.
Explanation:  The specified CREATE command
  statement is invalid because it contains either 0 or a
  number greater than 99.
System action:  Processing stops.
User response:  Specify a valid CREATE command
  statement. The correct syntax is CREATE nn, where nn
  is 1 - 99.

CCQS032E  The shared user profile data set
  data_set_name could not be created
  because the requester does not have
  UPDATE authority on this data set or
  because the data set already exists in
  another volume serial.
Explanation:  To create a shared user profile data set,
  the requester must have update authority on the data
  set, and the specified data set name must be unique.
System action:  Processing stops.
User response:  Ensure that the requester has UPDATE
  authority on the data set and ensure that the data set
  name is unique.

CCQS033E  A user profile cannot be copied into the
  same user profile
Explanation:  The specified data set cannot be copied
  into user's own user profile.
System action:  Processing stops.
User response:  Enter a different data set name.

CCQS034E  The shared user profile data set
  data_set_name could not be created
  because the requester does not have
  UPDATE authority on this data set or
  because the data set already exists in
  another volume serial.
Explanation:  To create a shared user profile data set,
  the requester must have update authority on the data
  set, and the specified data set name must be unique.
System action:  Processing stops.
User response:  Ensure that the requester has UPDATE
  authority on the data set and ensure that the data set
  name is unique.

CCQS035E  The specified data set already has a user
  profile. Specify a different data set, or
  press Enter again to replace the existing
  user profile.
Explanation:  Pressing Enter overwrites the previous
  user profile for the specified data set with user's own
  user profile.
System action:  Processing stops.
User response:  Specify a different data set name.

CCQS036E  The customization library data_set_name
  already exists in volume and cannot be
  created in a different volume. Enter a
different customization library name.
Explanation:  The same data set name cannot exist in a
  different volume.
System action:  Processing stops.
User response:  Specify a different data set name.

CCQS037E  The data set name was either not
  specified or invalid.
Explanation:  The data set name specified does not
  follow the IBM data set name convention.
System action:  Processing stops.
User response:  Specify a valid data set name.

CCQS038E  The specified data set cannot be used.
Explanation:  The specified data sets contain
  information that supports Tools Customizer, but this
  data set cannot be used.
System action:  Processing stops.
User response:  Specify a different data set.
CCQS039E  The specified data set has an invalid record format.
Explanation:  The specified data set should be saved as a different record format. For example, the record format should be FB (Formated Block) but it is set to VB (Variable Block).
System action:  Processing stops.
User response:  Specify a valid record format.

CCQT000I  The product configuration ID copied_configuration_ID was successfully copied from configuration_ID.
Explanation:  The specified configuration ID was copied.
System action:  None.
User response:  No action is required.

CCQT001E  The command_name line command was specified more than once, which is not allowed.
Explanation:  The specified line command cannot be specified more than one time.
System action:  Processing stops.
User response:  Specify the line command only once.

CCQT002E  The configuration_ID configuration ID already exists. Specify a different configuration ID.
Explanation:  The specified configuration ID exists.
System action:  Processing stops.
User response:  Ensure that the specified configuration ID is unique.

CCQT003I  The product configuration ID configuration_ID was created.
Explanation:  The specified configuration ID was created.
System action:  None.
User response:  No action is required.

CCQT004I  The product configuration ID configuration_ID was removed.
Explanation:  The specified configuration ID was removed.
System action:  None.
User response:  No action is required.

CCQT005E  The product configuration ID configuration_ID is not valid. The product configuration ID cannot contain a colon (:).
Explanation:  The specified configuration ID contains a colon (:), but a colon is not valid.
System action:  Processing stops.
User response:  Specify a configuration ID that does not contain a colon.

CCQT006E  The configuration_ID configuration ID exists. Specify a different configuration ID.
Explanation:  The specified configuration ID exists.
System action:  Processing stops.
User response:  Specify another configuration ID.

CCQT007E  The configuration_ID configuration ID exists but was removed from the list of configurations. To use this configuration ID, you must restore it.
Explanation:  The specified configuration ID exists but was removed from the list of available configuration.
System action:  Processing stops.
User response:  Specify another configuration ID. To restore the specified configuration ID, issue the CREATE command, and specify the same configuration ID again.

CCQT008E  The configuration_ID configuration ID exceeds maximum_number characters.
Explanation:  The specified configuration ID contains too many characters.
System action:  Processing stops.
User response:  Specify another configuration ID that does not exceed the maximum number of characters that was set by Db2 Recovery Expert.

CCQT010I  Create request for configuration_ID configuration was cancelled by user.
Explanation:  The request to create the specified configuration was canceled.
System action:  Processing stops.
User response:  No action is required.

System action: Processing continues.
User response: No action is required.

CCQX001S Product_name has already been customized by using values from data_set_name data store data set. Switch to the specified data store data set to continue customizing this product.
Explanation: The specified product was customized by using values from the specified data store data set.
System action: Processing stops.
User response: Use the specified data store data set to continue customizing the product.

CCQX002S component_name has already been customized by using values from data_set_name data store data set. Switch to the specified data store data set to continue customizing this component.
Explanation: The specified component was customized by using values from the specified data store data set.
System action: Processing stops.
User response: Use the specified data store data set to continue customizing the component.

CCQX011I Product_name was not found.
Explanation: The specified product was not found.
System action: Processing stops.
User response: Specify another product.

Db2 Recovery Expert for z/OS messages and codes

Use the information in these messages to help you diagnose and solve Db2 Recovery Expert problems.

All messages generated by Db2 Recovery Expert have a severity code printed as the last character of the message ID. The severity codes are described in this table:

Table 29. Error message severity codes

<table>
<thead>
<tr>
<th>Severity Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>Information message. No user action required.</td>
</tr>
<tr>
<td>S</td>
<td>Status message. No user action required.</td>
</tr>
<tr>
<td>W</td>
<td>Warning message. Results may not be as expected.</td>
</tr>
<tr>
<td>E</td>
<td>Error message. Some may be user-correctable, read the User Response to determine the course of action.</td>
</tr>
</tbody>
</table>

ARY0603I Volser volser is being processed by another job. It will be bypassed.
Explanation: During offload or restore processing when running with the multijob option, the specified volume will be skipped because it is being processed by another job.
User response: None required.

ARY0641E parameter is not supported for CSLB profiles (currently only LOG SUSPEND)
Explanation: While processing a Combined SLB
profile, it was determined that one of the parameters in the profile is not allowed for Combined SLB processing. The parameter is displayed in the message. Processing is terminated.

**User response:** Edit the Combined SLB profile and ensure that the listed parameter is set appropriately.

---

**ARY0642E**  
**module is an invalid CSLB offset table**

**Explanation:** While processing a Combined SLB profile, it was determined that one of the load modules which contains offset values is not valid. Processing is terminated.

**User response:** Ensure that the module listed was correctly installed.

---

**ARY0643E**  
**Error encountered during module phase processing**

**Explanation:** While processing a Combined SLB profile, an error occurred in the listed module during the listed phase. Processing is terminated.

**User response:** Review the job log for other messages that identify the error. Correct the error and resubmit the job.

---

**ARY0644E**  
**Parameter mismatch Section: section, Parameter: parameter**

**Explanation:** While performing BACKUP processing for a Combined SLB group, it was determined that the parameter listed was inconsistently set between IMS Recovery Expert and Db2 Recovery Expert. Processing continues.

**User response:** Review the listed parameter and the values displayed in "[ARY0645W]" for each product. Determine what you must do to make the parameter consistent.

---

**ARY0645W**  
**BSY value: value1, ARY value: value2**

**Explanation:** This message appears after message "ARY0644E" and displays the mismatched parameter values for IMS Recovery Expert (BSY) and Db2 Recovery Expert (ARY).

**User response:** Review the listed parameter and the values displayed for each product. Determine what you must do to make the parameter consistent.

---

**ARY0646E**  
**Error processing Combined SLB group group, error**

**Explanation:** While processing a Combined SLB profile, an error was detected in the group. The group and the error are listed in the message. Processing was terminated.

**User response:** Review the listed error. Correct the problem and resubmit the job.

---

**ARY0647E**  
**SSID ssid was not found in the Combined SLB backup**

**Explanation:** While performing image copy processing against a Combined SLB, it was determined that the listed SSID is not part of the backup. Processing was terminated.

**User response:** Select a backup that contains the SSID for which image copy processing is being performed, and resubmit the job.

---

**ARY0648E**  
**Combined SLB repository record validation failed**

**Explanation:** While attempting to create a Combined SLB, validation failed for the repository records that are created by the process.

**User response:** Contact technical support and provide them with the information displayed in this message.

---

**ARY0650I**  
**CSLB backup not allowed due to prior error**

**Explanation:** While performing BACKUP processing for a Combined SLB group, an error occurred that prevents the backup from completing. Processing was terminated.

**User response:** Review the job log for other messages that identify the error. Correct the error and resubmit the job.

---

**ARY801E**  
**Pgm: programname Stmt: statementnumber Type: sqlstatmenttype**

**Explanation:** This message is issued when an SQL error has occurred. It displays the program name where the SQL error occurred, the statement number, and the type of SQL statement.

**User response:** Correct the SQL error.

---

**ARY901E**  
**The default load library could not be located**

**Explanation:** The data set name entered for the load library was not found.

**User response:** Enter a valid load library data set name and continue.

---

**ARY902E**  
**A Db2 subsystem ID has to be entered for processing**

**Explanation:** There was no valid value entered for Db2 subsystem ID.

**User response:** Enter a valid Db2 subsystem name.
The specified dataset could not be opened for I/O

Explanation: A VSAM open error occurred while attempting to open the data set specified for the Db2 control data set.

User response: Verify that the VSAM data set is accessible.

An unexpected return code from VSAM was encountered while doing a read of the control file. RC=return code

Explanation: A VSAM read error occurred while attempting to access the data set specified for the Db2 control data set. The VSAM return code is provided for diagnostic purposes.

User response: Use the return code to resolve the VSAM read error before continuing.

The control file record for Db2 subsystem ssid has been successfully updated

Explanation: The control file named in the Db2 Control Dataset field has been successfully updated to include the specified changes and definitions for the listed Db2 subsystem.

User response: None required.

An unexpected return code from VSAM was encountered while doing an update operation of the control file. RC1=return code 1 RC2=return code 2

Explanation: A VSAM update error occurred while attempting to update the data set specified for the Db2 control data set. The RC1 and RC2 (VSAM return codes) are provided for diagnostic purposes.

User response: Use the return codes to resolve the VSAM errors before continuing.

The control file record for Db2 subsystem ssid has been successfully added

Explanation: The control file named in the Db2 Control Dataset field has been successfully updated to include the new record, based on the specified definitions for the listed Db2 subsystem.

User response: None required.

Invalid value. Valid options are 1 and 2.

Explanation: The value you specified is not valid. Valid values are 1 and 2.

User response: Enter a valid value.

An unexpected return code from VSAM was encountered while doing an add operation to the control file. RC1=return_code_1 RC2=return_code_2.

Explanation: A VSAM error occurred while attempting to perform an add operation to the specified Db2 control data set. The RC1 and RC2 (VSAM return codes) are provided for diagnostic purposes.

User response: Use the return codes to resolve the VSAM errors before continuing.

The FIND command requires specification of a target string.

Explanation: No parameters were specified with the F(ind) command. No match can be made unless you specify a string to find.

User response: Enter a FIND parameter.

The requested find string was not found.

Explanation: No matches were found for the string you specified with the FIND command.

User response: None required.

The control file record has been successfully updated.

Explanation: The control file was updated successfully.

User response: None required.

An unknown column was specified using the SORT command.

Explanation: The column you specified with the SORT command is not known.

User response: Verify that you correctly typed the name of the column or select another column.

SORT is not supported for the specified column.

Explanation: The column you attempted to SORT is not supported as a column on which to sort.

User response: Refer to the sort columns listed on the Define Sort Columns panel for a list of valid columns on which the sort can be based and redefine the sort.

Sort column not entered. Column name or number must be specified.

Explanation: A column was not specified with the SORT. A column name or number must be specified for the SORT command.
User response: Ensure that if the column name is used, that all spaces in the name are replaced with an underscore.

Incomplete string: Put an ending quote at the end of the string.

Explanation: The ending quote was omitted from the string.

User response: Put an ending quote at the end of the string.

Bottom of Data reached: CHAR string not found. Press PF5 to continue from top.

Explanation: The indicated character string was not found.

User response: To continue searching for the character string from the top of the dialog, press PF5.

Top of data reached: CHAR string not found. Press PF5 to continue from bottom.

Explanation: The indicated character string was not found.

User response: To continue searching for the character string from the bottom of the dialog, press PF5.

File tailoring open returned a file tailoring already in progress condition.

Explanation: An attempt to perform file tailoring for utility customization failed. There was a file tailoring session already in progress. File tailoring sessions cannot be performed concurrently.

User response: None required.

File tailoring open returned the output file already in use condition - ENQ failed.

Explanation: An attempt to open the Db2 control data set failed with an ENQ error. The data set is already open for output.

User response: Verify that you are the only user attempting to access this file.

File tailoring open returned the skeletal file or output file not allocated condition.

Explanation: An attempt to perform file tailoring failed because either the tailoring skeleton file or output file is not allocated.

User response: Verify that all required files are allocated prior to performing file tailoring.

File tailoring open returned a severe error condition.

Explanation: An attempt to perform file tailoring failed because a severe error condition was encountered on open.

User response: Verify that all required files are allocated and accessible prior to performing file tailoring.

File tailoring open returned an unknown code -- severe error.

Explanation: An attempt to perform file tailoring failed because a severe error condition was encountered on open.

User response: Verify that all required files are allocated and accessible prior to performing file tailoring.

File tailoring open returned an output file in use condition.

Explanation: An attempt to perform file tailoring failed because an output file in use condition was encountered on close.

User response: Verify that all required files are allocated and accessible and that there are no other tailoring sessions running concurrently with your session.

File tailoring close returned a file not open condition -- severe error.

Explanation: An attempt to perform file tailoring failed because a file not open condition was encountered on close.

User response: Verify that all required files are allocated and accessible and that there are no other tailoring sessions running concurrently with your session.

File tailoring close returned an output file in use condition.

Explanation: An attempt to perform file tailoring failed because an output file in use condition was encountered on close.

User response: Verify that all required files are allocated and accessible and that there are no other tailoring sessions running concurrently with your session.

File tailoring close returned a skeletal file or output file not allocated condition.

Explanation: An attempt to close file tailoring failed because either a tailoring skeleton file or output file was not allocated.

User response: Verify that all required files are allocated and accessible and that there are no other tailoring sessions running concurrently with your session.
AR**Y928E** File tailoring close returned a severe error.

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on close.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

---

AR**Y929E** File tailoring close returned an unknown code -- severe error.

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on close.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

---

AR**Y930E** File tailoring close returned a output member exists in the output library and NOREPL was specified.

**Explanation:** An attempt to perform file tailoring failed because the close process could not replace the pre-existing tailored member in the output file.

**User response:** Change the output member name to a new name or ensure that the output library allows for member replacement.

---

AR**Y931E** File tailoring include returned a skeleton does not exist condition.

**Explanation:** An attempt to perform file tailoring failed because the tailoring process could not locate a required tailoring skeleton.

**User response:** Assure that all required files are allocated to perform file tailoring.

---

AR**Y932E** File tailoring include returned a skeleton in use -- ENQ failed condition.

**Explanation:** An attempt to access a tailoring skeleton failed with an ENQ error (member-in-use).

**User response:** Verify that all required tailoring files are allocated and that there are no other tailoring sessions running concurrently.

---

AR**Y933E** File tailoring include returned a data truncation or skeleton library or output file not allocated condition.

**Explanation:** An attempt to perform file tailoring failed because either the tailoring skeleton file or output file is not allocated.

**User response:** Verify that all required files are allocated prior to performing file tailoring.

---

AR**Y934E** File tailoring include returned a severe error condition.

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on an include operation.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

---

AR**Y935E** File tailoring include returned an unknown condition -- severe error.

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on an include operation.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

---

AR**Y936E** Allocation Error - The ISPFILE DD is already allocated and cannot be deallocated - Process not completed.

**Explanation:** The ISPFILE DD allocation failed. The DD is already allocated and cannot be deallocated for this TSO session. The process did not complete successfully.

**User response:** None required.

---

AR**Y937E** Allocation Error - An error was encountered allocating the ISPWRK1 or ISPWRK2 DD - Process not complete.

**Explanation:** The ISPWRK1 or ISPWRK2 DD allocation failed

**User response:** Verify TSO session parameters are set correctly for your site prior to allocation of these DD statements. The process did not complete successfully.

---

AR**Y938E** Field Required - The dataset entered is a partitioned dataset and the member name is required.

**Explanation:** A required field was not specified. The data set entered is a PDS (partitioned data set) and a member in this PDS must be referenced.

**User response:** Please enter a valid member name for PDS access.

---

AR**Y940E** The specified dataset could not be found in the MVS catalog.

**Explanation:** The specified data set could not be found in the z/OS (MVS) catalog.
User response: Ensure that the data set name is correct.

ARY941 The RFIND key works only after a FIND character string is entered.

Explaination: A repeat FIND (RFIND) was issued before a FIND command was issued. You must issue FIND before RFIND will work.

User response: Issue FIND prior to attempting to issue RFIND.

ARY942E Invalid Sort number. Enter a valid digit.

Explaination: An invalid character was entered in the Srt column. Valid characters are the digits 1, 2, 3,... up to 9, or the number of sortable columns, whichever is less.

User response: Specify a valid sort number.

ARY943E Same Sort number entered twice.

Explaination: The same sort number was entered for more than one column. The screen is positioned to the second instance. Sort sequence numbers must be unique.

User response: Specify a valid sort number.

ARY944E Sort sequence skips a number.

Explaination: The selected sorting sequence skips a number. This is not allowed. The screen is positioned to a selection whose number is lacking an immediate predecessor. The sort sequence is completely rebuilt from the Cmd (and Dir) information. Any previously existing sort sequence is entirely replaced. It is not added to or extended by the new entries.

User response: Please specify a valid sort sequence that does not skip a number.

ARY945E Invalid Dir entered. Must be A or D (ascending/descending).

Explaination: The selected sorting direction is invalid. Only A (ascending) or D (descending) can be specified. A blank indicates ascending (default).

User response: Please specify a valid sorting direction.

ARY946E Dir not valid without Ord.

Explaination: A sorting direction was selected for a column that was not selected to be sorted. Sorting direction is only a valid choice for selected columns.

User response: Select a sorting direction and order.

ARY947E Max Sort Columns exceeded. Sorting first 10 columns.

Explaination: More columns were selected for sorting than are supported. Nine columns can be selected. Under certain circumstances the limit is less than nine, due to internal constraints. For example, sorting a date field can be implemented by three sorts of partial column fields. In that case, the column would count as three toward the maximum of nine, not one.

User response: Specify the appropriate allowable maximum number of sort columns.

ARY948E Fix Columns cannot exceed screen size.

Explaination: More columns were selected to be fixed than will fit on the screen.

User response: Remove the (F) selection character from one or more columns.

ARY950E Invalid selection character. "F" and "U" are valid.

Explaination: An invalid Cmd character was entered. Valid characters are F (fix) and U (unfix). Fix causes the column to move to the fixed area on the left side of the screen. Fixed columns do not scroll horizontally when LEFT or RIGHT scrolling commands are issued. Unfix moves the column out of the fixed area, and allows it to scroll horizontally when LEFT and RIGHT scroll commands are issued.

User response: Either remove the invalid character or enter a valid one.

ARY951E Invalid entry. Must be numeric.

Explaination: An invalid Cmd value was entered. Cmd values must be numeric. If the column is fixed, the number must be in the fixed range. If the column is not fixed, the number must be in the unfixed range.

User response: Either remove the invalid number or enter a valid one.

ARY952E Invalid entry for fixed column.

Explaination: An invalid Cmd value was entered for a fixed column. Valid selections for fixed column are up to the number of fixed columns.

User response: Either remove the invalid number or enter a valid one.

ARY953E Invalid entry for unfixed column.

Explaination: An invalid Cmd value was entered for an unfixed column. The number must be less than the number of columns, and greater than the number of fixed columns.
User response: Either remove the invalid number or enter a valid one.

**ARY954E**  Invalid value entered for column size: non-numeric data.

Explanation: An invalid Cmd value was entered. This must be a number between the values in the MIN and MAX fields.

User response: Either remove the invalid number or enter a valid one.

**ARY955E**  Invalid value entered for column size: out of range.

Explanation: An invalid Cmd value was entered. This must be a number between the values in the MIN and MAX fields. MIN is the smallest acceptable value. MAX is the largest acceptable value.

User response: Either remove the invalid number or enter a valid one.

**ARY956E**  Total fixed column sizes cannot exceed screen size.

Explanation: The Cmd values entered would result in the sum of the fixed column sizes to exceed the screen size. This is not allowed. The fixed columns are those with an or in the Fix column. Fixed columns are always displayed, and so must fit on the screen.

User response: Either change the fixed column sizes so that the total is less than the screen size or cancel to return to the previous panel.

**ARY957E**  New configuration makes column size invalid.

Explanation: The requested column sizes make at least one unfixed column undisplayable. The cursor is positioned on the value where the problem was detected. The unfixed area on the screen would be too small to show the column where the cursor is placed.

User response: Do one of the following:

- Make the column where the cursor is smaller so that it can fit in the available unfixed area
- Set it to its maximum size (width)
- Make the fixed area smaller
- Cancel to return to the previous panel

**ARY958E**  Column does not fit in unfixed area in new configuration.

Explanation: The requested column sizes would make the unfixed column where the cursor is positioned undisplayable. The unfixed area on the screen would be too small to show this column.

User response: Shrink the fixed area by either

unfixing columns or making fixed columns smaller. The column where the cursor is cannot be partially displayed (min-max) so its size cannot be changed.

**ARY959E**  New configuration makes this column size invalid.

Explanation: Fixing the requested columns would shrink the available area for unfixed columns unacceptably. One or more unfixed columns would not fit in the remaining unfixed area of the screen. The cursor is placed on a row that represents one such column. Therefore, the requested configuration is not allowed.

User response: To change column sizes, cancel out of the CFIX function and invoke the CSIZE function. Either cancel to exit CFIX with no change or blank out one or more FIX selections until an allowable fixed size is reached.

**ARY960E**  Invalid fixed selections. Would not leave enough space for this column.

Explanation: Fixing the columns requested would make at least one unfixed column undisplayable. The cursor is positioned on the row that represents one such unfixed column, whose minimum displayable size would not fit in the available screen area.

User response: Shrink the requested fixed area by either:

- Requesting fewer fixed columns
- Unfixing one or more fixed columns
- Cancel out of CFIX and invoke CSIZE in order to shrink one or more fixed columns enough so that all unfixed columns have the space they require

**ARY962E**  Duplicate Cmd values entered.

Explanation: Duplicate Cmd numbers were entered. The cursor points to the second instance of a Cmd value.

User response: Either change this value, clear it, or exit the CORDER function.

**ARY963E**  Cursor not on data element.

Explanation: CEXPAND was issued and the cursor was not located on a valid (expandable) area. CEXPAND requires the cursor to be positioned on a data element (non-heading area) in the dynamic area of the display. Or CEXPAND can be issued specifying the row and column of the data element to expand.

User response: Ensure the cursor is located on a valid (expandable) area prior to issuing the CEXPAND command.
Invalid scroll amount for CRIGHT. Must be numeric.

Explanation: Invalid (non-numeric) parameter to CRIGHT specified. CRIGHT accepts one numeric parameter: the number of columns to scroll right. If no parameter is entered a value of 1 is assumed.

User response: Specify a numeric parameter to the CRIGHT command.

Invalid scroll amount for CLEFT. Must be numeric.

Explanation: Invalid (non-numeric) parameter to CLEFT specified. CLEFT accepts one numeric parameter: the number of columns to scroll left. If no parameter is entered, a value of 1 is assumed.

User response: Specify a numeric parameter to the CLEFT command.

Invalid parameter to ICRIGHT; Must be numeric.

Explanation: A parameter to ICRIGHT is not numeric. ICRIGHT (inner column scroll right) accepts either zero, one, or two numeric parameters. ICRIGHT can be abbreviated as ICR.

User response: Specify a valid, numeric parameter for ICRIGHT.

Parameter to ICRIGHT too long. Invalid.

Explanation: A parameter to ICRIGHT is too long. ICRIGHT does not process more than eight digits in a parameter, which is more than double any reasonable value.

User response: Specify a valid parameter for ICRIGHT.

Parameter to ICRIGHT is zero. Invalid.

Explanation: A parameter to ICRIGHT has the value zero. This is not supported.

User response: Specify non-zero parameters to ICRIGHT.

ICRIGHT: unspecified column.

Explanation: ICRIGHT was invoked with no parameters and the cursor is not positioned in the dynamic panel area.

User response: Either put the cursor in the column that should be scrolled or specify the column by number. Column numbers can refer to visible columns (in the current display window) only. Numbering starts at 1, on the left side.

Column selected not sortable. Sort selection list presented.

Explanation: You cannot perform a SORT on the column you selected. Valid sort columns are displayed in the sort selection list.

User response: Sort on one of the valid columns displayed in the selection list.
**ARY977E**  ICLEFT: Column number specified is too big.

**Explanation:** A column number parameter to ICLEFT must be between 1 and the number of columns currently on the display screen.

**User response:** To refer to a column by number, you must first position the display window so that the desired column is visible.

**ARY978E**  Invalid column number specified for SORT (not numeric).

**Explanation:** A non-numeric value was specified for the column number sort parameter.

**User response:** Specify a column number parameter to CSORT that is between 1 and the number of columns currently on the display screen. This can be followed by a direction value A or D (ascending/ descending).

**ARY979E**  Invalid Column number specified. Too many digits.

**Explanation:** Invalid parameter to CSORT specified. More than eight digits were specified. Parsing stops at eight digits.

**User response:** Specify a column number parameter between 1 and the number of columns currently on the display screen. This can be followed by a direction value A or D (ascending/ descending).

**ARY980E**  Invalid Column number specified: zero.

**Explanation:** Invalid parameter to CSORT was specified (zero).

**User response:** Specify a column number parameter to CSORT that is between 1 and the number of columns currently on the display screen. This can be followed by a direction value A or D (ascending/ descending).

**ARY981E**  Invalid Column number specified: out of range.

**Explanation:** Invalid parameter to CSORT was specified (zero).

**User response:** Specify a column number parameter to CSORT that is between 1 and the number of columns currently on the display screen. This can be followed by a direction value A or D (ascending/ descending).

**ARY982E**  Invalid View. View adjusted.

**Explanation:** The current view was adjusted but not deleted. The saved view did not match the report requirements. This could be caused by the report changing or the view file getting corrupted.

**User response:** The adjusted view will be used. You can issue CSET to modify the view.

**ARY983E**  Invalid View. View deleted.

**Explanation:** Invalid data was found in a view for this report. The view was deleted and contents ignored. This could be caused by the report changing or the view file getting corrupted.

**User response:** You can issue CSET to create a view that will match the current report.

**ARY984E**  Unexpected return code from TBSTATS: return code

**Explanation:** An unexpected failure issuing TBSTATS was received.

**User response:** Please refer to the ISPF Services Guide for (hex) return code descriptions. Also, review the ISPTLIB and ISPTABL allocations. For information about ISPTLIB and ISPABABL, see ISPF manuals.

**ARY985E**  View Library not allocated.

**Explanation:** A view input library has not been allocated. In order for a user to save and use report customizations that are created via the CSET command, ISPTABL and ISPTLIB must be allocated.

**User response:** Refer to ISPF manuals for information on ISPTLIB and ISPABABL.

**ARY986E**  TBCREATE failed. RC=return code

**Explanation:** TBCREATE was issued to create a view. It failed with a (hex) return code as indicated in the message.

**User response:** Review ISPTLIB allocation and data set characteristics. Review security controlled access to ISPTLIB data sets. For information about return codes, refer to the ISPF Services Guide.

**ARY987E**  TBOPEN failed. RC=return code

**Explanation:** TBOPEN was issued to open a view. It failed with a (hex) return code as indicated in the message.

**User response:** Review ISPTLIB allocation and data set characteristics. Review security controlled access to ISPTLIB data sets. For information about return codes, refer to the ISPF Services Guide.

**ARY988E**  TBGET failed. RC=return code

**Explanation:** A TBGET produced a return code (as indicated in the message).

**User response:** Review ISPTLIB allocation and data set characteristics. Review security controlled access to ISPTLIB data sets. For information about return codes,
refer to the ISPF Services Guide.

**ARY989E**  
**TBMOD failed. RC=return code**

**Explanation:** A TBMOD produced an error and return code (as indicated in the message).

**User response:** Review ISPTLIB allocation and data set characteristics. Review security controlled access to ISPTLIB data sets. For information about return codes, refer to the ISPF Services Guide.

**ARY990E**  
**TBCLOSE failed. RC=return code**

**Explanation:** TBCLOSE failed with a (hex) return code as indicated in the message.

**User response:** Review ISPTLIB allocation and data set characteristics. Review security controlled access to ISPTLIB data sets. For information about return codes, refer to the ISPF Services Guide.

**ARY991E**  
**TBDELETE failed. RC=return code**

**Explanation:** TBDELETE failed with a (hex) return code as indicated in the message.

**User response:** Review ISPTLIB allocation and data set characteristics. Review security controlled access to ISPTLIB data sets. For information about return codes, refer to the ISPF Services Guide.

**ARY992E**  
**Invalid selection.**

**Explanation:** A command that is not supported on this panel was selected.

**User response:** Issue a valid command for the panel.

**ARY993E**  
**Permanent view not supported.**

**Explanation:** ARY has detected something that prevents views from being saved. The permanent view flag cannot be set to Y. The most likely cause of this is that either ISPTLIB or ISPTABL (or both) have not been properly allocated.

**User response:** Review ISPTLIB allocation and data set characteristics. Review security controlled access to ISPTLIB data sets. For information about return codes, refer to the ISPF Services Guide.

**ARY994E**  
**Invalid row number.**

**Explanation:** CEXPAND was issued with an invalid parameter of zero. CEXPAND can be issued with no parameters and the cursor on a data field, or with two parameters. The two parameters are the row number, followed by the column number of the data element to be expanded. The row number is counted down from the top, starting with the first scrollable row (heading not counted). The column number is counted from left to right, starting with the left column in the current display window.

**User response:** Specify a valid parameter count for use with CEXPAND.

**ARY995E**  
**Invalid column number.**

**Explanation:** CEXPAND was issued with an invalid parameter of zero. CEXPAND can be issued with no parameters and the cursor on a data field, or with two parameters. The two parameters are the row number, followed by the column number of the data element to be expanded. The row number is counted down from the top, starting with the first scrollable row (heading not counted). The column number is counted from left to right, starting with the left column in the current display window.

**User response:** Specify a valid parameter count for use with CEXPAND.

**ARY996E**  
**Invalid digits.**

**Explanation:** CEXPAND was issued with an invalid parameter of zero. CEXPAND can be issued with no parameters and the cursor on a data field, or with two parameters. The two parameters are the row number, followed by the column number of the data element to be expanded. The row number is counted down from the top, starting with the first scrollable row (heading not counted). The column number is counted from left to right, starting with the left column in the current display window.

**User response:** Specify a valid parameter count for use with CEXPAND.

**ARY997E**  
**Too many digits.**

**Explanation:** CEXPAND was issued with an invalid parameter of zero. CEXPAND can be issued with no parameters and the cursor on a data field, or with two parameters. The two parameters are the row number, followed by the column number of the data element to be expanded. The row number is counted down from the top, starting with the first scrollable row (heading not counted). The column number is counted from left to right, starting with the left column in the current display window.

**User response:** Specify a valid parameter count for use with CEXPAND.

**ARY998E**  
**Zero parameter invalid.**

**Explanation:** CEXPAND was issued with an invalid parameter of zero. CEXPAND can be issued with no parameters and the cursor on a data field, or with two parameters. The two parameters are the row number, followed by the column number of the data element to be expanded. The row number is counted down from the top, starting with the first scrollable row (heading
not counted). The column number is counted from left to right, starting with the left column in the current display window.

User response: Specify a non-zero parameter.

---

**ARY999E** Invalid parameter count: must be either two or zero parms.

Explanation: CEXPAND was issued with an invalid number of parameters. CEXPAND can be issued with no parameters and the cursor on a data field, or with two parameters. The two parameters are the row number, followed by the column number of the data element to be expanded. The row number is counted down from the top, starting with the first scrollable row (heading not counted). The column number is counted from left to right, starting with the left column in the current display window.

User response: Specify a valid parameter count for use with CEXPAND.

---

**ARY1001A** The SYSOUT data set could not be opened for output.

Explanation: The SYSOUT data set defined in your DB2® Recovery Expert JCL could not be opened for output.

User response: Verify that the SYSOUT data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

---

**ARY1002E** The SYSOUT DD must have a 133 byte LRECL.

Explanation: The SYSOUT DD specified in your Db2 Recovery Expert JCL does not have a 133-byte LRECL.

User response: Ensure your SYSOUT DD has a 133-byte LRECL and resubmit the Db2 Recovery Expert job.

---

**ARY1010E** The following space is not set to LOG for a required log range.

Explanation: The space listed in the messages is not set to LOG for a required log range.

User response: No action is required.

---

**ARY1012E** No valid full image copy in the SYSCOPY history was found for space(s): spaces

Explanation: Db2 Recovery Expert was unable to find a valid full image copy in the SYSCOPY history for the table space(s) indicated in the message. Db2 Recovery Expert requires a full image copy registered in SYSCOPY.

User response: Ensure the image copy is registered in SYSCOPY and that it is valid.

---

**ARY1013E** A table update ICTYPE was found in SYSCOPY that did not log for space(s): spaces

Explanation: There were multiple spaces being processed for which it was impossible for Db2 Recovery Expert to process due to the fact that some operation (such as LOAD REPLACE LOG(NO), REORG LOG(NO), etc.) occurred at some point between the selected starting point and the specified end point.

User response: No action is required.

---

**ARY1014I** Database: database Space: space Partition: partition

Explanation: This message is issued in conjunction with other Db2 Recovery Expert messages to indicate the database, space, and partition for which other messages apply.

User response: No action is required.

---

**ARY1015E** Could not determine disk/tape status of unit name.

Explanation: The device type for work data sets entered in the control file is invalid.

User response: Enter the correct device type.

---

**ARY1016E** The device type of the unit name from the control file could not be determined.

Explanation: The device type for work data sets entered in the control file is invalid.

User response: Enter the correct device type.

---

**ARY1017E** The REPORT utility returned an unrecoverable error.

Explanation: An internal error occurred.

User response: Contact IBM Software Support.

---

**ARY1018E** The FULL image copy DD CA(LP/LB/RP/RR) (1) is missing from the JCL. Each CAXxnnnn DD correlates to each SPACE(...) control card group.

Explanation: The full image copy data set is not included in your Db2 Recovery Expert JCL.

User response: Verify that the JCL is formatted correctly and contains the necessary information for your Db2 Recovery Expert job.
ARY1019E  The FULL image copy DD CA [1] refers to a DSNAME already in SYSCOPY.

Explanation: You specified a full image copy data set name that already exists in SYSCOPY.

User response: Specify a different image copy data set name.

ARY1020I  Each CAxxxx DD correlates to each SPACE(...) control card group.

Explanation: Each CAxxxx DD statement must be associated with a corresponding SPACE(...) control card group.

User response: Verify that the JCL is formatted correctly and that each CAxxxx DD statement is associated with a SPACE(...) control card group.

ARY1021E  The TO_QUIESCE control card was specified, but no quiesce point was found.

Explanation: The TO_QUIESCE control card directs Db2 Recovery Expert to read the log and incorporate data into the image copy up to the most recent quiesce point but no quiesce point was found.

User response: No action is required.

ARY1022E  The stop point precedes the start point for space: Database: database Table space: table_space Partition: partition Start point X'startpoint' End point X'endpoint'.

Explanation: The Db2 Recovery Expert job will not run if the stop point proceeds the start point for the listed database, table space, partition.

User response: Correct the JCL and resubmit the job.

ARY1023I  The version of Db2 subsystem ssid is ver.

Explanation: Displays the SSID and the version of the Db2 subsystem.

User response: No action is required.

ARY1024I  The version of Db2 group attach member_name is version.

Explanation: Displays the version of Db2 group attach that the Db2 group attach member subsystem is running.

User response: No action is required.

ARY1025I  Control card stream process complete.

Explanation: This is an informational message stating that the control card scanning process has finished. The number of objects found in the control card set is indicated by the space count variable.

User response: No action is required.

ARY1026I  The table space table_space contains n partitions.

Explanation: Indicates the number of partitions that the table space (displayed in the message) contains.

User response: No action is required.

ARY1027I  Db2 Recovery Expert will process dataset for tablespace tablespace.

Explanation: Indicates the data set name that Db2 Recovery Expert will process.

User response: No action is required.

ARY1028I  The image copy is of all parts.

Explanation: Indicates that the image copy is of all partitions of the table space.

User response: No action is required.

ARY1029I  The image copy contains one partition (partition).

Explanation: Indicates the one partition that the image copy contains.

User response: No action is required.

ARY1030E  A concurrent image copy was found in the SYSCOPY history. It cannot be used.

Explanation: The DFDSS concurrent image copy that was found cannot be read by Db2 Recovery Expert.

User response: Select an alternative mechanism by which to recover the space.

ARY1031I  Only partition partition within the image copy will be updated with log data and written to an individual partition copy.

Explanation: Db2 Recovery Expert will only update the partition within the image copy with log data and will write to an individual partition image copy.

User response: No action is required.
AR1032I All partitions will be updated with log data.
Explanation: Db2 Recovery Expert will update all partitions with log data.
User response: No action is required.

AR1033E A partial recovery point was found in SYSCOPY and its data set name does not match the data set name specified in the STARTING_IC control card.
Explanation: Although you specified a particular starting point, it cannot be used because a partial recovery point was found in SYSCOPY and the data set associated with it has to be used instead.
User response: You must remove the STARTING_IC control card from your Db2 Recovery Expert syntax.

AR1034I Db2 Recovery Expert will process the log only for table space table_space PART part.
Explanation: Db2 Recovery Expert will process only the log for the indicated table space and partition.
User response: No action is required.

AR1035E An image copy was found, but its RBA precedes the logging start point.
Explanation: This message indicates that although an image copy was found, it could not be used since its RBA precedes the logging start point.
User response: No action is required.

AR1036I Db2 Recovery Expert processing ends.
Explanation: Indicates that Db2 Recovery Expert processing has completed.
User response: No action is required.

AR1038E An incremental image copy was marked as cataloged in SYSCOPY, but was not found in the MVS catalog.
Explanation: This message indicates that although an incremental image copy was marked as cataloged in SYSCOPY, it was not found in the MVS catalog.
User response: No action is required.

AR1039E At least two end points within a single GROUP() are not the same.
Explanation: At least two end points within a GROUP are not the same.
User response: Verify that the end points you defined are correct.

AR1040I The SPACE(...) set involved that the error was detected in was #XXXXX'
Explanation: There was an error in the SPACE set indicated in the message.
User response: Verify the correct SPACE syntax has been specified.

AR1041W An error occurred during processing, but was overridden. Check all messages.
Explanation: An error occurred.
User response: Check messages for an error in processing.

AR1042W All objects are marked to skip. Log reading and further processing skipped.
Explanation: All objects are marked to skip so Db2 Recovery Expert will skip further processing and log reading.
User response: No action is required.

AR1043I Only LOB tablespaces with 4G DSSIZE values are supported at this time.
Explanation: Support will be added in the future.
User response: No action is required.

AR1044W error_message
Explanation: This is a warning message that is associated with the ADD_TABLES and REMOVE_AND_ADD_TABLES keywords. If the stored procedure returns anything other than a successful return code, the error messages it provides are output under this error message.
User response: Review the warning messages generated by the stored procedure for accuracy. Contact IBM Software Support for assistance.

AR1045E An error occurred while attempting to load the Db2 call attach service.
Explanation: A z/OS load error occurred for the Db2 call attach service.
User response: Ensure that the /*STEPLIB has the correct version of the Db2 loadlib data sets including SDSNLOAD.

AR1046I The space processing DATABASE_NAME:SPACE_NAME partition NUMBER was set to TO_CURRENT
Explanation: The end point for the object indicated in the message was set to TO_CURRENT.
**User response:** No action is required.

**ARY1049E**  
*databaseName.tablespaceName Part #nnnnn*  
**Consistent RBA/LRSN = X’rba/lrsn’.**

**Explanation:** Db2 Recovery Expert applied all committed units of work up to RBA/LRSN `rba/lrsn`. This message is issued for each table. In a Db2 data sharing environment, a decimal format timestamp is converted from the hexadecimal RBA/LRSN and displayed in the message.

**User response:** No action is required.

**ARY1050I**  
Tape image copy process was optimized.  
Space count x. Group count 1.

**Explanation:** When a DSNUM 0 image copy is on tape and the value of the PARALLEL `y` parameter is greater than 1, only one log apply task is performed.

**User response:** No action is required.

**ARY1051I**  
Unused groups were dropped.

**Explanation:** Empty groups were found and deleted.

**User response:** See related messages for details.

**ARY1052I**  
IC process order requires single task log apply.

**Explanation:** The tape optimization process determined that tape volume sequences prohibited the multiple groups specified in the control cards. The groups were combined to avoid runtime errors.

**User response:** No action is required.

**ARY1053E**  
The target table space cannot be configured for multiple tables.

**Explanation:** A multi-table image copy cannot be specified when the OBIDXLAT_CATALOG control card is specified.

**User response:** Specify a single-table image copy or remove the OBIDXLAT_CATALOG control card from the job.

**ARY1053W**  
Space order collision detected.

**Explanation:** Spaces could not be processed in the supplied order. To avoid space process lock, space redistribution will be performed.

**User response:** No action is required.

**ARY1054W**  
Space order collision detected.

**Explanation:** The order of the objects specified in the control cards is inconsistent with the order on the tape data set sequence. Objects will be rearranged.

**User response:** No action is required.

**ARY1055I**  
Space `<space_count>` round robin distribution used. Group `<group_count>`.

**Explanation:** Space redistribution was performed by round robin algorithm.

**User response:** No action is required.

**ARY1101E**  
The first control card was not a request for Db2 Recovery Expert.

**Explanation:** The JCL you submitted did not specify REDIRECTED_RESTORE as the first control card in the Db2 Recovery Expert syntax.

**User response:** Correct the Db2 Recovery Expert syntax. REDIRECTED_RESTORE is the main Db2 Recovery Expert keyword. An open parenthesis must follow this keyword and the remainder of the Db2 Recovery Expert keywords must be contained within.

**ARY1103E**  
Invalid syntax after REDIRECTED_RESTORE control card. Expected ").".

**Explanation:** The syntax after the REDIRECTED_RESTORE control card is not valid.

**User response:** Ensure the Db2 Recovery Expert control cards are enclosed in parentheses.

**ARY1105E**  
Invalid syntax after SPACE control card. Expected ").".

**Explanation:** The syntax after the SPACE control card is not valid.

**User response:** Ensure the Db2 Recovery Expert control cards are enclosed in parentheses.

**ARY1106E**  
The data base parameter was specified but no value was found with it.

**Explanation:** You specified the DATA_BASE parameter but did not specify a corresponding value.

**User response:** Enter the 8-character database name following the DATA_BASE keyword.
The table space name parameter was specified, but no value was found with it.

Explanation: You specified the SPACE_NAME parameter but did not specify a corresponding value.

User response: Enter the 8-character database name following the SPACE_NAME keyword.

The partition parameter was specified, but no value was found with it.

Explanation: You specified the PARTITION parameter but did not specify a corresponding value.

User response: Enter a partition number next to the PARTITION keyword.

The data base parameter is invalid.

Explanation: The DATA_BASE syntax is invalid.

User response: Verify that the DATA_BASE keyword has been properly specified in your JCL.

The space name parameter is invalid.

Explanation: The SPACE_NAME syntax is invalid.

User response: Verify that the SPACE_NAME keyword has been properly specified in your JCL.

The partition parameter is invalid.

Explanation: The PARTITION syntax is invalid.

User response: Verify that the PARTITION keyword has been properly specified in your JCL.

The end RBA parameter was specified, but no value was found with it.

Explanation: You specified the END_RBA keyword but did not specify a corresponding value.

User response: Enter a valid value for the END_RBA keyword.

Syntax error around end RBA value. Form is X'6 byte hex value'.

Explanation: The end RBA must be in the format X'nnnnnn', where nnnnnn is the hexadecimal value of the end RBA.

User response: Enter the end RBA value in the correct format.

Syntax error around end RBA value. Form is X'6 byte hex value'.

Explanation: The end RBA value contains an invalid hexadecimal value.

User response: Correct the end RBA value.

The end RBA value cannot be 0.

Explanation: The value specified for the END_RBA keyword cannot be 0.

User response: Specify a valid value for the END_RBA keyword.

The end RBA value was already specified before end LRSN in a control group.

Explanation: In the Db2 Recovery Expert JCL, the end RBA value is specified before end LRSN for the group.

User response: You can only specify end RBA or End LRSN, not both. Correct the JCL and resubmit the job.

The end LRSN parameter was specified, but no value was found with it.

Explanation: The END_LRSN keyword is missing its parameter value.

User response: Enter the end LRSN following the END_LRSN keyword.

Syntax error around end LRSN value. Form is X"<6 byte hex value>".

Explanation: The end LRSN must be in the format X"nnnnnn", where nnnnnn is the hexadecimal value of the end LRSN.

User response: Enter the end LRSN value in the correct format.

The end LRSN value contains an invalid hexadecimal value.

Explanation: The hexadecimal value entered is invalid.

User response: Enter the correct value.

The end LRSN value cannot be 0.

Explanation: The end LRSN cannot be 0.

User response: Enter the correct value.
The end LRSN value was already specified before end RBA in a control group.

**Explanation:** In the Db2 Recovery Expert JCL, the end LRSN value is specified before end RBA for the group.

**User response:** You can only specify end RBA or End LRSN, not both. Correct the JCL and resubmit the job.

---

One of the following options must be specified: TO_CURRENT, TO_QUIESCE, END_RBA, END_LRSN, TO_IC, TO_TIMESTAMP, TO_TIMESTAMP_LOCAL, or TOLOGPOINT.

**Explanation:** The product requires a log range end point to complete the process.

**User response:** Ensure that the control card set includes a valid end point control card or a single end point control card factored out at the group level. You can use one of the options listed in the message text.

---

Only one end point (END_RBA, END_LRSN, TO_CURRENT, TO_QUIESCE, TO_TIMESTAMP, TO_TIMESTAMP_LOCAL, TO_IC, or TOLOGPOINT) can be specified.

**Explanation:** You specified more than one end point parameter.

**User response:** Specify only one end point parameter.

---

The starting image copy value has mismatched apostrophes.

**Explanation:** An apostrophe is missing from the starting image copy data set name on the STARTING_IC keyword.

**User response:** Ensure the Db2 Recovery Expert control cards are enclosed in parentheses.

---

The starting image copy value has no contents.

**Explanation:** There is a problem with the starting image copy data set name included with the STARTING_IC keyword. Either the data set name is missing or spelled incorrectly, the data set cannot be opened, or the data set is not a valid image copy data set.

**User response:** Specify the correct data set.

---

A token value was found that was either no Db2 Recovery Expert command set or was misplaced in the Db2 Recovery Expert control cards. The value of the invalid token is:

**Explanation:** An invalid keyword appears in the control cards.

**User response:** Check the list of valid keywords and parameters, correct the keyword, and resubmit.

---

A table/index space name pair or index name pair is incomplete.

**Explanation:** One of the table/index space name pairs you specified is incomplete.

**User response:** Verify that all table/index space name pairs have been specified correctly. Edit your JCL as needed and resubmit the job.

---

The space was not found in the Db2 catalog. Space space.

**Explanation:** The table space you specified in your Db2 Recovery Expert JCL does not exist in the Db2 catalog.

**User response:** Correct the JCL and resubmit the job.

---

A partition was specified for {x} but the space is non-partitioned.

**Explanation:** A partition was specified but no partition is defined for that table space.

**User response:** Specify the correct table space partition information.

---

A partition was specified for {x} but the partition is not defined.

**Explanation:** A partition was specified but no partition is defined for that table space.

**User response:** Specify the correct table space partition information.

---

In a data sharing environment, specifying RBA values is not allowed.

**Explanation:** You specified an RBA value in a data sharing environment. RBA values are not available for use in data sharing environments.

**User response:** Correct the JCL and resubmit the job. If necessary use LRSN values instead of RBA values.
In a non data sharing environment, specifying LRSN values is not allowed.

**Explanation:** You are currently using a data sharing environment so the LRSN values you specified are not allowed.

**User response:** Do not use an LRSN value in your JCL or profile.

The command set must end with a close parenthesis ")".

**Explanation:** There is no close parenthesis following the Db2 Recovery Expert input cards.

**User response:** Enter a close parenthesis following the Db2 Recovery Expert input cards.

The command set has extra parameters after the close parenthesis.

**Explanation:** A command is outside the close parenthesis.

**User response:** Ensure the Db2 Recovery Expert control cards are enclosed in parentheses.

The SYSINAR DD card could not be found in the JCL.

**Explanation:** Db2 Recovery Expert requires the SYSINAR DD as input to the job. The SYSINAR DD could not be found in the JCL.

**User response:** Specify this DD as instream or as a data set.

The SYSINAR DD card could not be opened for input.

**Explanation:** The SYSINARY DD points to a data set but that data set could not be opened for input.

**User response:** Verify that the SYSINARY DD is not being accessed by other resources and resubmit the job.

The SYSINARY DD input stream is empty.

**Explanation:** No control cards appear in the instream file or the input data set.

**User response:** Correct the JCL and resubmit the job.

The parsing process gave an invalid return code.

**Explanation:** There is an error in your Db2 Recovery Expert JCL.

**User response:** Correct the JCL and resubmit the job.

The functional limit of Db2 Recovery Expert is 20000 Space control card groups.

**Explanation:** You specified more than 20000 Db2 Recovery Expert SPACE control card groups.

**User response:** Specify less than 20000 SPACE control card groups.

The following object is specified at least 2 times in the control cards:

**Explanation:** You specified the listed object twice or more in the control cards.

**User response:** Specify the object at most once in the control card.

Duplicate objects found in control card stream: PART part SPACE NUMB space numb.

**Explanation:** Duplicate object detected in control card stream.

**User response:** Remove the duplicate object.

The DATABASE keyword has already been coded for this space group.

**Explanation:** You specified the DATABASE parameter more than once for the SPACE group.

**User response:** Correct the JCL and resubmit the job.

The SPACE_NAME keyword has already been coded for this space group.

**Explanation:** You specified the SPACE_NAME parameter more than once for the SPACE group.

**User response:** Correct the JCL and resubmit the job.

The PARTITION keyword has already been coded for this space group.

**Explanation:** You specified the PARTITION parameter more than once for the SPACE group.

**User response:** Correct the JCL and resubmit the job.

The END_RBA keyword has already been coded for this space group.

**Explanation:** You can only specify the END_RBA once for each SPACE group.

**User response:** Correct the Db2 Recovery Expert JCL and resubmit the job.

</tbody>
</table>
all groups or none of the groups within the JCL.

**ARY1161E** Each group must have it’s own unique mini log data set name.

**Explanation:** The mini log data sets you specified are not all unique.

**User response:** Rename mini log data sets so the each have a unique name.

**ARY1162E** The data set dataset already exists in the Db2 Recovery Expert mini log control table.

**Explanation:** The data set you specified in the data set name generation qualifier string already exists in the Db2 Recovery Expert mini log control table.

**User response:** Specify a unique mini log data set name.

**ARY1163E** The specified mini log data set data_set already exists in the MVS catalog.

**Explanation:** The mini log data set shown in the message is not unique and already exists in the MVS catalog.

**User response:** Specify a unique mini log data set name.

**ARY1164W** The NO_SYSCOPY_ROW control card is ignored when producing mini logs.

**Explanation:** You used the NO_SYSCOPY_ROW control card in the JCL but this parameter is ignored when producing mini logs.

**User response:** Correct the JCL and resubmit the job.

**ARY1165E** The mini log data set value has mismatched apostrophes.

**Explanation:** The value you specified for MINI_LOG_DSN is not enclosed in matching apostrophes.

**User response:** Correct the apostrophes in your JCL and resubmit the job.

**ARY1166E** The mini log data set value has no contents.

**Explanation:** The MINI_LOG_DSN keyword has been specified without a value.

**User response:** Specify a valid value for the MINI_LOG_DSN keyword.

**ARY1167E** Operations on the Db2 directory are not allowed.

**Explanation:** You attempted to image copy the Db2 directory table space. This operation is not allowed.

**User response:** Do not perform operations on the Db2 directory.

**ARY1168E** Operations on the Db2 Catalog table space DSNDB06.SYSCOPY are not allowed.

**Explanation:** You attempted to image copy the Db2 catalog table space. This operation is not allowed.

**User response:** Do not perform operations on the Db2 catalog.

**ARY1169E** Space can be designated as DATA_BASE SPACE_NAME pair, or CREATOR INDEX pair.

**Explanation:** Control cards within the SPACE() group refer to both indexes and tables. This is not allowed.

**User response:** Edit your JCL so the SPACE() group control cards refer to either indexes or tables (but not both).

**ARY1170E** The index creator name parm was specified, but no value was found with it.

**Explanation:** If you specify an index creator name, you must specify a value with it.

**User response:** Specify a valid index creator value.

**ARY1171E** The index creator parameter is invalid.

**Explanation:** The parameter you specified for the index creator is not valid.

**User response:** Specify a valid index creator value.

**ARY1172E** The CREATOR keyword has already been coded for this space group.

**Explanation:** You specified multiple CREATOR keywords for a space group. You can only specify the CREATOR keyword once for the space group.

**User response:** Remove all extra CREATOR keywords and resubmit your Db2 Recovery Expert job.

**ARY1173E** The index name parameter was specified, but no value was found with it.

**Explanation:** You specified the INDEX_NAME parameter but no value was specified with it.
User response: Specify a value for the INDEX_NAME keyword or remove the keyword.

**ARY1174E** The index name parameter is invalid.
Explanation: The specification of the INDEX_NAME parameter is not valid.
User response: Correct the INDEX_NAME parameter specification.

**ARY1175E** The NAME keyword has already been coded for this space group.
Explanation: The NAME keyword was specified more than once for the space group.
User response: Remove all unnecessary NAME keywords from the space group. Only one NAME keyword can be specified for the group.

**ARY1176E** The object object was not found in the Db2 catalog.
Explanation: The object indicated in the message was not found in the Db2 Catalog. Processing cannot proceed for the indicated object.
User response: Contact IBM Software Support.

**ARY1177E** The value was not properly enclosed with apostrophes.
Explanation: The syntax you specified was not valid. The value must be enclosed in apostrophes but was not.
User response: Correct the syntax by enclosing the value in apostrophes.

**ARY1178E** The index does not currently have COPY=YES activated in Db2.
Explanation: The index cannot be copied because COPY=YES is not specified.
User response: Specify COPY=YES for the index.

**ARY1179E** The index index was mapped to indexspace indexspace Space# space#.
Explanation: This informational message displays the database name and indexspace name for the index specified in the control cards
User response: No action is required.

**ARY1180E** The LOCAL_SITE and RECOVERY_SITE control cards cannot be specified together.
Explanation: LOCAL_SITE and RECOVERY_SITE control cards are mutually exclusive.

**ARY1181E** The WRITE_TO_VSAM keyword has already been coded for this run.
Explanation: The WRITE_TO_VSAM control card was specified multiple times. It should be specified at most once.
User response: Correct the syntax and resubmit the job.

**ARY1182E** The NO_MINILOG_CHECKPOINTS keyword has already been coded for this run.
Explanation: Multiple instances of the NO_MINILOG_CHECKPOINTS keyword have been coded in your Db2 Recovery Expert job. This keyword can only be coded once for your run.
User response: Remove all extraneous instances of the NO_MINILOG_CHECKPOINTS keyword from your Db2 Recovery Expert syntax.

**ARY1183E** The NO_SYSCOPY_ROW control card is ignored when writing directly to VSAM.
Explanation: The NO_SYSCOPY_ROW control card is used if you want Db2 Recovery Expert to skip updating the SYSCOPY catalog table with a new row for the new image copy. If you specify WRITE_TO_VSAM or WRITE_TO_BOTH, this is not applicable and therefore, the NO_SYSCOPY_ROW control card will be ignored and the SYSCOPY catalog table will be updated with a new row for the image copy.
User response: No action is required. If you do not want the SYSCOPY catalog table to be updated with a new row for the image copy, specify WRITE_TO_COPIES.

**ARY1184E** The WRITE_TO_VSAM and MINI_LOG_DSN control cards are mutually exclusive.
Explanation: Your Db2 Recovery Expert syntax includes both the WRITE_TO_VSAM and MINI_LOG_DSN control cards. The WRITE_TO_VSAM control card cannot be used with the MINI_LOG_DSN control card.
User response: Correct your Db2 Recovery Expert syntax.

**ARY1185E** The control card set ended prematurely. Ensure proper continuation syntax
Explanation: The REDIRECTED_RESTORE control
card set contains an error and as a result ended prematurely.

**User response:** Check and correct your Db2 Recovery Expert syntax.

---

**ARY1186E** The WRITE_TO_COPIES keyword has already been coded for this run.

**Explanation:** The WRITE_TO_COPIES keyword has been specified more than once in a REDIRECTED_RESTORE run.

**User response:** Correct your syntax by removing any extra WRITE_TO_COPIES keywords.

---

**ARY1187E** The WRITE_TO_BOTH keyword has already been coded for this run.

**Explanation:** The WRITE_TO_BOTH keyword has been specified more than once for a single REDIRECTED_RESTORE run.

**User response:** Correct your syntax by removing any extra WRITE_TO_BOTH keywords.

---

**ARY1188E** Only one WRITE_TO_ control card can be specified per run.

**Explanation:** Multiple WRITE_TO (WRITE_TO_VSAM, WRITE_TO_COPIES, WRITE_TO_BOTH) control cards have been specified in your JCL. Only one is allowed per run.

**User response:** Remove all extraneous WRITE_TO_ control cards and resubmit the job. If you want to write to VSAM and to image copies, specify WRITE_TO_BOTH.

---

**ARY1190E** An unexpected error occurred while trying to read the ZPARAM information.

**Explanation:** Db2 Recovery Expert encountered an unexpected error when attempting to read ZPARAM information.

**User response:** Contact IBM Software Support.

---

**ARY1191E** Mini log data set #1 must be specified if mini log data set #2 is specified.

**Explanation:** If you specify a secondary mini log data set, you must also specify a primary mini log data set. Thus, if you include the MINI_LOG_DSN_2 control card in your Db2 Recovery Expert syntax, you must also include the MINI_LOG_DSN_1 control card in your Db2 Recovery Expert syntax.

**Note:** If you specify a primary mini log data set, you are not required to specify a secondary mini log data set.

**User response:** To resolve this issue, you must do one of the following:
- remove the MINI_LOG_DSN_2 control card from your syntax
- specify both MINI_LOG_DSN_1 and MINI_LOG_DSN_2
- specify only MINI_LOG_DSN_1

---

**ARY1192E** The TOLOGPOINT parameter was specified, but no value was found with it.

**Explanation:** Your syntax includes the TOLOGPOINT control card but no value was specified. The TOLOGPOINT control card must specify a valid log point to which you want to make the image copy.

**User response:** Verify that the correct TOLOGPOINT syntax is specified in your syntax. Ensure that a log point value is specified for the TOLOGPOINT control card.

---

**ARY1193E** Syntax error around TOLOGPOINT value. Form is 'X'^6 byte hex value'^'.

**Explanation:** A syntax error was detected for the TOLOGPOINT control card.

**User response:** Verify that the log point you specified is a six-byte hexadecimal value.

---

**ARY1194E** The TOLOGPOINT value contains an invalid hexadecimal value.

**Explanation:** The value specified for the TOLOGPOINT control card is not a valid hexadecimal value.

**User response:** Correct the value specified for the TOLOGPOINT control card. Ensure that you specify a valid hexadecimal value to indicate the point up to which you want to make the image copy.

---

**ARY1195E** The TOLOGPOINT value can not be 0.

**Explanation:** The value specified for the TOLOGPOINT control card is not valid. You cannot specify a value of 0.

**User response:** Correct the value specified for the TOLOGPOINT control card. Ensure that you specify a valid hexadecimal value that indicates the point up to which you want to make the image copy.

---

**ARY1196E** The TOLOGPOINT value was already specified before end LRSN in a control group.

**Explanation:** The TOLOGPOINT value overrides the specified END_LRSN control card.

**User response:** Remove the unnecessary END_LRSN
control card and adjust the TOLOGPOINT value as needed or remove the TOLOGPOINT control card.

**ARY1197E**  
The TOLOGPOINT keyword has already been coded for this space group.  
**Explanation:** The TOLOGPOINT control card need only be specified once for a space group.  
**User response:** Remove the extra TOLOGPOINT control card and ensure that the TOLOGPOINT control card that remains in your syntax is set to the correct log point.

**ARY1198E**  
The grouping end point conflicts/duplicates a SPACE() level end point.  
**Explanation:** The GROUP end point is invalid and conflicts with that of the SPACE level.  
**User response:** Correct the syntax.

**ARY1199E**  
The FORCE_COPIES keyword has already been coded for this run.  
**Explanation:** You coded the FORCE_COPIES control card multiple times for the run.  
**User response:** Check your syntax and remove any unnecessarily FORCE_COPIES control cards. Only one FORCE_COPIES control card is allowed per run.

**ARY1200E**  
The subsystem Db2 Recovery Expert was started with could not be found in JES2.  
**Explanation:** The subsystem Db2 Recovery Expert was started with could not be found in JES2.  
**User response:** Verify that you have specified the correct subsystem.

**ARY1201E**  
The subsystem Db2 Recovery Expert was started with is not active in JES2.  
**Explanation:** This message indicates that the subsystem that Db2 Recovery Expert was started with is not active in JES2.  
**User response:** No action is required.

**ARY1202E**  
The subsystem Db2 Recovery Expert was started with is not active in JES2.  
**Explanation:** This message indicates that the subsystem that Db2 Recovery Expert was started with is not active in JES2.  
**User response:** No action is required.

**ARY1203I**  
Db2 subsystem is not defined to OS/390. Using group attach name instead.  
**Explanation:** The Db2 subsystem you specified is not defined on OS/390®. If you use a group attach name, you will be able to connect to a Db2 subsystem that is active on OS/390.  
**User response:** Edit your Db2 Recovery Expert setup to connect to a group attach name or to connect to a Db2 subsystem that is active on OS/390.

**ARY1204I**  
Db2 subsystem is not active on OS/390. Using group attach name instead.  
**Explanation:** The Db2 subsystem you specified is not active on OS/390. If you use a group attach name, you will be able to connect to a Db2 subsystem that is active on OS/390.  
**User response:** Edit your Db2 Recovery Expert setup to connect to a group attach name or to connect to a Db2 subsystem that is active on OS/390.

**ARY1205I**  
The subsystem Db2 Recovery Expert was started with is the group attach name.  
**Explanation:** This message indicates the subsystem group attach name that Db2 Recovery Expert process is using.  
**User response:** No action is required.

**ARY1206I**  
The following subsystems are part of the data sharing group.  
**Explanation:** This message, in conjunction with message ARY1207I, provides the following information about the subsystem on which your Db2 Recovery Expert job ran:  
- Subsystem—the subsystem.  
- Member ID—the member ID.  
- Defined to OS/390—whether this member is defined to OS/390.  
- Active—whether this member is known to this OS/390 running on OS/390.  
**Note:** Db2 Recovery Expert cannot detect the status of a member that is not running on this OS/390. Although a Db2 member may appear to be inactive, it may be running on another OS/390. Regardless, Db2 Recovery Expert reads the logs and processes all of the necessary files from each member of the data sharing group.  
**User response:** No action is required.
This message, in conjunction with message ARY1206I, provides the following information about the subsystem on which your Db2 Recovery Expert job ran:

- The subsystem.
- The member ID.
- Whether or not this member is defined to OS/390.
- Whether or not this member is running on OS/390.

Note: Db2 Recovery Expert cannot detect the status of a member that is not running on this OS/390. Although a Db2 member may appear to be inactive, it may be running on another OS/390. Regardless, Db2 Recovery Expert reads the logs and processes all of the necessary files from each member of the data sharing group.

User response: No action is required.

This message displays the SSIDs that accompany messages ARY1206I and ARY1207I.

User response: No action is required.

Db2 Recovery Expert is not in an APF authorized concatenation. It needs to be.

Explanation: To run, Db2 Recovery Expert requires that the target load libraries SARLOAD and SARLOAD are APF authorized.

User response: Include the highlevel.SARLOAD and highlevel.SARLOAD libraries as part of your system APF authorized list.

Db2 Recovery Expert needs to run from a //STEPLIB concatenation.

Explanation: Your JCL does not specify a //STEPLIB concatenation.

User response: Correct your JCL and resubmit the job.

The following data set in the //STEPLIB concatenation is not APF authorized:

data_set

Explanation: The data set indicated in the message requires APF authorization.

User response: APF authorize the data set indicated in the message.

An internal error occurred while attempting to ascertain APF authorization status.

Explanation: An internal error occurred.

User response: Contact IBM Software Support.

The ENQs for the spaces were successful.

Explanation: This message indicates that the ENQs for the table spaces completed successfully.

User response: No action is required.

The ENQ for database database PART part was not successful.

Explanation: Indicates the database and partition for which the ENQs did not complete successfully.

User response: No action is required.

Incremental image copy image_copy could not be allocated.

Explanation: Indicates the incremental image copy that could not be allocated.

User response: No action is required.

Incremental image copy image_copy could not be deallocated.

Explanation: Indicates the incremental image copy that could not be deallocated.

User response: No action is required.

Could not start log record writer.

Explanation: A z/OS attachment error occurred attempting to start a component of the load read phase process.

User response: Ensure the product library is complete. Contact IBM Software Support.

The desired incremental image copy could not be opened.

Explanation: Db2 Recovery Expert could not open the incremental image copy you specified.

User response: Verify that the file is not in use.

The incremental image copy work file could not be opened.

Explanation: Db2 Recovery Expert could not open the incremental image copy work file.

User response: Verify that the file is not in use and...
that you have the proper authority to access this file.

**ARY1405I**  The incremental image copy sort input file could not be opened.
**Explanation:** Db2 Recovery Expert could not open the incremental image copy sort input file.
**User response:** Verify that the file is not in use and that you have the proper authority to access this file.

**ARY1406I**  A read request to the current incremental image copy failed.
**Explanation:** A request to read the current incremental image copy was not successful.
**User response:** Verify that the file is not in use and that you have the proper authority to access this file.

**ARY1407I**  Could not allocate the sort input work file for incr. IC processing.
**Explanation:** Db2 Recovery Expert was not able to allocate the sort input work file for incremental image copy processing.
**User response:** Verify that the file is not in use and that you have the proper authority to allocate this file.

**ARY1408I**  Could not allocate the sort output work file for incr. IC processing.
**Explanation:** Db2 Recovery Expert was not able to allocate the sort output work file for incremental image copy processing.
**User response:** Verify that the file is not in use and that you have the proper authority to allocate this file.

**ARY1409I**  An invalid return code was detected from the SORT program.
**Explanation:** Db2 Recovery Expert detected an invalid return code when attempting to SORT.
**User response:** Contact IBM Software Support.

**ARY1410I**  Dynamic allocation return code =return code
**Explanation:** Dynamic allocation produced the return code shown in the message.

**ARY1411I**  The last reported incremental image copy returned an immediate EOF.
**Explanation:** Db2 Recovery Expert encountered an immediate end of file for the last reported incremental image copy.
**User response:** No action is required.

**ARY1412I**  Image copy name=image_copy RBA=rba.
**Explanation:** Indicates the image copy name and RBA.
**User response:** No action is required.

**ARY1413I**  The accumulation of incremental image copies failed.
**Explanation:** The accumulation of incremental image copies was not successful.
**User response:** No action is required.

**ARY1414I**  The Db2 log will be used instead of the unusable incremental image copies.
**Explanation:** This message indicates that the Db2 log will be used in the Db2 Recovery Expert process since the incremental image copies are unusable.
**User response:** No action is required.

**ARY1415I**  The sort of the incremental image copies was successful.
**Explanation:** This message indicates that the sort of the incremental image copies completed successfully.
**User response:** No action is required.

**ARY1416E**  A FTR sort program could not be started.
**Explanation:** The SORT program could not be started.
**User response:** Contact IBM Software Support.

**ARY1417E**  An invalid return code was detected from the SORT program (FTR).
**Explanation:** The SORT program ended with an error.
**User response:** Contact IBM Software Support.

**ARY1421E**  An unexpected error occurred while trying to read the bootstrap data set.
**Explanation:** The ZPARM member could not be found.
**User response:** Verify that the ZPARM information is accurate in the log apply job. Verify that the correct data sets containing the ZPARM member are allocated. Contact IBM Software Support if the problem persists.
AR1500I An invalid return code was detected from the SORT program (log).
Explanation: Db2 Recovery Expert encountered an invalid return log.
User response: Correct the JCL and resubmit the job.

AR1501E The following log data set is required for processing but got an error: error.
Explanation: Db2 requires the log data set for processing but received the indicated error code when attempting to access the data set.
User response: Verify that the file is not in use and that you have the proper authority to access this file.

AR1502E A gap was found in the logs needed for processing. Last usable log was:
Explanation: A gap found in the logs required for processing was found. Logs after the gap were not usable. Subsequent message AR1503I indicates the log data set name of the last usable log.
User response: No action is required.

AR1503I data_set_name
Explanation: This message accompanies AR1502I and indicates the log data set name of the last usable log.
User response: No action is required.

AR1504E A desired log range cannot be found in any active/archive log.
Explanation: The log range is not available in any of the active or archive logs.
User response: No action is required.

AR1506W db2_ssid The start point for log processing was not within any active/archive log range.
Explanation: No log records for the objects in this run were found in this db2_ssid.
User response: No action is required.

AR1508I The sort of the applicable log records was successful.
Explanation: This message indicates that the sort of the applicable log records completed without error.
User response: No action is required.

AR1510I Error code #1: 'code' #2: 'code'
Explanation: This message indicates an internal error that occurs when the log reader process cannot allocate an active or archive log file.

AR1512E An unexpected error occurred while trying to read the bootstrap data set.
Explanation: Db2 Recovery Expert was unable to read the bootstrap data set.
User response: No action is required.

AR1513E An unexpected error occurred while trying to read the ZPARM information.
Explanation: An unexpected error occurred while trying to read the ZPARM information.
User response: No action is required.

AR1514E An error was detected during end log processing for subsystem ssid RC=rc.
Explanation: Db2 Recovery Expert encountered an error for the indicated subsystem.

AR1515I Log accumulated processing is beginning on subsystem ssid.
Explanation: Log accumulated processing has started on the subsystem indicated in the message.
User response: No action is required.

AR1516I Above the bar storage exhausted.
Explanation: The above the bar storage has been exhausted due to system or control card limits.
User response: The limit set by the maximum secondary allocation parameter has been met.

AR1517I All start points are Sharelevel Reference; checkpoint processing skipped.
Explanation: This informational messages indicates that checkpoint processing has been skipped since all start points are Sharelevel Reference.
User response: No action is required.
**ARY1518I**  •  **ARY1700I**

**ARY1518I**  Reading type log log.

**Explanation:** The ACTIVE/ARCHIVE log log_dataset_name is about to be read for log records associated with the specified objects.

**User response:** No action is required.

**ARY1519W**  Log reader operating in no consistency checking mode.

**Explanation:** Either mini logs are being written in SHARELEVEL CHANGE mode or a WRITE_TO_VSAM operation is taking place and all end points are TO_CURRENT.

**User response:** No action is required.

**ARY1600E**  The file used to hold log records as input to sort could not be allocated.

**Explanation:** Db2 Recovery Expert could not allocate the file used to hold log records as input to sort.

**User response:** Verify that the file is not in use.

**ARY1601E**  The file used to hold log records as input to sort could not be opened.

**Explanation:** Db2 Recovery Expert could not open the file used to hold log records as input to sort.

**User response:** Verify that the file is not in use.

**ARY1602E**  The file used to hold log records after they are sorted could not be allocated.

**Explanation:** Db2 Recovery Expert could not allocate the file used to hold log records after they have been sorted.

**User response:** Verify that the file is not currently in use or damaged.

**ARY1603E**  The mini log data set mini_log_dsn could not be allocated.

**Explanation:** Db2 Recovery Expert could not allocate the mini log data set.

**User response:** Verify that the file is not currently in use or damaged.

**ARY1604E**  The mini log data set mini_log_dsn could not be opened.

**Explanation:** There was a problem encountered when attempting to open the mini log data set.

**User response:** Verify that the file is not currently in use or damaged.

**ARY1605E**  Dynamic allocation return code 'rc'.

**Explanation:** This diagnostic message indicates data set allocation failure.

**ARY1606I**  The Db2 log record sort DD ddname was allocated.

**Explanation:** This message displays the input DDNAME. This message is output if Db2 Recovery Expert dynamically allocates the SORTIN2/SORTOUT2 DDNAMES. If the SORTIN2/SORTOUT2 DDNAMES are specified by the user in the step JCL, the messages does not appear and those DDs will be used as specified.

**User response:** No action is required.

**ARY1607I**  The Db2 log record sort DD ddname was allocated.

**Explanation:** This message displays the output DDNAME. This message is output if Db2 Recovery Expert dynamically allocates the SORTIN2/SORTOUT2 DDNAMES. If the SORTIN2/SORTOUT2 DDNAMES are specified by the user in the step JCL, the messages does not appear and those DDs will be used as specified.

**User response:** No action is required.

**ARY1608E**  The mini log data set dsn could not be located for append purpose.

**Explanation:** The mini log data set could not be located.

**User response:** Ensure the mini log data set is available.

**ARY1609E**  The mini log data set dsn could not be renamed for append purpose.

**Explanation:** The mini log data set could not be renamed.

**User response:** Ensure the mini log data set is available.

**ARY1700I**  An invalid return code was detected from the SORT program (data sharing).

**Explanation:** A data sharing problem has occurred.

**User response:** Verify that you have properly configured the data sharing information in Db2 Recovery Expert setup.
The following log data set is required for processing, but was not found: `data_set`.

**Explanation:** Processing could not proceed because a required log data set could not be found.

**User response:** Verify that the log data set was specified correctly and exists.

A gap was found in the logs needed for processing. Last usable log was: `dsn`

**Explanation:** A gap found in the logs required for processing was found. Logs after the gap were not usable. Subsequent message ARY1703I indicates the log data set name of the last usable log.

**User response:** Correct the problem with the logs and resubmit the Db2 Recovery Expert job.

An error was detected during end log processing for subsystem `subsystem`. `RC=rc`.

**Explanation:** An internal error occurred.

**User response:** Contact IBM Software Support.

The file used to hold log records as input to sort could not be allocated.

