If the USING BOTH clause was not specified for the statement and neither LOBs nor distinct types are present in the result, only one SQLVAR entry (a base entry) is needed for each column. The 7th byte of SQLDAID is set to a space. The SQLD is set to the number of columns in the result and represents the number of SQLVAR occurrences needed. If an insufficient number of SQLVAR occurrences were provided, Db2 returns a +236 warning in SQLCODE if the standards option was set. Otherwise, SQLCODE is zero.

If USING BOTH is specified and neither LOBs nor distinct types are present in the result, an extended SQLVAR entry per column is needed for the labels in addition to the base SQLVAR entry. The 7th byte of the SQLDAID is set to space. SQLD is set to the twice the number of columns in the result and represents the combined number of base and extended SQLVAR occurrences needed.

If LOBs, distinct types, or both are present in the results, one extended SQLVAR entry is needed per column in addition to the base SQLVAR entry with one exception. The exception is that when the USING BOTH clause is specified and distinct types are present in the results, two extended SQLVAR entries per column are needed. When a sufficient number of SQLVAR entries are provided in the SQLDA for both the base and extended SQLVARs, information for the LOBs and distinct types is returned. The 7th byte of SQLDAID is set to the number of SQLVAR entries that were used for each column:

2

Two SQLVAR entries per column (a base and an extended)

3

Three SQLVAR entries per column (a base and two extended)

SQLD is set to the number of columns in the result. Therefore, the value of the 7th byte of SQLDAID multiplied by the value of SQLD is the total number SQLVAR entries that were provided.

Otherwise, when an insufficient number of SQLVAR entries have been provided when LOBs or distinct types are present, Db2 indicates that by returning one of the following warnings in SQLCODE. Db2 also

sets the 7th byte of SQLDAID to indicate how many SQLVAR entries are needed for each column of the result.

+237

There are insufficient SQLVAR entries to describe the data, and the data includes distinct types. In this case, there were enough base SQLVAR entries to describe the data, so the base SQLVAR entries are set. However, sufficient extended SQLVAR entries were not provided so the distinct type names are not returned.

+238

There are insufficient SQLVAR entries to describe the data, and the data includes LOBs. In this case no information is returned in the SQLVAR entries.

+239

There are insufficient SQLVAR entries to describe the data, and the data includes distinct types. There weren't even enough base SQLVAR entries. In this case no information is returned in the SQLVAR entries.

Field descriptions of an occurrence of a base SQLVAR

The fields of a base SQLVAR have different uses depending on the SQL statement.

The following table describes the contents of the fields of a base SQLVAR.

Table 259. Fields in an occurrence of a base SQLVAR

C name assembler COBOL, or PL/I name	Data type	Usage in DESCRIBE ^{"1"} on page 2339 and PREPARE INTO	Usage in FETCH, OPEN, EXECUTE, and CALL
sqltype SQLTYPE	SMALLINT	Indicates the data type of the column or parameter and whether it can contain null values. For a description of the type codes, see Table 261 on page 2342 . For a distinct type, the data type on which the distinct type was based is placed in this field. The base SQLVAR provides no indication that this is part of the description of a distinct type.	Indicates the data type of the host variable and whether an indicator variable is provided. Host variables for datetime values must be character string variables. For FETCH, a datetime type code means a fixed-length character string. For a description of the type codes, see "SQLTYPE and SQLLEN fields of the SQLDA" on page 2341 .
sqlen SQLLEN	SMALLINT	The length attribute of the column or parameter. For datetime data, the length of the string representation of the value. See "SQLTYPE and SQLLEN fields of the SQLDA" on page 2341 for a description of allowable values. For LOBs, the value is 0 regardless of the length attribute of the LOB. For XML, the value is 0. Field SQLLONGLEN in the extended SQLVAR contains the length attribute.	The length attribute of the host variable. See "SQLTYPE and SQLLEN fields of the SQLDA" on page 2341 for a description of allowable values. For LOBs, the value is 0 regardless of the length attribute of the LOB. Field SQLLONGLEN in the extended SQLVAR contains the length attribute. For XML AS BLOB, CLOB, or DBCLOB, sqlen is 0 as for LOB types.

Table 259. Fields in an occurrence of a base SQLVAR (continued)

C name assembler COBOL, or PL/I name	Data type	Usage in DESCRIBE ^{"1"} on page 2339 and PREPARE INTO	Usage in FETCH, OPEN, EXECUTE, and CALL
sqldata SQLDATA	Pointer	<p>For string columns or parameters, SQLDATA contains X'0000zzzz', where zzzz is the associated CCSID. For character strings, SQLDATA can alternatively contain X'FFFF', which indicates bit data. Not used for other types of data.</p> <p>For datetime columns, SQLDATA can contain the CCSID of the string representation of the datetime value.</p> <p>For DESCRIBE PROCEDURE, the result set locator value associated with the result set.</p>	Contains the address of the host variable.
sqlind SQLIND	Pointer	<p>Reserved</p> <p>For DESCRIBE PROCEDURE, it is set to -1.</p>	Contains the address of an associated indicator variable, if SQLTYPE is odd. Otherwise, the field is not used.

Table 259. Fields in an occurrence of a base SQLVAR (continued)

C name assembler COBOL, or PL/I name	Data type	Usage in DESCRIBE ^{“1” on page 2339} and PREPARE INTO	Usage in FETCH, OPEN, EXECUTE, and CALL
sqlname SQLNAME	VARCHAR(30)	<p>Contains the unqualified name or label of the column, or a string of length zero if the name or label does not exist. If the name is longer than 30 bytes, it is truncated at a byte boundary. For more information about column names, see Names of result columns.</p> <p>For DESCRIBE PROCEDURE, SQLNAME contains the cursor name used by the stored procedure to return the result set. The values for SQLNAME appear in the order the cursors were opened by the stored procedure.</p> <p>For DESCRIBE INPUT, SQLNAME is not used.</p>	<p>Can contain CCSID and/or host-variable-array dimension information.</p> <p>Db2 interprets the third and fourth byte of the data portion of SQLNAME as the CCSID of the host variable if all of the following are true and the third and fourth byte are not X'0000':</p> <ul style="list-style-type: none"> • The sixth byte of SQLDAID is '+' (x'4E'). • SQLTYPE indicates the host variable is a string variable. • The length of SQLNAME is 8. • The first two bytes of the data portion of SQLNAME are X'0000'. <p>If the third and fourth byte of the data portion of SQLNAME are X'0000', Db2 uses the appropriate default CCSID.</p> <p>For FETCH, OPEN, INSERT, and EXECUTE, if the length of SQLNAME is 8, and the first two bytes of the data portion of SQLNAME are X'0000', Db2 interprets the fifth through eighth bytes of the data portion of the SQLNAME field as follows:</p>

Table 259. Fields in an occurrence of a base SQLVAR (continued)

C name assembler COBOL, or PL/I name	Data type	Usage in DESCRIBE ^{“1” on page 2339} and PREPARE INTO	Usage in FETCH, OPEN, EXECUTE, and CALL
(cont.) sqlname SQLNAME			<ul style="list-style-type: none"> • Fifth and sixth bytes: A flag field that indicates the type of host variable that is being described by the current SQLDA entry. The values of this field are as follows: <ul style="list-style-type: none"> – X'0000' - host variable – X'0100' - XML host variable (XML AS BLOB, XML AS CLOB, XML AS DBCLOB) – X'0001' - host-variable array – X'0101' - XML host-variable array – X'0002' - special host variable that represents the value for 'n' in a multiple-row INSERT statement • Seventh and eighth bytes: If the sixth byte is X'01', a binary small integer (halfword) that represents the dimension of the host-variable-array, and the corresponding indicator-array if one is specified.

Notes:

1. The third column of this table represents several forms of the DESCRIBE statement:
 - For [DESCRIBE OUTPUT](#) and [PREPARE *statement-name* INTO](#) statements, the column pertains to columns of the result table.
 - For [DESCRIBE CURSOR](#), the column pertains to a result set associated with a cursor.
 - For [DESCRIBE INPUT](#), the column pertains to parameter markers.
 - For [DESCRIBE PROCEDURE](#), the column pertains to the result sets returned by the stored procedure.

[The SQLDA Header](#)

The fields in the SQLDA header have different usage depending on whether the SQLDA is being used in a DESCRIBE or PREPARE INTO statement or the SQLDA is being used in a FETCH, INSERT, OPEN, EXECUTE, or CALL statement.

[SQLVAR entries in the SQLDA](#)

For each column or host variable described by the SQLDA, there are both base SQLVAR entries and extended SQLVAR entries.

Field descriptions of an occurrence of an extended SQLVAR

The fields of an extended SQLVAR have different uses depending on the SQL statement.

The following table describes the contents of the fields of an extended SQLVAR entry.

Table 260. Fields in an occurrence of an extended SQLVAR

C name assembler, COBOL, or PL/I name	Data type	Usage in DESCRIBE ^{"1"} on page 2341 and PREPARE INTO	Usage in FETCH, OPEN, EXECUTE, and CALL
len.sqllonglen SQLLONGL SQLLONGLEN	INTEGER	The length attribute of a LOB (BLOB, CLOB, or DBCLOB) column	The length attribute of a LOB (BLOB, CLOB, or DBCLOB) host variable. Db2 ignores the SQLLEN field in the base SQLVAR for these data types. The length attribute indicates the number of bytes for a BLOB or CLOB, and the number of characters for a DBCLOB.
*	INTEGER	Reserved	Reserved.
sqldatalen SQLDATAL SQLDATALEN	Pointer	Not used	Used only for LOB (BLOB, CLOB, and DBCLOB) host variables. If the value of the field is null, the actual length of the LOB is stored in the 4 bytes immediately before the start of the data, and SQLDATA points to the first byte of the field length. The actual length indicates the number of bytes for a BLOB or CLOB, and the number of characters for a DBCLOB. If the value of the field is not null, the field contains a pointer to a 4-byte long buffer that contains the actual length <i>in bytes</i> (even for DBCLOBs) of the data in the buffer pointed to from the SQLDATA field in the matching base SQLVAR. Regardless of whether this field is used, field SQLLONGLEN must be set.

Table 260. Fields in an occurrence of an extended SQLVAR (continued)

C name assembler, COBOL, or PL/I name	Data type	Usage in DESCRIBE ^{“1” on page 2341} and PREPARE INTO	Usage in FETCH, OPEN, EXECUTE, and CALL
sqldatatype_name e SQLNAME SQLDATATYPE- NAME	VARCHAR(30)	<p>A SQLTNAME field of the extended SQLVAR is set to one of the following:</p> <ul style="list-style-type: none"> • For a distinct type column, the database manager sets this field to the fully qualified distinct type name. If the qualified name is longer than 30 bytes, it is truncated. • For a label, the database manager sets this field to label. <p>In the case that both a distinct type name and a label need to be returned in extended SQLVAR entries (USING BOTH has been specified), the distinct type name is returned in the first extended SQLVAR entry and the label in the second extended SQLVAR entry.</p>	Not used.

Note:

1. The third column of this table represents several forms of the DESCRIBE statement:
 - For DESCRIBE OUTPUT and PREPARE *statement-name* INTO statements, the column pertains to columns of the result table.
 - For DESCRIBE CURSOR, the column pertains to a result set associated with a cursor.
 - For DESCRIBE INPUT, the column pertains to parameter markers.
 - For DESCRIBE PROCEDURE, the column pertains to the result sets returned by the stored procedure.

The SQLDA Header

The fields in the SQLDA header have different usage depending on whether the SQLDA is being used in a DESCRIBE or PREPARE INTO statement or the SQLDA is being used in a FETCH, INSERT, OPEN, EXECUTE, or CALL statement.

SQLVAR entries in the SQLDA

For each column or host variable described by the SQLDA, there are both base SQLVAR entries and extended SQLVAR entries.

SQLTYPE and SQLLEN fields of the SQLDA

The contents of the SQLTYPE and SQLLEN fields of the SQLDA depends on the SQL statement that is returning the value.

The following table shows the values that can appear in the SQLTYPE and SQLLEN fields of the SQLDA. In DESCRIBE and PREPARE INTO, an even value of SQLTYPE means the column does not allow nulls, and an odd value means the column does allow nulls. In DESCRIBE INPUT statements, only odd values are returned for SQLTYPE. In FETCH, OPEN, EXECUTE, and CALL, an even value of SQLTYPE means no

indicator variable is provided, and an odd value means that SQLIND contains the address of an indicator variable.

Table 261. *SQLTYPE* and *SQLLEN* values for *DESCRIBE*, *PREPARE INTO*, *FETCH*, *OPEN*, *EXECUTE*, and *CALL*

SQLTYPE	For DESCRIBE and PREPARE INTO		For FETCH, OPEN, EXECUTE, and CALL	
	Column or parameter data type	SQLLEN	Host variable data type	SQLLEN
384/385	Date	10 ¹	Fixed-length character string representation of a date	Length attribute of the host variable
388/389	Time	8 ²	Fixed-length character string representation of a time	Length attribute of the host variable
392/393	Timestamp without time zone	19 for <code>TIMESTAMP(0)</code> otherwise $20+p$ for <code>TIMESTAMP(p)</code> ⁵	fixed-length Character string representation of a timestamp	Length attribute of the host variable
400/401	N/A	N/A	NUL-terminated graphic string	Length attribute of the host variable
404/405	BLOB	0 ³	BLOB or XML AS BLOB	Not used. ³
408/409	CLOB	0 ³	CLOB or XML AS CLOB	Not used. ³
412/413	DBCLOB	0 ³	DBCLOB or XML AS DBCLOB	Not used. ³
448/449	Varying-length character string	Length attribute of the column	Varying-length character string	Length attribute of the host variable
452/453	Fixed-length character string	Length attribute of the column	Fixed-length character string	Length attribute of the host variable
456/457	Long varying-length character string SQLTYPE values 448/449 are returned instead of 456/457 for statements that are bound in Version 9 or later.	Length attribute of the column	Long varying-length character string	Length attribute of the host variable
460/461	N/A	N/A	NUL-terminated character string	Length attribute of the host variable
464/465	Varying-length graphic string	Length attribute of the column	Varying-length graphic string	Length attribute of the host variable
468/469	Fixed-length graphic string	Length attribute of the column	Fixed-length graphic string	Length attribute of the host variable

Table 261. *SQLTYPE* and *SQLLEN* values for *DESCRIBE*, *PREPARE INTO*, *FETCH*, *OPEN*, *EXECUTE*, and *CALL* (continued)

SQLTYPE	For DESCRIBE and PREPARE INTO		For FETCH, OPEN, EXECUTE, and CALL	
	Column or parameter data type	SQLLEN	Host variable data type	SQLLEN
472/473	Long graphic string SQLTYPE values 464/465 are returned instead of 472/473 for statements that are bound in Version 9 or later.	Length attribute of the column	Long graphic string	Length attribute of the host variable
480/481	Floating point	4 for single precision, 8 for double precision	Floating point	4 for single precision, 8 for double precision
484/485	Packed decimal	Precision in byte 1; scale in byte 2	Packed decimal	Precision in byte 1; scale in byte 2
492/493	Big integer ⁴	8	Big integer	8
496/497	Large integer	4	Large integer	4
500/501	Small integer	2	Small integer	2
504/505	N/A	N/A	DISPLAY SIGN LEADING SEPARATE, NATIONAL SIGN LEADING SEPARATE	Precision in byte 1; scale in byte 2
904/905	ROWID	40	ROWID	40
908/909	Varying-length binary string	Length attribute of the column	Varying-length binary string	Length attribute of the host variable
912/913	Fixed-length binary string	Length attribute of the column	Fixed-length binary string	Length attribute of the host variable
916/917	BLOB_FILE	267		
920/921	CLOB_FILE	267		
924/925	DBCLOB_FILE	267		
960/961	BLOB locator	4	BLOB_LOCATOR	4
964/965	CLOB locator	4	CLOB_LOCATOR	4
968/969	DBCLOB locator	4	DBCLOB_LOCATOR	4
972	Not applicable	Not applicable	Result set locator	4
988/989	XML	0	Invalid. Instead, use one of the following: XML AS BLOB, XML AS CLOB, XML AS DBCLOB	Not used
996/997	DECFLOAT(16) DECFLOAT(34)	8 16	DECFLOAT(16) DECFLOAT(34)	8 16

Table 261. *SQLTYPE* and *SQLLEN* values for *DESCRIBE*, *PREPARE INTO*, *FETCH*, *OPEN*, *EXECUTE*, and *CALL* (continued)

SQLTYPE	For DESCRIBE and PREPARE INTO		For FETCH, OPEN, EXECUTE, and CALL	
	Column or parameter data type	SQLLEN	Host variable data type	SQLLEN
2448/2449	Timestamp with time zone	147 for TIMESTAMP(0) WITH TIME ZONE otherwise 148+p for TIMESTAMP(p) WITH TIME ZONE ⁵	Varying-length character string representation of a timestamp with time zone	Length attribute of the host variable

Note:

1. *SQLLEN* might be different if a date installation exit is specified.
2. *SQLLEN* might be different if a time installation exit is specified.
3. Field *SQLLONGLEN* in the extended *SQLVAR* contains the length attribute of the column. In *REXX*, the *SQLVAR* length attribute field name is *SQLLONGL* and *SQLLEN* is not used.
4. *BIGINT* is supported by other Db2 platforms.
5. *p* is the timestamp precision.