**Explanation:** Db2 Recovery Expert could not allocate the file used to hold log records as input to sort.

**User response:** Verify that the file is not currently in use or damaged.

The file used to hold log records as input to sort could not be opened.

**Explanation:** Db2 Recovery Expert could not open the file that holds the log records as input to sort.

**User response:** Verify that the file is not currently in use or damaged.

The file used to hold log records after they are sorted could not be allocated.

**Explanation:** Db2 Recovery Expert could not allocate the file used to hold log records after they have been sorted.

**User response:** Verify that the file is not currently in use or damaged.

The start point for reading log records was not within any archive/active log.

**Explanation:** Db2 Recovery Expert could not find any log records to process for this member of the data sharing group. This does not mean that there are no log records generated for the spaces being processed. Instead, it means that this particular member ID—being processed as indicated by a prior ARY1709I message, ‘ARY is now processing subsystem xxx’—has no log records to participate in the merge process. The other members in the data sharing group may have log records.

**Note:** ARY1708I messages always refers to the most recent ARY1709I message.

Log accumulate processing is beginning on subsystem `subsystem`.

**Explanation:** This message indicates that the log accumulate processing has started on the subsystem.

**User response:** No action is required.

The log apply process will begin at LRSN: `X'lrSN'`.

**Explanation:** This message indicates that the log apply process will begin at the specified LRSN.

**User response:** No action is required.

The sort of the data sharing log records was successful.

**Explanation:** This message indicates that the sort of the data sharing log records completed successfully.

**User response:** No action is required.

The sort of the data sharing log records was not necessary.

**Explanation:** This message indicates that the sort of the data sharing log was unnecessary.

**User response:** No action is required.

An unexpected error occurred while trying to read the bootstrap data set.

**Explanation:** An unexpected error occurred.

**User response:** Contact IBM Software Support.
The load module ARY@LOGR could not be found.

Explanation: A load module could not be found.

User response: Verify that the necessary load modules are available.

Error code #1: code #2: code.

Explanation: An internal error has occurred.

User response: Contact IBM Software Support.

An unexpected error occurred while trying to read the ZPARM information.

Explanation: An unexpected error was encountered.

User response: Contact IBM Software Support.

Dynamic allocation return code = 'rc'.

Explanation: This diagnostic message indicates data set allocation failure.

The most recent full image copy could not be allocated.

Explanation: This message indicates that the most recent full image copy could not be allocated during the Db2 Recovery Expert process.

User response: No action is required.

The work file for sorting the full image copy file could not be allocated.

Explanation: Db2 Recovery Expert could not allocate the full image copy file.

User response: Verify that the full image copy file has not been damage. Check with your systems administrator to verify that you have proper authorizations to access the necessary file.

The work file for re-keying the full image copy file could not be allocated.

Explanation: Db2 Recovery Expert could not allocate the work file for re-keying the full image copy file.

User response: Verify that the full image copy file has not been damage. Check with your systems administrator to verify that you have proper authorizations to access the necessary file.

The most recent full image copy could not be allocated.

Explanation: Db2 Recovery Expert could not open the most recent full image copy.

User response: Verify that the full image copy is not currently being used and resubmit the job.

The temporary file used to re-key the full IC could not be opened.

Explanation: Db2 Recovery Expert could not open the temporary file used to re-key the full image copy.

User response: Verify that the file is not in use and that you have the proper authority to access this file.

Dynamic allocation return code=rc.

Explanation: This message indicates the dynamic allocation return code.

User response: No action is required.

Image copy name=image_copy_name RBA=rba

Explanation: Indicates the image copy name and RBA.

User response: No action is required.

An invalid return code was detected from the SORT program.

Explanation: Db2 Recovery Expert encountered an invalid return code from the SORT program.

User response: Contact IBM Software Support.

The full image copy image_copy could not be deallocated.

Explanation: Db2 Recovery Expert could not deallocate the full image copy.

User response: Verify that the file is not in use or damaged. Check with your systems administrator to ensure you have proper authorizations to access this file.

The full image copy file returned an immediate EOF.

Explanation: Db2 Recovery Expert could not deallocate the full image copy.

User response: Verify that the file is not in use or damaged. Check with your systems administrator to ensure you have proper authorizations to access this file.
This error occurred during the re-key process for a full IC.

**Explanation:** An error occurred during the re-key process for a full image copy.

**User response:** Contact IBM Software Support.

### ARY1811I

The sort of the REORG inline full image copy file was successful.

**Explanation:** This message indicates that the REORG inline full image copy completed successfully.

**User response:** No action is required.

### ARY1812I

The sort of the re-keyed REORG inline full image copy file was successful.

**Explanation:** This informational message indicates that the sort process for the re-keyed REORG inline full image copy completed successfully.

**User response:** No action is required.

### ARY1813I

The sort of the LOAD inline full image copy file was successful.

**Explanation:** This message indicates the LOAD inline full image copy file sorted successfully.

**User response:** No action is required.

### ARY1814I

The sort of the re-keyed LOAD inline full image copy file was successful.

**Explanation:** This message indicates that the re-keyed LOAD inline full image copy file completed successfully.

**User response:** No action is required.

### ARY1815E

The catalog check on the most recent image copy failed.

**Explanation:** The catalog check on the most recent image copy did not complete successfully.

**User response:** No action is required.

### ARY1900I

Log range LRSN X'\lrsn\textsuperscript{p} to X'\lrsn\textsuperscript{n} is being processed.

**Explanation:** Indicates the log range that is being processed by Db2 Recovery Expert.

**User response:** No action is required.

### ARY1901I

Log range RBA X'rba\textsuperscript{p} to X'rba\textsuperscript{n} is being processed.

**Explanation:** Indicates the log range that is being processed by Db2 Recovery Expert.

**User response:** No action is required.

### ARY1810E

The output full image copy image_copy could not be opened.

**Explanation:** Db2 Recovery Expert could not open the output full image copy.

**User response:** Verify that the file is not in use and that you have the proper authority to access this file.

### ARY2001E

Dyndalloc function error DSN DSN rc= rc reason= reason.

**Explanation:** A call to z/OS dynamic allocation failed.

**User response:** Contact IBM Software Support.

### ARY2002E

Error process IDCAM output. Output follows: output

**Explanation:** IDCAMS system service request returned an error condition. The IDCAMS output and error messages follow.

**User response:** Verify IDCAMS output. Contact IBM Software Support.

### ARY2003E

An internal error occurred in the Db2 Recovery Expert merge section.

**Explanation:** An internal error occurred.

**User response:** Contact IBM Software Support.

### ARY2004I

The number of pages in the full image copy is inconsistent with the page size.

**Explanation:** The page size you specified is not consistent with the number of pages in the full image copy.

**User response:** Correct the page size specified and resubmit the job.

### ARY2005E

The number of pages in the incr. image copy is inconsistent with the page size.

**Explanation:** The page size you specified is not consistent with the number of pages in the incremental image copy.

**User response:** Correct the number of pages specified and resubmit the job.

### ARY2006E

An unexpected EOF was encountered on the sorted log records file.

**Explanation:** An unexpected end of file was encountered.

**User response:** Contact IBM Software Support.
The selected full IC has a DBID/PSID mismatch to the Db2 catalog.

Explanation: The DBID/PSID for the selected full image copy does not match those in the Db2 catalog.
User response: Correct the DBID/PSID for the selected full image copy.

Number of pages read from the full image copy file(s)=n.

Explanation: This informational message indicates the number of pages that were read from the full image copy files.
User response: No action is required.

Number of pages read from the incremental image copy file(s)=n.

Explanation: This informational message indicates the number of pages that were read from the incremental image copy data set(s).
User response: No action is required.

Number of records read from the log apply file=n.

Explanation: This informational message indicates the number of pages that were read from the log apply file.
User response: No action is required.

Number of pages written to the new full image copy file(s)=n.

Explanation: This informational message indicates the number of pages that were written to the new full image copy data set(s).
User response: No action is required.

Number of pages written to the table/index space file(s)=n.

Explanation: Indicates the number of pages written to the table/index space files.
User response: No action is required.

Since no changes were found for this data set, it has been deleted: dsn

Explanation: This message appears during dynamic allocation of an output image copy data set and no output was written to that data set. It is similar to the other message that is reported when no output is written to an output image copy data set in JCL.
User response: No action is required.

Error to start rebuild indexes thread.

Explanation: An attempt to start the rebuild indexes process returned an error.

A open failure occurred on the VSAM I/O module.

Explanation: An open failure occurred for the VSAM I/O module.

A close failure occurred on the VSAM I/O module.

Explanation: A close failure occurred for the VSAM I/O module.
User response: Contact IBM Software Support.

A write failure occurred on the VSAM I/O module.

Explanation: A write failure occurred for the VSAM I/O module.
User response: Contact IBM Software Support.

An open for update failure occurred on the VSAM I/O module.

Explanation: An open failure occurred for the VSAM I/O module.
User response: Contact IBM Software Support.

A random fetch failure occurred on the VSAM I/O module.

Explanation: A fetch failure occurred for the VSAM I/O module.
User response: Contact IBM Software Support.

A random write failure occurred on the VSAM I/O module.

Explanation: A write failure occurred for the VSAM I/O module.
User response: Contact IBM Software Support.
A random close failure occurred on the VSAM I/O module.

**Explanation:** A close failure occurred for the VSAM I/O module.

**User response:** Contact IBM Software Support.

The underlying table/index space data set could not be found in MVS.

**Explanation:** The table/index space could not be found in MVS.

**User response:** No action is required.

Dynamic allocation return code ="return_code".

**Explanation:** This diagnostic message indicates data set allocation failure.

Object Database=database Space Name=space_name Partition=partition will have an image copy written anyway due to control card FORCE_COPIES.

**Explanation:** Db2 Recovery Expert will write an image copy for the object indicated in the message and override the WRITE_TO_VSAM control card, because the control card FORCE_COPIES has been specified with a value of Y.

**User response:** No action is required. If you do not want an image copy produced, specify FORCE_COPIES N.

The SYSIN DD could not be allocated during WRITE_TO_VSAM processing.

**Explanation:** Db2 Recovery Expert was unable to allocate the SYSIN DD during WRITE_TO_VSAM processing.

**User response:** No action is required.

A CELL64 free request failed.

**Explanation:** An internal error occurred.

**User response:** Contact IBM Software Support.

Rebuild indexes thread returned error.

**Explanation:** An internal error occurred.

**User response:** Contact IBM Software Support.

Log apply process cancelled by request from task manager.

**Explanation:** An internal error occurred.

**User response:** Contact IBM Software Support.

Space database.spacename Part # number will be written to DSN.

**Explanation:** SWITCH_VCAT keyword in effect, data set name dsn was generated to place WRITE_TO_VSAM result.

**User response:** None.

Data set organization is not VSAM DSN DSN.

**Explanation:** A WRITE_TO_VSAM operation to a specified data set with the REUSE option could not be completed because the data set is not VSAM.

**User response:** Check the data sets that were involved. Contact IBM Software Support.

The LP image copy spanned tape could not be freed for a device switch.

**Explanation:** The dynamic allocation of the image copy data set to the spanned tape failed because the tape could not be freed for a device switch.

**User response:** Verify that the spanned tape is available for allocation.

The initial LP image copy could not be allocated on the tape device.

**Explanation:** The allocation of the image copy data set to the tape device failed.

**User response:** Verify that the tape device is available for allocation.

The LP image copy data set to be created on tape could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

The LP image copy could not be allocated to the DASD device.

**Explanation:** The dynamic allocation of the data set to the DASD device failed.

**User response:** Verify that the device name is correct and that it is available for allocation.
### ARY2035E
The LP image copy data set to be created on DASD could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

### ARY2036E
The spanned LP image copy on tape could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

### ARY2037E
The LB image copy spanned tape could not be freed for a device switch.

**Explanation:** The dynamic allocation of the image copy data set to the spanned tape failed because the tape could not be freed for a device switch.

**User response:** Verify that the spanned tape is available for allocation.

### ARY2038E
The initial LB image copy could not be allocated onto the tape device.

**Explanation:** The allocation of the image copy data set to the tape device failed.

**User response:** Verify that the tape device is available for allocation.

### ARY2039E
The LB image copy data set to be created on tape could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

### ARY2040E
The LB image copy could not be allocated to the DASD device.

**Explanation:** The dynamic allocation of the data set to the DASD device failed.

**User response:** Verify that the device name is correct and that it is available for allocation.

### ARY2041E
The LB image copy data set to be created on DASD could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

### ARY2042E
The spanned LB image copy on tape could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

### ARY2043E
The RP image copy spanned tape could not be freed for a device switch.

**Explanation:** The dynamic allocation of the image copy data set to the spanned tape failed because the tape could not be freed for a device switch.

**User response:** Verify that the spanned tape is available for allocation.

### ARY2044E
The initial RP image copy could not be allocated onto the tape device.

**Explanation:** The allocation of the image copy data set to the tape device failed.

**User response:** Verify that the tape device is available for allocation.

### ARY2045E
The RP image copy data set to be created on tape could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

### ARY2046E
The RP image copy could not be allocated to the DASD device.

**Explanation:** The dynamic allocation of the data set to the DASD device failed.

**User response:** Verify that the device name is correct and that it is available for allocation.
The RP image copy data set to be created on DASD could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

The spanned RP image copy on tape could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

The RB image copy spanned tape could not be freed for a device switch.

**Explanation:** The dynamic allocation of the image copy data set to the spanned tape failed because the tape could not be freed for a device switch.

**User response:** Verify that the spanned tape is available for allocation.

The initial RB image copy could not be allocated onto the tape device.

**Explanation:** The allocation of the image copy data set to the tape device failed.

**User response:** Verify that the tape device is available for allocation.

The RB image copy data set to be created on tape could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

The RB image copy could not be allocated to the DASD device.

**Explanation:** The dynamic allocation of the data set to the DASD device failed.

**User response:** Verify that the device name is correct and that it is available for allocation.

The RB image copy data set to be created on DASD could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

The spanned RB image copy on tape could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

The spanned RB image copy on tape could not be opened.

**Explanation:** The image copy data set that is to be created cannot be opened.

**User response:** Verify that the image copy data set you specified in your Db2 Recovery Expert JCL is available for use and resubmit the Db2 Recovery Expert job.

A volume written to and left on the system could not be found.

**Explanation:** When Db2 Recovery Expert finishes writing to a tape data set, the tape cartridge is not rewound and ejected. It is left on the tape drive in case another data set needs to be written afterwards. Once any one data set is written, it is closed and code then goes back and reads internal MVS control blocks to get specifics about that data set. If this subsequent code can’t find the data set just written and closed, the error occurs.

**User response:** Contact IBM Software Support.

Could not use XLAT_DSN <DSN> for <XLAT_TARGET>.

**Explanation:** XLAT_VSAM was specified but XLAT_DSN <DSN> is not a VSAM data set.

**User response:** Specify the correct VSAM data set.

The following mini log data set could not be deallocated from OS/390:

**Explanation:** The mini log data set could not be deallocated from OS/390 and could therefore not be used in Db2 Recovery Expert processing. This message is followed by ARY2060I which displays the name of the mini log data set that could not be deallocated.

**User response:** Verify that the mini log data set is available for use.

The following mini log data set could not be opened:

**Explanation:** The mini log data set could not be opened and could therefore not be used in ARY processing. This message is followed by ARY2060I
which displays the name of the mini log data set that could not be opened.

User response: Verify that the mini log data set is available for use.

---

**ARY2059E**  The following mini log data set could not be allocated:

Explanation: The mini log data set could not be allocated and could therefore not be used in Db2 Recovery Expert processing. This message is followed by ARY2061 which displays the name of the mini log data set that could not be allocated.

User response: Verify that the mini log data set is available for use.

---

**ARY2060E**  *dsname*

Explanation: This message displays a data set name that is associated with other messages.

User response: No action is required.

---

**ARY2061I**  The mini log file *filename* has been processed.

Explanation: The mini log indicated in the messages has been processed.

User response: No action is required.

---

**ARY2062I**  ARY will attempt to use the MINI_LOG_DSN_2 data set instead.

Explanation: Db2 Recovery Expert was unable to use the MINI_LOG_DSN_1 data set so it will now attempt to use the MINI_LOG_DSN_2 data set.

User response: No action is required.

---

**ARY2063E**  A corrupted row was found in the mini log control table.

Explanation: Db2 Recovery Expert was unable to use the mini log control table due to a corrupted row.

User response: No action is required.

---

**ARY2064E**  Both mini log data sets for this space could not be opened.

Explanation: Db2 Recovery Expert attempted to open both mini log data sets for the space but was unable to do so.

User response: Verify that the mini log data sets are available for use.

---

**ARY2066E**  An unexpected EOF was encountered on a merged mini log records file.

Explanation: Db2 Recovery Expert encountered an unexpected EOF on a merged mini log record file.

User response: No action is required.

---

**ARY2067E**  XLAT_DSN <DSN> will be used for <XLAT_TARGET>

Explanation: XLAT_DSN <DSN> was not found and there is no XLAT_VSAM or XLAT_COPY specified. XLAT_TARGET will be determined by format of DSN. So if DSN conforms to Db2 space name format, new VSAM data set will be allocated, if not new sequential data set will be allocated.

User response: No action is required.

---

**ARY2068E**  The XML sequence number update process failed.

Explanation: Coordinating the internal XML sequence number during OBIDXLAT processing could not be completed.

User response: Contact IBM Software Support.

---

**ARY2069I**  The space space resulted in the error condition.

Explanation: Generic message that follows many other error messages.

User response: No action is required.

---

**ARY2070E**  The alternative SSID XML sequence column update program failed.

Explanation: Coordinating the internal XML sequence number during OBIDXLAT processing could not be completed.

User response: Contact IBM Software Support.

---

**ARY2071E**  An XML update job is needed, but the XML output DSN is missing.

Explanation: The XML output DSN was not specified.

User response: Specify an XML output DSN.

---

**ARY2072E**  An XML update job is needed, but the XML output prefix is missing.

Explanation: The XML output prefix was not specified.

User response: Specify the XML output prefix.

</table>
The sort of the applicable log records was successful.

Explanation: This message indicates that the sort of the applicable log records completed without error.

User response: No action is required.

Could not use XLAT_DSN <DSN> for XLAT_COPY

Explanation: XLAT_COPY was specified but XLAT_DSN <DSN> is a VSAM data set.

User response: Specify the correct XLAT_COPY data set.

An invalid return code was detected from the SORT program.

Explanation: This attempt to SORT returned an error.

User response: Verify SORT program error messages. Contact IBM Software Support.

The following objects will not be added to the SYSCOPY Db2 table because a UNIFIED check failed, updates could not be found either in incremental image copies or the log(s), OBID translation took place on the image copy, or an error triggering a skip condition to be placed on the object:

Explanation: The objects listed in the message will not be added to the SYSCOPY Db2 table. A UNIFIED check failed or updates could not be located.

User response: No action is required.

The following data set information was added to the SYSCOPY Db2 table:

Explanation: This message indicates the data set information that was added to the SYSCOPY Db2 table.

User response: No action is required.

The following data set information would have been added to the SYSCOPY Db2 table but was not because of control card NO_SYSCOPY_ROW:

Explanation: You specified the NO_SYSCOPY_ROW in your Db2 Recovery Expert JCL so the data set information that would have otherwise been added to the SYSCOPY Db2 table was not added.

User response: No action is required.
The following tape data set could not be cataloged: *dsn*

**Explanation:** Normally, JCL end step disposition processing catalogs a data set, if desired. This message displays if Db2 Recovery Expert has made a catalog attempt against a tape data set that has failed due to control card and dynamic allocation processing.

**User response:** No action is required.

The following tape data set was cataloged: Unit (X’device_code’) DSN: *dsn*  Sequence: *label*#

**Explanation:** When the catalog attempt against a tape data set is successful, this message is displayed. The unit is the actual 8 character device on which the data set was created. The device_code is a 4-byte hexadecimal number that represents the internal MVS device designation. The dsn is the data set name cataloged. The label# is the file sequence number of the data set on the stacked tape. The volser is reported by the tape management facility elsewhere in the job output.

**User response:** No action is required.

The following data set information was added to the ARY mini log table:

**Explanation:** This informational message indicates the data set information that was added to the Db2 Recovery Expert mini log table. This message is used in conjunction with message ARY2201I, ARY2202I, ARY2203I, and ARY2204I.

**User response:** No action is required.

The following data set information was updated to the ARY mini log table:

**Explanation:** This informational message indicates the data set information that was added to the Db2 Recovery Expert mini log table. This message is used in conjunction with message ARY2201I, ARY2202I, ARY2203I, and ARY2204I.

**User response:** No action is required.

Database database Table Space table_space Partition partition

**Explanation:** The content of this message is used in conjunction with message ARY2201I. The database, table space, and partition indicated in this message correspond to those of the data set added to the Db2 Recovery Expert mini log table.

**User response:** No action is required.

DSN: *dsn*

**Explanation:** The content of this message is used in conjunction with message ARY2201I. The DSN indicated in this message correspond to those of the data set added to the Db2 Recovery Expert mini log table.

**User response:** No action is required.
The following mini log data set could not be opened:

**Explanation:** The specified mini log data set could not be opened.

**User response:** Verify that the file is not in use and that you have the proper authority to access this file.

The following mini log data set could not be allocated:

**Explanation:** The specified mini log data set could not be allocated.

**User response:** Verify that the file is not in use and that you have the proper authority to access this file.

---

**Explanation:** Indicates the mini log DSN. This message is issued in conjunction with message ARY2303I.

**User response:** No action is required.

**Dynamic allocation return code = 'return_code'**

**Explanation:** This diagnostic message indicates data set allocation failure.

The mini log file: mini_log_file has been processed.

**Explanation:** This message indicates the mini log file that has been processed.

**User response:** No action is required.

ARY will attempt to use the MINI_LOG_DSN_2 data set instead.

**Explanation:** Db2 Recovery Expert was unable to use the MINI_LOG_DSN_1 data set specified in your JCL so it will attempt to use the MINI_LOG_DSN_2 data set specified in your data set instead.

**User response:** No action is required.

**Mini log data set dsn could not be appended because a gap is found for the object in the mini log control table.**

**Explanation:** There is a gap for the object in the mini log chain in the mini log control table. For this reason, the mini log data set indicated in the message could not be appended.

**User response:** To resolve this issue, either remove the mini log DSN from the mini log control table and MVS catalog or specify a new DSN for the mini log.

**The space space PART part has an unknown space status.**

**Explanation:** This message ensures that the indicated space is to be stopped before proceeding with the WRITE_TO_VSAM process. Db2 Recovery Expert checks the space with a call similar to a `'-display db(dbname) spacename(sname) part(0)'` to verify that the space is in 'stop' status. This message displays when the space comes back with a status not equal to RO, STOP, RW, or UT.

**User response:** Stop the indicated space before attempting to proceed with the WRITE_TO_VSAM process.

**The stop status check for space space PART part timed out.**

**Explanation:** This message is output when Db2 Recovery Expert tries to start and it has to ensure that when doing WRITE_TO_VSAM processing that the spaces are indeed stopped. The stop step that is generated (prior to Db2 Recovery Expert) to do this sends commands to Db2 to stop the data sets, but it does not wait for the spaces to actually stop.

If an in-flight URID is processing against the object and the stop is done, the space changes to 'STOPP' or stop pending until the URID finishes. It may also take Db2 some time to flush buffers. In either case, Db2 Recovery Expert does a check on the spaces before doing any real processing. If any of the spaces do not come back 'stop,' it waits a few seconds and checks again. After a few checks like this, it aborts, producing this message.

**User response:** Diagnose why the space will not stop.

**Fetching SYSIBM.SYSLOGRANGE data produced an error**

**Explanation:** Db2 Recovery Expert encountered an error when attempting to fetch SYSIBM.SYSLOGRANGE data.

**User response:** No action is required. The report utility's output will be output after this message.

**REPORT utility text follows: text**

**Explanation:** This message is the header line for the REPORT utility output that follows on the next line.

**User response:** No action is required.
**ARY2502I** Skipping SYSIBM.SYSLGRNX processing.

**Explanation:** This informational message indicates that Db2 Recovery Expert is not processing SYSIBM.SYSLGRNX because NO_SYSLGRNX was specified.

**User response:** No action is required.

**ARY2600E** The USER_INDICATOR parameter was specified, but no value was found with it.

**Explanation:** No value has been specified for the USER_INDICATOR parameter.

**User response:** Specify a valid parameter for the USER_INDICATOR parameter.

**ARY2601E** The USER_INDICATOR keyword has already been coded.

**Explanation:** More than one USER_INDICATOR keyword has been specified.

**User response:** Remove the extra USER_INDICATOR keyword.

**ARY2602E** The USER_INDICATOR parameter specified is invalid.

**Explanation:** The value specified for the USER_INDICATOR parameter is not valid.

**User response:** Specify a valid value for the USER_INDICATOR parameter.

**ARY2603E** The INCREMENTAL parameter was specified, but no value was found with it.

**Explanation:** Your JCL includes the INCREMENTAL parameter but no value is specified with it.

**User response:** Specify a valid value for the INCREMENTAL parameter.

**ARY2604E** The INCREMENTAL keyword has already been coded.

**Explanation:** The INCREMENTAL keyword has been coded multiple times in the Db2 Recovery Expert syntax.

**User response:** Remove the extra keyword and resubmit the JCL.

**ARY2605E** The INCREMENTAL parameter specified is invalid.

**Explanation:** The INCREMENTAL parameter specification in your Db2 Recovery Expert job is not valid.

**User response:** Specify a valid value for the INCREMENTAL parameter.

**ARY2606E** Control file values could not be read. Check for a user indicator mismatch.

**Explanation:** The control file values could not be read.

**User response:** Check for a user indicator mismatch.

**ARY2607E** The Db2 subsystem ID was not found in the control file.

**Explanation:** The control file does not have a Db2 subsystem ID.

**User response:** Specify a Db2 subsystem ID in your control file.

**ARY2608E** The Db2 subsystem member member was not found in the control file.

**Explanation:** The Db2 subsystem member was not found in the control file.

**User response:** Verify that the correct Db2 subsystem member is specified in the control file.

**ARY2609I** The LOG_COPY_PREFERENCE parameter was specified, but no value was found with it.

**Explanation:** Your JCL includes the LOG_COPY_PREFERENCE parameter but no value is specified with it.

**User response:** Specify a valid value for the LOG_COPY_PREFERENCE parameter.

**ARY2610E** The LOG_COPY_PREFERENCE keyword has already been coded.

**Explanation:** The LOG_COPY_PREFERENCE keyword has been coded multiple times in the Db2 Recovery Expert syntax.

**User response:** Remove the extra keyword and resubmit the JCL.

**ARY2611E** The LOG_COPY_PREFERENCE parameter specified is invalid.

**Explanation:** The LOG_COPY_PREFERENCE parameter specification in your Db2 Recovery Expert job is not valid.

**User response:** Specify a valid value for the
LOG_COPY_PREFERENCE parameter.

**ARY2612E**  The IMAGE_COPY_PREFERENCE parameter was specified, but no value was found with it.

**Explanation:** Your JCL includes the IMAGE_COPY_PREFERENCE parameter but no value is specified with it.

**User response:** Specify a valid value for the IMAGE_COPY_PREFERENCE parameter.

**ARY2613E**  The IMAGE_COPY_PREFERENCE keyword has already been coded.

**Explanation:** The IMAGE_COPY_PREFERENCE keyword has been coded multiple times in the Db2 Recovery Expert syntax.

**User response:** Remove the extra keyword and resubmit the JCL.

**ARY2614E**  The IMAGE_COPY_PREFERENCE parameter specified is invalid.

**Explanation:** The IMAGE_COPY_PREFERENCE parameter specification in your Db2 Recovery Expert job is not valid.

**User response:** Specify a valid value for the IMAGE_COPY_PREFERENCE parameter.

**ARY2615E**  LOCAL_SITE, RECOVERY_SITE, and IMAGE_COPY_PREFERENCE are mutually exclusive.

**Explanation:** Your Db2 Recovery Expert syntax includes more than one of the following parameters: LOCAL_SITE, RECOVERY_SITE, or IMAGE_COPY_PREFERENCE. These parameters are mutually exclusive and only one can be defined.

**User response:** Correct your Db2 Recovery Expert syntax.

**ARY2620E**  Invalid syntax after the IC_LP control card. Must be IC_LP (...).

**Explanation:** They syntax that follows the IC_LP control card contains an error.

**User response:** Verify that the correct syntax follows the IC_LP control card. The parameters that accompany the IC_LP control card must be enclosed in parenthesis ().

**ARY2622E**  Invalid syntax after the IC_RP control card. Must be IC_RP (...).

**Explanation:** The syntax that follows the IC_RP control card contains an error.

**User response:** Verify that the correct syntax follows the IC_RP control card. The parameters that accompany the IC_RP control card must be enclosed in parenthesis ().

**ARY2623E**  Invalid syntax after the IC_RB control card. Must be IC_RB (...).

**Explanation:** The syntax that follows the IC_RB control card contains an error.

**User response:** Verify that the correct syntax follows the IC_RB control card. The parameters that accompany the IC_RB control card must be enclosed in parenthesis ().

**ARY2625E**  Syntax error around IC_DSN value. Form is "dsn".

**Explanation:** The syntax defining the IC_DSN value is incorrect. The data set name must be enclosed in quotes.

**User response:** Verify and correct the syntax of the IC_DSN value. Ensure that the data set name is enclosed in quotes.

**ARY2626E**  The IC_DSN parameter was specified, but is either empty or too long.

**Explanation:** You specified the IC_DSN parameter but the values specified with it is either missing or too long.

**User response:** Specify a valid value with the IC_DSN parameter. Ensure that the data set name value you specify is enclosed in quotes.

**ARY2627E**  The IC_CATALOG keyword has already been coded.

**Explanation:** You specified the IC_CATALOG keyword more than once for the IC_group (where ** is LP, LB, RP or RB).
User response: Correct the JCL and resubmit the job.

**ARY2628E** The ICDEVICE parameter was specified, but no value was found with it.

Explanation: You specified the ICDEVICE parameter but did not specify a corresponding value. The ICDEVICE parameter requires that you specify a device name (up to 8 characters).

User response: Specify a 1-8 character device name with the ICDEVICE parameter or remove the optional ICDEVICE parameter.

**ARY2629E** The ICDEVICE keyword has already been coded.

Explanation: You specified the ICDEVICE keyword more than once for the IC** group (where ** is LP, LB, RP or RB).

User response: Correct the JCL and resubmit the job.

**ARY2630E** The ICDEVICE parameter specified is invalid.

Explanation: The ICDEVICE parameter syntax contains an error.

User response: Verify that you have properly defined the ICDEVICE parameter and corresponding value. The ICDEVICE control card accepts a 1-8 character device name value.

**ARY2631E** The ICSPACE parameter was specified, but no value was found with it.

Explanation: You specified the ICSPACE parameter but did not specify a corresponding value. The ICSPACE parameter requires that you specify a space name.

User response: Specify a space name with the ICSPACE parameter or remove the optional ICSPACE parameter.

**ARY2632E** The ICSPACE keyword has already been coded.

Explanation: You specified the ICSPACE keyword more than once for the IC** group (where ** is LP, LB, RP or RB).

User response: Correct the JCL and resubmit the job.

**ARY2633E** The ICSPACE parameter specified is invalid.

Explanation: The ICSPACE parameter syntax contains an error.

User response: Verify that you have properly defined the ICSPACE parameter and corresponding value.

**ARY2634E** The ICMGMTCLASS parameter was specified, but no value was found with it.

Explanation: You specified the ICMGMTCLASS parameter but did not specify a corresponding value. The ICMGMTCLASS parameter requires that you specify a management class.

User response: Specify a management class with the ICMGMTCLASS parameter or remove the optional ICMGMTCLASS parameter.

**ARY2635E** The ICMGMTCLASS keyword has already been coded.

Explanation: You specified the ICMGMTCLASS keyword more than once for the IC** group (where ** is LP, LB, RP or RB).

User response: Correct the JCL and resubmit the job.

**ARY2636E** The ICMGMTCLASS parameter specified is invalid.

Explanation: The ICMGMTCLASS parameter syntax contains an error.

User response: Verify that you have properly defined the ICMGMTCLASS parameter and corresponding value.

**ARY2637E** The ICDATACLASS parameter was specified, but no value was found with it.

Explanation: You specified the ICDATACLASS parameter but did not specify a corresponding value. The ICDATACLASS parameter requires that you specify a data class.

User response: Specify a data class with the ICDATACLASS parameter or remove the optional ICDATACLASS parameter.

**ARY2638E** The ICDATACLASS keyword has already been coded.

Explanation: You specified the ICDATACLASS keyword more than once for the IC** group (where ** is LP, LB, RP or RB).

User response: Correct the JCL and resubmit the job.

**ARY2639E** The ICDATACLASS parameter specified is invalid.

Explanation: The ICDATACLASS parameter syntax contains an error.

User response: Verify that you have properly defined the ICSPACE parameter and corresponding value.
the IC_DATA_CLASS parameter and corresponding value.

**ARY2640E** The IC_STOR_CLASS parameter was specified, but no value was found with it.

**Explanation:** You specified the IC_STOR_CLASS parameter but did not specify a corresponding value. The IC_STOR_CLASS parameter requires that you specify a storage class.

**User response:** Specify a storage class with the IC_STOR_CLASS parameter or remove the optional IC_STOR_CLASS parameter.

**ARY2641E** The IC_STOR_CLASS keyword has already been coded.

**Explanation:** You specified the IC_STOR_CLASS keyword more than once for the IC_* **_ group (where ** is LP, LB, RP or RB).

**User response:** Correct the JCL and resubmit the job.

**ARY2642E** The IC_STOR_CLASS parameter specified is invalid.

**Explanation:** The IC_DATA_CLASS parameter syntax contains an error.

**User response:** Verify that you have properly defined the IC_STOR_CLASS parameter and corresponding value.

**ARY2643E** The IC_EXP_DATE parameter was specified, but no value was found with it.

**Explanation:** You specified the IC_EXP_DATE parameter but did not specify a corresponding value. The IC_EXP_DATE parameter requires that you specify an expiration date in the format YYYYDDD.

**User response:** Specify an expiration date with the IC_EXP_DATE parameter or remove the optional IC_EXP_DATE parameter.

**ARY2644E** The IC_EXP_DATE keyword has already been coded.

**Explanation:** You specified the IC_EXP_DATE keyword more than once for the IC_* **_ group (where ** is LP, LB, RP or RB).

**User response:** Correct the JCL and resubmit the job.

**ARY2645E** The IC_EXP_DATE parameter specified is invalid.

**Explanation:** The IC_EXP_DATE parameter syntax contains an error.

**User response:** Specify a byte string with the IC_EXP_DATE parameter. Enclose the bytes string in single quotes.

<td>The USE ABOVE THE BAR parameter was specified, but no value was found with it.</td>
<td>You specified the USE ABOVE THE BAR parameter but did not include a primary segments allocation, secondary segments allocation, and maximum secondary allocation values.</td>
<td>Specify the appropriate segment allocations with the USE ABOVE THE BAR parameter.</td>
</tr>
<tr>
<td>ARY2664E</td>
<td>The USE ABOVE THE BAR keyword has already been coded.</td>
<td>The USE ABOVE THE BAR keyword should only be specified once.</td>
<td>Check your Db2 Recovery Expert syntax and remove the extra USE ABOVE THE BAR keyword.</td>
</tr>
</tbody>
</table>
**ARY2665E**  The USE_ABove_THE_BAR keyword parameter specified is invalid.

Explanation: The USE_ABove_THE_BAR parameter syntax is invalid. The primary segments allocation, secondary segments allocation, and maximum secondary allocation values must be 1-4 digits and contained within single quotes and be separated by commas.

User response: Check your syntax and correct.

**ARY2666E**  Use of the USE_ABove_THE_BAR keyword requires z/OS V1.5 or above.

Explanation: Your z/OS version is not 1.5 or above, z/OS V1/5 or above is required for you to use the USE_ABove_THE_BAR keyword.

User response: Remove the USE_ABove_THE_BAR keyword from your syntax.

**ARY2667E**  The MINILOG_SHARELEVEL was specified, but no value was found with it.

Explanation: You specified the MINILOG_SHARELEVEL parameter but did not specify a corresponding value.

User response: Enter a valid value following the MINILOG_SHARELEVEL keyword or remove the keyword. Valid values are REFERENCE and CHANGE.

**ARY2668E**  The MINILOG_SHARELEVEL keyword has already been coded.

Explanation: You specified the MINILOG_SHARELEVEL keyword more than once.

User response: Remove all extra occurrences of the MINILOG_SHARELEVEL keyword.

**ARY2669E**  The MINILOG_SHARELEVEL parameter specified is invalid.

Explanation: The MINILOG_SHARELEVEL parameter specification is not valid.

User response: The MINILOG_SHARELEVEL parameter accepts either REFERENCE or CHANGE as valid values. Correct your JCL and resubmit.

**ARY2670I**  The MINILOG_SHARELEVEL keyword is ignored when not producing mini logs.

Explanation: You included the MINILOG_SHARELEVEL keyword in your JCL indicating the type of SHARELEVEL for mini logs but did not specify the production of producing mini logs. The MINILOG_SHARELEVEL keyword is therefore ignored.

**ARY2671E**  The REPAIR_RECOVER_PENDING keyword has already been coded.

Explanation: You specified the REPAIR_RECOVER_PENDING keyword more than once.

User response: Correct the JCL and resubmit the job.

**ARY2672W**  The REPAIR_RECOVER_PENDING keyword is ignored when only writing to copies.

Explanation: The REPAIR_RECOVER_PENDING keyword is specified but this parameter is ignored when writing to copies.

User response: REPAIR_RECOVER_PENDING is ignored when writing to copies so the REPAIR_RECOVER_PENDING control card can be removed.

**ARY2673E**  The OBIDXLAT keyword group has already been coded.

Explanation: You specified the OBIDXLAT keyword more than once.

User response: Correct the JCL and resubmit the job.

**ARY2675E**  Invalid OBIDXLAT(...) keyword syntax.

Explanation: The OBIDXLAT syntax you specified is not valid.

User response: Correct the OBIDXLAT syntax and resubmit the job.

**ARY2676E**  The XLAT_IN_DSN keyword has already been coded.

Explanation: You specified the XLAT_IN_DSN keyword more than once.

User response: Correct the JCL and resubmit the job.

**ARY2677E**  Invalid XLAT_IN_DSN syntax.

Explanation: The XLAT_IN_DSN syntax you specified is not valid.

User response: Correct the XLAT_IN_DSN syntax and resubmit the job.

**ARY2678E**  The XLAT_IN_DSN parameter was specified, but no value was found with it.

Explanation: The XLAT_IN_DSN parameter requires that a dsn value be specified with it.

User response: Specify a dsn with the XLAT_IN_DSN
parameter. Enclose the dsn value in single quotes.

</table>
**ARY2702E** Dynamic allocation return code 'rc'.

**Explanation:** Dynamic allocation failed with the return code indicated in the message.

**ARY2703I** Image copy name=image_copy_name RBA='rba'.

**Explanation:** Indicates the image copy name an RBA.

**User response:** No action is required.

**ARY2704E** The catalog check on the most recent image copy failed.

**Explanation:** The catalog check failed for the most recent image copy.

**User response:** No action is required.

**ARY2705E** An internal error occurred during input incremental tape stacking processing.

**Explanation:** An internal error occurred.

**User response:** Contact IBM Software Support.

**ARY2706I** Db2 Recovery Expert will process the following incremental image copy file(s):

**Explanation:** Db2 Recovery Expert will process the incremental image copy file(s) listed in this message.

**User response:** No action is required.

**ARY2707I** For table space: table_space PART part

**Explanation:** This message indicates the table space and partition related to other Db2 Recovery Expert messages that have been issued.

**User response:** No action is required.

**ARY2800I** The log record sort record write service program could not be started.

**Explanation:** An internal error has occurred.

**User response:** Contact IBM Software Support.

**ARY2801E** A log record read service program could not be started.

**Explanation:** An internal error has occurred.

**User response:** Contact IBM Software Support.

**ARY2802E** The writer service returned an error, RC=rc.

**Explanation:** An internal error occurred.

**User response:** Contact IBM Software Support.

**ARY2803E** The reader service returned an error, RC=rc.

**Explanation:** An internal error occurred.

**User response:** Contact IBM Software Support.

**ARY2804E** An unexpected error occurred while trying to read the bootstrap data set.

**Explanation:** An unexpected error was encountered.

**User response:** Contact IBM Software Support.

**ARY2805E** An unexpected error occurred while trying to read the ZPARM information.

**Explanation:** An unexpected error occurred.

**User response:** Contact IBM Software Support.

**ARY2806I** The log apply process will begin at RBA='rba'.

**Explanation:** The log apply process will start at the RBA indicated in the message.

**User response:** No action is required.

**ARY2807I** The log apply process will begin at LRSN: X'lrsn'.

**Explanation:** The message indicates the LRSN value at which the log apply process will begin.

**User response:** No action is required.

**ARY2808I** The end point for dbname.tsname did no match the UNIFIED value.

**Explanation:** The end point for the table space indicated in the message did not match the value specified for the UNIFIED value.

**User response:** No action is required.

**ARY2809I** The SPACE(...) set involved that the error was detected in was mmm

**Explanation:** Indicates the SPACE set involved in the error.

**User response:** No action is required.
**AR2810I**  Consistency value = X'nnnnnnnnnnnn'

**Explanation:** This message displays if a problem occurs with the UNIFIED or UNIFIED_WARNING control cards. The message displays the consistency value taken from the first object in the group.

**User response:** The values shown in AR2810I and AR2811I can be compared for diagnostic purposes. The value shown in AR2810I is that for the first object in the group while the value shown in AR2811I is the value for any object that does not match it.

For example, if there are 10 objects in the group and three don’t match the first, then one AR2810I message will display with three AR2811I messages (for each group).

**AR2811I**  Object's derived value = X'nnnnnnnnnnnn'

**Explanation:** This message displays if a problem occurs with the UNIFIED or UNIFIED_WARNING control cards. The message displays the object’s derived value for the first object in the group. This message displays any object that does not match the first object in the group (identified in AR2810I).

**User response:** The values shown in AR2810I and AR2811I can be compared for diagnostic purposes. The value shown in AR2810I is that for the first object in the group while the value shown in AR2811I is the value for any object that does not match it.

For example, if there are 10 objects in the group and three don’t match the first, then one AR2810I message will display with three AR2811I messages (for each group).

**AR2812E**  A mismatch between passed Zparm information and the JES SSCT was found.

**Explanation:** This is an internal error indicating that the Zparm array that is being passed to Db2 Recovery Expert is inconsistent with the subsystem list found inside MVS data structures.

**User response:** Contact IBM Software Support.

**AR2813I**  The log reader process will launch a total of mmm tasks.

**Explanation:** This message indicates the total number of tasks that will be launched.

**User response:** No action is required.

**AR2814I**  The log reader will launch total of 1 task per member.

**Explanation:** Indicates that processing of the log reader will launch a total of one task per member since PARALELL has been set to 0.

**User response:** No action is required.

**AR2815I**  The log reader process will start with PARALLEL tasks = mmm

**Explanation:** The log reader process will start with the indicated maximum number of tasks.

**User response:** No action is required.

**AR2816I**  The log reader task #task_number finished.

**Explanation:** Indicates that processing of the log reader finished.

**User response:** No action is required.

**AR2900I**  The sorted log record file could not be opened.

**Explanation:** The sorted log record file could not be opened.

**User response:** No action is required.

**AR2901I**  The mini log data set data_set could not be allocated.

**Explanation:** Db2 Recovery Expert was unable to open the mini log data set indicated in the message.

**User response:** No action is required.

**AR2902I**  The mini log data set dsn could not be opened.

**Explanation:** Dynamic allocation failed with the return code listed in the message.

**User response:** No action is required.

**AR2903I**  Dynamic allocation return code=rc

**Explanation:** Dynamic allocation failed with the return code listed in the message.

**User response:** No action is required.

**AR2904I**  An unexpected EOF was encountered on the sorted log record file.

**Explanation:** An unexpected EOF was encountered on the sorted log record file.

**User response:** No action is required.
The mini log dataset dsn could not be located for resort purpose.

Explanation: The data set in the control cards could not be found in the MVS catalog.

User response: Ensure the data set is correct.

The mini log dataset dsn could not be renamed for resort purpose.

Explanation: An error occurred while attempting to append minilog records to an existing minilog dataset.

User response: Ensure proper authority on the minilog data sets.

The resort of the applicable space level minilog was successful.

Explanation: The resort was successful.

User response: No action is required.

An invalid return code was detected from the SORT program (mini log resort).

Explanation: Internal error.

User response: Contact IBM Software Support.

The space database.table_space PART partition has an unknown space status.

Explanation: The status of the space indicated in the message is not known.

User response: When Db2 Recovery Expert checks the space to see if it is in recover pending, a status code unknown to Db2 Recovery Expert was found. Contact IBM Software Support.

The stop status check for space database.table_space PART partition timed out.

Explanation: The stop status check for the space indicated in the message timed out.

User response: After the repair operation is started, Db2 Recovery Expert checks the space and waits for the recover pending flag to be removed by Db2. This message was generated because after checking 5 times in 15 seconds, the space was still in recover pending status. You must remove the recover pending status manually.

An attempt to Repair the Recover Pending status failed.

Explanation: The JCL attempted to repair the recover pending status but the repair failed.

User response: When Db2 Recovery Expert called Db2 to repair the recover pending status for the space, the operation finished with an error condition. Contact IBM Software Support.

An error occurred on an attempt to open the DSNUTILB Steplib.

Explanation: Db2 Recovery Expert was unable to open the DSNUTILB Steplib.

User response: The Db2 loadlib concatenation specified on the Update Db2 Subsystem Parameters panel is incomplete. When DSNUTILB attempted to use this concatenation, some of the required load modules were not found. Verify that you have specified the correct load modules on the Update Db2 Subsystem Parameters panel. If the problem persists, contact IBM Software Support.

The Repair operation's SYSPRINT output dataset could not be opened.

Explanation: Db2 Recovery Expert was unable to open the repair operation's SYSPRINT output data set.

User response: Verify that the data set exists and is available for use.

The Repair operation's SYSIN dataset allocation failed.

Explanation: Db2 Recovery Expert was unable to allocate the repair operation's SYSIN data set.

User response: To call Db2 to repair the recover pending status, a SYSIN data set must be allocated to hold the Db2 command stream. Db2 Recovery Expert was unable to allocate a SYSIN data set. Check the settings you specified in the User Settings option and correct any errors.

Dynamic allocation return code = return_code

Explanation: This message reports the return code associated with the failed dynamic allocation attempt.

User response: Ensure the data set exists and is available for use.

The SYSIN DD could not be opened for output during Repair processing.

Explanation: Db2 Recovery Expert was unable to open the SYSIN DD during repair processing.
**User response:** Check the settings you specified in the User Settings option and correct any errors.

**ARY3008E** Open error code

**Explanation:** This message reports the open error code that Db2 Recovery Expert encountered when it attempted to open the SYSIN DD.

**User response:** Check the settings you specified in the User Settings option and correct any errors.

**ARY3009E** The Repair operation’s SYSPRINT dataset allocation failed.

**Explanation:** Db2 Recovery Expert was unable to allocate the repair operation’s SYSPRINT data set.

**User response:** To call Db2 to repair the recover pending status, a SYSPRINT data set needs to be allocated to hold the Db2 command processor’s output stream. Db2 Recovery Expert was unable to allocate this data set. Check the settings you specified in the User Settings option and correct any errors.

**ARY3100I** Truncation error displaying panel in ARYS$MAIN - return_code

**Explanation:** A truncation error occurred.

**ARY3101I** Severe error displaying panel in ARYS$MAIN - return_code

**Explanation:** An internal error has occurred.

**ARY3102I** Unexpected return code from panel in ARYS$MAIN - return_code

**Explanation:** An unexpected return code was received.

**ARY3200E** The XLAT_DSN, DBID, PSID, and at least one OBID must be specified.

**Explanation:** When performing an OBIDXLAT, you must specify the XLAT_DSN, DBID, PSID and at least one OBID in your Db2 Recovery Expert syntax.

**User response:** Specify the XLAT_DSN, DBID, PSID and at least one OBID in your Db2 Recovery Expert syntax.
should be defined on a new line. Define multiple OBID pairs as necessary.

</table>

6-byte hexadecimal value of RBA/LRSN for the incremental DSN.

**User response:** Correct the JCL and resubmit the job.

**Explanation:** You specified the IC_VOLUME_COUNT keyword more than once.

**User response:** Correct the JCL and resubmit the job.

**Explanation:** The IC_VOLUME_COUNT syntax you specified is not valid. The correct syntax is IC_VOLUME_COUNT 'n' where 'n' is an integer in the range of 1 to 255.

**User response:** Correct the JCL and resubmit the job.

**Explanation:** The IC_VOLUME_COUNT syntax you specified is not valid. The correct syntax is IC_VOLUME_COUNT 'n' where 'n' is an integer in the range of 1 to 255.

**User response:** Correct the JCL and resubmit the job.

**Explanation:** The IC_VOLUME_COUNT syntax you specified is not valid. The correct syntax is IC_VOLUME_COUNT 'n' where 'n' is an integer in the range of 1 to 255.
ARY3233E  Mini log data set *dsn* has mismatched type in the ARY mini log control table.

**Explanation:** You attempted to append the mini log with the wrong type of data.

**User response:** Specify the mini log DSN at the appropriate GROUP or SPACE level.

ARY3234E  Only one of two mini log data set names was found in the mini log control table.

**Explanation:** You specified two mini log data set names but only one of the pair is found in the mini log control table.

**User response:** Verify that you have specified the correct mini log data set pair. Specify only one data set name to append only one existing mini log or new unique data set name pairs.

ARY3235E  Mini log DSN *dsn* is not appended because corresponding dataset not found in the MVS catalog.

**Explanation:** The specified mini log data set cannot be found in the MVS catalog.

**User response:** Remove any rows with incorrect data set names from the Db2 Recovery Expert mini log control table.

ARY3236E  Mini log data set *dsn* contains data for the different tablespace and could not be appended.

**Explanation:** The data set indicated in the message text contains data for a different table space and could not be appended.

**User response:** Verify that you have specified the correct mini log data set name.

ARY3237E  The XLAT_TARGET_SSID keyword has already been coded.

**Explanation:** You specified the XLAT_TARGET_SSID keyword more than once.

**User response:** Correct the JCL and resubmit the job.

ARY3238E  Invalid XLAT_TARGET_SSID syntax.

**Explanation:** The XLAT_TARGET_SSID syntax is not valid.

**User response:** Correct the JCL and resubmit the job.

ARY3239E  The XLAT_TARGET_SSID parameter was specified, but no value was found with it.

**Explanation:** You must specify a valid value with the XLAT_TARGET_SSID parameter.

**User response:** Correct the JCL and resubmit the job.

ARY3240E  The XLAT_TARGET_DBNAME keyword has already been coded.

**Explanation:** The XLAT_TARGET_DBNAME keyword was already been coded.

**User response:** Correct the JCL and resubmit the job.

ARY3241E  Invalid XLAT_TARGET_DBNAME syntax.

**Explanation:** The XLAT_TARGET_DBNAME syntax you specified is not valid.

**User response:** Correct the JCL and resubmit the job.

ARY3242E  The XLAT_TARGET_DBNAME parameter was specified, but no value was found with it.

**Explanation:** You must specify a valid value with the XLAT_TARGET_DBNAME parameter.

**User response:** Correct the JCL and resubmit the job.

ARY3243E  The XLAT_TARGET_TSNAME keyword has already been coded.

**Explanation:** The XLAT_TARGET_TSNAME keyword was already been coded.

**User response:** Correct the JCL and resubmit the job.

ARY3244E  Invalid XLAT_TARGET_TSNAME syntax.

**Explanation:** The XLAT_TARGET_TSNAME syntax is not valid.

**User response:** Correct the JCL and resubmit the job.

ARY3245E  The XLAT_TARGET_TSNAME parameter was specified, but no value was found with it.

**Explanation:** You must specify a valid value with the XLAT_TARGET_TSNAME parameter.

**User response:** Correct the JCL and resubmit the job.
| ARY3246E | The XLAT_TARGET_SSID/DBNAME/TSNAME must be specified together. |
| Explanation: | The XLAT_TARGET_SSID, DBNAME, and TSNAME parameters must be specified together. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3247E | The XML_JOBS_DSN keyword has already been coded. |
| Explanation: | The XML_JOBS_DSN keyword was coded more than once. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3248E | Invalid XML_JOBS_DSN syntax. |
| Explanation: | The XML_JOBS_DSN syntax is not valid. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3249E | The XML_JOBS_DSN parameter was specified, but no value was found with it. |
| Explanation: | You must specify a valid value with the XML_JOBS_DSN parameter. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3250E | The XML_JOBS_MEMBER_PFX keyword has already been coded. |
| Explanation: | The XML_JOBS_MEMBER_PFX keyword was already been coded. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3251E | Invalid XML_JOBS_MEMBER_PFX syntax. |
| Explanation: | The XML_JOBS_MEMBER_PFX syntax is not valid. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3252E | The XML_JOBS_MEMBER_PFX parameter was specified, but no value was found with it. |
| Explanation: | You must specify a valid value with the XML_JOBS_MEMBER_PFX parameter. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3253E | The XML_TEMPLATE_DSN keyword has already been coded. |
| Explanation: | The XML_TEMPLATE_DSN keyword has already been coded. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3254E | Invalid XML_TEMPLATE_DSN syntax. |
| Explanation: | The XML_TEMPLATE_DSN syntax is not valid. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3255E | The XML_TEMPLATE_DSN parameter was specified, but no value was found with it. |
| Explanation: | You must specify a valid value with the XML_TEMPLATE_DSN parameter. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3256E | The XML_TEMPLATE_MEMBER keyword has already been coded. |
| Explanation: | The XML_TEMPLATE_MEMBER keyword has already been coded. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3257E | Invalid XML_TEMPLATE_MEMBER syntax. |
| Explanation: | The XML_TEMPLATE_MEMBER syntax is not valid. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3258E | The XML_TEMPLATE_MEMBER parameter was specified, but no value was found with it. |
| Explanation: | A valid value was not specified with the XML_TEMPLATE_MEMBER parameter. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3259E | The XML_JOBS_.* and XML_TEMPLATE_.* parameters must be specified together. |
| Explanation: | The XML_JOBS_.* and XML_TEMPLATE_.* parameters must be specified together. |
| User response: | Correct the JCL and resubmit the job. |
| ARY3260W | Incremental method SORT is obsolete. MERGE mode used instead. |
| Explanation: | INCREMENTAL SORT is no longer supported (it is ignored). The internal method used instead is MERGE. |
| User response: | No action is required. |
AR3261E  OBIDXLAT processing is not allowed.
Explanation:  OBIDXLAT is not allowed.
User response:  Correct the JCL and resubmit the job.

AR3262E  At least one SPACE() control card set is required.
Explanation:  At least one SPACE() control card set is required, but no SPACE control card sets have been specified.
User response:  Correct the JCL and resubmit the job.

AR3263E  The PARALLEL parameter was specified, but no value was found with it.
Explanation:  The keyword PARALLEL has been coded with no associated value.
User response:  Correct the JCL and resubmit the job.

AR3264E  Invalid PARALLEL value
Explanation:  The value for keyword PARALLEL is not valid.
User response:  Correct the JCL and resubmit the job.

AR3265E  The PARALLEL keyword has already been coded.
Explanation:  The PARALLEL keyword has already been coded.
User response:  Correct the JCL and resubmit the job.

AR3266E  The REBUILD_INDEXES keyword was specified for the index space but the parent table space was not included.
Explanation:  You specified the REBUILD_INDEXES parameter for an index space, but did not include a parent table space.
User response:  Correct the JCL and resubmit the job.

AR3267E  Indexes can be rebuilt only when WRITE_TO_VSAM or WRITE_TO_BOTH is specified.
Explanation:  You specified the REBUILD_INDEXES parameter, but not WRITE_TO_VSAM or WRITE_TO_BOTH.
User response:  Correct the JCL and resubmit the job.

AR3268E  The OBIDXLAT keyword, present for the index space to rebuild, must be in line with the parent table space.
Explanation:  You specified the index space and its parent table space with the REBUILD_INDEXES parameter, but OBIDXLAT has been specified only for one of them.
User response:  Correct the JCL and resubmit the job.

AR3269E  The REBUILD_INDEXES keyword and the end point specification are mutually exclusive for index spaces.
Explanation:  You specified the REBUILD_INDEXES parameter and an end point for the recovery process. These are mutually exclusive.
User response:  Correct the JCL and resubmit the job.

AR3270E  One of TO_CURRENT, TO_QUIESCE, END_RBA, END_LRSN, TOLOGPOINT or REBUILD_INDEXES must be specified.
Explanation:  You did not specify one of the following required options in your JCL: TO_CURRENT, TO_QUIESCE, END_RBA, END_LRSN, TOLOGPOINT or REBUILD_INDEXES.
User response:  Correct the JCL and resubmit the job.

AR3271E  The REBUILD_INDEXES keyword has already been coded.
Explanation:  You specified the REBUILD_INDEXES parameter more than once.
User response:  Correct the JCL and resubmit the job.

AR3272E  The NO_REUSE keyword was coded multiple times for the same object.
Explanation:  The NO_REUSE keyword was specified more than once for the same object.
User response:  Correct the JCL and resubmit the job.

AR3273E  The NO_REUSE keyword is not valid in the current job environment.
Explanation:  The NO_REUSE keyword was specified in a job type other than WRITE_TO_VSAM or WRITE_TO_BOTH.
User response:  Correct the JCL and resubmit the job.
The CHECK_AFTER QUIESCE keyword was coded multiple times for the same object.

Explanation: The CHECK_AFTER QUIESCE keyword was coded more than once for the same object.

User response: Correct the JCL and resubmit the job.

The CHECK_AFTER QUIESCE keyword specified without TO QUIESCE.

Explanation: The CHECK_AFTER QUIESCE was specified but TO QUIESCE was not specified for space.

User response: Correct the JCL and resubmit the job.

The CHECK_AFTER QUIESCE keyword conflicts with UNIFIED check specified.

Explanation: The CHECK_AFTER QUIESCE keyword conflicts with the UNIFIED keyword.

User response: Correct the JCL and resubmit the job.

The CHECK_AFTER QUIESCE keyword conflicts with NO_SYSLGRNX keyword.

Explanation: The CHECK_AFTER QUIESCE keyword was specified with the NO_SYSLGRNX keyword. This is not valid.

User response: Correct the JCL and resubmit the job.

Error token: token appears more than once. Space# number.

Explanation: The indicated token could not be specified more than once on current level.

User response: Correct the JCL and resubmit the job.

Error token: token has an invalid value: value. Space# number.

Explanation: An invalid value was detected for token.

User response: Correct the JCL and resubmit the job.

Error token: token1 is unexpected with token: token2. Space# number.

Explanation: token1 could not be used when token2 is used.

User response: Correct the JCL and resubmit the job.

Error token: token could not be used without token2 specified.

Explanation: token1 could not be used without token2 specified.

User response: Correct the JCL and resubmit the job.

The ARY#DATA instream DD could not be opened.

Explanation: The DD could not be found in the job generated by Db2 Recovery Expert.

User response: Ensure that the job generated by Db2 Recovery Expert to run on this LPAR was not altered and the ARY#DATA DD exists in the generated job.

The following XML SSID/DBname/TSname control card is invalid:

Explanation: The control cards do not conform to expected syntax.

User response: Correct the JCL and resubmit the job.

An internal error occurred in program ARY#XMLD.

Explanation: Internal error.

User response: Contact IBM Software Support.

Object object required no action.

Explanation: The object was determined to require no action to make the object usable.

User response: No action is required.

Object object had its sequence nbr increased by rowcount.

Explanation: Db2 Recovery Expert updated the catalog to make the XML object usable.

User response: No action is required.

With a source count=count

Explanation: Db2 Recovery Expert updated the catalog to make the XML object usable.

User response: No action is required.

The XML target SSID/DBname/TSname control cards are invalid.

Explanation: The control cards do not conform to expected syntax.

User response: Ensure the generated job was not altered.
The SPACE(... set involved that the error was detected in was spacesetnumber.

Explanation: Indicates the SPACE set involved in the error.

User response: No action is required.

Log apply task returned an error, RC=return_code.

Explanation: The log apply component could not finish normally. An abnormal condition was detected.

User response: Check the job output for other error messages that further explain the error in the output. Make note of the return codes provided in the messages, and then contact IBM Software Support.

Log apply task manager returned an error, RC=return_code.

Explanation: The specified error occurred during parallel log apply processing.

User response: No action is required.

The pipe mechanism initialization function returned an error.

Explanation: An error occurred during pipe initialization.

User response: Check the log for related errors.

The pipe mechanism cleanup function returned an error.

Explanation: An error occurred during pipe cleanup.

User response: Check the log for related errors.

The common storage name/token pair could not be found.

Explanation: The common storage that was created at program startup could not be located, which indicates a possible error during initialization.

User response: Contact IBM Software Support.

An error occurred while calling IEANTRT to get the name/token pair.

Explanation: An error occurred while accessing common storage via IEANTRT.

User response: Contact IBM Software Support.

An error occurred attempting to open a pipe.

Explanation: An error occurred while the product was opening a pipe.

User response: Check the log for related errors. Also check the started task for any error messages.

An error occurred attempting an open on a pipe.

Explanation: An error occurred while the product was attempting to open a pipe for writing data to the accelerator.

User response: Verify that the started task is still running and check for related error messages. If necessary, contact IBM Software Support.

An error occurred attempting to create a name/token pair.

Explanation: An error occurred while the product was attempting to save the address of common storage via IEANTCR.

User response: Contact IBM Software Support.

An error occurred attempting to call the system post function.

Explanation: An error occurred while the product was posting to the started task.

User response: Check the started task for error messages. If necessary, contact IBM Software Support.

</tbody>
</table>
**ARY3644E**  This message provides table partition information.

**Explanation:** Partition information is as follows:
BAD_TABLE_PART_1 = partition_number.

**User response:** No action is required.

**ARY3719E**  Error control card stream has no continuation.

**Explanation:** An end of control card stream was detected but the expression is incomplete.

**User response:** Correct the JCL and resubmit the job.

**ARY3720E**  Error control card stream have unexpected continuation.

**Explanation:** The control card stream process was complete, but a continuation was found.

**User response:** Correct the JCL and resubmit the job.

**ARY3721E**  Error control card stream ended unexpectedly.

**Explanation:** The control card context expected additional input but found the end of the file instead.

**User response:** Correct the JCL and resubmit the job.

**ARY3722E**  Error control card stream ended while token value expected.

**Explanation:** The control card context expected a value associated with the token but found the end of the file instead.

**User response:** Correct the JCL and resubmit the job.

**ARY3723E**  Consistent Load operations require Db2 V10 or later. This Db2=DB2_VERSION.

**Explanation:** The attempted operation requires Db2 Version 10 or later.

**User response:** Verify that your system meets the minimum software requirements. For more information, see the topic about preparing to customize in the product documentation.

**ARY3736E**  Error in checking the accelerator name.

**Explanation:** Db2 Recovery Expert was unable to check the current accelerator name from the DISPLAY ACCELERATOR command output. The command output is displayed in the messages that follow.

**User response:** Review the command output and correct the problem.

**ARY3737E**  Error accelerator name invalid state.

**Explanation:** The accelerator state from DISPLAY ACCELERATOR command output is not "STARTED".

**User response:** Review the command output and correct the problem.

**ARY3738E**  Error exec -DIS ACCEL command rc = RC, rs = SQLSTATE

**Explanation:** An error was encountered when executing the Db2 DISPLAY ACCELERATOR command. Any available command output follows this message.

**User response:** Review the return code and correct the problem.

**ARY3739E**  Error call sysproc.accel_get_tables_details table owner.name severity reason reason.

**Explanation:** There was an error in the call to stored procedure owner.name table. See also ARY3740I, ARY3741I, ARY3742I.

**User response:** Review the error codes and correct the problem.

**ARY3740I**  Error text: text

**Explanation:** This message displays the error text from the stored procedure and is displayed after message ARY3727I.

**User response:** No action is required.

**ARY3741I**  Error description: text

**Explanation:** This message displays the error description from the stored procedure and is displayed after message ARY3727I.

**User response:** No action is required.

**ARY3742I**  Error action: text

**Explanation:** This message displays the error action text from the stored procedure and is displayed after message ARY3727I.

**User response:** No action is required.

**ARY3743E**  Error could not parse XML output. XML output follows.

**Explanation:** An error was encountered parsing the XML output from the stored procedure. The XML output will be dumped after this message.

**User response:** Provide the output to IBM Software Support.
STARTED TASK IS NOT R
THE DB2 SYSTEM BECAUSE THE DB2 RECOVERY EXPERT
EXPLANATION:

ARS7498S THE SELECTED DB2 SYSTEM IS NOT ON THE
RECOVERY EXPERT STARTED TASK INTERCEPT LIST.

EXPLANATION: THE DSNUTILB INTERCEPT POLICY FOR THE
DB2 RECOVERY EXPERT STARTED TASK MUST SPECIFY THE DB2
SYSTEM.

USER RESPONSE: INCLUDE THE DB2 SYSTEM IN THE
DSNUTILB INTERCEPT POLICY BY USING THE
<DB2SYSTEM> ELEMENT WITHIN THE <POLICY> SECTION
OF THE DSNUTILB INTERCEPT POLICY AS FOLLOWS:

OF THE DSNUTILB INTERCEPT POLICY AS FOLLOWS:

<DSNUTILB_INTERCEPT>
<POLICY>
<DB2SYSTEM SSID="ssid"
   ACTION="LOAD_ACCELERATOR">
</DB2SYSTEM>
</POLICY>
</DSNUTILB_INTERCEPT>

USER RESPONSE: MAKE SURE THE JCL AND RERUN THE JOB.

ARS744E THE TO_IC INLINE CONTROL CARD HAS
ALREADY BEEN SPECIFIED FOR THIS OBJECT.

EXPLANATION: A DUPLICATE CONTROL CARD WAS FOUND IN
THE OBJECT SPECIFICATION.
User response: Correct the JCL and resubmit the job.

**ARY3765E** The DBID, PSID, and at least one OBID must be specified.

Explanation: On a load operation, translation was called for, but all required fields to perform the function were not specified. All of the required options that are needed to perform the translation operation were not specified.

User response: Correct the JCL and resubmit the job.

**ARY3766E** When a segmented object is loaded, OBIDXLAT information must be specified.

Explanation: The process requires that OBIDXLAT information be specified when the underlying table space is segmented, even if there is only one table currently in the table space.

User response: Specify the DBID/PSID/OBID number pairs for the object.

**ARY3767E** The OBIDXLAT_CATALOG control card has already been specified for this object.

Explanation: A duplicate control card was found in the object specification.

User response: Correct the JCL and resubmit the job.

**ARY3768E** Keywords OBIDXLAT and OBIDXLAT_CATALOG can not be specified at the same time.

Explanation: The specified options are mutually exclusive, and only one of the options can be specified in the syntax.

User response: Correct the JCL and resubmit the job.

**ARY3769W** The DEBUG parameter has already been coded for this space group.

Explanation: A duplicate control card was found.

User response: Correct the syntax.

**ARY3769W** Warning table <schema>.<name> state <state> type <type>.

Explanation: Db2 Recovery Expert could not determine whether it is safe to load the table.

User response: Check the table state. For more information, see the IBM Db2 Analytics Accelerator for z/OS Stored Procedures Reference.
The table space 'db_name.ts_name' does not exist in the Db2 catalog.

Explanation: The table space specified in the Db2 Recovery Expert JCL does not exist in the Db2 catalog.

User response: Correct the JCL and resubmit the job.

Partition part_num was specified for 'db_name.ts_name' but the space is non-partitioned or the partition is not defined.

Explanation: A partition was specified for a non-partitioned table space or the partition is not defined.

User response: Correct the Db2 Recovery Expert JCL and resubmit the job.

Invalid syntax. Not allowed keyword 'word1'. Expected 'word2 word3 ...'.

Explanation: The syntax is not valid.

User response: Correct the JCL and resubmit the job.

Invalid syntax. Keyword keyword not allowed.

Explanation: The syntax is not valid.

User response: Correct the JCL and resubmit the job.

The DATA_BASE parameter is invalid.

Explanation: The DATA_BASE parameter is invalid.

User response: Verify that the DATA_BASE keyword has been properly specified in your JCL.

The SPACE_NAME parameter is invalid.

Explanation: The SPACE_NAME parameter is invalid.

User response: Verify that the SPACE_NAME parameter has been properly specified in your JCL.

The PARTITION parameter is invalid.

Explanation: The PARTITION parameter is invalid.

User response: Verify that the PARTITION parameter has been properly specified in your JCL.

The SPACE_THREAD parameter is invalid.

Explanation: The SPACE_THREAD parameter is invalid.

User response: Verify that the SPACE_THREAD parameter has been properly specified in your JCL.

The PART_THREAD parameter is invalid.

Explanation: The PART_THREAD parameter is invalid.

User response: Verify that the PART_THREAD parameter has been properly specified in your JCL.

Invalid INDEX_THREAD parameter, decimal expected.

Explanation: The INDEX_THREAD parameter is invalid.

User response: Verify that the INDEX_THREAD parameter has been properly specified in your JCL.

A DB.TS pair is incomplete.

Explanation: The DB.TS pair you specified is incomplete.

User response: Verify that all DB.TS pairs have been specified correctly. Correct the JCL and resubmit the job.

Operations on the Db2 directory are not allowed.

Explanation: Indexes cannot be rebuilt on the Db2 directory table spaces.

User response: No action is required.

Operations on the Db2 Catalog table space DSNDB06.SYSCOPY are not allowed.

Explanation: Indexes cannot be rebuilt on Db2 Catalog table spaces.

User response: No action is required.

The subsystem ID must be a valid Db2 subsystem name.

Explanation: You specified an invalid subsystem ID.

User response: Verify the subsystem ID.

The plan name must be a valid Db2 plan name.

Explanation: You specified an invalid plan name.

User response: Verify the plan name.

Error connecting to Db2 SSID ssid RC = rc

Explanation: The program could not connect to the Db2 subsystem. The return code returned from the Call Attach Facility is listed in the message.
**User response:** Refer to the message returned by the Call Attach Facility listed in message ARY4151I.

---

**ARY4143S** Error opening plan plan_name RC = rc

**Explanation:** The program could not open specified plan. The return code returned from the Call Attach Facility is listed in the message.

**User response:** Refer to the message returned by the Call Attach Facility listed in message ARY4151I.

---

**ARY4144S** Error disconnecting from Db2 SSID ssid RC = rc

**Explanation:** The program could not disconnect from the Db2 subsystem. The return code returned from the Call Attach Facility is listed in the message.

**User response:** Refer to the message returned by the Call Attach Facility listed in message ARY4151I.

---

**ARY4145S** CAF request can not be completed.

**Explanation:** The program could not complete a CAF request.

**User response:** Refer to messages ARY4151I, ARY4152I, ARY4153I, and DSNT300I for additional information and consult with your systems programmer. Refer to https://www.ibm.com/support/knowledgecenter/en/SSEPEK for information about Db2 messages and codes.

---

**ARY4146A** SQL request can not be completed.

**Explanation:** The program could not complete an SQL request.

**User response:** Refer to messages ARY4154I, ARY4155I, and ARY4156I for additional information and consult with your systems programmer.

---

**ARY4147I** The attempt to reset the RBDP flag returned an error

**Explanation:** Db2 Recovery Expert was unable to reset the Rebuild pending status for object specified in your job.

**User response:** Check the output for DSNUTILB error messages and consult with your systems programmer. Contact IBM Software Support.

---

**ARY4150I** The version of Db2 subsystem ssid is ver.

**Explanation:** Displays the SSID and the version of the Db2 subsystem.

**User response:** No action is required.

---

**ARY4151I** CAF reason codes = 'rc1,rc2'.

**Explanation:** This diagnostic message indicates a Db2 CAF request failure.

**User response:** Diagnose the problem using the return codes. Refer to https://www.ibm.com/support/knowledgecenter/en/SSEPEK for information about Db2 messages and codes.

---

**ARY4152I** message_text

**Explanation:** This message is used to hold text message information.

**User response:** No action is required.

---

**ARY4154I** Pgm: modulename Stmt: stmtnum Type: 'SQL type name' Code: sqlcode

**Explanation:** This diagnostic message indicates a Db2 SQL request failure.

**User response:** Diagnose the problem using the indicated SQL code. Refer to https://www.ibm.com/support/knowledgecenter/en/SSEPEK for information about Db2 messages and codes.

---

**ARY4155I** message_text

**Explanation:** This message is used to hold text message information.

**User response:** No action is required.

---

**ARY4162E** The SYSINARY DD card could not be opened for input.

**Explanation:** The SYSINARY DD data set specified in the JCL could not be opened for input.

**User response:** Verify that the SYSINARY DD is not being accessed by other resources and resubmit the job.

---

**ARY4164E** The SYSINARY DD input stream is empty.

**Explanation:** No control cards appear in the instream file or the input data set.

**User response:** Correct the JCL and resubmit the job.

---

**ARY4165E** The command set must end with a close parenthesis "\)".

**Explanation:** There is no close parenthesis following the Db2 Recovery Expert input cards.

**User response:** Enter a close parenthesis following the Db2 Recovery Expert input cards.
AR4166E  The parsing process gave an invalid return code.
Explanation: There is an error in your Db2 Recovery Expert JCL.
User response: Correct the JCL and resubmit the job.

AR4200E  A data set allocation failure occurred.
Explanation: The program could not allocate specified data set. The data set is listed in the message.

AR4201E  A data set deallocation error occurred.
Explanation: The program could not deallocate specified data set. The data set is listed in the message.
User response: The data set name is listed in message AR4210I. The DD name is listed in message AR4211I. Refer to messages AR4213I for any dynamic allocation return codes and contact IBM Software Support.

AR4202E  A data set open failure occurred.
Explanation: The program could not open specified data set. The data set is listed in the message.
User response: The data set name is listed in message AR4210I. The DD name is listed in message AR4211I. Contact IBM Software Support.

AR4203E  A data set close failure occurred.
Explanation: The program could not close specified data set. The data set is listed in the message.
User response: The data set name is listed in message AR4210I. The DD name is listed in message AR4211I. Contact IBM Software Support.

AR4204E  A dataset write failure occurred.
Explanation: The program could not write specified data set. The data set is listed in the message.
User response: The data set name is listed in message AR4210I. The DD name is listed in message AR4211I. Contact IBM Software Support.

AR4205E  A data set copy failure occurred.
Explanation: The program could not copy specified data set. The data set is listed in the message.
User response: The data set name is listed in message AR4210I. The DD name is listed in message AR4211I. Contact IBM Software Support.

AR4206S  The FULL image copy DD CA(LP/LB/RP/RB) {1} refers to a DSNAME already in SYSCOPY.
Explanation: You specified a full image copy data set name that already exists in SYSCOPY.
User response: Specify a different image copy data set name.

AR4207S  The FULL image copy DD CA(LP/LB/RP/RB) {1} is missing from the JCL.
Explanation: The full image copy data set is not included in your Db2 Recovery Expert JCL.
User response: Verify that the JCL is formatted correctly and contains the necessary information for your Db2 Recovery Expert job.

AR4210I  data_set_name
Explanation: This message is used to hold data set name information.
User response: No action is required.

AR4211I  DD_name
Explanation: This message is used to hold DD name information.
User response: No action is required.

AR4212I  Each CAxxxx DD correlates to each SPACE(...) control card group.
Explanation: Each CAxxxx DD statement must be associated with a corresponding SPACE(...) control card group.
User response: Verify that the JCL is formatted correctly and that each CAxxxx DD statement is associated with a SPACE(...) control card group.

AR4213I  Dynamic allocation return codes = 'rc'.
Explanation: This diagnostic message indicates data set allocation failure.
**ARY4215I**  
Object: Database *db_name*  
Indexspace *is_name*  
Partition *part_num*  
ICBackup 'site'

**Explanation:** This message, in conjunction with messages ARY2101I, ARY2102I, or ARY4216I indicates the database affected by the condition described in the associated message.

**User response:** No action is required.

**ARY4216I**  
DSN:*data_set_name*  
LRSN/RBA: *xxxxxxxxxxxx*

**Explanation:** This message, in conjunction with messages ARY2101I, ARY2102I, or ARY4215I indicates the data set name affected by the condition described in the associated message.

**User response:** No action is required.

**ARY4220E**  
An VSAM allocate failure occurred.

**Explanation:** The program could not allocate specified data set. The data set is listed in the message.

**User response:** The data set is listed in message ARY4236I. Refer to message ARY4238I for any dynamic allocation return codes and consult with your systems programmer. Refer to the [z/OS MVS Programming: Authorized Assembler Service Guide (SA23-1371)](https://www-304.ibm.com/servers/resourcelink/svc00100.nsf/pages/zOSV2R3sa231371) available at for more information.

**ARY4222E**  
An VSAM allocate failure occurred.  
Data set is locked.

**Explanation:** The program could not allocate specified data set because it is locked by other program. The data set is listed in the message.

**User response:** The data set is listed in message ARY4236I.

**ARY4226E**  
An VSAM deallocation error occurred.

**Explanation:** The program could not deallocate specified data set. The data set is listed in the message.

**User response:** The data set is listed in messages ARY4236I and ARY4237I. Contact IBM Software Support.

**ARY4224E**  
A VSAM open failure occurred.

**Explanation:** The program could not open specified data set. The data set is listed in the message.

**User response:** The data set is listed in messages ARY4236I and ARY4237I. Contact IBM Software Support.

**ARY4225E**  
A VSAM close failure occurred.

**Explanation:** The program could not close specified data set. The data set is listed in the message.

**User response:** The data set is listed in messages ARY4236I and ARY4237I. Contact IBM Software Support.

**ARY4226E**  
A VSAM read failure occurred.

**Explanation:** The program could not read specified data set. The data set is listed in the message.

**User response:** The data set is listed in message ARY4236I. Contact IBM Software Support.

**ARY4227E**  
A VSAM write failure occurred.

**Explanation:** The program could not write specified data set. The data set is listed in the message.

**User response:** The data set is listed in message ARY4236I. Contact IBM Software Support.

**ARY4230E**  
A VSAM random read failure occurred.

**Explanation:** The program could not read specified data set. The data set is listed in the message.

**User response:** The data set is listed in message ARY4236I. Contact IBM Software Support.

**ARY4232E**  
A VSAM fetch failure occurred.

**Explanation:** The program could not fetch specified data set. The data set is listed in the message.

**User response:** The data set is listed in message ARY4236I. Contact IBM Software Support.

**ARY4233E**  
A VSAM update failure occurred.

**Explanation:** The program could not update specified data set. The data set is listed in the message.

**User response:** The data set is listed in message ARY4236I. Contact IBM Software Support.
AR4236I

AR4271I
\textbf{Dynamic allocation return code} = ‘rc’.

\textbf{Explanation:} This diagnostic message indicates a data set allocation failure occurred.

\midrule
AR4360E
\textbf{The table space ‘db\_name.ts\_name’ partition part\_num has an unknown status}.

\textbf{Explanation:} Db2 Recovery Expert ensures that the indicated space is stopped before proceeding with the rebuild index process by issuing a call similar to a -DISPLAY DATABASE command. This message displays when the status is not equal to ‘RO’, ‘RW’, or ‘UT’.

\textbf{User response:} Stop the indicated space before attempting to proceed with the rebuild index process.

\midrule
AR4361E
\textbf{The status check for table space ‘db\_name.ts\_name partition part\_num’ timed out}.

\textbf{Explanation:} Before index processing can occur, Db2 Recovery Expert must attempt to stop the spaces involved. However, if an in-flight URID is processing and the object is stopped, the status changes to ‘STOP’, or Stop Pending until the URID finishes. It may also take Db2 some time to flush the buffers. In either case, Db2 Recovery Expert checks the spaces before beginning any index processing. If any of the spaces are not stopped, Db2 Recovery Expert waits a few seconds and checks again. After several checks, it will abort processing and issue this message.

\textbf{User response:} Diagnose why the space will not stop.
AR\text{Y}4362E  The ENQ for table space \textit{db\_name.ts\_name partition part\_num} was not successful.

Explanation: Indicates the database and partition for which the ENQs did not complete successfully.

User response: Diagnose why the space won't enqueued.

AR\text{Y}4363E  The index space \textit{\textquoteleft db\_name.is\_name \textquoteleft partition part\_num} has an unsupported type and will be skipped.

Explanation: Db2 Recovery Expert ensures that the indicated space is stopped before proceeding with the rebuild indexes process by issuing a call similar to a -\text{DISPLAY DATABASE} command. This message displays when the status is not equal to `RO', `RW', or `UT'.

User response: No action is required.

AR\text{Y}4364E  The index space \textit{\textquoteleft db\_name.is\_name \textquoteleft} belongs to a non-partitioned index and will be skipped.

Explanation: A partition was specified for a index space, but it is a non-partitioned index.

User response: No action is required.

AR\text{Y}4370I  The table space \textit{\textquoteleft db\_name.ts\_name \textquoteleft partition part\_num} beginning offloading keys.

Explanation: Db2 Recovery Expert is starting to read the specified table space partition to generate index keys.

User response: No action is required.

AR\text{Y}4371I  The table space \textit{\textquoteleft db\_name.ts\_name \textquoteleft partition part\_num} keys are being offloaded.

Explanation: Db2 Recovery Expert has finished reading the specified table space partition and generating index keys.

User response: No action is required.

AR\text{Y}4372  INFO\_ROWK\_BEGIN\_IS

Explanation: 

User response: 

AR\text{Y}4373I  The index space \textit{\textquoteleft db\_name.is\_name \textquoteleft} partition part\_num is being rebuilt.

Explanation: Db2 Recovery Expert has finished sorting the index keys and generating the specified index space.

User response: No action is required.

AR\text{Y}4374I  The table space \textit{\textquoteleft db\_name.ts\_name \textquoteleft partition part\_num} is empty and will be skipped.

Explanation: The specified table space partition has no one table or index.

User response: No action is required.

AR\text{Y}4375I  The index space \textit{db\_name.ts\_name partition part\_num} is ICOPY pending.

Explanation: The specified index space partition has the informational copy pending status.

User response: No action is required.

AR\text{Y}4380E  The index space \textit{\textquoteleft db\_name.is\_name \textquoteleft} partition part\_num has an unknown status.

Explanation: This message ensures that the indicated space is to be stopped before proceeding with the rebuild indexes process. Db2 Recovery Expert checks the space with a call similar to a -\text{DISPLAY DATABASE} command to verify that the space is in 'stop' status. This message displays when the database comes back with a status not equal to 'RO', 'RW', or 'UT'.

User response: Stop the indicated space before attempting to proceed with the rebuild indexes process.

AR\text{Y}4381E  The status check for index space \textit{\textquoteleft db\_name.is\_name \textquoteleft} partition part\_num timed out.

Explanation: This message is output when ARY tries to start and it has to ensure that when doing rebuild indexes processing that the index spaces are indeed stopped. The stop step that is generated (prior to ARY) to do this sends commands to Db2 to stop the data sets, but it does not wait for the index spaces to actually stop.

If an in-flight URID is processing against the object and the stop is done, the space changes to 'STOP' or stop pending until the URID finishes. It may also take Db2 some time to flush buffers. In either case, ARY does a check on the spaces before doing any real processing. If any of the spaces don't come back 'STOP', it waits a few seconds and checks again. After a few checks like this, it aborts, producing this message.

User response: The load library member might be unusable. Recovery of the load library is required.

**ARY9013E**  Warning func GETN no sections entry ENTRY_NAME rc = returncode, rsn = reasoncode
Explanation: An error occurred when enumerating sections in entry. Error from IEWBIND service. No sections was found.
User response: The load library member might be unusable. Recovery of the load library is required.

**ARY9014E**  Error func GETC get compile units entry ENTRY_NAME rc = returncode, rsn = reasoncode
Explanation: An error occurred when enumerating compile units in entry. Error from IEWBIND service.
User response: The load library member might be unusable. Recovery of the load library is required.

**ARY9015W**  Warning func GETC no compile units entry ENTRY_NAME rc = returncode, rsn = reasoncode
Explanation: An error occurred when enumerating compile units in entry. Error from IEWBIND service. No compile units was found.
User response: The load library member might be unusable. Recovery of the load library is required.

**ARY9016E**  Error invalid buffer size SIZE, expected SIZE.
Explanation: The buffer size is too small. Too many sections were found.
User response: The load library member might be unusable. Recovery of the load library is required.
**Error func GETD get data ENTRY_SECTION_CALSS**

**Explanation:** An error occurred while reading the entry section class. Error from IEWBIND service.

**User response:** The load library member might be unusable. Recovery of the load library is required.

**Warning func GETD no data ENTRY_SECTION_CALSS**

**Explanation:** An error occurred when reading the entry section class. Error from IEWBIND service. Class have no data.

**User response:** The load library member might be unusable. Recovery of the load library is required.

**Error func CSNBOWH calc MD5 hash**

**Explanation:** An error occurred when calculating the MD5 hash. Error from CSNBOWH service.

**User response:** Contact IBM Software Support.

**Error func GETD get RLD data ENTRY_SECTION_CALSS**

**Explanation:** An error occurred when reading the entry section class. Error from IEWBIND service.

**User response:** The load library member might be unusable. Recovery of the load library is required.

**Warning func OPEN output DD REPORT01**

**Explanation:** An error occurred when opening the REPORT01 DD.

**User response:** Correct your JCL and resubmit the job.

**Warning Module Section Usage report skipped**

**Explanation:** No REPORT01 DD was specified. No report was produced.

**User response:** Correct the JCL and resubmit the job.

**Module Section Usage report started**

**Explanation:** Report generation started.

**User response:** No action is required.

**Module Section Usage report completed**

**Explanation:** Report generation completed.

**User response:** No action is required.
Warning func OPEN output DD REPOR04 rc = returncode

Explanation: An error occurred when opening the REPOR04 DD.
User response: Correct the JCL and resubmit the job.

Warning APAR Section Affected report skipped

Explanation: No REPORT04 DD was specified. No report was produced.
User response: Correct the JCL and resubmit the job.

APAR Section Affected report started

Explanation: Report generation has started.
User response: No action is required.

APAR Section Affected report completed

Explanation: Report generation is complete.
User response: No action is required.

Utility starting.
User response: No action is required.

Load Library Report utility started

Explanation: Utility started.
User response: No action is required.

Load Library Report utility completed rc = returncode

Explanation: Utility completed.
User response: Check the return code.

Warning Entry %.*s have TEST attribute set

Explanation: The TEST attribute could not be set for an entry.
User response: The load library member might be unusable. Recovery of the load library is required.

Unsuccessful OPEN of ISPSLIB member ARVIN1

Explanation: An OPEN request failed for the specified member.
User response: Verify that the member exists.

Unsuccessful OPEN of temp file filename

Explanation: The temporary JCL file could not be opened.
User response: Verify the validity of the data set name for your site.

ISPSLIB member ARVIN1 bad record starting recid

Explanation: A bad record was found in the specified member.
User response: Use the record identifier to locate the bad record and correct the entry.

Bad date format or value

Explanation: A date format or value incorrect.
User response: Use the specified formats and/or verify the correctness of YYYYMMDD values.

Bad time format or value

Explanation: A time format or value incorrect.
User response: Use the specified formats and/or verify the correctness of HHMMSS values.

End date cannot be less than start date

Explanation: The end date must be greater than the start date for log analysis.
User response: Correct and retry.

End time must be greater than start time when dates are equal

Explanation: The end time must be greater than the start time for log analysis, given that the start and end dates are equal.
User response: Correct and retry.

No RBAs found in BSDS for the requested log range

Explanation: The log range specified was outside the range of the contents of the bootstrap data set (BSDS).
User response: Verify the specified log ranges. If the log ranges look correct, the possible reasons for this error are:
1. The ranges specified were greater than the highest ranges for the currently active log.
2. Date gaps might exist in the BSDS for the Db2 logs. If 1 above, archive the log and retry. Otherwise, check the BSDS log ranges. The Db2 supplied utility
DSNJU004 may be run against the BSDS to determine the log ranges and logs known to Db2.

**ARYA012E** The BSDS start date for logs was > the requested end date

**Explanation:** The BSDS contains no information for the Db2 logs in the date range specified. The BSDS keeps only a certain amount of data for the logs based on installation settings. Once the BSDS reaches its logging maximum, the most recent archive data wraps around, thereby overlaying older log data.

**User response:** Use the record identifier to locate and correct the record.

**ARYA013E** Time conversion routine found date lower than 1990/01/01

**Explanation:** A date was found while processing the log analysis request which was earlier than 1990/01/01. This is the low date limit of the Db2 Batch Undo. This is only a limit on Db2 log dates, not on Db2 data dates.

**User response:** If it seems unlikely that this date would be encountered in the logs, an internal error may have occurred; contact IBM Customer Support.

**ARYA014E** Primary space allocation not valid number.

**Explanation:** The specification for the primary allocation for the VSAM file is not valid. It must a number between 1-99999 only.

**User response:** Correct and retry.

**ARYA015E** Secondary space allocation not valid number.

**Explanation:** The specification for the secondary allocation for the VSAM file is not valid. It must be a number between 1-99999 only.

**User response:** Correct and retry.

**ARYA016E** Filter input bad record: recid.

**Explanation:** The filter input (DD DATAIN) contained a bad record. It is most likely that this would only occur if the user edited the input records. The offending record is shown (the first 20 characters of it).

**User response:** Correct and retry.

**ARYA018E** OPEN failure on DATAIN input dataset

**Explanation:** An OPEN request failed for the specified ddname.

**User response:** Verify that the ddname exists in the JCL.

**ARYA019E** DATAIN input file has bad record starting with: recid

**Explanation:** A bad record was encountered while processing the specified data set.

**User response:** Use the record identifier to locate and correct the record.

**ARYA021E** Error occurred during error processing:

**Ret:** code

**Explanation:** An error occurred while error processing was in effect. The return code values are listed below:

- 14 -missing a quote in the ISPMLIB member message.
- 16/28 -OPEN failed/abended.
- For 28, a bad message ID may have been entered.
- 20 -dynamic allocation failure for ISPMLIB.
- 24 -dynamic de-allocation failure for ISPMLIB.

**User response:** Contact IBM Customer Support.

**ARYA022E** OPEN failure for GENRPT output file

**Explanation:** An OPEN request for the specified data set failed.

**User response:** Verify the existence of the ddname in the JCL.

**ARYA023E** BSDS VSAM OPEN error: Ret: code, Res: code

**Explanation:** An OPEN failure occurred while attempting to access the bootstrap data set.

**User response:** The return and reason codes can be found in the IBM document DFSMS Macro Instructions For Data Sets. Correct and retry.

**ARYA024E** BSDS VSAM GET error: Ret: code, Res: code

**Explanation:** A GET failure occurred while attempting to access the bootstrap data set.

**User response:** The return and reason codes can be found in the IBM document DFSMS Macro Instructions For Data Sets. Correct and retry.

**ARYA025E** "Misc Flags = H" requires "Generate Details = Y".

**Explanation:** The high speed option requires a combined general and detail report run. The reasons for this are that high speed processing does not allow further filtering at the detail report level, and it also adds overhead during the general report run (the savings occur during the detail report only).

**User response:** Correct and retry.
Table owner: userid, Table: tablename; not found in Db2

Explanation: The specified table owner and name was not found in Db2. Either the table has been dropped, or it never existed.

User response: Change the table owner and name and retry.

DBname: name, TSname: name; not found in Db2

Explanation: The specified database/table space was not found in Db2. Either the table space has been dropped, or it never existed.

User response: Change the database/ table space name and retry.

Any set of log range values requires both start and end values.

Explanation: To request either an RBA or LRSN log range, both the start and end values must both be present.

User response: Correct and retry.

Start log range not less than end log range value.

Explanation: To request either an RBA or LRSN log range, the start value must be less than the end value.

User response: Correct and retry.

No point-in-time conversion was found.

Explanation: An interface request was made to convert between a date/time, LRSN, or RBA values. However, no conversion was possible. This is most likely due to bad input values. For example, if the requested input value was a date/time value that is beyond the current date/time, this error would occur.

User response: Validate your input and retry.

No SSID found for details report

Explanation: No SSID was found which may mean that no database activity report (general) was run prior to running the detail report.

User response: Verify that the general report was run.

The specified end date/time is greater than the current date/time

Explanation: The end date/time specified is later than the current date/time, which is not allowed.

User response: Correct the end date/time to specify a date/time less than the current date/time.
**ARYA041E**  
CATFILE lookup error: code

Explanation: The CATFILE holds Db2 catalog information generated during the general report creation for the log analysis. This CATFILE can only be used with the REFILE generated in the same batch run. This message may indicate a mismatch between the files. It is also possible that a filter was used in the detail report that did not exist in the general report (for example, TABLE X was requested, but it was not present in the results of the general report). The variable information may be either a table name, database and table space name, DBID/PSID/OBID, or DBID/OBID, depending on the format.

User response: Contact IBM Customer Support.

**ARYA042E**  
An unknown type of log record was found. It is dumped below.

Explanation: A log record was read but the program could not decipher its type based on known log record mappings. The first 70 bytes of the offending log record are dumped out with this message.

User response: Notify your product administrator.

**ARYA043E**  
GENCB for ACB failed in ARYPGR: return code: code.

Explanation: The GENCB statement failed in the specified program.

User response: Check the IBM document DFSMS Macro Instructions For Data Sets for return code explanations.

**ARYA044E**  
GENCB for RPL failed in ARYPGR: return code: code.

Explanation: The GENCB statement failed in the specified program.

User response: Check the IBM document DFSMS Macro Instructions For Data Sets for return code explanations.

**ARYA045E**  
OPEN err DSN: name, res cde: code.

Explanation: The OPEN request failed for the named data set.

User response: Verify validity of the data set name. Check the IBM document DFSMS Macro Instructions For Data Sets for reason code explanations.

**ARYA046E**  
GET err DSN: name, res cde: code.

Explanation: The GET request failed for the named data set.

User response: Check the IBM document DFSMS Macro Instructions For Data Sets for reason code explanations.

**ARYA047E**  
CAF error: Unable to CONNECT to SSID: ssid.

Explanation: The Call Attach Facility was unable to CONNECT to the named subsystem.

User response: Verify that the subsystem name is correct and that it is up and running.

**ARYA048E**  
CAF error: Unable to OPEN plan: name.

Explanation: The Call Attach Facility was unable to OPEN the named PLAN.

User response: Verify that the PLAN name is correct and that it has been bound.

**ARYA049E**  
OPEN failed for PLOGD DD dataset.

Explanation: The OPEN request for the PLOGD DD failed.

User response: This should not occur; contact IBM Customer Support.

**ARYA050E**  
OPEN err for ROWDATA, res cde: code.

Explanation: The VSAM file associated with the ROWDATA DD statement could not be opened.

User response: Check the reason code included with the message in the IBM document DFSMS Macro Instructions For Data Sets for descriptions of VSAM OPEN errors.

**ARYA051E**  
GET err for ROWDATA, res cde: code.

Explanation: The VSAM file associated with the ROWDATA DD statement could not be written to.

User response: Check the reason code included with the message in the IBM document DFSMS Macro Instructions For Data Sets for descriptions of VSAM GET errors.

**ARYA052E**  
PUT err for ROWDATA, res cde: code.

Explanation: The VSAM file associated with the ROWDATA DD statement could not be written to.

User response: Check the reason code included with the message in the IBM document DFSMS Macro Instructions For Data Sets for descriptions of VSAM PUT errors.
**ARQA053E**  OPEN error for DD FRMTFILE.

**Explanation:** An OPEN attempt failed for this DD statement.

**User response:** This should not occur; contact IBM Customer Support.

**ARQA054E**  OPEN error for DD CATFILE.

**Explanation:** An OPEN attempt failed for this DD statement.

**User response:** This should not occur; contact IBM Customer Support.

**ARQA055E**  OPEN error for DD REPORT.

**Explanation:** An OPEN attempt failed for this DD statement. This should not occur; contact your product administrator to notify the vendor.

**User response:** This should not occur; contact IBM Customer Support.

**ARQA057I**  There is no data to process for the details report. Job stops.

**Explanation:** This message will occur if a detail report is being run but the general report generated no data. It will also occur if the filters for the detail report filtered out all the data so there is nothing to process. This is not an error condition but rather an indication of end of processing as no detail report can be generated.

**User response:** None required.

**ARQA058W**  Not authorized to view this table: name

**Explanation:** This warning message occurs if a table is found while processing the details report which the user is not authorized to SELECT from. The table will not be included in the details report and no more processing is done for this table.

**User response:** None required.

**ARQA059W**  The Db2 dataset is not found: name

**Explanation:** This warning message occurs if the named Db2 VSAM data set cannot be allocated because it can not be found. This would occur if the VSAM data set was deleted outside of Db2s knowledge but the object was not dropped in Db2. The table will not be included in the details report and no more processing is done for this table.

**User response:** None required.

**ARQA060E**  No records written to ROWDATA DD. Job stops.

**Explanation:** The vsam file associated with the ROWDATA DD statement had no records written to it. This can occur only if there were also warnings generated for the detail report run. Processing stops here because there is no data to further process and hence, no detail report can be generated.

**User response:** Check the job for messages in the WARNINGS DD.

**ARQA061W**  Log RID mismatch with page RID; variable1 - variable5

**Explanation:** When reading the data page associated with a log record modification, it was determined that the data page row ID did not match the log page row ID. This causes processing to shutdown for this particular table space. The table is identified by the variables in the message, listed as such: page number, row ID, DBID, PSID, and OBID. These values are all from the log record. This can occur for many reasons, such as if a table was REORGed, was recreated, or the log record data is still in the Db2 buffer pool.

**User response:** If this latter case is likely, retry after a QUIESCE on the database. Otherwise, use a log-forward mode process.

**ARQA063W**  OPEN failed for auth: name

**Explanation:** While attempting to open the Db2 VSAM data set, an authorization failure occurred. You are not authorized to OPEN this data set. This table/table space will not be included in the final details report.

**User response:** None required.

**ARQA064E**  Dyn alloc err: DDname: name, Ret: code, Res: code

**Explanation:** An internal dynamic allocation attempt failed for the specified ddname. The return code and reason codes are SVC 99 standard codes and can be found in the IBM manual "Authorized Assembler Services Guide" in the chapter "Requesting Dynamic Allocation Functions". The most common codes likely to be encountered are:

- 0210/0410 - ddname unavailable or in use by another user.
- 0420 - ddname associated with an already opened data set.
- 1708 - data set associated with ddname not found.

**User response:** Contact IBM Customer Support.
Unsuccessful OPEN of name

Explanation: An unsuccessful OPEN was issued for the specified ddname. The data set may not be allocated or already open.

User response: Logging off TSO may resolve this problem.

Db2PARMS file bad for ssid, missing configuration information.

Explanation: For the SSID specified on the message, there is missing common configuration information.

User response: Verify with your product administrator that all the necessary configuration information has been supplied for the SSID.

Db2PARMS file does not have requested SSID: ssid

Explanation: The configuration file has no entry for the specified subsystem.

User response: Edit the configuration file to add the specified subsystem.

DYN:DSName: name, code, code

Explanation: An internal dynamic allocation attempt failed for the specified dsname. The reason code and info codes follow after the DSName field. These codes are SVC 99 standard codes and can be found in the IBM manual "Authorized Assembler Services Guide" in the chapter "Requesting Dynamic Allocation Functions". The most common codes likely to be encountered are:

- 0210/0410 - ddname unavailable or in use by another user
- 0420 - ddname associated with an already opened data set
- 1708 - dsname not found

User response: Contact IBM Customer Support.

Db2PARMS file bad for ssid, missing the log analysis parm data.

Explanation: For the SSID specified on the message, there is missing configuration data.

User response: Verify that the log analysis has been properly configured by your product administrator and that all needed parameters were provided for the failing subsystem.

Uncommitted URID found and bypassed; variable1 - variable4

Explanation: An uncommitted URID was found that matched the filter criteria. This URID is not included in the report, as it cannot be determined at this time if the work will be committed or aborted. The variables listed are for the URID and the DBID, PSID, and OBID of the table affected, respectively.

User response: Re-running the the job at a later time will resolve the warning as the URID will eventually be either committed or rolled back.

Edit proc error: name: name; retcode:code; rescode:code

Explanation: The named edit procedure returned an error while attempting to decode the row. The named edit procedure returned the listed return and reason codes. Processing halts.

User response: Contact IBM Customer Support.

Dictionary mismatch: variable1 - variable4

Explanation: A row was found that needed to be decompressed, but the current dictionary was created after the row was written to the log. The dictionary cannot be used to decompress the row. The variables listed show the DBID, PSID, page number and URID for the row. This row is bypassed for the details report.

User response: None required.

OPEN error for DD WARNINGS

Explanation: An OPEN attempt failed for this DD statement.

User response: Check for the inclusion of this DD statement in your JCL step and for correct specification of the associated data set.

Field proc error: name: name; retcode:code; rescode:code

Explanation: The named field procedure returned an error while attempting to decode the column. The named field procedure returned the listed return and reason codes. The values shown are hexadecimal displays of return/reason codes provided by the field procedure as Db2 allows anything in these fields. Processing halts.

User response: Contact IBM Customer Support.

OPEN failure on TEMPIC ddname for output

Explanation: The OPEN failed for the ddname.

User response: Verify that the DD statement for TEMPIC is defined and valid in the JCL step.
**ARYA077E** OPEN failure on TEMPIC ddname for update

**Explanation:** The OPEN failed for the ddname.

**User response:** Verify that the DD statement for TEMPIC is defined and valid in the JCL step.

**ARYA078E** Incremental IC merge err: name

**Explanation:** While attempting to merge the named incremental image copy into the full image copy, a page mismatch occurred. The full image copy data set (TEMPIC) hit an end-of-file condition while trying to match the current incremental page number.

**User response:** Verify the incremental image copy name is a valid and expected data set for the current process.

**ARYA079E** OPEN failure on TEMPIC ddname for input

**Explanation:** The OPEN failed for the ddname.

**User response:** Verify that the DD statement for TEMPIC is defined and valid in the JCL step for the current process.

**ARYA080E** OPEN failure on full image copy: name

**Explanation:** The OPEN failed for the dsname.

**User response:** Verify that the data set name is valid and that you are authorized to browse this data set.

**ARYA081E** OPEN failure on incremental image copy: name

**Explanation:** The OPEN failed for the dsname.

**User response:** Verify that the data set name is valid and that you are authorized to browse this data set.

**ARYA082W** OPEN failed for auth: name

**Explanation:** While attempting to open the image copy data set, an authorization failure occurred. You are not authorized to OPEN this data set. The associated table space will not be included in the final details report.

**User response:** None required.

**ARYA083E** OPEN failure on dsname: &V1 during mode file conversion

**Explanation:** The OPEN failed for the dsname. The dsname should not exist before conversion and the user should have permission to create the data set. The dsname is built internally based upon the values found in the mode file that is converted.

**User response:** Verify that the data set name does not exist and that you are authorized to create this data set.

**ARYA084E** No full image copy found: variable1 - variable4

**Explanation:** A full image copy was not found with a RBA less than or equal to the RBA shown in the message. The product cannot continue processing. These values are all from ties for this table space. The variables shown are DBNAME, TSNAME, DSNUM, and RBA of log record.

**User response:** Verify the validity of the shown RBA and then check your SYSIBM.SYSCOPY table to verify the state of your image copy, database name, table space name.

**ARYA085E** UNDO and REDO SQL mutually exclusive. Set only one to Y.

**Explanation:** A request was made to generate a details report generating both UNDO and REDO SQL. This is not permitted. Select only one of these options.

**User response:** Correct and retry.

**ARYA086E** Bad commit scope value. Enter value between 000 to 999 only.

**Explanation:** The value entered for commit scope must be between 000 and 999 only.

**User response:** Correct and retry.

**ARYA088W** SQL bypassed, LOB data found on: variable1.variable2

**Explanation:** A LOB column was found in a table modified during the specified log range. LOBs are not currently supported and therefore, any log activity found for this table will not be generated into SQL. Variable1 represents the table owner, and variable2 is the table name.

**User response:** None required.

**ARYA089W** SQL bypassed, catalog table(s) present.

**Explanation:** SQL cannot update catalog tables, and therefore, SQL generation is bypassed for all the catalog tables reported on by the detail report. Non-catalog tables will still be included in the generated SQL, if any.

**User response:** None required.

**ARYA091E** Error in reading SYSLGRNX, return code: code

**Explanation:** An error occurred while attempting to read the SYSLGRNX directory table. See your job log output for additional diagnostics relating to this error.
(look for possible text in job log output of "FEC#REPO").

**User response:** Report this error to your product administrator.

---

**ARYA093E**  LOBs not currently supported in load format.

**Explanation:** A LOB type column was found in the table while generating load cards. LOBs are not currently supported, so the load generation process fails.

**User response:** None required.

---

**ARYA094E**  LOB type column was found in the table while generating load cards. LOBs are not currently supported, so the load generation process fails.

**User response:** None required.

---

**ARYA095E**  LOADFILE OPEN failure

**Explanation:** An error occurred while attempting to open the DD LOADFILE.

**User response:** Verify the existence of the DD statement LOADFILE in either the DD CFIL or hardcoded in your JCL.

---

**ARYA096E**  DDLFILE OPEN failure

**Explanation:** An error occurred while attempting to open the DD DDLFILE.

**User response:** Verify the existence of the DD statement DDLFILE in either the DD CFIL or hardcoded in your JCL.

---

**ARYA097E**  LOADCARD OPEN failure

**Explanation:** An error occurred while attempting to open the DD LOADCARD.

**User response:** Verify the existence of the DD statement LOADCARD in either the DD CFIL or hardcoded in your JCL.

---

**ARYA098E**  Job run identifier must start with alphanumeric

**Explanation:** The job run identifier will be appended to a data set name as a low level qualifier. It must start with a character between A-Z.

**User response:** Correct and retry.

---

**ARYA099E**  Object list filter value too long: value.

**Explanation:** An object list filter value was found to be too long. The bad filter value is shown in the error message for a length long enough to indicate the error (for example, 9 characters on a database name). The maximum lengths of these filters (including the trailing wildcard, if present) are listed below:

- Table Creator: 128 characters (only use 8 for pre-Db2 V8).
- Database Name: 128 characters
- table space Name: 8 characters

**User response:** Correct and retry.

---

**ARYA100E**  TICSPECS DD OPEN failure

**Explanation:** An inline image copy was found, but while attempting to read the TICSPECS DD, an OPEN failure occurred.

**User response:** Verify the existence of this DD in the JCL.

---

**ARYA101W**  Log-forward required for detail report

**Explanation:** Data was found during the general report process that requires a log-forward process for generating the detail report. Such data could be reorg, load, or mass-delete log record(s).

**User response:** Re-run as a log-forward process.

---

**ARYA102W**  EDICT DD OPEN failure

**Explanation:** The EDICT DD failed to open.

**User response:** This should not occur; contact IBM Customer Support.

---

**ARYA103E**  Page column value on line indicated is invalid.

**Explanation:** The page field value is invalid. Enter either a space, a "Y" (yes), or "N" only.

**User response:** Correct the input and retry.

---

**ARYA104E**  ISPSLIB member ARYIN4 bad record starting name

**Explanation:** A bad record was found in the specified member.

**User response:** Use the record identifier to locate the bad record and correct the entry.

---

**ARYA105E**  ISPSLIB member ARYIN4 bad record starting name

**Explanation:** A bad record was found in the specified member.

**User response:** Use the record identifier to locate the bad record and correct the entry.

---

**ARYA106E**  TICSPECS DD OPEN failure

**Explanation:** An inline image copy was found, but while attempting to read the TICSPECS DD, an OPEN failure occurred.

**User response:** Verify the existence of this DD in the JCL.
No useable image copy found for tablespace name

Explanation: A full image copy was not found for the specified table space. An image copy must exist prior to the time of your earliest log records. If none can be found earlier than that time, no useable image copy exists. For example, if you INSERT many records and subsequently take an image copy of the table space, that image copy is not useable for the INSERTs because it occurred after them.

User response: Verify that a full image copy is available prior to the time of your earliest log record actions for the table space.

Disk primary and secondary space values must be numeric.

Explanation: The primary and secondary space values must be between 0000 and 9999 only, without any non-numeric characters. This field is only validated if "Device Type" is not equal to "T".

User response: Correct and retry.

No temporary image copy data found.

Explanation: An attempt was made to run a detail report in log-forward mode. However, it was found that required data was missing. This is an internal error as proper and required parameters have not been passed to Log Analysis Tool for the temporary image copy allocation.

User response: This should not occur; contact IBM Customer Support.

Object type can be "T" for table, or "S" for table space only.

Explanation: The specified object type value was incorrect. If one of the above value is not used, the entire line must be left blank.

User response: Correct the input and retry.

OPEN error for DD SFMTFILE

Explanation: An OPEN attempt failed for this DD statement.

User response: This should not occur; contact IBM Customer Support.

OPEN error for DD CHFILE

Explanation: An OPEN attempt failed for this DD statement.

User response: Check for the inclusion of the DD CHFILE in either your hardcoded JCL or in the DD CFILES output.

OPEN error for DD HVFILE

Explanation: An OPEN attempt failed for this DD statement.

User response: Check for the inclusion of the DD HVFILE in either your hardcoded JCL or in the DD CFILES output.

Table owner: userid, table: name; not found in Db2

Explanation: The specified table owner and name was not found in Db2. The table may have been dropped.

User response: None required.

OPEN error for DD SQLIN

Explanation: An OPEN attempt failed for this DD statement.

User response: This should not occur; contact IBM Customer Support.

OPEN error for DD SQLTIN

Explanation: An OPEN attempt failed for this DD statement.

User response: This should not occur; contact IBM Customer Support.

OPEN error for DD SQLOUT

Explanation: An OPEN attempt failed for this DD statement.

User response: This should not occur; contact IBM Customer Support.

Processing stops due to bad table list.

Explanation: A table was requested for the static program generation, but the table was not found in the input. Therefore, there is no data to further process.

User response: Verify the correctness of the table specification in the TABLE DD statement and verify that there is data in the input data set. (The input data set here refers to the SQLOUT file from the details report, which if empty, will result in this message.)

DBID is blank, but PSID and/or OBID are not; invalid.

Explanation: DBID must be entered if PSID and/or OBID are entered.

User response: Validate the JCL and that the required ID values conform to the above rules.
<table>
<thead>
<tr>
<th>ARYA123E</th>
<th>DBID is nonblank, but PSID is blank; invalid.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>If DBID is not blank, there must minimally be a value entered for PSID. OBID does not have to be specified if only a table space is being filtered. If OBID is not a blank, PSID must also not be a blank.</td>
</tr>
<tr>
<td><strong>User response:</strong></td>
<td>Validate the JCL and that the required ID values conform to the above rules.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ARYA126E</th>
<th>Contiguous group values must be either all blank or all numeric</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>You specified a non-blank contiguous group value for at least one log entry, therefore all entries must have a value. That is, the logs are either all contiguous, or they are not. If they are not, each log entry must have a non-blank value.</td>
</tr>
<tr>
<td><strong>User response:</strong></td>
<td>Validate that your JCL conforms to these rules.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ARYA127E</th>
<th>No log data sets were specified, you must enter at least one.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>You hit &quot;ENTER&quot; to accept the list of specified log data sets, but none were found. If you want to bypass use of the list, hit &quot;PF3&quot;, otherwise enter at least one log data set name. A line of spaces (from top to bottom) in the log data set column stops the list, so be sure the first line is not spaces.</td>
</tr>
<tr>
<td><strong>User response:</strong></td>
<td>Correct the input and retry.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ARYA130E</th>
<th>IDCAMS job failure. See WTO messages in job output.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>The job failed while processing IDCAMS for the active log. The output from SYSPRINT has been written to your joblog in the form of WTO messages.</td>
</tr>
<tr>
<td><strong>User response:</strong></td>
<td>See these messages for help on the cause of the failure.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ARYA131E</th>
<th>Existence of old IDs requires both old and current/new OBID.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>You requested old IDs but omitted the old OBID and/or the current/new OBID. This is not permitted. When requesting old IDs, all objects must be fully qualified with the current/new full set of DBID/PSID/OBID and old DBID/PSID/OBID.</td>
</tr>
<tr>
<td><strong>User response:</strong></td>
<td>Validate the correctness of these rules in your JCL.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ARYA132E</th>
<th>Object name fields cannot be spaces</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>The line has an object type = &quot;T&quot; or &quot;S&quot;, and therefore object names representing either a table or a database/table space must not be left blank.</td>
</tr>
<tr>
<td><strong>User response:</strong></td>
<td>Either set the entire line to spaces, or fill in these names.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ARYA133E</th>
<th>Object type is blank, therefore entire line must be blank.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>The line has an object type which is blank (or spaces), and therefore the entire line must be left blank.</td>
</tr>
<tr>
<td><strong>User response:</strong></td>
<td>Correct the input and retry.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ARYA134W</th>
<th>Warning: At least one utility record found.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>The detail report found the existence of a utility record(s). These records are identified by an &quot;X&quot; in the general report. They have been bypassed because only a log-forward process can handle these types of records and you have requested a log-backward process. If the &quot;X&quot; type record was the first record shown for a specific table/table space, running log-backward can yield good results.</td>
</tr>
<tr>
<td><strong>User response:</strong></td>
<td>Evaluate and retry if necessary.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ARYA135W</th>
<th>Warning: A BSDS member could not be found.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>While processing the named BSDS for the group, another BSDS was found which could not be allocated. This data set does not exist as the allocation attempt failed on a &quot;1708&quot; reason code. You likely have old and outdated BSDS names in your configured BSDS. This is treated as a warning only and the name of any such BSDS is written to your joblog in the form of a WTO message.</td>
</tr>
<tr>
<td><strong>User response:</strong></td>
<td>Confirm that the named BSDS is not needed for the run.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ARYA136W</th>
<th>Unsupported column type found: type</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>The current function found a column type that is not currently supported. Processing cannot continue.</td>
</tr>
<tr>
<td><strong>User response:</strong></td>
<td>None required.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ARYA137E</th>
<th>Bad partition value. Enter a valid number between 0-4096.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>The value entered for the partition must be between 0 and 4096. Spaces are also permissible, and equate to a value of 0.</td>
</tr>
</tbody>
</table>
User response: Validate the correctness of the above rules in your JCL.

ARYA138E  A database/tablespace filter is required with a partition filter.

Explanation: A non-zero value was specified for the partition filter, but no database and table space filter was specified and/or a table filter was also specified.

User response: Validate the correctness of the above rules in your JCL.

ARYA139E  Table filters are not permitted with a partition filter.

Explanation: A non-zero value was specified for the partition filter, but a table filter was also requested. This is not allowed. When using a partition filter, specify only a single database/table space filter to be associated with the requested partition filter.

User response: Validate the correctness of the above rules in your JCL.

ARYA141E  Bad contiguous group specification. Must be 00-99 only.

Explanation: You specified a bad value for a contiguous group field. The only allowable values are from 00 to 99.

User response: Validate the correctness of the above rules in your JCL for the log specification option.

ARYA142E  Valid operator values are EQ, NE, GT, GE, LT, LE, LK, NL, IC, XC, CH, NC.

Explanation: You specified an invalid operator field. The field can be only one of those listed above.

User response: Correct the input and retry.

ARYA143E  "Cond" field can only contain A, O, ), (, or blank.

Explanation: You specified an invalid "Cond" field. The field can either be "A" (AND), "O" (OR), or spaces to indicate there are no more conditions. If the field is not spaces, then there must be another conditional on the next line. Additionally, you may chose to nest your conditionals using up to 3 levels of parentheses. That is, any single line can contain from 1 to 3 left parentheses or right parentheses, and the total number of left and right parentheses must match.

User response: Correct the input and retry.

ARYA144E  Bad advanced filter record: recid

Explanation: You specified an invalid advance filter record.

User response: If you edited the JCL, it was done incorrectly. Regenerate the JCL and do not edit it. If you did not edit the JCL, contact your product administrator to notify the vendor.

ARYA146E  Use of ARCHLOG1 only and ARCHLOG2 only are mutually exclusive

Explanation: You requested use of both ARCHLOG1 and ARCHLOG2 only, which is not permitted. Only one of these can be requested exclusively.

User response: If you wish to use either, that is the default behavior of the product and both should be set to "N".

ARYA147E  Unsuccessful OPEN of name

Explanation: An unsuccessful OPEN was issued for the specified dsnname. Processing halts. This message will occur only if all logs (active and archive) with the same RBA range failed.

User response: None required.

ARYA148E  Unsuccessful LOCATE of name

Explanation: An unsuccessful LOCATE occurred while trying to resolve the dsnname. This message can occur while the product attempts to resolve the DATA component name of an active log. It can also occur during internal file allocation processing time.

User response: Verify the correctness of the dsnname in the message. If you are unable to determine the cause of the problem, contact the vendor.

ARYA150E  Valid values are "Y", "N", or "O" only for field.

Explanation: For the "Show Rollbacks" field, please specify only the following values: "Y" to include rollbacks in the output; "N" to exclude rollbacks from the output; "O" to show only rollbacks in the output.

User response: None required.

ARYA151E  Optional old IDs must have related new IDs.

Explanation: You specified a group of optional old IDs in the object list, but there were no IDs on the same line for the new IDs. This is not acceptable input. Old IDs must always correspond directly to new IDs.

User response: Validate the correctness of the JCL regards the above rules.
**ARYA152E**  Mismatch found between old and new IDs.

**Explanation:** You specified a line of both old and new IDs, but the IDs do not directly match. When specifying the optional new IDs, all IDs must be specified for both old and new. That is, the old DBID, PSID, and OBID must all be stated, as well as the new DBID, PSID, and OBID.

**User response:** Validate the correctness of the JCL regards the above rules.

**ARYA153E**  Object IDs list requested but no entries found.

**Explanation:** You requested use of object IDs, and hit ENTER to use the list, but no object IDs were found. If you wish to bypass the list, hit PF3, or enter at least one valid line of IDs.

**User response:** Correct the input and retry.

**ARYA154E**  Old object IDs detected in REFILE; must use log-forward mode.

**Explanation:** While running in log-backward mode, old object IDs were detected in the REFILE. These occur only when old object IDs were included in the general report.

**User response:** You must run this detail report in log-forward mode, as log-backward mode does not support handling of previously dropped objects.

**ARYA155E**  Old object IDs on one line require them on all lines.

**Explanation:** You specified the optional old IDs on at least one line, so they must be present on all lines. Running with old IDs is considered running in dropped-object mode. Running without old IDs is considered standard mode. You cannot mix these two modes.

**User response:** Validate the correctness of the JCL regards the above rules.

**ARYA156E**  message_text

**Explanation:** All debug messages will be displayed in this form. These messages are always activated to prevent unnecessary and potentially expensive re-runs in order to activate them. Unless a component of this product refers to such a message, disregard it. There is generally no useful user information here and this information is intended primarily for internal use as necessary.

**User response:** None required.

**ARYA157E**  Internal array in ARYBSDS exhausted, processing halts.

**Explanation:** You have exceeded the maximum number of stored archive and active logs allowed. The maximum allowable number is approximately 2788, and is deemed excessive. This will likely only occur in a detail report run where one of the following situations has occurred: log-backward mode and the associated general report timeframe was very long ago or log-forward mode and the earliest image copy needed was created long before the associated general report timeframe.

**User response:** Analyze your situation and take appropriate actions such as changing time frames or detail report modes (for example, change log-backward mode to log-forward).

**ARYA158E**  Partition filter not allowed with wildcards.

**Explanation:** You have requested a partition filter, but also used a wildcard in the database or table space name field. This is not permitted. A partition filter can only be applied to a single table space.

**User response:** Remove either the partition filter or the wildcard and retry.

**ARYA159E**  An invalid ID was found on the line. Enter only decimal numbers.

**Explanation:** You have specified an invalid ID value. Only decimal values are permitted and these can only be between 0 and 99999. No alphanumeric or hexadecimal values are allowed.

**User response:** Validate the correctness of the JCL regards the above rules.

**ARYA160E**  Required fields from the general report panel have not been set.

**Explanation:** You are attempting to generate detail report JCL, but some required information is missing, and this information comes from your general report settings. You may be attempting to generate detail report JCL without ever having created general report JCL. This is not allowed. The detail report JCL uses output from the general report, so you can not run a detail report without first running a general report.

**User response:** Contact IBM Customer Support.

**ARYA170E**  Both table owner and name must be filled in, or both left spaces.

**Explanation:** You requested a table owner or name, but not both. Either leave these fields both blank, or fill them both in. The table name must be fully qualified.
User response: Validate the correctness of the above rules in your JCL.

**ARYA171E**  
Invalid number of hex digits in DD FILTERS input: &V1.

Explanation: When using hexadecimal values in the advanced filters, there must be at least two digits. If there are more than two digits the total number of digits must be even.

User response: Correct the input in your JCL and retry.

**ARYA172E**  
SQL stmt not valid due to: WHERE clause could not be generated.

Explanation: The WHERE clause could not be generated, and therefore no SQL statement could be produced. This is an internal error.

User response: Contact IBM Customer Support.

**ARYA173E**  
Invalid or unbalanced quotes in DD FILTERS input: &V1.

Explanation: When using hexadecimal values in the advanced filters, the string entered must start with X followed by a single quote, valid hexadecimal digits, and end with a single quote. If you are attempting to use the LK or NL operator then put the % after the final single quote not inside the quotes.

User response: Correct the input in your JCL and retry.

**ARYA175E**  
Unable to LOAD Db2 module DSNHDECP

Explanation: A LOAD was issued against module DSNHDECP which was unsuccessful.

User response: Verify that the "Setup" options for this subsystem correctly identify a Db2 load library containing this module. Typically this module would reside in *.SDSNLOAD or *.SDSNEXIT type libraries.

**ARYA176E**  
OPEN error for DD DECLFILE

Explanation: An OPEN attempt failed for this DD statement.

User response: Check for the inclusion of this DD statement in either your DD CFINES or hardcoded in your JCL step and for correct specification of the associated data set.

**ARYA177E**  
Table owner/name fields must both be specified or both left blank.

Explanation: Either a table owner field is spaces and the name is not spaces, or a table owner is not spaces and the name is spaces. These are invalid specifications.

Either specify both the owner and name, or leave both blank.

User response: Correct the input and retry.

**ARYA178E**  
Invalid hexadecimal character found in DD FILTERS input: &V1.

Explanation: When using hexadecimal values in the advanced filters, the string entered must start with X followed by a single quote, valid hexadecimal digits (012345678ABCDEF), and end with a single quote. If you are attempting to use the LK or NL operator, then put the % after the final single quote, not inside the quotes.

User response: Correct the input in your JCL and retry.

**ARYA190E**  
Dictionary data missing in: name

Explanation: Either some or all of the needed dictionary was not found for the identified object (format is DBID/PSID/partition number). This should only occur if a "REPAIR SET TABLESPACE .. NOCOPYPEND" or "START(db) ACC(FORCE)" was run. Running such an action invalidates all types of Db2 recovery scenarios, as well as using this tool to report on the object.

User response: If you have not run either Db2 action, contact your product administrator. A log-backward detail report can be attempted to bypass this situation, but in some cases, only a log-forward detail report can be used (and log-forward is only case where this situation can occur). Filtering out the identified object is also a remedy.

**ARYA191E**  
No data to process; job processing stops.

Explanation: Either all of the data was filtered out because of column data filters, or there was no data to process from the results of the detail report.

User response: Verify the possibility of each condition, and either change your column data filters, or re-run the general/detail reports and verify the existence of reported data (at least one line of log record activity data).

**ARYA192I**  
No SQL was executed; the table filter/restart file might be the cause.

Explanation: A table filter may have prevented any SQL from being executed. If the SQL did not include the named table, all SQL would have been bypassed. Another possible cause is that a restart was requested, and the SQL statement number to restart on is incorrect.

User response: Verify you actually needed to restart here, and that the previous failing run generated the restart file you are using here.
ARYA195E  A Mass Delete type record was found, must use log-forward mode only.

Explanation:  A mass delete record was found in the REFILE (input file generated in the general report process). The only way to resolve such a record is to use a log-forward detail report ("Apply log forward = Y" on detail report panel).

User response:  Either run the detail report in log-forward mode, or eliminate the related segmented table from your detail report by filtering on other specific objects. For example, filter only on table X when table Y had the mass delete action.

ARYA196E  IC,XC column data operators are mutually exclusive.

Explanation:  While generating column data filters, you used both IC (include) and XC (exclude) on the same table. This is not permitted. Either name all the columns you wish to include, or name all the columns you wish to exclude, but do not mix these operators. It is implicit that if you are naming columns to be included that any columns not specified will be excluded. It is also implicit that if you are naming columns to be excluded, any columns not specified will be included.

User response:  Correct the input and retry.

ARYA197E  Invalid or unbalanced quotes in DD FILTERS input: &V1

Explanation:  When using column filters if you have a beginning quote you need to end the string with an ending quote.

User response:  Correct the input in your JCL and retry.

ARYA224E  INTERFACE: SQL DSN is too long; max 44 characters (non PDS).

Explanation:  A requested data set name was too long. The SQL DSN data set can only be a maximum of 44 characters long, and no member specification is allowed.

User response:  Correct and retry.

ARYA227E  INTERFACE: SQL DSN cannot be a PDS, only flat files valid.

Explanation:  The requested SQL data set name contained a member name, indicating it was a PDS. Only sequential flat files are allowed.

User response:  Specify the SQL DSN as a flat file and retry.

ARYA228E  INTERFACE: JCL DSN requested but not found.

Explanation:  The requested JCL data set name could not be found. The use of this data set requires that it exists.

User response:  Either remove the JCL DSN specification, or create it prior to invocation.

ARYA233E  INTERFACE: No REDO/UNDO SQL requested, but "SQL DSN" requested.

Explanation:  The interface file requested no SQL generation, but specified a data set name to contain generated SQL.

User response:  Either remove the "SQL DSN" specification, or request generation of either REDO or UNDO SQL.

ARYA301E  Invalid value, specify only one the listed values.

Explanation:  The filter type specified was incorrect. This is an internal error as incorrect values have been passed to Log Analysis Tool.

User response:  Contact IBM Customer Support.

ARYA302E  Filter type and name must both be specified, or neither.

Explanation:  Enter both a filter type and a filter name as specified on the panel. It is invalid to enter only a filter type or only a filter name without the other value. This is an internal error as incorrect values have been passed to Log Analysis Tool.

User response:  Contact IBM Customer Support.

ARYA303E  SYSCOLUMNS entry not found for table: table_name

Explanation:  An SQLCODE = +100 was found immediately when querying for column data for the named table. The log record data cannot be parsed out without this information, so processing stops.

User response:  Examine your catalog for possible reasons for this condition (SYSIBM.SYSCOLUMNS catalog table where TBCREATOR/TBNAME equals the named table.)

ARYA304W  No Db2 logs were read.

Explanation:  The general report will yield no report data because no logs were read. This can occur for many reasons. The use of SYSLGRNX with your filters may have eliminated all logs from processing. This cause of the message should be considered for your information only, and is not a problem. Other causes may indicate a problem which you might rectify. For
User response: Evaluate your settings and BSDS for the Db2 subsystem. Check the BSDS data as it relates to the time range requested.

**Explanation:**

Referential integrity records detected. SQL has been modified.

If you set either flag on this panel to “Y” to use advanced filters from a file, or save advanced filters to a file, a file name must therefore be provided.

**User response:** Correct the input and retry.

**Explanation:**

The identified operator above is incorrect. The conditional value may be incorrect, or it could be an “AND” condition as the last condition. An “AND” condition cannot logically be the last condition. The only acceptable values for conditionals are spaces, “A”, “O”, or one of those values preceded by left or right parentheses. For example, “)A” or “(O” are correct, but “)(A” or “A(“ or “()” are all invalid.

**User response:** Correct and retry. Contact IBM Customer Support, if necessary.

**Explanation:**

Bad operator value in DD FILTERS input: operator

For any given table, there can only be INCLUDE or EXCLUDE type column specifications, not both. They are mutually exclusive.

**User response:** Either specify all the columns to include, or specify all the columns to exclude, but do not mix these operators. Contact IBM Customer Support, if necessary.

**Explanation:**

Both INCLUDE (IC) and EXCLUDE (XC) operators found for table.

The SET clause could not be generated, and therefore no SQL was produced. This is an internal error.

**User response:** Correct the input and retry.

**Explanation:**

The SET clause could not be generated.

The identified conditional above is incorrect. The conditional value may be incorrect, or it could be an “AND” condition as the last condition. An “AND” condition cannot logically be the last condition. The only acceptable values for conditionals are spaces, “A”, “O”, or one of those values preceded by left or right parentheses. For example, “)A” or “(O” are correct, but “)(A” or “A(“ or “()” are all invalid.

**User response:** Correct and retry. Contact IBM Customer Support, if necessary.

**Explanation:**

Bad conditional value in DD FILTERS input: conditional_value

The conditional value may be incorrect, or it could be an “AND” condition as the last condition. An “AND” condition cannot logically be the last condition. The only acceptable values for conditionals are spaces, “A”, “O”, or one of those values preceded by left or right parentheses. For example, “)A” or “(O” are correct, but “)(A” or “A(“ or “()” are all invalid.

**User response:** Correct and retry. Contact IBM Customer Support, if necessary.

**Explanation:**

Bad input sequence on column data filters: record

The identified record above represents the beginning on an input record that is likely out of sequence. This should only occur if you have manually edited the DD FILTERS input records in the generated JCL.

**User response:** Use the identified record to pinpoint the location of the failing record and determine why it is considered out of sequence. Contact IBM Customer Support for assistance, if necessary.

**Explanation:**

The identified record above represents the beginning on an input record that is likely out of sequence. This should only occur if you have manually edited the DD FILTERS input records in the generated JCL.

**User response:** Use the identified record to pinpoint the location of the failing record and determine why it is considered out of sequence. Contact IBM Customer Support for assistance, if necessary.

**Explanation:**

Log record activity contained actions resulting from referential constraints. For REDO, all such records are ignored because it is implied that the originating action (that which caused the RI actions) will also be re-done, triggering again the RI actions. For UNDO, only the order of the SQL is changed.

**User response:** Examine the SQL and your filters closely before executing any such generated SQL.

**Explanation:**

"Object filters = A" requires "Generate Details = Y".

When using advanced filters, the detail level report must be generated at the same time as the general report. This is because advanced filters must operate on both general and detail level data. The advanced filters specified will automatically be carried through to both levels of reporting.

**User response:** Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

**Explanation:**

Using current filters is mutually exclusive with saving filters.

You can either use the current advanced filters that have been previously saved to the named file, or you edit and save a new set of advanced filters, but not both.

**User response:** Set one of these flags to “N” and retry.

**Explanation:**

If using or saving filters within a file, file name cannot be blank.

If you set either flag on this panel to “Y” to use advanced filters from a file, or save advanced filters to a file, a file name must therefore be provided.

**User response:** Correct the input and retry.
User response: Contact IBM Customer Support.

**ARYA326E**  "Advanced filters" mutually exclusive with object list/IDs.

**Explanation:** Specifying "Y" to "Advanced filters" means all objects (table space/table) will be specified there only. No other object lists or IDs are allowed when using this option.

**User response:** Either set this field to "N", or set object IDs and object lists flags to "N". Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

---

**ARYA327E**  Exclude flag can be "Y" (yes) or "N" (no) or spaces (no).

**Explanation:** The exclude flag can be left blank, set to "Y" to exclude the object, or set to "N", which is the same as being left blank.

**User response:** Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

---

**ARYA328E**  All columns excluded for table:

`table_name`

**Explanation:** Column data filters excluded all columns of a single table. This is not allowed, as no data can be generated for that table.

**User response:** Correct the exclude filters to leave at least one column of the table included.

---

**ARYA330E**  Unable to OPEN file for DD ARYAFN for input.

**Explanation:** This represents an internal error.

**User response:** This should not occur; contact IBM Customer Support.

---

**ARYA332E**  Log range values date-time, RBA, and LRSN are mutually exclusive.

**Explanation:** Log range values can be specified as date-time, RBAs, or LRSNs, but not a combination of any of these. Each is mutually exclusive with the other.

**User response:** Specify a single set of log range start/end values and retry. Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

---

**ARYA333E**  At least one set of log range values must be provided.

**Explanation:** Log range values can be specified as date-time, RBAs, or LRSNs, and one of these range values must be set. It is invalid to omit all of these ranges, and it is invalid to provide more than one as well.

**User response:** Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

---

**ARYA335E**  Conditional value can be "A" (AND) or "O" (OR) only.

**Explanation:** The conditional value specified was neither "A" nor "O". These are the only allowable values.

**User response:** Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

---

**ARYA336E**  OPEN failure on DD MODEFILE.

**Explanation:** The OPEN failed for DD MODEFILE.

**User response:** This should not occur; contact IBM Customer Support.

---

**ARYA339E**  OPEN failure for MODERPT output file

**Explanation:** An OPEN request for the specified data set failed.

**User response:** Verify the existence of the ddname in the JCL.

---

**ARYA340E**  Filter file name must exist if usage is not = "N".

**Explanation:** The filter file field was left blank, but the filter file usage field was not = "N". This is an invalid combination. The filter file field identifies the name of the file used in filter file saving, and must not be left blank unless the filter file usage field is set to "N".

**User response:** Either change the usage field to "N", or specify a filter file name.

---

**ARYA341**  IBM* Rocket**+ Licensed Materials - Property of IBM 5697-H74 + (c)

**Explanation:** Informational message.

**User response:** None required.
**User response:** Either set this field to a value other than "P", or change your "Object Filters" setting to something other than "A".

**ARYA343E** "Uniq" value of LUWID filter must be exactly 12 characters.

**Explanation:** The "Uniq" value (uniqueness value) of the LUWID must be entered as a 12 character hexadecimal display value, such as B91F0CA0034. No characters can be omitted.

**User response:** Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

**ARYA344E** Commit value of LUWID filter must be exactly 4 characters.

**Explanation:** The Commit value (commit count) of the LUWID must be entered as a 4 character hexadecimal display value, such as 000A. No characters can be omitted.

**User response:** Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

**ARYA345W** Seclabels found during FASTPATH mode. DBID:&V1 PSID:&V2 OBID:&V3

**Explanation:** The fastpath method should not be used when tables that have security labels are being processed. This is due to the nature of fastpath processing, which will likely result in non-full row images, and therefore, the security label is unobtainable. The activity on this table can not be reported.

**User response:** Either change the log reading mode to a value other than "P" or change your filters to not include tables with security labels.

**ARYA346W** Row(s) removed during MLS processing DBID:&V1 PSID:&V2 OBID:&V3

**Explanation:** Multilevel security is in place and prevented row(s) from being processed.

**User response:** None.

**ARYA347E** RBA log range request in data sharing system prohibited.

**Explanation:** The general report run specified RBAs as the log range type, but it was determine the requested subsystem is part of a data sharing group. This combination is invalid. Only date/time or LIRSN log ranges are allowable in a data sharing system.

**User response:** Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

**ARYA348E** Filter file is PDS, but no member specified.

**Explanation:** You specified a PDS (library) to be used as the filter file, but did not provide a member name. This is not valid.

**User response:** Either specify a sequential file or a PDS with a member name.

**ARYA349E** Filter file usage is "Edit" or "Use", but file/member does not exist.

**Explanation:** All references to "file/member" below refer to either a sequential file or a member within a partitioned data set (PDS or library). You specified a usage type of "Edit" or "Use", but no filter file/member was found. "Edit" infers that you are editing a previously saved file/member. "Use" infers that you are using a previously saved file/member.

**User response:** Either of these options requires the file/member to pre-exist and have saved filters in it. You must first save filter data off to the named file/member before you can edit or use it. See help on filter file usage.

**ARYA351E** Page filter IDs have no matching object IDs filter.

**Explanation:** The page filter is associated with a DBID/PSID/OBID. However, when attempting to match this set of IDs to an object filter set of IDs, no match was found. This could only happen if you edited the filter file incorrectly, as the panel-driven input would not allow such a mismatch. Page filters IDs are not permitted as standalone filters; they must be associated with a defined object ID filter. In other words, two object ID filter lines must be present to request page-level filters: one for the object itself (dbid,psid,obid), and the second for the associated page level filters (dbid,psid,obid=pages).

**User response:** Correct the input and retry, or use only the panel-driven process.

**ARYA352E** General SORT failure...see SYSOUT output for step.

**Explanation:** A program invoked SORT failed. The SYSOUT output for the failing job step will contain needed diagnostics.

**User response:** Attempt to resolve and retry.

**ARYA353E** CONCURRENT image copies not supported.

**Explanation:** An image copy was found and determined needed, but it is a CONCURRENT image copy, which is not supported (STYPE="C" from SYSIBM.SYSCOPY). Processing stops.
User response: Attempt to resolve and retry.

ARYA354E  Input invalid for field.
Explanation: A field value was entered that is not valid.
User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA355E  Quiet time report invalid with detail report.
Explanation: A quiet time report cannot be run with a detail report. The quiet time report does not generate the proper input for a detail report.
User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA356E  Quiet time report must have start date/time input only.
Explanation: A quiet time report cannot be run with any log range values except start date and time.
User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA357E  Quiet time threshold value bad
Explanation: The specified value is incorrect. The quiet time threshold must be in the format specified, with the following restrictions: HH >= 00 and HH < 24 MM >= 00 and MM <= 24 SS >= 00 and SS <= 59
User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA358E  ALTER COLUMN DATA TYPE found for object ID: variable1 - variable3
Explanation: An unsupportable condition was found for the object (DBID PSID OBID). D62 provides very limited support for tracking column data type alterations, and therefore most attempts to materialize full row images across such an alteration cannot currently be provided.
User response: If possible, remove the identified table from the result set and rerun your general report creating new input for this detail report without the named table. This product can only process such an altered table if the following conditions are true: a REORG has been done after the last alter, and no needed log activity occurred prior to that REORG.

ARYA359E  Filter file member specified, but data set is not a PDS.
Explanation: A filter file was specified for use, but it included a member name and is not a PDS (library).
Either remove the member name or specify a different file entirely.
User response: Correct the input and retry.

ARYA400E  Storage obtain failure for MMTAB.
Explanation: A request for storage failed for area MMTAB.
User response: If possible, increase your region size, otherwise contact IBM Customer Support.

ARYA401E  Storage obtain failure for MMSP.
Explanation: A request for storage failed for area MMSP.
User response: If possible, increase your region size, otherwise contact IBM Customer Support.

ARYA402E  Storage obtain failure for MMIBM.
Explanation: A request for storage failed for area MMIBM.
User response: If possible, increase your region size, otherwise contact IBM Customer Support.

ARYA403E  Storage obtain failure for MRE.
Explanation: A request for storage failed for area MRE.
User response: If possible, increase your region size, otherwise contact IBM Customer Support.

ARYA404E  Storage obtain failure for MM buffers.
Explanation: A request for storage failed for the MM buffers.
User response: If possible, increase your region size, otherwise contact IBM Customer Support.

ARYA405W  No SQL generated, may be due to filters/rollbacks/other options.
Explanation: No SQL was generated for this run. This can occur because of your filters (for example, advanced filters at the column-level filtered out all rows), rollbacks, only catalog tables present in your output (no SQL is generated for catalog tables), or the fastpath option did not materialize full rows and therefore no SQL could be generated.
User response: Check for these possibilities as well as any possible warnings that may have been generated during the run.
ARYA406E • ARYA422E

ARYA406E  Bad input, field must start with value between A-Z.

Explanation: The archive fields for table creator, name, and data set suffix must all start with characters from A-Z, with no other special characters.

User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA408E  Catalog data for LOB object not found.

Explanation: You requested data for a LOB column, but either the base table IDs are incorrectly specified, or the LOB column name is not valid. This can mean the LOB column name is typed incorrectly, or is a valid column of the table, but is not a LOB column.

User response: Verify the correctness of your input if materializing LOB column data. If this message occurs during SQL generation, contact the vendor.

ARYA411E  MASS DELETE found during log-backward process: value.

Explanation: A MASS DELETE matching record was found during log-backward processing. This condition can only be determined while reading the logs (if the MASS DELETE record was not part of the general report output). Processing must stop, and only a log-forward approach is allowed. Whenever running against segmented tables, there is a possibility of mass delete records (that is, DELETE FROM table with no WHERE clause).

User response: If this possibility exists at your site, always run in log-forward mode to prevent unnecessary job stoppage such as this. DATA CAPTURE CHANGES will also prevent mass delete type records. The value shown is the DBID/PSID/OBID identifying the table where the MASS DELETE occurred.

ARYA412E  Partition or page filters not allowed w/LOAD REPLACE log action.

Explanation: A "Load Replace" type utility was found during the general report run. The action-type for this record is "P", indicating "Load Replace". This type of action is not currently permitted with filters below the table level. That is, partition or page level filters are not permitted. Use of only table space or table level filters is permitted when processing a "Load Replace" type log record.

User response: Change your filters (remove any partition or page level filters for the table space identified in the "P" action-type record in your general report output) and retry. These filters are not allowed in either the general or detail report runs when LOAD REPLACE actions exist.

ARYA414E  RBA or LRSN value specified is not proper hexadecimal value.

Explanation: You requested use of either RBAs or LRSNs, but the value(s) entered are not valid hexadecimal specifications. An RBA or LRSN must only contain hexadecimal values, which can be 0-9 and A-F only. For example, a value of 00012FE560BBC is valid, but a value of 0012WXX0345 is not.

User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA415E  Db2 log with needed starting logpoint unavailable. Processing stops.

Explanation: The general or detail report run required a starting logpoint (RBA/LRSN) which was lower than any available Db2 log logpoint in the BSDS. Therefore, processing must stop. This would likely only occur in situations where the date/time specified was so old that the relevant archive logs are no longer in the BSDS. It could also occur on test systems where archive logs are not available after a very short time, or at all. This product cannot function without these needed resources (logs).

User response: Correct and retry.

ARYA419I  Char conversions ended: Ret cde: code, Res cde: code, variable1 - variable3

Explanation: The product failed during character conversion from Unicode or ASCII to EBCDIC. The "Support For Unicode" product was called to do the conversion, but it failed with the shown return code and reason code. The last three variables displayed are the source CCSID, the target SBCS CCSID, and the target MBCS CCSID used in the conversion call.

User response: Verify these CCSIDs are defined to the "Support For Unicode" product.

ARYA420E  Invalid starting/ending RBA/LRSN value(s) provided.

Explanation: You must request one and only one of the following values: a starting RBA, a starting LRSN, an ending RBA, or an ending LRSN. You cannot provide more than one of these values (they are all mutually exclusive).

User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA422E  Invalid input dataset type; must be "T","I","O" only.

Explanation: You requested an invalid data set type. The value must be one of those listed in the error message. A space is invalid here.

User response: Invalid values have been passed to
ARYA426E  Bad dataset line; invalid volume serial specification.

Explanation: You requested an invalid set of volume serial numbers. Each volume specified must be exactly 6 characters long, and separated only by commas. For example, "XT0123,XT0234,SPD001" is valid. Invalid specifications might be: "XT0,SPD001" or "XT0123XT0234" or "XT0123 XT0234 SPD001".

User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA437E  Misc flags can only be spaces, "X", "P", or "H" values.

Explanation: The possible values for miscellaneous flags are spaces, "X" (bypass SYSLGRNX), "P" (ignore partial recovery logpoints), or "H" (allow high speed option).

User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA438E  Extract file (DD EXTFILE) is missing; processing stops.

Explanation: The DD named EXTFILE was not found in your report JCL. This file must be present.

User response: If you edited the product-generated JCL, you may have omitted this DD. Re-generate the JCL and retry. If the file is still missing from the JCL, contact your product administrator.

ARYA439E  Temp extract file (DD TEMPEXTF) is missing; processing stops.

Explanation: The DD named TEMPEXTF was not found in your report JCL. This is an internal error.

User response: This should not occur; contact IBM Customer Support.

ARYA440E  ROWDATA validation error: value

Explanation: An error was detected while validating the results of full row materialization. The value listed in the message identifies the first 19 bytes of the record in the ROWDATA DD file where the error was detected. This error can occur for the following reasons:

- for an INSERT: no post-insert row image found/pre-insert row image found
- for a DELETE: no pre-delete row image found/post-delete row image found
- for an UPDATE: no post-update row image found/no pre-update row image found
- for an UPDATE: no change in pre-update and post-update row images found

User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA442W  No keys found for table: &V1.

Explanation: You requested current row images on the identified table (DBID,PSID,OBID) but no key columns were found for it. Only uniquely keyed tables are available for this type of current row materialization. An index on expression cannot be used as a unique key here. The identified table will not have current row images displayed based on its key. That is, if a log-backward method is being utilized, the current row images based on page/rid values will be kept. If a log-forward method is being utilized, no current row image is available.

User response: None required.

ARYA443E  Current row image process found LOB column in table: table

Explanation: You requested current row images on the identified table (DBID,PSID,OBID) but the LOB column exists on that table. This is not valid. Therefore, if a log-backward method is being utilized, the current row images based on page/rid values will be kept. If a log-forward method is being utilized, no current row images are available for the table.

User response: None required.

ARYA444E  Cannot get current rows due to CCSID translation: table

Explanation: You requested current row images on the identified table (DBID,PSID,OBID) but it required CCSID translation which failed. See joblog output for additional diagnostics (ARYA56I messages). This table will not have current row images based on key values. If a log-forward method is being utilized, no current row images are available for the table.

User response: None required.

ARYA445E  Job Identifier invalid; not previously used or currently in-use.

Explanation: You specified a job identifier that was not previously used in a general report, or was used, but is currently in-use. For the first case, you must run a general report prior to running any detail report, and the detail report must reflect a job identifier that was previously specified for a general report run. For the second case, you are trying to use a job identifier that is currently in-use. This means a job is running using that same job identifier, and you cannot use it now. The job identifier distinguishes files between different runs of different jobs, and these files must exist and not be in-use while generating report JCL.

User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.
**ARDA446E** Filter value too long for filter type; see HELP for panel.

**Explanation:** You specified a filter value which is too long for the filter type. For example, you specified a filter type = A (authid), but the filter value provided is greater than 8 characters.

**User response:** If you edited the JCL, regenerate it and do not edit it again. Otherwise, invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

**ARDA447E** ROWDATA update validation error: record

**Explanation:** An error was detected while validating during the merge phase. An update to a record was needed at a certain offset (>0) into the row, but there was no current data on that row. This is a fatal error. The value listed in the message identifies the first 19 bytes of the record in the ROWDATA DD file where the error was detected.

**User response:** Contact IBM Customer Support to report the problem. The support team will need to see the contents of the PLOGDS DD file.

**ARDA451E** SYSLGRNX storage failure

**Explanation:** A failure occurred during storage obtains for the SYSLGRNX reading process. Too many table spaces were provided as input and not enough region is available for the request.

**User response:** Either bypass SYSLGRNX processing, or increase your region size. If region is currently at the maximum setting for your batch jobs, you must either reduce the number of table spaces requested or bypass SYSLGRNX utilization.

**ARDA452E** Invalid parallelism/concurrency value; must be between 01-16 only

**Explanation:** The value entered for this field is incorrect.

**User response:** Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

**ARDA453E** Quiet time report mutually exclusive with all others.

**Explanation:** When requesting a quiet time report, only a value of "Q" can be entered for the "Output flags" field. This setting is mutually exclusive with all other output types.

**User response:** Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

**ARDA454E** Quiet time report preceded detail report; invalid.

**Explanation:** A quiet time report does not generate the appropriate input necessary to run a detail report. The MODEFILE indicates the last general report run was a quiet time report, and therefore, it is not possible to now run a detail report.

**User response:** You must run a general report without the quiet time option prior to running a detail report.

**ARDA455E** Bypassing all reports mutually exclusive with requesting reports.

**Explanation:** You requested a bypass of all report types ("Output flags = B"), but added at least one other specification. This is not allowed. A value of "B" must be the only value in this field, or it must be removed to specify other report output types.

**User response:** Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

**ARDA456E** Filters found to be in error; probable user-editing error.

**Explanation:** The end-of-file was found while reading your filter list, but a filter group was still in-progress. Each group of filters must end with either an INC/EXC card, or a COND card. These are referred to as "terminating records" and must be present as the last record in every filter group. See tutorial on filter file handling. Check your filters for such an omission and correct and retry. This could occur on object name filters, advanced filters, or miscellaneous filters only.

**User response:** If you did not edit the JCL, invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

**ARDA457E** Filter record invalid within grouping: record

**Explanation:** The identified record is in error, and probably due to user-edit error. Verify your filters. This would occur most likely from duplication of a record within a filter group or if you omitted a required record from the group. Regards the latter, if the terminating record in the group is found before all other required records, that terminating record will be displayed here (for example, COND= and INC/EXC= are terminating records). There are no optional records in any group; they must all be present, and in the specified order.

**User response:** If you did not edit the JCL, invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

Appendix F. Messages and Codes 785
ARYA477I  Error occurred during error processing.

Explanation: Some problem occurred that prevented the normal processing of an error condition. This may be an expected or unexpected situation. For example, some errors can occur before enough information about the environment is available to properly handle message processing (expected situation). Other errors can occur because the environment has not been properly setup (unexpected situation). In either case, the true error message is displayed below this message.

User response: None required.

ARYA478E  "Specify Logs=Y" mutually exclusive with impact report.

Explanation: You requested an impact report ("Output Flags" includes value of 'T'), and also requested "Specify Logs = Y". This is not a valid combination. An impact report requires all logs to the current time, and this would require use of active logs. Active logs are not allowed within the context of specifying logs and, therefore, these two options are mutually exclusive.

User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA479E  MODE file is in an invalid state; must re-run general report.