[The SQLDA Header](#)

The fields in the *SQLDA* header have different usage depending on whether the *SQLDA* is being used in a *DESCRIBE* or *PREPARE INTO* statement or the *SQLDA* is being used in a *FETCH*, *INSERT*, *OPEN*, *EXECUTE*, or *CALL* statement.

[SQLVAR entries in the SQLDA](#)

For each column or host variable described by the *SQLDA*, there are both base *SQLVAR* entries and extended *SQLVAR* entries.

SQLDATA field of the SQLDA

Depending on the data type of the string column that the *SQLVAR* is describing, the *SQLDATA* field can contain different *CCSID* values.

The following table identifies the *CCSID* values that appear in the *SQLDATA* field when the *SQLVAR* element describes a string column.

Table 262. *CCSID* values for *SQLDATA*

Data type	Subtype	Bytes 1 and 2	Bytes 3 and 4
Character	SBCS data	X'0000'	CCSID
Character	Mixed data	X'0000'	CCSID
Character	BIT data	X'0000'	X'FFFF'
Graphic	N/A	X'0000'	CCSID
Any other data type	N/A	N/A	N/A

[The SQLDA Header](#)

The fields in the SQLDA header have different usage depending on whether the SQLDA is being used in a DESCRIBE or PREPARE INTO statement or the SQLDA is being used in a FETCH, INSERT, OPEN, EXECUTE, or CALL statement.

SQLVAR entries in the SQLDA

For each column or host variable described by the SQLDA, there are both base SQLVAR entries and extended SQLVAR entries.

Unrecognized and unsupported SQLTYPES

The values that appear in the SQLTYPE field of the SQLDA are dependent on the level of data type support available at the sender as well as at the receiver of the data. This support is particularly important as new data types are added to the product.

New data types might not be supported by the sender or receiver of the data and might not be recognized by the sender or receiver of the data. Depending on the situation, the new data type might be returned, a compatible data type that is agreed to by both the sender and the receiver of the data might be returned, or an error might occur.

When the sender and receiver agree to use a compatible data type, the following table indicates the mapping that takes place. This mapping takes place when at least one of the sender or receiver does not support the data type provided. The unsupported data type can be provided by either the application or the database manager.

Table 263. Compatible data types for unsupported data types

Data type	Compatible data type
ROWID	VARCHAR(40) FOR BIT DATA

No indication is given in the SQLDA that the data type is substituted.

The included SQLDA

Only assembler, C, C++, COBOL, and PL/I C are supported for the SQLDA that is given by INCLUDE SQLDA.

assembler:

```

Identifying an SQLDA in C or C++

A *descriptor-name* can be specified in the CALL, DESCRIBE, EXECUTE, FETCH, and OPEN statements. When the host application is written in C or C++, *descriptor-name* can be a pointer variable with pointer notation.

For example, *descriptor-name* could be declared as

```
sqlda *outsqlda;
```

Afterwards, it could be used in a statement like the following:

```
EXEC SQL DESCRIBE STMT1 INTO DESCRIPTOR :*outsqlda;
```

The REXX SQLDA

A REXX SQLDA consists of a set of REXX variables with a common stem. The stem must be a REXX variable name that contains no periods and is the same as the value of *descriptor-name* that you specify when you use the SQLDA in an SQL statement. Db2 does not support the INCLUDE SQLDA statement in REXX.

The following table shows the variable names in a REXX SQLDA. The values in the second column of the table are values that Db2 inserts into the SQLDA when the statement executes. Except where noted otherwise, the values in the third column of the table are values that the application must put in the SQLDA before the statement executes.

Table 264. Fields of a REXX SQLDA

Variable name	Usage in DESCRIBE and PREPARE INTO	Usage in FETCH, OPEN, EXECUTE, and CALL
<i>stem</i> .SQLD	<p>The number of columns that are described in the SQLDA. Double that number if USING BOTH appears in the DESCRIBE or PREPARE INTO statement. Contains a 0 if the statement string is not a query.</p> <p>For DESCRIBE PROCEDURE, the number of result sets returned by the stored procedure. Contains a 0 if no result sets are returned.</p>	<p>The number of host variables that are used by the SQL statement.</p>
<p>Each SQLDA contains <i>stem</i>.SQLD of the following variables. Therefore, $1 \leq n \leq \textit{stem} . \textit{SQLD}$. There is one occurrence of each variable for each column of the result table or host variable that is described by the SQLDA.</p>		
<i>stem.n</i> .SQLTYPE	<p>Indicates the data type of the column or parameter and whether it can contain null values. For a description of the type codes, see “SQLTYPE and SQLLEN fields of the SQLDA” on page 2341.</p> <p>For a distinct type, the data type on which the distinct type was based is placed in this field. The base SQLVAR provides no indication that this is part of the description of a distinct type.</p>	<p>Indicates the data type of the host variable and whether an indicator variable is provided. Host variables for datetime values must be character string variables. For FETCH, a datetime type code means a fixed-length character string. For a description of the type codes, see “SQLTYPE and SQLLEN fields of the SQLDA” on page 2341.</p> <p>The data type of the host variable cannot be BLOB locator, CLOB locator, or DBCLOB locator.</p>
<i>stem.n</i> .SQLLONGL	<p>For a LOB column, the length of the string representation of the value or parameter.</p>	<p>For a host variable that has a LOB data type, the length attribute of the host variable. For a description of supported values, see “SQLTYPE and SQLLEN fields of the SQLDA” on page 2341.</p>

Table 264. Fields of a REXX SQLDA (continued)

Variable name	Usage in DESCRIBE and PREPARE INTO	Usage in FETCH, OPEN, EXECUTE, and CALL
<i>stem.n</i> .SQLLEN	For a column other than a DECIMAL, NUMERIC, or LOB column, the length attribute of the column or parameter. For datetime data, the length of the string representation of the value. See “SQLTYPE and SQLLEN fields of the SQLDA” on page 2341 for a description of allowable values.	For a host variable that does not have a decimal or LOB data type, the length attribute of the host variable. See “SQLTYPE and SQLLEN fields of the SQLDA” on page 2341 for a description of allowable values.
<i>stem.n</i> .SQLLEN.SQLPRECISION	For a DECIMAL or NUMERIC column, the precision of the column or parameter.	For a host variable with a decimal data type, the precision of the host variable.
<i>stem.n</i> .SQLLEN.SQLSCALE	For a DECIMAL or NUMERIC column, the scale of the column or parameter.	For a host variable with a decimal data type, the scale of the host variable.
<i>stem.n</i> .SQLCCSID	For a string column or parameter, the CCSID of the column or parameter.	For a string host variable, the CCSID of the host variable.
<i>stem.n</i> .SQLUSECCSID	Not used.	Set to a new CCSID. If set, REXX will change the CCSID of the SQLDATA.
<i>stem.n</i> .SQLLOCATOR	For DESCRIBE PROCEDURE, the value of a result set locator.	Not used.
<i>stem.n</i> .SQLDATA	Not used.	Before EXECUTE or OPEN, contains the value of an input host variable. The application must supply this value. After FETCH, contains the values of an output host variable.
<i>stem.n</i> .SQLIND	Not used.	Before EXECUTE or OPEN, contains a negative number to indicate that the input host variable in <i>stem.n</i> .SQLDATA is null. The application must supply this value. After FETCH, contains a negative number if the value of the output host variable in <i>stem.n</i> .SQLDATA is null.
<i>stem.n</i> .SQLNAME	The name of the <i>n</i> th column in the result table. For DESCRIBE PROCEDURE, contains the cursor name that is used by the stored procedure to return the result set. The values for SQLNAME appear in the order that the cursors were opened by the stored procedure.	Not used.

Table 264. Fields of a REXX SQLDA (continued)

Variable name	Usage in DESCRIBE and PREPARE INTO	Usage in FETCH, OPEN, EXECUTE, and CALL
<i>stem.n</i> .SQLTNAME	The fully qualified distinct type name of the <i>n</i> th column in the result table. If the qualified name is longer than 30 bytes, it is truncated.	Not used.

Appendix H. Db2 catalog tables

Db2 for z/OS maintains a set of tables (in database DSNDB06) called the Db2 catalog.

About the Db2 catalog tables

The catalog tables contain information about Db2 objects such as tables, views, and indexes. When you create, alter, or drop an object, Db2 inserts, updates, or deletes rows of the catalog that describe the object.

The DSNDB06 system database contains the Db2 catalog.

When you create, alter, or drop any structure, Db2 inserts, updates, or deletes rows in the catalog table that describe the structure and how it relates to other structures. For example, SYSIBM.SYSTABLES is one catalog table that records information when a table is created. Db2 inserts a row into SYSIBM.SYSTABLES that includes the table name, its owner, its creator, and the name of its table space and its database.

Related concepts

[Reorganizing the Db2 catalog and directory](#)

The REORG TABLESPACE utility can be run on all the table spaces in the catalog database (DSNDB06) to reclaim unused or wasted space, which can affect performance.

Related reference

[SQL statements allowed on the catalog](#)

Certain SQL statements can be used to change the value of certain options for existing catalog indexes, sequences, and table spaces, or to add indexes to any of the catalog tables.

Db2 catalog tables and table spaces

Db2 for z/OS maintains a set of tables (in database DSNDB06) called the Db2 catalog.

The catalog tables describe such things as table spaces, tables, columns, indexes, privileges, application plans, and packages. Authorized users can query the catalog; however, it is primarily intended for use by Db2 and is therefore subject to change.

The catalog tables are updated by Db2 during normal operations in response to certain SQL statements, commands, and utilities.

All catalog tables are qualified by SYSIBM. Do not use this qualifier for user-defined tables.

About these topics

These topics describe the Db2 catalog by describing the columns of each catalog table.

Programming interface information

Not all catalog table columns are part of the general-use programming interface. Whether a column is part of this interface is indicated in a column labeled "Use" in the table that describes the column. The meanings of the Use column values are shown in the following table.

Use column value	Meaning
G	Column is part of the general-use programming interface
S	Column is part of the product-sensitive interface
I	Column is for internal use only
N	Column is not used

For columns with N or I in the Use column, the name of the column and its description might not appear in the explanation of the column.

For more information about programming interface information, see [Programming interface information \(Introduction to Db2 for z/OS\)](#).

Db2 catalog tables, table spaces, and indexes

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM.

Table	Table space	Indexes (Type "2" on page 2367)	Description
IPLIST	SYSDDF	DSNDUX01 (U)	Contains a row for each IP address that corresponds to a remote DRDA server
IPNAMES	SYSDDF	DSNFPX01 (UC)	Contains a row for each remote DRDA server that Db2 can access using TCP/IP
LOCATIONS	SYSDDF	DSNFCX01 (UC)	Contains a row for every accessible remote server
LULIST	SYSDDF	DSNFLX01 DSNFLX02	Contains a row for each real LU name that is associated with the dummy LU name for a data sharing group
LUMODES	SYSDDF	DSNFMX01 (UC)	Contains a row for the conversation limit for each combination of LU name and VTAM logon mode description
LUNAMES	SYSDDF	DSNFMX01 (UC)	Contains a row for each remote SNA client or server
MODESELECT	SYSDDF	DSNFDX01 (UC)	Contains a row for each VTAM logon mode and combination of authorization ID, plan name, and LU name
SYSAUDITPOLICIES	SYSTSADT	DSNAPX03 (UC)	Each row represents an audit policy.
SYSAUDITPOLICIES_H	SYSTSADH	—	Not used
SYSAUTOALERTS	SYSTSATS	DSNALX01 (UC) DSNALX02 (N) DSNALX03 (N) DSNALX04 (N) DSNALX05 (N) DSNALX06 (N)	Contains a row for each recommendation from the autonomic procedures
SYSAUTOALERTS_OUT	SYSTSATX	DSNALX07 (A)	Contains the LOB data for the OUTPUT column of SYSIBM.SYSAUTOALERTS
SYSAUTORUNS_HIST	SYSTSPRH	DSNPHX01 (UC) DSNPHX02 (N) DSNPHX03 (N)	Contains a row for each execution of an autonomic procedure.

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSAUTORUNS_HISTOU</u>	SYSTSPHX	DSNPHX04 (A)	Contains the LOB data for the OUTPUT column of SYSIBM.SYSAUTORUNS_HIST
<u>SYSAUTOTIMEWINDOWS</u>	SYSTSATW	DSNTWX01 (UC)	Contains a row for each time period during which autonomic procedures can be run
<u>SYSAUXRELS</u>	SYSTSAUX	DSNOXX01 (NC) DSNOXX02 (N)	Contains one row for each auxiliary table for a LOB column
<u>SYSCHECKDEP</u>	SYSTSCKD	DSNSDX01 (UC)	Contains one row for each reference to a column in a table check constraint
<u>SYSCHECKS2</u>	SYSTSCHX	DSNCHX01 (UC)	Contains one row for each table check constraint
<u>SYSCHECKS</u>	SYSTSCKS	DSNSCX01 (UC)	Contains one row for each table check constraint
<u>SYSCOLAUTH</u>	SYSTSFAU	DSNACX01 (N) DSNACX02 (N) DSNACX03 (N) DSNACX04 (N)	Records the UPDATE privileges that are held by users on individual columns of a table or view
<u>SYSCOLAUTH_H</u>	SYSTSFAH	—	Not used
<u>SYSCOLDIST</u>	SYSSTATS	DSNTNX01 (NC)	Contains cardinality, frequency, and histogram statistics for a single column or a column group.
<u>SYSCOLDIST_HIST</u>	SYSHIST	DSNHFX01 (N)	Contains accumulated rows from SYSCOLDIST
<u>SYSCOLDISTSTATS</u>	SYSSTATS	DSNTPX01 (NC)	Contains cardinality, frequency, and histogram statistics for a single column or a column group. Each partition can have 0 or more rows.
<u>SYSCOLSTATS</u>	SYSSTATS	DSNTCX01 (NC)	Contains partition statistics for selected columns. Each column contains a row for each partition in the table
<u>SYSCOLUMNS</u>	SYTSCOL	DSNDCX01 (U) DSNDCX02 (N) DSNDCX05 (N) DSNDCX06 (N)	Contains one row for every column of each table and view
<u>SYSCOLUMNS_HIST</u>	SYSHIST	DSNHEX01 (N)	Contains accumulated rows from SYSCOLUMNS

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSCONSTDEP</u>	SYSTSCON	DSNCCX01 (N) DSNCCX02 (N)	Records dependencies on check constraints or user-defined defaults for a column
<u>SYSCONTEXTAUTHIDS</u>	SYSCONTX	DSNCDX01 (UC) DSNCDX02 (N)	Contains the authorization ID under which a trusted context can be used.
<u>SYSCONTEXTAUTHID_H</u>	SYTSCXH	—	Not used
<u>SYSCONTEXT</u>	SYSCONTX	DSNCTX01 (UC) DSNCTX02 (U) DSNCTX03 (U) DSNCTX04 (N)	Contains one row for each trusted context.
<u>SYSCONTEXT_H</u>	SYTSCNH	—	Not used
<u>SYSCONTROLS</u>	SYTSCTL	DSNCLX01 (U) DSNCLX02 (U) DSNCLX03 (N) DSNCLX04 (N) DSNCLX05 (N)	Contains one row for each row permission and column mask.
<u>SYSCONTROLS_DESC</u>	SYTSCTD	DSNTRX02 (A)	Contains the LOB data for the DESCRIPTOR column of SYSIBM.SYSCONTROLS
<u>SYSCONTROLS_DESC_H</u>	SYTSCHD	DSNTRX04 (A)	Contains the LOB data for the DESCRIPTOR column of SYSIBM.SYSCONTROLS_H
<u>SYSCONTROLS_RTXT</u>	SYTSCTR	DSNTRX01 (A)	Contains the LOB data for the RULETEXT column of SYSIBM.SYSCONTROLS.
<u>SYSCONTROLS_RTXT_H</u>	SYTSCHR	DSNTRX03 (A)	Contains the LOB data for the RULETEXT column of SYSIBM.SYSCONTROLS_H
<u>SYSCOPY</u>	SYTSCPY	DSNUCH01 (N) DSNUCX01 (N)	Contains information that is needed for recovery
<u>SYSCTXTTRUSTATTRS</u>	SYSCONTX	DSNCAX01 (UC)	Contains the attributes for a given trusted context
<u>SYSCTXTTRUSTATTR_H</u>	SYTSTA_H		Not used
<u>SYSDATABASE</u>	SYTSDBA	DSNDDH01 (U) DSNDDX02 (N)	Contains one row for each database, except for database DSNDDB01
<u>SYSDATATYPES</u>	SYTSDAT	DSNODX01 (U) DSNODX02 (U)	Contains one row for each distinct data type

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSDBAUTH</u>	SYSTSDBU	DSNADH01 (N) DSNADX01 (N) DSNADH02 (N)	Records the privileges held by users over databases
<u>SYSDBAUTH_H</u>	SYSTSDBH	—	Not used
<u>SYSDBRM</u>	SYSTSDBR	DSNDBX01 (N) DSNDBX02 (U)	Contains one row for each DBRM of each application plan
<u>SYSDEPENDENCIES</u>	SYSTSDEP	DSNONX01 (U) DSNONX02 (N)	Records the dependencies between objects
<u>SYSDUMMY1</u>	SYSEBCDC	—	Contains one row. This table is used by SQL statements that do not use any tables but must specify a table name.
<u>SYSDUMMYA</u>	SYSTSASC	—	Contains one row and is used for SQL statements in which a table reference is required, but the contents of the table are not important. SYSTSASC is an ASCII table space.
<u>SYSDUMMYE</u>	SYSEBCDC	—	Contains one row and is used for SQL statements in which a table reference is required, but the contents of the table are not important. SYSEBCDIC is an EBCDIC table space.
<u>SYSDUMMYU</u>	SYSTSUNI	—	Contains one row and is used for SQL statements in which a table reference is required, but the contents of the table are not important. SYSTSUNI is a UNICODE table space.
<u>SYSDYNQRY</u>	SYTSDQY	DSNDQX01 (U) DSNDQX02 (UC) DSNDQX11 (U)	Contains one row for each stabilized dynamic query.
<u>SYSDYNQRYDEP</u>	SYTSDQD	DSNDQX03 (N) DSNDQX04 (N) DSNDQX05 (N) DSNDQX12 (N)	Records the dependencies of stabilized dynamic queries.
<u>SYSDYNQRY_EXPL</u>	SYTSDQE	DSNDQX08 (A)	Internal use for stabilized dynamic queries.
<u>SYSDYNQRY_OPL</u>	SYTSDQO	DSNDQX10 (A)	Internal use for stabilized dynamic queries.

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
SYSDYNQRY_SHTEL	SYSTSDQH	DSNDQX09 (A)	Internal use for stabilized dynamic queries.
SYSDYNQRY_SPAL	SYSTSDQS	DSNDQX07 (A)	Internal use for stabilized dynamic queries.
SYSDYNQRY_TXTL	SYSTSDQT	DSNDQX06 (A)	Internal use for stabilized dynamic queries.
SYSENVIRONMENT	SYSTSENV	DSNOEX01 (U)	Records the environment variables when an object is created
SYSFIELDS	SYSTSFLD	DSNDFX01 (N)	Contains one row for every column that has a field procedure
SYSFORIGNKEYS	SYSTSFOR	DSNDRH01 (N)	Contains one row for every column of every foreign key
SYSINDEXCLEANUP	SYSTSIXC	DSNICX01 (N)	Contains time window data to control index cleanup processing.
SYSINDEXCONTROL	SYSTSICO		Contains rows that specify time windows to control the use of memory allocated for an index.
SYSINDEXES	SYSTSIXS	DSNDXX01 (U) DSNDXX02 (U) DSNDXX03 (U) DSNDXX04 (N) DSNDXX07	Contains one row for every index
SYSINDEXES_RTSECT	SYSTSIXR	DSNDXX06 (A)	Contains the LOB data for the RTSECTION column of SYSIBM.SYSINDEXES.
SYSINDEXES_TREE	SYSTSIXT	DSNDXX05 (A)	Contains the LOB data for the PARSETREE column of SYSIBM.SYSINDEXES.
SYSINDEXES_HIST	SYSHIST	DSNHHX01 (NC) DSNHHX02 (N)	Contains accumulated rows from SYSINDEXES
SYSINDEXPART	SYSTSIPT	DSNDRX01 (U) DSNDRX02 (N) DSNDRX03 (N)	Contains one row for each nonpartitioned index and one row for each partition of a partitioning index or DPSI
SYSINDEXPART_HIST	SYSHIST	DSNHGX01 (N)	Contains accumulated rows from SYSINDEXPART
SYSINDEXSPACESTATS	SYSTSISS	DSNRTX02 (U) DSNRTX03 (N)	Contains Real-time Statistics for index spaces.

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSIXSPACESTATS_H</u>	SYSTSISH		A history table for temporal versioning of the " <u>SYSINDEXSPACESTATS catalog table</u> " on page 2504 table. For more information, see " <u>Temporal versioning for Db2 statistics-related catalog tables</u> " on page 2790.
<u>SYSINDEXSTATS</u>	SYSSTATS	DSNTXX01 (UC)	Contains one row for each partition of a partitioning index or data-partitioned secondary index (DPSI)
<u>SYSINDEXSTATS_HIST</u>	SYSHIST	DSNHIX01 (NC)	Contains accumulated rows from SYSINDEXSTATS
<u>SYSJARCLASS_SOURCE</u>	SYSJAUXB	DSNJSX01 (A)	Contains the source code for a Java stored procedure
<u>SYSJARCONTENTS</u>	SYSJAVA	DSNJCX01 (NC)	Records the classes for each JAR file for a Java stored procedure
<u>SYSJARDATA</u>	SYSJAUXA	DSNJDX01 (A)	Contains the contents of the JAR file for each Java stored procedure
<u>SYSJAROBJECTS</u>	SYSJAVA	DSNJOX01 (UC)	Records the contents of each JAR file for a Java stored procedure
<u>SYSJAVAOPTS</u>	SYSJAVA	DSNJVX01 (UC)	Records the build options for a Java stored procedure
<u>SYSJAVAPATHS</u>	SYSJAVA	DSNJPX01 (U) DSNJPX02 (N)	Contains the complete JAR class resolution path, and records the dependencies that one JAR has on the JARs in its Java path.
<u>SYSKEYS</u>	SYSTSKEY	DSNDKX01 (U) DSNDKX02 (N) DSNDKX03 (U)	Contains one row for each column of an index key
<u>SYSKEYCOLUSE</u>	SYTSKYC	DSNCUX01 (N)	Contains a row for every column in a unique constraint (primary key or unique key)
<u>SYSKEYTARGETS</u>	SYSTARG	DSNRKX01 (UC) DSNRKX02 (N)	Contains one row for each key-target participating in an extended index definition
<u>SYSKEYTARGETS_HIST</u>	SYSHIST	DSNHKX01 (N)	Contains accumulated rows from SYSKEYTARGETS
<u>SYSKEYTARGETSTATS</u>	SYSSTATS	DSNTKX01 (U)	Contains partition statistics for selected key-targets
<u>SYSKEYTGTDIST</u>	SYSSTATS	DSNTDX01 (N)	Contains one or more rows for the first key-target of an extended index key

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSKEYTGTDIST_HIST</u>	SYSHIST	DSNTDX02 (N)	Contains accumulated rows from SYSKEYTGTDIST
<u>SYSKEYTGTDISTSTATS</u>	SYSSTATS	DSNTSX01 (N)	Contains zero or more rows per partition for the first key-target of a data-partitioned secondary index (DPSI)
<u>SYSLEVELUPDATES</u>	SYSTSLVH	DSNLVX01 (N) DSNLVX02 (N)	Contains information about the function levels, catalog levels, and code levels of the Db2 subsystem or data sharing group.
<u>SYSLOBSTATS</u>	SYSSTATS	DSNLNX01 (UC)	Contains one row for each LOB table space
<u>SYSLOBSTATS_HIST</u>	SYSHIST	DSNHJX01 (NC)	Contains accumulated rows from SYSLOBSTATS
<u>SYSOBDS</u> "1" on page 2367	SYSALTER	DSNDOB01 (N) DSNDOB02 (N)	Contains one row for each table space or index that can be recovered to an image copy that was made before the first version was generated. Important: Do not manipulate data in the SYSIBM.SYSOBDS catalog table, except at the direction of IBM Support.
<u>SYSOBD_AUX</u> "1" on page 2367	SYTSOVBX	DSNOB03 (A)	Contains the LOB data for the OBD_IMAGE column of SYSIBM.SYSOBDS.
<u>SYSOBJROLEDEP</u>	SYSROLES	DSNRDX01 (UC) DSNRDX02 (N)	Contains one row for each dependent role
<u>SYSPACKAGE</u>	SYTSPKG	DSNKKX01 (U) DSNKKX02 (U)	Contains one row for each package
<u>SYSPACKAUTH</u>	SYTSPKA	DSNKAX01 (N) DSNKAX02 (N) DSNKAX03 (N)	Contains the privileges that are held by users over packages
<u>SYSPACKAUTH_H</u>	SYTSPKH	—	Not used
<u>SYSPACKCOPY</u>	SYTSPKC	DSNPCX01 (UC)	Contains one row for the previous version of each package and one row for the original version of each package.
<u>SYSPACKDEP</u>	SYTSPKD	DSNKDX01 (N) DSNKDX02 (N) DSNKDX03 (N)	Records the dependencies of packages on local tables, views, synonyms, table spaces, indexes, aliases, and triggers

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSPACKLIST</u>	SYTSPKL	DSNKLX01 (N) DSNKLX02 (U)	Contains one row for every package list entry for a plan
<u>SYSPACKSTMT</u>	SYTSPKS	DSNKSX01 (UC)	Contains one row for every SQL statement that belongs to a package
<u>SYSPACKSTMT_STMB</u>	SYTSPVR	DSNKSX02 (A)	Contains the LOB data for the STMTBLOB column of SYSIBM.SYSPACKSTMT.
<u>SYSPACKSTMT_STMT</u>	SYTSPKX	DSNPX01 (A)	Contains the LOB data for the STATEMENT column of SYSIBM.SYSPACKSTMT.
<u>SYSPARMS</u>	SYTSPRM	DSNOPX01 (U) DSNOPX02 (N) DSNOPX03 (N) DSNOPX04 (N)	Contains a row for each parameter of a routine or a row for each column of a table that is passed as a parameter to a routine
<u>SYSPENDINGDDL</u>	SYTSPEN	DSNPDX01 (N) DSNPDX02 (N)	Contains information about which objects have pending definition changes. The entries exist only during the window between when the pending option is run and when the utility materializes these pending options.
<u>SYSPENDINGDDLTEXT</u>	SYTSPDT	DSNPDX03 (A)	Contains the LOB data for the STATEMENT_TEXT column of SYSIBM.SYSPENDINGDDL.
<u>SYSPENDINGOBJECTS</u>	SYTSPDO	DSNPOX01 (N) DSNPOX02 (N) DSNPOX03 (N)	Contains name and OBID information about the pending-CREATE objects, whose data sets are created but object definitions have not been materialized to the real catalog.
<u>SYSPKSYSTEM</u>	SYTSPKY	DSNKYX01 (N)	Contain one row of system information for each package
<u>SYSPLAN</u>	SYTSPLN	DSNPPH01 (U)	Contains one row for each application plan
<u>SYSPLANAUTH</u>	SYTSPLA	DSNAPH01 (N) DSNAPX01 (N) DSNAPX02 (N)	Records the privileges that are held by users over application plans
<u>SYSPLANAUTH_H</u>	SYTSP LH	—	Not used
<u>SYSPLANDEP</u>	SYTSP LD	DSNGGX01 (N) DSNGGX05 (N)	Records the dependencies of plans on tables, views, aliases, synonyms, table spaces, and indexes
<u>SYSPLSYSTEM</u>	SYTSP LY	DSNKPX01 (N)	Contains one row of system information for each plan

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSQUERY</u>	SYSTSQRY	DSNQYX01 (N) DSNQYX02 (U) DSNQYX03 (N) DSNQYX04 (N)	Contains a set of queries
<u>SYSQUERY_AUX</u>	SYSTSQRA	DSNQSX01 (A)	Contains the LOB data for the STMTTEXT column of SYSIBM.SYSQUERY
<u>SYSQUERYOPTS</u>	SYSTSQRO	DSNQPX01 (N)	Contains optimization parameters for the queries in SYSIBM.SYSQUERY.
<u>SYSQUERYPLAN</u>	SYSTSQRP	DSNQNX01 (N)	Contains the plan hint information for the queries in the SYSIBM.SYSQUERY table
<u>SYSQUERYPREDICATE</u>	SYSTSQRE	DSNQEX01 (UC) DSNQEX02 (N)	Contains rows that describe the predicates within a query. Rows are added to this table by using the BIND QUERY command. Rows are removed from this table by using the FREE QUERY command.
<u>SYSQUERYSEL</u>	SYSTSQRS	—	Contains rows that describe the selectivity of predicates. Rows are added to this table by using the BIND QUERY command. Rows are removed from this table by using the FREE QUERY command.
<u>SYSRELS</u>	SYSTSREL	DSNDLX01 (N) DSNDLX02 (N) DSNDLX03 (N) DSNDLX04 (U)	Contains one row for every relationship
<u>SYSRESAUTH</u>	SYSGPAUT	DSNAGH01 (N) DSNAGX01 (N)	Records the privileges that are held by users over buffer pools, storage groups, table spaces, and collections
<u>SYSRESAUTH_H</u>	SYSTSAUH	—	Not used
<u>SYSROLES</u>	SYSROLES	DSNRLX01 (UC)	Contains one row for each role
<u>SYSROUTINES</u>	SYSTSROU	DSNOFX01 (U) DSNOFX02 (U) DSNOFX03 (N) DSNOFX04 (U) DSNOFX05 (N) DSNOFX06 (N) DSNOFX07 (U) DSNOFX08 (N)	Contains a row for every routine
<u>SYSROUTINESTEXT</u>	SYSPLUXA	DSNPLX01 (A)	Contains LOB data for the column SYSIBM.SYSROUTINES.TEXT

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSROUTINES_TREE</u>	SYSPLUXB	DSNPLX02 (A)	Contains the LOB data for the PARSETREE column of SYSIBM.SYSROUTINES.
<u>SYSROUTINEAUTH</u>	SYSTSR AU	DSNOAX01 (N) DSNOAX02 (U) DSNOAX03 (N)	Records the privileges that users hold on routines
<u>SYSROUTINEAUTH_H</u>	SYSTSR AH	—	Not used
<u>SYSROUTINES_OPTS</u>	SYSGR TNS	DSNR OX01 (UC)	Contains one row to record the build options for each generated routine
<u>SYSROUTINES_SRC</u>	SYSGR TNS	DSNR SX01 (N) DSNR SX02 (U)	Contains one or more rows for the source code for each generated routine
<u>SYSSCHEMAAUTH</u>	SYSTSSCM	DSNSKX01 (N) DSNSKX02 (N)	Contains one or more rows for each grantee of a privilege on a schema
<u>SYSSCHEMAAUTH_H</u>	SYSTSSCH	—	Not used
<u>SYSSEQUENCEAUTH</u>	SYSSEQ2	DSNWCX01 (N) DSNWCX02 (N) DSNWCX03 (N)	Records the privileges that users hold on sequences
<u>SYSSEQUENCEAUTH_H</u>	SYSTSSAH	—	Not used
<u>SYSSEQUENCES</u>	SYSSEQ	DSNSQX01 (U) DSNSQX02 (UD) DSNSQX03 (N)	Contains one row for each identity column or user-defined sequence.
<u>SYSSEQUENCESDEP</u>	SYSSEQ2	DSNSRX01 (N) DSNSRX02 (N)	Records the dependencies of identity columns on the corresponding entries in SYSIBM.SYSSEQUENCES
<u>SYSSESSION</u>	SYTSSSES	DSNSNX02 (N)	Contains session tokens that are generated by the server and associated session data.
<u>SYSSESSION_EX</u>	SYTSSSNX	DSNSNX04 (U) DSNSNX05 (U)	Contains the global variable data of LOB or array type that corresponds to the locator stored in the GLOBAL_VARIABLES column of SYSSESSION table.
<u>SYSSESSION_GV</u>	SYTSSNL	DSNSNX01 (U)	Contains the LOB data for the GLOBAL_VARIABLES column of SYSIBM.SYSSESSION table.
<u>SYSSESSION_DATA</u>	SYTSSXL	DSNSNX03 (U)	Contains LOB data for the DATA column of the SYSSESSION_EX table.

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSESSION_STATUS</u>	SYSTSSTA	DSNSNX06 (U)	Contains the session token and timestamp value when the corresponding session data was last referenced.
<u>SYSSTATFEEDBACK</u>	SYTSSFB	DSNSFX01 (UC)	Contains one row for every missing or conflicting statistic that is identified during query optimization.
<u>SYSSTMT</u>	SYTSSTM	DSNPSX01 (N) DSNPSX02 (N)	Contains one or more rows for each SQL statement of each DBRM
<u>SYSSTOGROUP</u>	SYTSSTG	DSNSSH01 (U)	Contains one row for each storage group
<u>SYSSTRINGS</u>	SYTSSRG	DSNSSX01 (U)	Contains information necessary to perform string translations
<u>SYSSYNONYMS</u>	SYTSSYN	DSNDYX01 (U) DSNDYX02 (N)	Contains one row for each synonym of a table or view
<u>SYSTABAUTH</u>	SYTSTAU	DSNATX01 (N) DSNATX02 (N) DSNATX03 (N) DSNATX04 (N) DSNATX05 (U)	Records the privileges that are held by users on tables, views, and triggers
<u>SYSTABAUTH_H</u>	SYTSTBH	—	Not used
<u>SYSTABCONST</u>	SYTSTBC	DSNCNX01 (U) DSNCNX02 (N)	Contains one row for each unique constraint that was created in Db2 for z/OS DB2 version 7 or later
<u>SYSTABLES</u>	SYTSTAB	DSNDTX01 (U) DSNDTX02 (N) DSNDTX03 (N) DSNDTX05	Contains one row for each table, view, and alias
<u>SYSTABLES_HIST</u>	SYSHIST	DSNHDX01 (N)	Contains accumulated rows from SYSTABLES
<u>SYSTABLES_PROFILES</u>	SYTSTPF	DSNPRX01 (UC)	Contains a row for each profile that is associated with a table in SYSIBM.SYSTABLES
<u>SYSTABLES_PROFILE_TEXT</u>	SYTSPTX	DSNPRX02 (UC)	Contains the LOB data for the PROFILE_TEXT column of SYSIBM.SYSTABLES_PROFILES

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSTABLEPART</u>	SYSTSTPT	DSNDPX01 (U) DSNDPX02 (N) DSNDPX03 (N) DSNDPX04 (N) DSNDPX05 (N)	Contains one row for each nonpartitioned table space and one row for each partition of a partitioned table space
<u>SYSTABLEPART_HIST</u>	SYSHIST	DSNHGX01 (N)	Contains accumulated rows from SYSTABLEPART
<u>SYSTABLESPACE</u>	SYSTSTSP	DSNDSX01 (U)	Contains one row for each table space
<u>SYSTABLESPACESTATS</u>	SYSTSTSS	DSNRXX01 (U)	Contains Real Time Statistics for table spaces.
<u>SYSTABSPACESTATS_H</u>	SYSTSTSH		A history table for temporal versioning of the " <u>SYSTABLESPACESTATS catalog table</u> " on page 2727 table. For more information, see " <u>Temporal versioning for Db2 statistics-related catalog tables</u> " on page 2790.
<u>SYSTABSTATS</u>	SYSSTATS	DSNTTX01 (U) DSNTTX02 (N)	Contains one row for each partition of a partitioned table space and no rows for nonpartitioned table spaces
<u>SYSTABSTATS_HIST</u>	SYSHIST	DSNHGX01 (NC)	Contains accumulated rows from SYSTABSTATS
<u>SYSTRIGGERS</u>	SYSTSTRG	DSNOTX01 (UC) DSNOTX02 (N) DSNOTX03 (N)	Contains one row for each trigger
<u>SYSTRIGGERS_STMT</u>	SYSTSTRT	DSNOTX04 (A)	Contains the LOB data for the STATEMENT column of SYSIBM.SYSTRIGGERS
<u>SYSUSERAUTH</u>	SYSUSER	DSNAUH01 (N) DSNAUX02 (N)	Records the system privileges that are held by users
<u>SYSUSERAUTH_H</u>	SYSTSUAH	—	Not used
<u>SYSVARIABLEAUTH</u>	SYSTSVAU	DSNVAX01 (N) DSNVAX02 (N) DSNVAX03 (N)	Contains one row for each authorization ID that has privileges for each global variable.
<u>SYSVARIABLES</u>	SYSTSVAR	DSNOVX01 (U)	Contains one row for each global variable that has been created.
<u>SYSVARIABLES_DESC</u>	SYTSVAD	DSNOVX03 (A)	Contains the LOB data for the DESCRIPTOR column of SYSIBM.SYSVARIABLES.

Table 265. Db2 catalog tables. The qualifier for all catalog table names is SYSIBM. (continued)

Table	Table space	Indexes (Type "2" on page 2367)	Description
<u>SYSVARIABLES_TEXT</u>	SYSTSVAT	DSNOVX02 (A)	Contains the LOB data for the DEFAULTTEXT column of SYSIBM.SYSVARIABLES.
<u>SYSVIEWS</u>	SYSTSVIEW	DSNVVX01 (U)	Contains one or more rows for each view
<u>SYSVIEWS_STMT</u>	SYSTSVWT	DSNVWX01 (A)	Contains the LOB data for the STATEMENT column of SYSIBM.SYSVIEWS
<u>SYSVIEWS_TREE</u>	SYSTSVTR	DSNVWX02 (A)	Contains the LOB data for the PARSETREE column of SYSIBM.SYSVIEWS
<u>SYSVIEWDEP</u>	SYSTSVWD	DSNGGX02 (N) DSNGGX03 (N) DSNGGX04 (N) DSNGGX06	Records the dependencies of views on tables and other views
<u>SYSVIEWDEP_H</u>	SYSTSVDH	—	Not used.
<u>SYSVOLUMES</u>	SYSTSVOL	DSNSSH02 (N)	Contains one row for each volume of each storage group
<u>SYSXMLRELS</u>	SYSXML	DSNXRX01 (N) DSNXRX02 (N)	Contains one row for each XML table that is created for an XML column
<u>SYSXMLSTRINGS</u>	SYSXML	DSNXSX01 (UC) DSNXSX02 (U)	Each row holds a single string and its unique ID. They are used to condense XML data. The string can be an element name, attribute name, name space prefix, or a name space URI.
<u>SYSXMLTYPMOD</u>	SYSTSXTM	DSNTMX01 (U)	Contains rows about the XML type modifiers of XML columns. Rows in this table can be inserted, updated, and deleted.
<u>SYSXMLTYPMSHEMA</u>	SYSTSXTS	DSNMSX01 (U) DSNMSX02 (N)	Contain rows about XML schemas for the XML type modifiers that are stored in SYSXMLTYPMOD. Each row contains one XML schema specification for one XML type modifier. Rows in this table can be inserted, updated, and deleted.
<u>USERNAMES</u>	SYSDDF	DSNFEX01 (U)	Contains a row for each authorization ID to be translated or checked as it is sent to or from this Db2

Notes:

1. Descriptions of the SYSIBM.SYSOBDS and SYSIBM.SYSOBD_AUX catalog tables are available only to users who work in enterprises with a Db2 12 license. For more information see "Internal catalog table formats" in [Advanced diagnostic information for Db2 12 for z/OS](#).

2. The following index types are indicated:

- A**
Auxiliary
- N**
Nonunique
- U**
Unique
- UC**
Unique clustering
- UD**
Unique descending

Db2 12 catalog levels

The *catalog level* of a data sharing group or subsystem indicates that a particular CATMAINT utility UPDATE LEVEL job was run on the Db2 catalog, and the data sharing group or Db2 subsystem is ready for the activation of certain function levels.

Db2 12 uses the following Db2 catalog levels:

- V12R1M509
- V12R1M507
- V12R1M505
- V12R1M503
- V12R1M502
- V12R1M500

Tip: When you update the Db2 catalog level, you can specify either the target function level or the catalog level. If you specify the function level, Db2 determines the appropriate target catalog level, and the CATMAINT utility completes any required catalog level updates in sequential order. For more information, see [CATMAINT \(Db2 Utilities\)](#).

For a summary of the changes, see [Catalog changes in Db2 12 \(Db2 for z/OS What's New?\)](#).

Trailing blanks in converted catalog columns

Db2 subsystems that were migrated from earlier releases might have trailing blanks in catalog table columns that were converted from fixed to varying length data types. You might need to make adjustments in applications that use these columns in comparisons. For more information, see [Trailing blanks in Db2 catalog columns \(Db2 Administration Guide\)](#).

Release indicators in the Db2 catalog

Some objects depend on functions in particular releases of Db2. If you are running on a release of Db2 and fall back to a previous release, an object that depends on the more recent release becomes frozen. The object is marked with a release dependency indicator and is unavailable until remigration.

The release dependency indicator, which is listed in the IBMREQD, RELCREATED, and RELBOUND columns of the catalog tables, shows the release of Db2 upon which the objects depend.

Important: The IBMREQD column is not a reliable indicator for indicating release dependencies. Where possible, the RELCREATED and RELBOUND columns should be used instead.

Db2 release dependency indicators in the IBMREQD, RELCREATED, and RELBOUND columns might use the following values:

Values	Meanings for IBMREQD, RELCREATED, and RELBOUND columns
R	Db2 13
Q	Db2 12
P	Db2 11
O	DB2 10
M	DB2 9
L	DB2 version 8
K	DB2 version 7
J	DB2 version 6
I	DB2 version 6
H	DB2 version 5
G	DB2 version 4
F	DB2 version 3R1
E	DB2 version 2R3
D	DB2 version 2R2
C	DB2 version 2R1
B	DB2 version 1R3
Y	Rows with IBMREQD='Y' were provided with the Db2 for z/OS product code
N	Rows with IBMREQD='N' have no release dependency and were not provided with the Db2 for z/OS product code

Trailing blanks in converted catalog columns

Db2 subsystems that were migrated from earlier releases might have trailing blanks in catalog table columns that were converted from fixed to varying length data types. You might need to make adjustments in applications that use these columns in comparisons. For more information, see [Trailing blanks in Db2 catalog columns \(Db2 Administration Guide\)](#).

Related concepts

[Reorganizing the Db2 catalog and directory](#)

The REORG TABLESPACE utility can be run on all the table spaces in the catalog database (DSNDB06) to reclaim unused or wasted space, which can affect performance.

Related reference

[SQL statements allowed on the catalog](#)

Certain SQL statements can be used to change the value of certain options for existing catalog indexes, sequences, and table spaces, or to add indexes to any of the catalog tables.

[Catalog indexes](#)

Indexes are defined on most catalog tables to improve catalog access.

IPLIST catalog table

The IPLIST table allows multiple IP addresses to be specified for a given LOCATION. The schema is SYSIBM.

Insert rows into this table when you want to define a remote Db2 data sharing group. The same value for the IPADDR column cannot appear in both the IPNAMES table and the IPLIST table. Rows in this table can be inserted, updated, and deleted.

Table 266. SYSIBM.IPLIST table column descriptions

Column name	Data type	Description	Use