Explanation: The start of the detail report determined the mode file was not in the proper state. The mode file is used as a means of communication between the general and detail report runs. You must always precede a detail report run with a general report run. You must also not re-generate any general report JCL in between running the general and detail reports. Such a re-generation changes the contents of the mode file.

User response: Invalid values have been passed to Log Analysis Tool; contact IBM Customer Support.

ARYA480E  Including LOB data is mutually exclusive with High Speed Mode.

Explanation: LOB data cannot be accessed in high speed mode. The overhead involved in processing LOB data prevents such efficiencies.

User response: Remove either the inclusion of LOB data, or remove "H" from your miscellaneous flags setting.

ARYA481E  LOB log record of type DELETE/UPDATE invalid in log-backward mode.

Explanation: You forced a log-backward mode for detail reporting, but LOB data was found of type DELETE or UPDATE, and these types of LOB log records cannot be processed in log-backward mode.

User response: See the tutorial section on "Table

ARYA482E  Invalid number of hex digits found in hex filter.

Explanation: When using hexadecimal values in the advanced filters, there must be at least two digits. If there are more than two digits the total number of digits must be even.

User response: Correct the input and retry.

ARYA483E  Invalid or unbalanced quotes found in hex filter.

Explanation: When using hexadecimal values in the advanced filters, the string entered must start with X followed by a single quote, valid hexadecimal NL digits, and end with a single quote. If you are attempting to use the LK or operator, then put the % after the final single quote not inside the quotes.

User response: Correct the input and retry.

ARYA484E  Invalid hexadecimal character found in hex filter.

Explanation: When using hexadecimal values in the advanced filters, the string entered must start with X followed by a single quote, valid hexadecimal digits (012345678ABCDEF), and end with a single quote. If you are attempting to use the LK or NL operator, then put the % after the final single quote not inside the quotes.

User response: Correct the input and retry.

ARYA485E  Invalid or unbalanced quotes found in filter value.

Explanation: When using column filters if you have a beginning quote you need to end the string with an ending quote.

User response: Correct the input and retry.

ARYA486E  Versioning data not available for table: &V1.

Explanation: This message indicates versioning information was required to format row data, but was not found in the DD TVFILE. Versioning information is required because a table's column was altered by data type, and therefore this data is needed to correlate different row formats. The message indicates the table ID (DBID,PSID,OBID) and the version number missing is the last value.

User response: See the tutorial section on "Table
Versioning support" for more information on how to proceed.

**ARYA487E**  Error occurred writing informational messages to file

**Explanation:** This message indicates a fatal error occurred while trying to write out informational messages to the DD INFOM. This can be avoided by setting the "Send informational messages to file" field on the "User settings" panel to "N".

**User response:** Try to determine the cause of the failure by looking in the job log for any system-generated messages related to this failure and file DD INFOM. If unable to detect and correct the error, contact your product administrator to notify the vendor.

**ARYA490E**  Error occurred during DSPSERV CREATE services: &V1, &V2.

**Explanation:** An error was generated during DSPSERV CREATE services while processing LOB data. The variables in the message reflect the return code and reason code associated with the error.

**User response:** Check the return and reason codes in the IBM manual "Authorized Assembler Services Reference" for macro DSPSERV. If resolution cannot be determined, contact your product administrator to notify the vendor.

**ARYA491E**  Error occurred during ALESERV ADD services: &V1, &V2.

**Explanation:** An error was generated during ALESERV ADD services while processing LOB data. The variables in the message reflect the return code and reason code associated with the error.

**User response:** Check the return and reason codes in the IBM manual "Authorized Assembler Services Reference" for macro ALESERV. If resolution cannot be determined contact your product administrator to notify the vendor.

**ARYA492E**  LOB file does not exist or is currently in-use.

**Explanation:** You requested to browse the current LOB file, but it is either in-use, or does not yet exist.

**User response:** If you just submitted the batch job to materialize LOB data, please wait for that job to end. In this case, the file is still in-use. If you did not materialize any LOB data yet for viewing, then you must first do so before you can browse the LOB data. In this case, the file does not yet exist.

**ARYA493E**  Conversion services failed for LOB materialization.

**Explanation:** The LOB contained non-EBCDIC data, and conversion services to EBCDIC failed for the LOB.

**User response:** See your job log (or INFOM DD) messages for more information on why the conversion process failed. The LOB cannot be materialized due to this failure.

**ARYA494E**  No point-in-time conversion could be performed.

**Explanation:** A conversion from one type of log point to another type was requested, but no conversion could be performed. For example, you requested that a LRSN be converted to a RBA, but the returned RBA value was all zeros. This service is only available via the product interface mechanism.

**User response:** Confirm that your input is valid and relative. The input must not be beyond the current limits of any accepted values. For example, if a date/time was provided that is beyond the current date/time, this will occur. Correct your input and retry.

**ARYA495E**  Number of log records tracked excessive; storage exhausted.

**Explanation:** An attempt was made to store over 60 million log records. This is considered excessive, and no more storage will be obtained.

**User response:** Reduce the number of tracked log records in a single run by narrowing your time range or reducing the number of filtered objects. If you did not provide any filters, do so now, as running against all objects in your subsystem will likely lead to such an error.

**ARYA496E**  DDLFILE > 32k SQL limit after whitespace compression.

**Explanation:** The DDLFILE created by this product contains DDL to create the target table(s) for the LOAD process. After whitespace was compressed, this DDL is still greater than 32K, a Db2 limit.

**User response:** Reduce the number of tables to create or the number of columns if in audit mode.

**ARYA500E**  GETMAIN failure...Return code: &V1, Length: &V2.

**Explanation:** An error was generated during GETMAIN services. The return code and length of the failing GETMAIN are displayed in the message.

**User response:** Check the return code in the IBM manual "Authorized Assembler Services Reference" for macro GETMAIN. It is most likely that storage has been completely exhausted, and a smaller run is
required (i.e., shorter time frame and/or more filters to further limit the result set).

**ARYA501E**  IARV64 Failure

**Explanation:** An error was generated during IARV64 services. The return code and the reason code of the failing IARV64 are displayed in the message. The most common reason codes likely to be encountered are:
- 4A0016200 - Memory limit exceeded
- 4A0017200 - Insufficient free space to satisfy request
- 4A0021200 - MEMLIMIT was zero

**System action:** Program processing halts and an error message is used.

**User response:** Check the return/reason code in the IBM manual "Authorized Assemblers Service Reference" for macro IARV64. It may be that storage has been completely exhausted, and a smaller run is required (i.e. shorter time frame and/or more filters to further limit the result set).

**ARYA504E**  "Include LOB/XML" mutually exclusive with one-phase mode

**Explanation:** The "User settings" panel has field "Use 64 bit storage" set to "Y", or field "Use work files" set to "Y". These fields put you in one-phase mode. One-phase mode cannot be used when including LOB/XML data.

**User response:** Either set "Include LOB/XML" to "N", or go to the "User Settings" panel and set both one-phase mode fields to "N", and then retry.

**ARYA505E**  "Use 64-bit storage" mutually exclusive with "Use work files"

**Explanation:** The "User settings" panel has field "Use 64-bit storage" set to "Y", and the "Use work files" field also set to "Y". These fields are mutually exclusive.

**User response:** Set at least one of these fields to "N" and retry. See the tutorial topic on one-phase mode for more information.

**ARYA506E**  Base/Clone tables not supported: &V1, &V2

**Explanation:** A table was found in the result set that is either a base table of a base/clone pair, or the clone table itself. Neither is supported.

**User response:** Either remove the base/clone tables from your filter list, or explicitly exclude them from your filter list, and retry. The DBID and OBID of the failing table is included in the message (in decimal).

**ARYA507E**  LOB PDS name must be specified

**Explanation:** You requested to include LOB/XML data and to generate either UNDO or REDO SQL. This combination requires specification of a LOB PDS name.

**User response:** Specify a valid PDS name to contain your LOB/XML data, or do not include LOB/XML data, or do not request any type of SQL. See the tutorial topic on LOB/XML data for more information.

**ARYA508E**  Cannot use LOAD option while in one-phase mode

**Explanation:** You requested to go to the LOAD data into Db2 option, but are also currently using one-phase mode. These options are mutually exclusive. You cannot use the separate LOAD detail data into Db2 panel after running a one-phase job.

**User response:** Either run a job including LOAD options in one-phase mode, or turn off one-phase mode (via User Settings panel) and run a job in two-phase mode. Once a two-phase mode job runs, you can then use the LOAD panel separately. See tutorial topic on one-phase mode for more information.

**ARYA510E**  LOB data present and SQL requested using pre-V9 Db2: &V1, &V2

**Explanation:** LOB data was found in the result set, and SQL was requested, but the release of Db2 is not greater than or equal to V9. Support for LOB data in SQL requires Db2 V9 or higher. The owning LOB table is identified in the message.

**User response:** Remove the identified table using the appropriate filters, or do not request SQL generation for this run.

**ARYA511E**  XML data present and SQL requested: &V1, &V2

**Explanation:** XML data was found in the result set, and SQL was requested, and XML is not supported for SQL at this time. The owning XML table is identified in the message.

**User response:** Remove the identified table using the appropriate filters, or do not request SQL generation for this run.

**ARYA512E**  LOB data present and using pre-V7 Db2: &V1, &V2

**Explanation:** LOB data was found in the result set, but the release of Db2 is not greater than or equal to V7. Support for LOB data in SQL/LOAD requires Db2 V7 or higher. The owning LOB table ID identified in the message as DBID/OBID (in decimal).

**User response:** Remove the identified table using the
appropriate filters, or do not request LOAD processes for this run.

**ARYA515E**  
Maximum of 500 Db2 logs to read has been exceeded.  

**Explanation:** The requested time frame results in more than 500 logs to be read. This is considered excessive, and the product cannot continue processing.  

**User response:** Shorten the time frame requested and retry. You can also use workfiles instead of 64-bit memory, to avoid the 500-log limit: In the Recovery Options window, under General Options, specify Use workfiles for undo/redo SQL = Y. Using workfiles may impact performance and should only be selected when scanning more than 500 Db2 logs for activity.

**ARYA516E**  
Required SYSCOPY records not found for DBID and PSID: &V1, &V2  

**Explanation:** A page format log record was found, but no SYSCOPY records were found to resolve the original action causing the page format. The DBID and PSID are included in the message to identify the table space for which this occurred.  

**User response:** It is likely the database/table space was dropped for the identified object, and Db2 therefore deleted the rows from SYSCOPY. This object cannot be processed because the required resources (SYSCOPY data) have been eliminated.

**ARYA517E**  
Utility type record found, but log-backward was forced.  

**Explanation:** While processing the output from the general report (REFILE records), a record was found indicating a utility type action, such as a LOAD record. Such records can only be processed in log-forward mode.  

**User response:** Most likely, log-backward mode was forced, but cannot be used here. Either change "Log reading mode" to a value of "F" (forward) or "A" (product will automatically determine proper mode, which will be log-forward here).

**ARYA518E**  
"Current row by key" and LOB inclusion are mutually exclusive.  

**Explanation:** You requested current row by key, and also have requested inclusion of LOB type columns. The two are mutually exclusive. Current row values cannot be accessed by key when LOB columns are present.  

**User response:** Either turn off inclusion of LOB columns, or turn off the current row by key fields (i.e., set either/both of them to 'N'), and retry. The LOB inclusion field is on the general reports panel.

**ARYA520E**  
LOB/XML data present with LOAD or Mass Delete, not supported  

**Explanation:** LOB/XML data was found in conjunction with an action such as LOAD, LOAD REPLACE, or a Mass Delete. This combination is not currently supported.  

**User response:** Examine the general/summary reports to determine which objects had these types of actions, and remove them from the run using filters.

**ARYA521E**  

**Explanation:** Dynamic allocation attempt failed for the specified ddname. The return code and reason codes are SVC 99 standard codes and can be found in the IBM manual "Authorized Assembler Services Guide" in the chapter "Requesting Dynamic Allocation Functions". The most common codes likely to be encountered are:  
- ddname unavailable or in use by another user  
- ddname associated with an already opened data set  
- data set associated with ddname not found  

**User response:** If the return and reason codes provide enough information, correct the error and retry. Otherwise, contact the vendor.

**ARYA522E**  
Override product dynamic allocation=N requires a disk unit name.  

**Explanation:** You set "Override product dynamic allocation=N", but left "Disk unit name for dynamic allocations" field blank. This is an invalid combination.  

**User response:** Set "Disk unit name for dynamic allocations" to a valid value if you want to use the products dynamic allocation feature. Otherwise, set "Override product dynamic allocation=Y".

**ARYA523E**  
Invalid number was entered. Enter only decimal numbers.  

**Explanation:** You have entered an invalid number. Only decimal values are permitted. No alphanumeric or hexadecimal values are allowed.  

**User response:** Correct the input and retry.

**ARYA524E**  
At least one line of version information is needed.  

**Explanation:** You have not entered any information to be added to the table version file. Please enter the necessary fields for at least one line.  

**User response:** Enter the versioning information.
OPEN failure on dsname: &V1 during table version processing

Explanation: The OPEN failed for the dsname. The dsname should exist before starting this process. The dsname is built internally based on the default values found in User Settings and on the value found in the job identifier field in the Table Version Support panel.

User response: Verify that the data set name does exist and that you are authorized to edit this data set.

Versioning information has been added to &V1. Enter more or exit.

Explanation: The versioning information entered has been added to the TVFILE. You can either add more versioning information or exit the panel.

User response: None.

Optional VSAM fields must be spaces when overriding dyn allocation

Explanation: Overriding dynamic allocation means the ROWDATA VSAM data set must come from the standard naming convention only (i.e., name=userid.ROWDATA.CLUSTER) using only the "Create/Re-create ROWDATA VSAM file" panel. Optional VSAM fields here must be spaces.

User response: Either set "Optional data sets prefix (VSAM)" to spaces, and "Optional volume serial numbers (VSAM)" to spaces, or set "Override product dynamic allocation" to "N".

Unsupported alter column data type found on column: &V1.

Explanation: An unsupported alter column data type was found during an attempt to create a static SQL program. Variable length to fixed length conversions, conversions to FLOAT, and conversions to DECIMAL are not currently supported.

User response: Table versioning is supported via dynamic SQL processing only at this time.

Showing uncommitted units of work not allowed when resolving UOWs.

Explanation: You cannot show uncommitted units of work and request to resolve started units of work. By resolving started units of work, there will not be any uncommitted units of work to show.

User response: Either set "Show uncommitted = N" or set "Resolve started UOWs = N". Correct your input and retry.

Resolve started UOWs is available only with date-time log ranges.

Explanation: Resolve started UOWs was specified, but either RBAs or LRSNs were provided as the log range. Only date-time specifications are allowed with Resolve started UOWs.

User response: Correct the input and retry.

SQL statement not valid due to: SET clause had only non-updatable columns.

Explanation: Db2 Recovery Expert cannot recover a table containing a GENERATED ALWAYS column when an update has been made that only changed the GENERATED ALWAYS column.

User response: This is a warning message indicating the generation of a particular UPDATE SQL will be skipped.

Mismatch encountered between the MODEFILE and JCL.

Explanation: The MODEFILE and JCL are out of sync. One is set up for 1 Phase, while another is set up for 2 Phase.

User response: Regenerate or restore the MODEFILE, JCL, or both so they will be in sync.

Connected to Db2 subsystem ssid

Explanation: Informational message identifying the Db2 subsystem to which you are connected.

User response: None

Error (action: action; code: code; reason: reason) occurred during connection to Db2 subsystem ssid.

System action: Db2 Recovery Expert cannot connect to the specified Db2 subsystem.

System action: Review the action, code, and reason information that is included in the message text. Correct the issues and retry connecting.

Disconnected from Db2.

Explanation: Informational message specifying that you have disconnected from the current Db2 subsystem.

User response: None
Error (code: code, reason: reason) occurred during disconnection from Db2.

**Explanation:** An error occurred while Db2 was disconnecting from the specified Db2 subsystem.

**User response:** Review the code and reason information that is included in the message text. Correct the issues and retry disconnecting.

SQL warning occurred in modulename on line linenumber. SQLCODE = sqlstatementtext.

**Explanation:** A message warns that the SQL statement in the specified module on the specified line number might not perform as expected. The text of the SQL statement is displayed.

**User response:** Review the statement and message to verify the validity of the statement. Processing continues.

SQL error occurred in modulename on line linenumber. SQLCODE = sqlstatementtext.

**Explanation:** A SQL error has occurred in the specified module on the specified line number. The text of the SQL statement is displayed.

**User response:** Correct the SQL statement and resubmit.

sqlstatementtext

**Explanation:** This is an informational message that displays the SQL statement.

**User response:** None

Db2 version version.modlevel is not supported.

**Explanation:** The Db2 version that you are attempting to connect to is no longer supported.

**User response:** Update the Db2 subsystem to a supported version.

Insufficient memory for allocation.

**Explanation:** Not enough memory has been allocated for the function that you are performing.

**User response:** Allocate additional memory.

Can't load module modulename.

**Explanation:** Db2 Recovery Expert is unable to load the specified module.

**System action:**

Specified timestamp value timestamp invalid.

**Explanation:** The timestamp that you specified is in an invalid format.

**User response:** Correct the timestamp value and resubmit.

Cannot open ddstatementname for input.

**Explanation:** The file in the specified DD statement cannot be opened.

**User response:** Verify that the file named in the DD statement is available and specified correctly.

**Fieldname is required.**

**Explanation:** The field that is identified in the message is a required field and it has not been specified.

**User response:** Specify the field.

Unexpected token was found: token. Possible tokens are: validtokens.

**Explanation:** An unexpected token that is named in the message is encountered. You must choose a valid token from the list of possible tokens that is provided.

**User response:** Specify a valid token value.

Token control card is specified without a value. Value is required.

**Explanation:** A value is missing from the specified token control card.

**User response:** Specify a value for the token control card.

Token control card must be specified only once.

**Explanation:** The specified token control card has been specified more than once.

**User response:** Remove all duplicate token control cards.

Token1 and token2 are mutually exclusive.

**Explanation:** The specified tokens cannot be used at the same time.

**User response:** Remove or change one of the tokens.
ARYB252I • ARYA906E

ARYB252I  SLR cleanup module started.
Explanation: This is an informational message specifying that the SLR Cleanup job is running.
User response: None

ARYB253I  SLR cleanup module completed with return code = code.
Explanation: This is an informational message specifying that the SLR Cleanup job has completed.
User response: None

ARYB254I  SLR cleanup module version: versioninfo.
Explanation: This is an informational message specifying the SLR Cleanup job version and runtime.
User response: None

ARYB255I  Unnecessary SLR records will be deleted up to timestamp.
Explanation: This is an informational message identifying the time and date before which all SLR records will be deleted.
System action:
User response: None

ARYB257I  Number rows are deleted from table tablename.
Explanation: This is an informational message identifying the number of rows that will be deleted from the specified table.
User response: None

ARYB258I  Table tablename is not found in repository.
Explanation: This is an informational message specifying that the named table cannot be found in the repository.
User response: None

ARYB259I  text
Explanation: This is an informational message. The content of the message text can vary depending on the encountered issue. Review the proceeding messages to gather more information about the instance in question.
User response: None

ARYB260I  Db2 version is db2version, modification level is modlevel.
Explanation: This is an informational message identifying the version and mod level of the Db2 subsystem to which you are connected.
User response: None

ARYA900E  Invalid Column Function value. Valid values: 1, 2, 3, 4.
Explanation: An invalid character was entered in the Column Function field.
User response: Specify a valid character (1, 2, 3, or 4).

ARYA901E  Invalid Permanent View value. Valid values: Y, N.
Explanation: An invalid value was entered in the Permanent View field.
User response: Correct the value or cancel. Valid values are Y and N.

ARYA902E  Invalid Reset View value. Valid values are Y, N.
Explanation: An invalid character was entered in the Reset View field. Valid values are Y and N.
User response: Specify a valid value or cancel.

ARYA903E  Invalid Stop Sorting value. Valid values: Y, N.
Explanation: An invalid character was entered in the Stop Sorting field. Valid values are Y and N.
User response: Specify a valid value or cancel.

ARYA904E  Invalid FORM parameter.
Explanation: Invalid parameter to the FORM command. The FORM command has no parameters.
User response: Clear the invalid parameters and re-issue the command. Or, clear the entire command.

ARYA906E  Invalid parameter for NROW. Must be numeric.
Explanation: The parameter you specified was not numeric and is therefore invalid.
User response: Specify a numeric value corresponding to the number of rows to advance. The default value for NROW is 1.
ARYA907E  Invalid parameter for PROW. Must be numeric.
Explanation: The parameter you specified was not numeric and is therefore invalid.
User response: Specify a numeric value corresponding to the number of rows to scroll back. The default value for PROW is 1.

ARYA908E  Invalid parameter for NROW. Too many digits.
Explanation: An invalid parameter for the NROW keyword was specified. More than eight digits were specified. Parsing stops at eight digits.
User response: A parameter of NROW must be between 1 and the number of rows in the current report display. If no parameter is specified, 1 is assumed.

ARYA909E  Invalid parameter for PROW. Too many digits.
Explanation: Invalid parameter to PROW specified. More than eight digits were specified. Parsing stops at eight digits.
User response: A parameter of PROW must be between 1 and the number of rows in the current report display. If no parameter is specified, 1 is assumed.

ARYA910E  CSETUP command not supported from FORM function.
Explanation: CSETUP functions are not supported while in the FORM display. CSETUP functions include CFIX, CORDER, CSIZE, CSORT, and CSETUP (CSET).
User response: Exit the current FORM function before issuing a CSETUP function.

ARYA911E  Invalid ICR command. Use RIGHT command.
Explanation: ICR is only valid with columns that are not their maximum size. You can see the column’s current and maximum sizes by issuing CSIZE.
User response: RIGHT and LEFT commands can be used to see all parts of this column.

ARYA912E  Invalid ICL command. Use LEFT command.
Explanation: ICL is only allowed with columns that are not their maximum size. You can see the column’s current and maximum sizes by issuing CSIZE.
User response: RIGHT and LEFT commands can be used to see all parts of this column.

ARYA913E  Format mix data element not updated.
Explanation: Format MIX data cannot be updated when only part of the data is displayed.
User response: None required.

ARYA914E  FORM command not supported from FORM function.
Explanation: FORM was issued from within a FORM display. This is not supported.
User response: None required.

ARYA915I  FORM PF keys set; NROW = next row PROW = previous row.
Explanation: The NROW (next row) and PROW (previous row) commands are used to move the FORM display window to another row. The UP, DOWN, LEFT, and RIGHT commands move the FORM display window within the current row. Row, as mentioned above, refers to the row from the original report display, not any reformatted FORM display row. By default, NROW advances the FORM display to the next row. If NROW n is issued, the FORM display will advance n rows. Similarly, PROW moves the FORM display window to the immediately prior row. PROW n moves the current FORM display window to the nth prior row.
User response: None required.

ARYA916E  Invalid CNUM parm. Valid parms are ON, OFF, or blank.
Explanation: CNUM was issued with an invalid parameter. Issuing CNUM with no parameter acts as an ON/OFF toggle. ON and OFF are the only parameters accepted. ON turns the CNUM display on. OFF turns the CNUM display off.
User response: Use a valid CNUM parameter (ON, OFF, or blank).

ARYA917E  Report width for print too large.
Explanation: The report width specified is too large. The maximum report width currently supported is 32,760.
User response: Reduce the report width.

ARYA918E  FORM command not supported from CSET function.
Explanation: FORM was issued from within a CSET function. This is not supported. CSET functions include CFIX, CORDER, CSIZE, CSORT and CSETUP (CSET).
User response: None required.
**ARYA920I**  Chars string found number times.

**Explanation:** The FIND command located the specified character string. The number of times the string was found is listed in the message.

**User response:** None required.

**ARYA921I**  Chars string not found on any lines.

**Explanation:** The FIND command could not locate the specified character string.

**User response:** None required.

**ARYA922I**  Search for CHARS string was successful.

**Explanation:** The FIND command located the specified character string.

**User response:** None required.

**ARYA923E**  Parameter not recognized: Check for misspelled keywords or embedded blanks in search string.

**Explanation:** An invalid parameter was entered for the FIND command.

**User response:** Check the parameter spelling and syntax.

**ARYA924E**  Inconsistent parameters: parameter 1 and parameter 2 cannot both be specified for FIND command.

**Explanation:** Too many parameters were specified for the FIND command.

**User response:** Check the command syntax and retry.

**ARYA926E**  Parm too long: Maximum parameter length is 80.

**Explanation:** The parameter entered in the FIND command is too long. Maximum length is 80 characters.

**User response:** Shorten the parameters to less than or equal to 80 characters and retry.

**ARYA927E**  Invalid COLS parm. Valid parms are ON, OFF, or blank.

**Explanation:** An invalid parameters was entered with the COLS command.

**User response:** Enter a valid value as indicated in the message text.

**ARYA930I**  No columns eligible for resizing.

**Explanation:** The displayed report does not contain any columns that can be resized.

**User response:** None required.

**ARYA931I**  No columns eligible for sorting.

**Explanation:** The displayed report does not contain any columns that can be sorted.

**User response:** None required.

**ARYA932E**  TBMOD failed. RC=return_code.

**Explanation:** An unexpected return code of (hex) return code occurred doing TBMOD.

**User response:** See the ISPF Services Guide under TBMOD. Review ISPTLIB allocation. Review ISPTLIB data set characteristics. Review security controlled access to ISPTLIB data sets.

**ARYA933E**  Invalid column name: missing quote.

**Explanation:** SORT or CSORT was issued with a parameter that had an initial quotation character, but not a second closing quotation character.

**User response:** Either clear the command line and select the desired sort column(s) from the displayed selection list or correct the command on the command line.

**ARYA934E**  More than 9 columns specified.

**Explanation:** SORT or CSORT was issued with too many columns specified as sort columns. A maximum of 9 sort columns can be specified.

**User response:** Either clear the command line and select the desired sort column(s) from the displayed selection list or correct the command on the command line.

**ARYA935E**  Invalid column name.

**Explanation:** SORT or CSORT was issued with a column parameter that does not match any column name. A list of the correct column names is seen in the SORT selection panel.

**User response:** Either clear the command line and select the desired sort column(s) from the displayed selection list or correct the command on the command line.
ARYA936E Invalid row selection character
Explanation: An invalid selection character was entered in the SSID selection list. The only valid selection character is S. Alternatively, simply place the cursor on the desired line and press ENTER (without a line selection character).
User response: Clear the invalid character.

ARYA937E Only one row selection allowed
Explanation: More than one SSID was selected from the SSID selection list. A maximum of one SSID can be selected.
User response: Clear all, or all but one row selection character.

ARYA938E Invalid command
Explanation: An invalid command was entered on the SSID selection list panel.
User response: Clear the command.

ARYA939E Read of control file failed
Explanation: Reading the control data set failed.
User response: Verify that the data set name is correct.
Tip: Product setup typically has a setup command, 'S' where you can see the control data set currently in use.

ARYC001E A description for the Combined SLB Group must be specified
Explanation: You must specify a valid description for the Combined SLB group definition.
User response: Specify a valid description.

ARYC002I Add new Combined SLB Group operation canceled
Explanation: The operation to add a new Combined SLB group was canceled at your request.
User response: None required.

ARYC003I Combined SLB Group group added
Explanation: The listed Combined SLB group was successfully added.
User response: You can now define backup and DR profiles for this group.

ARYC004E Combined SLB Group group already exists
Explanation: The listed Combined SLB group is already defined.
User response: Choose a different name for the Combined SLB group, and continue.

ARYC005E Subsystem ssid is already part of a Combined SLB Group
Explanation: The listed subsystem ssid is already a part of a Combined SLB group and cannot be included in another group. You can only include a subsystem in one Combined SLB group.
User response: Choose a different SSID to include in this group. If the SSID must be added to this group, it must first be removed from the other group.

ARYC006E Error adding Combine SLB Group group, RC=rc, RSN=rsn
Explanation: An internal error occurred while attempting to add the listed group to the repository.
User response: Contact technical support and provide them with the information displayed in this message.

ARYC007E A Combined SLB Group must contain at least 1 member
Explanation: A Combined SLB group must contain at least 1 member. You cannot add a group that has no member(s), and you cannot delete all members from a group.
User response: If you are adding a new Combined SLB group, include at least one SSID in the group. If you are deleting all SSIDs from a group, then delete the group instead of deleting the members.

ARYC008I Combined SLB Group group deleted
Explanation: The listed Combined SLB group was successfully deleted.
User response: None required.

ARYC009E Error deleting Combine SLB Group group, RC=rc, RSN=rsn
Explanation: An internal error occurred while attempting to delete the listed group from the repository.
User response: Contact technical support and provide them with the information displayed in this message.
**ARDY010I**  Combined SLB Group &CSLBGRPN successfully updated

*Explanation:* The listed Combined SLB group was successfully updated.

*User response:* None required.

**ARDY011E**  Error updating Combined SLB Group group, RC=rc, RSN=rsn

*Explanation:* An internal error occurred while attempting to update the listed group in the repository.

*User response:* Contact technical support and provide them with the information displayed in this message.

**ARDY012E**  Error adding member SSID to Combined SLB Group group, RC=rc, RSN=rsn

*Explanation:* An internal error occurred while attempting to add the listed member to the Combined SLB group in the repository.

*User response:* Contact technical support and provide them with the information displayed in this message.

**ARDY013E**  Error deleting member SSID from Combined SLB Group group, RC=rc, RSN=rsn

*Explanation:* An internal error occurred while attempting to delete the listed member from the Combined SLB group in the repository.

*User response:* Contact technical support and provide them with the information displayed in this message.

**ARDY014E**  Error reading SYSGROUP repository, RC=rc, RSN=rsn

*Explanation:* An internal error occurred while attempting to read the SYSGROUP repository.

*User response:* Contact technical support and provide them with the information displayed in this message.

**ARDY015E**  There are no Combined SLB Groups currently defined in the SYSGROUP repository

*Explanation:* While attempting to add a profile for a Combined SLB group, it was detected that there are currently no Combined SLB groups defined.

*User response:* Define a Combined SLB group before creating backup or DR profiles for the Combined SLB group.

**ARDY016E**  Unable to read the Combined SLB Group from the SYSGROUP repository

*Explanation:* An error occurred while attempting to read a Combined SLB group from the SYSGROUP repository.

*User response:* Ensure that a valid SYSGROUP repository is defined and specified in the invocation CLIST.

**ARDY017E**  Combined SLB group delete canceled, profiles exist for the group

*Explanation:* While attempting to delete a Combined SLB group, it was determined that there are profiles that still reference this group. A list of these profiles was displayed, and a confirmation to delete them was canceled.

*User response:* None required.

**ARDY018E**  View mode - updates not allowed because there are backups for this Combined SLB group

*Explanation:* While attempting to update a Combined SLB group, it was determined that there are backups associated with the group. You cannot add or remove SSIDs in a Combined SLB group when there are backups for the group. As a result, you are placed in the group in view mode.

*User response:* To update the Combined SLB group, you must first delete any backups for the group.

**ARDY018E**  Invalid Value - Please Enter a "Y" if you would like to delete the group or "N" if you do not want to delete the group.

*Explanation:* In the process of deleting an application group you have entered an invalid value.

*User response:* Enter a “Y” to delete the group or “N” to cancel the delete request.

**ARDY020E**  Specify a Combined SLB Group name or ? to display the currently defined groups

*Explanation:* To add a new profile for a Combined SLB group, you must either specify an existing group name or specify ? to view a list of groups from which to choose.

*User response:* Specify a valid Combined SLB group name or ? to view a list of groups.
ARS021E  Group display allowed for Combined SLB profiles only

Explanation:  The group display option is valid only for profiles that are associated with a Combined SLB group.

User response:  Choose a profile that is associated with a Combined SLB group for the group display option.

ARS022W  There are no Combined SLB Groups defined to the product

Explanation:  There are currently no Combined SLB groups defined in the SYSGROUP repository.

User response:  Define one or more Combined SLB groups before attempting to create Combined SLB profiles.

ARS023E  Group is an invalid Combined SLB Group name

Explanation:  The listed group name is not a valid Combined SLB group name.

User response:  Specify a valid Combined SLB group name and retry the operation.

ARS024E  Only one Combined SLB Group can be selected

Explanation:  You can only select a single Combined SLB group for the operation you are attempting to perform.

User response:  Choose one Combined SLB group and continue.

ARS025E  Invalid profile type selected

Explanation:  The profile type that you selected is not valid.

User response:  Specify one of the listed values to select a valid profile type.

ARS026E  Only one SSID can be selected

Explanation:  For the operation being performed, only one SSID can be selected.

User response:  Select a single SSID. If you want to perform the operation against multiple SSIDs, you must run the process multiple times.

ARS027W  The excluded volume could not be discovered

Explanation:  The excluded volume could not be discovered. This backup profile is for a Combined SLB group that contains Db2 SSIDs. The volume being excluded was not associated with any IMS SSID in the CSLB group and could be associated with a Db2 SSID. If this volume is associated with one of the Db2 SSIDs in the group and contains a catalog, then BACKUP will fail.

User response:  Ensure that the volume being excluded does not contain any catalogs.

ARS028E  Invalid value - the Source/Target Mapping field should be A for Auto Mapping or $ for Stogroup Discover

Explanation:  In the Source/Target mapping field, you must specify A for Auto Mapping or $ for Stogroup Discovery. No other values are allowed.

User response:  Specify A for Auto Mapping or $ for Stogroup Discovery in the Source/Target mapping field.

ARS029E  Invalid Combined SLB group name. An SSID or data sharing group with this name already exists.

Explanation:  The Combined SLB group name duplicates an existing SSID or data sharing group. Subsystem names, data sharing group names, and Combined SLB group names must be unique.

User response:  Change the name to a unique name.

ARS030E  Invalid subsystem name. A Combined SLB group with this name already exists.

Explanation:  The subsystem name duplicates an existing Combined SLB group name. Subsystem names, data sharing group names, and Combined SLB group names must be unique.

User response:  Change the name to a unique name.

ARS031E  Invalid IMSPLEX name. A Combined SLB group with this name already exists.

Explanation:  The IMSPLEX name duplicates an existing Combined SLB group name. Subsystem names, data sharing group names, and Combined SLB group names must be unique.

User response:  Change the name to a unique name.

ARS032E  You must select the SSID to be processed for a Combined SLB backup.

Explanation:  You must select at least one SSID to be processed for the operation you are attempting to perform.

User response:  Select one or more SSIDs to be processed.
There are no candidate SSIDs in the backup for processing

**Explanation:** For the operation being performed, it was determined that there are no SSIDs that are candidates for this process.

**User response:** None required.

SLB Used at DR must be L for Local Site, or R for Remote Site.

**Explanation:** The value specified for the SLB to be used for disaster recovery was not valid.

**User response:** Specify L to use the local site backups, or R to use the remote site backups.

Invalid Value - Backup Method should be "B" for BCV volumes, "S" for SNAP volumes, "F" for Flash Volumes or "L" for DFSMSdss disk copy.

**Explanation:** An invalid value was entered in the Backup Method field.

**User response:** Enter a valid value as described in the message text.

Invalid Value - Enter a "B" to prepare JCL to perform disaster recovery to the offloaded Backup, or "P" if you would like to generate JCL to perform recovery to a later Point in Time.

**Explanation:** An invalid value was entered.

**User response:** Enter a valid value as described in the message text.

**SLR bind controls not found**

**Explanation:** The product control file (PCF) bind options are not defined.

**User response:** Ensure that the product control file (PCF) bind options are defined.

**SLR auth indicators not found**

**Explanation:** The product control file (PCF) authorization options are not defined.

**User response:** Ensure that the product control file (PCF) authorization options are defined.

**Product plan not defined in product control file**

**Explanation:** The product plan is not defined in the product control file (PCF).

**User response:** Ensure that the product plan is defined in the product control file (PCF).
ARYE006E  PCF ALLOCATION FAILED
Explanation: This is an installation error.
User response: Ensure that you have installed the product correctly.

ARYF002E  PLAN #1 NOT FOUND IN PCF
Explanation: The plan specified in Plan #1 in the ARYEMAC1 CLIST was not found in the product control file.
User response: Ensure that you have the correct name for Plan #1 in the ARYEMAC1 CLIST and that you are using the correct product control file.

ARYF003E  Subsystem ID ssid is not currently active.
Explanation: An error was encountered with the Db2 Call Attach Facility (CAF). The message displayed is the CAF error message.
User response: Use the information in the message to resolve the problem. Ensure that the Db2 subsystem is active and that you have specified the correct Db2 subsystem.

ARYF006E  PCF ALLOCATION FAILED
Explanation: DB2 Recovery Expert was unable to allocate the product control file.
User response: Ensure that you are attempting to allocate the correct product control file.

ARYF007E  Db2 SQL error messages
Explanation: DB2 Recovery Expert encountered an error with Db2 SQL. The message displayed is the Db2 SQL error message text.
User response: Use the information in the message to resolve the problem. Ensure that the Db2 subsystem is active and that you have specified the correct Db2 subsystem.

ARYF010E  CALL ATTACH ERROR OCCURRED
Explanation: An error occurred attempting to connect to a Db2 subsystem. Additional messages follow that describe error.
User response: Use the additional messages to correct the error.

ARYG001I  STATEMENT statement EXECUTION WAS SUCCESSFUL
Explanation: The statement identified in the message was executed.
User response: No action is required.

ARYG003E  STATEMENT statement EXECUTED WITH WARNING
Explanation: The statement identified in the message was executed and returned a "+" SQLCODE.
User response: Use the information found in other messages to resolve this issue.

ARYG004E  STATEMENT statement EXECUTED WITH ERROR
Explanation: The statement identified in the message was executed and returned a "-" SQLCODE.
User response: Use the information found in other messages to resolve this issue.

ARYG005E  PRECEDING STATEMENT TOO LONG (MAX value)
Explanation: The preceding statement size exceeded the Db2 SQL statement buffer size limit. The value in the message indicates the buffer size.
User response: Turn on the statement compression option if it is not on, otherwise, the statement is too large to execute.

ARYG006E  INVALID SQL TERM CHARACTER
Explanation: The SQL terminator character supplied in the SET TERMINATOR statement is invalid. The terminator cannot be a blank, comma, double quote, ",", "", or ",".
User response: Change the terminator character and retry.

ARYG010E  Repository update in progress.
Explanation: DB2 Recovery Expert detected that a repository update in progress.
User response: Retry action after repository updated has completed.

ARYG017E  LBDR Scanned Log range tracked by IDENTIFIER no longer exists.
Explanation: The Log Based Dropped Recovery scanned log range associated with the selected identifier no longer exists in the LBDR repository table.
User response: Create a new LBDR scanned log range by entering the time range of log data to scan and proceed with the dropped object recovery.
**ARYG012E**  MESSAGES FOLLOW:

**Explanation:** These are additional messages providing information for ARYG010E.

- ARYG0001 'SQL STATEMENTS PROCESSED ..'
- ARYG0001 'INPUT RECORDS READ .......
- ARYG0001 'STATEMENT WARNING COUNT ..'
- ARYG0001 'STATEMENT ERROR COUNT .....'
- ARYG015I 'STATEMENTS COMPRESSED .....'
- ARYG000I 'SQL STATEMENTS PROCESSED ..'
- ARYG000I 'INPUT RECORDS READ .......
- ARYG000I 'STATEMENT WARNING COUNT ..'
- ARYG000I 'STATEMENT ERROR COUNT .....'
- ARYG015I 'STATEMENTS COMPRESSED .....'

**User response:** Use the information found in these and other messages to resolve the problem.

**ARYG016E**  SQL code error text returned by Db2

**Explanation:** An SQL statement returned a non-zero return code and this is the message text for the SQLCODE.

**User response:** Use the information in this message to resolve the problem.

**ARYG017E**  PRODUCT PLAN 4 NAME NOT DEFINED FOR Db2 SUBSYSTEM

**Explanation:** The product plan is not defined in product control file for the Db2 subsystem.

**User response:** Correct the plan name, the Db2 subsystem name, and ensure that the Db2 subsystem and plan are defined in the product control file.

**ARYG010E**  UNABLE TO READ JOB CARDS

**Explanation:** Dynamic allocation of and access to the data set and member containing JOB cards has failed.

**User response:** Correct the data set name and member, or enable access.

**ARYG021E**  UNRECOVERABLE OBJECT

**Explanation:** None of the available recovery methods support this combination of object type, image copies, conflicting utilities, DDL changes for the requested Point-In-Time.

**User response:** Choose a different Point-In-Time or exclude this object to recover the remaining selected objects.

**ARYL013E**  BSDS NOT FOUND IN PCF

**Explanation:** The BSDS entry for the selected Db2 subsystem in the Product Control File is blank.

**User response:** Update the PCF with a valid BSDS for this SSID.

**ARYJ023E**  BSDS ALLOCATION FAILED

**Explanation:** Dynamic allocation of the BSDS specified in the PCF for this SSID has failed.

**User response:** Update the PCF with a valid BSDS for this SSID.

**ARYJ024E**  BSDS OPEN FAILED

**Explanation:** Access to the BSDS specified in the PCF for this SSID has failed.

**User response:** Update the PCF with a valid BSDS for this SSID.

**ARYJ031I**  PLAN VALID WITH NO CHANGES

**Explanation:** No significant difference found between the old and new recovery plans.

**User response:** Proceed with the previously generated recovery plan.

**ARYJ032I**  PLAN VALID WITH MINOR CHANGES

**Explanation:** Additional image copies created since initial generation.

**User response:** No action is required.

**ARYJ033I**  PLAN IS INVALID

**Explanation:** The selected recovery plan has different objects, uncataloged image copies, or conflicting utilities.

**User response:** Regenerate recovery plans.
ARYJ040I  The object is not eligible for data recovery.

Explanation: The object is not eligible for data recovery. These objects (for example DATABASE) do not directly relate to database data.

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ041I  Recreating the clone table would conflict with the existing base table.

Explanation: An EXCHANGE DATA command has been executed and would interfere with the existing base table data if it were to be restored using this method.

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ042I  The method uses only DDL with no data recovery.

Explanation: This method is only used to drop existing objects. For example if a recovery of an object was requested to before the point in time which it existed, the DDL only plan would be generated to drop it.

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ043I  The method does not support this object type.

Explanation: The method does not support this object type. Methods that are supported are listed in the Recovered Objects folder and have a green check mark.

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ044I  The index is dependent on data recovery.

Explanation: The index is a COPY YES index and will be recovered using a data recovery method (for example, DSN1COPY, or Recover).

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ045I  The method does not allow recreated tables.

Explanation: The specified method will not work with a table that was re-created because it was dropped or an older version of the table was selected for recovery.

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ046I  The method does not support this point in time.

Explanation: This method cannot be used recover the object to the specified point in time. The specified point in time may be before the object was created.

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ047I  DSN1COPY does not support NOREUSE data sets.

Explanation: You cannot use the DSN1Copy recovery method to recover NOREUSE data sets.

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ048I  REDO/UNDO SQL does not support GENERATED ALWAYS columns.

Explanation: You cannot use the Redo/Undo SQL recovery method to recover a table with GENERATED ALWAYS columns.

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ049I  REDO/UNDO SQL does not support non-EBCDIC identifiers.

Explanation: You cannot use the Redo/Undo SQL recovery method to recover a table with non-EBCDIC identifiers.

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ050I  REDO/UNDO SQL does not support distinct types.

Explanation: You cannot use the Redo/Undo SQL recovery method to recover a table with distinct types.

User response: Select an alternative recovery method or choose a different recovery point in time.

ARYJ051I  REDO/UNDO SQL does not support the first data set of a non-partitioned space.

Explanation: You cannot use the Redo/Undo SQL recovery method to recover the first data set of a non-partitioned space.

User response: Select an alternative recovery method or choose a different recovery point in time.
Table space method supersedes recovering all tables.

Explanation: All tables of a tablespace were chosen for recovery. The recovery of the tablespace will be presented instead of recovery of each individual table.

User response: Select an alternative recovery method or choose a different recovery point in time.

Redo SQL does not support a recreated table from a previous table space version.

Explanation: You cannot use the Redo SQL recovery method to recover a recreated table from a previous version of the tablespace. A previous version is one that has been dropped and recreated.

User response: Select an alternative recovery method or choose a different recovery point in time.

This method is not enabled in the product control file.

Explanation: This recovery method has not been enabled in the product control file.

User response: To enable this method, update the product control file using the Tools Customizer.

Last image copy before point in time unavailable.

Explanation: This recovery method requires an incremental image copy before the specified point in time. No usable image copy was found. This might be due to an unrecoverable event found between the image copy and the specified point in time.

User response: Select an alternative recovery method and resubmit the JCL.

Last image copy after point in time unavailable.

Explanation: This recovery method requires an incremental image copy after the specified point in time. No usable image copy was found. This might be due to an unrecoverable event found between the image copy and the specified point in time.

User response: Select an alternative recovery method or choose a different recovery point in time. the JCL.

Full image copy before point in time unavailable.

Explanation: This recovery method requires a full image copy before the specified point in time. No usable image copy was found. This might be due to an unrecoverable event found between the image copy and the specified point in time.

User response: Select an alternative recovery method or choose a different recovery point in time.

Full image copy after point in time unavailable.

Explanation: This recovery method requires a full image copy after the specified point in time. No usable image copy was found. This might be due to an unrecoverable event found between the image copy and the specified point in time.

User response: Select an alternative recovery method or choose a different recovery point in time.

LOG NO event between current and point in time.

Explanation: A LOG NO event such as a REORG or LOAD LOG NO was executed between the current point in time and the selected recovery point in time.

User response: Select an alternative recovery method or choose a different recovery point in time.

Log processing not allowed with this method.

Explanation: The selected recover method does not include any log processing component. The selected point in time to recover the object(s) to would require log processing.

User response: Select an alternative recovery method or choose a different recovery point in time.

Log processing required with this method.

Explanation: The selected recovery method requires a log processing component. The selected point in time to recover the object(s) to would not require log processing, but it must for this method.

User response: Select an alternative recovery method or choose a different recovery point in time.

Log processing not supported for NOT LOGGED intervals.

Explanation: The selected method requires log processing and a NOT LOGGED interval was discovered within the required processing range. This means that the tablespace was altered and logging was turned off.

User response: Select an alternative recovery method or choose a different recovery point in time.
**ARYJ063I** Full image copy has been deleted from SYSIBM.SYSCOPY.

**Explanation:** The selected method requires an image copy. The record of one was found in the SLR, but not in the system catalog.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ064I** Concurrent copy excluded from this method.

**Explanation:** This method type cannot use a concurrent image copy as a resource.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ065I** Concurrent copy required with this method.

**Explanation:** This method requires a concurrent image copy as a resource.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ066I** REDO/UNDO SQL requires Db2 V9 for LOB column support.

**Explanation:** Db2 V9 is required to use the Redo/Undo SQL recovery method with LOB column support.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ067I** RECOVER does not support COPY NO indexes.

**Explanation:** The selected index is defined COPY NO and the selected plan uses the recover utility. The recover utility requires that indexes be defined COPY YES.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ068I** This method must provide the lowest total cost.

**Explanation:** This method must calculate to the lowest recovery cost before it is presented.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ069I** REDO/UNDO SQL does not support IMPLICITY HIDDEN columns.

**Explanation:** This method must calculate to the lowest recovery cost before it is presented.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ070I** System Backup Recovery Services is disabled in the PCF.

**Explanation:** This method must calculate to the lowest recovery cost before it is presented.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ071I** System backup usable for object restore was not found.

**Explanation:** A system backup usable for object restores was not found prior to the specified recovery point.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ072I** Load does not support XML columns.

**Explanation:** The table being recovered contains a XML column. This recovery method uses the LOAD utility so it cannot be used for recovery.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ073I** Load does not support LOB table spaces.

**Explanation:** The table being recovered contains a LOB column. This recovery method uses the LOAD utility so it cannot be used for recovery.

**User response:** Select an alternative recovery method or choose a different recovery point in time.

**ARYJ079I** Recover with backout requires Db2 10 or higher.

**Explanation:** This message indicates that the Recover with Backout plan could not be produced when Db2 Recovery Expert is running on a Db2 version prior to Db2 10 NFM.

**User response:** Upgrade to Db2 10 NFM.

**ARYJ081I** SQL Undo/Redo not allowed for table or index spaces with versioning.

**Explanation:** This message will be displayed when the objects chosen contain SYSTEM TIME TEMPORAL data. Plans with SQL Undo/Redo were not generated.
System action: It is not possible to update the history table associated with the SYSTEM TIME temporal data via SQL.

User response: Choose an image copy point in time for recovery. The plans generated do not require a SQL Undo/Redo component.

**ARYJ100E** UTILID user-id.job-name NOT AVAILABLE

Explanation: The default utility-id (user-id.job-name) has been used by a stopped utility that has not yet been terminated.

User response: You should terminate the stopped utility before proceeding with this recovery.

**ARYJ101E** SPACE NOT ACCESSIBLE

Explanation: Either the object does not have the required access level, or Db2 has assigned a restrictive status or lock. The Status and Lockinfo columns provide more detailed information.

User response: Review and resolve the conflicts before proceeding with this recovery.

**ARYJ110E** PARSING ERROR

Explanation: This represents an internal error and should not occur.

User response: Contact IBM Software Support.

**ARYJ111E** INVALID TYPE

Explanation: This represents an internal error and should not occur.

User response: Contact IBM Software Support.

**ARYJ125E** Qualifier exceeds 8 bytes – DSN: dsn

Explanation: The qualifier is invalid. Only 8 bytes are allowed between each period.

User response: Ensure that the qualifier is 8 bytes or less.

**ARYJ125W** Qualifier may exceed 8 bytes – DSN: dsn

Explanation: The qualifier is invalid. When the data set mask is resolved, it may exceed 8 bytes.

User response: Ensure that the qualifier is 8 bytes or less.

**ARYJ126E** GDG must be at end of mask – DSN: dsn

Explanation: The &GDG variable can only be specified at the end of the data set mask.

User response: Move the &GDG variable to the end of the data set mask.

**ARYJ122E** IC DSN exceeds 44 char – DSN: dsn

Explanation: Image Copy DSN exceeded the character limit.

User response: Edit the data set mask to make sure the resulting data set is not greater than 44 characters.

**ARYJ122W** IC mask may exceed 44 char – Mask: dsnmask

Explanation: When the specified DSN MASK dsnmask is resolved, it may be greater than 44 characters and generate an invalid data set name.

User response: If the resulting data set name is greater than 44 characters, edit the data set mask to make it shorter.

**ARYJ123E** Invalid character in IC DSN – DSN: dsn

Explanation: An invalid character is in the Image Copy DSN. Valid characters are A through Z, 0 through 9, and $ # @.

User response: Reenter the information using only valid characters.

**ARYJ124E** Invalid qualifier detected – DSN: dsn

Explanation: DB2 Recovery Expert detects an invalid qualifier.

User response: Enter a valid qualifier.

**ARYJ125E** Qualifier exceeds 8 bytes – DSN: dsn

Explanation: The qualifier is invalid. Only 8 bytes are allowed between each period.

User response: Ensure that the qualifier is 8 bytes or less.

**ARYJ125W** Qualifier may exceed 8 bytes – DSN: dsn

Explanation: The qualifier is invalid. When the data set mask is resolved, it may exceed 8 bytes.

User response: Ensure that the qualifier is 8 bytes or less.

**ARYJ126E** IC DSN already exists – DSN: dsn

Explanation: The generated data set name already exists.

User response: Either delete the existing data set or change the data set mask so a different data set name is generated.

</table>
Strategy RECOVER is used for JCL generation.

Explanation: Strategy of type RECOVER is used to generate recovery JCL.

User response: No action is required.

File file.name was produced.

Explanation: Recovery JCL has been saved in specified file.

User response: No action is required.

Match generated plans to at least one selected plan.

Explanation: Generated plans have matched to at least one selected plan.

User response: No action is required.

Match generated plans to at least one RECOVER plan.

Explanation: Generated plans have matched at least one RECOVER plan.

User response: No action is required.

plan.id (plan.status) plan.name: description

Explanation: Description of generated plans.

User response: No action is required.

Unable to match generated plans to at least one selected plan.

Explanation: Unable to match generated plans to at least one selected plan.

User response: Check and correct input parameters. Contact IBM Customer Support if necessary.

Unable to match generated plans to at least one RECOVER plan.

Explanation: Unable to match generated plans to at least one RECOVER plan.

User response: Check and correct input parameters. Contact IBM Customer Support if necessary.

Strategy AUTO is used for JCL generation.

Explanation: Utility is configured to select recovery plans automatically based on approximate cost.

User response: No action is required.

Provided DSN dsn is not associated with consistent history point.

Explanation: Provided image copy data set name is not associated with a consistent history point.

User response: Check and correct input parameters. Contact IBM Customer Support if necessary.

Object profile owner.name is being skipped due to lack of credentials for SSID ssid on LPAR system.

Explanation: No valid credentials were specified.

User response: Check and correct input parameters. Contact IBM Customer Support if necessary.

Recovery status utility started.

Explanation: Utility started.

User response: No action is required.

Recovery status utility completed successfully.

Explanation: Utility completed successfully.

User response: No action is required.

Recovery status utility ended with RC = rc.

Explanation: Utility has failed.

User response: Check previous error messages. Contact IBM Customer Support if necessary.

Attempts to attach to a shared memory segment id failed.

Explanation: Attempts to attach to a shared memory segment failed.

User response: Ignore if JOB has been started manually. Contact IBM Customer Support if necessary.

Shared memory segment eyecatcher eyecatcher invalid.

Explanation: Shared memory segment eyecatcher is invalid.

User response: Ignore if JOB has been started invalid.

Shared memory segment version version is not compatible; expected expected

Explanation: Shared memory segment version is not compatible.

User response: Ignore if JOB has been started manually. Contact IBM Customer Support if necessary.
**ARJG007S**  
*Shared memory segment key verification failed (error).*  
Explanation: Shared memory segment key verification failed.  
User response: Ignore if JOB has been started manually. Contact IBM Customer Support if necessary.

**ARJG008I**  
*Attached to shared memory segment id.*  
Explanation: Utility has attached to shared memory segment successfully.  
User response: No action is required.

**ARJG009E**  
*Shared memory segment is overflow.*  
Explanation: Shared memory segment is overflow.  
User response: Contact IBM Customer Support.

**ARJG010W**  
*Input option option value value is invalid: expected expected.*  
Explanation: Input option value is invalid.  
User response: Ignore if JOB has been started manually. Contact IBM Customer Support.

**ARJG011E**  
*Input option option value value is invalid: expected expected.*  
Explanation: Input option value is invalid.  
User response: Ignore if JOB has been started manually. Contact IBM Customer Support.

**ARJG012E**  
*Missed input option option.*  
Explanation: Specified input option is missing.  
User response: Ignore if JOB has been started manually. Contact IBM Customer Support.

**ARJG013I**  
*Processing was skipped due to missed input parameter parameter.*  
Explanation: Specified input option is missing.  
User response: Ignore if JOB has been started manually. Contact IBM Customer Support.

**ARJL001I**  
*Configuration discovery utility started.*  
Explanation: Utility started.  
User response: No action is required.

**ARJL002I**  
*Configuration discovery utility completed successfully.*  
Explanation: Utility completed successfully.  
User response: No action is required.

**ARJL003E**  
*Configuration discovery utility failed (RC = rc).*  
Explanation: Utility has failed.  
User response: Check previous error messages. Contact IBM Customer Support if necessary.

**ARJL004E**  
*Db2 ZPARM member could not be read.*  
Explanation: An error was encountered trying to read the Db2 ZPARM member.  
User response: Ensure that the product control file information is correct for the Db2 SSID.

**ARJL005E**  
*Unknown error.*  
Explanation: An unknown error was encountered.  
User response: Contact IBM Software Support.

**ARJL006E**  
*Db2 LOADLIB processing error.*  
Explanation: A Db2 LOADLIB processing error was encountered.  
User response: Ensure that the Db2 load libraries are available.

**ARJL007E**  
*Db2 ZPARM member load failed.*  
Explanation: The LOAD of the Db2 ZPARM member failed.  
User response: Ensure that the Db2 SSID ZPARM member is available.

**ARJL008E**  
*BDS reader RC=24 - process error.*  
Explanation: The bootstrap data set reader has encountered an error.  
User response: Contact IBM Software Support.

**ARJL009E**  
*BDS reader RC=20 - allocate error.*  
Explanation: The bootstrap data set reader has encountered an error.  
User response: Contact IBM Software Support.
ARYL007E  BSDS reader RC=16 - GENCB error

Explanation: The bootstrap data set reader has encountered an error.
User response: Contact IBM Software Support.

ARYL008E  BSDS reader RC=16 - GENCB error

Explanation: The bootstrap data set reader has encountered an error.
User response: Contact IBM Software Support.

ARYL009E  Error during subsystem information retrieval

Explanation: An error occurred while retrieving subsystem information.
User response: Contact IBM Software Support.

ARYL010E  APF AUTH REQUIRED: library_name

Explanation: One or more product libraries are not APF authorized.
User response: Ensure that the product libraries are APF authorized.

ARYL011E  All data sets are APF authorized.

Explanation: Informational message that all data sets are APF authorized.
User response: No action is required.

ARYL013E  Product version migrate is in progress

Explanation: Schema level repository is being migrated and access to the product is denied.
User response: Try again later after SLR data migration is completed.

ARYP001I  Received shutdown request.

Explanation: Indicates that the server has received a shutdown request.
User response: No action is required.

ARYP002I  Servername server started.

Explanation: Indicates that the server with the specified name was started. Possible server names are DB2 Recovery Expert Web or DB2 Recovery Expert XML Socket Policy File.
User response: No action is required.

ARYP003I  Starting the socket selector thread (thread number).

Explanation: The server is starting a separate thread to manage activity on the socket. You can track this thread by its number.
User response: No action is required.

ARYP004I  Starting the command listener thread (thread number).

Explanation: Server is starting a separate thread to handle commands. You can track this thread by its number.
User response: No action is required.

ARYP006I  The socket selector thread is terminating.

Explanation: Indicates that the socket selector thread is finishing its work and will cease managing activity on the socket.
User response: No action is required.

ARYP007I  Received "stop" command: commandtext.

Explanation: Indicates that the server has received a "stop" command. The full command text is specified in the variable commandtext.
User response: No action is required.

ARYP008I  Received modify command: commandtext

Explanation: Indicates that the server has received a modify command. The full command text is specified in the variable commandtext.
User response: No action is required.

ARYP009S  The servername server is terminating due to hard stop request.

Explanation: The server has received a "force" command and will stop without waiting for queued events to be handled.
User response: No action is required.

ARYP010I  The servername server is terminating.

Explanation: Indicates that the server servername will be stopped. Possible server names are DB2 Recovery Expert Web or DB2 Recovery Expert XML Socket Policy File.
User response: No action is required.
**ARYP012I**  Received shutdown request.

**Explanation:** Indicates that the server has received a shutdown request while waiting to handle queued events.

**User response:** No action is required.

**ARYP013I**  Servername secured server listening on port number using the protocolname protocol.

**Explanation:** Indicates that the specified server is listening on the specified port number using the specified protocol. The option secured if present indicates that SSL encryption has been used.

**User response:** No action is required.

**ARYP017E**  The maximum number of listen attempts has been reached.

**Explanation:** The maximum number of listen attempts has been reached on the port specified in the server configuration.

**User response:** Set free port in the server configuration or stop already running server (that uses same port) before starting this one.

**ARYP019E**  Could not match requested-uri-string to existing routes.

**Explanation:** The server could not match the requested-uri-string to existing routes. Client must use different routes to interact with the server.

**User response:** Use the actual version of the client to interact with the server. Contact your product administrator for additional information.

**ARYP020E**  The variable controller-name is not registered as a valid controller name.

**Explanation:** The client sent an unknown name for the RESTful controller. The route is only partially recognized.

**User response:** Use the actual version of the client to interact with the server. Contact your product administrator for additional information.

**ARYP021E**  Requested HTTP Method has not been implemented.

**Explanation:** The client has sent a HTTP request that is not implemented on the server.

**User response:** Use the actual version of the client to interact with the server. Contact your product administrator for additional information.

**ARYP023E**  Not authorized to access this resource.

**Explanation:** The use of the RESTful controller requires authorization that was not passed.

**User response:** Change authorization credentials and retry.

**ARYP024E**  HTTP Method Override method-name is not supported for this request.

**Explanation:** Specified an unknown override method. An ‘x-http-method-override’ request header option can be specified as GET, PUT or DELETE.

**User response:** Avoid using this option. Contact IBM Software Support for additional information.

**ARYP026E**  Request body is required and must be provided.

**Explanation:** The HTTP request body is missing and must be provided.

**User response:** Use the actual version of the client to interact with the server. Contact your product administrator for more information.

**ARYP027E**  The configuration file configuration-file-name is invalid; the root element element-name is not server-config.

**Explanation:** The configuration file is invalid.

**User response:** Change the configuration root element to the variable specified in server-config or use a valid configuration file.

**ARYP028E**  An error occurred while opening the configuration file configuration-file-name error-text.

**Explanation:** Opening the configuration file ended with the error that is specified in the variable error-text.

**User response:** Check that the configuration file exists and can be accessed. Contact your product administrator for additional information if necessary.

**ARYP029S**  Server-name server is not configured.

**Explanation:** The configuration section for this server was not found in the configuration file.

**User response:** Add a configuration section to the server configuration file or contact your product administrator.
ARYP030E Unexpected symbols in URL: string

Explanation: This error can occur while accessing a help page.

System action: This error can occur while accessing a help page. The help page was not found.

User response: Use the actual version of the client to interact with the server. Contact your product administrator for more information.

ARYP031E Invalid parameters in URL.

Explanation: This error can occur while accessing a help page. The page was not found.

User response: Use the actual version of the client to interact with the server. Contact your product administrator for more information.

ARYP032I HTTP session number established.

Explanation: Indicates that the new HTTP session with the specified number has been established to the server.

User response: No action is required.

ARYP033I HTTP session number ended normally.

Explanation: Indicates that the HTTP server session with the specified number ended normally.

User response: No action is required.

ARYP034I HTTP session number upgraded to protocol-name protocol.

Explanation: Indicates that the HTTP server session with specified number has been upgraded to the specified protocol-name.

User response: No action is required.

ARYP035I HTTP session number downgraded to HTTP 1.1 protocol.

Explanation: Indicates that the HTTP server session with specified number has been downgraded to HTTP 1.1 protocol.

User response: No action is required.

ARYP036E Websocket exception occurred: session number; status code = 'statuscode'.

Explanation: Indicates that the HTTP server session working on the websocket protocol has produced an exception with the specified status code while reading the data from the socket.

User response: Contact IBM Software Support if it occurs frequently or if it affects the ability to run the product successfully.

ARYP037I Sending websocket 'operation' frame to client with HTTP session number.

Explanation: The server is sending the specified websocket frame to the client.

User response: No action is required.

ARYP038I Received websocket operation frame from client with HTTP session number.

Explanation: The server has received the specified websocket frame from the client.

User response: No action is required.

ARQY001E Storage allocation failure, increase the region size.

Explanation: There was a failure detected when storage was requested by the program. The region size can be specified on the JOB card in the JCL or enforced by various system exit routines.

User response: Increase the region size and resubmit the job.

ARQY002I Termination complete.

Explanation: The program has ended, either normally or abnormally.

User response: No action is required.

ARQY003W External abend. Error retry is not possible.

Explanation: An abend has occurred. However, the abend location was not within the boundaries of error recovery established for the program. This is usually attributed to an abend in a called service routine. Since the exact circumstances are not known leading up to the unexpected abend, no safe error retry processing can be attempted and the abend is percolated leading to the program abnormally ending.

User response: Collect all available diagnostic information, including the job log, any dumps taken and a printed copy of the LOGREC starting at least 5 minutes prior to the time of the abend. Any additional environmental information will also be useful such as release and maintenance levels for the operating system and the selected Db2 subsystem. Contact IBM Software Support for further instructions.
**ARYQ004I**  
**ABENDED xxxx at offset X"xxxx"**

**Explanation:** An abend has occurred. The abend location was within the boundaries of error recovery established for the program. The failing instruction offset and the abend code is reported.

**User response:** Collect all available diagnostic information, including the job log, any dumps taken and a copy of LOGREC starting at least 5 minutes prior to the time of the abend. Any additional environmental information will also be useful such as release and maintenance levels for the operating system and the selected Db2 subsystem. Contact IBM Software Support for further instructions.

**ARYQ005I**  
**Diagnostic SDUMP in progress.**

**Explanation:** An abend has occurred. The abend location was within the boundaries of error recovery established for the program. A SVC dump is being attempted.

**User response:** No action is required.

**ARYQ006I**  
**Diagnostic SDUMP complete.**

**Explanation:** An abend has occurred. The abend location was within the boundaries of error recovery established for the program. A SVC dump was successfully captured.

**User response:** Collect all available diagnostic information, including the job log, any dumps taken and a copy of LOGREC starting at least 5 minutes prior to the time of the abend. Any additional environmental information will also be useful such as release and maintenance levels for the operating system and the selected Db2 subsystem. Contact IBM Software Support for further instructions.

**ARYQ007W**  
**Diagnostic SDUMP suppressed by DAE.**

**Explanation:** An abend has occurred. The abend location was within the boundaries of error recovery established for the program. However, the system Dump Analysis and Elimination facility has suppressed the dump due to a duplicate dump already captured.

**User response:** Determine the status and location of the original dump and contact IBM Software Support for further instructions.

**ARYQ008E**  
**Diagnostic SDUMP failed.**

**Explanation:** An abend has occurred. The abend location was within the boundaries of error recovery established for the program. However, an attempt to capture a SVC dump failed.

**User response:** Investigate the reasons why the dump has failed and correct the source of the failure.

**ARYQ009I**  
**Diagnostic SDUMP in progress.**

**Explanation:** An abend has occurred. The abend location was within the boundaries of error recovery established for the program.

**User response:** Collect all available diagnostic information, including the job log, any dumps taken and a copy of LOGREC starting at least 5 minutes prior to the time of the abend. Any additional environmental information will also be useful such as release and maintenance levels for the operating system and the selected Db2 subsystem. Contact IBM Software Support for further instructions.

**ARYQ010I**  
**Diagnostic SDUMP complete.**

**Explanation:** An abend has occurred. The abend location was within the boundaries of error recovery established for the program.

**User response:** Collect all available diagnostic information, including the job log, any dumps taken and a copy of LOGREC starting at least 5 minutes prior to the time of the abend. Any additional environmental information will also be useful such as release and maintenance levels for the operating system and the selected Db2 subsystem. Contact IBM Software Support for further instructions.

**ARYQ011I**  
**Quiet Time Cleanup program starting.**

**Version xx.yy.zzz**

**Explanation:** This message confirms the Quiet Time Cleanup program has started and is running.

**User response:** No action is required.

**ARYQ012I**  
**Current date and time: yyyy/mm/dd hh:mm:ss**

**Explanation:** This message reports the date and time that the Quiet Time Cleanup program started running.

**User response:** No action is required.

**ARYQ013I**  
**Db2 SSID selected: ssid**

**Explanation:** This message reports the selected Db2 subsystem identifier specified on the JCL EXEC card parameter of the Quiet Time Cleanup job.

**User response:** No action is required.

**ARYQ014I**  
**Retention period (Days): xxxx**

**Explanation:** This message reports the retention period that was specified on the JCL EXEC card parameter of the Quiet Time Cleanup job. Entries in the Quiet Time tables that are older than the specified number of days will be displayed if REPORT mode was selected or will be deleted if DELETE mode was selected. A valid value range is 0 - 9999 days.
User response: No action is required.

ARYQ015I  Execution Mode: report/delete

Explanation: This message reports the execution mode specified on the JCL EXEC card parameter of the Quiet Time Cleanup job. A valid selection is either REPORT or DELETE. Entries in the Quiet Time tables that are older than the specified number of days will be displayed if REPORT mode was selected or will be deleted if DELETE mode was selected.

User response: No action is required.

ARYQ016I  Initialization complete.

Explanation: This message reports that the Quiet Time Cleanup program has successfully completed the first phase of execution. Working storage has been allocated, error recovery has been established, and user input parameters have been validated.

User response: No action is required.

ARYQ017I  Requires APF authorization.

Explanation: The program requires APF authorization to continue processing and it has been determined that APF authorization has not been granted. The program terminates.

User response: Add the library from where the program is loaded to the system APF list.

ARYQ018I  Missing execution mode. Assume default REPORT.

Explanation: The user input parameter "MODE", which is the 3rd positional parameter on the job JCL EXEC PARM card was omitted. The default of REPORT is assigned.

User response: Specify a valid mode input parameter, either REPORT or DELETE on the job JCL EXEC PARM card.

ARYQ019E  Invalid or missing required input parameters.

Explanation: One or more positional user input parameters on the JOB JCL EXEC PARM card of the Quiet Time Cleanup job were omitted.

User response: Specify a valid and active Db2 SSID for the first positional parameter; a valid Retention Period for the second positional parameter in the range 0 - 9999 days; and either REPORT or DELETE for the third positional parameter on the job JCL EXEC PARM card.

ARYQ020E  Invalid or missing Db2 subsystem ID.

Explanation: The user input parameter "SSID", which is the 1st positional parameter on the job JCL EXEC PARM card of the Quiet Time Cleanup job was omitted.

User response: Specify a valid and active Db2 SSID for the first positional parameter.

ARYQ021E  Invalid or missing retention period.

Explanation: The user input parameter "Retention Period", which is the 2nd positional parameter on the job JCL EXEC PARM card of the Quiet Time Cleanup program was omitted.

User response: Specify a valid retention period in the range 0 - 9999 days for the second positional parameter.

ARYQ022E  Invalid or missing execution mode, REPORT or DELETE.

Explanation: The user input parameter "Execution Mode", which is the 3rd positional parameter on the JOB JCL EXEC PARM card of the Quiet Time Cleanup program was omitted.

User response: Specify either REPORT or DELETE for the third positional parameter.

ARYQ023I  Attempting Connect to Db2: ssid - planname

Explanation: This message specifies that an attempt is being made to connect to the indicated Db2 Subsystem using the indicated PLAN NAME.

User response: No action is required.

ARYQ024E  Error connecting to Db2: ssid

Explanation: The Quiet Times Cleanup program was unable to establish an active connection with the indicated Db2 subsystem. This usually happens when the Db2 SSID specified is either invalid or the Db2 subsystem is not active.

User response: Check that a valid Db2 SSID was specified as the first positional parameter on the JOB JCL EXEC PARM card of the Quiet Times Cleanup job and that the Db2 subsystem is started and fully operational.

ARYQ025I  Performing SQL processing.

Explanation: The Quiet Times Cleanup program has successfully connected to Db2 and is now processing the SELECT and/or DELETE SQL statements.

User response: No action is required.
ARYQ026I  The following rows were deleted from table ARYQTG.

Explanation: This message is only written to SYSPRINT. This is a report heading. Following the heading will be a list of abbreviated rows that will be deleted from the ARYQTG Quiet Time table based on the retention periods specified.

User response: No action is required.

ARYQ027I  The following rows were selected from table ARYQTG.

Explanation: This message is only written to SYSPRINT. This is a report heading. Following the heading will be a list of abbreviated rows that will be selected from the ARYQTG Quiet Time table based on the retention periods specified.

User response: No action is required.

ARYQ028E  Error deleting row from ARYQTG.

Explanation: This message is only written to SYSPRINT. A failure occurred when a SQL delete statement was issued for the indicated row for the ARYQTG Quiet Time table.

User response: Investigate the accompanying SQL error codes and correct the source of the problem.

ARYQ030I  The following rows were selected from table ARYQT.

Explanation: This message is only written to SYSPRINT. A SQL select statement was executed and the qualifying rows are being displayed.

User response: No action is required.

ARYQ031I  Error deleting row from ARYQT.

Explanation: This message is only written to SYSPRINT. A failure occurred when a SQL delete statement was issued for the indicated row for the ARYQT Quiet Time table.

User response: Investigate the accompanying SQL error codes and correct the source of the problem.

ARYQ032E  SQL error, SQLCODE = ?xxxx

Explanation: This message is only written to SYSPRINT. A failure occurred when a SQL statement was issued for either a select or delete. The literal ?xxxx will be substituted by the actual SQLCODE that is returned from Db2 when the SQL statement was executed.

User response: Investigate the accompanying SQL error codes and correct the source of the problem.

ARYQ033I  Now disconnected from Db2: xxxx

Explanation: A previously established active connection with the indicated Db2 subsystem has been successfully terminated.

User response: No action is required.

ARYQ034E  Error disconnecting from Db2: xxxx

Explanation: An attempt to end an active connection with a Db2 subsystem has failed.

User response: Collect all available diagnostic information, including the job log, any dumps taken and a copy of LOGREC starting at least 5 minutes prior to the time of the abend. Any additional environmental information will also be useful such as release and maintenance levels for the operation system and the selected Db2 subsystem. Contact IBM Software Support for further instructions.

ARYQ035I  Activity summary report:

Explanation: This is a report heading. Following the heading will be a report showing the number of rows deleted from the ARYQTG and ARYQT Quiet Time tables based on the retention period specified.

User response: No action is required.

ARYQ036I  Number of rows deleted from ARYQTG = xxxx.

Explanation: This message reports the number of rows deleted from the ARYQTG Quiet Time table based on the retention period specified.

User response: No action is required.

ARYQ037I  Number of rows deleted from ARYQT = xxxx.

Explanation: This message reports the number of rows deleted from the ARYQT Quiet Time table based on the retention period specified.

User response: No action is required.

ARYQ038W  MODE = REPORT, no rows were deleted.

Explanation: This message informs the user that no rows will be deleted from the ARYQTG and ARYQT Quiet Time tables because the operating mode REPORT was either explicitly specified or assigned by default.

User response: If this was the intention then no further user action is required. If Quiet Time table cleanup was desired, rerun the job and specify DELETE as the third positional parameter on the JOB JCL EXEC PARM card and rerun the job.
ARYQ040I  < qualifying ARYQTG table row entry>
Explanation: This message is only written to SYSPRINT. It shows a qualifying row entry selected from the ARYQTG table.
User response: This is an informational message only. No further user action is required. The user can inspect each row listed to determine which rows will be deleted if the program should run in REPORT mode. The user can see each row deleted when the program runs in DELETE mode.

ARYQ041I  < qualifying ARYQT table row entry>
Explanation: This message is only written to SYSPRINT. It shows a qualifying row entry selected from the ARYQT table.
User response: This is an informational message only. The user can inspect each row listed to determine which rows will be deleted if the program should run in REPORT mode. The user can see each row deleted when the program runs in DELETE mode.

ARYQ042E Open failed for SYSPRINT.
Explanation: An attempt to open the SYSPRINT DD failed. The program terminates.
User response: Check the SYSPRINT DD card in the JCL and correct the error. Some DD parameters might be invalid for your installation.

ARYQ043I  GRPID-+-GRPNUM-+-T+-FILTER NAME-
Explanation: This is a report formatting message.
User response: No action is required.

ARYQ044I  GRPID-+-START TIMESTAMP----------+
END TIMESTAMPP----------+
Explanation: This is a report formatting message.
User response: No action is required.