LINKNAME	VARCHAR(24) NOT NULL	This column is associated with the value specified in the LINKNAME column in the SYSIBM.LOCATIONS table and the SYSIBM.IPNAMES table. The values of the other columns in the SYSIBM.IPNAMES table apply to the server identified by the LINKNAME column in this row.	G
IPADDR	VARCHAR(254) NOT NULL	This column contains an IPv4 or IPv6 address, or fully qualified domain name of a remote TCP/IP host of the server. If WLM Domain Name Server workload balancing is used, this column must contain the member specific domain name. If Dynamic VIPA workload balancing is used, this column must contain the member specific Dynamic VIPA address. The IPADDR column must be specified as follows: <ul style="list-style-type: none"> An IPv4 address must be left justified and is represented as a dotted decimal address. For example, '123.456.78.912' would be interpreted as an IPv4 address. An IPv6 address must be left justified and is represented as a colon hexadecimal address. An example of an IPv6 address is '2001:0DB8:0000:0000:0008:0800:200C:417A', which can also be expressed in compressed form as '2001:DB8::8:800:200C:417A'. A domain name is converted to an IP address by the domain name server where a resulting IPv4 or IPv6 address is determined. An example fully qualified domain name is 'stlmvs1.svl.example.com'. 	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

IPNAMES catalog table

The IPNAMES catalog table defines the remote DRDA servers Db2 can access using TCP/IP. The schema is SYSIBM.

Rows in this table can be inserted, updated, and deleted.

Table 267. SYSIBM.IPNAMES table column descriptions

Column name	Data type	Description	Use
LINKNAME	VARCHAR(24) NOT NULL	The value specified in this column must match the value specified in the LINKNAME column of the associated row in SYSIBM.LOCATIONS.	G
SECURITY_OUT	CHAR(1) NOT NULL WITH DEFAULT 'A'	<p>This column defines the DRDA security option used for outbound connections when local Db2 SQL applications connect to any remote server associated with this TCP/IP host. For more information about the meanings of these options, see SYSIBM.IPNAMES columns (Managing Security).</p> <p>A Already verified</p> <p>D User ID with security-sensitive data encryption</p> <p>E Userid, password, and security-sensitive data encryption</p> <p>P Password</p> <p>R RACF PassTicket</p> <p><i>Security-sensitive data</i> is any input or output data. Examples are rows that are retrieved from a remote server, rows that are sent to the remote server, and SQL statement text.</p>	G
USERNAMES	CHAR(1) NOT NULL WITH DEFAULT	<p>This column controls outbound authorization ID translation. Outbound translation is performed when an authorization ID is sent by Db2 to a remote server.</p> <p>O An outbound ID is subject to translation. Rows in the SYSIBM.USERNAMES table are used to perform ID translation.</p> <p>No translation or "come from" checking is performed on inbound IDs.</p> <p>S Row in the SYSIBM.USERNAMES table is used to obtain the system AUTHID used to establish a trusted connection.</p> <p>blank No translation occurs.</p> <p>The supported values depend on the IPNAMES, SECURITY_OUT and LOCATIONS.TRUSTED column values. For more information, see "Supported combinations for SECURITY_OUT and USERNAMES column values" in SYSIBM.IPNAMES columns (Managing Security).</p>	G

Table 267. SYSIBM.IPNAMES table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
IPADDR	VARCHAR(254) NOT NULL WITH DEFAULT	This column contains an IPv4 or IPv6 address, or fully qualified domain name of a remote TCP/IP host. The IPADDR column must be specified as follows: <ul style="list-style-type: none"> An IPv4 address must be left justified and is represented as a dotted decimal address. For example, '123.456.78.91' would be interpreted as an IPv4 address. An IPv6 address must be left justified and is represented as a colon hexadecimal address. An example of an IPv6 address is '2001:0DB8:0000:0000:0008:0800:200C:417A', which can also be expressed in compressed form as '2001:DB8::8:800:200C:417A'. A domain name is converted to an IP address by the domain name server where a resulting IPv4 or IPv6 address is determined. An example fully qualified domain name is 'stlmvs1.svl.example.com'. 	G

LOCATIONS catalog table

The LOCATIONS catalog table contains a row for every accessible remote server. The schema is SYSIBM. The row associates a LOCATION name with the TCP/IP or SNA network attributes for the remote server. Requesters are not defined in this table.

Rows in this table can be inserted, updated, and deleted.

Table 268. SYSIBM.LOCATIONS table column descriptions

Column name	Data type	Description	Use
LOCATION	VARCHAR(128) NOT NULL	A unique location name for the accessible server. This is the name by which the remote server is known to local Db2 SQL applications.	G

Table 268. SYSIBM.LOCATIONS table column descriptions (continued)

Column name	Data type	Description	Use
LINKNAME	VARCHAR(24) NOT NULL	<p>Identifies the VTAM or TCP/IP attributes associated with this location. For any LINKNAME specified, one or both of the following statements must be true:</p> <ul style="list-style-type: none"> • A row exists in SYSIBM.LUNAMES whose LUNAME matches the value specified in the SYSIBM.LOCATIONS LINKNAME column. This row specifies the VTAM communication attributes for the remote location. • A row exists in SYSIBM.IPNAMES whose LINKNAME matches the value specified in the SYSIBM.LOCATIONS LINKNAME column. This row specifies the TCP/IP communication attributes for the remote location. <p>For accelerators that are defined with an alias (logical name), specify a LINKNAME value of DSNACCELERATORALIAS.</p>	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	<p>A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators.</p> <p>The value in this field is not a reliable indicator of release dependencies.</p>	G
PORT	VARCHAR(96) NOT NULL WITH DEFAULT	<p>TCP/IP is used for outbound DRDA connections when the following statement is true:</p> <ul style="list-style-type: none"> • A row exists in SYSIBM.IPNAMES, where the LINKNAME column matches the value specified in the SYSIBM.LOCATIONS LINKNAME column. <p>If the above mentioned row is found, the value of the PORT column is interpreted as follows:</p> <ul style="list-style-type: none"> • If PORT is blank, the default DRDA port (446) is used. • If PORT is nonblank, the value specified for PORT can take one of two forms: <ul style="list-style-type: none"> – If the value in PORT is left justified with 1-5 numeric characters, the value is assumed to be the TCP/IP port number of the remote database server. – Any other value is assumed to be a TCP/IP service name, which can be converted to a TCP/IP port number using the TCP/IP <code>getservbyname</code> socket call. TCP/IP service names are not case sensitive. 	G

Table 268. SYSIBM.LOCATIONS table column descriptions (continued)

Column name	Data type	Description	Use
TPN	VARCHAR(192) NOT NULL WITH DEFAULT	Used only when the local Db2 begins an SNA conversation with another server. When used, TPN indicates the SNA LU 6.2 transaction program name (TPN) that will allocate the conversation. A length of zero for the column indicates the default TPN. For DRDA conversations, this is the DRDA default, which is X'07F6C4C2'. For Db2 private protocol conversations, this column is not used. When the server is Db2 Server for VSE & VM, TPN should contain the resource ID of that machine.	G
DBALIAS	VARCHAR(128) NOT NULL	Database alias. The name associated with the server. This name is used to access a remote database server. If DBALIAS is blank, the location name is used to access the remote database server. This column does not change the name of any database objects sent to the remote site that contains the location qualifier. This column applies only to DRDA connections. For information about accelerators that are defined with an alias, see Using an alias for an accelerator (Db2 Performance) .	G
TRUSTED	CHAR(1) NOT NULL WITH DEFAULT 'N'	Indicates whether the connection to the remote server can be trusted. This is restricted to TCP/IP only. This column is ignored for connections using SNA. Y Location is trusted. Access to the remote location requires trusted context defined at the remote location. N Location is not trusted.	G
SECURE	CHAR(1) NOT NULL WITH DEFAULT 'N'	Indicates the use of the Secure Socket Layer (SSL) protocol for outbound DRDA connections when local Db2 applications connects to the remote database server using TCP/IP. Y Indicates a secure connection using SSL is required for the outbound DRDA connection. N Indicates a secure connection is not required for the outbound DRDA connection.	G

LULIST catalog table

The LULIST catalog table allows multiple LU names to be specified for a given LOCATION. The schema is SYSIBM.

Insert rows into this table when you want to define a remote Db2 data sharing group. The same value for LUNAME column cannot appear in both the SYSIBM.LUNAMES table and the SYSIBM.LULIST table. Rows in this table can be inserted, updated, and deleted.

Table 269. SYSIBM.LULIST table column descriptions

Column name	Data type	Description	Use
LINKNAME	VARCHAR(24) NOT NULL	The value of the LINKNAME column in the SYSIBM.LOCATIONS table with which this row is associated. This is also the value of the LUNAME column in the SYSIBM.LUNAMES table. The values of the other columns in the SYSIBM.LUNAMES row apply to the LU identified by the LUNAME column in this row of SYSIBM.LULIST.	G
LUNAME	VARCHAR(24) NOT NULL	The VTAM logical unit name (LUNAME) of the remote database system. This LUNAME must not exist in the LUNAME column of SYSIBM.LUNAMES.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

LUMODES catalog table

Each row of the LUMODES table provides VTAM with conversation limits for a specific combination of LUNAME and MODENAME. The schema is SYSIBM. The table is accessed only during the initial conversation limit negotiation between Db2 and a remote LU. This negotiation is called *change-number-of-sessions* (CNOS) processing.

Rows in this table can be inserted, updated, and deleted.

Table 270. SYSIBM.LUMODES table column descriptions

Column name	Data type	Description	Use
LUNAME	VARCHAR(24) NOT NULL	LU name of the server involved in the CNOS processing.	G
MODENAME	VARCHAR(24) NOT NULL	Name of a logon mode description in the VTAM logon mode table.	G
CONVLIMIT	SMALLINT NOT NULL	Maximum number of active conversations between the local Db2 and the other system for this mode. Used to override the number in the DSESLIM parameter of the VTAM APPL definition statement for this mode.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

LUNAMES catalog table

The LUNAMES table must contain a row for each remote SNA client or server that communicates with Db2. The schema is SYSIBM.

Rows in this table can be inserted, updated, and deleted.

Table 271. SYSIBM.LUNAMES table column descriptions

Column name	Data type	Description	Use
LUNAME	VARCHAR(24) NOT NULL	Name of the LU for one or more accessible systems. A blank string indicates the row applies to clients whose LU name is not specifically defined in this table. All other column values for a given row in this table are for clients and servers associated with the row's LU name.	G
SYSMODENAME	VARCHAR(24) NOT NULL WITH DEFAULT	Mode used to establish inter-system conversations. A blank indicates the default mode IBMDB2LM (Db2 private protocol access and for collecting sysplex balancing information from remote data sharing groups). If private protocols are used to access a remote Db2 LU or if the remote LU is a member of a Db2 data sharing group, use a separate mode other than the default mode.	G
SECURITY_IN	CHAR(1) NOT NULL WITH DEFAULT 'A'	This column defines the security options that are accepted by this Db2 when an SNA client connects to Db2: V The option is "verify". An incoming connection request must include one of the following: a userid and password, a userid and RACF PassTicket, or a Kerberos security ticket. A The option is "already verified". A request does not need a password, although a password is checked if it is sent. With this option, an incoming connection request is accepted if it includes any of the following: a userid, a userid and password, a userid and RACF PassTicket, or a Kerberos security ticket. If the USERNAMES column contains 'I' or 'B', RACF is not invoked to validate incoming connection requests that contain only a userid unless one of the following situations is true: <ul style="list-style-type: none"> • The RACF access control authorization exit (DSNX@XAC) is enabled • The IBM supplied RACF SECLABEL resource class is active. 	G

Table 271. SYSIBM.LUNAMES table column descriptions (continued)

Column name	Data type	Description	Use
SECURITY_OUT	CHAR(1) NOT NULL WITH DEFAULT 'A'	<p>This column defines the security option that is used when local Db2 SQL applications connect to any remote server associated with this LUNAME:</p> <p>A</p> <p>The option is "already verified". Outbound connection requests contain an authorization ID and no password.</p> <p>The authorization ID used for an outbound request is either the Db2 user's authorization ID or a translated ID, depending upon the value of the USERNAMES column.</p> <p>R</p> <p>The option is "RACF PassTicket". Outbound connection requests contain a userid and a RACF PassTicket. The server's LU name is used as the RACF PassTicket application name.</p> <p>The authorization ID used for an outbound request is either the Db2 user's authorization ID or a translated ID, depending upon the value of the USERNAMES column.</p> <p>P</p> <p>The option is "password". Outbound connection requests contain an authorization ID and a password. The password is obtained from the SYSIBM.USERNAMES table or RACF, depending upon the value specified in the ENCRYPTPSWDS column.</p> <p>The USERNAMES column must specify 'B' or 'O'.</p>	G
ENCRYPTPSWDS	CHAR(1) NOT NULL WITH DEFAULT 'N'	<p>This column only applies to Db2 for z/OS partners. It is provided to support connectivity to prior releases of Db2 that are unable to support RACF PassTickets.</p> <p>For connections between Version 5 and later, use the SECURITY_OUT='R' option instead of the ENCRYPTPSWDS='Y' option.</p> <p>N</p> <p>No, passwords are not in internal RACF encrypted format. This is the default.</p> <p>Y</p> <p>Yes for outbound requests, the encrypted password is extracted from RACF and sent to the server. For inbound requests, the password is treated as encrypted.</p>	G

Table 271. SYSIBM.LUNAMES table column descriptions (continued)

Column name	Data type	Description	Use
MODESELECT	CHAR(1) NOT NULL WITH DEFAULT 'N'	Whether to use the SYBIBM.MODESELECT table: N Use default modes: IBMDB2LM (for Db2 private protocol) and IBMRDB (for DRDA). Y Searches SYSIBM.MODESELECT for appropriate mode name.	G
USERNAMES	CHAR(1) NOT NULL WITH DEFAULT	This column controls inbound and outbound authorization ID translation, and "come from" checking. Inbound translation and "come from" checking are performed when an authorization ID is received from a remote client. Outbound translation is performed when an authorization ID is sent by Db2 to a remote server. When 'I', 'O', or 'B' is specified in this column, rows in the SYSIBM.USERNAMES table are used to perform ID translation. I An inbound ID is subject to translation and "come from" checking. No translation is performed on outbound IDs. O No translation or "come from" checking is performed on inbound IDs. An outbound ID is subject to translation. B An inbound ID is subject to translation and "come from" checking. An outbound ID is subject to translation. blank No translation occurs.	G
GENERIC	CHAR(1) NOT NULL WITH DEFAULT 'N'	Indicates whether Db2 should use its real LU name or generic LU name to identify itself to the partner LU, which is identified by this row. N The real VTAM LU name of this Db2 subsystem Y The VTAM generic LU name of this Db2 subsystem	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

MODESELECT catalog table

The MODESELECT catalog table associates a mode name with any conversation created to support an outgoing SQL request. The schema is SYSIBM. Each row represents one or more combinations of LUNAME, authorization ID, and application plan name.

Rows in this table can be inserted, updated, and deleted.

Table 272. SYSIBM.MODESELECT table column descriptions

Column name	Data type	Description	Use
AUTHID	VARCHAR(128) NOT NULL WITH DEFAULT	Authorization ID of the SQL request. Blank (the default) indicates that the MODENAME specified for the row is to apply to all authorization IDs.	G
PLANNAME	VARCHAR(24) NOT NULL WITH DEFAULT	Plan name associated with the SQL request. Blank (the default) indicates that the MODENAME specified for the row is to apply to all plan names.	G
LUNAME	VARCHAR(24) NOT NULL	LU name associated with the SQL request.	G
MODENAME	VARCHAR(24) NOT NULL	Name of the logon mode in the VTAM logon mode table to be used in support of the outgoing SQL request. If blank, IBMDB2LM is used for Db2 private protocol connections and IBMRDB is used for DRDA connections.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSAUDITPOLICIES catalog table

The SYSAUDITPOLICIES table contains one row for each audit policy. The schema is SYSIBM.