ARYQ045E Allocation Error: An error was encountered allocating the ISPWRK1 or ISPWRK2 DD. Process not completed.
Explanation: The ISPWRK1 or ISPWRK2 DD allocation failed. The process did not complete successfully.
User response: Verify TSO session parameters are set correctly for your site prior to allocation of these DD statements.

ARYR001E Invalid value entered - Please enter a valid value from the list displayed.
Explanation: You entered an invalid selection in the Option line.
User response: Correct the invalid value and retry.

ARYR002E AUTOTGT is only valid for BCV type profiles.
Explanation: You used the AUTOTGT primary command, but the backup is a SNAP type backup. The AUTOTGT command searches for any BCVs that have a current relationship with the source volumes listed in the profile. If a BCV is found that is currently established to a source volume, it will be placed in the first open target UCB slot. The AUTOTGT command is only available for BCV type profiles.
User response: Clear the invalid command from the Option line.

ARYR003I Log Suspend is required for Flash or DFSMSdss type profiles. The value of the issue Log Suspend field has been changed to "Y"
Explanation: Log Suspend must be set to Y for Flash or DFSMSdss type backup profiles.
User response: None required.

ARYR004E Invalid Subsystem ID (SSID) entered. The SSID must be defined in the "Setup" section of the product before it can be used.
Explanation: The subsystem listed in the message has not been configured using the product setup screen.
User response: From the product main menu, enter 0 to set up the subsystem. Refer to the configuration documentation for information about the setup parameters.
ARYR005E  Invalid Command Entered. The command is not supported on this screen. Enter a "?" to get a list of the valid commands.

Explanation: An invalid command was entered in the Option line.
User response: Clear the invalid command from the command line. Enter ? and press Enter to get a list of valid primary commands.

ARYR006E  Varies depending on the source of the error.

Explanation: Internal error. Command processor's normal processing has ended unsuccessfully.
User response: Contact IBM Customer Support. Please provide the text of this message.

ARYR007E  Invalid value entered - Please enter a valid value.

Explanation: An invalid value was entered.
User response: Enter Y or N and press Enter.

ARYR008E  Invalid Command Entered. The command is not supported on this screen.

Explanation: An invalid command was entered in the Option line.
User response: Check the command syntax and resubmit.

ARYR009E  Bootstrap #01 cannot be equal to bootstrap #02.

Explanation: The Db2 Bootstrap data set names must be unique.
User response: Enter a unique name for one of the bootstrap data sets.

ARYR010  Rocket Licensed Materials - Property of Rocket Software (c) Copyright Rocket Software, Inc. 2006 All Rights Reserved. Trademark of Rocket Software, Inc.

Explanation: This message appears upon starting the Db2 Recovery Expert ISPF screens.
User response: None required.

ARYR011E  Cannot offload from a backup that is not on disk.

Explanation: You cannot generate offload JCL for this backup because it is no longer on DASD volumes.
User response: The backup must be on DASD volumes in order to be offloaded.

ARYR012E  Invalid value. Must be H for HSM or R for AR

Explanation: An invalid value was entered when specifying offload options.
User response: Enter 'H' to use IBM's HSM product to offload the backup to tape. In order to use HSM, you must have created the proper HSM dump classes and configured them properly. Enter 'R' to have Db2 Recovery Expert manage the offload process.

ARYR014E  Invalid value. Backup method should be (B)cv, (S)nap, (F)lash, (D)b2, or dfsmsdss(L)

Explanation: An invalid value was entered for the Backup method.
User response: Enter B for BCV, S for Snap, F for Flash, D for Db2, or L for DFSMSdss.

ARYR015E  Invalid value. Must be H for HSM or A for Db2 Recovery Expert.

Explanation: None required.
User response: Invalid value entered. Enter H to use IBM's HSM product to offload the backup to tape. In order to use HSM, you must have created the proper HSM dump classes and configured them properly. Enter A to have Db2 Recovery Expert manage the offload process.

ARYR016E  Only one Db2 type profile can be created for each Db2 SSID. Profile profile_creator.profile_name already exists for this Db2 SSID. Please cancel from this profile edit session.

Explanation: Only one profile that specifies a backup method of "Db2" can be created per Db2 subsystem.
User response: Please edit and/or use the profile name specified in the message.

ARYR018E  Any volume that contains a data user catalog or active log user catalog cannot be excluded.

Explanation: The Exclude line command was entered next to a volume that contains a data user catalog or active log user catalog. This volume cannot be excluded from a system backup.
User response: Clear the line command from the selected volume.
AR YR019W  This volume has already been excluded.
Explanation: Since this volume has already been excluded, the exclude command cannot be performed.
User response: None required.

AR YR020E  No source volumes were found in the entered range.
Explanation: The entered UCB range was scanned and no valid online disk volume serials were found.
User response: Enter another range or contact your DASD administrator.

AR YR021I  There were no Backup System history records found in the product repository. The Restore System utility cannot be run without running a Backup System utility first.
Explanation: You selected the System Restore and Offload option from the Db2 Recovery Expert main menu, but no backup history records have been found.
User response: None required.

AR YR022E  No offload options were specified for this backup profile. Update the Backup Profile and add Offload Options before trying again.
Explanation: No offload options were specified for this backup profile. Offload options must be set before attempting an offload.
User response: Update the Backup Profile and add Offload Options before attempting to offload again.

AR YR023E  Invalid Entry - The Recover RBA/LRSN field is not a valid hexadecimal string. Please enter a valid RBA / LRSN to recover to.
Explanation: An invalid value was entered in the Recover to RBA/LRSN field.
User response: Enter a valid value as listed in the message text, or enter Y in the Select Timestamp Recovery Point field to locate an appropriate RBA or LRSN.

AR YR024E  Invalid Entry - Enter a "Y" if you would like to enter a date/time and have it converted to an LRSN for you.
Explanation: An invalid value was entered in the Select Timestamp Recovery Point field.
User response: Enter Y in the Select Timestamp Recovery Point field to locate an appropriate RBA or LRSN. Enter N to use the listed RBA / LRSN as the recovery point.

AR YR025W  This volume has not been excluded so the undo will not be performed.
Explanation: The U(ndo) line command was entered next to a volume, but since this volume has not been excluded, the undo command will not be performed.
User response: None required.

AR YR026E  Invalid Entry - Only one recovery point can be selected from the list for the Restore System Utility. Please select only one line or select none and enter a recovery point RBA/LRSN.
Explanation: Two or more recovery points were selected for restoration.
User response: Select one recovery point, or enter the RECOVER subsystem command to specify an RBA/LRSN.

AR YR027E  Invalid value. Please enter one of the listed valid line commands.
Explanation: An invalid line command was entered next to the recovery point.
User response: Enter S to choose the recovery point for restoration, or enter another valid line command from the list on the screen.

AR YR028E  Invalid Value - Please enter a "Y" if you would like to edit the generated JCL after the job has been built.
Explanation: An invalid value was entered in the Edit Generated Job field.
User response: Enter Y to edit the generated JCL after the job is built. Enter N to return to the Backup Profile Display without editing the job after it is built.

AR YR029E  A fully qualified dataset name is required to save the generated JCL.
Explanation: The data set name is missing from the Build job in Dataset field.
User response: Enter a fully qualified data set name in the Build job in Dataset field to hold the generated JCL.

AR YR030E  Invalid Dataset/Member/Alias - The Dataset, Member name, or Alias entered does not meet the MVS Dataset naming standards.
Explanation: The data set, member name, or alias entered is not valid for z/OS data set names. The first character must be capitalized alphabetic (A-Z,@,$,#)
and the remaining characters must be capitalized alphanumeric (A-Z,0-9,@,$,#).

User response: Correct the data set, member name, or alias.

ARYR031I  No Profiles were found that match your selection criteria. Press enter to create a new profile or change the selection criteria.

Explanation: No profiles match your selection criteria.

User response: Press Enter to create a new profile, or change your selection criteria to get a different list.

ARYR032E  Error opening VSAM repository dataset.

Explanation: An error occurred upon opening the ARY VSAM repository data set. The data set and return code are listed in the message. Possible cause of this message is the data set was not found.

User response: A WTO is issued for this message listing the file that is in error. Check to ensure the data set exists and is accessible.

ARYR033E  Error writing to VSAM repository dataset. DSN = data set name RETCODE = return code.

Explanation: An error occurred upon attempting to write to the ARY VSAM repository data set. The data set and return code are listed in the message.

User response: A WTO is issued for this message listing the file that is in error. Check to ensure the data set exists and is accessible.

ARYR034E  Error reading from VSAM repository dataset. DSN = data set name RETCODE = return code.

Explanation: An error occurred upon attempting to read the ARY VSAM repository data set. The data set and return code are listed in the message.

User response: A WTO is issued for this message listing the file that is in error. Check to ensure the data set exists and is accessible.

ARYR035E  Profile profile_creator,profile_name was not found.

Explanation: The specified profile is not found in the ARY VSAM repository.

User response: A WTO is issued for this message listing the file that is in error. Check to ensure the repository exists and is accessible.

ARYR036E  The entered value must be numeric.

Explanation: An invalid value was entered in a numeric field.

User response: Enter a valid numeric value.

ARYR037E  You are not authorized to enter any line commands for this profile. The Creator of the profile is restricting all activity.

Explanation: The creator of the selected profile specified that no other user is to view, update, or export the selected profile.

User response: Choose a different profile to work with.

ARYR038E  You are not authorized to update or delete this profile. Enter a "V" if you would like to View this profile.

Explanation: The creator of the selected profile specified that no other user is to update or delete the selected profile.

User response: Enter V to view the profile, or choose a different profile to work with.

ARYR039E  Invalid Line Command Entered.

Explanation: An invalid value was entered in the line command area.

User response: Enter one of the valid line commands listed at the bottom of the screen.

ARYR040E  Invalid profile name specified.

Explanation: An error occurred upon attempting to save a profile. The profile name or creator cannot contain an asterisk (*).

User response: Remove the asterisk from the profile name and continue.

ARYR041E  A problem was encountered in allocating the files necessary for ISPF file tailoring. Please try again

Explanation: An error occurred when dynamically allocating the ISPF work files ISPFFILE, ISPWRK1, or ISPWRK2.

User response: Retry the operation. Contact IBM Customer Support if the problem persists.

ARYR042E  Invalid Dataset DSORG - The job can only be built into a sequential file or a PDS/PDSE. VSAM and other data types are not supported for job generation.

Explanation: The data set organization of the file you
entered is not supported for job generation. The data set must be a sequential or a partitioned data set.

User response: Specify a data set of the proper type.

---

**ARYR043E** Dataset not found - Dataset data set name was not found in the MVS catalog. Please enter a valid dataset that is cataloged.

Explanation: The data set name entered in the Build job in Dataset field does not exist.

User response: Enter an existing cataloged data set name in the Build job in Dataset field.

---

**ARYR044E** The dataset could not be allocated or opened.

Explanation: The dynamic allocation of the specified data set failed.

User response: Verify that the data set exists and is available for allocation.

---

**ARYR045E** Field Required - The dataset entered is a partitioned dataset and the member name is required.

Explanation: A required field was not specified. The data set entered is a PDS (partitioned data set) and a member in this PDS must be referenced.

User response: Enter a valid member name for PDS access.

---

**ARYR046E** Dataset must be a partitioned dataset because multiple members will be generated.

Explanation: The data set entered is a sequential data set. Because multiple members will be generated, you must specify a PDS in this field.

User response: Enter an existing cataloged PDS data set name in the Build job in Dataset field.

---

**ARYR047E** The member name entered for the Restore job cannot be the same as the Restore System Utility member. Please enter a different member for one of the jobs.

Explanation: When building a restore job, a duplicate member name was entered for one of the member names. This is not allowed.

User response: Enter three unique member names to hold the output from the restore system job build.
AR\text{Y}R054E\quad \text{Invalid Value - Please enter the Unit Device (SYSDA, DISK, etc.) that you want used when generating a job.}

\text{Explanation:}\quad \text{A value was not entered for the work file unit devices.}

\text{User response:}\quad \text{Specify a valid unit device that Db2 Recovery Expert can use when generating utility JCL.}

AR\text{Y}R055E\quad \text{The entered device type is not recognized by OS/390 as a valid device type.}

\text{Explanation:}\quad \text{An invalid device type was entered in the Work File Unit Type field.}

\text{User response:}\quad \text{Enter a valid device type or CART for tape devices.}

AR\text{Y}R056E\quad \text{The VOLSER qualifier should always be part of the dataset name to ensure that each dataset name is unique.}

\text{Explanation:}\quad \text{When specifying data set names for offloaded backups, the VOLSER qualifier was not selected. The VOLSER qualifier should always be part of the data set name to ensure that each data set name is unique.}

\text{User response:}\quad \text{Add the VOLSER qualifier to the data set name.}

AR\text{Y}R057E\quad \text{Invalid Value - Please Enter a "N" if you want to Restore both Data and Logs or a "Y" if you want to restore only the data.}

\text{Explanation:}\quad \text{An invalid value was entered in the Restore Only field.}

\text{User response:}\quad \text{Enter a valid value as described in the message text.}

AR\text{Y}R058E\quad \text{If restoring both Data and Logs you cannot select a timestamp recovery point.}

\text{Explanation:}\quad \text{You cannot select a timestamp recovery point if you have specified to restore both data and logs.}

\text{User response:}\quad \text{Db2 Recovery Expert changes the Select Timestamp Recovery Point field to N and makes the field read only. To select a timestamp recovery point, change the Restore Only Data field to Y.}

AR\text{Y}R059E\quad \text{A timestamp recovery point cannot be selected for a non data sharing Db2 subsystem.}

\text{Explanation:}\quad \text{You cannot select a timestamp recovery point when the subsystem you are restoring is not a data sharing subsystem.}

AR\text{Y}R060E\quad \text{Invalid Entry - The Roll Forward to RBA/LRSN field is not a valid hexadecimal string. Please enter a valid RBA/LRSN}

\text{Explanation:}\quad \text{The Roll Forward to RBA/LRSN field is an invalid hexadecimal string.}

\text{User response:}\quad \text{Enter a valid RBA or LRSN.}

AR\text{Y}R061E\quad \text{Invalid Value - Please Enter a "F" if you would like to perform a Full Backup (Data and Logs) or a "D" if you want to perform a Data only backup.}

\text{Explanation:}\quad \text{An invalid value was entered in the Backup Type field.}

\text{User response:}\quad \text{Enter a valid value as described in the message text.}

AR\text{Y}R062E\quad \text{Invalid Value - The number of backup generations must be numeric.}

\text{Explanation:}\quad \text{A non-numeric value was entered in the Backup Generations field.}

\text{User response:}\quad \text{Enter a numeric value in the specified range for the backup type.}

AR\text{Y}R063E\quad \text{Invalid Value - Backup Method should be "B" for BCV volumes, "S" for SNAP volumes, "F" for Flash Volumes, "D" for Db2 or "L" for DFSMSdss Disk copy}

\text{Explanation:}\quad \text{An invalid value was entered in the Backup Method field.}

\text{User response:}\quad \text{Enter a valid value as described in the message text.}

AR\text{Y}R064E\quad \text{Invalid Value - Please Enter a "Y" if you would like to perform a Log Suspend or a "N" if you do not want to perform a Log Suspend.}

\text{Explanation:}\quad \text{An invalid value was entered in the Issue Log Suspend field.}

\text{User response:}\quad \text{Enter a valid value as described in the message text.}

AR\text{Y}R065E\quad \text{Invalid Value - Please Enter a "Y" if you would like to perform validations or a "N" if you do not want to perform validations.}

\text{Explanation:}\quad \text{An invalid value was entered in the Validate Db2 Volumes field.}

\text{User response:}\quad \text{None required; Db2 Recovery Expert changes the Select Timestamp Recovery Point field to N.}
User response: Enter a valid value as described in the message text.

**ARYR066E** Invalid Value - Please Enter a "Y" if you would like to add offload options, a "N" if you do not want to add offload options or "U" to update offload options.

Explanation: An invalid value was entered.

User response: Enter "Y" if you wish to have have the DASD backups offloaded to tape. Enter "N" if you do not want to offload the backups to tape. Enter "U" to update previous offload options.

**ARYR067E** Invalid Value - The number of backup generations for a BCV target must be numeric and must be between 1 and 8.

Explanation: An invalid value was entered in the Backup Generations field.

User response: Enter a valid value as described in the message text.

**ARYR068E** Invalid Value - Enter a "U" to allow other users to Update your profile, a "V" to allow other users to just View your profile or "N" to disallow other users from viewing or updating your profile.

Explanation: An invalid value was entered in the Share Option field.

User response: Enter a valid value as described in the message text.

**ARYR069I** Profile `profile_name` saved

Explanation: The profile named in the message was successfully saved.

User response: None required.

**ARYR070E** An error occurred trying to allocate a repository dataset data set name.

Explanation: An error occurred when allocating the Db2 Recovery Expert VSAM repository data set.

User response: Check the system log for additional error information.

**ARYR071E** At least one Volume Mapping must be entered.

Explanation: No volume mappings have been created for the profile. At least one volume mapping is required for successful execution of the backup job.

User response: Enter a volume mapping, or type CAN in the option line to exit the profile.

**ARYR072E** The Source Volume must not be blank.

Explanation: The value in the Source Volume field was removed, but the target volumes are still in place.

User response: If you intended to remove the source volume and its mapping, use the D line command in the Cmd area. Otherwise, enter a source volume.

**ARYR073E** Invalid Value - Please Enter a "Y" if you would like to enable Object Restore or a "N" if you do not want to enable Object Restore.

Explanation: An invalid value was entered in the Enable Obj Restore field.

User response: Enter Y for Yes or N for No.

**ARYR074E** The volume must start with an alphabetic or a national character.

Explanation: An invalid value was entered as the first character of the volumes field. The first character must be alphabetic or a national character, and the remaining characters must be alphabetic or numeric.

User response: Change the first character of the volume.

**ARYR075E** The Target Unit must only contain alphanumeric characters.

Explanation: A non-hexadecimal value was entered in the Target Unit field.

User response: The first character must be alphabetic and the remaining characters must be alphanumeric. Change the invalid value to an alphanumeric character.

**ARYR076E** The Target Unit must only contain valid hexadecimal characters.

Explanation: A non-hexadecimal value was entered in the Target Unit field.

User response: Re-enter the Target Unit field using valid hexadecimal characters.

**ARYR077E** The Profile Creator is a required field. Please enter a valid profile creator.

Explanation: When creating a new profile, the Profile Creator field was left blank.

User response: Enter a profile creator in the Profile Creator field.
**AR YR078E**  The Profile Name is a required field. Please enter a unique profile name.

**Explanation:** When creating a new profile, the Profile Name field was left blank.

**User response:** Enter a unique profile name in the Profile Name field.

---

**AR YR079E**  Invalid Value - Enter a "U" to allow other users to Update your profile, a "V" to allow other users to just View your profile or "N" to disallow other users from viewing or updating your profile.

**Explanation:** When creating a new profile, an invalid value was entered the Update Option field.

**User response:** Correct the value as described in the message text.

---

**AR YR080E**  Invalid Value - The number of backup generations for a SNAP, Flash, or DFSMSdss type target must be numeric and must be between 1 and 99.

**Explanation:** An invalid value was entered for the number of backup generations for a SNAP, Flash, or DFSMSdss target. The value must be numeric and must be between 1 and 99.

**User response:** Enter a valid value as described in the message text.

---

**AR YR081E**  The End Unit must be greater than the Start Unit.

**Explanation:** An invalid value was entered for the End Unit. The end unit specified for a target range must be greater than the start unit.

**User response:** Enter a valid value as described in the message text.

---

**AR YR082E**  The new Source Volume entered is a duplicate of an existing Source Volume.

**Explanation:** A source volume was added to the volume mapping, but the source volume is already listed in the volume mapping.

**User response:** Remove the duplicate value or use the D line command to delete the volume mapping.

---

**AR YR083E**  The unit of the new Source Volume entered is a duplicate of an existing Target Unit.

**Explanation:** A source volume is also specified as a target unit. The same device cannot be specified as both a source volume and target unit.

**User response:** Select a different target unit that is on the same array.

---

**AR YR089E**  The new Target Unit entered is a duplicate of an existing Source Volume.

**Explanation:** A target unit was added to the volume mapping, but the target unit is also listed as a source volume in the mapping. The same device cannot be specified as both a source volume and target unit.

**User response:** Change either the source volume or the target unit.

---

**AR YR084E**  The new Target Unit entered is a duplicate of an existing Target unit.

**Explanation:** A target unit was added to the volume mapping, but the unit is already listed in the volume mapping as a target unit.

**User response:** Remove the duplicate value or use the D line command to delete the volume mapping.

---

**AR YR085E**  The Source Volume's device type is not the same as the Target Unit's device type.

**Explanation:** The source and target volume must be of the same volume type (such as both 3390 mod 9s).

**User response:** Choose a target unit of the same volume type as the source unit.

---

**AR YR086E**  The beginning target value must be less than the end target value.

**Explanation:** The value entered in the Beginning Target Range field is less than the value in the Ending Target Range field. This is not valid.

**User response:** Correct the range and retry.

---

**AR YR087E**  The Source Volume and the Target Unit are not on the same storage array.

**Explanation:** The source volume and its specified target unit are not located on the same storage array. The source volume and target unit must be on the same array.

**User response:** Select a different target unit that is on the same array.

---

**AR YR088E**  The Source Volume and the Target Unit are not on the same storage array.

**Explanation:** Invalid value - the Source/Target Mapping field should be A for Auto discover/pool mapping, S for Stogroup discover/pool mapping, or M for Manual mapping.

**Explanation:** An invalid value has been specified in the Source/Target Mapping field in the Enter New Backup Profile Options panel. The value specified
should be A for Auto discover/pool mapping, S for Stogroup discover/pool mapping, or M for Manual mapping.

**User response:** Enter a valid value as described in the message text.

---

**ARYR090E** Invalid Device Number (CUU) entered.

**Explanation:** An invalid device number (CUU) was entered.

**User response:** Check with your systems programmer for a valid list of device numbers.

---

**ARYR091E** Number of BCV devices must be numeric and between 1 and 9999 inclusive.

**Explanation:** An invalid value was entered for the number of BCV devices. The number of BCV devices entered must be numeric and between 1 and 9999.

**User response:** Enter a valid value as listed in the message text.

---

**ARYR092E** The Enter By Generation field must be "Y" or "N".

**Explanation:** An invalid value was entered in the Enter by Generation field.

**User response:** Correct the value and press Enter.

---

**ARYR093E** The Setup Job field must be "Y" or "N".

**Explanation:** An invalid value was entered in the Setup Job field.

**User response:** Enter Y to build JCL to run profile setup only. Enter N to build JCL for backing up the systems.

---

**ARYR094E** The Backup Repository field must be "Y" or "N".

**Explanation:** An invalid value was entered in the Backup Repository field.

**User response:** Enter Y to include job steps to back up the Db2 Recovery Expert VSAM repository as the last step of the job. Enter N to omit these steps.

---

**ARYR095E** Invalid value. Enter "Y" or "N".

**Explanation:** An invalid value was entered.

**User response:** Enter Y for Yes or N for No.

<td>Allocation Error - The ISPFILE DD is already allocated and cannot be deallocated - Process not completed.</td>
</tr>
<tr>
<td>Explanation:</td>
<td>The ISPFILE DD allocation failed. The DD is already allocated and cannot be deallocated for this TSO session. The process did not complete successfully.</td>
</tr>
</tbody>
</table>
User response:

ARYR18E  Allocation Error - An error was encountered allocating the ISPWRK1 or ISPWRK2 DD - Process not completed.

Explanation: The ISPWRK1 or ISPWRK2 DD allocation failed. The process did not complete successfully.

User response: Verify TSO session parameters are set correctly for your site prior to allocation of these DD statements.

ARYR19E  Field Required - The dataset entered is a partitioned dataset and the member name is required.

Explanation: A required field was not entered. The data set entered is a PDS (partitioned data set) and a member in this PDS must be referenced.

User response: Enter a valid member name for PDS access.

ARYR20I  A repository file has not been allocated for Subsystem Setup. No information regarding setup steps taken will be logged. Enter a Db2 subsystem and press enter to continue or PF3 to exit.

Explanation: The repository file to save information about subsystem setup has not been allocated. Please refer to the documentation for installing and configuring Db2 Recovery Expert for information on creating and allocating this file.

User response: You may proceed with the setup, but no information will be saved for later use.

ARYR21E  Invalid reply - Please enter a "Y" if you would to re-analyze this subsystem or "N" to retrieve the information stored in the repository.

Explanation: An invalid value was entered in the Re-analyze Db2 Subsystem Info field.

User response: Enter Y to re-analyze the subsystem. Enter N to view the previous history and analysis.

ARYR22E  Invalid command - Please enter a "C" to create a new MVS user catalog, "A" to add an alias to the catalog, "D" to view a list of aliases assigned to this catalog or "U" to change the name of the entered catalog, or "V" to view the aliases assigned to the catalog.

Explanation: An invalid line command was entered.

User response: Enter C to create a new MVS user catalog. Enter A to add an alias to the listed catalog. Enter D to view the aliases for the listed catalog. Enter U to change the name of the entered user catalog. Enter V to view the aliases assigned to the catalog.

ARYR23E  Invalid command - Please enter an "V" to view all the aliases assigned to this catalog, or "D" to view all the datasets assigned to the catalog.

Explanation: An invalid line command was entered.

User response: Enter A to view the aliases assigned to the listed catalog. Enter D to view the data sets assigned to the listed catalog.

ARYR24E  Invalid command - Please enter an "R" to rename all the BSDS or Active log datasets in the list or "M" to move all the datasets.

Explanation: An invalid command was entered on the heading line.

User response: Enter R to rename all of the BSDS or active log data sets listed. This will be done by specifying a new highlevel qualifier. Enter M to move all of the BSDS or active log data sets listed.

ARYR25E  Invalid command - Please enter an "R" to rename the dataset or "M" to move the dataset to another volume.

Explanation: An invalid line command was entered.

User response: Enter R to rename this data set or M to move it to a different MVS volume.

ARYR26E  Invalid reply - Please enter a "U" to enter targets by unit or "S" to enter targets by stogroup.

Explanation: An invalid value was entered.

User response: Enter U to enter targets by unit or S to enter targets by stogroup.

ARYR27E  Invalid command - Please enter "D" to display all datasets using this alias, "M" to mergecat this alias into another catalog, or "R" to rename all Db2 object datasets using this alias.

Explanation: An invalid line command was entered.

User response: Enter D to display all the data sets using the alias. Enter M to perform a MERGECA to move this alias from one MVS usercat into another. Enter R to rename all the Db2 object data sets using this alias.
logs and data for this Db2 subsystem.

User response: None required.

**ARYR134E** Subsystem subsystem_ID is currently inactive. It must be active for this function. Please start the system and try again.

Explanation: The Db2 subsystem must be active to perform the requested function.

User response: Start the Db2 subsystem and try again.

**ARYR135E** Option not allowed - Dataset Renaming or moving is not allowed while Db2 is active. Please shut all Db2 Subsystems down that will have data sets renamed or moved.

Explanation: The Db2 subsystem must down to perform BSDS or active log renaming or moving.

User response: Shut down the subsystem before renaming or moving these data sets.

**ARYR136E** Option not allowed - The MVS User catalog used for the Db2 active logs and boot straps is not allowed to the same catalog used for the Db2 Data.

Explanation: The specified MVS user catalogs must not be the same data set name. The active logs and BSDS data sets should use one MVS catalog, and all other Db2 data sets should use another.

User response: None required.

**ARYR137E** Invalid command - Please enter an "V" to view all the volumes assigned to this copy pool.

Explanation: An invalid command was entered. The only valid command is V to view all the volumes assigned to this copy pool.

User response: Enter V to view all the volumes assigned to this copy pool.

**ARYR138E** The stogroup entered is a duplicate of a previously entered stogroup.

Explanation: The stogroup entered is a duplicate of a previously entered stogroup.

User response: Clear the duplicate stogroup.

**ARYR139E** The stogroup entered does not exist.

Explanation: The stogroup entered does not exist.

User response: Clear the stogroup and enter a valid existing stogroup. Or, press Enter again and the stogroup will be accepted. If the stogroup does not
exist, it is assumed that it will be created before executing the backup.

User response: None required.

ARYR168E  No recovery point that matches the selection criteria was found.
Explanation: The RECOVER ssid primary command was entered, but a recovery point was not found.
User response: Enter an RBA/LRSN greater than or equal to the recovery point listed on the display for the subsystem.

ARYR169E  A volume cannot be excluded if it was manually added. The volume can just be deleted.
Explanation: This volume was inserted as an inclusion volume. It should not be excluded, but can be deleted.
User response: If you want to eliminate the volume from the profile, use the D line command to delete the volume from the list.

ARYR170E  The index parameter for buffers must be specified.
Explanation: A parameter is missing.
User response: The buffers value must be specified and it must be numeric.

ARYR171E  The index parameter for buffers must be numeric.
Explanation: An invalid value was entered.
User response: The buffers value must be specified and it must be numeric.

ARYR172E  The SMS Storage Class name specified is invalid, it must only contain alphanumeric characters.
Explanation: The SMS Storage Class specified is invalid. It must only contain alphanumeric characters. These include A-Z and 0-9.
User response: Correct the invalid value.

ARYR173E  At least one ALIAS needs to be specified.
Explanation: At least one alias name needs to be specified. The alias name is a highlevel that will be tracked in this user catalog data set.
User response: Specify an alias name.

ARYR174E  The Alias name specified is invalid, it must only contain alphanumeric characters.
Explanation: The alias name specified is invalid. It must only contain alphanumeric characters. These include A-Z and 0-9.
User response: Correct the invalid value.

ARYR175E  The Action field should be E - Edit, O - Online Submission or B - Batch Submission.
Explanation: An invalid value was entered in the Action Field.
User response: Enter E to edit the shown information. Enter O to execute the shown information online. Enter B to execute the shown information in batch.

ARYR176E  The specified alias already exists in your MVS installation.
Explanation: The entered alias name already exists in your MVS installation.
User response: If you wish to have this alias tracked by this user catalog, you must perform a MERGECA to move the alias from another user catalog to this one.

ARYR177E  Error allocating SYSIN dataset.
Explanation: The entered alias name already exists in your MVS installation.
User response: If you wish to have this alias tracked by this user catalog, you must perform a MERGECA to move the alias from another user catalog to this one.

ARYR178E  Open failed for SYSIN dataset.
Explanation: An error occurred opening the SYSIN data set.
User response: Check the system log for any further information.

ARYR179E  Allocate failed for TEMPFILE.
Explanation: An error occurred allocating the TEMPFILE data set.
User response: Check the system log for any further information.

ARYR180E  Open failed for TEMPFILE.
User response: Retry the operation. Contact IBM Customer Support if the problem persists.
AR YR181E Error allocating SYSPRINT dataset.
Explanation: An error occurred trying to allocate the SYSPRINT data set.
User response: Retry the operation. Contact IBM Customer Support if the problem persists.

AR YR182E Open failed for SYSPRINT.
Explanation: An error occurred trying to open the SYSPRINT data set.
User response: Retry the operation. Contact IBM Customer Support if the problem persists.

AR YR183E A volume and storage class cannot both be specified.
Explanation: When entering values for the target pool, you can enter either target units in ranges or you can specify SMS storage groups. However, you cannot enter a combination of the two. When entering the target pool selection, you can switch back and forth between target unit or SMS storage groups; when switching, the previous list will be deleted. However, once the profile has been setup, you will no longer be able to switch between the two.
User response: If the incorrect target pool type was specified, recreate the profile.

AR YR184E An error occurred during file tailoring.
Explanation: An error occurred during file tailoring.
User response: Retry the operation. Contact IBM Customer Support if the problem persists.

AR YR185E Invalid Value - The number of offline generations must be numeric.
Explanation: The number of offline generations must be numeric.
User response: Specify offline generations as a numeric value.

AR YR186I System restore will be performed from the offloaded backup.
Explanation: This backup is no longer on DASD and therefore the system restore will be performed from the backup that has been offloaded to tape.
User response: None required.

AR YR187E The new dataset name data_set_name already exists.
Explanation: The alias entered will rename the data set to a data set name that already exists in your MVS installation.
User response: Either choose another alias, or delete or rename the data set that already exists with this name.

AR YR188E A new User Catalog must be entered and must already exist before adding an alias.
Explanation: The MVS user catalog must be specified and created before you can add an alias to it.
User response: Create or specify the new MVS user catalog, then add the alias.

AR YR189E An error occurred trying to retrieve the Active and Archive Log datasets
Explanation: An error occurred trying to retrieve the active and archive log data sets.
User response: 

AR YR190E Invalid Value - Enter a "Y" to display the subsystem Log RBAs captured by the ARY RBA Capture utility or "N" to bypass RBA display.
Explanation: An invalid value has been entered for Display Timestamp / RBA Captured Data.
User response: Enter Y to display the subsystem log RBAs captured by the RBA capture utility or N to bypass the RBA display.

AR YR191E Option not allowed - The ARY RBA repository file has not been allocated or the utility has not been run to capture log RBA data
Explanation: The ARY RBA repository file has not been allocated or the utility has not been run to capture log RBA data.
User response: Create the RBA repository file and run the RBA capture utility. Refer to the user documentation about configuring the RBA capture utility for more information.

AR YR192E Invalid Value - Enter a "Y" to display the Archive Log RBA information with their respective timestamps.
Explanation: An invalid value has been entered for Display Archive Logs times / RBAs.
User response: Enter Y to display the Archive Log RBA information with their respective timestamps.
**ARYR193E** Invalid Value - Enter a "Y" to display the Checkpoint RBA information with their respective timestamps.

**Explanation:** An invalid value has been entered for Display Checkpoint times / RBAs.

**User response:** Enter Y to display the Checkpoint RBA information with their respective timestamps.

---

**ARYR194E** Invalid Value - Enter a "Y" to enter a recovery timestamp and have the Db2 LRSN generated for you or "N" to bypass timestamp to LRSN Utility.

**Explanation:** An invalid value has been entered for Timestamp to Db2 LRSN Utility field.

**User response:** Enter Y to enter a recovery timestamp and have the Db2 LRSN generated for you or N to bypass the timestamp to LRSN utility.

---

**ARYR195E** Invalid Selection - You can enter the display timestamp screen or the Timestamp to LRSN utility, but not both. Please deselect one of the options.

**Explanation:** You cannot use both utilities.

**User response:** Deselect one of the options.

---

**ARYR196W** There are no RBA capture times found in the repository for this Db2 subsystem.

**Explanation:** No RBA capture times were found for the selected SSID.

**User response:** Change the RBA value and retry the operation.

---

**ARYR197E** There were no RBA capture records for this Db2 Subsystem found in the repository for the time ranges requested.

**Explanation:** There were no RBA capture records for the selected Db2 subsystem in the repository for the time ranges requested.

**User response:** Change the time range and retry the operation.

---

**ARYR198I** The RBA capture records display list was truncated because the capture times were greater than the backup times of another backup made after this one.

**Explanation:** The RBA capture records list was truncated because the capture times were greater than the capture times of a backup taken after this one.

**User response:** None required.

---

**ARYR199E** Invalid return code attempting to read DSNZPARMs to acquire boot strap and checkpoint information. Check setup for this subsystem to verify the information entered for this subsystem is correct.

**Explanation:** An invalid return code was received attempting to read DSNZPARMs to acquire boot strap and checkpoint information.

**User response:** Check setup for this subsystem to verify that the information entered for this subsystem is correct.

---

**ARYR200E** Invalid characters in new alias. It must be alphanumeric.

**Explanation:** The Alias entered is not a valid MVS alias.

**User response:** It must start with an alphabetic character and contain only letters and numbers.

---

**ARYR201E** New alias must not have embedded blanks.

**Explanation:** The alias entered must not contain any embedded blanks.

**User response:** Edit the alias and remove the blank(s).

---

**ARYR202E** The only & variable supported is &SSID.

**Explanation:** The only replaceable variable supported is &SSID. This variable will be replaced by the subsystem identifier to create the new alias name.

**User response:** Change the variable to the supported type.

---

**ARYR203E** &SSID cannot be specified twice.

**Explanation:** The variable can only be specified once.

**User response:** Remove one occurrence of the variable.

---

**ARYR204E** Alias alias is not in the specified Usercat user_catalog. If you wish to use this alias, you need to add it to the usercat first.

**Explanation:** The specified alias must exist in the specified MVS user catalog first.

**User response:** You can add the alias to the usercat by using the A command next to the usercat in the New MVS User Catalogs section of the Subsystem Setup Information screen.
The old and new alias cannot be equal. Please specify a new alias that is different from the old alias.

**Explanation:**
The old and new aliases cannot be equal.

**User response:** Enter a different new alias.

The alias cannot be renamed if it contains LOG data. You can rename log files in the Boot Strap and Active Log Dataset sections.

**Explanation:**
The alias listed cannot be renamed because it contains Db2 log or boot strap data set data.

**User response:** You can rename Db2 log/BSDS data sets from their respective sections on the Subsystem Setup Information panel.

Invalid Value - The value for Encryption Type must be "S" for Substitution, "C" for Cipher, "A" for AES, "I" for AES192, "2" for AES256, "F" for AES Fast or "T" for TDES.

**Explanation:**
An invalid value was entered for the type of FDR encryption to use.

**User response:** Enter a valid value as described in the message text.

If RSA encryption is selected, an RSA Label must be entered.

**Explanation:**
If RSA encryption is selected, an RSA Label must be entered. An RSA label can be defined in the Integrated Cryptographic Service Facility (ICSF).

**User response:** Enter a valid value for the label. An RSA label can be from 1 to 64 characters in length and must be specified as follows: the first character must be alphabetic or a national character and the remaining characters must be alphabetic, numeric, a national character or a period.

The first character of the Label must be alphabetic or a national character.

**Explanation:**
An invalid value was entered for the first character of the RSA Label.

**User response:** Enter a valid value for the label. An RSA label can be from 1 to 64 characters in length and must be specified as follows: the first character must be alphabetic or a national character and the remaining characters must be alphabetic, numeric, a national character or a period.

A new MVS user catalog for data needs to be specified.

**Explanation:**
The new MVS user catalog for Db2 object data must be specified before you can perform this action.

**User response:** Create the new MVS user catalog for Db2 object data.

A new MVS user catalog for logs needs to be specified.

**Explanation:**
The new MVS user catalog for Db2 logs and BSDS data must be specified before you can perform this action.

**User response:** Create the new MVS user catalog for Db2 log/BSDS data.

This alias contains both data and logs, the logs must be renamed using a different alias before a mergecat can be performed.

**Explanation:**
The selected alias contains both Db2 log and object data.

**User response:** The log and/or boot strap data sets using this alias must be renamed before the mergecat can be performed.

Cannot mergecat alias information into the same user catalog.

**Explanation:**
The current user catalog for this alias is the same user catalog specified in the New section above. The mergecat function moves all data sets using an alias from one MVS user catalog to another. The target MVS user catalog is specified in the New MVS User catalog section above.

**User response:** Enter the correct MVS target user catalog in the New MVS User catalog section.

The Action field should be E - Edit, or B - Batch Submission.

**Explanation:**
An invalid value was entered in the Action field.

**User response:** The valid values for Action include: "E" - Edit the control cards before execution. "B" - Generate JCL to run the job in Batch.

The new volume specified is not a valid device.

**Explanation:**
The new volume specified is not valid or might be offline.

**User response:** Enter a valid volume name or vary the volume online.
ARYR216E  All characters after the first character must be alphabetic, numeric, a national character or a period.

**Explanation:** An invalid value was entered for the RSA Label.

**User response:** Enter a valid value for the label. An RSA label can be from 1 to 64 characters in length and must be specified as follows: the first character must be alphabetic or a national character and the remaining characters must be alphabetic, numeric, a national character or a period.

ARYR217E  This command requires a current analysis to show which data sets are in use by Db2.

**Explanation:** The command entered requires a current analysis to be performed.

**User response:** Enter the REANALYZE command from the Subsystem Setup Information screen to perform the analysis.

ARYR218E  Entering a target volume requires a current analysis to determine which data sets are in use by Db2.

**Explanation:** The command entered requires a current analysis to be performed.

**User response:** Enter the REANALYZE command from the Subsystem Setup Information screen to perform the analysis.

ARYR219W  No datasets were selected to be moved.

**Explanation:** There were no data sets that satisfied the selection criteria. No data sets will be moved.

**User response:** None required.

ARYR220E  The Volume must start with an alphabetic character.

**Explanation:** The volume entered must start with an alphabetic character from A through Z.

**User response:** Correct the invalid volume name.

ARYR221E  The Volume must only contain alphanumeric characters.

**Explanation:** The volume entered must contain only alphanumeric characters, A through Z and 1 through 9.

**User response:** Correct the invalid volume name.

ARYR222E  The Db2 Object Data field must be "Y" or "N".

**Explanation:** An invalid value was entered in the Db2 Object Data field. Valid values are "Y" and "N". Specifying "Y" will move all object data sets (table space and index) for the Db2 subsystem being analyzed to the target volume(s).

**User response:** Correct the invalid value.

ARYR223E  The Other Data field must be "Y" or "N".

**Explanation:** An invalid value was entered in the Other Data field. Valid values are "Y" and "N". Specifying "Y" will move all non-Db2 data sets not related to the Db2 subsystem being analyzed to the target volume(s). You cannot move VSAM data sets for other Db2 subsystems or MVS user catalogs via this interface.

**User response:** Correct the invalid value.

ARYR224E  The new volume entered must not be the same as the old volume.

**Explanation:** The entered volume is the same name as the source volume.

**User response:** Enter a different target volume name.

ARYR225E  Invalid Value - Please enter a "1" to see a display of Db2 RBA data, "2" to send a modify command to current utility, "3" to build a job to clean up the RBA captured repository, "4" to build the RBA capture utility JCL/proc or "5" to exit Db2 RBA

**Explanation:** An invalid selection was entered.

**User response:** Enter a valid selection as listed in the message text.

ARYR226E  Option not available - An RBA Capture Repository file has not been added to the startup clist. If a repository file has been created, add it to the ARY startup clist and try this option again.

**Explanation:** The selection entered requires that you create the RBA capture utility repository.

**User response:** Please refer to the installation chapter of the user guide for more information about the RBA capture utility.
**ARYR227E** • **ARYR235I**

| **ARYR227E** | Option not available - There is no RBA Capture Utility currently running on this MVS LPAR. |
| **Explanation:** | The RBA capture utility must be running before entering this selection. |
| **User response:** | None required. |

| **ARYR228E** | A volume of "-NONE-" or "MIGRAT" cannot be moved. |
| **Explanation:** | A volume of "-NONE-" indicates Db2 datasets that could not be located. The can be viewed via the "D" command, but cannot be viewed. A volume of "MIGRAT" indicates Db2 datasets that have been migrated by DFSMSHSM and cannot be moved. |
| **User response:** | Clear the invalid line command. |

| **ARYR229E** | Recovery Resources must be "A" for all resources, "S" for SLB, or "I" for image copies. |
| **Explanation:** | An invalid value was entered in the Recover Resources field. |
| **User response:** | Enter A for all resources (system-level backups and image copies), S for system-level backups only, or I for image copies only. |

| **ARYR230I** | Valid line commands for New MVS User Catalogs are: C-Create User Catalog, A-Add Alias to User Catalog, D-Display Datasets in User Catalog, U-Update User Catalog Name, V-View Aliases associated with the User Catalog. |
| **Explanation:** | This message appears when a ? is entered in the line command area to get help on valid line commands. The following line commands are valid in this line command area: Enter C to create a new MVS user catalog. Enter A to add an alias to the listed catalog. Enter D to view the aliases for the listed catalog. Enter U to change the name of the entered user catalog. Enter V to view the aliases assigned to the catalog. |
| **User response:** | None required. |

| **ARYR231I** | Valid line commands for Individual BSDS or Active Log Datasets are: R-Rename the Dataset, M-Move the Dataset. |
| **Explanation:** | This message appears when a ? is entered in the line command area to get help on valid line commands. The following line commands are valid in this line command area: Enter R to rename this dataset. Enter M to move it to a different MVS volume. |
| **User response:** | None required. |

| **ARYR233I** | Valid line commands for Aliases are: D-Display Datasets associated with Alias, M-Mergecat Datasets from one User Catalog to another, R-Rename the Alias. |
| **Explanation:** | This message appears when a ? is entered in the line command area to get help on valid line commands. The following line commands are valid in this line command area: Enter D to display all the data sets using this alias. Enter M to perform a MERGECAT to move this alias from one MVS usercat into another. Enter R to rename all the Db2 object data sets using this alias. |
| **User response:** | None required. |

| **ARYR234I** | Valid line commands for Volumes are: D-Display Datasets on the Volume, M-Move all datasets on the volume. |
| **Explanation:** | This message appears when a ? is entered in the line command area to get help on valid line commands. The following line commands are valid in this line command area: Enter D to display all the MVS data sets on this volume, or M to move data sets from this volume to another. |
| **User response:** | None required. |
If you select a recovery point of Last Copy, Last Incremental or Last Full Copy you cannot specify a Recovery Resource of SLB.

Explanation: If you select a recovery point of last copy, last incremental or last full copy, you cannot specify a system-level backup as a recovery resource.

User response: Either change the recovery point or change the recovery resource.

You are not authorized to use application profile profile_creator.profile_name; - build process aborted.

Explanation: The Update option for the indicated profile is either View or No, and your user ID does not match the creator ID of the profile. Your user ID must match the creator ID of the profile with an update option of View or No. The job cannot be built.

User response: Examine the profile in question. If you are not authorized to use the profile, select a different profile to use.

The application profile profile_creator.profile_name has been deleted.

Explanation: The application profile included in the job has been deleted. The job cannot be built.

User response: Recreate the application profile.

Build of application profile profile_creator.profile_name has resulted in no selected objects.

Explanation: The build of application profile profile_creator.profile_name produced no selected objects.

User response: Check the profile to make sure an object is selected or the object mask(s) specified are correct.

Invalid Value - Please Enter a "Y" if you want to take a Local Primary Offload or "N" if you do not want to perform offload.

Explanation: An invalid value was entered.

User response: Enter a valid value as described in the message text.

Invalid Value - Please Enter a "Y" if you want to take a Recovery Primary Offload or "N" if you do not want to perform offload.

Explanation: An invalid value was entered.

User response: Enter a valid value as described in the message text.

Invalid Value - Please Enter a "Y" if you want to take a Recovery Backup Offload or "N" if you do not want to perform offload.

Explanation: An invalid value was entered.

User response: Enter a valid value as described in the message text.

Invalid Value - Please enter a "Y" if you want to encrypt the offload data, "U" to update the encryption options or "N" if you do not want to perform encryption.

Explanation: An invalid value was entered.

User response: Enter a valid value as described in the message text.

Invalid Value - The value for ICOUNT must be numeric and must be between 1 and 10000.

Explanation: An invalid value was entered.

User response: Enter a valid value as described in the message text.
AR YR257E  Invalid Value - The value for KEYPASSWORD type must be "C" for CLRAES128 or "D" for CLR TDES.

Explanation: An invalid value was entered.
User response: Enter a valid value as described in the message text.

AR YR258E  Invalid Value - Please enter a "Y" if you want to use RSA for encryption else enter "N".

Explanation: An invalid value was entered.
User response: Enter a valid value as described in the message text.

AR YR259E  Invalid Value - The value for RSA type must be "C" for CLRAES128, "D" for CLR TDES or "E" for ENCTDES.

Explanation: An invalid value was entered.
User response: Enter a valid value as described in the message text.

AR YR260E  Either KEYPASSWORD or RSA encryption should be selected, but not both.

Explanation: Y was specified in both the Keypasswd and the RSA field. This combination is not allowed.
User response: Enter Y in either the Keypasswd or RSA field.

AR YR261E  One encryption method, either KEYPASSWORD or RSA, should be selected.

Explanation: N was specified in both the Keypasswd and the RSA field.
User response: Enter Y in either the Keypasswd or RSA field, or type CAN in the Option line to exit.

AR YR262E  A Local Backup offload can not be selected unless a Local Primary offload is selected.

Explanation: A local backup offload was specified, but a local primary offload must be selected first.
User response: Enter Y in the Local Primary field, then enter Y in the Local Backup field.

AR YR263E  A Recovery Backup offload can not be selected unless a Recovery Primary offload is selected.

Explanation: A recovery backup offload was specified, but a recovery primary offload must be selected first.
User response: Enter Y in the Recovery Primary field, then enter Y in the Recovery Backup field.

AR YR264E  An offload unit and an offload symbolic data set name must be entered when selecting this type of offload.

Explanation: An offload unit and an offload symbolic dataset name must be entered when selecting this type of offload.
User response: Enter valid values as described in the message text.

AR YR265E  Invalid Value - Please Enter a "Y" if you want to update the dataset name specification otherwise enter "N".

Explanation: An invalid value was entered in the Update DSN Specification field.
User response: Enter a valid value as listed in the message text.

AR YR266E  The unit type must be specified.

Explanation: In order to update the data set name specification, you must specify the unit type.
User response: Enter a valid unit type in the Unit Type field.

AR YR267E  Invalid Value - Please Enter a "Y" if you want the dataset to be Cataloged otherwise enter "N".

Explanation: An invalid value was entered in the Catalog field.
User response: Enter a valid value as listed in the message text.

AR YR268E  The entered device type is not recognized by OS/390 as a valid device type.

Explanation: An invalid value was entered in the Unit Type field.
User response: Enter a valid device type.

AR YR269E  When using Disk type devices, expiration date and retention period are not valid.

Explanation: A disk device was specified for the unit type, but values were also entered in the Expiration date and/or Retention period fields. This is not a valid combination.
User response: Remove the values from the Expiration date or Retention period fields, or change the unit type to a tape devices.
If a Tape device is selected, either retention period or expiration date can be specified.

**Explanation:** You selected a tape device without specifying retention period or expiration date.

**User response:** Select either a retention period or expiration date.

The retention period and expiration date fields cannot be entered at the same time.

**Explanation:** You entered both a retention period or expiration date. Only one of those is permitted.

**User response:** Select either a retention period or expiration date.

The entered value for Retention Period must be numeric.

**Explanation:** A non-numeric value was entered for Retention Period.

**User response:** Enter a numeric retention period.

The entered value for Expiration Date must be numeric.

**Explanation:** A non-numeric value was entered for Expiration Date.

**User response:** Enter a numeric expiration date period.

The day in the expiration date must be in the range of 1 to 366.

**Explanation:** An invalid value was entered in the Expiration date field. The day portion of the value is incorrect.

**User response:** Enter a valid value as described in the message text.

The year in the expiration date must be in a range of 1999 and higher.

**Explanation:** An invalid value was entered in the Expiration date field. The year portion of the value is incorrect.

**User response:** Enter a valid value as described in the message text.

Invalid Value - Please Enter a "Y" if you want to display the dataset otherwise enter "N".

**Explanation:** An invalid value was entered in the Show DSN field.

User response: To display the data set name as generated using the current qualifiers, enter Y in the Show DSN field and press Enter.

The specified qualifier code is not a supported value.

**Explanation:** An invalid value was entered in the Qualifier code field.

**User response:** Enter one of the valid qualifier code numbers listed at the bottom of the panel.

The GDG limit must be numeric.

**Explanation:** The GDG limit must be numeric.

**User response:** Enter a numeric value between 1 and 255 as the GDG limit.

The GDG limit value must be either blank or a number in the range of 1-255.

**Explanation:** An invalid value was entered in the GDG Limit field.

**User response:** Enter a numeric value between 1 and 255 as the GDG limit.

The symbolic dataset name generation field is full.

**Explanation:** The symbolic input area is out of space. The maximum number of characters allowed is 159.

**User response:** Reduce the number or type of symbolics in the generated data set name.

Truncation has occurred in building the dataset qualifier.

**Explanation:** The data set name for the image copy is too long as constructed.

**User response:** Shorten the data set name by using less or shorter qualifiers.

Invalid starting position entered. Enter a numeric value for the starting position in the symbolic to substring.

**Explanation:** An invalid value was entered in the Enter Starting Position field.

**User response:** Enter a valid numeric as specified in the message text.

Invalid substring length entered. Enter a numeric value greater than 1 to substring the symbolic.

**Explanation:** An invalid value was entered in the Enter Substring Length field.

**User response:** Enter a valid numeric as specified in the message text.
User response: Enter a valid numeric as specified in the message text.

ARYR285E  Invalid dataset node detected - first character not alphabetic or national.

Explanation: The first character of the entered substring resolved to an invalid character. Data set nodes must begin with alphabetic or national characters.

User response: Change the starting character to a valid character.

ARYR286E  Dataset truncation may occur.

Explanation: When resolved, the data set name may be too long. The maximum number of characters allowed for data set names is 44.

User response: Shorten the data set name so it resolves to less than 44 characters.

ARYR287E  Invalid dataset node detected length greater than 8 characters.

Explanation: The substring entered caused a data set node to be greater than eight characters.

User response: Shorten the substring to less than eight characters.

ARYR288E  Invalid dataset node detected - 2 consecutive periods.

Explanation: The qualifier string contains two consecutive periods as resolved. Data set names cannot contain two consecutive periods.

User response: Change the qualifier string so that two periods do not appear consecutively.

ARYR289E  Invalid characters detected in dataset node.

Explanation: The first character must be alphabetic or national and the remaining seven characters must be alphabetic, numeric, national, or a hyphen.

User response: Correct the data set name.

ARYR290E  Invalid starting position entered. Enter a numeric value for the starting position in the symbolic to substring.

Explanation: An invalid starting position was entered.

User response: Enter a numeric value for the starting position in the symbolic to substring.

ARYR291E  Invalid substring length entered. Enter a numeric value greater than 1 to substring the symbolic.

Explanation: An invalid value was entered for the substring length.

User response: Enter a numeric value greater than 1 to substring the symbolic.

ARYR292E  Invalid substring starting position entered. Enter a starting position that is within the range of generated symbolic.

Explanation: An invalid value was entered for the substring starting position.

User response: Enter a starting position that is within the range of the generated symbolic.

ARYR293E  Invalid substring length. Length exceeds end of data. Enter a length where the starting position plus length are less than or equal to the maximum length of data.

Explanation: An invalid value was entered in the Enter Substring Length field.

User response: Enter a length where the starting position plus length are less than or equal to the maximum length of data.

ARYR294E  Recovery point must be a value from 1 through 6.

Explanation: An invalid value was entered in the Recovery Point field.

User response: Enter a valid recovery point as listed in the message text.

ARYR295E  Site must be "Z", "L", or "R".

Explanation: An invalid value was entered for the Site field.

User response: Enter L for local site, R for recovery site, or Z to use the site specified in the ZPARM member for this Db2 subsystem.

ARYR296E  Reuse must be "Y" or "N".

Explanation: An invalid value was entered for the Reuse field.

User response: Enter Y to specify that the IBM RECOVER utility is to logically reset and reuse Db2-managed data sets without deleting and redefining them. If you enter N, Db2-managed data sets are deleted and redefined.
AR YR297E Edit Rebuild Indexes Options must be "Y" or "N".

Explanation: An invalid value was entered in the Edit Rebuild IX Options field.

User response: Enter Y in this field to set options for REBUILD INDEX.

AR YR298E Value must be between 01 and 99.

Explanation: An invalid value was entered.

User response: Enter a numeric between 01 and 99.

AR YR299E Reuse must be "Y" or "N".

Explanation: An invalid value was entered in the Reuse existing datasets field.

User response: Enter Y in this field to specify that Db2-managed data sets will be logically reset and reused without deleting and redefining them. Enter N to specify that Db2-managed data sets will be deleted and redefined to reset them.

AR YR310W Line commands were cleared for a cursor sensitive screen command.

Explanation: Line commands were cleared for a cursor sensitive screen command.

User response: None required.

AR YR311E An invalid line command was entered.

Explanation: An invalid line command was entered.

User response: Enter a valid line command.

AR YR312E You are not authorized to enter any line commands for this profile. The creator of the profile is restricting all activity.

Explanation: The creator of the selected profile specified that no other user is to view or update the selected profile.

User response: Choose a different profile to work with.

AR YR313E You are not authorized to update or delete this profile. Enter a "Y" if you would like to view this profile.

Explanation: A profile was selected that has restricted access. The creator of the selected profile specified that no other user is to update or delete the selected profile.

User response: Enter V if you would like to view the profile.

AR YR314E If RSA encryption is not selected the RSA label should not be specified.

Explanation: Keypassword was selected for the encryption type, but a value was entered in the Label field for RSA.

User response: Enter Y in the RSA field to specify RSA, or remove the value from the Label field.

AR YR315E The Profile Creator is a required field. Please enter a valid creator.

Explanation: When creating a new profile, the Profile Creator field was left blank.

User response: Enter a profile creator in the Profile Creator field.

AR YR316E The Profile Name is a required field. Please enter a unique name.

Explanation: When creating a new profile, the Profile Name field was left blank.

User response: Enter a unique profile name in the Profile Name field.

AR YR317E Invalid Value - Enter a "U" to allow other users to update your profile, a "V" to allow other users to just view your profile or "N" to disallow other users from viewing or updating your profile.

Explanation: An invalid value was entered for the Update Option field.

User response: Correct the value as described in the message text.

AR YR318E Invalid Value - Enter a value of "Y" to enter a new Target Pool selection, enter a "U" to update the Target Pool selection, a value of "N" indicates that a Target Pool selection does not exist.

Explanation: An invalid value was entered for the Target Pool field. If a target pool already exists, this value will be set to Y.

User response: Correct the value as described in the message text.

AR YR319I Profile "profile_creator.profile_name" saved.

Explanation: The profile named in the message was successfully saved.

User response: None required.

</tbody>
</table>
ARYR334E  Requested object not found.
Explanation:  The selected object was not found in this Db2 subsystem.
User response:  Check to see if it has since been dropped.

ARYR335E  An excluded object cannot be exploded.
Explanation:  This object has been explicitly excluded from the profile. The Explode operation cannot be performed upon it.
User response:  To continue, clear the line command from the excluded object.

ARYR336W  There are no spaces that meet the wildcard selection criteria. Press Enter to accept the wildcard anyway or change the selection criteria.
Explanation:  There are currently no table spaces or index spaces in this Db2 subsystem that meet the specified wildcard that you have entered. This might be acceptable if you know there will be objects that match it in the future.
User response:  Press Enter to accept the wildcard as is, or change your selection criteria.

ARYR337E  Requested object not found.
Explanation:  The requested object was not found.
User response:  Change the selection criteria and retry the process.

ARYR338I  Object queue has been modified.
Explanation:  The selected objects have been added to the queue of objects to be restored.
User response:  None required.

ARYR339E  Invalid line command entered.
Explanation:  Invalid line command has been entered.
User response:  Please check the list of valid line commands.

ARYR340W  Object already exists.
Explanation:  The selected object already has been included in this application profile.
User response:  Select a different object.

ARYR341E  Cannot specify both Process RI and Process Clones, change one of the values to "N".
Explanation:  A Y was entered in both the Process RI and Process Clones field; this is an invalid combination. RI is not allowed on clone objects.
User response:  Change one or both values to N.

ARYR342E  No objects meet wildcard criteria.
Explanation:  You entered the Explode line command next to an object detail line that contains wildcard selection criteria. However, no objects exist on the Db2 subsystem that meet the wildcard criteria. The object or objects may have been dropped.
User response:  Press Enter to continue.

ARYR343E  Object already excluded.
Explanation:  The specified object has already been excluded in a previous exclude selection.
User response:  To continue, clear the line command from the excluded object.

ARYR344E  Invalid Value - The only valid values are "Y" and "N.".
Explanation:  An invalid value has been detected by the SCMD processor.
User response:  Please specify either "Y" or "N".

ARYR345E  Invalid line command entered.
Explanation:  An invalid line command has been detected.
User response:  Please enter one of the listed values.

ARYR346E  An encryption type or key must be specified when selecting offloads to be encrypted.
Explanation:  You have selected to encrypt an offload and neglected to specify an encryption type or key.
User response:  Enter a valid encryption type or key.

ARYR348E  Message text varies depending on the cause of the error.
Explanation:  Parmlib member parsing error. Text describes the problem and possible solution.
User response:  See error text and check for correctness of entered values, or check the parmlib member for syntax errors.
AR YR360E • AR YR377E

AR YR360E  An APF authorization failure occurred.

Explanation: Db2 Recovery Expert requires that all the load libraries in the start up CLIST for ISPLLIB LIBDEF be APF authorized. Certain product functions will not work without this requirement. If a data set name is listed in this message help, it is the first one in the ISPLLIB LIBDEF concatenation detected as not being APF authorized.

User response: Refer to the installation instructions for more information. If additional assistance is needed, contact IBM Customer Support.

AR YR369E  Invalid value. Delete Aged Backup should be Yes or No.

Explanation: An invalid value was entered in the Delete Aged Backup field.

User response: Enter Y to have the product automatically delete any offload files when it is removed from the ARY repository. For example, if you specify two offload generations and the third backup is offloaded, the first (or oldest) offloaded backup would be removed from the Db2 Recovery Expert repository. If this option is Y, then Db2 Recovery Expert will also delete the offload files from the MVS catalog.

AR YR370E  Invalid value - Enter "D" to select DFSMSdss as the offload vendor, enter a "F" to select FDR as the offload vendor or "I" to use FDRInstant.

Explanation: An invalid value was entered in the Data Mover field.

User response: Enter D to use DFSMSdss to perform the offload of volumes. Enter F to use FDR to perform the offload of volumes. Enter I to use FDRInstant to perform the offload of volumes. You must have a license for FDR to use it as the data mover.

AR YR371E  Invalid value - Enter a "Y" to stack tapes otherwise enter "N"

Explanation: An invalid value was entered in the Stack Backups on Tape field.

User response: Enter Y to direct Db2 Recovery Expert to stack multiple volume backups (or offloads) onto one tape. Most tape cartridges will hold multiple volume backups. You can specify how many volume backups to stack on each tape under the options for each backup type (local primary, local backup, remote primary, and remote backup).

AR YR372E  The RBA/LRSN entered must be greater than or equal to the RBA/LRSN of the Backup selected.

Explanation: The value in the Roll Forward to RBA/LRSN field is at a point prior to the RBA/LRSN of the selected backup. This is not allowed.

User response: Specify a roll forward RBA/LRSN equal to or greater than the listed RBA/LRSN.

AR YR373E  Invalid value - The tape stack limit must be numeric.

Explanation: An invalid value was entered in the Tape Stack Limit field. The tape stack limit controls how many volume offloads will be stacked onto one tape before the next tape mount is requested.

User response: Calculate approximately how many volume backups will fit onto one tape. There are performance concerns also. When performing data set restore from offloaded backups that have been stacked to tape, there will be a time delay while the tape is forwarded to the correct location to perform the restore.

AR YR374E  Invalid value - the Perform Offload field must be "Y" or "N".

Explanation: An invalid value was entered in the Perform Offload field.

User response: Enter Y if you wish to make this type of backup. You may wish to make multiple backups for use at a disaster recovery site. If each backup is going to disk, make sure you have enough tape units to satisfy the request. If you take all four backup types, and have specified Max Tasks of 1, then you will need FOUR tape units.

AR YR375E  No mapping information found for this Db2 subsystem.

Explanation: No volume information was found for this subsystem.

User response: Enter the VOLUME command or make sure the Db2 subsystem has been properly configured for the Db2 system backup utility within SMS and HSM.

AR YR376E  Invalid Value - Enter an "O" to generate the job online or "B" to build the job in Batch.

Explanation: An invalid value was entered.

User response: Enter O to build the JCL online. Enter B to generate JCL that will build the recovery job in batch.

AR YR377E  The member name selected for the generated job cannot be the same as the member name used for the generation job (which was specified in the dataset shown at the text at the beginning of this window)

Explanation: The same member name was used for
the output of the job to build the JCL as for the built JCL.

User response: You must enter different member names for location of the JCL to perform the batch job generation and the location where the batch job will place its generated JCL.

**ARYR378E** Invalid value - Update Recovery Options should be "Y" or "N".

Explanation: An invalid value was entered in the Update Recovery Options field.

User response: Enter Y to update recovery options.

**ARYR379E** Invalid value - Compress Data should be Yes or No.

Explanation: An invalid value was entered in the Compress Data field.

User response: Enter Y to have DFSMSdss or FDR compress the volume backup while it is being copied to tape. If you have hardware tape compression, you should set this value to N.

**ARYR380E** Gather index statistics must be "Y" or "N".

Explanation: An invalid value was entered in the Gather Index Statistics field.

User response: Enter Y to have the index rebuild utility collect inline object statistics (RUNSTATS values).

**ARYR381E** Report messages must be "Y" or "N".

Explanation: An invalid value was entered in the Report Messages field.

User response: Enter Y to have the index rebuild utility generate a report on the collected statistics values.

**ARYR382E** Update catalog tables must be "A", "P", "S" or "N".

Explanation: An invalid value was entered in the Update catalog tables field.

User response: Enter these values to have the REBUILD INDEX utility record the following values in the Statistics history tables: A - All values; P - Access path values; S - Space-related values; N - Update none of the above (Only valid when Report = Y)

**ARYR383E** Update history tables must be "A", "P", "S" or "N".

Explanation: An invalid value was entered in the Update history tables field.

User response: Enter these values to have the

**ARYR384E** Collect all distinct values must be "Y" or "N".

Explanation: An invalid value was entered in the Collect all distinct values field.

User response: Enter Y to have the REBUILD INDEX utility collect distinct counts for each index key.

**ARYR385E** Invalid value - Edit Recovery Options should be "Y" or "N".

Explanation: An invalid value was entered in the Edit Recovery Options field.

User response: Enter Y to update the recovery options for this application profile.

Note: All recovery options changed here will automatically be saved into the application profile.

**ARYR386E** At least one DUMP Class needs to be specified.

Explanation: No dump classes were specified for an HSM offload.

User response: You must specify at least one HSM dump class in order to perform an offload. The HSM dump class is a construct that can be created in the HSM setup screen.

**ARYR387E** This volume is offline. You cannot move datasets from it while it is offline.

Explanation: The specified volume is offline. Data sets cannot be moved from offline volumes.

User response: Bring the volume online before attempting to move the listed data sets to different volumes.

**ARYR388E** If restoring both Data and Logs you cannot choose to resolve Recover/Rebuild pending objects.

Explanation: You cannot choose to resolve Recover Pending and Rebuild Pending objects if you have specified to restore both data and logs.

User response: None required; Db2 Recovery Expert changes the Resolve Recover/Rebuild Pending Objects field to N.
Invalid Value - The only valid value for a Disaster Recovery Profile is "B" to build the job in Batch.

Explanation: An invalid value was entered in the Build Online or Batch field.
User response: Enter B to build the job in batch.

The entered value must be numeric.

Explanation: A non-numeric value was entered in a numeric field.
User response: Enter a numeric value.

The maximum value for the drain wait is 1800 seconds.

Explanation: An invalid value was entered in the Drain Wait field.
User response: Enter a valid value that is less than or equal to the maximum of 1800 seconds.

The maximum value for the number of retries is 255.

Explanation: An invalid value was entered in the Retry field.
User response: Enter a valid value that is less than or equal to the maximum of 255.

The maximum value for the retry delay is 1800 seconds.

Explanation: An invalid value was entered in the Retry Delay field.
User response: Enter a valid value that is the range of 1 to 1800 seconds.

The valid values for Maxro are a blank, "DEFER", or a number.

Explanation: An invalid value was entered for the Maxro field.
User response: Enter a valid value as specified in the message text.

Sharelevel has valid values of "R"eference, and "C"hange.

Explanation: An invalid value was entered in the Sharelevel field.
User response: Enter a valid value as specified in the message text.

The valid values for Long Log are "C"ontinue, "T"erm, and "D"rain.

Explanation: An invalid value was entered for the Longlog field.
User response: Enter a valid value as specified in the message text.

Online Rebuild Index must be "Y" or "N".

Explanation: An invalid value was entered in the Online Rebuild Index field.
User response: Enter Y to specify an online REBUILD INDEX. This option is valid for Db2 V9 and later.

Edit Online Rebuild Index Options must be "Y" or "N".

Explanation: An invalid value was entered in the Edit Online Rebuild Index Options field.
User response: Enter Y to edit options for an online REBUILD INDEX utility. This option is only valid for Db2 V9 and later.

Invalid Value - Enter a "C" if you would like System Backup to copy your archive logs, "I" if you will be using Local Archive Log 1, or "2" if you will be using Local Archive Log 2 logs at the DR.

Explanation: An invalid value was entered in the Archive Logs used at DR field.
User response: Enter a valid value as listed in the message text.

Invalid Value - Enter a "1" if you want to copy only Archive Log 1, "2" if you want to copy only Archive Log 2, "B" if you want to copy both Archive Log 1 and 2, or "C" to create both Archive Log 1 and 2 from Local Archive Log 1.

Explanation: An invalid value was entered in the Copy Localsite Logs field.
User response: Enter a valid value as listed in the message text.

Invalid Value - Enter a valid nbr of days of Archive Logs you will need at the DR site. Valid values are 0 thru 999.

Explanation: An invalid value was entered in the Archive Logs needed at DR (days) field.
User response: Enter a valid value as listed in the message text.
ARYR403E  Invalid Value - Enter a valid nbr of hours back of Archive Logs you will need at the DR site. This field can be added to the nbr of days needed. Valid Values are 0 thru 999.

Explanation: An invalid value was entered in the Archive Logs needed at DR (hours) field.

User response: Enter a valid value as listed in the message text.

ARYR404E  Please Enter Required Field - A new Archive Log 1 prefix is required for copying Local Logs for the DR site.

Explanation: No archive log prefix was entered in the DR Archive Log Prefix 1 field. This field is required.

User response: Enter the archive log prefix that the new archive logs will have at the recovery site.

ARYR405E  Please Enter Required Field - A new Archive Log 2 prefix is required for copying Local Logs for the DR site.

Explanation: No archive log prefix was entered in the DR Archive Log Prefix 2 field. This field is required.

User response: Enter the archive log prefix that the new archive logs will have at the recovery site.

ARYR406E  Please Enter Required Field - A valid unit is required for copying Local Logs for the DR site.

Explanation: No unit device was entered in the Unit for copying Archive Logs field. This field is required.

User response: Enter a valid unit device to be used to copy the archive logs.

ARYR407E  Invalid Unit - Unit entered must be a tape or disk device that will be used for copying local logs for the DR site.

Explanation: An invalid unit device was entered in the Unit for copying Archive Logs field.

User response: Enter a valid unit device to be used to copy the archive logs.

ARYR408E  Invalid Value - Please enter the number of days back that you would like your image copies cataloged at the DR site.

Explanation: An invalid value was entered in the Catalog x days of Image Copies at DR field.

User response: Enter a valid numeric that specifies how many days of image copies back from current are to be cataloged at the recovery site.

ARYR409E  Invalid Value - Please enter an "L" if you will be using Local site backups at the DR or "R" if you will be using Recovery site backups at the DR.

Explanation: An invalid value was entered in the Image Copies (or SLB) used at DR field.

User response: Enter a valid value as described in the message text.

ARYR410E  In order to process Disaster Recovery via the archive log method, we need to know the archive logs that will be needed at the DR site. You must enter either nbr of days or nbr of hours or both days and hours of logs you need available for disaster recovery.

Explanation: An invalid value was entered in the Archive Logs needed at DR field.

User response: Enter a valid value as described in the message text.

ARYR411E  This Db2 subsystem is a member of a Datassharing group. A symbolic of &SSID is required in the Archive Log Prefix in order for the new logs symbolic to be unique across subsystems.

Explanation: If the subsystem is a member of a datassharing group, you must have &SSID somewhere in the archive log prefix.

User response: Enter &SSID in the archive log prefix.

ARYR412E  Invalid Value - Please Enter a "Y" if you would like to force a check point before issuing the archive log command - It is recommended that you check point if the current active logs contain the information from the last image copy of the Db2 catalog and directory. Enter an "N" to bypass this step.

Explanation: An invalid value was entered in the Force a checkpoint before Archiving field.

User response: Enter a valid value as described in the message text.

ARYR413W  Setting the force check point without issuing the archive log command has no meaning. This option will be ignored at run time.

Explanation: A Y was entered in the Force a checkpoint before Archiving field, but the Force the Active Log to Archive field was set to N. This combination is not allowed; the checkpoint cannot be generated without an archive log process.
If you want to force a checkpoint, make sure the Force the Active log to Archive field is set to Y.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

**Explanation:** An invalid value was entered in the Force the Active log to Archive field.

**User response:** Enter a valid value as described in the message text.

field; then enter either ranges of target units or stogroups.

**ARYR437E** Your region size must be greater than 1000K.

**Explanation:** Your region size must be greater than 1000K.

**User response:** Increase your region size and try again.

**ARYR438E** The SSID of the application profile selected does not match the SSID of the backup profile selected.

**Explanation:** You selected an application profile that has a different SSID then the system backup you selected. The application profile must have the same SSID as the backup selected.

**User response:** Select a different application profile that has the same SSID as the system backup.

**ARYR439E** Invalid value - Edit Image Copy Options should be "Y" or "N".

**Explanation:** An invalid value was entered in the Edit Image Copy Options field.

**User response:** Enter Y in this field to update the image copy options to be used when creating image copies from the selected system backup.

**ARYR440E** Invalid value - The maximum tapes value must be numeric.

**Explanation:** The maximum tapes value must be numeric.

**User response:** Enter a numeric value.

**ARYR441E** Invalid value - The maximum tapes value must be between 1 and 256.

**Explanation:** The maximum tapes value must be between 1 and 256.

**User response:** Enter a valid value as listed in the message text.

**ARYR442E** Invalid Entry - The Date entered is invalid.

**Explanation:** An invalid date was entered.

**User response:** Enter a valid date in the form of CCYYMMDD.

**ARYR443E** Invalid entry - Enter Cancel or End to return to System Restore.

**Explanation:** An invalid primary command was entered.

**User response:** Please correct and retry the operation.

**ARYR444E** Invalid value - The tape stack limit must be between 1 and 999.

**Explanation:** The tape stack limit must be between 1 and 999.

**User response:** Enter a valid value as listed in the message text.

**ARYR445E** Invalid Value - Enter a "G" if the time you are entering is machine time (GMT) or enter an "L" if you are entering a Local Time.

**Explanation:** An invalid value was entered in the Timestamp is in GMT or Local Time field.

**User response:** Enter a valid value as listed in the message text.

**ARYR446E** Invalid Value - The number of offload generations must be numeric and must be between 1 and 99.

**Explanation:** An invalid value was entered for the number of offload generations.

**User response:** Enter a valid value.

**ARYR447E** Invalid Value - The number of tasks must be numeric and must be between 1 and 99.

**Explanation:** An invalid value was entered for the number of tasks. The number of tasks controls how many tasks Db2 Recovery Expert will run simultaneously to offload the backup to tape. It will control how quickly the offload operation completes.