A user with SECADM authority has the privilege to select from, insert, update, or delete from the SYSAUDITPOLICIES catalog table. A user with SQLADM, system DBADM, DATAACCESS, ACCESSCTRL, SYSCTRL or SYSADM authority has the privilege to select from this catalog table.

If a view is created on this catalog table, the DATAACCESS authority can perform insert, update, and delete on the view to indirectly insert, update, and delete on the catalog table.

Table 273. SYSIBM.SYSAUDITPOLICIES table column descriptions

Column name	Data type	Description	Use
AUDITPOLICYNAME	VARCHAR(128) NOT NULL	Name of the audit policy. The name must be an identifier of 1 to 128 characters and must begin with a letter. Any other values result in an error being returned when audit policy is started.	G
OBJECTSCHEMA	VARCHAR(128) NOT NULL WITH DEFAULT	Schema of the audited object. The object schema only applies to categories, OBJMAINT and EXECUTE.	G

Table 273. SYSIBM.SYSAUDITPOLICIES table column descriptions (continued)

Column name	Data type	Description	Use
OBJECTNAME	VARCHAR(128) NOT NULL WITH DEFAULT	Name of the object. The object name only applies to categories, OBJMAINT and EXECUTE. Object name can be specified using an SQL LIKE predicate. If the object name is specified using an SQL LIKE predicate, it has to be specified as a delimited identifier. The escape character to be used for the SQL LIKE predicate is obtained from RGFESCP subsystem parameter. If not specified, the default escape character is '+'.	G
OBJECTTYPE	CHAR(1) NOT NULL WITH DEFAULT	Type of the object. C Clone table P Implicit table created for XML columns T Table blank All of the above object types All other values Error when audit policy is started The object type only applies to categories, OBJMAINT and EXECUTE	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	The time when the row was inserted.	G
ALTEREDTS	TIMESTAMP NOT NULL WITH DEFAULT	The time when the row was last updated.	G
CHECKING	CHAR(1) NOT NULL WITH DEFAULT	Value of the CHECKING audit category: A Audit all failures (Authorization and authentication failures) blank Audit none All other values Error when audit policy is started	G
VALIDATE	CHAR(1) NOT NULL WITH DEFAULT	Value of the VALIDATE audit category: A Audit all blank Audit none All other values Error when audit policy is started	G

Table 273. SYSIBM.SYSAUDITPOLICIES table column descriptions (continued)

Column name	Data type	Description	Use
OBJMAINT	CHAR(1) NOT NULL WITH DEFAULT	Indicates if auditing is enabled for when the table that is identified by OBJECTSCHEMA, OBJECTNAME, and OBJECTTYPE columns is altered or dropped: A Audit when the specified table is altered or dropped blank Audit none All other values Error when audit policy is started	G
EXECUTE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of auditing that is performed. Auditing is done for every unique operation on a table by an SQL statement with a unique statement ID. The table on which the SQL statement operates is identified by the OBJECTSCHEMA, OBJECTNAME, and OBJECTTYPE columns. A Audit when an operation of any kind is performed on the table during a utility or application process. C Audit when an insert, update, or delete operation is performed on the table during a utility or application process. blank No auditing is done. All other values An error occurs when the audit policy is started.	G
CONTEXT	CHAR(1) NOT NULL WITH DEFAULT	Indicates if auditing is enabled for the start of a utility, a change to a utility object or phase, and the end of utility: A Audit all utilities blank Audit none All other values Error when audit policy is started	G
SECMAINT	CHAR(1) NOT NULL WITH DEFAULT	Indicates if auditing is enabled for when a grant or revoke is made or a trusted context is created or altered: A Audit all blank Audit none All other values Error when audit policy is started	G

Table 273. SYSIBM.SYSAUDITPOLICIES table column descriptions (continued)

Column name	Data type	Description	Use
SYSADMIN	VARCHAR(128) NOT NULL WITH DEFAULT	<p>Indicates if auditing is enabled for when an operation is performed using an administrative authority to perform system administration tasks:</p> <p>blank Audit none</p> <p>* Audit all the authorities</p> <p>I Installation SYSADM</p> <p>L SYSCTRL</p> <p>O SYSOPR</p> <p>R Installation SYSOPR</p> <p>S SYSADM</p> <p>All other values Error when audit policy is started</p> <p>The value of SYSADMIN can be a concatenated string of all supported values. For example, 'LOS' would indicate auditing of any operation that is performed using the administrative authorities: SYSCTRL, SYSOPR, and SYSADM. Multiple occurrences of a value are ignored.</p>	G

Table 273. SYSIBM.SYSAUDITPOLICIES table column descriptions (continued)

Column name	Data type	Description	Use
DBADMIN	VARCHAR(128) NOT NULL WITH DEFAULT	<p>Indicates if auditing is enabled for when an operation is performed using an administrative authority to perform database administration tasks:</p> <p>blank Audit none</p> <p>* Audit all the authorities</p> <p>B System DBADM</p> <p>C DBCTRL</p> <p>D DBADM</p> <p>E SECADM</p> <p>G ACCESSCTRL</p> <p>K SQLADM</p> <p>M DBMAINT</p> <p>P PACKADM</p> <p>T DATAACCESS</p> <p>All other values Error when audit policy is started</p> <p>The value of DBADMIN can be a concatenated string of all supported values. For example, 'BMP' would indicate auditing of any operation that is performed using the administrative authorities: System DBADM, DBMAINT, and PACKADM. Multiple occurrences of a value are ignored.</p>	G
DBNAME	VARCHAR(24) NOT NULL WITH DEFAULT	<p>Database name. The database name can be used to specify the database for auditing DBADM, DBCTRL, and DBMAINT authorities. If the database name is not specified, then all the databases, including implicit databases are audited. If the database name is specified, it only applies to DBADM, DBCTRL, and DBMAINT authorities in category, DBADMIN.</p>	G
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	<p>Name of the package collection. The package collection can be used to specify the collection name for auditing PACKADM authority. If specified, all packages in that collection are audited. If the collection name is not specified, packages in all collections are audited. If the package collection is specified, it only applies to PACKADM authority in category, DBADMIN.</p>	G

Table 273. SYSIBM.SYSAUDITPOLICIES table column descriptions (continued)

Column name	Data type	Description	Use
DB2START	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates if audit policies are to be started automatically during Db2 start up. Up to 8 audit policies can be specified.</p> <p>Y Audit policy will be started automatically during Db2 startup.</p> <p>S Audit policy will be started automatically during Db2 startup. The audit policy can be stopped only by a user with SECADM authority.</p> <p>T FL 509 Audit policy will be started automatically during Db2 startup. The audit policy can be modified or stopped only by a user with the required permit to the audit policy profile in an external security product, such as RACF.</p> <p>N Audit policy will not be started automatically during Db2 startup.</p> <p>All other values Error when audit policy is started</p>	G
IBMREQD	CHAR(1) NOT NULL	<p>A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators.</p> <p>The value in this field is not a reliable indicator of release dependencies.</p>	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSAUTOALERTS catalog table

The SYSAUTOALERTS table contains one row for each recommendation from autonomic procedures. The schema is SYSIBM.

Table 274. SYSIBM.SYSAUTOALERTS table column descriptions

Column name	Data type	Description	Use
ALERT_ID	BIGINT NOT NULL GENERATED ALWAYS AS IDENTITY	The ID of the alert described in this row.	G
HISTORY_ENTRY_ID	BIGINT NOT NULL	The ID of the entry in the ADMIN_UTLPROCEDURES_HIST procedure that produced this alert.	G
ACTION	VARCHAR(32) NOT NULL	The type of action requested by this alert.	G
TARGET_QUALIFIER	VARCHAR(128) NOT NULL	The qualifier name of the Db2 object (the database name) to which this alert applies.	G
TARGET_OBJECT	VARCHAR(128) NOT NULL	The name of the Db2 object (the table space name) to which this alert applies.	G
TARGET_PARTITION	SMALLINT NOT NULL	The partition number of the Db2 object to which this alert applies. Zero, if this alert applies to all partitions or if the object is not partitioned.	G
OPTIONS	VARCHAR(4000)	The options that should be specified when the corresponding action is run: USE PROFILE Use the options specified in the profile TABLE Options only apply for this table COLUMNS Options only apply for these columns SAMPLE The table space is too big and sampling is allowed	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	The timestamp when the alert was issued.	G
DURATION	INTEGER	An estimate of the time, in seconds, that would be needed to run the corresponding action. If this column contains NULL, the execution plan might overwrite the time window.	G

Table 274. SYSIBM.SYSAUTOALERTS table column descriptions (continued)

Column name	Data type	Description	Use
STATUS	VARCHAR(32)	The status of the actual planned task. Valid values are: OPEN The alert is not yet resolved INPROGRESS The alert execution is in progress COMPLETED The alert execution is complete	G
STARTTS	TIMESTAMP	The timestamp for when the alert execution started. This column contains NULL if the task execution has not yet started.	G
ENDTS	TIMESTAMP	The timestamp for when the alert execution ended. This column contains NULL if the task execution has not yet ended.	G
RETURN_CODE	INTEGER	The return code that is written directly by the autonomic stored procedure that resolved the alert. This column contains NULL if the alert is not yet resolved, if the autonomic stored procedure failed, or if the autonomic stored procedure does not write any return code. A RETURN_CODE of 0 is expected in case of a successful execution.	G
ERROR_MESSAGE	VARCHAR(1331)	An error message that indicates why the alert was not resolved successfully. This column contains NULL if the alert is not yet resolved, or if the autonomic stored procedure that executes the alert does not write any error message. No ERROR_MESSAGE text is expected in case of a successful execution.	G
OUTPUT	CLOB(2M)	The output that is written directly by the autonomic stored procedure that executes the planned task. This column contains NULL if the task is not yet executed, if the execution failed, or if the autonomic stored procedure does not write any output.	G
ROWID	ROWID NOT NULL GENERATED ALWAYS	The ROWID value for the CLOB column of this table.	G

SYSAUTOALERTS_OUT catalog table

The SYSAUTOALERTS_OUT catalog table is an auxiliary table for the OUTPUT column of the SYSAUTOALERTS catalog table. The schema is SYSIBM.

Table 275. SYSIBM.SYSAUTOALERTS_OUT table column descriptions

Column name	Data type	Description	Use
OUTPUT	CLOB(2M)	The output of the autonomic stored procedure.	G

SYSAUTORUNS_HIST catalog table

The SYSAUTORUNS_HIST table contains one row for each time an autonomic procedure has been run. The schema is SYSIBM.

Table 276. SYSIBM.SYSAUTORUNS_HIST table column descriptions

Column name	Data type	Description	Use
HISTORY_ENTRY_ID	BIGINT NOT NULL GENERATED ALWAYS AS IDENTITY	The ID of the entry in the history table.	G
PROC_NAME	VARCHAR(128) NOT NULL	The name of the autonomic stored procedure that produced this entry.	G
STARTTS	TIMESTAMP	The timestamp when the autonomic stored procedure started.	G
ENDTS	TIMESTAMP	The timestamp when the autonomic stored procedure ended.	G
OUTPUT	CLOB(2M)	The output of the autonomic stored procedure.	G
ERROR_MESSAGE	VARCHAR(1331)	An error message that indicates why the autonomic stored procedure was not successful. No ERROR_MESSAGE text is expected in case of a successful execution.	G
RETURN_CODE	INTEGER	The return code written directly by the autonomic stored procedure. This column contains NULL if the autonomic stored procedure execution failed, or if the autonomic stored procedure does not write any return code. A RETURN_CODE of 0 is expected in case of a successful execution.	G
ROWID	ROWID NOT NULL GENERATED ALWAYS	The ROWID value for the OUTPUT column of this table.	G

SYSAUTORUNS_HISTOU catalog table

The SYSAUTORUNS_HISTOU catalog table is an auxiliary table for the OUTPUT column of the SYSIBM.SYSAUTORUNS_HIST table. The schema is SYSIBM.

Table 277. SYSIBM.SYSAUTORUNS_HISTOU table column descriptions

Column name	Data type	Description	Use
OUTPUT	CLOB(2M)	The output of the autonomic stored procedure.	G

SYSAUTOTIMEWINDOWS catalog table

The SYSAUTOTIMEWINDOWS table contains one row for each time period during which autonomic procedures can be run. The schema is SYSIBM.

Table 278. SYSIBM.SYSAUTOTIMEWINDOWS table column descriptions

Column name	Data type	Description	Use
WINDOW_ID	BIGINT NOT NULL GENERATED ALWAYS AS IDENTITY	The ID of the time window described in this row.	G
DB2_SSID	CHAR(4)	The Db2 member name on which the planned tasks have to be run. If this column contains NULL, the tasks in this time window can be run on any Db2 member.	G
MONTH_WEEK	CHAR(1) NOT NULL	Indicates how the value of the DAY column is interpreted: M The value of the DAY column is interpreted as a day of the month W The value of the DAY column is interpreted as a day of the week	G
MONTH	INTEGER	Month in which the time window applies. The value will be from 1 (January) to 12 (December). If this column contains NULL, the time window applies to all months. If MONTH_WEEK is 'W', this column must be NULL.	G
DAY	INTEGER	Day of the month or day of the week for which the time window applies. If this column contains NULL, the time window applies to every day of the month or to every day of the week (depending on the value of the MONTH_WEEK column).	G
FROM_TIME	TIME	The time of day at which the time window begins. If this column contains NULL, no limitation on the time exists. This column will contain NULL if the TO_TIME column contains NULL.	G
TO_TIME	TIME	The time of day at which the time window ends. If this column contains NULL, no limitation on the time exists. This column will contain NULL if the FROM_TIME column contains NULL.	G
ACTION	VARCHAR(256)	The comma-separated list of actions that are allowed during this time window. If this column contains NULL, all actions are allowed.	G

Table 278. SYSIBM.SYSAUTOTIMEWINDOWS table column descriptions (continued)

Column name	Data type	Description	Use
MAX_TASKS	INTEGER	The number of concurrent actions that are allowed during this time window. If this column contains NULL, any number of actions are allowed concurrently.	G

SYSAUXRELS catalog table

The SYSAUXRELS table contains one row for each auxiliary table created for a LOB column. A base table space that is partitioned must have one auxiliary table for each partition of each LOB column. The schema is SYSIBM.

Table 279. SYSIBM.SYSAUXRELS table column descriptions

Column name	Data type	Description	Use
TBOWNER	VARCHAR(128) NOT NULL	The schema of the base table.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the base table.	G
COLNAME	VARCHAR(128) NOT NULL	Name of the LOB column in the base table.	G
PARTITION	SMALLINT NOT NULL	Partition number if the base table space is partitioned. Otherwise, the value is 0.	G
AUXTBOWNER	VARCHAR(128) NOT NULL	The schema of the auxiliary table.	G
AUXTBNAME	VARCHAR(128) NOT NULL	Name of the auxiliary table.	G
AUXRELOBID	INTEGER NOT NULL	Internal identifier of the relationship between the base table and the auxiliary table.	S
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to Version 9. See Release dependency indicators for all other values.	G

SYSCHECKDEP catalog table

The SYSCHECKDEP table contains one row for each reference to a column in a check constraint. The schema is SYSIBM.

Table 280. SYSIBM.SYSCHECKDEP table column descriptions

Column name	Data type	Description	Use
TBOWNER	VARCHAR(128) NOT NULL	The schema of the table on which the check constraint is defined.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table on which the check constraint is defined.	G
CHECKNAME	VARCHAR(128) NOT NULL	Name of the check constraint.	G
COLNAME	VARCHAR(128) NOT NULL	Name of the column that the check constraint refers to.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSCHECKS catalog table

The SYSIBM.SYSCHECKS table contains one row for each check constraint. The schema is SYSIBM.

Table 281. SYSIBM.SYSCHECKS table column descriptions

Column name	Data type	Description	Use
TBOWNER	VARCHAR(128) NOT NULL	The schema of the table on which the check constraint is defined.	G
CREATOR	VARCHAR(128) NOT NULL	Authorization ID of the creator of the check constraint.	G
DBID	SMALLINT NOT NULL	Internal identifier of the database for the check constraint.	S
OBID	SMALLINT NOT NULL	Internal identifier of the check constraint.	S
TIMESTAMP	TIMESTAMP NOT NULL	Time when the check constraint was created.	G
RBA	CHAR(10) NOT NULL FOR BIT DATA	The log RBA when the check constraint was created.	G

Table 281. SYSIBM.SYSCHECKS table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators .	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table on which the check constraint is defined.	G
CHECKNAME	VARCHAR(128) NOT NULL	Check constraint name.	G
CHECKCONDITION	VARCHAR(7400) NOT NULL	Text of the check constraint.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to Version 9. See Release dependency indicators for all other values. The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
ENVID	INTEGER NOT NULL WITH DEFAULT	Internal environment identifier.	G
PERIOD	CHAR(1) NOT NULL WITH DEFAULT	The type of period associated with the check constraint: B BUSINESS_TIME check constraint blank Not applicable	G

SYSCHECKS2 catalog table

The SYSCHECKS2 table contains one row for each check constraint for catalog tables created in or after Version 7. The schema is SYSIBM. Check constraints for catalog tables created before Version 7 are not included in this table.

Table 282. SYSIBM.SYSCHECKS2 table column descriptions

Column name	Data type	Description	Use
TBOWNER	VARCHAR(128) NOT NULL	The schema of the table on which the check constraint is defined.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table on which the check constraint is defined.	G
CHECKNAME	VARCHAR(128) NOT NULL	Check constraint name.	G

Table 282. SYSIBM.SYSCHECKS2 table column descriptions (continued)

Column name	Data type	Description	Use
PATHSCHEMAS	VARCHAR(2048) NOT NULL	SQL path at the time the check constraint was created. The path is used to resolve unqualified cast function names that are used in the constraint definition.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to Version 9. See Release dependency indicators for all other values.	G

SYSCOLAUTH catalog table

The SYSCOLAUTH table records the UPDATE or REFERENCES privileges that are held by users on individual columns of a table or view. The schema is SYSIBM.

Table 283. SYSIBM.SYSCOLAUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID or role of the user who granted the privileges. Could also be PUBLIC.	G
GRANTEE	VARCHAR(128) NOT NULL	Authorization ID or role of the user who holds the privilege or the name of an application plan or package that uses the privilege. PUBLIC for a grant to PUBLIC.	G
GRANTEETYPE	CHAR(1) NOT NULL	Type of grantee: blank An authorization ID L Role P An application plan or a package. The grantee is a package if COLLID is not blank.	G
CREATOR	VARCHAR(128) NOT NULL	The schema of the table or view on which the update privilege is held.	G
TNAME	VARCHAR(128) NOT NULL	Name of the table or view.	G
—	CHAR(12) NOT NULL	Internal use only.	I
DATEGRANTED	CHAR(6) NOT NULL	Not used.	N

Table 283. SYSIBM.SYSCOLAUTH table column descriptions (continued)

Column name	Data type	Description	Use
TIMEGRANTED	CHAR(8) NOT NULL	Not used.	N
COLNAME	VARCHAR(128) NOT NULL	Name of the column to which the UPDATE privilege applies.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
LOCATION	VARCHAR(128) NOT NULL WITH DEFAULT	Not used.	N
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	If GRANTEE is a package, its collection name. Otherwise, the value is blank.	G
CONTOKEN	CHAR(8) NOT NULL WITH DEFAULT FOR BIT DATA	If GRANTEE is a package, the consistency token of the DBRM from which the package was derived. Otherwise, the value is blank.	S
PRIVILEGE	CHAR(1) NOT NULL WITH DEFAULT	Indicates which privilege this row describes: R Row pertains to the REFERENCES privilege. blank Row pertains to the UPDATE privilege.	G
GRANTEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the GRANT statement was executed.	G
GRANTORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantor: L Role blank Authorization ID that is not a role	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use. The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G

Table 283. SYSIBM.SYSCOLAUTH table column descriptions (continued)

Column name	Data type	Description	Use
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSCOLDIST catalog table

The SYSCOLDIST catalog table contains one or more rows for the cardinality, frequency, and histogram statistics for a single column or a column group. The schema is SYSIBM.

Rows in the SYSCOLDIST catalog table can be inserted, updated, and deleted.

Important: Use care when issuing SQL statements or using tools to update statistics values in catalog tables. If such updates introduce invalid data, unpredictable results can occur, including abends for RUNSTATS and other utilities. If such problems occur, you can run the RUNSTATS utility and collect statistics at the table space level to resolve the problems, in most cases.

Table 284. SYSIBM.SYSCOLDIST table column descriptions

Column name	Data type	Description	Use
FREQUENCY	SMALLINT NOT NULL	Db2 utilities might populate this value, but its use is not recommended in DB2 version 5 or later. For best results, use its replacement, the FREQUENCYF column.	N
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
TBOWNER	VARCHAR(128) NOT NULL	The schema of the table that contains the column.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table that contains the column.	G
NAME	VARCHAR(128) NOT NULL	Name of the column. If NUMCOLUMNS is greater than 1, this name identifies the first column name of the set of columns associated with the statistics.	G

Table 284. SYSIBM.SYSCOLDIST table column descriptions (continued)

Column name	Data type	Description	Use
COLVALUE	VARCHAR(2000) NOT NULL FOR BIT DATA	Contains the data of a frequently occurring value. Statistics are not collected for an index on a ROWID column. If the value has a non-character data type, the data might not be printable.	S
TYPE	CHAR(1) NOT NULL WITH DEFAULT 'F'	The type of statistics gathered: C Cardinality F Frequent value H Histogram Statistics N Non-padded frequent value	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	For TYPE='C', the number of distinct values for the column group. For TYPE='H', the number of distinct values for the column group in a quantile indicated by QUANTILENO.	S
COLGROUPCOLNO	VARCHAR(254) NOT NULL WITH DEFAULT FOR BIT DATA	Identifies the set of columns associated with the statistics. If the statistics are only associated with a single column, the field contains a zero length. Otherwise, the field is an array of SMALLINT column numbers with a dimension equal to the value in NUMCOLUMNS. This is an updatable column.	S
NUMCOLUMNS	SMALLINT NOT NULL WITH DEFAULT 1	Identifies the number of columns associated with the statistics.	G
FREQUENCYF	FLOAT NOT NULL WITH DEFAULT -1	Gives the percentage of rows in the table with the value specified in COLVALUE when the number is multiplied by 100. For example, a value of '1' indicates 100%. A value of '.153' indicates 15.3%. When TYPE='H', this is the percentage of rows in table which falls at the quantile indicated by QUANTILENO whose range is limited by [LOWVALUE, HIGHVALUE]. Statistics are not collected for an index on a ROWID column.	G
QUANTILENO	SMALLINT NOT NULL WITH DEFAULT -1	Ordinary sequence number of a quantile in the whole consecutive value range, from low to high. This column is not updatable.	G
LOWVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	For TYPE='H', this is the lower bound for the quantile indicated by QUANTILENO. Not used if TYPE is not 'H'. This column is not updatable.	G

Table 284. SYSIBM.SYSCOLDIST table column descriptions (continued)

Column name	Data type	Description	Use
HIGHVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	For TYPE='H', this is the higher bound for the quantile indicated by QUANTILENO. Not used if TYPE is not 'H'. This column is not updatable.	G

SYSCOLDISTSTATS catalog table

The SYSCOLDISTSTATS catalog table contains zero or more rows per partition for the cardinality, frequency, and histogram statistics for a single column or a column group. The schema is SYSIBM.

No row is inserted if the index is a non-partitioned index. Rows in this table can be inserted, updated, and deleted.

Important: Use care when issuing SQL statements or using tools to update statistics values in catalog tables. If such updates introduce invalid data, unpredictable results can occur, including abends for RUNSTATS and other utilities. If such problems occur, you can run the RUNSTATS utility and collect statistics at the table space level to resolve the problems, in most cases.

Table 285. SYSIBM.SYSCOLDISTSTATS table column descriptions

Column name	Data type	Description	Use
FREQUENCY	SMALLINT NOT NULL	Db2 utilities might populate this value, but its use is not recommended in DB2 version 5 or later. For best results, use its replacement ejbd, the FREQUENCYF column.	N
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
PARTITION	SMALLINT NOT NULL	Partition number for the table space that contains the table in which the column is defined.	G
TBOWNER	VARCHAR(128) NOT NULL	The schema of the table that contains the column.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table that contains the column.	G
NAME	VARCHAR(128) NOT NULL	Name of the column. If NUMCOLUMNS is greater than 1, this name identifies the first column name of the set of columns associated with the statistics.	G

Table 285. SYSIBM.SYSCOLDISTSTATS table column descriptions (continued)

Column name	Data type	Description	Use
COLVALUE	VARCHAR(2000) NOT NULL FOR BIT DATA	Contains the data of a frequently occurring value. Statistics are not collected for an index on a ROWID column. If the value has a non-character data type, the data might not be printable.	S
TYPE	CHAR(1) NOT NULL WITH DEFAULT 'F'	The type of statistics gathered: C Cardinality F Frequent value H Histogram statistics N Non-padded frequent value	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	If TYPE is C, the value is the number of distinct values for the column group. If TYPE is N or TYPE is F, the value is the number of rows or keys in the partition for which the FREQUENCYF value applies. If TYPE is H, the number of distinct values for the column group in a quantile indicated by QUANTILENO.	S
COLGROUPCOLNO	VARCHAR(254) NOT NULL WITH DEFAULT FOR BIT DATA	Identifies the set of columns associated with the statistics. If the statistics are only associated with a single column, the field contains a zero length. Otherwise, the field is an array of SMALLINT column numbers with a dimension equal to the value in NUMCOLUMNS. This is an updatable column.	S
NUMCOLUMNS	SMALLINT NOT NULL WITH DEFAULT 1	Identifies the number of columns associated with the statistics.	G
FREQUENCYF	FLOAT NOT NULL WITH DEFAULT -1	Gives the percentage of rows in the table with the value specified in COLVALUE when the number is multiplied by 100. For example, a value of '1' indicates 100%. A value of '.153' indicates 15.3%. When TYPE='H', this is the percentage of rows in table which falls in the quantile indicated by QUANTILENO whose range is limited by [LOWVALUE, HIGHVALUE]. Statistics are not collected for an index on a ROWID column.	G
—	VARCHAR(1000) NOT NULL WITH DEFAULT FOR BIT DATA	Internal use only.	I
QUANTILENO	SMALLINT NOT NULL WITH DEFAULT -1	Ordinary sequence number of a quantile in the whole consecutive value range, from low to high. This column is not updatable.	G

Table 285. SYSIBM.SYSCOLDISTSTATS table column descriptions (continued)

Column name	Data type	Description	Use
LOWVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	For TYPE='H', this is the lower bound for the quantile indicated by QUANTILENO. Not used if TYPE is not 'H'. This column is not updatable.	G
HIGHVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	For TYPE='H', this is the higher bound for the quantile indicated by QUANTILENO. Not used if TYPE is not 'H'. This column is not updatable.	G

SYSCOLDIST_HIST catalog table

The SYSCOLDIST_HIST catalog table contains history rows from the SYSCOLDIST catalog table. The schema is SYSIBM.

Rows are added or changed in the SYSCOLDIST_HIST catalog table when the RUNSTATS utility collects history statistics. Rows in this table can also be inserted, updated, and deleted.

Table 286. SYSIBM.SYSCOLDIST_HIST catalog table column descriptions

Column name	Data type	Description	Use
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
TBOWNER	VARCHAR(128) NOT NULL	The schema of the table that contains the column.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table that contains the column.	G
NAME	VARCHAR(128) NOT NULL	Name of the column. If the NUMCOLUMNS value is greater than 1, this name identifies the first column name of the set of columns associated with the statistics.	G
COLVALUE	VARCHAR(2000) NOT NULL FOR BIT DATA	Contains the data of a frequently occurring value. Statistics are not collected for an index on a ROWID column. If the value has a non-character data type, the data might not be printable.	S

Table 286. SYSIBM.SYSCOLDIST_HIST catalog table column descriptions (continued)

Column name	Data type	Description	Use
TYPE	CHAR(1) NOT NULL WITH DEFAULT 'F'	The type of statistics gathered: C Cardinality F Frequent value H Histogram Statistics N Non-padded frequent value	G
CARDF	FLOAT(8) NOT NULL WITH DEFAULT -1	When TYPE='C', this is the number of distinct values for the column group. When TYPE='H', this is the number of distinct values for the column group in a quantile indicated by the QUANTILENO value. The value is -1 if statistics have not been gathered.	S
COLGROUPCOLNO	VARCHAR(254) NOT NULL FOR BIT DATA	Identifies the set of columns associated with the statistics. If the statistics are only associated with a single column, the field contains a zero length. Otherwise, the field is an array of SMALLINT column numbers with a dimension equal to the value in the NUMCOLUMNS column.	S
NUMCOLUMNS	SMALLINT NOT NULL WITH DEFAULT 1	Identifies the number of columns associated with the statistics.	G
FREQUENCYF	FLOAT(8) NOT NULL DEFAULT -1	Gives the percentage of rows in the table with the value specified in the COLVALUE column when the number is multiplied by 100. For example, a value of '1' indicates 100%. A value of '.153' indicates 15.3%. When TYPE='H', this is the percentage of rows in table which falls in the quantile indicated by the QUANTILENO value. whose range is limited by [LOWVALUE, HIGHVALUE]. Statistics are not collected for an index on a ROWID column. The value is -1 if statistics have not been gathered.	G
IBMREQD	CHAR(1) NOT NULL DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
QUANTILENO	SMALLINT NOT NULL WITH DEFAULT -1	Ordinary sequence number of a quantile in the whole consecutive value range, from low to high. This column is not updatable.	G

Table 286. SYSIBM.SYSCOLDIST_HIST catalog table column descriptions (continued)

Column name	Data type	Description	Use
LOWVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	For TYPE='H', this is the lower bound for the quantile indicated by the QUANTILENO value. Not used if TYPE is not 'H'. This column is not updatable.	G
HIGHVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	For TYPE='H', this is the higher bound for the quantile indicated by the QUANTILENO value. Not used if TYPE is not 'H'. This column is not updatable.	G

SYSCOLSTATS catalog table

The SYSCOLSTATS table contains partition statistics for selected columns. The schema is SYSIBM. For each column, a row exists for each partition in the table.

Rows are inserted when RUNSTATS collects either indexed column statistics or non-indexed column statistics for a partitioned table space. No row is inserted if the table space is nonpartitioned. Rows in this table can be inserted, updated, and deleted.

Important: Use care when issuing SQL statements or using tools to update statistics values in catalog tables. If such updates introduce invalid data, unpredictable results can occur, including abends for RUNSTATS and other utilities. If such problems occur, you can run the RUNSTATS utility and collect statistics at the table space level to resolve the problems, in most cases.

Table 287. SYSIBM.SYSCOLSTATS table column descriptions

Column name	Data type	Description	Use
HIGHKEY	VARCHAR(2000) NOT NULL FOR BIT DATA	Highest value of the column within the partition. Blank if statistics have not been gathered or the column is an indicator column, a node ID column, or a column of an XML table. If the column has a non-character data type, the data might not be printable. If the partition is empty, the value is a string of length 0.	S
HIGH2KEY	VARCHAR(2000) NOT NULL FOR BIT DATA	Second highest value of the column within the partition. Blank if statistics have not been gathered or the column is an indicator column, a node ID column, or a column of an XML table. If the column has a non-character data type, the data might not be printable. If the partition is empty, the value is a string of length 0.	S
LOWKEY	VARCHAR(2000) NOT NULL FOR BIT DATA	Lowest value of the column within the partition. Blank if statistics have not been gathered or the column is an indicator column, a node ID column, or a column of an XML table. If the column has a non-character data type, the data might not be printable. If the partition is empty, the value is a string of length 0.	S
LOW2KEY	VARCHAR(2000) NOT NULL FOR BIT DATA	Second lowest value of the column within the partition. Blank if statistics have not been gathered or the column is an indicator column, a node ID column, or a column of an XML table. If the column has a non-character data type, the data might not be printable. If the partition is empty, the value is a string of length 0.	S