**User response:** Enter a valid value for the number of tasks.

**Note:** You must have enough tape units to satisfy the mount requests that will result. For example, if you specify 4 tasks, and are making both Local Primary and Remote Primary copies, you must have EIGHT tape units available. If you specify 2 tasks and are making Local Primary and Remote Primary copies, you must have FOUR tape units available.
A Db2 backup method is not valid for a Db2 Version 7 subsystem. The backup method has been changed to Flash.

**Explanation:** A Db2 backup method is not valid for a Db2 Version 7 subsystem. The backup method has been changed to Flash.

**User response:** None required.

"From Offload" is only valid when recovering an object from a system-level backup.

**Explanation:** An I was entered in the Recovery Resources field to select image copies as a recovery resource, and Y was entered in the From Offload field.

**User response:** Change the Recovery Resources field to A(II) or S(LB), or change the From Offload field to N.

Image copies cannot be created from an offloaded backup created using FDR.

**Explanation:** Image copies cannot be created from an offloaded backup when the backup was created using FDR.

**User response:** Select a different backup from which to make image copies.

The Backup Type should be LP for Local Primary, LB for Local Backup, RP for Remote Primary or RB for Remote Backup.

**Explanation:** An invalid backup type was entered in the Backup Type field.

**User response:** Enter a valid value as described in the message text.

Invalid Value - Please Enter a "Y" if you want the image copies to be registered in SYSCOPY otherwise enter "N".

**Explanation:** An invalid value was entered in the Register in SYSCOPY field.

**User response:** If you want the image copies created by ARY to be registered in SYSCOPY, enter Y.

A work volume must be specified.

**Explanation:** No value was entered in the Work Volume field.

**User response:** A work volume must be specified. Enter the volume serial number of a volume that can be used as a work volume.

Image copies cannot be created from a System Backup that did not have Object Collection set to Yes.

**Explanation:** An "I" was entered next to a system backup that did not have object restore enabled when the backup was taken. No image copies can be created from this system backup.

**User response:** Select a different backup with object restore enabled.

JCL generation failed.

**Explanation:** Object restore job generation failed.

**User response:** Possible reasons and responses are:

- No objects found in application profile: Verify that the job profile contains objects.
- The application profile not found in repository: Verify that the application profile is listed on the Application Profile Display. If it is listed, contact IBM Customer Support.
- User is not authorized to use the application profile: Ensure that the share option for the application profile allows access.
- An error occurred connecting to Db2: Ensure that the Db2 subsystem is up, the plan is bound, and that you have authority to execute the plan.

The work volume is invalid or not online.

**Explanation:** The work volume that was entered is either invalid or not online.

**User response:** Ensure that the correct work volume is entered and that the volume is online.

If the work volume(s) are SMS-managed, an SMS storage class must also be specified.

**Explanation:** The work volume(s) entered are SMS-managed work volumes.

**User response:** Enter the SMS storage class for the work volume(s) in the Work Storage Class field(s).

Only one application profile can be selected.

**Explanation:** An S was entered next to more than one application profile. Only one application profile can be selected at a time.

**User response:** Enter S next to the profile you want to use to make image copies, and deselect the other profiles.
A storage class must not be specified if the work volume(s) are not SMS-managed.

**Explanation:** A non SMS-managed work volume(s) were entered in the Work Volume field(s).

**User response:** Remove SMS storage classes from the Work Storage Class field(s).

A duplicate volume was entered.

**Explanation:** The same volume serial was entered more than once in the Work Volume fields.

**User response:** Ensure that each work volume is only specified once in the Work Storage Class fields.

The specified work volume(s) cannot be a mixture of SMS-managed and non-SMS-managed.

**Explanation:** A mixture of SMS-managed and non-SMS managed volumes was entered in the Work Volume fields.

**User response:** Ensure that the work volumes are either all SMS-managed or all non-SMS managed.

The requested backup was in use by another process. Please try again later.

**Explanation:** The backup was not available for rename or delete processing.

**User response:** Retry the process again later.

The first character of the Db2 subsystem id must be alphabetic or a national character.

**Explanation:** An invalid value was entered for the Db2 subsystem ID. A Db2 subsystem ID can be from 1 to 4 characters in length and must be specified as follows: the first character must be an alphabetic or a national character and the remaining characters must be alphabetic, numeric or a national character.

**User response:** Correct the invalid value.

All characters after the first character must be alphabetic, numeric or a national character.

**Explanation:** An invalid value was entered for the Db2 subsystem ID. A Db2 subsystem ID can be from 1 to 4 characters in length and must be specified as follows: the first character must be an alphabetic or a national character and the remaining characters must be alphabetic, numeric or a national character.

**User response:** Enter a different symbolic.

From Offload must be "Y" or "N".

**Explanation:** An invalid value was entered for the From Offload field.

**User response:** Enter Y to indicate that any data sets that need to be restored from a system backup should be done using an offload copy of the system backup. Enter N to have the data sets restored using the system backup on disk.

Update catalog tables None is not valid with Report messages No.

**Explanation:** Update catalog tables = None is not valid when Report messages is set to No.

**User response:** You can change the Update catalog tables option to another value, such as All, Path, or Space, or you can change the Report messages option to Yes.

MAXRO, LONGLOG and DELAY are not valid with ShareLevel reference.

**Explanation:** The MAXRO, LONGLOG and DELAY options are not valid when the SHRLEVEL option is set to REFERENCE.

**User response:** You can either blank out the MAXRO, LONGLOG and DELAY options or change the SHRLEVEL option to CHANGE.

The Recover to RBA/LRSN must be equal to the RBA/LRSN of the Backup which is backup_RBA.

**Explanation:** The Recover to RBA/LRSN must be equal to the RBA/LRSN of the backup RBA, which is listed in the messages.

**User response:** Change the Recover to RBA/LRSN.

The GDG symbolic can only be used once in a dataset mask.

**Explanation:** The GDG symbolic can only be used once in a data set mask. The second GDG symbolic is removed from the mask.

**User response:** Enter a different symbolic.

When a GDG symbolic is used it must be the last symbolic specified.

**Explanation:** The GDG symbolic must be the last symbolic in the data set mask.

**User response:** Ensure that the GDG symbolic is the last symbolic in the string.
AR YR472I  A reanalysis should be performed to refresh the displayed information.

Explanation: A reanalyze should be performed to update the displayed information. One of the following functions was selected:
- Rename/Move Boot Strap Datasets
- Rename/Move Active Log Datasets
- Merge Catalog entries
- Rename an Alias
- Moved datasets

User response: If the batch job for this function has been submitted, once the batch job has completed, a reanalyze should be performed to reflect the recent changes. If Db2 is not started, it must be started before performing the reanalyze.

AR YR473E  No alias with this name was found on this system. The dataset with this highlevel may be cataloged in the master catalog.

Explanation: No alias with the specified name was found on this system.

User response: Check the master catalog to see if data sets starting with the high level qualifier are already cataloged in the master catalog. If so, determine if the data sets exist.

AR YR474E  This command is not supported for data sets with no alias or data sets cataloged in the master catalog.

Explanation: There is no alias entry for this data set. The entered command is not supported in this case.

User response: Clear the command from the line command area.

AR YR475E  "Like" fields must not have imbedded blanks, all profiles will be displayed.

Explanation: When specifying the fields for filtering you have included a blank space. As a result all the profiles are displayed.

User response: Remove the blank from the filter field.

AR YR476E  Invalid value. The Source Stogroup selection field should be either Y, U, or N.

Explanation: The value entered in the Source Stogroup selection field is invalid. You must specify either a Y to enter a new Source Stogroup selection, a U to update the Source Stogroup selection, or an N to specify that a Source Stogroup selection does not exist.

User response: Enter a valid value.

AR YR480E  Invalid value. The Update Image Copy Options should be either Y or N.

Explanation: The value entered in the Update Image Copy Options field is invalid. You must specify either a Y to update the image copy options or a N which indicates that you will not update the image copy options.

User response: Enter a valid value.

AR YR481E  Invalid value. Valid values for the Local Primary Image Copy field are Y or N.

Explanation: The value entered in the Local Primary Image Copy field is invalid. You must specify either a Y to take a local primary image copy or a N if you do not want to take an image copy.

User response: Enter a valid value.

AR YR482E  Invalid value. Valid values for the Local Backup Image Copy field are Y or N.

Explanation: The value entered in the Local Backup Image Copy field is invalid. You must specify either a Y to take a local backup image copy or a N if you do not want to take an image copy.

User response: Enter a valid value.

AR YR483E  Invalid value. Valid values for the Recovery Primary Image Copy field are Y or N.

Explanation: The value entered in the Recovery Primary Image Copy field is invalid. You must specify either a Y to take a recovery primary image copy or a N if you do not want to take an image copy.

User response: Enter a valid value.

AR YR484E  Invalid value. Valid values for the Recovery Backup Image Copy field are Y or N.

Explanation: The value entered in the Recovery Backup Image Copy field is invalid. You must specify either a Y to take a recovery backup image copy or a N if you do not want to take an image copy.

User response: Enter a valid value.

AR YR485E  A Local Backup Image Copy cannot be selected unless a Local Primary Image Copy is selected.

Explanation: You cannot create a local backup image copy without also creating a local primary image copy.

User response: In addition to the Y specified in the Local Backup Image Copy field, specify a Y in the Local Primary Image Copy field.
A Recovery Backup Image Copy cannot be selected unless a Recovery Primary Image Copy is selected.

**Explanation:** You cannot create a recovery backup image copy without also creating a recovery primary image copy.

**User response:** In addition to the Y specified in the Recovery Backup Image Copy field, specify a Y in the Recovery Primary Image Copy field.

An image copy unit and an image copy symbolic data set name must be entered when selecting this type of image copy.

**Explanation:** The unit and symbolic data set name specified for the image copy are invalid.

**User response:** Specify a valid unit and symbolic data set name for the image copy.

Invalid value has been specified for the fast replication method.

**Explanation:** You have specified an invalid fast replication method. Valid fast replication methods can be either an S for EMC Snap fast replication or a D for DFSMSdss fast replication.

**User response:** Specify a valid fast replication method. You can specify an S for EMC Snap fast replication or a D for DFSMSdss fast replication.

Invalid value has been specified for the fast replication update option.

**Explanation:** You have specified an invalid fast replication update option. You can specify a Y to update using fast replication or N if you do not want to do a fast replication update.

**User response:** Specify a valid fast replication update value.

Invalid value has been specified for the Sharelevel field.

**Explanation:** You have specified an invalid valid for the sharelevel. You can specify a R for sharelevel reference or C for sharelevel change.

**User response:** Specify a valid sharelevel value.

Invalid value has been specified for the Scope field.

**Explanation:** You have specified an invalid valid for the scope. You can specify an A for all or a P for pending.

**User response:** Specify a valid value for scope.

Invalid value has been specified for the Register VSAM Copy field.

**Explanation:** You have specified an invalid valid for the Register VSAM Copy field. You can specify a Y to register a VSAM copy or an N to not register the VSAM copy.

**User response:** Specify a valid value.

Invalid value has been specified for the Stack tapes field.

**Explanation:** You have specified an invalid valid for the Stack tapes field. You can specify a Y to stack tapes or an N to not stack the tapes.

**User response:** Specify a valid value.

Invalid value has been specified for the stack limit.

**Explanation:** You have specified a value that is not numeric for the stack limit.

**User response:** Specify a valid numeric value.

Invalid value has been specified for the Number of tasks field.

**Explanation:** You have specified an invalid valid for the Number of tasks field. The value that you specify must be numeric and must be between 1 and 99.

**User response:** Specify a valid value.

Invalid value - All parts in one copy should be Y or N.

**Explanation:** You have specified an invalid valid for the All parts in one copy field. You can specify a value of Y to include all parts in one copy or an N to indicate separate copies.

**User response:** Specify a valid value.

Invalid value has been specified for the Edit Image Copy Options field.

**Explanation:** You have specified an invalid valid for the Edit Image Copy Options field. You can specify a value of Y to edit the image copy options or an N to not edit the image copy options.

**User response:** Specify a valid value.

Invalid value has been specified for the Scope field.

**Explanation:** You have specified an invalid valid for the scope. You can specify an A for all or a P for pending.

**User response:** Select at least one image copy type.

</table>
You must update either or both of the Db2 and IMS disaster recovery profiles to use SLB or remove the external subsystem and turn off coordinated recovery.

ARSY5171  ISPF client passwords were reset.

Explanation: The ISPF client passwords are no longer saved. Users will have to enter their passwords the next time they access the ISPF client.

ARSY600E  Invalid value - Enter Y if you want to use multiple jobs for performing an offload and restore, or N if you want to use a single job.

Explanation: An invalid value was specified for the Use Multiple Jobs option.

ARSY601E  Invalid value - The number of jobs must be numeric.

Explanation: The value specified for the maximum number of jobs that can be submitted to an LPAR is not valid. This value is specified when setting up the Multijob Options for offload and restore processing.

ARSY602E  Invalid value - The number of jobs must be between 01 and 99.

Explanation: The value specified for the maximum number of jobs that can be submitted to an LPAR is not valid. This value is specified when setting up the Multijob Options for offload and restore processing.

ARSY603E  Invalid value - The number of tasks must be numeric.

Explanation: The value specified for the maximum number of tasks that can be used per job submitted to an LPAR is not valid. This value is specified when setting up the Multijob Options for offload and restore processing.

ARSY604E  Invalid Value – The number of tasks must be between 1 and 99.

Explanation: The value specified for the maximum number of tasks that can be used per job submitted to an LPAR is not valid. This value is specified when setting up the Multijob Options for offload and restore processing.

ARSY605E  Invalid Value – Update Multijob Options value must be Y or N.

Explanation: The value specified for the Update Multijob option is not valid.

ARSY606E  You must specify both RECON Copy 1 and RECON Copy 2.

Explanation: A value was not specified for both the RECON Copy 1 field and the RECON Copy 2 field.

ARSY607E  Invalid Value – The value for the Use Multijob for DR Restore option must be Y, N, or U.

Explanation: The value specified for the Use Multijob for DR Restore option is not valid.

ARSY608E  The first character of the Multijob Prefix must be an alphabetic or national character.

Explanation: The first character specified for the Multijob Prefix option must begin with either an alphabetic character or a national symbol (#, @, or $) so
that when the multijob job name is generated it will be a valid z/OS job name.

**System action:** None.

**User response:** Specify an alphabetic character or a national symbol (#, @, or $) as the first character for the Multijob Prefix option.

---

**ARYR700E**  The specified dataset could not be found in the MVS catalog.

**Explanation:** The specified data set could not be found in the MVS catalog.

**User response:** Ensure that the data set name is correct.

---

**ARYR701E**  An unexpected return code from VSAM was encountered while doing an add operation to the control file.

**RC1=return_code**  **RC2=return_code_2.**

**Explanation:** A VSAM error occurred while attempting to perform an add operation to the specified Db2 control dataset.

**User response:** The RC1 and RC2 (VSAM return codes) are provided for investigation. Refer to the z/OS DFSMS Macro Instructions for Data Sets documentation for more information.

---

**ARYR702E**  A Db2 subsystem ID has to be entered for processing.

**Explanation:** There was no valid value entered for Db2 subsystem ID.

**User response:** Enter a valid subsystem ID and continue.

---

**ARYR704E**  The specified dataset could not be opened for I/O.

**Explanation:** A VSAM open error occurred while attempting to open the data set specified for the Db2 control data set.

**User response:** Verify that the VSAM data set is accessible and continue.

---

**ARYR705E**  An unexpected return code from VSAM was encountered while doing a read of the control file. **RC=return_code.**

**Explanation:** A VSAM READ error occurred while attempting to access the data set specified for the Db2 control data set.

**User response:** The return code (VSAM return code) is provided for investigation. Refer to the z/OS DFSMS Macro Instructions for Data Sets documentation for more information.

---

**ARYR706I**  The control file record for subsystem **subsystem_ID** has been successfully updated.

**Explanation:** The control file named in the field Db2 Control Dataset has been successfully updated to include the specified changes and definitions for the specified Db2 subsystem.

**User response:** None required.

---

**ARYR707E**  An unexpected return code from VSAM was encountered while doing an update operation of the control file.

**RC1=return_code_1**  **RC2=return_code_2.**

**Explanation:** A VSAM update error occurred while attempting to update the data set specified for the Db2 control data set.

**User response:** The RC1 and RC2 (VSAM return codes) are provided for investigation. Refer to the z/OS DFSMS Macro Instructions for Data Sets documentation for more information.

---

**ARYR708I**  The control file record for Db2 subsystem **subsystem_ID** has been successfully added.

**Explanation:** The control file named in the field Db2 Control Dataset has been successfully updated to include the new record, based on the specified definitions for the specified Db2 subsystem.

**User response:** None required.

---

**ARYR709E**  Invalid value. Valid options are 1 and 2.

**Explanation:** An invalid panel option was entered.

**User response:** Valid options are 1 and 2.

---

**ARYR720E**  File tailoring open returned a file tailoring already in progress condition.

**Explanation:** An attempt to perform file tailoring for utility customization failed. There was file tailoring session already in progress. File tailoring sessions cannot be performed concurrently.

**User response:** None required.

---

**ARYR721E**  File tailoring open returned the output file already in use condition -- ENQ failed.

**Explanation:** An attempt to open the Db2 control data set failed with an ENQ error. The data set is already open for output.

**User response:** Verify that you are the only user attempting to access this file.
File tailoring open returned the skeletal file or output file not allocated condition.

Explanation: An attempt to perform file tailoring failed because either the tailoring skeleton file or output file is not allocated.

User response: Verify that all required files are allocated prior to performing file tailoring.

File tailoring open returned a severe error condition.

Explanation: An attempt to perform file tailoring failed because a severe error condition was encountered on open.

User response: Verify that all required files are allocated and accessible prior to performing file tailoring.

File tailoring open returned an unknown code -- severe error.

Explanation: An attempt to perform file tailoring failed because a severe error condition was encountered on open.

User response: Verify that all required files are allocated and accessible prior to performing file tailoring.

File tailoring close returned a file not open condition -- severe error.

Explanation: An attempt to perform file tailoring failed because a file-not-open condition was encountered on close.

User response: Verify that all required files are allocated and accessible, and that there are no other tailoring sessions running concurrently with your session.

File tailoring close returned an output file in use condition.

Explanation: An attempt to perform file tailoring failed because the close process could not replace the pre-existing tailored member in the output file.

User response: Change the output member name to a new name or ensure that the output library allows for member replacement.

File tailoring close returned an output member exists in the output library and NOREPL was specified.

Explanation: An attempt to perform file tailoring failed because the close process could not replace the pre-existing tailored member in the output file.

User response: Change the output member name to a new name or ensure that the output library allows for member replacement.

File tailoring include returned a skeleton in use condition.

Explanation: An attempt to access a tailoring skeleton failed with an ENQ error (member in use).

User response: Ensure that all required files are allocated to perform file tailoring.

File tailoring include returned a skeleton does not exist condition.

Explanation: An attempt to perform file tailoring failed because the tailoring process could not locate a required tailoring skeleton.

User response: Ensure that all required files are allocated to perform file tailoring.

File tailoring include returned a severe error.

Explanation: An attempt to perform file tailoring failed because a severe error condition was encountered on close.

User response: Verify that all required files are allocated and accessible prior to performing file tailoring.

File tailoring include returned an unknown code -- severe error.

Explanation: An attempt to perform file tailoring failed because a severe error condition was encountered on close.

User response: Verify that all required files are allocated and accessible prior to performing file tailoring.

File tailoring close returned an output file not allocated condition.

Explanation: An attempt to close file tailoring failed because either a tailoring skeleton file or output file was not allocated.

User response: Verify that all required files are allocated and accessible, and that there are no other tailoring sessions running concurrently with your session.
AR YR733E  File tailoring include returned a data truncation or skeleton library or output file not allocated condition.

**Explanation:** An attempt to perform file tailoring failed because either the tailoring skeleton file or output file is not allocated.

**User response:** Verify that all required files are allocated prior to performing file tailoring.

---

AR YR734E  File tailoring include returned a severe error condition.

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on an include operation.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

---

AR YR735E  File tailoring include returned an unknown condition -- severe error.

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on an include operation.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

---

AR YR800E  Insufficient storage size. Region size of at least 50000 is required.

**Explanation:** Your region size must be greater than 30000.

**System action:** None.

**User response:** Increase your region size and try again.

---

AR YR802E  The PRDSHDR Db2 control file does not exist.

**Explanation:** The Db2 control file does not exist.

**System action:** None

**User response:** Verify the existence of the Db2 control file data set.

---

AR YR803I  No profiles were found that match your selection criteria. Press enter to create a new profile or change the selection criteria.

**Explanation:** No profiles were found that match the values that you entered in the Creator or Name fields as search criteria.

**System action:** None.

**User response:** Retry with different search criteria.

---

AR YR804I  Operation completed successfully.

**Explanation:** The operation performed completed successfully.

**System action:** None.

**User response:** None required.
ARYR805I  No subsystems were found.
Explanation: No Db2 subsystems were found.
System action: None.
User response: Verify that one or more Db2 subsystems have been defined in the Db2 control file data set.

ARYR806I  No objects were found that match your selection criteria.
Explanation: No objects were found that match your filter criteria.
System action: None.
User response: Retry with different filter criteria.

ARYR807E  Application profile or group profilegroupname already exists. Enter a unique profilegroupname name and press enter.
Explanation: The profile or group that you are trying to create already exists.
System action: None.
User response: Retry creating the profile or group using a different name.

ARYR808E  Profile profilename was not created.
Explanation: The profile that you are attempting to create was not created.
System action: None.
User response: Verify that you have specified all information correctly.

ARYR809I  No selected objects were found in this profile. Press enter to add new selected objects.
Explanation: No objects that you selected were found in this profile.
System action: None.
User response: Press enter to add a new object or select another object. You can also press CANCEL to exit the profile.

ARYR810E  Invalid CNUM parm. Valid parms are ON, OFF, or blank.
Explanation: CNUM was issued with an invalid parameter. Issuing CNUM with no parameter acts as an ON/OFF toggle. ON and OFF are the only parameters accepted. ON turns the CNUM display on. OFF turns the CNUM display off.
System action: None.
User response: Reissue CNUM using a valid CNUM parameter. Valid parameters are ON, OFF, or blank.

ARYR811E  Invalid COLS parm. Valid parameters are ON, OFF, or blank.
Explanation: An invalid parameter was entered with the COLS command.
System action: None.
User response: Enter a valid value as indicated in the message text.

ARYR812I  The FIND command requires specification of a target string.
Explanation: The FIND command was used without specifying a target string.
System action: None.
User response: Retry FIND command specifying a target string.

ARYR813E  The RFIND key works only after a FIND character string is entered.
Explanation: RFIND is not available for use until after a FIND command with specified criteria has been issued.
System action: None.
User response: Retry the RFIND after issuing a FIND command that has search criteria specified.

ARYR814E  An unknown column columnname was specified.
Explanation: The column specified on the line command is unknown.
System action: None.
User response: Specify a valid column name to continue.

ARYR815E  SORT is not supported for the specified column.
Explanation: The SORT command is not supported for the specified column.
System action: None.
User response: None required.

<td>None.</td>
</tr>
</tbody>
</table>
User response: Wait until the first session completes before starting the next file tailoring session.

**ARYR831E** File tailoring open returned the output file already in use condition -- ENQ failed.

**Explanation:** An attempt to open the Db2 control data set failed with an ENQ error. The data set is already open for output.

**System action:** None.

**User response:** Verify that you are the only user attempting to access this file.

**ARYR832E** File tailoring open returned the skeletal file or output file not allocated.

**Condition = condition.**

**Explanation:** An attempt to perform file tailoring failed because either the tailoring skeleton file or the output file is not allocated.

**System action:** None.

**User response:** Verify that all required files are allocated prior to performing file tailoring.

**ARYR833E** File tailoring open returned a severe error condition. Explanation: System Response: User Response:

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on open.

**System action:** None.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

**ARYR834E** File tailoring open returned an unknown code -- severe error.

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on open.

**System action:** None.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

**ARYR835E** File tailoring close returned a file not open condition -- severe error.

**Explanation:** An attempt to perform file tailoring failed because a file not open condition was encountered on close.

**System action:** None.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

**ARYR836E** File tailoring close returned an output file in use condition.

**Explanation:** An attempt to perform file tailoring failed because an output file in use condition was encountered on close.

**System action:** None.

**User response:** Verify that all required files are allocated and accessible and that there are no other tailoring sessions running concurrently with your session.

**ARYR837E** File tailoring close returned a skeletal file or output file not allocated condition.

**Explanation:** An attempt to close file tailoring failed because either a tailoring skeleton file or output file was not allocated.

**System action:** None.

**User response:** Verify that all required files are allocated and accessible and that there are no other tailoring sessions running concurrently with your session.

**ARYR838E** File tailoring close returned a severe error.

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on close.

**System action:** None.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

**ARYR839E** File tailoring close returned an unknown code -- severe error.

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on close.

**System action:** None.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.
File tailoring close returned an output member exists in the output library and NOREPL was specified.

**Explanation:** An attempt to perform file tailoring failed because the close process could not replace the pre-existing tailored member in the output file. System Response: User Response:

**System action:** None.

**User response:** Change the output member name to a new name or ensure that the output library allows for member replacement.

File tailoring include returned a skeleton does not exist condition.

**Explanation:** An attempt to perform file tailoring failed because the tailoring process could not locate a required tailoring skeleton.

**System action:** None.

**User response:** Assure that all required files are allocated to perform file tailoring.

File tailoring include returned a skeleton in use -- ENQ failed condition.

**Explanation:** An attempt to access a tailoring skeleton failed with an ENQ error which indicate the requested member is being used.

**System action:** None.

**User response:** Verify that all required tailoring files are allocated and that there are no other tailoring sessions running concurrently.

File tailoring include returned a data truncation or skeleton library or output file not allocated condition.

**Explanation:** An attempt to perform file tailoring failed because either the tailoring skeleton file or output file is not allocated.

**System action:** None.

**User response:** Verify that all required files are allocated prior to performing file tailoring.

File tailoring include returned a severe error condition.

**Explanation:** An attempt to perform file tailoring failed because a severe error condition was encountered on an include operation.

**System action:** None.

**User response:** Verify that all required files are allocated and accessible prior to performing file tailoring.

Allocation Error - An error was encountered allocating the ISPFILE DD. Process not completed.

**Explanation:** The ISPFILE DD allocation failed. The DD is already allocated and cannot be deallocated for this TSO session. The process did not complete successfully.

**System action:** None.

**User response:** None required.

Allocation Error - An error was encountered reading the ISPFILE DD. Process not completed.

**Explanation:** The ISPFILE DD allocation failed. The DD is already allocated and cannot be deallocated for this TSO session. The process did not complete successfully.

**System action:** None.

**User response:** None required.

Invalid Value. The number of VSAM generations must be numeric and must be between 1 and 9999.

**Explanation:** An invalid value was detected for VSAM generations

**System action:** None.

**User response:** Specify a valid value between 1 and 9999 to continue.

Invalid Command. Please enter a valid command.

**Explanation:** An invalid line command was entered.

**System action:** None.

**User response:** Enter a valid line command to continue.
**AR YR853E** Invalid Line Command. Please enter a valid line command.

**Explanation:** An invalid line command has been detected.

**System action:** None.

**User response:** Refer to acceptable line commands on the panel. Select a valid line command to continue.

---

**AR YR854E** Invalid Selection. Please enter a valid option.

**Explanation:** An invalid selection was entered.

**System action:** None.

**User response:** Provide a valid selection to continue.

---

**AR YR855E** Invalid Value.

**Explanation:** An invalid valid was entered or the input field is empty.

**System action:** None.

**User response:** Provide an appropriate value to continue.

---

**AR YR856I** Move is pending. Enter A(After) or B(Before).

**Explanation:** A move operation has not completed.

**System action:** None.

**User response:** You must specify an A (After) or a B (Before) to continue.

---

**AR YR857E** Result not found.

**Explanation:** The FIND operation has completed and the value specified was not found.

**System action:** None.

**User response:** None required.

---

**AR YR858I** No item(s) selected.

**Explanation:** No item(s) were selected on selection panel.

**System action:** None.

**User response:** Select one or more items to continue.

---

**AR YR859I** No LBDR Scanned Log Ranges were found. Press enter to create new LBDR Scanned Log Range.

**Explanation:** No previously recorded LBDR scanned log ranges have been recorded.

**System action:** None.

**User response:** Press enter to create a new LBDR scanned log range.

---

**AR YR860E** You do not have access rights to this profile.

**Explanation:** This profile was created with no access rights extended to any user other than the creator. Therefore only the creator may modify this profile.

**System action:** None.

**User response:** Verify with the creator and see if UPDATE rights should be given to this profile.

---

**AR YR861E** You only have rights to view this profile.

**Explanation:** This profile was created with only view access extended to any user other than the creator. Therefore only the creator may modify this profile.

**System action:** None.

**User response:** Verify with the creator and see if UPDATE rights should be given to this profile.

---

**AR YR862E** Profile was not deleted.

**Explanation:** The profile was not deleted.

**System action:** None.

**User response:** Verify that you have permission to delete the profile.

---

**AR YR863E** Profile was not opened.

**Explanation:** The profile was not opened.

**System action:** None.

**User response:** Verify that you have permission to rename the profile.

---

**AR YR864E** Profile was not opened. Explanation: System Response: User Response: None required.

**Explanation:** The profile was not opened.

**System action:** None.

**User response:** Verify that you have permission to open the profile.

---

**AR YR865E** Profile was not closed.

**Explanation:** The profile was not closed.

**System action:** None.

**User response:** Verify that the profile is in fact open.

---
**AR YR866I**  LBDR Scanned Log Range was deleted.

**Explanation:** The LBDR scanned ranged marked for deletion has been deleted.

**System action:** None.

**User response:** This message is informational and requires no user action.

---

**AR YR867E**  You cannot select more than one profile.

**Explanation:** Selection of more than one profile is not permitted.

**System action:** None.

**User response:** Select only one profile to continue.

---

**AR YR868I**  Validation was successful for plan **planname**. (Note that this is not a guarantee of successful execution.)

**Explanation:** The selected recovery plan that was generated was successfully validated.

**User response:** Proceed with the previously generated recovery plan. Validation does not guarantee successful execution.

---

**AR YR869E**  Invalid value. Please enter data set name.

**Explanation:** An invalid value was entered for the data set name.

**System action:** None.

**User response:** Provide a valid data set name to continue.

---

**AR YR870E**  Error during data set creation.

**Explanation:** An error was encountered during data set creation.

**System action:** None.

**User response:** Refer to errors in SDSF logs to determine why data set creation failed.

---

**AR YR871E**  Cannot open the data set **datasetname**.

**Explanation:** Unable to open specified data set.

**System action:** None.

**User response:** Verify that the data set exists and is currently allocated.

---

**AR YR872E**  Invalid value. Please enter member name.

**Explanation:** An invalid value was specified for the member name.

**System action:** None.

**User response:** None required.

---

**AR YR873E**  Profile was not exported.

**Explanation:** An error has occurred while exporting an application profile.

**System action:** None.

**User response:** Verify that you have specified a valid export data set name and that the data set is not currently in use.

---

**AR YR874E**  Profile was not imported.

**Explanation:** An error has occurred while importing an application profile.

**System action:** None.

**User response:** Verify that you have specified a valid import data set name and that the data set contains valid profile information.

---

**AR YR875E**  Cannot establish connection to server.

**Explanation:** Unable to establish a connection to the server.

**System action:** None.

**User response:** Verify that you have specified the correct server and port information. Server and port information are specified using the User Settings selection (0) from the main ISPF panel.

---

**AR YR876E**  Db2 subsystem was not found.

**Explanation:** The Db2 subsystem was not found.

**System action:** None.

**User response:** Verify that the Db2 subsystem is available for your use and was specified correctly.

---

**AR YR877I**  Recover job group completed with **MAXCC = MAXCCcode**

**Explanation:** The recover job group completed with a specified return code.

**System action:** None.

**User response:** None required.
AR YR881E  Error on file filename I/O Handler: iohandlername.

Explanation: An error occurred that is documented in the message.

System action: None.

User response: Correct the error described in the message and retry.

AR YR882E  Update is only valid for wildcard selections.

Explanation: Wildcards may only be edited in object list.

System action: None.

User response: Wildcards may only be edited in the object list.

AR YR883E  You cannot submit this job because some jobs were saved to data set with errors.

Explanation: An error occurred while saving the recovery plan job.

System action: None.

User response: Use SUBMIT to Recover Job Group or try to edit the jobs and resubmit the jobs.

AR YR886E  The start timestamp must be less than the end timestamp.

Explanation: The start timestamp that was specified is not less than the end timestamp.

System action: None.

User response: To continue specify a valid start timestamp that is less than the end timestamp.

AR YR887E  The start timestamp must be less than the current Db2 location timestamp.

Explanation: The start timestamp that was specified is not less than the current Db2 location timestamp.

System action: None.

User response: To continue specify a valid start timestamp that is less than the current Db2 location timestamp.

AR YR888E  The end timestamp cannot be more than the current Db2 location timestamp.

Explanation: The end timestamp that was specified cannot be more than the current Db2 location timestamp.

System action: None.

User response: To continue specify a valid end timestamp that is not more than the current Db2 location timestamp.

AR YR889E  The data set datasetname is not partitioned.

Explanation: The data set listed in the message is not a partitioned data set.

System action: None.

User response: Specify a partitioned data set to continue.

AR YR90E  The member membername is not found.

Explanation: The member listed in the message was not found.

System action: None.

User response: Verify member name and resubmit with correct member name to continue.

AR YR91E  The data set datasetname is not sequential.

Explanation: The data set listed in the message is not a sequential data set.

System action: None.

User response: Specify a sequential data set and resubmit to continue.

AR YR94E  Quiet Time Analysis is not allowed for Log Based Dropped Object Recovery profiles.

Explanation: You have requested Quiet Time Analysis on a Log Based Dropped Object Recovery profile. Quiet Time Analysis is not allowed for Log Based Dropped Object Recovery profiles.

System action: None.

User response: None required.

AR YR95E  No included objects were found in this profile.

Explanation: The application profile that you have selected does not include any objects.

System action: None.

User response: You must add one or more objects to the application profile.
**Explanation:** Only one selection is allowed.

**System action:** None.

**User response:** Selection of more than one item is not permitted. Select only one item to continue.

---

**Explanation:** No profiles were found that match your selection criteria. Please change your selection criteria or exit from this screen and create a new application profile.

**System action:** None.

**User response:** Change your selection criteria or exit from this screen and create a new application profile.

---

**Explanation:** An out of memory error was encountered.

**System action:** None.

**User response:** Exit from the application.

---

**Explanation:** Recovery plan generation has successfully completed for the specified recovery plan.

**System action:** None.

**User response:** No action required.

---

**Explanation:** Validate object translation has completed successfully. All objects will be translated to new target names.

**System action:** None.

**User response:** No action required.

---

**Explanation:** An invalid selection character was detected.

**System action:** None.

**User response:** Specify a valid value of "F" or "U" to continue.

---

**Explanation:** An invalid location has been specified as the new location for a column that you are moving.

**System action:** None.

**User response:** You must specify a number that is not greater than the number of columns.

---

**Explanation:** An invalid value that is not numeric has been entered for the column size. The number must be between the values in the MIN and MAX fields.

**System action:** None.

**User response:** You must enter a valid numeric value that falls within the range of values specified in the MIN and MAX fields.

---

**Explanation:** An invalid value has been entered for the column size. The value specified is out of the MIN and MAX field range.

**System action:** None.

**User response:** You must enter a valid numeric value that falls within the range of values specified in the MIN and MAX fields. MIN is the smallest acceptable value. MAX is the largest acceptable value.

---

**Explanation:** The values entered would result in the sum of the fixed column sizes to exceed the screen size. This is not allowed. Fixed columns are always displayed, and so must fit on the screen.

**System action:** None.

**User response:** You must either change the fixed column sizes so that the total is less than the screen size or cancel to return to the previous panel.

---

**Explanation:** At least one unfixed column cannot be displayed based on the requested column sizes. The cursor is positioned on the value where the problem was detected. The unfixed area on the screen would be too small to show the column where the cursor is placed.

**System action:** None.

**User response:** To correct the problem do one of the following:

- Make the column where the cursor is pointing smaller so that it can fit in the available unfixed area.
- Set the unfixed area to its maximum size (width)
- Set the fixed area smaller
- Cancel to return to the previous panel
Column does not fit in unfixed area in new configuration.

Explanation: The unfixed column where the cursor is positioned cannot be displayed based on the requested column sizes. The unfixed area on the screen would be too small to show this column.

System action: None.

User response: You must shrink the fixed area by either unfixing columns or making fixed columns smaller. The column where the cursor is positioned cannot be partially displayed (min-max) so its size cannot be changed.

New configuration makes this column size invalid.

Explanation: Fixing the requested columns would shrink the available area for unfixed columns so that some may not display. The cursor is placed on a row that represents one such column. Therefore, the requested configuration is not allowed.

System action: None.

User response: To change column sizes, cancel out of the CFIX function and invoke the CSIZE function. Either cancel to exit CFIX with no change or blank out one or more FIX selections until an allowable fixed size is reached.

Invalid fixed selections. Would not leave enough space for this column.

Explanation: At least one unfixed column cannot be displayed based on the requested fixed selections for the columns. The cursor is positioned on the row that represents one such unfixed column, whose minimum displayable size would not fit in the available screen area.

System action: None.

User response: You must shrink the requested fixed area by either:
- Requesting fewer fixed columns.
- Unfixing one or more fixed columns.
- Cancel out of CFIX and invoke CSIZE in order to shrink one or more fixed columns enough so that all unfixed columns have the space they require.

Duplicate Cmd values entered.

Explanation: Duplicate values have been specified in the Cmd line.

System action: None.

User response: Re-enter the Cmd values.

Invalid sort number. Enter a valid digit.

Explanation: An invalid character was entered in the sort column. Valid characters are the digits 1, 2, 3,... up to 9, or the number of sortable columns, whichever is less.

System action: None.

User response: Specify a valid sort number.

Same sort number entered twice.

Explanation: The same sort number was entered for more than one column. The screen is positioned to the second instance. Sort sequence numbers must be unique.

System action: None.

User response: Specify a valid sort number.

Sort sequence skips a number.

Explanation: The selected sorting sequence skips a number. This is not allowed. The screen is positioned to a selection whose number is lacking an immediate predecessor. The sort sequence is completely rebuilt from the Cmd (and Dir) information. Any previously existing sort sequence is entirely replaced. It is not added to or extended by the new entries.

System action: None.

User response: You must specify a valid sort sequence that does not skip a number.

Invalid sort direction entered. Must be A or D (ascending/descending)

Explanation: The selected sorting direction is invalid. Only an A (ascending) or D (descending) can be specified. A blank indicates ascending (default).

System action: None.

User response: You must specify a valid sorting direction.

Dir not valid without Ord.

Explanation: The selected sorting direction is invalid. Only an A (ascending) or D (descending) can be specified. A blank indicates ascending (default).

System action: None.

User response: You must specify a valid sorting direction.
Fix columns cannot exceed screen size.

**Explanation:**
More columns were selected to be fixed than will fit on the screen.

**System action:** None.

**User response:** Remove the (F) selection character from one or more columns.

---

Invalid entry. Must be numeric.

**Explanation:**
The entry for this field must be a numeric value.

**System action:** None.

**User response:** Specify a numeric value.

---

Invalid entry for permanent column.

**Explanation:**
You have made an invalid entry for a permanent column.

**System action:** None.

**User response:** Specify a valid entry for the permanent column.

---

Invalid entry for fixed column.

**Explanation:**
You have made an invalid entry for a fixed column.

**System action:** None.

**User response:** Specify a valid entry for the fixed column.

---

Invalid entry for unfixed column.

**Explanation:**
You have made an invalid entry for an unfixed column.

**System action:** None.

**User response:** Specify a valid entry for the unfixed column.

---

Invalid Column Function value. Valid values: 1, 2, 3, 4

**Explanation:**
An invalid column function value was detected.

**System action:** None.

**User response:** Specify a valid value of 1, 2, 3 or 4 to continue.

---

Invalid Permanent View value. Valid values: Y, N

**Explanation:**
An invalid Permanent View value was detected.

**System action:** None.

**User response:** Specify a valid value of Y or N to continue.

---

Invalid Reset View value. Valid values are Y, N

**Explanation:**
An invalid Reset View value was detected.

**System action:** None.

**User response:** You must specify a valid value of Y or N to continue.

---

Invalid Stop Sorting value. Valid values: Y, N

**Explanation:**
An invalid Stop Sorting value was detected.

**System action:** None.

**User response:** You must specify a valid value of Y or N to continue.

---

TBCREATE failed. RC=returncode

**Explanation:**
TBCREATE was issued to create a view. It failed with a (hex) return code as indicated in the message.

**System action:** None.

**User response:** Review ISPTLIB allocation and data set characteristics. Review security controlled access to ISPTLIB data sets. For information about return codes, refer to the ISPF Services Guide.

---

TBOPEN failed. RC=returncode

**Explanation:**
TBOPEN was issued to open a view. It failed with a (hex) return code as indicated in the message.

**System action:** None.

**User response:** Review ISPTLIB allocation and data set characteristics. Review security controlled access to ISPTLIB data sets. For information about return codes, refer to the ISPF Services Guide.

---

TBCLOSE failed. RC=returncode

**Explanation:**
TBCLOSE failed with a (hex) return code as indicated in the message.

**System action:** None.

**User response:** Review ISPTLIB allocation and data set characteristics. Review security controlled access to ISPTLIB data sets. For information about return codes, refer to the ISPF Services Guide.
**ARYS005E**  The first control card must be "BACKUP" or "RESTORE".

**Explanation:** An error occurred when validating the control card. The first control card must be the BACKUP or RESTORE control card.

**User response:** Ensure that the first control card on the SYSIN DD begins with either BACKUP or RESTORE.
**ARYS007E**  Error opening SYSIN DD.

**Explanation:** An attempt to open the data set defined for the SYSIN DD failed. A WTO is also issued with this message.

**User response:** The JCL must specify a SYSIN DD. Check the JCL for the presence of the SYSIN DD. Rebuild the job if necessary.

**ARYS008E**  Invalid profile creator creator name specified. Profile creator must be 8 bytes or less.

**Explanation:** The profile creator name is more than 8 characters.

**User response:** Correct the profile creator name and retry.

**ARYS009E**  Invalid profile name profile name specified. Profile name must be 30 bytes or less.

**Explanation:** The profile name is more than 30 characters.

**User response:** Correct the profile name and retry.

**ARYS010E**  Invalid profile name specified. It must be in the format "CREATOR. NAME".

**Explanation:** The profile name and/or creator name specified is invalid. The profile must be in the format profile creator.profile name.

**User response:** Correct the profile name.

**ARYS011E**  Invalid token name specified.

**Explanation:** One of the options on the backup control cards is invalid. The option is listed in the message.

**User response:** Correct the invalid option and resubmit.

**ARYS012E**  Unmatched quotes found in input.

**Explanation:** A control card is missing a quote from a required set of quotes.

**User response:** Correct the control cards to add a matching quote and resubmit.

**ARYS013I**  Backup profile profile creator:profile name was read from the repository.

**Explanation:** The backup profile listed in the message was successfully read.

**User response:** None required.

**ARYS014E**  Backup profile profile creator:profile name was not found in the repository.

**Explanation:** The backup profile listed in the message probably has been renamed or deleted.

**User response:** Check for the presence of the profile. Rename or recreate the backup profile if necessary.

**ARYS015E**  Fatal error fetching backup profile profile creator:profile name from the repository.

**Explanation:** An internal error occurred when attempting to retrieve the backup profile from the ARY repository.

**User response:** Contact IBM Customer Support.

**ARYS016E**  Call attach error connecting to Db2 SSID subsystem ID. Check installation and authorization.

**Explanation:** ARY cannot connect to the specified subsystem. The call attach facility has failed.

**User response:** Confirm that the Db2 subsystem is active and that authorizations are properly granted.

**ARYS017E**  Db2 SSID subsystem ID was not found in the Backup/Recovery control file.

**Explanation:** The subsystem ID listed in the message was not found in the ARY control file.

**User response:** Ensure that the subsystem was defined in Db2 Recovery Expert using the Setup option from the main menu. Refer to the configuration documentation for information.

**ARYS018E**  Db2 SSID subsystem ID will not be backed up in this execution.

**Explanation:** There was an error with the listed subsystem ID. Db2 Recovery Expert cannot back up the subsystem.

**User response:** Check the SYSPRINT DD for error messages explaining why the SSID could not be backed up.

**ARYS019E**  You are not authorized to execute backup profile profile creator:profile name.

**Explanation:** The user ID under which the backup job is being built does not have sufficient RACF authority.

**User response:** Check with your systems administrator to ensure the proper authorizations. Refer to the installation documentation for information about configuring RACF authority for Db2 Recovery Expert.
The following volumes are being used by Subsystem subsystem ID but are not being backed up:

Explanation: Db2 Recovery Expert validation processing found volumes that are in use by the specified subsystem that were not included in the backup profile. The backup will not be taken.

User response: Update the profile and use the VOLUME command to find all volumes associated with the subsystem.

Profile profile creator.profile name is currently being used by another user or process.

Explanation: The profile is being used by someone else. Db2 Recovery Expert must have exclusive use of the profile during the backup and restore processes.

User response: Clear the contention on the backup profile and resubmit the job.

Subsystem subsystem ID is currently being backed up or recovered by another process.

Explanation: Another backup of this subsystem is running. Only one Db2 Recovery Expert backup can be running at a time.

User response: You can resubmit the job when the other backup has completed.

Failed to initialize ARY Command processor.

Explanation: An internal error occurred when attempting to start the Db2 Recovery Expert command processor.

User response: Contact IBM Customer Support.

The job steplib is not APF authorized.

Explanation: The Db2 Recovery Expert step libraries are not APF authorized. APF authorization for the step libraries is required.

User response: APF authorize the step libraries. Refer to the installation documentation for more information.

Error loading module module name.

Explanation: An internal error occurred when attempting to load the listed module.

User response: Contact IBM Customer Support.

Last command = command name Error = error message.

Explanation: An error occurred in the Db2 Recovery Expert command processor. The errant command and any associated message are listed in the message.

User response: Contact IBM Customer Support.

Source volser volume serial is not a valid online MVS volume.

Explanation: The source volume listed in the message is now offline. Db2 Recovery Expert requires the source volume to be online to perform the backup.

User response: Contact your systems programmer for help bringing the volume online.

Source volser volume serial is not on an EMC Symmetrix array.

Explanation: The listed source volume is not on an EMC Symmetrix array. The source volume cannot be backed up or restored.

User response: Move the data on the volume to a EMC Symmetrix array and update the profile.

Target unit target_unit is not a valid MVS UCB unit.

Explanation: The target unit specified is not valid on this z/OS system.

User response: Rerun the system restore job with the RESTORE-TO-VOLSER keyword added to the system restore job JCL at the disaster recovery site. If the problem persists, consult with your system programmer.

Target unit target unit is not on an EMC Symmetrix array.

Explanation: The listed target unit does not reside on an EMC Symmetrix.

User response: Move the target unit to a Symmetrix or change the profile to specify a target unit located on the Symmetrix.

Source volser volume serial is not on the same EMC Symmetrix array as target unit target unit.

Explanation: The source volume and its specified target unit are not located on the same Symmetrix array. The source volume and target unit must be on the same array.

User response: Edit the backup profile and select a different target unit that is on the same array.
ARYS035E Source volser volume serial is not on the same device type as target unit target unit.

Explanation: The listed source volume is not the same device type as its associated target unit. The source volume and target unit must be of the same device type.

User response: Update the profile and specify a target unit of the same device type.

ARYS036E Target unit target unit is not an EMC BCV device.

Explanation: The backup profile specified a BCV type backup, but the target unit is not a BCV device.

User response: Edit the backup profile and select a different target unit that is a BCV device.

ARYS037E The profile contains blank target units.

Explanation: The backup profile contains source volumes that do not have target volumes mapped to them.

User response: Update the backup profile and specify a target volume for each source volume.

ARYS038I Performing profile setup...

Explanation: This informational message states that profile setup is under way.

User response: None required.

ARYS039I Volume map validation complete.

Explanation: This informational message states that the volume validation has completed.

User response: None required.

ARYS041W BCV Establish Bypassed due to previous error.

Explanation: No more establishes will be performed due to the previous error.

User response: None required.

ARYS047W MVS UCB Scan Bypassed due to previous error.

Explanation: No more UCB scans of source or target units will be performed due to the previous error.

User response: None required.

Explanation: An internal error occurred. For an invalid source volume, the message may appear: MVS UCB scan failed for source volume with Return code: rc

User response: Rerun the system restore job with the RESTORE-TO-VOLSERS keyword added to the system restore job JCL at the disaster recovery site. If the problem persists, contact IBM Customer Support.

ARYS052E MVS UCB Scan failed for BCV Unit unit name.

Explanation: An internal error occurred.

User response: Contact IBM Customer Support.

ARYS054E MVS UCB scan failed for unit_type unit_name.

Explanation: An internal error occurred.

User response: Rerun the system restore job with the RESTORE-TO-VOLSERS keyword added to the system restore job JCL at the disaster recovery site. If the problem persists, contact IBM Customer Support.

ARYS057I MVS UCBSCAN will continue because Continue on Errors Flag has been set.

Explanation: A UCB scan failed for a unit, but Db2 Recovery Expert has determined the information through another means.

User response: None required.

ARYS061E EMC FC01 Call failed on unit device name with return codes.

Explanation: An internal error occurred.

User response: Contact IBM Customer Support.

ARYS065W BCV Re-Establish Bypassed due to previous error.

Explanation: No more BCV re-establishes will be performed due to the previous error.

User response: None required.

ARYS072W Target Unit target unit is also being used in backup profile profile creator profile name.

Explanation: The listed target unit is also being used as a target unit in the listed profile name. At backup time, if this target unit has been used by the other profile, the backup will fail.
User response: Select a different target unit.

**ARS073E** Error occurred executing Db2 command on subsystem ssid.

Explanation: An error occurred while executing the listed Db2 command on the subsystem. The command and the Db2 error associated with its execution will be displayed.

User response: Check that the user who submitted the job has the proper Db2 authority to issue the listed command.

**ARS074I** Target target unit is still synchronizing to source volume source volume.

Explanation: The listed target unit has been established to the listed source volume, but the target volume is still in the process of synchronizing. A backup cannot be taken until this process is completed.

User response: None required.

**ARS075I** Performing Db2 source volume validation...

Explanation: Db2 Recovery Expert is in the process of ensuring all the volumes in the Db2 subsystem are included in the backup profile.

User response: None required.

**ARS076I** Db2 source volume validation complete. All Db2 volumes are in this profile.

Explanation: Db2 Recovery Expert validated all volumes in the Db2 subsystem and all have been included in the backup profile.

User response: None required.

**ARS078E** Profile setup is needed. Place "SETUP" control card after the profile name.

Explanation: The profile requires profile setup before a backup can be taken.

User response: Add the SETUP card to the job as follows and resubmit the job: //SYSIN DD * BACKUP profile creator."profile name" SETUP

**ARS079I** Profile setup is complete. Remove the "SETUP" control card to run the backup.

Explanation: The profile has been successfully set up.

User response: Remove the SETUP control card and run the backup.

**ARS080I** Backup with timestamp timestamp, generation generation number was saved in the repository.

Explanation: The information from the backup listed in the message has been successfully saved in the Db2 Recovery Expert repository.

User response: None required.

**ARS081I** Backup with timestamp timestamp, generation generation number was removed from the repository.

Explanation: The listed backup has been removed from the Db2 Recovery Expert repository.

User response: None required.

**ARS082I** Performing BCV splits to create backup...

Explanation: Db2 Recovery Expert is splitting the BCVs required to create the backup.

User response: None required.

**ARS083I** Performing Snap Volumes to create backup...

Explanation: Db2 Recovery Expert is snapping the volumes to create the backup.

User response: None required.

**ARS084I** Backup of profile profile creator:profile name has been created.

Explanation: The backup based on the information in the listed profile has been successfully created.

User response: None required.

**ARS085I** Performing BCV establish on next generation of BCVs.

Explanation: The backup has been successfully created.

User response: None required.

**ARS089E** An Error has occurred obtaining ZPARM information from Db2 Subsystem ssid.

Explanation: An error occurred when attempting to obtain the DSNZPARMS load module for the listed SSID.

User response: Check that the SETUP information was entered correctly for the SSID you are attempting to back up.
**ARYS091E** Error splitting BCV BCV device name from Standard unit standard unit.

**Explanation:** An error occurred when splitting the BCV device from the standard unit. This message appears with ARY0141E, which provides the reason for the failure.

**User response:** Refer to the EMC TimeFinder OS/390 and z/OS Product Set Message and Code Guide to resolve the error.

<table>
<thead>
<tr>
<th><strong>ARYS092E</strong></th>
<th>Error calling SymDevice on Standard volser standard unit.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong> An error occurred when attempting to access the listed Symmetrix device.</td>
<td></td>
</tr>

<td></td>
</tr>
</tbody>
</table>

| **ARYS094I** | Volser volser (Unit: unit) is still online|offline. |
|-------------|------------------------------------------|
| **Explanation:** This informational message appears while Db2 Recovery Expert is checking the volume status. The volume listed in the message is either online or offline. Db2 Recovery Expert will continue to check the volume status until the required status is set. |
| **User response:** None required. |

| **ARYS095I** | Waiting seconds seconds for volumes to go online|offline... |
|-------------|-----------------------------------------------|
| **Explanation:** This informational message appears while Db2 Recovery Expert is checking the volume status. Db2 Recovery Expert is waiting the specified amount of time for the volume to go online or offline. The amount of seconds (listed in the message) that Db2 Recovery Expert will wait is set in the Db2 Recovery Expert PARMLIB. |
| **User response:** None required. |

| **ARYS096E** | Volumes are pending online|offline. Make sure they are not in use on any MVS system. |
|-------------|--------------------------------------------------------|
| **Explanation:** Db2 Recovery Expert has been waiting for a volume to go online or offline. The amount of wait time has exceeded the wait time specified in the Db2 Recovery Expert PARMLIB. |

**User response:** If Db2 Recovery Expert is waiting for the volume to go offline, it may be in use by some other z/OS or VM system; check with your systems programmer. You might need to configure Db2 Recovery Expert to route the offline/online commands to all members of the sysplex. This is controlled by the ROUTE_ALL_ON_CONSOLE_CMDS parameter in the PARMLIB member. Refer to documentation for configuring the PARMLIB member for information about the parameter.

<table>
<thead>
<tr>
<th><strong>ARYS102W</strong></th>
<th>Source volume volume contains both object object usercat data and active log active log usercat data.</th>
</tr>
</thead>
</table>
| **Explanation:** IBM Customer Support detected log data sets on the same volume as object data sets. The backup will continue but the backup will be marked as

Appendix F. Messages and Codes 873
"Mixed Data", and any restores done from this backup must include data and logs. The message lists the type of mixed data found on the volume.

User response: None required.

ARYS103W All recoveries of this backup must include log recovery.

Explanation: IBM Customer Support detected log data sets on the same volume as object data sets. The backup will continue but the backup will be marked as "Mixed Data", and any restores done from this backup must include data and logs.

User response: None required.

ARYS104E Source volser volser is currently established to BCV unit target unit which is not in this profile.

Explanation: This listed source volume is established to the listed target unit. However, the target unit is not included in the backup profile. Db2 Recovery Expert cannot establish another BCV to this source unit until the currently established BCV has been split. Since the currently established BCV is not specified in this profile, it cannot be split. The backup will not be taken.

User response: Use EMC Timefinder utilities to split this BCV from the source volume if you still want to back up the source volume.

ARYS105E Target BCV target unit is not currently paired to Volser source unit.

Explanation: The target unit listed in the message is not paired to the source unit that is in the profile. The backup will not be taken.

User response: Run the setup process on this profile to correct the error.

ARYS106E Target BCV target_unit is currently established to Unit source_unit which is not in this profile.

Explanation: The BCV target unit specified is currently established to a source volume that is not included in this profile.

User response: Use the EMC Timefinder utilities to split this BCV from its currently established standard unit.

ARYS107E Source volser source volume is a BCV.

Explanation: The source volume listed in the message is a BCV. For a BCV backup profile, the source volume cannot reside on a BCV volume.

User response: Either use a SNAP backup profile or copy the data to a non-BCV volume and update the profile.

ARYS108E Error saving profile

profile_creator.profile_name.

Explanation: An internal error occurred when attempting to save the backup profile.

User response: Contact IBM Customer Support.

ARYS109E Target BCV target unit is expected to be split from source volume source volume and is not.

Explanation: Db2 Recovery Expert expected to find a different BCV established to the specified source volume. The current generation is out of sync.

User response: Run profile setup on the profile.

ARYS110E Target BCV target unit is expected to be established to source volume source volume and is not.

Explanation: Db2 Recovery Expert expected the listed target BCV to be established to the source unit.

User response: Run profile setup on the profile.

ARYS111E Target BCV target unit is still synchronizing to source volume source volume. Backup not available.

Explanation: The specified BCV generation has not fully synchronized with the listed source volume. The backup will not be taken.

User response: You might want to configure IBM Customer Support to retry the synchronization or to issue a WTOF. This is controlled by the WAIT_FOR_VOLUME_SYNC parameter in the PARMLIB member. Refer to configuration instructions for the PARMLIB member for information about the parameter.

ARYS112E SSID ssid was not found on this MVS LPAR.

Explanation: The Db2 subsystem ID listed in the message is not found.

User response: Contact IBM Customer Support.

ARYS113E Unknown error determining datasharing status of SSID ssid.

Explanation: An internal error occurred.

User response: Contact IBM Customer Support.
ARYS16E Abnormal termination has been detected. Resuming log activity on SSID ssid.

Explanation: An internal error occurred while the Db2 logs were suspended. Logging will be resumed.

User response: Contact IBM Customer Support.

ARYS17E Error saving backup information in the repository datasets.

Explanation: An internal error occurred.

User response: Contact IBM Customer Support.

ARYS18E Error text

Explanation: Internal error. Some action is necessary as normal processing has ended unsuccessfully.

User response: Contact IBM Customer Support. Please provide the text of this message, along with the preceding or following messages.

ARYS19E BCV hold | release | establish | re-establish failed on unit target unit. Additional information.

Explanation: The BCV process failed on the listed target unit. Additional information is provided in the message text as to the cause of the error.

User response: Note the error message contents and contact IBM Customer Support.

ARYS20E Invalid generation specified. It must be numeric between 1 and 99 inclusive.

Explanation: An invalid generation number was found in the control card for the restore.

User response: Correct the control card and resubmit.

ARYS21E Backup profile creator.profile name generation generation was not found in the repository.

Explanation: The profile and/or its backups were not found in the repository. Either the profile name was mistyped or the backups have been deleted.

User response: Ensure the profile creator and name are correct. Contact IBM Customer Support if necessary.

ARYS22E Fatal error fetching backup profile creator.profile name generation generation from the repository.

Explanation: An internal error occurred.

User response: Contact IBM Customer Support.

ARYS23E Backup profile creator.profile name generation generation was read from the repository.

Explanation: The backup information for the listed generation was successfully read.

User response: None required.

Explanation: This message is used in conjunction with other messages to report return code, reason code, and register contents for debugging purposes.

User response: None required.

ARYS25E Source volume source volume contains log data. This profile specifies "Data Only".

Explanation: Db2 Recovery Expert detected that the specified source volume contains log data, but the backup profile specified data only.

User response: Either separate the log and object data or change the profile to a full backup to include all data and log volumes.

ARYS26E Waiting seconds seconds for background splits to complete...

Explanation: The BCV volumes are still in the process of being split. IBM Customer Support will wait the number of seconds specified in the PARMLIB for the split to complete.

User response: None required.

ARYS28I Requesting wait status from operator...

Explanation: The target BCV is still synchronizing to the source volume. The WAIT_FOR_VOLUME_SYNC parameter in the IBM Customer Support PARMLIB is set to prompt with a WTOR if any BCVs are not fully synchronized to their standard volumes. IBM Customer Support is issuing a WTOR to ask if it should continue waiting or quit.

User response: Reply to the WTOR.

ARYS29E Reply was to "NOT WAIT". Backup will terminate.

Explanation: The target BCV was synchronizing to the source volume. Db2 Recovery Expert issued a WTOR to ask if it should continue waiting or quit. The reply was N to not wait. The backup will be terminated.

User response: None required.
ARSYS130I  Reply was to "WAIT". Waiting 30 seconds for BCVs to synchronize.
Explanation:  The target BCV was synchronizing to the source volume. IBM Customer Support issued a WTOR to ask if it should continue waiting or quit. The reply was Y to wait. Db2 Recovery Expert will wait 30 seconds and re-issue the WTOR if necessary.
User response:  None required.

ARSYS131E  Db2 version must be at least version V710 to execute.
Explanation:  Db2 Recovery Expert detected that the Db2 subsystem is at a version prior to Db2 V7. You can only use Db2 Recovery Expert on subsystems that are Db2 V7 or later.
User response:  None required.

ARSYS132E  User is not authorized to execute a System Backup Utility | Restore System Utility for Db2 SSID ssid.
Explanation:  The TSO user ID attempting to execute a Db2 Recovery Expert system backup or system restore does not have sufficient authority to do so.
User response:  Refer to the installation instructions for information about how to set up RACF authority for a TSO user ID.

ARSYS133I  BCV | Snap unit device name is still online.
Explanation:  The listed volume is still online. Db2 Recovery Expert will continue attempting to take the volume offline.
User response:  None required.

ARSYS134I  Splitting current generation of BCVs.
Explanation:  Db2 Recovery Expert is in the process of splitting the current generation of BCVs.
User response:  None required.

ARSYS135I  Profile profile creator.profile name has been marked as "Setup Needed".
Explanation:  This message appears after a BCV restore is complete. The setup process must be re-run in order to re-establish a generation of BCVs.
User response:  Run profile setup on the profile.

ARSYS136I  Disconnecting user catalogs.
Explanation:  In preparation for a restore, Db2 Recovery Expert is disconnecting the user catalogs.
User response:  None required.

ARSYS137I  Varying volumes online | offline.
Explanation:  Db2 Recovery Expert is in the process of varying volumes online or offline.
User response:  None required.

ARSYS138I  Restoring volumes.
Explanation:  Db2 Recovery Expert is in the process of varying volumes online or offline.
User response:  None required.

ARSYS140E  SYM of volume volume serial is lower than 5x67. It must be at least 5x67.
Explanation:  The device listed in the message is not at the appropriate microcode level. Db2 Recovery Expert requires all devices to be at microcode 5x67 or higher. Refer to software and hardware requirements for specifics.
User response:  Contact EMC to update your Symmetrix devices to the latest microcode version.

ARSYS141E  EMC ECA_Qry | ECA_SET | BCV_InSplit failed. Error message text.
Explanation:  An EMC command failed. Additional information is provided in the message text as to the cause of the error.
User response:  Note the error message contents and contact IBM Customer Support.

ARSYS142E  EMC ECA_Clr failed on unit volume serial. Error message text.
Explanation:  An EMC command failed on the listed unit. Additional information is provided in the message text as to the cause of the error.
User response:  Note the error message contents and contact IBM Customer Support.

ARSYS143E  Open | Closed ECA window already exists on volser volume_serial.
Explanation:  One of the source volumes has an existing hold on the I/O (ECA window).
User response:  If the window is closed, you can set CLEAN_OLD_CONSIST_WINDOWS to Y in the Db2 Recovery Expert PARMLIB member and resubmit the job.
**ARYS144E** Target Unit target unit is a volume in an existing backup for profile profile creator:profile name.

**Explanation:** The target unit listed in the message is listed in another profile as a backup volume. Therefore, this unit cannot be used as a target unit.

**User response:** Update the profile and select a different target unit.

**ARYS145E** Subsystem subsystem ID is still online. The Subsystem must be taken offline before running this job.

**Explanation:** Db2 Recovery Expert has detected that the Db2 subsystem you are attempting to restore is online. The subsystem must be offline before running the restore.

**User response:** Issue the -STOP Db2(subsystem ID) command to take the subsystem offline.

**ARYS146I** Removing volser volume serial from this restore. It contains only log data.

**Explanation:** The volume being restored contains only log data, but you specified to restore data only. This volume will not be restored.

**User response:** None required.

**ARYS148I** Sym Device volume serial does not support "Consistency" functionality.

**Explanation:** The device listed in the message is not at the proper microcode level to support ECA. Refer to the software and hardware requirements section for software requirements for ECA support.

**User response:** None required.

**ARYS149E** EMC ECA_Clr failed on SYM Device volume serial. Error message text.

**Explanation:** An EMC command failed. Additional information is provided in the message text as to the cause of the error.

**User response:** Note the error message contents and contact IBM Customer Support.

**ARYS151E** Snap target target unit is an established BCV.

**Explanation:** The target unit associated with the SNAP source volume is an established BCV.

**User response:** Choose a different target unit of the same device type.

**ARYS152I** Suspending | Resuming log activity to subsystem subsystem ID.

**Explanation:** Db2 Recovery Expert is issuing either the SET LOG SUSPEND or SET LOG RESUME command to manage log activity.

**User response:** None required.

**ARYS153I** Enque of user cat user catalog failed. Will retry in 2 seconds...

**Explanation:** Db2 Recovery Expert requires exclusive use of the listed user catalog while performing the restore. It will wait again and retry in 2 seconds.

**User response:** None required.

**ARYS154E** Enque of user cat user catalog failed.

**Explanation:** Db2 Recovery Expert requires exclusive use of the listed user catalog while performing the backup. Another z/OS system might be accessing this catalog.

**User response:** You might need to set ROUTE_ALL_ON_CONSOLSE_CMDS to Y in the Db2 Recovery Expert PARMLIB member. This setting will disconnect the catalog from the master catalog on all z/OS systems in the sysplex.

**ARYS155E** BCV target unit is still restoring to standard unit volume serial.

**Explanation:** Db2 Recovery Expert needs to wait for the restore to complete before continuing with the next process.

**User response:** None required.

**ARYS156E** Backup contains volumes with both log and object data. You must specify RESTORE-LOGS.

**Explanation:** The control card is missing the RESTORE-LOGS keyword.

**User response:** Add the RESTORE-LOGS keyword to the control cards for this restore.

**ARYS157I** Release of unit device name bypassed. Unit is not held.

**Explanation:** Because the unit is not being held, the BCV or standard volume listed in the message does not need to be released.

**User response:** None required.
Hold of unit device name bypassed. Unit is already held.

**Explanation:** The BCV or standard volume listed in the message is already being held.

**User response:** None required.

Target unit device name has an active SNAP session. Wait till complete.

**Explanation:** The listed target unit has either a current active SNAP session or too many old completed SNAP sessions to start a new one.

**User response:** You might need to set CLEAN_OLD_SNAP_SESSIONS to Y in the Db2 Recovery Expert PARMLIB member to remove the old SNAP sessions.

Source volser volume serial has an active SNAP session. Wait till complete.

**Explanation:** The listed source volume has either a current active SNAP session or too many old completed SNAP sessions to start a new one.

**User response:** You might need to set CLEAN_OLD_SNAP_SESSIONS to Y in the Db2 Recovery Expert PARMLIB member to remove the old SNAP sessions.

EMC PathGroups call failed for unit device name.

**Explanation:** An internal error occurred.

**User response:** Contact IBM Customer Support.

Parmlib used for this execution.

**Explanation:** This informational message states that the Db2 Recovery Expert PARMLIB member will be utilized in setting default values for the job.

**User response:** None required.

Closed ECA Window is being cleared from Volser volume serial.

**Explanation:** An Enginuity Consistency Assist (ECA) window was found on this volume but was not active (no I/O is being held). The ECA window was cleared.

**User response:** None required.

ECA Window has timed out. Backup is not consistent.

**Explanation:** The backup operation could not complete in the specified time to hold the I/O on the volumes. The Db2 Recovery Expert PARMLIB member setting of CONSIST_TIME_OUT_SECONDS controls how long the I/O can be held before this error occurs.

**User response:** Try making the value for CONSIST_TIME_OUT_SECONDS higher.

Volume volume is not in this profile. These subsystem datasets reside on this volume:

**Explanation:** The relevant volume is missing in the backup

**User response:** Add the relevant volume to the profile.

Dataset: dname

**Explanation:** See message ARYS166E.

**User response:** See message ARYS166E.

Background splits wait limit exceeded.

**Explanation:** The number of times Db2 Recovery Expert has checked to see if a background split has completed has exceeded the WAIT_RETRIES wait limit specified in the PARMLIB member.

**User response:** Increase either the BCV_WAIT_SECONDS or WAIT_RETRIES in the BCV_SPLIT_PARAMETERS section of the Db2 Recovery Expert PARMLIB member.

BCV unit unit_name is not ready. Waiting 2 seconds to retry BCV Establish|Re-establish.

**Explanation:** Db2 Recovery Expert is attempting to establish or re-establish the unit listed in the message, but the device is not ready. Db2 Recovery Expert will retry until the BCV is established or the number of retries exceeds the wait limit.

**User response:** None required.

Standard unit volume serial is not ready. Waiting 2 seconds to retry BCV restore.

**Explanation:** Db2 Recovery Expert is restoring a BCV, but the standard device is not ready. Db2 Recovery Expert will retry until the BCV is established or the number of retries exceeds the wait limit.

**User response:** None required.

Restore failed on unit volume serial. Error message text.

**Explanation:** The restore command failed. Additional information is provided in the message text as to the cause of the error.

**User response:** Note the error message text and contact IBM Customer Support.

</tbody>
</table>
Error saving backup report to repository.

Explanation: After completing the backup, Db2 Recovery Expert attempted to save a backup report to its repository. The backup is still valid.

User response: Examine the z/OS error messages issued to determine the reason the backup report could not be saved.

Profile profile creator:profile name has been marked "Setup Needed".

Explanation: Db2 Recovery Expert determined the next run of the profile needs the "SETUP" card added. This is the expected behavior for a one generation BCV profile. If the profile contains more than one generation, possible causes may be that BCVs are not established to the expected standard volumes, or there was an error during a backup and the BCV profile needs to undergo profile setup.

User response: Add the SETUP control card to the backup job and resubmit the job.

Parmlib not Specified in JCL, default values will be used.

Explanation: No PARMLIB library was specified in the PARMLIB member of the startup CLIST. Db2 Recovery Expert will use the default values for the variables that are listed in the PARMLIB member.

User response: None required.

Parmlib parsing produced errors. Utility cannot continue with Parmlib Errors.

Explanation: An error occurred when processing the Db2 Recovery Expert PARMLIB member. The backup or restore cannot proceed. A possible reason for this error is an invalid keyword was encountered.

User response: Check the job output for the error encountered.

Volume volume serial is not included in this backup. It contains only ARCHIVE log data.

Explanation: The listed volume contains archive logs for this Db2 SSID, but is not included in the backup. This condition is acceptable if you do not want to back up the archive logs of this Db2 subsystem.

User response: If you want to back up the archive logs, add the listed volume to the backup profile and resubmit the job.

Target unit target unit is on hold. Parmlib option RELEASE_HELD_VOLUMES is N.

Explanation: During volume validation, Db2 Recovery Expert determined that the target unit listed in the message is being held. Due to the setting in the PARMLIB member, the volume will not be released for use and the job has been terminated.

User response: Either release the hold on this volume or change the setting of RELEASE_HELD_VOLUMES to Y in the Db2 Recovery Expert PARMLIB member and resubmit the job.

Target unit target unit is "Not Ready". Parmlib option MAKE_READY_NOTREADY_DEVICES is N.

Explanation: During volume validation, Db2 Recovery Expert determined that the target unit listed in the message is in a not ready state. Due to the setting in the PARMLIB member, the volume will not be made ready for use and the job has been terminated.

User response: Either release the hold on this volume or change the setting of MAKE_READY_NOTREADY_DEVICES to Y in the Db2 Recovery Expert PARMLIB member and resubmit the job.

Target BCV target unit is still synchronizing to source volume volume serial. Use "FORCE-SPLIT" option.

Explanation: The listed unit is still synchronizing from the last submitted restore job.

User response: Either wait for the synchronization to complete, or change the setting of FORCE_SPLIT to Y in the Db2 Recovery Expert PARMLIB member and resubmit the job. This will force the split of the BCV pair established by the previous restore job.

Background splits are complete.

Explanation: This message appears when a BCV split has completed.

User response: None required.

Establishing current generation of BCVs...

Explanation: This message appears at the beginning of the process of establishing a current generation of BCVs.

User response: None required.
**ARYS196W**

32K Tablespace *data base table space does not have a CISIZE of 32K*. Consistency is not guaranteed.

**Explanation:** Db2 Recovery Expert requires that Db2 data sets defined with a page size of 32 KB must have their control interval size defined as 32 KB as well. The table space listed in the message does not have a CI size of 32k and therefore may become inconsistent during restore.

**User response:** To guarantee consistency of the listed table spaces, you must alter their CI size to 32K and run the IBM REORG utility on them. See "Db2 32 KB table space requirements" on page 5 for further information.

**ARYS197W**

Make sure DSNZPARM DSVCI is "NO" and reorganize the above list of tablespaces.

**Explanation:** This message is used with ARY0196W to provide further information about the issue.

**User response:** Refer to the Db2 32KB table space requirements for further information.

**ARYS198I**

Backup via Snap Volume Std Vol *volume serial* Dev *standard device to Dev SNAP device*.

**Explanation:** This informational message indicates that the standard device listed has been backed up to the SNAP device.

**User response:** None required.

**ARYS199I**

Restore via Snap Volume Dev *standard device to Standard Dev standard device Vol volume serial*.

**Explanation:** This informational message indicates that the SNAP device listed has been restored to the standard device.

**User response:** None required.

**ARYS200E**

message text.

**Explanation:** This message is used to display various message text associated with errors.

**User response:** Review the message text and other related messages to determine the problem.

**ARYS201I**

Parmlib Override on *command_name command - parameter_name Value: parameter_value*.

**Explanation:** The designated PARMLIB value was specified in the PARMLIB member and has been used to override the default value when calling EMC Snap.

**User response:** Change the order of the keywords and rerun the job.

**ARYS202I**

BSDS update process starting.

**Explanation:** The BSDS for the specifying Db2 SSID is being updated with the new Active log data set names that have been renamed.

**User response:** None required.

**ARYS203I**

----SSID ssid - BSDS bsds Opened---.

**Explanation:** The BSDS named for the SSID specified has been opened for update.

**User response:** None required.

**ARYS204I**

----SSID ssid - BSDS bsds Closed---.

**Explanation:** The BSDS named for the SSID specified has been closed.

**User response:** None required.

**ARYS205I**

dsn record updated.

**Explanation:** The specified record has been updated.

**User response:** None required.

**ARYS206I**

Old Name = *old_name*.

**Explanation:** The specified data set name has been updated.

**User response:** None required.

**ARYS207I**

New Name = *new_name*

**Explanation:** The specified old data set name has been changed to this name.

**User response:** None required.

**ARYS208I**

BSDS update process ended. Return code = *return_code*.

**Explanation:** The BSDS update process is complete with the specified return code.

**User response:** None required.

**ARYS209I**

Keyword NEWHIGHLEVEL must follow the BSDSNAME and ACTIVENAME keywords.

**Explanation:** The keywords passed to the BSDS update process must be in a specific order. The NEWHIGHLEVEL keyword must not precede a BSDSNAME or ACTIVENAME keyword.

**User response:** Change the order of the keywords and rerun the job.
ARSYS210I | BSDS change_type old_name not updated.

Explanation: The specified BSDS data set name was not changed.
User response: None required.

ARSYS211I | Db2 Volume validation will not be bypassed because setup has never been run.

Explanation: Db2 Volume validation must be run at least one time for each backup profile.
User response: None required.

ARSYS212I | Db2 Volume validation is being bypassed.

Explanation: As requested. The process to validate that all Db2 volumes are included in the backup will be bypassed.
User response: None required.

ARSYS213I | ------SSID ssid - ARY Control File Opened------.

Explanation: The specified control file has been opened for update
User response: None required.

ARSYS214I | ------SSID ssid -ARY Control File Closed------.

Explanation: The specified control file has been closed.
User response: None required.

ARSYS215I | SSID ssid is not data sharing. No group BSDS records will be updated.

Explanation: The SSID specified is not a member of a data sharing group. No updates are needed to rename the BSDS names for other members.
User response: None required.

ARSYS216I | Offloaded Backup with timestamp timestamp was removed from the repository.

Explanation: The specified offloaded backup has been removed from the repository. This is a normal process when a new offload is taken. Only a user specified number of offloaded backups is maintained in the repository.
User response: None required.

ARSYS217I | User catalog user_catalog unallocated.

Explanation: The specified user catalog has been unallocated. This is a required process during a system restore. The ICF catalog data sets are automatically reallocated the next time a data set belonging to that catalog is accessed.
User response: None required.

ARSYS218E | Source Unit unit_name is a volume in an existing backup for profile profile_creator.profile.name.

Explanation: The specified source unit is being used as a backup unit in a system-level backup.
User response: If the unit is now being used as a source unit, you must delete the backup specified on the system restore screen before proceeding.

ARSYS219E | Bad date specified. Date must be in format MM/DD/YYYY

Explanation: An invalid date has been specified.
User response: Change the control cards to specify the date in the format MM/DD/YYYY.

ARSYS220E | Bad time specified. Time must be in format HH:MM:SS.

Explanation: An invalid time has been specified.
User response: Change the control cards to specify the time in the format HH:MM:SS.

ARSYS221I | Db2 Alias Rename Process starting...

Explanation: The process to rename the Db2 alias has started.
User response: None required.

ARSYS222E | Db2 Alias Rename Process complete. RC = return_code.

Explanation: The process to rename the Db2 alias has completed with the specified return code.
User response: None required.

ARSYS223I | Rename of dataset data_set_name complete.

Explanation: The specified data set has been successfully renamed.
User response: None required.
Rename of dataset `data_set_name` failed.  
Messages follow:

**Explanation:** The process to rename the specified data set has failed. This message will be followed by addition diagnostic information indicating why the data set rename has failed.

**User response:** The additional information specified should identify why the process has failed. The user ID used to submit the job might not have the MVS authorities needed to perform the rename.

---

Table space `database.tablespace` partition `partition` has been stopped | started.

**Explanation:** The specified table space has been either stopped or started. The table space needs to be stopped before it can be restored. It will be started automatically after a successful restore process.

**User response:** None required.

---

Index space `index_creator.indexspace_name` partition `partition` has been stopped | started.

**Explanation:** The specified index space has been either stopped or started. The index space needs to be stopped before it can be restored. It will be started automatically after a successful restore process.

**User response:** None required.

---

New dataset name is `data_set_name`.

**Explanation:** The new name of the renamed Db2 data set name is specified in this message.

**User response:** None required.

---

Processing table space `database.tablespace` index `index_creator.indexspace_name` partition `partition` number `number`.

**Explanation:** The process to restore the specified Db2 object is starting.

**User response:** None required.

---

Volser `volume_serial` was removed from Stogroup `stogroup_name`.

**Explanation:** The specified volume serial was removed from the storage group.

**User response:** None required.

---

Volser `volume_serial` was added to Stogroup `stogroup_name`.

**Explanation:** The specified volume serial was added to the storage group.

**User response:** None required.

---

Dataset `data_set_name` was not found.

**Explanation:** The specified data set was not found in the MVS catalog. It will not be processed.

**User response:** This could be normal if the object was created with the DEFER option.
ARYS237E  Volser volume_serial contains Db2 data but was not found or is not online.

Explanation: The specified VOLSER contains a data set for the analyzed Db2 but is not online to the MVS system.

User response: Have a systems operator vary the specified VOLSER online.

ARYS238E  Source volser volume_serial is not Flashcopy capable

Explanation: The specified volser is not capable of Flashcopy operations.

User response: Make sure the specified volser is a unit that resides in an array that is capable of executing Flashcopy commands.

ARYS239E  Target unit target_unit is not Flashcopy capable

Explanation: The specified target unit is not capable of Flashcopy operations.

User response: Make sure the specified target unit resides in an array that is capable of executing Flashcopy commands.

ARYS240I  Performing fast replication to create backup...

Explanation: The fast replication process to create a system backup is commencing.

User response: None required.

ARYS241I  Backup via backup type from source volser volume_serial to unit target_unit has completed

Explanation: The specified source volser is being copied to the specified target unit.

User response: None required.

ARYS242I  Restore via restore type from backup unit target_unit to volser volume_serial has completed

Explanation: The specified volser is being restored.

User response: None required.

ARYS243E  Flash copy of source volser volume_serial to target unit target_unit failed. RC = return_code RS = reason_code

Explanation: The specified Flashcopy operation failed. An error occurred while invocation of ANTRQST macro with REQUEST parameter equal to FCESTABLISH. This message will be followed by additional diagnostic information.

User response: Make sure the source and target volumes of the Flashcopy operation are equal in size. For more information, see the IBM Knowledge Center page with the return/reason codes for the ANTRQST macro.

ARYS244E  Checksum for unit target_unit restored to volser volume_serial failed. Volume has changed since backup

Explanation: The checksum operation for the specified backup unit has failed. This indicates the backup unit has been possibly changed outside of the product.

User response: If you still want to perform the system restore, change the PERFORM_CHECKSUM PARMLIB value to N.

ARYS245E  FCQUERY call failed for unit target_unit RC = return_code RS = reason_code

Explanation: The command to query the Flashcopy relationships for the specified unit has failed.

User response: Make sure the TSO ID used to submit the job has the appropriate MVS authorities to perform the query command.

ARYS248E  Task task_name - Error invoking program. Please check file DD_name for problem determination.

Explanation: An error has occurred invoking either DFSMSdss or FDR to perform a volume backup or a data set restore.

User response: Please check the indicated DD (file) for more information on the failure.

ARYS249I  Task task_name - Offload process starting for unit target_unit (Source volser volume_serial).

Explanation: The process to offload the specified unit has started.

User response: None required.

ARYS250E  Online Offline request failed for unit target_unit. RC = return_code RS = reason_code.

Explanation: Offline or Online request failed for the specified unit.

User response: Make sure the specified unit is not in use by any other MVS process.
options should generate a unique name for each
User response: None required.

ARYS255E  Check sum type: type = Old = old_value -
New = new_value

Explanation: This message is produced if a check sum
fails at system restore time. This means that the backup
disk has changed since the backup was performed.
User response: Determine if the change made to the
backup disk is acceptable. If the backup is valid, the
check sum function can be turned off using the
PARMLIB entry PERFORM_CHECKSUM.

ARYS256E  Task task - message data_set_name
hex_value.

Explanation: Dynamic allocation has failed for the
designated dataset.
User response: Make sure the unit specified for
DASD_ALLOCATION_UNIT in the PARMLIB is valid
for your site.

ARYS257E  Task task - Process abended. PSW
=program_status_word - Return Code =
return_code - Reason Code = reason_code.

Explanation: The process has abended.
User response: Please contact IBM Customer Support.

ARYS258I  SSID ssid checkpointed at RBA/LRSN
rba lrsn.

Explanation: A Db2 checkpoint process has completed
for the specified Db2 subsystem.
User response: None required.

ARYS259I  Waiting for checkpoint to complete on
SSID ssid.

Explanation: The product is waiting for a Db2 system
checkpoint process to complete.
User response: None required.

ARYS260E  Task task - Invalid DSN generated for
backup_type DSN = data_set_name - Check
DSN Mask

Explanation: The data set mask to offload a volume is
invalid.
User response: The data set mask in the offload
options should generate a unique name for each
volume serial. It should have the &VOLSER variable in
it and some other time or date variable to make it
unique for each offload process.

ARYS262E  Task task - message_text.

Explanation: This message is used to display various
message text associated with errors.
User response: Review the message text and other
related messages to determine the problem.

ARYS263I  Task task - Unit unit_name offloaded to
device dataset data_set_name.

Explanation: The specified unit was offloaded to the
specified data set name.
User response: None required.

ARYS264I  Unit unit_name was offloaded by a
previous offload job. Use RE-OFFLOAD
card to offload again.

Explanation: The specified backup unit was already
offloaded by a previous offload job.
User response: If you wish to replace that previous
offload with a new offload backup, rerun the job with
the RE-OFFLOAD keyword.

ARYS265E  Generation generation has not been
offloaded. Offload it or run with the
BYPASS-OFFLOAD keyword.

Explanation: This backup process will replace a
system backup on disk that has not been offloaded to
tape yet.
User response: Since you have specified offload
options in the system backup profile, it is assumed
each system backup should be offloaded to tape before
it is replaced. You can offload the backup by going to
the system restore screen and selecting to offload it
from there, or you can specify the BYPASS-OFFLOAD
keyword if you do not want to offload the backup.

ARYS266I  No Tablespaces found for this Pattern.
Database: database_name Tablespace:
table_space_name TS Creator: creator_name

Explanation: The wildcard mask specified in an
objects profile did not result in any matches during the
JCL build process.
User response: None required.

ARYS267E  Tablespace excluded because it is a
TEMP or WORK database. Type TS|IX
Database database_name, Spacename
Partition partition.

Explanation: The specified table space has been
excluded from the object restore JCL because it is a temporary work space.

User response: None required.

| ARYS268E | Tablespace excluded because it was created with DEFINE NO and the underlying file has not yet been created. Type type Database database Spacename space name Partition partition. |
| ARYS269I | No Indexes found for this Pattern. Database: database name IX_Name: index name IX_Creator: index creator. |
| ARYS272E | Space no longer exists. Type TS|IX Database database_name, Spacename |
| ARYS275I | message_text |
| ARYS277I | Task task - Volser volume_serial was restored from file_name file seq nbr file_sequence_number |
| ARYS278I | Task task - Unit unit_name was initialized with volser volume_serial |
| ARYS279I | Task task - Unit unit_name with old volser volume_serial was clipped to volser volume_serial. |
| ARYS280E | An error has occurred obtaining SMS information for copy_pool|storage_group copy_pool_name|storage_group_name. |
| ARYS281E | Requested storage needed for SMS call is not available. |
| ARYS282E | Storage used for SMS call could not be released. |
| ARYS283I | HSM backup with token token_name message. |
| ARYS284E | Performing HSM DUMP of copypool copy_pool |
| ARYS285E | HSM Command failed. RC = return_code |

Explanation: The specified table space has been excluded from the object restore JCL because the space was created using DEFINE NO and the underlying data set has not yet been created.

User response: None required.

Explanation: The specified table space has been excluded from the object restore JCL because it is a temporary work space.

User response: None required.

Explanation: The specified table space has been excluded from the object restore JCL because the space was created using DEFINE NO and the underlying data set has not yet been created.

Explanation: The specified table space has been excluded from the object restore JCL because it is a temporary work space.

User response: None required.
Source volser `volume_serial` is in an active Flashcopy relationship.

**Explanation:** The specified source volume serial is in a current Flashcopy relationship. This message is issued on a restore when a backup of the source unit has not completed.

**User response:** Re-submit the job when the Flashcopy session is complete.

Target unit `target_name` is in an active Flashcopy relationship.

**Explanation:** The specified target unit is in a current Flashcopy relationship. This message is issued when the previous backup to this unit has not completed.

**User response:** Resubmit the job when the Flashcopy session is complete.

Dataset for object did not exist at the time of system backup.

**Explanation:** The data set for the specified object did not exist at the time of the system backup. The object could be defined `DEFER YES`.

**User response:** None required.

Object was successfully restored.

**Explanation:** The specified object was successfully restored from the system backup.

**User response:** None required.

No backups for profile `profile_creator.profile_name` were found in repository.

**Explanation:** No system backups for the specified profile were found.

**User response:** It is possible they were deleted or replaced by a more recent backup since the JCL was generated. Please generate the object JCL again.

Object no longer exists or was dropped and re-created since the backup.

**Explanation:** The specified object no longer exists in this Db2 subsystem or it was dropped and re-created since the backup.

**User response:** A dropped object (or a re-created object) cannot be restored.

No suitable target could be found for source volser: `source_volser`.

**Explanation:** A target cannot be found for the listed source volume.

**User response:** Update the backup profile and ensure the source volume is mapped to a valid target volume.

No objects were found in Profile `profile_creator.profile_name` `Db2 subsystem ssid`.

**Explanation:** The application profile was empty or resulted in no objects being resolved from the wildcards.

**User response:** Add objects to the application profile.

There are no Objects to process due to prior errors, the Build Process was terminated.

**Explanation:** The JCL build process has been terminated because no objects can be successfully restored.

**User response:** None required.

File tailoring `open|close\include` error, `RC=return_code`.

**Explanation:** A file tailoring error has occurred.

**User response:** Make sure there is enough space on the target data set to hold the JCL being generated.

Build JCL will be written to `data_set_name`.

**Explanation:** Object recovery JCL will be written to the specified data set.

**User response:** None required.
**ARYS306E** - No recovery information was found in SYSCOPY for object:

**Explanation:** No recovery information was found in SYSCOPY for the specified object and no system-level backup was found that is capable of restoring the object.

**User response:** No recovery resources exist for the object. It is recommended that you back up the system on which this object resides, or take an image copy of this object.

**ARYS307E** - Required full image copy IC_data_set could not be found for object:

**Explanation:** The specified image copy was not found in the MVS catalog for the specified object. The object will not be recoverable using this image copy.

**User response:** Recovery to the specified point may not be possible. Either choose a different recovery point or catalog the missing image copy.

**ARYS308E** - A valid starting point could not be found for the RECOVER utility for object:

**Explanation:** Recovery of Db2 objects requires finding an appropriate copy or appropriate log records to recover the object. A starting point might be a system backup, and image copy, or log records used to recreate the object. If a "non-logged" event is found at a certain point in time before a starting point is found, the object cannot be restored to the point in time requested.

**User response:** Either back up the object or choose a different restore point.

**ARYS309E** - Recovery point could not be found for object:

**Explanation:** The recovery point is the stopping point of a recovery. If you chose to restore the object to the latest image copy, and none was found, this error could occur.

**User response:** Chose a different recovery point.

**ARYS311E** - An Alter has been done on the object:

**Explanation:** A DDL ALTER has been performed against the specified object. It cannot be restored.

**User response:** It is recommended that you take another system backup or an image copy of this object.

**ARYS312W** - This index has been rebuilt which prohibits recovery. Index will be rebuilt for object:

**Explanation:** The specified index has been rebuilt since its last copy. It will be rebuilt again since it cannot be restored from the previous system backup or image copy.

**User response:** None required.

**ARYS313E** - Space is not recoverable to desired point. A CHECK DATA with LOG NO prohibits recovery for object:

**Explanation:** The specified object cannot be recovered because a LOG NO utility has been run since the last system backup or image copy.

**User response:** It is recommended that you take another system backup or an image copy of this object.

**ARYS315E** - Space is not recoverable to desired point. A LOAD REPLACE with LOG NO prohibits recovery for object:

**Explanation:** The specified object cannot be recovered because a LOAD REPLACE utility with LOG NO has been run since the last system backup or image copy.

**User response:** It is recommended that you take another system backup or an image copy of this object.

**ARYS316E** - Space is not recoverable to desired point. A REORG with LOG NO prohibits recovery for object:

**Explanation:** The specified object cannot be recovered because a REORG utility with LOG NO has been run since the last system backup or image copy.

**User response:** It is recommended that you take another system backup or an image copy of this object.

**ARYS317E** - Space is not recoverable to desired point. A LOAD RESUME with LOG NO prohibits recovery for object:

**Explanation:** The specified object cannot be recovered because a LOAD RESUME utility with LOG NO has been run since the last system backup or image copy.

**User response:** It is recommended that you take another system backup or an image copy of this object.

**ARYS319W** - The following Index has been excluded due to the exclusion of the associated tablespace:

**Explanation:** The specified index will not be recovered in the JCL stream because its associated table space could not be recovered.

**User response:** None required.
**ARYS320I**  
*Tablespace | Indexspace has been stopped | started.*

**Explanation:** The specified Db2 object has been either stopped or started.

**User response:** None required.

**ARYS321E**  
*Tablespace | Indexspace was not restored.*

**Explanation:** The specified Db2 object was not restored. A previous error will detail why this object could not be restored.

**User response:** None required.

**ARYS322I**  
*Dataset data_set_name was restored via method*

**Explanation:** The specified data set was restored via DFDSS, FDR, or SNAP data set.

**User response:** None required.

**ARYS323E**  
*Dataset data_set_name failed restore_type restore.*

**Explanation:** The specified data set failed restore using the specified method.

**User response:** A previous error message will indicate the reason for the failure.

**ARYS324I**  
*Tablespace | Indexspace dbname.spacename*

**Explanation:** This message indicates the index space or table space that was referenced in a previous error message.

**User response:** None required.

**ARYS325E**  
*Function failed for member member_name RC = return_code.*

**Explanation:** VDEFINE or VDELETE has failed for the ISPF member listed in the message.

**User response:** The necessary ISPF libraries are missing from the agent JCL.

**ARYS326E**  
*Dataset data_set_name has been renamed to data_set_name.*

**Explanation:** The specified data set has been renamed.

**User response:** None required.

**ARYS327E**  
*Task task - Generated DSN data_set_name already exists.*

**Explanation:** The data set mask specified in the offload options has been resolved to a data set name that already exists.

**User response:** Please change the data set mask in the offload options so each generated data set name will be unique. A suggestion is to add the timestamp variable.

**ARYS328E**  
*Task task - No space for dataset data_set_name Needs number_of_tracks tracks.*

**Explanation:** No space could be found on a source volume to restore the specified data set. The amount of space needed is shown.

**User response:** Either add volumes to the target storage group, compress the volumes to free up space, or delete some unneeded data sets from the volume.

**ARYS330I**  
*Volume: volume Tracks: number_of_tracks.*

**Explanation:** The specified data set has been restored to this volume. The amount of space the data set is on this volume is also displayed.

**User response:** None required.

**ARYS331I**  
*Copy Pending status has been reset for the selected object types.*

**Explanation:** COPY PENDING status has been reset for the listed objects.

**User response:** None required.

**ARYS332I**  
*Resetting copy pending status for TABLESPACE | INDEXSPACE | INDEX object_name.*

**Explanation:** COPY PENDING will be reset for the listed object.

**User response:** None required.

**ARYS333E**  
*Function failed for member member_name RC = return_code.*

**Explanation:** VDEFINE or VDELETE has failed for the ISPF member listed in the message.

**User response:** The necessary ISPF libraries are missing from the agent JCL.

**ARYS335I**  
*Dataset data_set_name has been renamed to data_set_name.*

**Explanation:** The specified data set has been renamed.

**User response:** None required.
**ARYS337E**  Offload it or run with the BYPASS-OFFLOAD keyword.

**Explanation:** This is a continuation of message ARYS336E.

**User response:** You can also choose to specify the BYPASS-OFFLOAD keyword and rerun the job.

**ARYS338W**  Backup backup timestamp timestamp has been deleted and replaced by this backup.

**Explanation:** The target units for the specified backup has been replaced by this backup. The specified backup will be removed from the repository.

**User response:** None required.

**ARYS339I**  Backup backup timestamp timestamp was marked as no longer on disk.

**Explanation:** The specified backup has been offloaded to disk and will be replaced by this backup. It will be marked as no longer on disk in the repository.

**User response:** None required.

**ARYS340E**  Tablespace not found: spacename

**Explanation:** The installation verification procedure has detected that the required table space was not found. Required objects are part of the Schema Level Repository (SLR).

**User response:** Verify that the installation job used to create the Schema Level Repository completed successfully.

TCz jobname ssDDL1dd, template ARYDDL1.

**ARYS341E**  Error fetching system backup information. Check the agent JCL.

**Explanation:** The system backup could not be fetched from the repository.

**User response:** Please check the agent JCL to make sure all the required data sets have been specified. These libraries are:

//ARYBPROF DD DISP=SHR,
DSN=datalevel.PROFILES

//ARYSBACK DD DISP=SHR,
DSN=datalevel.SYSBACK

//ARYSBSOBJ DD DISP=SHR,
DSN=datalevel.SYSBACK.OBJS

//ARYSBVOL DD DISP=SHR,
DSN=datalevel.SYSBACK.VOLS

//ARYSBSSD DD DISP=SHR,
DSN=datalevel.SYSBACK.SSIDS

Where datalevel is the high level used to create these data sets during install.

**ARYS342E**  ARY System Backup and Restore control record not found.

**Explanation:** The control record for the ARY system backup and restore utility was not found.

**User response:** Refer to the installation section on how to create this record.

**ARYS343E**  FCWithdraw failed on target unit unit_name RC = return_code RS = reason_code.

**Explanation:** The FCWithdraw operation failed on the specified target unit.

**User response:** Make sure the TSO ID that submitted the job has the authority necessary to execute the FCWithdraw command.

**ARYS344W**  Data set collection has ended with warning conditions:

**Explanation:** The process to collect information about where data sets resided at the time of the system backup has completed with warning conditions. These will be listed after this message.

**User response:** None required.

**ARYS345W**  Error creating catalog entry for data_set_name. FDRInstant will not be used.

**Explanation:** An error has occurred creating a data set required by FDRInstant. FDRInstant will not be used. FDR will be used to perform the volume ofload.

**User response:** Make sure the appropriate steps have been taken at your shop to create data sets that start with FDR.USE.*

**ARYS346I**  Source Volser: volume_serial Target Unit: target_unit Remaining Tracks: number_of_tracks.

**Explanation:** This is an informational message showing the total number of tracks that need to be copied inside the array from source to target volumes.

**User response:** None required.

**ARYS348E**  These Db2 datasets reside on this volume:

**Explanation:** The specified Db2 data sets reside on a volume that has not been included in the system backup.

**User response:** You must include the specified volume in the system backup profile.

</table>
ARYS363W • ARYS370I
Backup cannot be used for system restore. Deleting backup.

Explanation: The settings in the PARM LIB member dictate that migrated data sets will not be recalled. In addition, object restore was not enabled for this profile. Since the backup cannot be used for system restore or object restore, the backup is stopped and deleted.

User response: None required.

ARYS361I • ARYS371I
Recalling migrated datasets.

Explanation: Db2 data sets that have been migrated by DFSMS/Hsm are being recalled.

User response: None required.

ARYS362I • ARYS372E
Waiting for recalled datasets.

Explanation: The backup is waiting for data sets to be recalled.

User response: None required.

ARYS363I • ARYS373E
Waiting number of minutes minutes for recalled datasets.

Explanation: The backup is waiting the specified number of minutes for data sets to be recalled.

User response: None required.

ARYS364I • ARYS365I
Invalid SMS return code for volume
volser, rc=return_code.

Explanation: An error occurred when attempting to determine the SMS storage group for a volume.

User response: Make sure the volume serial is online, is included in an SMS storage group, and is properly configured in SMS.

ARYS366I • ARYS367E
Volser volume_serial was restored in a previous restore job. It will be bypassed.

Explanation: This message may appear when a restore job is re-run using the RESTART parameter. The volume listed in the message was successfully restored during the previous run and will not be restored again.

User response: None required.

ARYS368I • ARYS369E
Volser volume_serial was restored in a previous restore job. It will be bypassed.

Explanation: This message may appear when a restore job is re-run using the RESTART parameter. The volume listed in the message was successfully restored during the previous run and will not be restored again.

User response: None required.

ARYS370I
Performing target volume validation...

Explanation: This informational message indicates that target volume validation is in progress.

User response: None required.

ARYS371I
Target volume validation complete.

Explanation: This informational message indicates that target volume validation is complete.

User response: None required.

ARYS372E
All source volumes could not be matched to an appropriate target volume.

Explanation: One or more of the source volumes could not be matched to a target volume. The backup is stopped.

User response: Ensure that there are enough targets specified for the desired number of backup generations. The target units/volumes must match the size of the source volumes. Also, make sure the specified target units are not in use for a system backup of another subsystem. This will make them ineligible for pairing with volumes in this profile.

ARYS373E
No target volumes were found, check the target pool volumes entered for this profile.

Explanation: The target volumes were not specified in the profile, or the storage groups specified did not contain any valid volumes.

User response: Verify whether any of the following issues might be causing the target volumes to not be found:

• Verify that valid ranges of target units or storage groups are specified in the backup profile.
• Verify that the target volume is not excluded from the target volume list because it is already in a relationship.
• Verify that the target volume is not excluded from the target volume list because it is offline.
• Verify that the source volume is not mapped to the target volume because the source volume size is greater than the target volume size.
• Verify that the source volume is not mapped to the target volume because the source volume size is less than the target volume size.
• Verify that the source volume is not mapped to the target volume because the target volume holds a backup for another backup profile.
- Source volume not mapped to target volume because devices not on the same control unit.

**ARYS374I**  
Task task_name: Restoring source volser source_volser from backup volser backup_volser.

Explanation: This informational message lists the source volume being restored and the backup volume being used to restore it.

User response: None required.

**ARYS375E**  
ShadowImage action mode of source volser source_volser to target unit target_unit failed.

Explanation: The specified Shadow Image operation has failed.

User response: Ensure the user ID has the proper authorization to execute the command. Also, make sure the specified volumes reside on a storage array that is capable of executing ShadowImage commands and is properly licensed.

**ARYS376E**  
Return Code = return_code, Reason Code = reason_code.

Explanation: This message displays the return and reason codes affiliated with a prior message.

User response: Examine the return and reason codes. Determine and correct the source of the problem.

**ARYS377E**  
ShadowImage delete of pair source volser and target volser failed. RC = return_code, RS = reason_code.

Explanation: The specified ShadowImage operation has failed.

User response: Ensure the user ID has the proper authorization to execute the command. Also, make sure the specified volumes reside on a storage array that is capable of executing ShadowImage commands and is properly licensed.

**ARYS378E**  
Invalid Subsystem ID subsystem_ID entered. The SSID must be defined in the Setup section of the product.

Explanation: The subsystem listed in the message has not been configured using the product setup screen.

User response: From the product main menu, enter 0 to set up the subsystem. Refer to the configuration documentation for information about the setup parameters.

**ARYS379E**  
An SSID was not passed to the Health Check program.

Explanation: The subsystem ID for the health check is not specified or was not found.

User response: Ensure that an SSID parameter is passed to the Health Check program.

**ARYS380E**  
A Start RBA/LRSN was not passed to the Health Check program.

Explanation: A starting RBA or LRSN for the health check is not specified or was not found.

User response: Ensure that a start RBA/LRSN parameter is passed to the Health Check program.

**ARYS381E**  
An End RBA/LRSN was not passed to the Health Check program.

Explanation: An ending RBA or LRSN for the health check is not specified or was not found.

User response: Ensure that an End RBA/LRSN parameter is passed to the Health Check program.

**ARYS382E**  
An LCB was not passed to the Health Check program.

Explanation: An internal error has occurred; a list control block was not passed to the Health Check program.

User response: Contact IBM Customer Support.

**ARYS383E**  
An invalid SSID was specified, it must be between 1 and 4 characters in length.

Explanation: An invalid Db2 subsystem ID was specified.

User response: Verify that the subsystem ID selected is a valid SSID and is online.

**ARYS384E**  
An invalid RBA/LRSN was specified, it must be 12 chars in length and contain valid hexadecimal chars.

Explanation: An invalid RBA or LRSN was specified.

User response: Correct the starting or ending RBA or LRSN.

**ARYS386E**  
An invalid Image Copy Check option was specified, the valid options are "Y" or "N".

Explanation: The image copy check option is invalid.

User response: Enter Y or N for the IC-CHECK parameter in the control cards.
This profile is in incremental status already.

Explanation: The backup profile contains the START-INCREMENTAL keyword, but the backup profile has previously been submitted and an incremental relationship established.

User response: Remove the START-INCREMENTAL keyword from the backup profile.

This profile not in incremental status.

Explanation: The backup profile contains the END-INCREMENTAL keyword, but the backup profile has not previously been submitted with a START-INCREMENTAL keyword. No incremental relationship has been established.

User response: Remove the END-INCREMENTAL keyword from the backup profile.

The current backup generation is not in incremental status.

Explanation: For a system backup that has enough target volumes for multiple generations, only one generation can be in incremental status. This message is produced when END-INCREMENTAL was specified when the next backup generation is not for a generation that is in incremental status.

User response: You can only enter the END-INCREMENTAL card when the backup generation you are about to replace is in incremental status.

There are not enough target volumes specified based on the number of source volumes and generations.

Explanation: There are not enough target volumes specified in the profile to backup all source volumes for the specified number of generations.

User response: Edit the backup profile and either add more target volumes or specify less backup generations.

An input card cannot extend beyond two input cards.

Explanation: An input control card contains a continuation character on the second line of the card. This is not allowed. Only 2 lines are allowed for a control card.

User response: Ensure the control card does not extend past two lines. Remove the continuation character from the second line.

The work volume work_volser cannot be the same volume that the object resides on.

Explanation: The object being copied is located on the volume that is also specified as a work volume. This is not allowed.

User response: Edit the application profile and change the work volume(s) to different work volume(s).

A work volume must be specified with an input card.

Explanation: No work volume was found in the control cards.

User response: Add a work volume(s) by updating the Edit Image Copy Options from the Build Image Copy Job panel.

Task subtask_name - Image copy of object object_name has failed

Explanation: The subtask named in the message failed. The image copy for the specified object was not created. There will be one or more additional messages that provide more detail about the error.

User response: Review additional error messages to determine course of action.

Task task_name - Image copy created for object_name.

Explanation: This informational message states that the image copy for the listed object has been successfully created.

User response: None required.

Task subtask_name- Type: image_copy_type DSN: data_set_name.

Explanation: This informational message indicates that the image copy was successfully created. It lists the image copy type as local primary (LP), local backup (LB), remote primary (RP), or remote backup (RB), and displays the associated data set name.

User response: None required.
**ARS411I** Task task_name- Unit: unit Fileseq: 
file_sequence_num Cataloged: Yes | No.

Explanation: This informational message indicates that the image copy was successfully created. It lists the type of device the image copy was written to; if the image copy was written to tape, the file sequence number of the image copy on the tape volser; and indicates whether the image copy data set was cataloged.

User response: None required.

**ARS412I** Task subtask_name- Volser(s): vols_sers.

Explanation: This informational message indicates that the image copy was successfully created. It lists the volume serial name(s) where the image copy resides.

User response: None required.

**ARS413I** Task subtask_name- Start_RBA: 
starting_rba Pit_RBA: ending_rba.

Explanation: This informational message indicates that the image copy was successfully created. It lists the starting RBA and the ending RBA of the image copy.

User response: None required.

**ARS414I** Task subtask_name- Registered in 
SYSCOPY: Yes | No Number of Pages: 
number_of_pages.

Explanation: This informational message indicates that the image copy was successfully created. It indicates whether the image copy is recorded in SYSCOPY and the number of pages (in size) of the image copy data set.

User response: None required.

**ARS415E** Image copies cannot be created from an 
offloaded backup created using FDR.

Explanation: The offloaded backup from which the image copies were to be made was created using FDR. Image copies cannot be created from FDR offloaded backups.

User response: If you want to create image copies from a system backup on tape, you must use DFSMSdss to create the tape copy of the system backup. You can also try selecting an another offloaded backup that was not created using FDR, or use a backup that is still on disk.

**ARS417W** message text will vary.

Explanation: This message is used to display various message text associated with errors.

User response: Review the message text and other related messages to determine the problem.

**ARS418E** error text will vary.

Explanation: Internal error. Normal processing has ended unsuccessfully.

User response: Contact IBM Customer Support. Please provide the text of this message, along with the preceding or following messages.

**ARS420E** Space is not recoverable to desired point.

Explanation: A MODIFY RECOVERY utility was performed on the space. The space cannot be recovered.

User response: Select a recovery point before the MODIFY RECOVERY utility was performed.

**ARS421E** An ICTYPE=copy type STYPE= type row 
in SYSCOPY with RBA rba was found and prohibits processing for object:

Explanation: A MODIFY RECOVERY utility was performed on the space. The space cannot be recovered. copy type is the type of operation (M for MODIFY RECOVERY); type is a subtype, (when copy type = M and the MODIFY RECOVERY utility was executed to delete SYSCOPY and/or SYSLGRNX records, the value is R).

User response: Select a recovery point before the MODIFY RECOVERY utility was performed.

**ARS422W** Indexspace index creator.index name is not 
defined COPY YES. This object will be bypassed.

Explanation: The index space listed in the message was defined with COPY NO. The index space will not be copied.

User response: None required.

**ARS423E** The following object was selected but 
does not exist in the Backup:

Explanation: The specified object was in the application profile, but the selected system backup did not contain information for it. An image copy will not be created for this object.

User response: Take a new system backup that includes the object, then select the new system backup for image copy processing.
**ARYS424E** The following object was dropped and recreated after the Backup:

**Explanation:** The object was dropped after the system backup was taken and then recreated; therefore, the object cannot be recovered using the SLB selected.

**User response:** None required.

**ARYS425E** A Db2 control file DD was not passed to the Health Check program.

**Explanation:** A Db2 control file containing information on all the Db2 subsystems registered was not passed to the Health Check program.

**User response:** If Health Check was executed in batch, make sure a Db2PARMS DD card is present in the JCL. If Health Check was executed online, contact IBM Customer Support.

**ARYS426E** message text RC=return code, RS=reason code.

**Explanation:** This message is used to provide additional error message explanation. It contains the message text, return code and reason code.

**User response:** None required.

**ARYS427E** An error occurred obtaining SMS Copypool information.

**Explanation:** When configuring a Db2 subsystem to work with the BACKUP SYSTEM utility, an error occurred attempting to obtain information about the SMS copypools.

**User response:** Contact IBM Customer Support.

**ARYS429E** Backup unit mnn is no longer valid.

**Explanation:** The specified space efficient backup volume is no longer valid. The reason is stated in the message.

**User response:** One of the following instances caused this message to be issued:
- The space efficient pool filled up
  After a system backup is taken on a SE volume, when Db2 updates a track, the original version of that track is written to the pool of disk space that is associated with the SE volumes. If this pool of disk space becomes filled, the system backup on the space efficient volumes will become invalided. To free up space in the pool, users can either delete the system backup or take another backup using the same set of space efficient volumes. Each time the volumes are used, the space used to hold the original version of changed tracks from the previous backup will be freed.

- Some other process cleared the relationship between this volume and the source volume
  The SE volumes may need to be re-initialized before being re-used by IBM Customer Support.

**ARYS431E** Space is not recoverable to the desired point. A space defined as LOG NO prohibits recovery of the object.

**Explanation:** The table space or index space listed is not recoverable to the desired point. The specified space is defined as LOG NO. It can only be restored to the point of a copy.

**User response:** Redefine the table or index space.

**ARYS432E** inputcardvariable is invalid in combination with LAST-BACKUP card.

**Explanation:** You cannot specify TIME, DATE, or GENERATION if LAST-BACKUP follows the IMAGE-COPY card. You also cannot specify TIME or DATE if LAST-BACKUP follows the GENERATION card.

**User response:** Remove the invalid TIME, DATE, or GENERATION parameters from the control cards.

**ARYS433E** The LAST-BACKUP card must follow IMAGE-COPY or GENERATION card.

**Explanation:** The LAST-BACKUP card must follow either the IMAGE-COPY card or the GENERATION card.

**User response:** Correct the order of the control cards.

**ARYS434I** Temporary data set datasetname has been deleted.

**Explanation:** The listed VSAM dataset is no longer needed and has been deleted. Since the user chose not to register VSAM copy, it is no longer needed and was deleted.

**User response:** None.

**ARYS435I** Task taskname - Registered in datasetname

**Total Tracks:** numberoftracks

**Explanation:** This message provides information about the image copy data set that is produced.

**User response:** None.

**ARYS436I** Task taskname - DSN: datasetname to DSN: datasetname

**Explanation:** This message will provide information about the image copy data set produced.

**User response:** None.
**ARYS437E**  
*Spacename* cannot be copied because it is in *currentstatus* status.

**Explanation:** The specified table space or index space cannot be image copied because it is in an invalid status.

**User response:** Correct the status condition and resubmit the job.

---

**ARYS438E**  
Copy data set *datasetname* was not found for *recoveryjob*.

**Explanation:** A recovery from a VSAM copy has been generated, but the image copy data set is missing.

**User response:** Regenerate the recovery JCL for this object as the JCL generation will detect the missing VSAM copy and generate recovery in another manner.

---

**ARYS439I**  
VSAM copy DSN *datasetname* was deleted.

**Explanation:** The specified VSAM data set was deleted because it was the oldest VSAM copy for this object and was outside of the specified number of generations to keep.

**User response:** None.

---

**ARYS440I**  
*Objectname* is not in copy pending status and not be copied due to Scope Pending status.

**Explanation:** The image copy options specified to only copy object in COPY PENDING status. The specified object was not processed because it was not in COPY PENDING status.

**User response:** Change the Scope Pending status of the object.

---

**ARYS441W**  
Image copy *datasetname* not found.  
Searching for prior recovery asset for object: *objectname*.

**Explanation:** While generating recovery JCL for the specified object, the specified image copy data set was not found in the ICF catalog. A recovery for the specified object might still be possible using a prior recovery asset.

**User response:** Check to see if the image copy data set was specified correctly and saved in the ICF catalog.

---

**ARYS442I**  
The COPY PENDING status has been reset for *objectname*.

**Explanation:** The specified object was in COPY PENDING status and the status has been cleared because a successful image copy has been taken.

**User response:** None.

---

**ARYS443E**  
Fast replication failed for data set *datasetname*.

**Explanation:** Fast replication (either SNAP or Flash) has failed for the specified data set.

**User response:** Check the output for other specific message that indicate the reason for the failure.

---

**ARYS444E**  
No image copy options have been set for this application profile.

**Explanation:** The application profile did not contain any valid options to produce image copies.

**User response:** Update the application profile and specify the image copy options that you want to be used.

---

**ARYS446I**  
The *objectname* was image copied from this system backup on a previous job.

**Explanation:** This message indicates that restart processing is occurring and the specified object name already has an image copy created for it. As a result the object will be bypassed and not copied in the current job.

**User response:** None.

---

**ARYS448E**  
Object was in a restricted state at the time of the system backup. It will not be included recovery.

**Explanation:** The object was in a restricted state at the time of the system backup. It will not be included in the recovery and it will be listed in the Restricted Objects Report. An object is considered in a restricted state if its status is CHKP, GRECP, LPL, RBDP, RECP, UTUT, or WEPR.

**User response:** Change the status of the object to a non-restricted state.

---

**ARYS449E**  
Object was in a restricted state at the time of the system backup. It will not be image copied.

**Explanation:** The object was in a restricted state at the time of the system backup. It will not be included in the image copy and it will be listed in the Restricted Objects Report. An object is considered in a restricted state if its status is CHKP, GRECP, LPL, RBDP, RECP, UTUT, or WEPR.

**User response:** Change the status of the object to a non-restricted state.
**ARYS451I**  Volume `volname` was found in storage group but has been excluded in the profile.

**Explanation:** The specified volume was found in a source storage group but it will not be copied because it has been specifically entered as a volume to be excluded from the system backup.

**User response:** If you do not want this volume excluded, update the backup profile and remove the volume from the list of excluded volumes.

**ARYS452I**  Db2 volume validation is turned off. Volumes discovered on the last SETUP run will be backed up.

**Explanation:** This system backup profile has Validate Db2 Volumes set to "N". This means that Db2 volumes discovered when the profile was first setup will be backed up.

**User response:** You can either add the SETUP control card or update the profile and change Validate Db2 Volumes to Y if you want Db2 Recovery Expert to discover the Db2 volumes.

**ARYS455E**  Error fetching volumes from storage group `stogroupname`.

**Explanation:** This error can occur when a storage group that does not exist has been specified in the system backup profile or when some unidentifiable SMS problem causes the volume fetch to fail.

**User response:** Correct the storage group that has been specified in the system backup profile. If the storage profile is correct, verify that no other SMS problem could be causing the volume fetch to fail.

**ARYS457E**  Target unit `targetunitname` is online with volume `volnameserialnumber`. It must be offline for this type of backup.

**Explanation:** When performing a system backup using Flash or Snap profiles that use UCB numbers as targets, IBM Customer Support will issue this error message if the UCB volumes are online during the backup.

**System action:**

**User response:**

**ARYS458I**  Optional LBDR TS not found: `spacename`

**Explanation:** The installation verification procedure has detected that the Log Based Data Recovery (LBDR) table space was not found.

**User response:** If Log Based Data Recovery is not used, no further action is required. If LBDR is used, verify that the installation job used to create the Schema Level Repository completed successfully.

**TCz jobname ssDDL1dd, template ARYDDL1.**

**ARYS467E**  INCLUDE-ARCHIVE_VOLS conflicts with PARMLIB option ARCHIVE-WARNINGS.

**Explanation:** A system level backup cannot execute if the backup control cards include the keyword INCLUDE-ARCHIVE-VOLS and the setting for the ARCHIVE_WARNINGS parameter is N.

**User response:** Either remove the INCLUDE-ARCHIVE-VOLS keyword from the backup control cards in the system level backup job JCL, or set the ARCHIVE_WARNINGS parameter to Y in the ARY#PARM member.

**ARYS469E**  Error fetching STOGROUP information.

**Explanation:** Error fetching STOGROUP volumes from SYSEIBM.SYSVOLUMES for non-SMS managed spaces during dataset fast replication restore for TS/IX.

**User response:** Contact IBM Customer Support.

Provide the text of this message, along with the preceding or following messages.

**ARYS470E**  Open failed for `ddname`.

**Explanation:** Internal error during `ddname` dataset opening.

**User response:** Contact IBM Customer Support.

Provide the text of this message, along with the preceding or following messages.

**ARYS471E**  Error text will vary depending on the cause of the error.

**Explanation:** Call attachment facility calling error. Error text describes the error.

**User response:** Contact IBM Customer Support.

Provide the text of this message, along with the preceding or following messages.

**ARYS472E**  `dsname` allocation failed.

**Explanation:** Internal error allocating `dsname` dataset.

**User response:** Contact IBM Customer Support.

Provide the text of this message, along with the preceding or following messages.

**ARYS473E**  Attach failed for `module name`. Check STEPLIB.

**Explanation:** `module name` has not been attached.

**User response:** Check whether the LOADLIB dataset is correct in the STEPLIB DD.
**ARYS474E**  
*Module name* error text will vary depending on the source of the error.

**Explanation:** In the *module name* module, an error occurred when calling the z/OS System Data Mover API. The error text describes the error.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS475E**  
*Module name* error returned from ARYSRIO, function *function name*.

**Explanation:** In the *module name* calling of ARYSRIO has ended with the error during the *function name* function.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS476E**  
No Db2 objects.

**Explanation:** There are no Db2 objects after Db2 object discovery during collection of dataset information for object level recovery.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS477E**  
*Module name* Attach failed for DSNUTILB.

**Explanation:** In *module name*, an error occurred during DSNUTILB calling.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS478E**  
Error registering VSAM copy in ARYT_VSYSCOPY table. Unregistered VSAM copies will be deleted.

**Explanation:** Internal error during SQL query to ARYT_VSYSCOPY table.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS479E**  
Error performing RTS commit. RTS rows have not been updated.

**Explanation:** Internal error committing the Real Time Stats Updates.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS480E**  
Error updating Real Time Stats tables.

**Explanation:** Internal error during SQL query updating Real Time Stats.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS481E**  
Error fetching ARYT_VSYSCOPY information.

**Explanation:** Internal error occurred while selecting information from VSLAM SYSCOPY table.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS482E**  
No objects are selected to be copied.

**Explanation:** Objects for copying not found in ARYT_VSYSCOPY during object level image copy process.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS483E**  
TS Definition not found.

**Explanation:** Workfile tablespace definition not found for recreation during catalog update.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS484E**  
Db2 must be down to rename the catalog.

**Explanation:** The Db2 subsystem was not shut down when connected to a subsystem to rename the catalog. The call attach facility failed.

**User response:** Shut down the Db2 subsystem whose catalog you want to rename.

**ARYS485E**  
Error loading module ARYJIMGM.

**Explanation:** Internal error while calling the ARYJIMGM module.

**User response:** Check your installation. If no problems are found, Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.
**ARYS486E**  Error fetching object profile.

**Explanation:** Internal error while building image copy from offload job.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS487E**  INCREMENTAL only valid for Db2 version 9 and above.

**Explanation:** INCREMENTAL only valid for Db2 version 9 and above.

**User response:** None required.

**ARYS488E**  Subsystem must be down before it can be backed up without fast replication.

**Explanation:** IMS or Db2 subsystem was on when trying to create backup without fast replication DASD.

**User response:** Shut down the subsystem.

**ARYS489E**  INCREMENTAL parm not valid in combination with SETUP parm.

**Explanation:** INCREMENTAL parm is not valid for Db2/Flash/DFSMSdss backup at the SETUP phase.

**User response:** Remove the INCREMENTAL parm from the control card.

**ARYS490E**  MAXTASKS must be numeric between 1 and 8.

**Explanation:** MAXTASKS must be numeric between 1 and 8.

**User response:** Set MAXTASKS to a valid value.

**ARYS491E**  Error text varies depending on the source of the error.

**Explanation:** Internal error running SCMD processor.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS492E**  Bad retcode from module name.

**Explanation:** Internal error running module name.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS493E**  A FlashCopy relationship already exists.

**Explanation:** This profile in non-incremental status cannot be built with the START-INCREMENTAL control card while the relationship exists. The relationship exists because:
- There are different profiles using the same source and target volumes. One of the profiles has been built with incremental status, so an incremental relationship is established between source and target volumes.
- The FRBACKUP command, with the FCINCREMENTAL keyword, has been issued, establishing an incremental relationship.

**User response:** If an incremental backup is needed, do one of the following:
- Change to the profile which is already in incremental status and build it; or
- Withdraw the relationship and rerun the build job with the START-INCREMENTAL control card. For non-incremental backup, remove the START-INCREMENTAL control card and rerun the job.

**ARYS494E**  No VSAM copy was made.

**Explanation:** An error occurred during the Fast Replication functions.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS495E**  Real image copies didn't make for: object.

**Explanation:** An error occurred while processing an VSAM dataset where the image copy would be saved.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS496E**  Check DFSMSdss messages for more information.

**Explanation:** Internal error during volume copying for DFSMSdss backup.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

**ARYS497E**  Error saving object level restore information.

**Explanation:** Internal error saving object level restore information.

**User response:** Contact IBM Customer Support. Provide the text of this message, along with the
preceeding or following messages.

ARS498E  At least one backup volume is in use by another process. Free allocation and restart job.

Explanation:  At least one backup volume is in use by another process.

User response:  Free allocation and restart job.

ARS499E  Please check BSDS names in Product Setup section.

Explanation:  Internal error. Unable to read BSDS datasets.

User response:  Check BSDS names in Product Setup section.

ARS531W  Unable to determine conditional restart for SSID.

Explanation:  The last checkpoint in a BSDS is not a shutdown entry.

User response:  Check to see if the SSID is stopped.

ARS533I  Subsystem SSID does not need a conditional restart.

Explanation:  The SSID has an LRSN lower than the recovery LRSN.

User response:  None required.

ARS612E  Vol dev.address volume was not successfully processed.

Explanation:  Some problems occurred while processing the volume. It could be either during restore or offload process.

User response:  Check to see if something is wrong with the volume. Contact IBM Customer Support if the problem persists.

ARS621E  Task task Unable to get next volume in the stack dev.address volume.

Explanation:  Processing error while volume check in background offload process.

User response:  Check if something is wrong with the volume. Contact IBM Customer Support if the problem persists.

ARS641E  Allocation Error: An error was encountered allocating the ISPWRK1 or ISPWRK2 DD. Process not completed.

Explanation:  The ISPWRK1 or ISPWRK2 DD allocation failed. The process did not complete successfully.

User response:  Verify TSO session parameters are set correctly for your site prior to allocation of these DD statements.

ARS700E  Previous ACTIVATE is not completing.

Explanation:  Previous ACTIVATE is not completing for phased SNAP backup.

User response:  Contact IBM Customer Support. Provide the text of this message, along with the preceeding or following messages.

ARS701E  EMCGROUP DDNAME must be present in JCL.

Explanation:  EMCGROUP control card not found in JCL during phased SNAP backup.

User response:  Specify EMCGROUP DD in JCL.

ARS702E  No source storage groups or source volumes have been specified in the profile.

Explanation:  No source storage groups or source volumes have been specified in the profile.

User response:  Specify source storage groups.

ARS703E  You cannot mix virtual and non-virtual target devices.

Explanation:  You cannot mix virtual and non-virtual target devices during SNAP backup.

User response:  Specify only one type of devices.

ARS704E  At least one target volume is Space Efficient. Incremental is invalid.

Explanation:  Incremental DFSMSdss or Flash backup cannot be used if at least one target volume is Space Efficient.

User response:  Choose target volumes that are not Space Efficient.

ARS705E  Incremental is not valid when using a Shared Target Pool.

Explanation:  Incremental DFSMSdss or Flash backup cannot be used when you are using a Shared Target Pool.

User response:  Do not use a Shared Target Pool with incremental DFSMSdss or Flash backup.

ARYS735E COPY-RETPD must be numeric and 4 digits.
Explanation: Invalid value of COPY-RETPD in backup control card.
User response: Correct the COPY-RETPD value.

ARYS736E LAST-COPY or TIMESTAMP keyword expected.
Explanation: The LAST-COPY or TIMESTAMP value is missing in the backup control card.
User response: Enter the LAST-COPY or TIMESTAMP value.

ARYS737E Expecting timestamp in format "YYYY.MM.DD.HH.MM.SS.NNNNNN" in single quotes or LAST-COPY.
Explanation: A date value is expected in the backup control card.
User response: Enter the date.

ARYS738E Expected DBNAME.SPACENAME
Explanation: DBNAME for the TABLESPACE/INDEXSPACE control card is not specified.
User response: Specify DBNAME in the control cards.

ARYS739E DBNAME or SPACENAME cannot exceed 8 bytes.
Explanation: The DBNAME or SPACENAME in the control card exceeds 8 characters.
User response: Enter a DBNAME or SPACENAME value that does not exceed 8 characters.

ARYS740E PARTITION must be between 1 and 4096 inclusive.
Explanation: PARTITION value in control card is not in range.
User response: Enter a valid PARTITION value.

ARYS741E MAXTASKS must be numeric between 1 and 8.
Explanation: MAXTASKS must be numeric between 1 and 8.
User response: Set MAXTASKS to a valid value.

ARYS742E KEEP-GEN must be numeric between 0 and 9999.
Explanation: The KEEP-GEN value in the backup control card is not in the required range.
User response: Correct the KEEP-GEN value.

ARYS743E Error fetching object profile. Make sure image copy options have been specified in profile.
Explanation: Error fetching object profile due to internal error.
User response: Make sure image copy options have been specified in profile.

ARYS744E Unexpected token.
Explanation: The OBJECT-COLLECTION or OBJECT-IMAGE-COPY parameter value is missing in the backup control card.
User response: Enter the value.

ARYS745E Catalog entry error.
Explanation: Internal error during Object Restore Check Object.
User response: Contact IBM Customer Support.

ARYS746E Error loading backup info.
Explanation: Internal error while loading last backup.
User response: Contact IBM Customer Support.

ARYS747E No backups found for SSID.
Explanation: No backups found for SSID when creating an image copy from the last created system-level backup.
User response: Check SLB backups for specified SSID.

ARYS748E This backup was not offloaded to Remote Primary or Remote backup files.
Explanation: Internal error during Remote site offload.
User response: Contact IBM Customer Support.

ARYS749E Error text varies depending on cause of error.
Explanation: Invalid SSID entered for IMAGE-COPY card.
User response: Enter valid SSID.
ARYS750E Error text varies depending on cause of error.
Explanation: Invalid type has been entered for TAPE or COPY-TYPE for IMAGE-COPY card.
User response: Enter valid type.

ARYS751E Error text varies depending on cause of error.
Explanation: Invalid stype has been entered for SMS-COPY for IMAGE-COPY card.
User response: Enter valid stype.

ARYS752E Error text varies depending on cause of error.
Explanation: Stoclas has not been specified for SMS volume for IMAGE-COPY card.
User response: Enter valid stoclas.

ARYS753E The specified work volumes are SMS managed. You must also supply a COPY-WORK-HLQ.
Explanation: The specified work volumes are SMS managed.
User response: Supply a COPY-WORK-HLQ.

ARYS754E The work volume is invalid or not online.
Explanation: The work volume is invalid or not online.
User response: Check volume state.

ARYS755E Expected area/part name not found.
Explanation: Expected AREA/PART name not found for IMAGE-COPY card.
User response: Specify AREA/PART name.

ARYS756E Expected DDNAME name not found.
Explanation: Expected DDNAME name not found for AREA/PART field for IMAGE-COPY card.
User response: Specify DDNAME.

ARYS757E Expected DDNAME name not found.
Explanation: Expected DDNAME name not found for IMAGE-COPY card.
User response: Specify DDNAME.

ARYS758E ENQ from Master not found.
Explanation: System ENQ from Master catalog has not been found during offload.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

ARYS759E Offload options must be set in backup profile before performing an offload.
Explanation: Offload options have not been set in backup profile before performing an offload.
User response: Set the offload options.

ARYS760E Expecting HSM DUMPCLASS.
Explanation: Expecting HSM DUMPCLASS for DUMPC-LP/LB/RP/RB for OFFLOAD card.
User response: Specify DUMPCLASS.

ARYS761E Control card value is missing.
Explanation: The value for control card has not been found in offload/restore control card.
User response: Enter value for control card.

ARYS762E Control card is too long, limited to 8 characters.
Explanation: The value for control card exceeds 8 characters in offload/restore control card.
User response: Correct the value.

ARYS766E MULTIJOB-PREFIX is too long, limited to a 6 character name.
Explanation: The value for MULTIJOB-PREFIX exceeds 6 characters in offload/restore control card.
User response: Correct the value.

ARYS767E LPAR-LIST has an invalid format.
Explanation: LPAR-LIST has an invalid format in offload/restore control card.
User response: Correct the value.

ARYS768E LPAR-LIST name greater than 8 characters.
Explanation: LPAR-LIST value exceeds 8 characters in offload/restore control card.
User response: Correct the value.
<table>
<thead>

</table>
| ARYS769E   | LPAR-LIST maxjobs greater than 2 characters.  
**Explanation:** Maxjob value for LPAR-LIST exceeds 2 characters in offload/restore control card.  
**User response:** Correct the value. |
| ARYS770E   | LPAR-LIST maxtasks greater than 2 characters.  
**Explanation:** Maxtask value for LPAR-LIST exceeds 2 characters in offload/restore control card.  
**User response:** Correct the value. |
| ARYS771E   | LPAR-LIST is limited to a maximum of four entries.  
**Explanation:** LPAR-LIST is limited to a maximum of four entries for OFFLOAD card.  
**User response:** Specify valid LPAR-LIST value. |
| ARYS772E   | USE-MULTIJOB is required for multijob processing.  
**Explanation:** Value for the USE-MULTIJOB is required, if there is a value for the MULTIJOB-PREFIX in offload/restore control card.  
**User response:** Set the USE-MULTIJOB value. |
| ARYS773E   | LPAR-LIST is required for multijob processing.  
**Explanation:** Value for the LPAR-LIST is required, if there is a value for the MULTIJOB-PREFIX in offload/restore control card.  
**User response:** Set the LPAR-LIST value. |
| ARYS774E   | MASTER-JOBNAME is invalid when USE-MULTIJOB is specified.  
**Explanation:** MASTER-JOBNAME is invalid when USE-MULTIJOB is specified in offload/restore control card.  
**User response:** Remove the MASTER-JOBNAME parameter. |
| ARYS775E   | PROCESS-TOKEN is invalid when USE-MULTIJOB is specified.  
**Explanation:** PROCESS-TOKEN is invalid when USE-MULTIJOB is specified in offload/restore control card.  
**User response:** Remove the PROCESS-TOKEN parameter. |
| ARYS776E   | MULTIJOB is invalid when USE-MULTIJOB is specified.  
**Explanation:** MULTIJOB is invalid when USE-MULTIJOB is specified in offload/restore control card.  
**User response:** Remove the MULTIJOB parameter. |
| ARYS777E   | MASTER-JOBNAME is required for Multijob processing.  
**Explanation:** MASTER-JOBNAME is required for Multijob processing.  
**User response:** Specify the MASTER-JOBNAME value in the offload/restore control card. |
| ARYS778E   | PROCESS-TOKEN is required for Multijob processing.  
**Explanation:** PROCESS-TOKEN is required for Multijob processing.  
**User response:** Specify the PROCESS-TOKEN value in the offload/restore control card. |
| ARYS779E   | MULTIJOB is required for Multijob processing.  
**Explanation:** MULTIJOB is required for Multijob processing.  
**User response:** Specify the MULTIJOB value in the offload/restore control card. |
| ARYS780E   | HSM Dump failed. Check DFSMShsm log for error messages.  
**Explanation:** HSM Dump failed.  
**User response:** Check DFSMShsm log for error messages. |
| ARYS781E   | HSM FRDELETE failed. Check DFSMShsm log for error messages.  
**Explanation:** HSM FRDELETE failed.  
**User response:** Check DFSMShsm log for error messages. |
| ARYS782E   | HSM FRDELETE failed. Check DFSMShsm log for error messages.  
**Explanation:** HSM FRDELETE failed.  
**User response:** Check DFSMShsm log for error messages. |
ARYS783E  LAST-BACKUP not supported for object report.
Explanation: LAST-BACKUP not supported for OREPORT card.
User response: Remove the LAST-BACKUP.

ARYS784E  SSID-LIST has an invalid format.
Explanation: SSID-LIST has an invalid format for OREPORT card.
User response: Use valid format: SSID-LIST ({*}) {ssid[,ssid...]}).

ARYS785E  SSID-LIST SSID name is greater than 4 characters.
Explanation: SSID-LIST SSID name exceeds 4 characters for OREPORT card.
User response: Correct the SSID-LIST SSID name.

ARYS786E  Rename not supported for this restore. Recovery must be from EMC storage or using FDR. Consider adding the USE-FDR or USE-FDR-ININSTANT keywords.
Explanation: Rename not supported for this restore. Recovery must be from EMC storage or using FDR.
User response: Consider adding the USE-FDR or USE-FDR-ININSTANT keywords.

ARYS787E  MVS 1.8 or higher is required to restore datasets from DASD during DFSMSdss.
Explanation: If you want to restore datasets from DASD using DFSMSdss, you must use MVS version 1.8 or higher.
User response: None required.

ARYS788E  SSID missing.
Explanation: The SSID value for the PROF-SSID is missing in backup control card.
User response: Specify the SSID value.

ARYS789E  CSLB-SSID value is missing.
Explanation: The CSLB-SSID value is missing for the ORESTORE card.
User response: Specify the CSLB-SSID value.

ARYS790E  NEW Highlevel missing
Explanation: NEW Highlevel is missing in RENAME-ALL for the ORESTORE card.
User response: Specify the NEW value.

ARYS791E  NEW Highlevel missing
Explanation: NEW Highlevel is missing in RENAME-SPACE for the ORESTORE card.
User response: Specify the NEW value.

ARYS792E  Invalid start mode. Must be RW, RO, UT, or FORCE.
Explanation: The correct start mode value is missing for the START-SPACE-MODE in the backup control card.
User response: Specify the correct start mode value.

ARYS793E  SMS SW AREQ failed.
Explanation: Initialization failed for SMS object restore.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

ARYS794E  HSM Restore failed. Check DFSMSHsm log for error messages.
Explanation: HSM Restore failed.
User response: Check DFSMSHsm log for error messages.

ARYS795E  At least one subsystem volume is in use by another process. Free allocation and restart job.
Explanation: At least one subsystem volume is in use by another process.
User response: Free allocation and restart job.

ARYS796E  All members of a datasharing system must be down before restore can proceed.
Explanation: Some datasharing members were running during Restore System Volume Validation.
User response: Turn off all datasharing members.

ARYS797E  Tablespace or Indexspace must be specified before COPY-DSN.
Explanation: Tablespace or Indexspace must be specified before COPY-DSN for OBJ-IREST card.
User response: Specify Tablespace or Indexspace before COPY-DSN.

ARSYS798E  COPY-DSN dataset missing.
Explanation: COPY-DSN dataset missing for Obj-IREST card.
User response: Specify COPY-DSN.

ARSYS799E  Cannot clip volume because ICKDSF was not loaded. Change parm LOAD_ICKDSF in ARY#PARM to Y and run the offload.
Explanation: Cannot clip volume because ICKDSF was not loaded.
User response: Change parm LOAD_ICKDSF in ARY#PARM to Y and run the offload.

ARSYS800E  Group PRESNAP failed. Please examine the previous SNAP messages for error diagnosis. A CLEAN-SNAP keyword may be needed on the next run.
Explanation: Group PRESNAP failed. A CLEAN-SNAP keyword may be needed on the next run.
User response: Examine previous SNAP messages.

ARSYS801E  Bad load of EMCSNAP.
Explanation: The EMCSNAP has not been loaded.
User response: Check your installation.

ARSYS802E  Bad call to EMCSNAP.
Explanation: Calling to EMCSNAP failed.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

ARSYS803E  Bad attach of EMCSNAP.
Explanation: Attach of EMCSNAP failed.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

ARSYS804E  Snap GROUP command failed.
Explanation: Snap GROUP command was not executed due to an internal error.
User response: Check EMCSNAP output messages.

ARSYS805E  ddname dynalloc failed.
Explanation: Dynamic allocation of ddname dataset failed.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

ARSYS806E  EMCLIB concatenation failed.
Explanation: EMCLIB concatenation failed.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

ARSYS807E  EXCP action error.
Explanation: Internal error while relabeling a VOLUME.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

ARSYS808E  Error text varies depending on cause of error.
Explanation: Internal error while relabeling a VOLUME.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

ARSYS809E  Attach failed for ADRDSSU.
Explanation: Internal error during offload or restore process related to attaching DFSMSdss module.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

ARSYS810E  Open failed to read FDR SYSPRINT.
Explanation: A reading of FDR output failed.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

ARSYS811E  Open failed to write FDR SYSPRINT.
Explanation: A write into FDR output failed.
User response: Contact IBM Customer Support. Provide the text of this message, along with the preceding or following messages.

</table>

| ARYS873I | Copypool DUMPSTATE status is ALLCOMPLETE. |
| Explanation: | The offload process was completed successfully. All volumes have been successfully dumped. | |
| User response: | None required. |

| ARYS874I | The backup was not completely dumped to tape. |
| Explanation: | The offload process is still in progress. | |
| User response: | None required. |

| ARYS875W | Copypool DUMPSTATE status is NONE. |
| Explanation: | No dumps are associated with the copypool. The most likely reasons are HSM or tape systems failure. | |
| User response: | Check the job log for other error or warning messages. Make sure all problems with HSM and tape systems are fixed. Re-run the offload. |

| ARYS876W | Additional monitoring is available only for Db2 backups. |
| Explanation: | The additional monitoring of the backup or offload process is not provided for profiles other than those using the Db2 backup method. | |
| User response: | No action is required. |

| ARYS879I | Checking v_version_ object: table, column column |
| Explanation: | The Installation Verification Program (IVP) has found the required column in the table version shows current SSID working level. | |
| User response: | No action is required. |

| ARYS880E | The column was not found: table column |
| Explanation: | The Installation Verification Program (IVP) has detected that the required column in the table was not found. Required objects are part of the Schema Level Repository (SLR). | |
| User response: | Verify that the installation job used to |

| ARYS9920E | Device nnnn (volser) is inaccessible. |
| Explanation: | An internal error occurred. The device listed in the message is not accessible. | |
| User response: | Contact IBM Customer Support. |

| ARYS9918E | At least one USERCAT statement is REQUIRED. |
| Explanation: | An internal error occurred. At least one USERCAT statement is required. | |
| User response: | Contact IBM Customer Support. |

| ARYS9920E | Device nnnn (volser) is inaccessible. |
| Explanation: | An internal error occurred. The device listed in the message is not accessible. | |
| User response: | Contact IBM Customer Support. |

| ARYS9926E | USERCAT BCS Component contains Structural Errors. |
| Explanation: | An internal error occurred. The user catalog BCS component contains structural errors. | |
| User response: | Contact IBM Customer Support. |

| ARYS9934E | Volume Metadata Errors on VOL(volser) UNIT(unit). |
| Explanation: | An internal error occurred. The volume and unit listed in the message encountered errors. | |
| User response: | Contact IBM Customer Support. |

| ARYT001E | The specified user ID userid is not defined or does not have an OMVS segment defined. |
| Explanation: | You specified a user ID that is not defined or does not have an OMVS segment defined. | |
| User response: | DB2 Recovery Expert was unable to authenticate the specified user. Either specify a valid user ID, or if the user ID is valid, see your security administrator to have an OMVS segment defined for the user ID. |

| ARYT002I | Cancelled request with ID id and type type. |
| Explanation: | DB2 Recovery Expert cancelled the request identified in the message. | |
| User response: | No action is required. |
**ARYT003E**  Unable to cancel request with ID *id* and type *type*.

**Explanation:** DB2 Recovery Expert was unable to cancel the request identified in the message.

**User response:** If you are trying to cancel a request that submitted an MVS job, the job name or ID was not known, and the job could not be cancelled. Review the message log to determine the name and ID of the job that was submitted, and use native JES facilities to review the job’s status and cancel it.

If you are trying to cancel a different type of request, contact IBM Software Support.

---

**ARYT004E**  A cancel request was received for a non-existent request (ID *id*).

**Explanation:** You attempted to cancel a non-existent request.

**User response:** Contact IBM Software Support.

---

**ARYT005I**  Cancelling request with ID *id* and type *type*.

**Explanation:** DB2 Recovery Expert is cancelling the request identified in the message.

**User response:** No action is required.

---

**ARYT006S**  The product is not properly configured to authenticate users.

**Explanation:** DB2 Recovery Expert is not properly configured to authenticate users.

**User response:** An error occurred while authenticating a remote user request. The error code indicates that the installation configuration required to allow this authentication has not been completed. For more information about how to complete the required configuration, see “Maintaining the Db2 Recovery Expert agent” on page 143.

---

**ARYT007I**  Completed processing request with ID *id* and type *type*.

**Explanation:** DB2 Recovery Expert completed processing the request identified in the message.

**User response:** No action is required.

---

**ARYT008E**  The configuration file *filename* is invalid; the root element *element* is not <agent-config>.

**Explanation:** The configuration file identified in the message is invalid.

**User response:** The contents of the specified configuration file are invalid. Correct the file contents to specify <agent-config> as the root XML element.

---

**ARYT009I**  No server address was configured; listening for server advertisements.

**Explanation:** No specific server address was configured, so the DB2 Recovery Expert client is listening for server advertisements.

**User response:** No action is required.

---

**ARYT010E**  An error occurred while opening the configuration file *filename* message text.

**Explanation:** An error occurred while opening the configuration file identified in the message. Additional error information is also contained within the message.

**User response:** Use the specified message text to diagnose the error that occurred. Specify a valid configuration file which is not in use by any other process.

---

**ARYT011E**  The maximum number of connection attempts has been reached.

**Explanation:** DB2 Recovery Expert has repeatedly attempted to connect to the server and the maximum number of connection attempts has been reached.

**User response:** The agent is not able to connect to the server specified in the configuration file. Review the configuration file to ensure that the correct server host name (or IP address) is specified by the <server-address> configuration parameter. Ensure that the server has been started and is properly running. Ensure that the <server-port> value in the agent configuration file matches the <agent-listener-port> value in the server configuration file.

---

**ARYT012I**  Performing discovery of available locations.

**Explanation:** The DB2 Recovery Expert agent is looking for available locations.

**User response:** No action is required.

---

**ARYT013I**  DB2 Recovery Expert agent is terminating.

**Explanation:** The DB2 Recovery Expert agent is terminating.

**User response:** No action is required.

---

**ARYT014I**  Connected to server *hostname* on port *port number*.

**Explanation:** The DB2 Recovery Expert agent has connected to the identified server and port number.

**User response:** No action is required.
ARYT015I  Attempting connection to server hostname on port port number.

Explanation: The DB2 Recovery Expert agent is attempting to connect to the identified server and port number.

User response: No action is required.

ARYT016I  Discovered data sharing group group name.

Explanation: The DB2 Recovery Expert agent has discovered the identified data sharing group.

User response: No action is required.

ARYT017I  Discovered subsystem subsystem-id.

Explanation: The DB2 Recovery Expert agent has discovered the identified subsystem.

User response: No action is required.

ARYT018I  The agent is ready to process requests.

Explanation: The agent is ready to process requests.

User response: No action is required.

ARYT019I  DB2 Recovery Expert agent started.

Explanation: DB2 Recovery Expert agent started.

User response: No action is required.

ARYT020I  Starting the socket selector thread (thread thread id)

Explanation: The DB2 Recovery Expert agent is starting the identified socket selector thread.

User response: No action is required.

ARYT021I  Processing request with ID id and type type.

Explanation: The DB2 Recovery Expert agent is processing a request with the identified ID and type.

User response: No action is required.

ARYT022I  Reading request with ID id and type type.

Explanation: The DB2 Recovery Expert agent is reading a request with the identified ID and type.

User response: No action is required.

ARYT023I  Received shutdown request.

Explanation: The DB2 Recovery Expert agent has received a shutdown request.

User response: No action is required.

ARYT024I  Request thread timed out waiting for work.

Explanation: The DB2 Recovery Expert agent request thread has timed out waiting for work.

User response: No action is required.

ARYT025I  The socket selector thread is terminating.

Explanation: The DB2 Recovery Expert agent socket selector thread is terminating.

User response: No action is required.

ARYT026E  Location location name is not known to the agent.

Explanation: The location name specified on a received request does not match any Db2 subsystem ID or data sharing group attachment name known to the agent.

User response: Ensure that a valid location is specified in the client. If a valid location is specified, ensure that the Db2 subsystem is operational.

ARYT027E  An invalid request type "request-id" was received.

Explanation: The DB2 Recovery Expert agent received an invalid request type.

User response: Contact IBM Software Support.

ARYT028E  An error occurred while authenticating user user-id.

Explanation: An unexpected return code was returned by the pthread_security_np() callable service.

User response: Ensure that the configuration required to use this service has been completed. See DB2 Recovery Expert User Guide for more information on the required agent configuration. Check the agent job log for additional messages which may be generated.

ARYT029E  Location location name has not been configured for use with DB2 Recovery Expert.

Explanation: The specified location name is recognized by the agent, but an error occurred while accessing the product control file for the location's configuration information.
User response: Use sample job ARYSJ001 to establish the required configuration parameters.

**AR YT031I** Starting the command listener thread (thread thread-id).

Explanation: The DB2 Recovery Expert agent is starting the command listener thread.

User response: No action is required.

**AR YT032I** Received "stop" command: command-text.

Explanation: The DB2 Recovery Expert agent received a STOP command.

User response: No action is required.

**AR YT033I** Received "modify" command: command-text.

Explanation: The DB2 Recovery Expert agent received a MODIFY command.

User response: No action is required.

**AR YT034I** DB2 Recovery Expert agent is terminating due to hard stop request.

Explanation: DB2 Recovery Expert agent is terminating due to a user /MODIFY FORCE command.

User response: No action is required.

**AR YT035E** An error occurred while opening file-name: message-text

Explanation: An error occurred while opening the specified file and there is also error information in the message.

User response: Use the specified message text to diagnose why the specified file could not be opened.

**AR YT036E** An error occurred while writing file-name: message-text

Explanation: An error occurred while writing to the specified file and there is also error information in the message.

User response: Use the specified message text to diagnose why the specified file could not be written.

**AR YT037I** Associating with advertised server server name description \description\)

Explanation: DB2 Recovery Expert is associating with the identified server.

User response: No action is required.

**AR YT038W** An XML error occurred while parsing a server advertisement.

Explanation: An XML error occurred while parsing a server advertisement.

User response: Contact IBM Software Support.

**AR YT039W** The request was cancelled.

Explanation: The request was cancelled due to a user or administrator request.

User response: No action is required.

**AR YT040E** An I/O abend S-abend-code-reason-code occurred on filename.

Explanation: An abend occurred while trying to write to the identified file.

User response: Review the abend and reason codes to determine the error that occurred while writing the file.

**AR YT041E** Authenticating user user-id.

Explanation: DB2 Recovery Expert is authenticating the identified user.

User response: No action is required.

**AR YT042E** The specified job has invalid job cards.

Explanation: The specified job has invalid job cards.

User response: Specify valid job cards in the job. The job cards must not exceed 72 characters in length, and must include a job name on the JOB statement.

**AR YT043E** The specified SYSOUT data set (job / step / proc-step / dd) was not found.

Explanation: The specified SYSOUT data set was not found. Only output data sets with a "held" output class can be accessed by the agent.

User response: Use native JES facilities to determine whether or not the specified data set is available, and its status. Check the agent job log and the system log for additional messages which may have been generated.

**AR YT044E** The connection to the server has been lost.

Explanation: The agent has detected that the network connection to the server has been terminated. This could be due to shutdown of the server by the administrator, a problem in the server, or a network problem. All work that the agent was performing at the time of the lost connection was cancelled.

User response: If the server shutdown was unexpected, see the server job output to diagnose why
the job ended. The agent will attempt to reconnect to the server, up to the limit specified by the <server connect retry max> configuration parameter.

**ARYT045E** Location SSID has not been configured properly for use with the product.

**Explanation:** SSID is found in the control file but it is not configured correctly.

**User response:** Remove the current SSID from the control file and then add it back with the correct configuration information.

**ARYT046E** Cannot overwrite data set dataset-name because of mismatched data set organization.

**Explanation:** Cannot overwrite the data set dataset-name because of a mismatched data set organization.

**User response:** There are several ways to address this error message:

• Overwrite the data set using the same organization as an existing data set.
• Use a different name for the data set that has not been used previously.
• Delete the existing mismatched data set through the ISPF interface and then use that name with any organization you want.

**ARYT047E** The name of data set is not valid: dataset-name

**Explanation:** Provided dataset-name has incorrect format.

**User response:** Check input for compliance with the z/OS data set naming convention.

**ARYT048E** The name of the member is not valid: membername

**Explanation:** Unable to write to the specified member because the name of the member is not valid.

**User response:** Specify a valid member name and retry.

**ARYT049E** This product is not properly configured to authenticate using passtickets.

**Explanation:** User interface is attempting to use passticket strategy for authentication but the product was not configured properly.

**User response:** Contact your product administrator.

**ARYT050E** A MVS internal error or environmental occurred while attempting to access resource resourcename/rcsn.

**Explanation:** Specified error occurs while attempting to use passticket strategy for authentication. Additional diagnostic information is provided by the rc/rsn code explanation.

**User response:** Contact your product administrator.

**ARYT051E** Unexpected error occurred in the security product while attempting to access resource resourcename/rcsn.

**Explanation:** The specified error occurs while attempting to use passticket strategy for authentication. Additional diagnostic information is provided by the rc/rsn code explanation.

**User response:** Contact your product administrator.

**ARYT052E** System is unable to verify access to the resource resourcename/rcsn.

**Explanation:** The specified error occurs while attempting to use passticket strategy for authentication. Additional diagnostic information is provided by the rc/rsn code explanation.

**User response:** Contact your product administrator.

**ARYT053E** This product is not configured properly to access the resource PTKTDATA.passticket-app-id.

**Explanation:** The Db2 Recovery Expert agent issued this message because it is unable to access the named resource. The resource name passticket-app-id is controlled by passticket-app-id in the agent configuration file.

**User response:** Verify that you have set up passticket verification correctly. For more information on setting up passtickets see the section Authenticating the current ISPF user in the Db2 Recovery Expert for z/OS User Guide.

**ARYT054E** No interfaces are enabled for multicasting.

**Explanation:** Agent was not able to join any multicast group in order to listen for server announcements.

**User response:** Check if multicast configuration was set up properly. If you did not edit the configuration file, contact your product administrator.

**ARYT055E** No interfaces are enabled for multicasting.

**Explanation:** Agent was not able to join any multicast group in order to listen for server announcements.
User response: Check if multicast configuration was set up properly. If you did not edit the configuration file, contact your product administrator.

**ARYT055I** Attempting to enumerate network interfaces.

Explanation: Agent is attempting to enumerate network interfaces to listen for server announcements.

User response: No action is required.

**ARYT056I** Discovered interface stackname with IP address ipaddressindex.

Explanation: Agent discovered specified network interface which will be used to listen for server announcements.

User response: No action is required.

**ARYT057I** Multicast group multicastaddress was joined successfully.

Explanation: Agent joined successfully to the specified multicast group to listen for server announcements.

User response: No action is required.

**ARYT058I** Attempting to join multicast group multicast-address at default interface.

Explanation: Agent is attempting to join the multicast group at the default network interface since enumerating network interfaces is disabled.

User response: No action is required.

**ARYT059I** Attempting to join multicast group multicast-address at default interface.

Explanation: Agent is attempting to join the multicast group at the default network interface since enumerating network interfaces is disabled.

User response: No action is required.

**ARYT029E** An error occurred while exporting the JCL.

Explanation: An error occurred while exporting the JCL. Db2 Recovery Expert cannot overwrite the data set [data set name] because of a mismatched data set organization.

User response: There are several ways to address this error message:

- Overwrite the data set using the same organization as an existing data set.
- Use a different name for the data set that has not been used previously.

User response: Delete the existing mismatched data set through the ISPF interface and then use that name with any organization you want.

**ARYU001E** The specification context references an unrecognized request type type.

Explanation: The specification context references an unrecognized request type that is identified in the message.

User response: Contact IBM Software Support.

**ARYU002EE** An error occurred while accessing the saved user preferences.

Explanation: An error occurred while accessing the saved user preferences.

User response: This message provides context for an error reported by a subsequent message.

**ARYU003II** Received multicast

Explanation: Received multicast.

User response: No action is required.

**ARYU004E** An I/O error occurred while receiving a server multicast message.

Explanation: An I/O error occurred while receiving a server multicast message.

User response: This message provides context for an error reported by a subsequent message.

**ARYU005E** An error occurred while listening for server multicast messages.

Explanation: In order for agents and clients to discover this server, they must be configured with the same multicast-address value.

User response: Check the multicast-address value and make sure that it is configured properly. Valid values are IP addresses in dotted-decimal notation, in the range from 224.0.1.0 to 238.255.255.255, inclusive.

**ARYU006E** A malformed server multicast message was received.

Explanation: An incorrect server multicast message was received.

User response: Contact IBM Software Support.

**ARYU007I** Read network data

Explanation: Read network data.

User response: No action is required.
ARYU008E  An I/O error occurred while processing data received from the server.

Explanation:  An I/O error occurred while processing data received from the server.

User response:  This message provides context for an error reported by a subsequent message.

ARYU009E  An unexpected network read error occurred; the connection is in an unrecognized state.

Explanation:  An unexpected network read error occurred; the connection is in an unrecognized state.

User response:  Contact IBM Software Support.

ARYU010I  Disconnecting from the server.

Explanation:  The DB2 Recovery Expert agent is disconnecting from the server.

User response:  No action is required.

ARYU011W  Disconnecting from the server due to an unexpected error.

Explanation:  The connection to the server has been lost.

User response:  Check the server and the client network connections.

ARYU012E  An I/O error occurred while disconnecting from the server.

Explanation:  An I/O error occurred while disconnecting from the server.

User response:  This message provides context for an error reported by a subsequent message.

ARYU013E  An I/O error occurred while reading data from the server.

Explanation:  An I/O error occurred while reading data from the server.

User response:  This message provides context for an error reported by a subsequent message.

ARYU014I  Writing network data

Explanation:  Writing network data.

User response:  No action is required.

ARYU015E  An I/O error occurred while writing data to the server.

Explanation:  An I/O error occurred while writing data to the server.

User response:  This message provides context for an error reported by a subsequent message.
ARYU023E  Received an unexpected response with tag <tag>, type type, and ID id.

Explanation:  DB2 Recovery Expert received an unexpected response with the identified tag, type, and ID.

User response:  Contact IBM Software Support.

ARYU024E  The client has lost its connection with the server.

Explanation:  The client has lost its connection with the server.

User response:  Check the network connection of the client and the server.

ARYU025E  An unexpected error occurred: unknown report ticket type type.

Explanation:  An unexpected error has occurred with the identified ticket type.

User response:  Contact IBM Software Support.

ARYU026E  An unexpected error occurred: duplicate registration for XML tag <tag> (class1 and class2).

Explanation:  An unexpected error occurred with a duplicate registration for the identified XML tag.

User response:  Contact IBM Software Support.

ARYU027E  An unexpected window initialization error occurred.

Explanation:  An unexpected window initialization error occurred.

User response:  Contact IBM Software Support.

ARYU028E  An error occurred while creating a hex formatter.

Explanation:  An error occurred while creating a hex formatter.

User response:  This message provides context for an error reported by a subsequent message.

ARYU029E  An error occurred while parsing a formatted value.

Explanation:  An error occurred while parsing a formatted value.

User response:  This message provides context for an error reported by a subsequent message.

ARYU030E  An error occurred initializing the application look-and-feel.

Explanation:  An error occurred initializing the application look-and-feel.

User response:  This message provides context for an error reported by a subsequent message.

ARYU031E  An error occurred while initializing the help system.

Explanation:  An error occurred while initializing the help system.

User response:  This message provides context for an error reported by a subsequent message.

ARYU032E  An error occurred while shutting down the help system.

Explanation:  An error occurred while shutting down the help system.

User response:  This message provides context for an error reported by a subsequent message.

ARYU033E  You must enter the host name or IP address of the DB2 Recovery Expert server.

Explanation:  You did not enter the host name or IP address of the DB2 Recovery Expert server.

User response:  Enter a valid host name or IP address of an online DB2 Recovery Expert server into the login field.

ARYU034E  The specified port number is invalid.

Explanation:  You entered an invalid port number.

User response:  Enter a valid host name or IP address and port number of an online DB2 Recovery Expert server into the login field.

ARYU035I  Connecting to server hostname on port portnumber.

Explanation:  DB2 Recovery Expert client is connecting to the identified server and port.

User response:  Wait until the client finishes the connection process or click Exit to terminate the connection request.

ARYU036I  Connected to server hostname on port portnumber.

Explanation:  DB2 Recovery Expert client has connected to the identified server and port.

User response:  No action is required.
ARUY037E  The specification context contains no valid request IDs.

Explanation:  The specification context contains no valid request IDs.

User response:  Contact IBM Software Support.

ARUY038E  The internal state of the specification is invalid ("token").

Explanation:  The specification contains invalid data.

User response:  If the specification was exported, ensure that the specification was not changed.

ARUY039E  An error occurred while cancelling the request.

Explanation:  An error occurred while cancelling the request.

User response:  This message provides context for an error reported by a subsequent message.

ARUY040E  An error occurred while deleting the message.

Explanation:  An error occurred while deleting the message.

User response:  This message provides context for an error reported by a subsequent message.

ARUY041E  Pattern help topic not found for object node type "type".

Explanation:  Pattern help topic not found for object node type.

User response:  Contact IBM Software Support.

ARUY042E  An error occurred while retrieving the recovery history events.

Explanation:  An error occurred while retrieving the recovery history events.

User response:  This message provides context for an error reported by a subsequent message.

ARUY043E  An error occurred while retrieving the quiet times.

Explanation:  An error occurred while retrieving the quiet times.

User response:  This message provides context for an error reported by a subsequent message.

ARUY044E  An error occurred while retrieving the object definition levels.

Explanation:  An error occurred while retrieving the object definition levels.

User response:  This message provides context for an error reported by a subsequent message.

ARUY045E  The date value date is invalid.

Explanation:  You entered a date value that is not in the proper format.

User response:  Ensure that the date value is properly formatted. Check the online help for the valid format.

ARUY046E  An error occurred while connecting to the server.

Explanation:  An error occurred while connecting to the server.

User response:  This message provides context for an error reported by a subsequent message.

ARUY047E  No database locations are known to the DB2 Recovery Expert server.

Explanation:  The server has no locations.

User response:  Check to see if any agents are connected.

ARUY048E  The format of the log RBA is invalid.

Explanation:  You entered the log RBA in an invalid format.

User response:  Ensure that the entered RBA value is properly formatted.

ARUY049E  The format of the LRSN is invalid.

Explanation:  You entered the LRSN in an invalid format.

User response:  Ensure that the entered RBA value is properly formatted.

ARUY050E  The "to" date/time must be later than the "from" date/time.

Explanation:  You entered a "to" date/time that is earlier than the "from" date/time.

User response:  Ensure that the "from" date/time value is less than the "to" date/time value.
The "to" RBA must be greater than the "from" RBA.

Explanation: You entered a "to" RBA that is less than the "from" RBA.

User response: Ensure that the "from" RBA value is less than the "to" RBA value.

The "to" LRSN must be greater than the "from" LRSN.

Explanation: You entered a "to" LRSN that is less than the "from" LRSN.

User response: Ensure that the "from" LRSN value is less than the "to" LRSN value.

An unrecognized time range type value was encountered.

Explanation: An unrecognized time range type value was encountered.

User response: Contact IBM Software Support.

Validation was successful for plan. Note that this is not a guarantee of successful execution.

Explanation: DB2 Recovery Expert successfully validated the identified recovery plan.

User response: No action is required.

Validation was unsuccessful for recovery plan "plan-name".

Explanation: DB2 Recovery Expert did not successfully validate the identified recovery plan.

User response: Check the server logs for more information.

Validation warnings for recovery plan "plan-name".

Explanation: DB2 Recovery Expert successfully validated the identified recovery plan with warnings.

User response: Review the message text for more information about the warning(s).

The tri-state value is invalid.

Explanation: The tri-state value identified in the message is invalid.

User response: Contact IBM Software Support.

The recovery site value is invalid.

Explanation: The recovery site identified in the message is invalid.

User response: Contact IBM Software Support.

The rebuild scope value is invalid.

Explanation: The rebuild scope value identified in the message is invalid.

User response: Contact IBM Software Support.

The copy scope value is invalid.

Explanation: The copy scope value identified in the message is invalid.

User response: Contact IBM Software Support.

The in-stream data set delimiter value is invalid. It must be exactly two non-blank characters.

Explanation: The in-stream data set delimiter value that you specified is invalid. It must be exactly two non-blank characters.

User response: Contact IBM Software Support.

The specified JCL is invalid. At least one line exceeds 72 characters.

Explanation: The specified JCL is invalid. At least one line exceeds 72 characters.

User response: Ensure that all the lines in the JCL are 72 characters or less.

The job status value is invalid.

Explanation: The job status value identified in the message is invalid.

User response: Contact IBM Software Support.

The job cards must be no more than 4 lines long.

Explanation: You specified job cards that have more than 4 lines.

User response: Ensure that the job card is no longer than 4 lines.
ARYU064E  The specified job cards are invalid. At least one line exceeds 72 characters.
Explanation: You specified job cards that have at least one line that exceeds 72 characters.
User response: Ensure that all the lines in the job card are 72 characters or less.

ARYU065E  The specified job cards are invalid. The job name exceeds 8 characters.
Explanation: You specified job cards that are invalid because the job name exceeds 8 characters.
User response: Ensure that the job name is 8 characters or less.

ARYU066E  The specified job cards are invalid. The job name could not be determined.
Explanation: You specified job cards that are invalid because the job name could not be determined.
User response: The job card is improperly formatted. Ensure that the job name is in the correct location.

ARYU067E  The job group type value type is invalid.
Explanation: The job group type value that is identified in the message is invalid.
User response: Contact IBM Software Support.

ARYU068E  The location type value type is invalid.
Explanation: The location type value that is identified in the message is invalid.
User response: Contact IBM Software Support.

ARYU069E  The message status value status is invalid.
Explanation: The message status value that is identified in the message is invalid.
User response: Contact IBM Software Support.

ARYU070E  The message type value type is invalid.
Explanation: The message type value that is identified in the message is invalid.
User response: Contact IBM Software Support.

ARYU071E  The timestamp value timestamp is invalid.
Explanation: The timestamp value that is identified in the message is invalid.
User response: Ensure that the entered timestamp is properly formatted.

ARYU072E  The log point value log-point is invalid.
Explanation: The log point value that is identified in the message is invalid.
User response: Ensure that the entered logpoint is properly formatted.

ARYU073E  The LRSN value lrsn is invalid.
Explanation: The LRSN value that is identified in the message is invalid.
User response: Ensure that the entered LRSN value is properly formatted.

ARYU074E  The log RBA value log-rba is invalid.
Explanation: The log RBA value that is identified in the message is invalid.
User response: Ensure that the entered RBA value is properly formatted.

ARYU075E  The point-in-time type value type is invalid.
Explanation: The point-in-time type value that is identified in the message is invalid.
User response: Contact IBM Software Support.

ARYU076E  The point-in-time description value is invalid.
Explanation: The point-in-time description that is identified in the message is invalid.
User response: Contact IBM Software Support.

ARYU077E  The recovery job group type value type is invalid.
Explanation: The recovery job group type that is identified in the message is invalid.
User response: Contact IBM Software Support.

ARYU078E  The recovery plan log processing flag value flag is invalid.
Explanation: The recovery plan log processing flag that is identified in the message is invalid.
User response: Contact IBM Software Support.

ARYU079E  The recovery resource type value type is invalid.
Explanation: The recovery resource type that is identified in the message is invalid.
User response: Contact IBM Software Support.
The resource severity value severity is invalid.

Explaination: The resource severity that is identified in the message is invalid.
User response: Contact IBM Software Support.

The specification share option value share-option is invalid.

Explaination: The specification share option that is identified in the message is invalid.
User response: Contact IBM Software Support.

The specification type value type is invalid.

Explaination: The specification type that is identified in the message is invalid.
User response: Contact IBM Software Support.

The time range type value time-range-type is invalid.

Explaination: The time range type that is identified in the message is invalid.
User response: Contact IBM Software Support.

The utility type value type is invalid.

Explaination: The utility type that is identified in the message is invalid.
User response: Contact IBM Software Support.

The predicate operator value operator is invalid.

Explaination: The predicate operator that is identified in the message is invalid.
User response: Contact IBM Software Support.

A protocol error occurred: received unexpected element element.

Explaination: A protocol error has occurred. DB2 Recovery Expert received an unexpected element that is identified in the message.
User response: Contact IBM Software Support.

A protocol error occurred: received unrecognized report element element.

Explaination: A protocol error has occurred. DB2 Recovery Expert received an unexpected report element that is identified in the message.
User response: Contact IBM Software Support.

A protocol error occurred: received unrecognized response element element.

Explaination: A protocol error has occurred. DB2 Recovery Expert received an unexpected response element that is identified in the message.
User response: Contact IBM Software Support.

An internal protocol error occurred: invalid state state.

Explaination: An internal protocol error has occurred the invalid state is identified in the message.
User response: Contact IBM Software Support.

The recovery plan validation status value status is invalid.

Explaination: The recovery plan validation status that is identified in the message is invalid.
User response: Contact IBM Software Support.

A protocol error occurred: received unrecognized response element element.

Explaination: A protocol error has occurred. DB2 Recovery Expert received an unexpected response element that is identified in the message.
User response: Contact IBM Software Support.

The job group type value type is invalid.

Explaination: The job group type that is identified in the message is invalid.
User response: Contact IBM Software Support.

Connection decryption key not initialized.

Explaination: The connection decryption key was not initialized.
User response: Contact IBM Software Support.
**ARU095S**  Connection encryption key not initialized.

**Explanation:** The connection encryption key was not initialized.

**User response:** Contact IBM Software Support.

**ARU096E**  Decryption error. *(message-text)*

**Explanation:** There was a decryption error. See the error message text for more information.

**User response:** Contact IBM Software Support.

**ARU097E**  Encryption error. *(message-text)*

**Explanation:** There was an encryption error. See the error message text for more information.

**User response:** Contact IBM Software Support.

**ARU098E**  Failed to create cipher. *(message-text)*

**Explanation:** Failed to create cipher. See the error message text for more information.

**User response:** Contact IBM Software Support.

**ARU099S**  Settings decryption key not initialized.

**Explanation:** The settings decryption key was not initialized.

**User response:** Contact IBM Software Support.

**ARU100S**  Settings encryption key not initialized.

**Explanation:** The settings encryption key was not initialized.

**User response:** Contact IBM Software Support.

**ARU101S**  The UTF-8 encoding is not supported on this platform.

**Explanation:** The UTF-8 encoding is not supported on this platform.

**User response:** Contact IBM Software Support.

**ARU102E**  The base64 data is invalid.

**Explanation:** The base64 data is invalid.

**User response:** Contact IBM Software Support.

**ARU103E**  XML document creation failed. *(message-text)*

**Explanation:** XML document creation failed. See the message text for more information.

**User response:** Contact IBM Software Support.

**ARU104E**  XML document parsing failed. *(message-text)*

**Explanation:** XML document parsing failed. See the message text for more information.

**User response:** Contact IBM Software Support.

**ARU105E**  An XML syntax error was detected; no element was found at the root of the document.

**Explanation:** An XML syntax error was detected; no element was found at the root of the document.

**User response:** Contact IBM Software Support.

**ARU106E**  An XML schema violation was detected; expected root element *element-expected*, but found *element-found* instead.

**Explanation:** An XML schema violation was detected. DB2 Recovery Expert expected the identified root element but found the other identified element instead.

**User response:** Contact IBM Software Support.

**ARU107E**  XML document generation failed. *(message-text)*

**Explanation:** XML document generation failed. See the message text for more information.

**User response:** Contact IBM Software Support.

**ARU108S**  The UTF-8 encoding is not supported on this platform.

**Explanation:** The UTF-8 encoding is not supported on this platform.

**User response:** Contact IBM Software Support.

**ARU109E**  An XML schema violation was detected; value *value* is not a valid integer value.

**Explanation:** An XML schema violation was detected. The identified value is not a valid integer value.

**User response:** Contact IBM Software Support.

**ARU110E**  An XML schema violation was detected; value *value* is not a valid boolean value.

**Explanation:** An XML schema violation was detected. The identified value is not a valid boolean value.

**User response:** Contact IBM Software Support.
AR
YU118 Object instantiation failure.

(message-text)

Explanation: Object instantiation failure. See the
message text for more information.

User response: Contact IBM Software Support.

AR
YU119 An XML schema violation was detected;

element element child child-number has

the wrong type.

Explanation: An XML schema violation was detected;
the element that is identified in the message has the
wrong type.

User response: Contact IBM Software Support.

AR
YU120I The JCL has changed. Do you want to

save the changes?

Explanation: This message identifies that the JCL has
changed and ensures that you want to save the
changes.

User response: Confirm whether you want to save the
changes.

AR
YU121E You are not authorized to open

specification. Do you want to make a copy

instead?

Explanation: You are not allowed to access or edit the
specification, but you are allowed to make a copy.

User response: Make a copy.

AR
YU122EI You are not authorized to rename

specification. Do you want to make a copy

 instead?

Explanation: You are not allowed to access or edit the
specification, but are allowed to make a copy.

User response: Make a copy.

AR
YU123E An error occurred while opening

specification.

Explanation: An error occurred while opening the
specification that is identified in the message.

User response: This message provides context for an
error reported by a subsequent message.

AR
YU124W The size of the result file is number

bytes. Do you want to view the entire

file?

Explanation: The size of the file is greater than the file
size trigger in the options menu.

User response: Confirm whether you want to view
the entire file.

</table>
ARYu167E  An error occurred while generating JCL for the quiet time analysis.
Explanation: An error occurred while generating JCL for the quiet time analysis.
User response: This message provides context for an error reported by a subsequent message.

ARYu168E  An error occurred while performing the quiet time analysis.
Explanation: An error occurred while performing the quiet time analysis.
User response: This message provides context for an error reported by a subsequent message.

ARYu169E  An unexpected error occurred while making a copy of a specification.
Explanation: An unexpected error occurred while making a copy of a specification.
User response: This message provides context for an error reported by a subsequent message.

ARYu170E  Caused by: message-text (class-name)
Explanation: This message gives more details about a preceding message.
User response: See the message text for more information.

ARYu171E  Caused by: (class-name)
Explanation: This message gives more details about a preceding message.
User response: See the message text for more information.

ARYu172I  file-name already exists. Do you want to replace it?
Explanation: This message identifies that the file already exists and ensures that you want to replace it.
User response: No action is required.

ARYu173I  XML: S->C: xml-trace
Explanation: XML trace message.
User response: No action is required.

ARYu174I  XML: C->S: xml-trace
Explanation: XML trace message.
User response: No action is required.

ARYu175E  The specified job cards are invalid. The job name is not all uppercase characters.
Explanation: You have specified a job name that is not in uppercase characters. Job names are required to be in uppercase characters.
User response: Change your job name to uppercase characters and retry.

ARYu176I  Build date client date.
Explanation: The build date of the client.
User response: No action is required.

ARYu177I  DB2 Recovery Expert client terminating.
User response: No action is required.

ARYu178W  You cannot close until the specification has finished opening.
Explanation: An advisor window cannot be closed while a specification is being opened. Cancel the opening or wait for the opening to complete before attempting to close the window.
User response: No action is required.

ARYu179E  An error occurred while issuing the command.
Explanation: This message provides context for an error reported by a subsequent message.
User response: No action is required.

ARYu180E  Db2 command command-text failed with return code = return-code and reason code = reason-code.
Explanation: A Db2 error with the specified return and reason codes occurred while issuing the specified command.
User response: See Db2 Messages and Codes for more information about the return and reason codes.

ARYu181W  The request was interrupted.
Explanation: A task that was running was interrupted. This is usually caused by a specification being closed before a task is completed.
User response: No action is required.
System-level recovery is not performed directly from this user interface. After generating JCL for the recovery plan, additional instructions for completing the recovery will display.

**Explanation:** This message indicates that the process for running a system-level recovery is different from other types of recovery. Rather than simply submitting one or more jobs from the DB2 Recovery Expert user interface, system-level recovery requires additional manual steps. After generating JCL, the System Recovery Instructions dialog box displays, describing the required steps.

**User response:** No action is required.

---

The from date/time must be earlier than the current date/time.

**Explanation:** This message indicates that you specified an from date and time that is later than the current date and time.

**User response:** Specify a from date and time that is earlier than the current time and retry.

---

No agents online.

**Explanation:** The DB2 Recovery Expert server attempted to communicate with an agent, but there are no agents currently running.

**User response:** Run the agent JCL to start an agent on the LPAR where the Db2 subsystem to which you want to connect resides.

---

An error occurred while retrieving the list of backups.

**Explanation:** An error occurred while retrieving the list of backups.

**User response:** No action is required. This message provides context for an error reported by a subsequent message.

---

An error occurred while retrieving the properties of the backup.

**Explanation:** An error occurred while retrieving the properties of the backup.

**User response:** This message provides context for an error reported by a subsequent message.

---

The backup type value is invalid. Valid values are B(cv), S(NAP), F(lash), D(B2), and L (DFSMSdss).

**Explanation:** The backup type value is invalid. Valid values are:

- Specif

---

An error occurred while generating JCL for the system restore job.

**Explanation:** An error occurred while generating JCL for the system restore job.

**User response:** No action is required. This message provides context for an error reported by a subsequent message.

---

An error occurred while deleting a backup.

**Explanation:** An error occurred while deleting a backup.

**User response:** This message provides context for an error reported by a subsequent message.

---

An error occurred while generating offload JCL for the backup.

**Explanation:** An error occurred while generating offload JCL for the backup.

**User response:** This message provides context for an error reported by a subsequent message.

---

An error occurred while running the offload JCL for the backup.

**Explanation:** An error occurred while running the offload JCL for the backup.

**User response:** This message provides context for an error reported by a subsequent message.

---

An error occurred while running the system restore job.

**Explanation:** An error occurred while running the system restore job.

**User response:** This message provides context for an error reported by a subsequent message.

---

An error occurred while retrieving data from the RBA Capture Utility.

**Explanation:** An error occurred while retrieving data from the RBA Capture Utility.

**User response:** This message provides context for an error reported by a subsequent message.
An error occurred while running the RBA timestamp to LRSN conversion utility.

Explanation: An error occurred while running the RBA timestamp to LRSN conversion utility.

User response: This message provides context for an error reported by a subsequent message.

An error occurred while generating object restore DDL.

Explanation: An error occurred while generating object restore DDL.

User response: This message provides context for an error reported by a subsequent message.

An error occurred while running the object restore DDL.

Explanation: An error occurred while running the object restore DDL.

User response: This message provides context for an error reported by a subsequent message.

An error occurred while running the object restore recovery JCL.

Explanation: An error occurred while running the object restore recovery JCL.

User response: This message provides context for an error reported by a subsequent message.

An XML schema violation was detected; value date is not a valid date value.

Explanation: An XML schema violation was detected. The identified value is not a valid date value.

User response: Contact IBM Software Support customer support.

Are you sure that you want to delete the selected backup?

Explanation: You must confirm that you want to delete the selected object in order to delete it.

User response: Click OK to delete the selected object or Cancel to cancel the deletion and return to the previous window.

Protocol verification has failed. The server reported a version of server-version and the client expected server-version or higher.

Explanation: A protocol error occurred; the server version of DB2 Recovery Expert is not compatible with the client version being run.

User response: Upgrade the DB2 Recovery Expert server to match the version specified in the error message.

The specification has an unknown type.

Explanation: A specification was read but the program could not decipher its type.

User response: Contact IBM Software Support customer support.

The recover to RBA/LRSN must be greater than RBA/LRSN of the selected backup.

Explanation: The Recover To RBA/LRSN specified is at a point prior to the RBA/LRSN of the selected backup. This is not allowed.

User response: Specify a recovery point RBA/LRSN equal to or greater than the listed RBA/LRSN, or choose an earlier backup.

Are you sure that you want to delete the selected job?

Explanation: You must confirm that you want to delete the selected job in order to delete it.

User response: Click OK to delete the selected job or Cancel to cancel the deletion and return to the previous window.

A specification must be saved at an active location, you must select a different location in order to continue.

Explanation: The location that you selected to save the specification is inactive.

User response: Choose an active location to save the specification.

Db2 subsystem subsystem-id has been restarted and has issued the following WTOR: (1) CONDITIONAL RESTART RECORD INDICATES TRUNCATION AT RBA (2). REPL Y OR N. Do you wish to reply Yes to this request?

Explanation: Before the final job of a system restore runs, a message informs you that the Db2 subsystem restarted and issued the following WTOR.

User response: Reply to the WTOR. To complete the final job, you must reply Y.
ARUY240W The Include RI related objects option is switched off. If you do not include referential integrity related objects in generated recovery plans the restore may fail.

Explanation: From either the ISPF interface or the web browser interface, you have set the referential integrity recovery option to N.

User response: If you do not want to include the objects related by referential integrity then you do not need to do anything. This is a warning message and processing will continue. If you want to include the related objects you must set the recovery option back to Y using either the ISPF or web browser interface. Using the ISPF interface, set the recovery option Include RI related objects to Y. Using the web browser interface select the Include RI related objects check box to include the additional objects in the recovery.

ARUY241W The Allow LOAD from full IC for recreated tables option is set to Y. This type of plan, when used for recreated tables, may fail in some cases.

Explanation: This is an informational message. It is informing you that the Allow LOAD from full IC for recreated tables option has been checked and the LOAD from full IC recovery plan has been selected to recover recreated tables. In some cases, using this plan may fail.

User response: None is required if you want to go forward with using the LOAD from full IC recovery plan to recover recreated tables. Otherwise select another recovery plan.

ARVY013I Listening on port port-number.

Explanation: Identifies the port number that the server is listening to.

User response: None required.

ARVY014I The network connection has been disconnected.

Explanation: The network connection has been disconnected.

User response: None required.

ARVY015I Session session-id ended normally.

Explanation: The session that is identified in the message ended normally.

User response: None required.

ARVY016I Session session-id established.

Explanation: The session that is identified in the message has been established.

User response: None required.

ARVY017E The maximum number of listen attempts has been reached.

Explanation: The server cannot open the client or agent port in order to listen for incoming requests.

User response: Ensure that the desired ports are specified in the server configuration file. Ensure that the specified ports are not in use by any other application.

ARVY018E Session session-id has ended abnormally.

Explanation: The session that is identified in the message has ended abnormally.

User response: Contact IBM Customer Support.

ARVY019E Invalid data received from client.

Explanation: This error can occur if an incorrect port has been specified in the agent/server configuration or a client is attempting to connect at an incorrect port.

User response: Check the port configuration in all the configuration files and verify that the client is connecting at either the client-listener-port and/or the HTTP port (depending on the type of client being used).

ARVY003E Active module not found.

Explanation: The active module was not found.

User response: No action is required. Preceding and/or following messages provide more information about the abend that occurred.

ARVY008E ARYCSI SQL code = sql-code, reason code = reason-code.

Explanation: An SQL error has occurred.

User response: See "Db2 Messages and Codes" for more information about the specified SQL code and SQL state values. Ensure that the product packages have been bound at the connected location.

ARVY009E The data set data-set-name does not exist on volume volume.

Explanation: The specified image copy or log data set is recorded as being cataloged on the specified volume, but it does not exist on that volume.

User response: Regenerate recovery plans. You may need to take a new image copy with the COPY utility
to replace the missing data set.

**ARYW010E**  The data set *data-set-name* is not cataloged.

**Explanation:** The specified image copy or log data set is recorded as being cataloged, but it is not cataloged.

**User response:** Regenerate recovery plans. You may need to take a new image copy with the COPY utility to replace the missing data set.

**ARYW011E**  The image copy data set *data-set-name* does not exist on volume *volume*.

**Explanation:** The specified image copy data set is recorded as being cataloged on the specified volume, but it does not exist on that volume.

**User response:** Regenerate recovery plans. You may need to take a new image copy with the COPY utility to replace the missing data set.

**ARYW012E**  The image copy data set *data-set-name* is not cataloged.

**Explanation:** The specified image copy data set is recorded as being cataloged, but it is not cataloged.

**User response:** Regenerate recovery plans. You may need to take a new image copy with the COPY utility to replace the missing data set.

**ARYW015E**  The log data set *data-set-name* does not exist on volume *volume*.

**Explanation:** The specified Db2 log data set is recorded as being cataloged on the specified volume, but it does not exist on that volume.

**User response:** Regenerate recovery plans.

**ARYW016E**  The log data set *data-set-name* is not cataloged.

**Explanation:** The specified log data set is recorded as being cataloged, but it is not cataloged.

**User response:** Regenerate recovery plans.

**ARYW030I**  Invoking callable service *service-name*.

**Explanation:** Invoking a callable service that is identified in the message.

**User response:** No action is required.

**ARYW031I**  Returned from callable service *service-name*.

**Explanation:** Returned from a callable service that is identified in the message.

**User response:** No action is required.

**ARYW034E**  The job *job-name*/*job-id* was abandoned.

**Explanation:** The specified job did not end in a timely fashion after it was cancelled.

**User response:** Use native JES facilities to check the status of the job, and take further actions if necessary.

**ARYW035E**  The job *job-name*/*job-id* abended *abend-code*.

**Explanation:** The job that is identified in the message abended.

**User response:** Use native JES facilities to check the status and review the output of the job to diagnose the error.

**ARYW036E**  The job *job-name*/*job-id* was cancelled.

**Explanation:** The job was cancelled due to a user request.

**User response:** No action is required.

**ARYW037E**  The job *job-name*/*job-id* did not run.

**Explanation:** The job that is identified in the message did not run.

**User response:** Use native JES facilities to check the status and review the output of the job to diagnose the error. Contact IBM Software Support.

**ARYW038E**  The job *job-name*/*job-id* ended with a JCL error.

**Explanation:** The job that is identified in the message ended with a JCL error.

**User response:** Use native JES facilities to check the status and review the output of the job to diagnose the error. Contact IBM Software Support.

**ARYW039E**  The job *job-name*/*job-id* ended with MAXCC = *max-cc*.

**Explanation:** The job that is identified in the message ended with an error.

**User response:** Use native JES facilities to check the status and review the output of the job to diagnose the error. Contact IBM Software Support.

**ARYW040W**  The job *job-name*/*job-id* ended with MAXCC = *max-cc*.

**Explanation:** The job that is identified in the message ended with a warning.

**User response:** Use native JES facilities to check the status and review the output of the job to diagnose the warning. Contact IBM Software Support.
The job job-name / job-id ended with MAXCC = max-cc.

Explanation: The job that is identified in the message ended successfully.
User response: No action is required.

The job job-name / job-id is running.

Explanation: The job that is identified in the message should have ended, but is still running.
User response: Contact IBM Software Support.

A severe error occurred while running job job-name / job-id.

Explanation: A severe error occurred while running job that is identified in the message.
User response: Contact IBM Software Support.

The specified timestamp is not within the scope of the log.

Explanation: You specified a timestamp that is not found within the log, most likely one in the future.
User response: Specify a timestamp prior to the current point in time.

The specified log RBA is not within the scope of the log.

Explanation: You specified a log RBA that is not within the scope of the log.
User response: Specify a log RBA which is within the scope of the Db2 log.

The specified LRSN is not within the scope of the log.

Explanation: You specified an LRSN that is not within the scope of the log.
User response: Specify an LRSN that is within the scope of the Db2 log.

ARYCSI SQL code = sql-code, reason code = reason-code. SQL message text follows: .

Explanation: An SQL error occurred.
User response: See "Db2 Messages and Codes" for more information about the specified SQL code and SQL state values. Ensure that the product packages have been bound at the connected location.

The job job-name / job-id was deleted by JES or cancelled by the operator before execution.

Explanation: The job job-name / job-id was deleted by JES or cancelled by the operator before execution.
User response: No action is required.

The log point <hex-value> has unknown type.

Explanation: Cannot determine the log point type because the log point value specified has the wrong format.
User response: Check the input. If you have not edited any field, contact IBM Software Support.

An XML schema violation was detected; value "value" is not a valid boolean value.

Explanation: An XML schema violation was detected and the value that is identified in the message is not a valid boolean value.
User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

An XML schema violation was detected; value "value" is not a valid double value.

Explanation: An XML schema violation was detected and the value that is identified in the message is not a valid double value.
User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

An XML schema violation was detected; value "value" is not a valid integer value.

Explanation: An XML schema violation was detected and the value that is identified in the message is not a valid integer value.
User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

An XML syntax error was detected at offset offset; expected "expected-value", found "found-value".

Explanation: An XML syntax error was detected at the offset that is identified in the message. The expected value and found value are also identified in the message.
User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

**ARYX018E** An XML schema violation was detected; required element \"element\" attribute \" attribute \" is not present.

Explanation: An XML schema violation was detected. The required element that is identified in the message is not present.

User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

**ARYX019E** An XML schema violation was detected; required element \"element\" child \"child-element\" is not present.

Explanation: An XML schema violation was detected. The required element that is identified in the message is not present.

User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

**ARYX020E** Memory allocation failed (number bytes).

Explanation: A memory allocation has failed.

User response: Contact IBM Software Support.

**ARYX021E** An XML schema violation was detected; element \"element\" child \"child-number\" has wrong type.

Explanation: An XML schema violation was detected. The element that is identified in the message has the wrong type.

User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

**ARYX022E** An XML syntax error was detected; character reference \"character-reference\" is invalid.

Explanation: An XML syntax error was detected. The character reference that is identified in the message is invalid.

User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

**ARYX023E** An XML syntax error was detected; entity reference \"entity-reference\" is invalid.

Explanation: An XML syntax error was detected. The entity reference that is identified in the message is invalid.

User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

**ARYX024E** An XML syntax error was detected; more than one element was found at the root of the document.

Explanation: An XML syntax error was detected; more than one element was found at the root of the document.

User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

**ARYX025E** An XML syntax error was detected; no element was found at the root of the document.

Explanation: An XML syntax error was detected; no element was found at the root of the document.

User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

**ARYX026E** An XML syntax error was detected; text was found at the root of the document.

Explanation: An XML syntax error was detected; text was found at the root of the document.

User response: If the error occurred while reading the agent or server configuration file, correct the file contents. Otherwise, contact IBM Software Support.

**ARYX027E** A severe error occurred during XML parsing; an unknown exception occurred.

Explanation: A severe error occurred during XML parsing; an unknown exception occurred.

User response: Contact IBM Software Support.

**ARYX028E** The command line option \"option\" is invalid.

Explanation: The command line option that is identified in the message is invalid.

User response: Correct the command line option and retry the operation. See the DB2 Recovery Expert client/server environment information in the DB2

**ARYX029E** The command line option "option" value "value" is invalid.

**Explanation:** The command line option that is identified in the message is invalid.

**User response:** Correct the command line option and retry the operation. See the DB2 Recovery Expert client/server environment information in the DB2 Recovery Expert User Guide for valid options.

**ARYX030E** The required command line option "option" was not specified.

**Explanation:** The required command line option that is identified in the message was not specified.

**User response:** Correct the command line option and retry the operation. See the DB2 Recovery Expert client/server environment information in the DB2 Recovery Expert User Guide for valid options.

**ARYX031E** A value is required for the command line option "option".

**Explanation:** You did not enter a value for the command line option that is identified in the message.

**User response:** Specify a value for the command line option and retry the operation. See the DB2 Recovery Expert client/server environment information in the DB2 Recovery Expert User Guide for valid options.

**ARYX032E** Too many values were specified for the command line option "option".

**Explanation:** You entered too many values for the command line option that is identified in the message.

**User response:** Specify only one value for the command line option and retry the operation. See the DB2 Recovery Expert client/server environment information in the DB2 Recovery Expert User Guide for valid options.

**ARYX033E** The command line option "option" does not accept any values.

**Explanation:** You entered a value for the command line option that is identified in the message.

**User response:** Correct the command line option and retry the operation. See the DB2 Recovery Expert client/server environment information in the DB2 Recovery Expert User Guide for valid options.

**ARYX034E** A severe error occurred during command line processing; an unknown exception occurred.

**Explanation:** A severe error occurred during command line processing; an unknown exception occurred.

**User response:** Contact IBM Software Support.

**ARYX035E** The operation completed successfully.

**Explanation:** The operation completed successfully.

**User response:** No action is required.

**ARYX036E** The address family is not supported by the protocol family (socket-return-code).

**Explanation:** The address family is not supported by the protocol family.

**User response:** Contact IBM Software Support.

**ARYX037E** The operation is still in progress (socket-return-code).

**Explanation:** The operation that is identified in the message is still in progress.

**User response:** Contact IBM Software Support.

**ARYX038E** Permission is denied (socket-return-code).

**Explanation:** Permission is denied.

**User response:** Contact IBM Software Support.

**ARYX039E** The network is down (socket-return-code).

**Explanation:** The network is down.

**User response:** Contact IBM Software Support.

**ARYX040E** No buffer space is available (socket-return-code).

**Explanation:** No buffer space is available.

**User response:** Contact IBM Software Support.

**ARYX041E** Too many sockets have been opened (socket-return-code).

**Explanation:** Too many sockets have been opened.

**User response:** Contact IBM Software Support.

**ARYX042E** The protocol is not supported (socket-return-code).

**Explanation:** The protocol is not supported.

**User response:** Contact IBM Software Support.
ARXY043E  The WSAStartup routine was not called (socket-return-code).
Explanation:  The WSAStartup routine was not called.
User response:  Contact IBM Software Support.

ARXY044E  The protocol is the wrong type for the socket (socket-return-code).
Explanation:  The protocol is the wrong type for the socket.
User response:  Contact IBM Software Support.

ARXY045E  The socket type is not supported (socket-return-code).
Explanation:  The socket type is not supported.
User response:  Contact IBM Software Support.

ARXY046E  The destination network is unreachable (socket-return-code).
Explanation:  The destination network is unreachable.
User response:  Ensure that the correct host name or IP address was specified.

ARXY047E  The socket handle is invalid (socket-return-code).
Explanation:  The socket handle is invalid.
User response:  Contact IBM Software Support.

ARXY048E  The address is already in use (socket-return-code).
Explanation:  The address is already in use.
User response:  Contact IBM Software Support.

ARXY049E  The function call was interrupted (socket-return-code).
Explanation:  The function call was interrupted.
User response:  Contact IBM Software Support.

ARXY050E  The requested address is not available (socket-return-code).
Explanation:  The requested address is not available.
User response:  Contact IBM Software Support.

ARXY051E  The connection was aborted (socket-return-code).
Explanation:  The connection was aborted.
User response:  Contact IBM Software Support.

ARXY052E  The connection was refused by the partner (socket-return-code).
Explanation:  The connection was refused by the partner.
User response:  Ensure that the correct port number was specified, and that the partner application has been started and is available.

ARXY053E  The connection was reset by the partner (socket-return-code).
Explanation:  The partner application terminated the network connection.
User response:  If this is unexpected, diagnose the other application's failure. Otherwise, no action is required.

ARXY054E  The network message is too long (socket-return-code).
Explanation:  The network message is too long.
User response:  Contact IBM Software Support.

ARXY055E  The network dropped the connection when reset (socket-return-code).
Explanation:  The network dropped the connection when reset.
User response:  Contact IBM Software Support.

ARXY056E  An invalid parameter was specified (socket-return-code).
Explanation:  An invalid parameter was specified.
User response:  Contact IBM Software Support.

ARXY057E  The socket is not connected (socket-return-code).
Explanation:  The socket is not connected.
User response:  Contact IBM Software Support.

ARXY058E  The operation is not supported (socket-return-code).
Explanation:  The operation is not supported.
User response:  Contact IBM Software Support.

ARXY059E  The socket has been closed (socket-return-code).
Explanation:  The socket has been closed.
User response:  Contact IBM Software Support.

</table>
ARXY077E  A Db2 attachment facility error occurred: function = function-code, RC = return-code, reason = reason-code.

Explanation: A Db2 attachment facility error occurred.

User response: An error occurred while performing a Db2 attachment function. See Db2 Messages and Codes for more information about the return and reason codes.

ARXY078E  An error occurred while opening the Db2 load libraries: RC = return-code.

Explanation: An error occurred while opening the Db2 load libraries.

User response: Ensure that the correct list of load libraries for the Db2 subsystem is configured in the product control file, using sample job ARYSJ001. See DFSMS Macro Instructions For Data Sets for more information about the return code.

ARXY079E  An error occurred while attaching the Db2 attachment facility subtask: RC = return-code.

Explanation: An error occurred while attaching the Db2 attachment facility subtask.

User response: Contact IBM Software Support.

ARXY080E  The Db2 attachment facility subtask ended unexpectedly: RC = return-code.

Explanation: The Db2 attachment facility subtask ended unexpectedly.

User response: Contact IBM Software Support.

ARXY081E  An SQL error occurred: SQL code = sql-code, SQL state = sql-state

Explanation: An SQL error occurred.

User response: See Db2 Messages and Codes for more information about the SQL code and SQL state values.

ARXY082E  The input Db2 command is too long.

Explanation: The input Db2 command is too long.

User response: Contact IBM Software Support.

ARXY083E  An error occurred while making an IFI call: IFCARC1 = return-code, IFCARC2 = reason-code.

Explanation: An error occurred while making an IFI call.

User response: See Db2 Messages and Codes for more information about the SQL code and SQL state values.

ARXY084E  Insufficient data was returned from an IFI call.

Explanation: Insufficient data was returned from an IFI call.

User response: Contact IBM Software Support.

ARXY085E  A dynamic allocation error occurred: info code = info-code, error code = error-code.

Explanation: A dynamic allocation error occurred.

ARXY086E  A dynamic concatenation error occurred: info code = info-code, error code = error-code.

Explanation: A dynamic concatenation error occurred.

ARXY087E  A dynamic free error occurred: info code = info-code, error code = error-code.

Explanation: A dynamic free error occurred.

ARXY088E  An invalid dynamic allocation parameter was specified: code = parm-code.

Explanation: An invalid dynamic allocation parameter was specified.

User response: Contact IBM Software Support.

ARXY089E  The specified user ID user-id and password are invalid.

Explanation: You entered a user ID and password that are invalid.

User response: Correct the user ID and password and retry the operation.

ARXY090E  The specified password for user ID user-id has expired.

Explanation: The specified password for the user ID that is identified in the message has expired.

User response: Use native facilities to change your password, then retry the operation.
Access for the specified user ID user-id has been revoked.

**Explanation:** Access for the specified user ID that is identified in the message has been revoked.

**User response:** See your security administrator to get your user ID reinstated.

**Explanation:** An error occurred while performing authentication.

**User response:** Contact IBM Software Support.

An unexpected error occurred (file-name, line-number).

**Explanation:** An unexpected error occurred.

**User response:** Contact IBM Software Support.

An unexpected error occurred with token "token", (file-name).

**Explanation:** An unexpected error occurred.

**User response:** Contact IBM Software Support.

An unexpected error occurred with tokens "token" and "token" (file-name, line-number).

**Explanation:** An unexpected error occurred.

**User response:** Contact IBM Software Support.

An unexpected error occurred with tokens "token", token " and "token" (file-name, line-number).

**Explanation:** An unexpected error occurred.

**User response:** Contact IBM Software Support.

An unexpected error occurred with tokens "token", token, token, " and "token" (file-name, line-number).

**Explanation:** An unexpected error occurred.

**User response:** Contact IBM Software Support.

A thread error occurred on "thread-operation": message-text

**Explanation:** A thread error occurred.

**User response:** Contact IBM Software Support.

An event error occurred on "event-operation": message-text

**Explanation:** An event error occurred.

**User response:** Use the specified message text to diagnose the error.

A mutex error occurred on "mutex-operation": message-text

**Explanation:** A mutex error occurred.

**User response:** Use the specified message text to diagnose the error.

A semaphore error occurred on "semaphore-operation": message-text

**Explanation:** A semaphore error occurred.

**User response:** Use the specified message text to diagnose the error.

The network connection has been disconnected.

**Explanation:** The network connection has been disconnected.

**User response:** No action is required.

An SQL error occurred with SQL code = sql-code and SQL state = sql-state. SQL message text follows: message-text

**Explanation:** An SQL error occurred and SQL message text is displayed.

**User response:** See Db2 Messages and Codes for more information about the SQL code and SQL state values.

An SQL error occurred with SQL code = sql-code and SQL state = sql-state.

**Explanation:** An SQL error occurred.

**User response:** See Db2 Messages and Codes for more information about the SQL code and SQL state values.

An SQL error occurred with SQL code = sql-code and SQL state = sql-state.

**Explanation:** An SQL error occurred.

**User response:** See Db2 Messages and Codes for more information about the SQL code and SQL state values.

A dynamic allocation query error occurred: info code = info-code, error code = error-code.

**Explanation:** A dynamic allocation query error occurred.
AR YX15E • AR YX129I

AR YX15E An input command error occurred on \
"command-operation": message-text
Explanation: An input command error occurred.
User response: Contact IBM Software Support.

AR YX16I Received input command: command.
Explanation: Received input command.
User response: No action is required.

AR YX17E Excessive data was encountered in the ASN.1 data stream.
Explanation: Excessive data was encountered in the ASN.1 data stream.
User response: Contact IBM Software Support.

AR YX18E Insufficient data was encountered in the ASN.1 data stream.
Explanation: Insufficient data was encountered in the ASN.1 data stream.
User response: Contact IBM Software Support.

AR YX19E An unsupported ASN.1 feature was encountered.
Explanation: An unsupported ASN.1 feature was encountered.
User response: Contact IBM Software Support.

AR YX20E Invalid DES-encrypted data was encountered.
Explanation: Invalid DES-encrypted data was encountered.
User response: Contact IBM Software Support.

AR YX21E Invalid DES-encrypted data was encountered (pad = pad-value).
Explanation: Invalid DES-encrypted data was encountered.
User response: Contact IBM Software Support.

AR YX22I Build date component = date.
Explanation: Identifies the build date of the component that is identified in the message.
User response: No action is required.

AR YX23W The action was cancelled.
Explanation: The operation was cancelled due to user or administrator request.
User response: No action is required.

AR YX24E The task is not running APF-authorized.
Explanation: The task is not running APF-authorized. The Db2 Recovery Expert load library, and the load libraries for all of the Db2 subsystems accessed, must be APF-authorized.

AR YX25E An error occurred while retrieving product configuration data: RC = return-code.
Explanation: An error occurred while retrieving product configuration data.
User response: Ensure that a product control file has been created and loaded using sample jobs ARYSJ000 and ARYSJ001, and that it is allocated to the Db2PARMS DD.

AR YX26E A DLL error occurred on \
"dll-operation": message-text
Explanation: A DLL error occurred on the operation that is identified in the message.
User response: Contact IBM Software Support.

AR YX27S An error occurred while opening log file \
"file-name".
Explanation: An error occurred while opening the log file that is identified in the message.
User response: Contact IBM Software Support.

AR YX28E An error occurred while submitting the job: RC = return-code.
Explanation: An error occurred while submitting the job.
User response: Contact IBM Software Support.

AR YX29I Job job-id was submitted.
Explanation: The job that is identified in the message was submitted.
User response: No action is required.

**Explanation:** Indicates that the SSL connection has been closed.

**User response:** No action is required. Use the specified message text to diagnose the reason.

**Explanation:** This message warns that the key database directory can be read by any user in the same group as the owner.

**User response:** No action is required. You can change directory permissions to be more secure if it is necessary.

**Explanation:** This message warns that the key database directory can be modified by any user in the same group as the owner.

**User response:** No action is required. You can change directory permissions to be more secure if it is necessary.

**Explanation:** This message warns that the key database directory is not owned by user-name.

**User response:** No action is required. Change directory permissions to be more secure if it is necessary.
The configuration file file-name is invalid; the root element element is not <server-config>.

Explanation: The contents of the specified configuration file are invalid.

User response: Correct the file contents to specify <server-config> as the root XML element.

An error occurred while opening the configuration file file-name. message-text

Explanation: An error occurred while opening the configuration file that is identified in the message.

User response: Review the message text for more information about the error that occurred. Specify a valid configuration file which is not in use by any other process.

Message with ID = id does not exist.

Explanation: The message with the ID that is identified in the message does not exist.

User response: Contact IBM Software Support.

A task is in progress for .

Explanation: The specification could not be deleted or renamed because it has an active related job to be viewed by the user.

User response: Either wait for the job to end, or open the specification and cancel the job before deleting the specification.

Received an acknowledgment with sequence = sequence-id and ID = request-id from an agent session with ID = session-id.

Explanation: Received an acknowledgment that is identified in the message from an agent session.

User response: No action is required.

Received a report with type = type from an agent session with ID = session-id.

Explanation: DB2 Recovery Expert received a report from an agent that is identified in the message.

User response: No action is required.

Received request with sequence = sequence-id and type = type from client session session-id.

Explanation: Recovery Expert received a request from the client session that is identified in the message.

User response: No action is required.

Received a response with ID = id, type = type, and final indicator = indicator from an agent session with ID = session-id.

Explanation: DB2 Recovery Expert received a response from an agent session that is identified in the message.

User response: No action is required.

Received a report with ID = id, type = type, and final indicator = indicator from an agent session with ID = session-id.

Explanation: DB2 Recovery Expert received a report from an agent that is identified in the message.

User response: No action is required.

Received a data message from an agent session with ID = session-id.

Explanation: Received a data message from an agent session with the ID that is identified in the message.

User response: No action is required.

Received a response with ID = id at host-address.

Explanation: The specification that is identified in the message is already open.

User response: Switch to the specification's active window rather than trying to open the specification a second time.

Received an acknowledgment with sequence = sequence-id and ID = request-id from an agent session with ID = session-id.

Explanation: Received an acknowledgment that is identified in the message from an agent session.

User response: No action is required.

Received a data message from an agent session with ID = session-id.

Explanation: Received a data message from an agent session with the ID that is identified in the message.

User response: No action is required.

Received a negative acknowledgment with sequence = from an agent session with ID = session-id.

Explanation: DB2 Recovery Expert received a negative acknowledgment from an agent session that is identified in the message.

User response: No action is required.

User response: No action is required.

ARYY024E  (CT request-id) Error: message-text
Explanation: Message text identifies the error and the request ID.
User response: Use the specified message text to diagnose the error.

ARYY025I  (CT request-id) Task ended.
Explanation: Task ended.
User response: No action is required.

ARYY026I  (CT request-id) Started processing request with sequence = sequence-id and type = type.
Explanation: DB2 Recovery Expert started processing the request that is identified in the message.
User response: No action is required.

ARYY027I  (CT request-id) Completed processing request with sequence = sequence-id and type = type.
Explanation: DB2 Recovery Expert completed processing the request that is identified in the message.
User response: No action is required.

ARYY028E  (CT request-id) Task does not exist.
Explanation: Task does not exist.
User response: IBM Software Support.

ARYY029I  DB2 Recovery Expert server is terminating normally.
Explanation: DB2 Recovery Expert server is terminating normally.
User response: No action is required.

ARYY030E  DB2 Recovery Expert server is terminating due to prior errors.
Explanation: DB2 Recovery Expert server is terminating due to prior errors.
User response: See preceding messages to determine why the server is terminating.

ARYY031E  An invalid request type \"request-id\" was received.
Explanation: An invalid request type that is identified in the message was received.
User response: Contact IBM Software Support.

ARYY032E  Invalid data was received from an agent: data.
Explanation: Invalid data that is identified in the message was received from an agent.
User response: Contact IBM Software Support.

ARYY033I  DB2 Recovery Expert is terminating. Please end your session.
Explanation: DB2 Recovery Expert is terminating.
User response: End your session.

ARYY034E  An invalid report type \"report-id\" was received.
Explanation: An invalid report type that is identified in the message was received.
User response: Contact IBM Software Support.

ARYY035I  (AT request-id) Task started.
Explanation: Task started.
User response: No action is required.

ARYY036I  (AT request-id) Error: message-text.
Explanation: Message text identifies the error and the request ID.
User response: Use the specified message text to diagnose the error.

ARYY037I  (AT request-id) Task ended.
Explanation: Task ended.
User response: No action is required.

ARYY038I  (AT request-id) Sent request. agent-info {id=agent-id ; request-info {type=request-type,sequence=sequence-id}}
Explanation: Request sent.
User response: No action is required.
ARYY039I  (AT request-id) Received ack. agent-info
   {id=agent-id; nack-info
   {sequence=sequence-id, id=request-id}

Explanation: Acknowledgment received.
User response: No action is required.

ARYY040I  (AT request-id) Received ack. agent-info
   {id=agent-id; ack-info
   {sequence=sequence-id}

Explanation: Negative acknowledgment received.
User response: No action is required.

ARYY041I  (AT request-id) Received response.
   agent-info {id=agent-id} ; response-info
   {id=request-id, final =indicator}

Explanation: Response received.
User response: No action is required.

ARYY042I  (AT request-id) Agent disconnected unexpectedly.
   agent-info {id=agent-id}

Explanation: Agent disconnected unexpectedly.
User response: Review the agent job output to determine why it disconnected unexpectedly.

ARYY043I  Task was cancelled.

Explanation: Task was cancelled.
User response: No action is required.

ARYY044S  The agent for location location-name has unexpectedly disconnected.

Explanation: The agent for the location that is identified in the message has unexpectedly disconnected.
User response: Review the agent job output to determine why it disconnected unexpectedly.

ARYY045E  Specification already exists.

Explanation: The specification already exists.
User response: Specify a different specification owner or name.

ARYY046E  The length of the "parameter" configuration parameter exceeds number.

Explanation: The length of the configuration parameter that is identified in the message exceeds the maximum allowable length.
User response: Specify a value for the configuration parameter which does not exceed the maximum allowable length.

ARYY047E  Specification authorization error.

Explanation: Specification authorization error.
User response: Specify a different specification owner, or contact the owner of the specification in order to complete the task.

ARYY048I  (ACP) Received command command.

Explanation: DB2 Recovery Expert received the command that is identified in the message.
User response: No action is required.

ARYY049I  (ACP) command -- Begin output.

Explanation: This is the beginning of the output from the command that is identified in the message.
User response: No action is required.

ARYY050I  (ACP) command -- End output.

Explanation: This is the end of the output from the command that is identified in the message.
User response: No action is required.

ARYY051E  (ACP) command not recognized.

Explanation: The command that is identified in the message is not recognized.
User response: Specify a command that is supported by the server. See "The DB2 Recovery Expert client/server environment" in the DB2 Recovery Expert User Guide for supported administrative commands.

ARYY052E  (ACP) command -- Unique specification ID not specified.

Explanation: The command is not properly formatted.
User response: See "The Db2 Recovery Expert for z/OS client/server environment" for supported administrative commands.

ARYY053E  (ACP) command -- Session ID required.

Explanation: The command is not properly formatted.
ARYY054I  The administrator has requested that this session be ended. Please end your session.

Explanation: The administrator has requested that this session be ended.

User response: End your session.

ARYY055I  Sending report with type = type to client with session id = session-id.

Explanation: DB2 Recovery Expert is sending the report that is identified in the message.

User response: No action is required.

ARYY056I  Protocol verification has failed. The client reported a version of version-number and the server expected version-number or higher.

Explanation: This error occurs if there is a mismatch between the client version and the server version and the mismatch would cause unpredictable results.

User response: Please verify that the version of the server and the client is the same.

ARYY057E  Specified interface stack-name (IP address ipaddress, index index) can not be configured for multicasting.

Explanation: Attempt to configure specified network interface for multicasting fails.

User response: Contact your product administrator.

ARYY058I  No interfaces are available for multicasting.

Explanation: There are no network interfaces in the system available for multicasting.

User response: Contact your product administrator.

ARYY059I  Attempting to configure multicasting at interface ip-stack-name@interface-name (IP address IP address, index index). Multicasting group address multicast-address.

Explanation: Server is attempting to configure specified network interface to send announcements for multicast group multicast-address.

User response: No action is required.

ARYY060I  Attempt to configure multicasting at default interface. Multicasting group address multicast-address.

Explanation: Server is attempting to configure default network interface to send announcements for multicast group multicast-address.

User response: No action is required.

ARYY061I  Multicasting has been configured successfully.

Explanation: Indicates that multicasting has been configured successfully.

User response: No action is required.

ARYY062I  Attempting to send multicast packet.

Explanation: Server is attempting to send multicast announcement.

User response: No action is required.

ARYY063I  Multicast packet sent successfully.

Explanation: Server multicast announcements sent successfully.

User response: No action is required.

ARYY064I  Attempting to enumerate network interfaces.

Explanation: Server is attempting to enumerate network interfaces to send multicast announcements.

User response: No action is required.

ARYY065I  Discovered number interfaces.

Explanation: Server discovered a number of network interfaces represented by number which can be used to send server announcements.

User response: No action is required.

ARYY066I  (AT agent-task-id) Received raw packet. agent-info {id=agent-id}

Explanation: Specifies that the server has received a raw packet from the agent.

User response: No action is required.

ARYZ001E  A callable services abend abend-code has occurred.

Explanation: A callable services abend has occurred.

User response: Contact IBM Software Support.
**ARYZ002E**  GPRS register-register: value value value value.

Explanation: An abend has occurred.

User response: No action is required. Preceding and/or following messages provide more information about the abend that occurred.

---

**ARYZ004E** Active module = module-name, load point = address, offset = offset.

Explanation: An abend has occurred.

User response: No action is required. Preceding and/or following messages provide more information about the abend that occurred.

---

**ARYZ005E** PSW = psw-contents.

Explanation: An abend has occurred.

User response: No action is required. Preceding and/or following messages provide more information about the abend that occurred.

---

**ARYZ007E** Callable service invocation failed with return code = return-code and reason code = reason-code.

Explanation: A callable service invocation failed with a return code and reason code that are identified in the message.

User response: Contact IBM Software Support.

---

**ARYZ008E** The following objects are unrecoverable: object-list.

Explanation: The objects in the list are unrecoverable.

User response: See [No recovery plans generated]. If you are unable to resolve the issue, contact IBM Software Support.

---

**ARYZ009E** objectname doesn't exist.

Explanation: The object was not found in Db2 and may have been either typed incorrectly or dropped from Db2.

User response: Verify the correctness of the object name and its existence in the specified Db2 subsystem.

---

**ARYZ010E** Specification already exists.

Explanation: The specification that is identified in the message already exists.

User response: Specify a different specification owner or name.

---

**ARYZ011E** Specification does not exist.

Explanation: The specification that is identified in the message does not exist.

User response: Specify the owner and name of a specification that does exist.

---

**ARYZ012E** You are not authorized to delete specification.

Explanation: You are not authorized to delete the specification that is identified in the message.

User response: See the owner of the specification to delete the specification.

---

**ARYZ013E** None of the image copies are enabled.

Explanation: Image copy options node does not specify a valid image copy. At least one of the image copy traditional types must be specified.

User response: Contact IBM Software Support.

---

**ARYZ014E** Image copy type <type-string> already specified.

Explanation: Duplicated image copy of specified type found.

User response: Pass data without duplicated image copies.

---

**ARYZ015E** No included objects were passed.

Explanation: At least one object or wildcard of type "include" should be specified in profile/specification.

User response: Regenerate profile/specification and add required object or wildcard.

---

**ARYZ016E** You are not authorized to delete specification.

Explanation: You are not authorized to delete the specification that is identified in the message.

User response: See the owner of the specification to delete the specification.

---

**ARYZ017E** No objects to recover were found.

Explanation: There are no recovery plans available for the selected objects.

User response: Attempt to resolve this issue using the information available in the documentation under "No recovery plans generated". If unable to do so, contact IBM Software Support.

---

**ARYZ018E** The following objects are unrecoverable: object-list.

Explanation: The objects in the list are unrecoverable.

User response: See [No recovery plans generated]. If you are unable to resolve the issue, contact IBM Software Support.

---

**ARYZ019E** objectname doesn't exist.

Explanation: The object was not found in Db2 and may have been either typed incorrectly or dropped from Db2.

User response: Verify the correctness of the object name and its existence in the specified Db2 subsystem.

---

**ARYZ020E** Specification already exists.

Explanation: The specification that is identified in the message already exists.

User response: Specify a different specification owner or name.

---

**ARYZ021E** Specification does not exist.

Explanation: The specification that is identified in the message does not exist.

User response: Specify the owner and name of a specification that does exist.

---

**ARYZ022E** You are not authorized to delete specification.

Explanation: You are not authorized to delete the specification that is identified in the message.

User response: See the owner of the specification to delete the specification.

---

**ARYZ023E** You are not authorized to open specification.

Explanation: You are not authorized to open the specification that is identified in the message.

User response: See the owner of the specification to receive permission to open and use it.
You are not authorized to save specification.

**Explanation:** You are not authorized to save the specification that is identified in the message.

**User response:** Specify a different owner when saving the specification.

Job job-number (beginning with "jcl-text ...") has invalid job cards.

**Explanation:** The job that is identified in the message has invalid job cards.

**User response:** Specify valid job cards in the job. The job cards must not exceed 72 characters in length, and must include a job name on the JOB statement.

You are not authorized to rename specification.

**Explanation:** You are not authorized to rename the specification that is identified in the message.

**User response:** Contact the owner to rename the specification.

A file read error occurred on file-name: message-text.

**Explanation:** A file read error has occurred on the file that is identified in the message.

**User response:** Use the specified message text to diagnose why the specified file could not be read.

A file open error occurred on file-name: message-text.

**Explanation:** A file open error occurred on the file that is identified in the message.

**User response:** Use the specified message text to diagnose why the specified file could not be opened.

The subsystem cannot be recovered because no system backups exist prior to the selected point in time.

**Explanation:** The subsystem cannot be recovered because no system backups exist prior to the selected point in time.

**User response:** Use the BACKUP SYSTEM utility to take a subsystem-level backup of the Db2 subsystem.

Use of a SHRLEVEL CHANGE copy during recovery could result in SQL errors or duplicate rows in the table.

**Explanation:** A warning is displayed by the product if SHRLEVEL CHANGE copy is used during recovery.

No action is required.

Objects required for IBM Database Relationship Analyzer support have not been defined properly.

**Explanation:** DB2 Recovery Expert views and/or tables required for IBM Database Relationship Analyzer support have not been defined.

**User response:** Verify that IBM Database Relationship Analyzer is installed and required DB2 Recovery Expert objects are defined using SAMPLIB member ARYDDLG.

Objects required for IBM Db2 Automation Tool support have not been defined properly.

**Explanation:** DB2 Recovery Expert views and/or tables required for IBM Db2 Automation Tool support have not been defined.

**User response:** Verify IBM Db2 Automation Tool is installed and required DB2 Recovery Expert objects are defined using the Tools Customizer.

Discovered available backups for subsystem subsystem-id.

**Explanation:** Discovered available backups for subsystem subsystem-id.

**User response:** No action is required.

System Restore and Backup Services is not configured properly.

**Explanation:** This message is always accompanied with another message regarding the specific configuration issue. In most cases, the agent JCL is missing a DD statement required for system restore and backup services.

**User response:** Check the agent JCL and add any missing DD statements required for supporting system restore and backup services.

Scanned log range with IDENT = id does not exist.

**Explanation:** The scanned log range was not found in Db2 and may have been either typed incorrectly or dropped from Db2.

**User response:** Verify the correctness of the scanned log range id and its existence in the specified Db2 subsystem.
<table>

coordinated profile. If unable to do so, contact IBM Software Support.

**ARYZ070E** Required parameter *parameter-name* was not found.

**Explanation:** Required input parameter was not found.

**User response:** Define values for all required input parameters.

**ARYZ071I** Retrieved *number* quiet times for *profile*.

**Explanation:** The number of quiet times as specified in the variable *number* were added to the Quiet Times Report for the profile *profile*.

**User response:** No action is required.

**ARYZ072E** Parameter *parameter-name* has invalid format: *parameter-value*.

**Explanation:** The specified input parameter is invalid.

**User response:** Specify a valid value for *parameter-name* and retry.

**ARYZ073E** Application profile *owner*.<name> is not associated with a coordinated profile.

**Explanation:** An error occurs while retrieving an application profile that is supposed to be associated with a coordinated profile.

**User response:** Verify the correctness of the application profile creator and name and its existence in the coordinated profile catalog.

**ARYZ074I** Coordinated application recovery has been disabled as <dd-name> DD is not allocated.

**Explanation:** Coordinated application recovery has been disabled because a valid <dd-name> statement is not allocated.

**User response:** No action is required.

**ARYZ075E** *owner*.<name> already exists on <ssid>.

**Explanation:** The specification already exists in the specified Db2 subsystem.

**User response:** Specify a unique name for the specification.

**ARYZ076E** All operations with *owner*.<name> are valid only on <ssid>.

**Explanation:** The specification *owner*.<name> can only be used on the specified Db2 subsystem.

**User response:** Access the specified Db2 subsystem to work with this specification.

**ARYZ078E** The page number is out of range of the source number.

**Explanation:** The number specified for a paging request is out of range.

**User response:** Contact IBM Software Support.

**ARYZ079I** Data set <dataset-name> has been deleted.

**Explanation:** Specifies that the <dataset-name> has been deleted.

**User response:** No action is required.

**ARYZ083E** Operation is not permitted: Specification *owner*.<name> is part of application group *parent-owner*.<parent-name>.

**Explanation:** A request has been made to include the specified application profile *owner*.<name> in an application group *parent-owner*.<parent-name>. However the application profile is already included in another application group. An application profile can only be a member of a single application group.

**User response:** Select a different application profile or a different application group.

**ARYZ084E** Application group specification *owner*.<name> contains an incorrect reference type.

**Explanation:** Application group can contain only specifications that have the same object-collection type.

**User response:** Exclude named specification from the application group and try again.

**ARYZ085E** Application collection specification *owner*.<name> already included in another application-group *parent-owner*.<parent-name>.

**Explanation:** Indicates that the selected application collection specification *owner*.<name> is included in another application group *parent-owner*.<parent-name>. An application collection specification can be a part of only one application group.

**User response:** Exclude named specification from the application group and try again.
Application group specification contains duplicate object collections.

Explanation: The application profiles that are included in the application group contain duplicate objects. The same object has been included for recovery in more than one application profile.

User response: Change the application profiles that you are including in the group or change the objects that are scheduled to be recovered in the application profile.

Failed on parsing object card <object-card>.

Explanation: Parsing of the specified object card failed.

User response: Check your input. If you have not edited any field, contact IBM Customer Support.

The following dropped objects are not eligible for redirected recovery: <dropped-objects-list>.

Explanation: Specified list of dropped objects is not eligible for redirected recovery.

User response: Choose other objects to recover with redirected recovery.

Only one automatic image copy can be specified.

Explanation: Automatic image copy has been specified more than one time.

User response: Reduce the number of automatic image copies.

An automatic image copy must be of Local Primary type.

Explanation: You have specified that the automatic image copy be a type other than Local Primary.

User response: Be sure that a VSAM image copy of a type other than Local Primary is not marked as automatic.

Number of volumes should be in the range from <min-work-volumes-number> to <max-work-volumes-number>.

Explanation: Number of work volumes must be in the specified range.

User response: Specify valid value for the number of work volumes.

<object-name> cannot be translated using the provided masks.

Explanation: Error indicates that the specified object cannot be translated using the provided masks.

User response: Specify other masks or exclude the object from input.

The product configuration does not allow saving a specification at the data sharing member level.

Explanation: The product has not been configured to allow saving a specification at the data sharing member level.

User response: Use a data sharing group to save the specification.

Operation is not permitted: Specification <application-profilename> is part of application group <application-groupname>.

Explanation: A request has been made to include the specified application profile in an application group. However the application profile is already included in the another application group. An application profile can only be a member of a single application group.

User response: Select a different application profile or a different application group.

COPYRIGHT LICENSE:
This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs. The sample programs are provided "AS IS", without warranty of any kind. IBM shall not be liable for any damages arising out of your use of the sample programs.

Each copy or any portion of these sample programs or any derivative work, must include a copyright notice as follows:

© Rocket Software 2018. Portions of this code are derived from IBM Corp. Sample Programs. © Copyright IBM Corp. 2018. All rights reserved.

If you are viewing this information softcopy, the photographs and color illustrations may not appear.

**Trademarks**

IBM, the IBM logo, and ibm.com® are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the web at "Copyright and trademark information" at [http://www.ibm.com/legal/copytrade.html](http://www.ibm.com/legal/copytrade.html).

Adobe, the Adobe logo, PostScript, and the PostScript logo are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States, and/or other countries.

Intel, Intel logo, Intel Inside, Intel Inside logo, Intel Centrino, Intel Centrino logo, Celeron, Xeon, Intel SpeedStep, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.

Java™ and all Java-based trademarks and logos are trademarks or registered trademarks of Oracle and/or its affiliates.

Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both.

Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.

UNIX is a registered trademark of The Open Group in the United States and other countries.

Other company, product, and service names may be trademarks or service marks of others.

**Privacy policy considerations**

IBM Software products, including software as a service solutions, ("Software Offerings") may use cookies or other technologies to collect product usage.
information, to help improve the end user experience, to tailor interactions with
the end user or for other purposes. In many cases no personally identifiable
information is collected by the Software Offerings. Some of our Software Offerings
can help enable you to collect personally identifiable information. If this Software
Offering uses cookies to collect personally identifiable information, specific
information about this offering’s use of cookies is set forth below.

This Software Offering does not use cookies or other technologies to collect
personally identifiable information.

If the configurations deployed for this Software Offering provide you as customer
the ability to collect personally identifiable information from end users via cookies
and other technologies, you should seek your own legal advice about any laws
applicable to such data collection, including any requirements for notice and
consent.

For more information about the use of various technologies, including cookies, for
these purposes, see IBM’s Privacy Policy at [http://www.ibm.com/privacy] and the
section titled "Cookies, Web Beacons, and Other Technologies" in IBM’s Online
Privacy Statement at [http://www.ibm.com/privacy/details]. Also, see the "IBM
Software Products and Software-as-a-Service Privacy Statement" at

Notices

This information was developed for products and services offered in the U.S.A.

This material may be available from IBM in other languages. However, you may be
required to own a copy of the product or product version in that language in order
to access it.

IBM may not offer the products, services, or features discussed in this document in
other countries. Consult your local IBM representative for information on the
products and services currently available in your area. Any reference to an IBM
product, program, or service is not intended to state or imply that only that IBM
product, program, or service may be used. Any functionally equivalent product,
program, or service that does not infringe any IBM intellectual property right may
be used instead. However, it is the user’s responsibility to evaluate and verify the
operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter
described in this document. The furnishing of this document does not give you
any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing
IBM Corporation
North Castle Drive
Armonk, NY 10504-1785
U.S.A.

For license inquiries regarding double-byte (DBCS) information, contact the IBM
Intellectual Property Department in your country or send inquiries, in writing, to:

Intellectual Property Licensing
Legal and Intellectual Property Law
IBM Japan Ltd.
19-21, Nihonbashı-Hakozakicho, Chuo-ku
Tokyo 103-8510, Japan

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law:

INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM Web sites are provided for convenience only and do not in any manner serve as an endorsement of those Web sites. The materials at those Web sites are not part of the materials for this IBM product and use of those Web sites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

IBM Director of Licensing
IBM Corporation
North Castle Drive, MD-NC119
Armonk, NY 10504-1785
U.S.A.

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this information and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement, or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Notices 959
Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM’s future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

This information is for planning purposes only. The information herein is subject to change before the products described become available.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.