Table 287. SYSIBM.SYSCOLSTATS table column descriptions (continued)

Column name	Data type	Description	Use
COLCARD	INTEGER NOT NULL	Number of distinct column values in the partition.	S
STATSTIME	TIMESTAMP NOT NULL	<p>If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.</p> <p>The value '0001-01-02-00.00.00.000000' indicates that an ALTER TABLE statement was executed to change the length of a VARCHAR column and RUNSTATS should be run to update the statistics before they are used.</p>	G
IBMREQD	CHAR(1) NOT NULL	<p>A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators.</p> <p>The value in this field is not a reliable indicator of release dependencies.</p>	G
PARTITION	SMALLINT NOT NULL	Partition number for the table space that contains the table in which the column is defined.	G
TBOWNER	VARCHAR(128) NOT NULL	Schema or qualifier of the table that contains the column.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table that contains the column.	G
NAME	VARCHAR(128) NOT NULL	Name of the column.	G
—	VARCHAR(1000) NOT NULL FOR BIT DATA	Internal use only.	I
STATS_FORMAT	CHAR(1) NOT NULL WITH DEFAULT	<p>The type of statistics gathered:</p> <p>blank Statistics have not been collected or varchar column statistical values are padded.</p> <p>N Varchar column statistical values are not padded.</p> <p>This is an updatable column.</p>	G

SYSCOLUMNS catalog table

The SYSCOLUMNS table contains one row for every column of each table and view. The schema is SYSIBM.

Table 288. SYSIBM.SYSCOLUMNS table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the column.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table or view which contains the column.	G
TBCREATOR	VARCHAR(128) NOT NULL	The schema of the table or view that contains the column.	G
COLNO	SMALLINT NOT NULL	Numeric place of the column in the table or view; for example 4 (out of 10).	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
COLTYPE	CHAR(8) NOT NULL	<p>The type of the column specified in the definition of the column:</p> <p>INTEGER Large integer</p> <p>SMALLINT Small integer</p> <p>FLOAT Floating-point</p> <p>CHAR Fixed-length character string</p> <p>VARCHAR Varying-length character string</p> <p>LONGVAR Varying-length character string (for columns that were added before Version 9)</p> <p>DECIMAL Decimal</p> <p>GRAPHIC Fixed-length graphic string</p> <p>VARG Varying-length graphic string</p> <p>LONGVARG Varying-length graphic string (for columns that were added before Version 9)</p> <p>DATE Date</p> <p>TIME Time</p> <p>TIMESTAMP Timestamp</p> <p>TIMESTZ Timestamp with time zone</p> <p>BLOB Binary large object</p> <p>CLOB Character large object</p> <p>DBCLOB Double-byte character large object</p> <p>ROWID Row ID data type</p>	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
COLTYPE (continued)		<p>DISTINCT Distinct type</p> <p>XML XML data type</p> <p>BIGINT Big integer</p> <p>BINARY Fixed-length binary string</p> <p>VARBIN Varying-length binary string, or a Db2 11 VARCHAR or VARGRAPHIC Unicode column in an EBCDIC table</p> <p>DECFLOAT Decimal floating point</p>	

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH	SMALLINT NOT NULL	<p>Length attribute of the column or, in the case of a decimal column, its precision. The number does not include the internal prefixes that are used to record the actual length and null state, where applicable.</p> <p>INTEGER 4</p> <p>SMALLINT 2</p> <p>BIGINT 8</p> <p>FLOAT 4 or 8</p> <p>CHAR Length of string</p> <p>VARCHAR Maximum length of string</p> <p>LONGVAR Maximum length of string (for columns that were added before Version 9)</p> <p>DECIMAL Precision of number</p> <p>DECFLOAT 8 or 16</p> <p>GRAPHIC Number of DBCS characters</p> <p>VARGRAPHIC Maximum number of DBCS characters. For a Db2 11 VARGRAPHIC Unicode column in an EBCDIC table, this value is the maximum number of bytes.</p> <p>LONGVARG Maximum number of DBCS characters (for columns that were added before Version 9)</p> <p>BINARY Length of string</p> <p>VARBINARY Maximum length of string</p> <p>DATE 4</p> <p>TIME 3</p> <p>TIMESTAMP WITHOUT TIME ZONE The integral part of $((p+1)/2) + 7$ where p is the precision of the timestamp</p> <p>TIMESTAMP WITH TIME ZONE The integral part of $((p+1)/2) + 9$ where p is the precision of the timestamp</p>	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH (continued)	SMALLINT NOT NULL	<p>LOB 4 - For a table, a field of length of 4 is stored in the base table. The maximum length of the LOB column is found in LENGTH2.</p> <p>INLINE LOB Greater than 4 - For a table, a field of length 4 plus the inline length (in byte) is stored in the base table. The maximum length of the LOB column is found in LENGTH2.</p> <p>BLOB 4 - For a table, a field of length of 4 is stored in the base table. The maximum length of the LOB column is found in LENGTH2.</p> <p>CLOB 4 - For a table, a field of length of 4 is stored in the base table. The maximum length of the CLOB column is found in LENGTH2.</p> <p>DBCLOB 4 - For a table, a field of length of 4 is stored in the base table. The maximum length of the DBCLOB column is found in LENGTH2.</p> <p>ROWID 17 - The maximum length of the stored portion of the identifier.</p> <p>XML 6 - If column cannot contain multiple versions of an XML document. 14 - If column can contain multiple versions of an XML document. For more information, see How Db2 uses XML versions (Db2 Programming for XML).</p> <p>DISTINCT The length of the source data type.</p>	G
SCALE	SMALLINT NOT NULL	<p>If the column type is DECIMAL, this value represents the scale. If the column type is timestamp or timestamp with time zone, this value represents the number of fractional second digits. Otherwise the value is 0.</p> <p>If the column is a timestamp type, the LENGTH is 10 and the SCALE is 0, the number of fractional second digits is 6.</p>	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
NULLS	CHAR(1) NOT NULL	Whether the column can contain null values: N No Y Yes The value can be N for a view column that is derived from an expression that is not a simple column name or constant, or from a function. Nevertheless, such a column allows nulls when an outer select list refers to it.	G
COLCARD	INTEGER NOT NULL	Db2 utilities might populate this column value, but its use is not recommended in DB2 version 5 and later. For best results use its replacement, the COLCARDF column.	N
HIGH2KEY	VARCHAR(2000) NOT NULL FOR BIT DATA	Second highest value of the column. Blank if statistics have not been gathered, or the column is an indicator column or a column of an auxiliary table. If the column has a non-character data type, the data might not be printable. If the table is empty, the value is a string of length 0. This is an updatable column.	S
LOW2KEY	VARCHAR(2000) NOT NULL FOR BIT DATA	Second lowest value of the column. Blank if statistics have not been gathered, or the column is an indicator column or a column of an auxiliary table. If the column has a non-character data type, the data might not be printable. If the table is empty, the value is a string of length 0. This is an updatable column.	S
UPDATES	CHAR(1) NOT NULL	Whether the column can be updated: N No Y Yes The value is N if the column is: <ul style="list-style-type: none"> • Derived from a function or expression • A column with a row ID data type (or a distinct type based on a row ID type) • A read-only view 	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
REMARKS	VARCHAR(762) NOT NULL	A character string provided by the user with the COMMENT statement.	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
DEFAULT	CHAR(1) NOT NULL	<p>The contents of this column are meaningful only if the TYPE column for the associated SYSTABLES row indicates that this is for a table (T) or a created temporary table (G).</p> <p>Default indicator:</p> <p>A The column is defined as a ROWID with the GENERATED ALWAYS attribute.</p> <p>B The column is defined as a built-in data type with a default value that depends on the data type of the column.</p> <p>D The column is defined as a ROWID with the GENERATED BY DEFAULT attribute.</p> <p>E The column is defined with the FOR EACH ROW ON UPDATE and GENERATED ALWAYS attributes.</p> <p>F The column is defined with the FOR EACH ROW ON UPDATE and GENERATED BY DEFAULT attributes.</p> <p>I The column is defined with the AS IDENTITY and GENERATED ALWAYS attributes.</p> <p>J The column is defined with the AS IDENTITY and GENERATED BY DEFAULT attributes.</p> <p>K The column is defined for the implicit DOCID column for a base table that contains XML data.</p> <p>L The column is defined with the AS SECURITY LABEL attribute.</p> <p>N The column has no default value.</p> <p>Q The column is defined with the AS ROW BEGIN attribute.</p> <p>R The column is defined with the AS ROW END attribute.</p>	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
DEFAULT (continued)	CHAR(1) NOT NULL	<p>Default indicator:</p> <p>S The column has a default value that is the value of the SQL authorization ID of the process at the time a default value is used.</p> <p>U The column has a default value that is the value of the SESSION_USER special register at the time a default value is used.</p> <p>X The column is defined with the AS TRANSACTION START ID attribute.</p> <p>Y If the NULLS column is Y, the column has a default value of null. If the NULLS column is N, the default value depends on the data type of the column.</p> <p>Data type Default Value</p> <p>Numeric 0</p> <p>Fixed-length character string Blanks</p> <p>Fixed-length graphic string Blanks</p> <p>Fixed-length binary string Hexadecimal blanks</p> <p>Varying-length string A string length of 0</p> <p>Date The current date</p> <p>Time The current time</p> <p>Timestamp The current timestamp</p> <p>Timestamp with time zone The current timestamp with time zone</p> <p>1 The column has a default value that is the string constant found in the DEFAULTVALUE column of this table row. The column has a graphic data type and has a default value that is the graphic string found in the DEFAULTVALUE column of this table row.</p>	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
DEFAULT (continued)	CHAR(1) NOT NULL	<p>Default indicator:</p> <p>2 The column has a default value that is the floating-point constant found in the DEFAULTVALUE column of this table row.</p> <p>3 The column has a default value that is the decimal constant found in the DEFAULTVALUE column of this table row.</p> <p>4 The column has a default value that is the integer constant found in the DEFAULTVALUE column of this table row.</p> <p>5 The column has a default value that is the hexadecimal character string found in the DEFAULTVALUE column of this table row.</p> <p>6 The column has a default value that is the UX string found in the DEFAULTVALUE column of this table row.</p> <p>7 The column has a graphic data type and has a default value that is the character string constant found in the DEFAULTVALUE column of this table row.</p> <p>8 The column has a character data type and has a default value that is the graphic string constant found in the DEFAULTVALUE column of this table row.</p> <p>9 The column has a default value that is the DECFLOAT constant found in the DEFAULTVALUE column of this table row.</p> <p>a The column is defined with an expression that specifies a special register. The default value is the value of the special register.</p> <p>b The column is defined with an expression that specifies a built-in session variable. The default value is the value of the built-in session variable.</p> <p>d The column is defined with the DATA CHANGE OPERATION clause. The default value is an I, U, or D character indicating which data change operation the row represents.</p>	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
KEYSEQ	SMALLINT NOT NULL	The numeric position of the column within the primary key of the table. The value is 0 if it is not part of a primary key.	G
FOREIGNKEY	CHAR(1) NOT NULL	<p>Applies to character or CLOB columns, where it indicates the subtype of the data:</p> <p>B BIT data</p> <p>M MIXED data</p> <p>S SBCS data</p> <p>blank Indicates one of the following subtypes:</p> <ul style="list-style-type: none"> MIXED data if the encoding scheme is Unicode, or if the encoding scheme is not Unicode and the value of MIXED DATA on installation panel DSNTIPS is YES SBCS data if the encoding scheme is not Unicode and the value of MIXED DATA on the installation panel DSNTIPS is NO. <p>For views defined prior to Version 7, subtype information is not available and the default (MIXED or SBCS) is used.</p>	G
FLDPROC	CHAR(1) NOT NULL	<p>Whether the column has a field procedure:</p> <p>N No</p> <p>Y Yes</p> <p>blank The column is for a view defined prior to Version 7. Views defined after Version 7 contain Y or N.</p>	G
LABEL	VARCHAR(90) NOT NULL	The column label provided by the user with a LABEL statement; otherwise, the value is an empty string.	G
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	<p>If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.</p> <p>The value '0001-01-02-00.00.00.000000' indicates that an ALTER TABLE statement was executed to change the length of a VARCHAR column and RUNSTATS should be run to update the statistics before they are used.</p>	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
DEFAULTVALUE	VARCHAR(1536) NOT NULL WITH DEFAULT	<p>This field is meaningful only if the column being described is for a table (the TYPE column of the associated SYSTABLES row is T for table or G for created temporary table).</p> <p>When the DEFAULT column is 1, 2, 3, 4, 5, 6, 7, 8, or 9, this field contains the default value of the column.</p> <p>If the default value is a string constant or a hexadecimal constant (DEFAULT is 1, 5, 6, 7, or 8 respectively), the value is stored without delimiters.</p> <p>If the default value is a numeric constant (DEFAULT is 2, 3, 4, or 9), the value is stored as specified by the user, including sign and decimal point representation, or special constant values, as appropriate for the constant.</p> <p>When the DEFAULT column is S or U and the default value was specified when a new column was defined with the ALTER TABLE statement, this field contains the value of the CURRENT SQLID or SESSION_USER special register at the time the ALTER TABLE statement was executed. This default value applies only to rows that existed before the ALTER TABLE statement was executed.</p> <p>When the DEFAULT column is L and the column was added as a new column with the ALTER TABLE statement, this field contains the security label of the user at the time the ALTER TABLE statement was executed. This default value applies only to rows that existed before the ALTER TABLE statement was executed.</p> <p>When the DEFAULT column contains a, this field contains the name of the special register.</p> <p>When the DEFAULT column contains b, this field contains the qualified name of the session variable.</p> <p>When the DEFAULT column contains d, this field contains DATA CHANGE OPERATION.</p>	G
COLCARDF	FLOAT NOT NULL WITH DEFAULT	<p>Estimated number of distinct values in the column. For an indicator column, this is the number of LOBs that are not null and have a length greater than zero. The value is -1 if statistics have not been gathered. The value is -2 if the column is a LOB column. This is an updatable column.</p>	S
COLSTATUS	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates the status of the definition of a column:</p> <p>I The definition is incomplete because a LOB table space, auxiliary table, or index on an auxiliary table has not been created for the column.</p> <p>blank The definition is complete.</p>	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH2	INTEGER NOT NULL WITH DEFAULT	<p>Maximum length of the data retrieved from the column. Possible values are:</p> <p>0 Column is not a LOB or ROWID column</p> <p>40 For a ROWID column, the length of the returned value</p> <p>1 to 2,147,483,647 bytes For a LOB column, the maximum length</p>	G
DATATYPEID	INTEGER NOT NULL WITH DEFAULT	<p>For a built-in data type, the internal ID of the built-in type. For a distinct type, the internal ID of the distinct type.</p> <p>The DATATYPEID value corresponds to one of the SQLTYPE values in “SQLTYPE and SQLLEN fields of the SQLDA” on page 2341. However, the DATATYPEID value is not a reliable indicator of the nullability of the column. A column with an even DATATYPEID value might allow nulls, and a column with an odd DATATYPEID value might not allow nulls. To determine the nullability of the column, use the NULLS column value.</p> <p>If the column was created prior to DB2 version 6, the value is 0.</p>	S
SOURCETYPEID	INTEGER NOT NULL WITH DEFAULT	<p>For a built-in data type, 0. For a distinct type, the internal ID of the built-in data type upon which the distinct type is based.</p> <p>If the column was created prior to DB2 version 6, the value is 0.</p>	S
TYPESHEMA	VARCHAR(128) NOT NULL WITH DEFAULT 'SYSIBM'	If COLTYPE is 'DISTINCT', the schema of the distinct type. Otherwise, the value is 'SYSIBM'.	G
TYPENAME	VARCHAR(128) NOT NULL WITH DEFAULT	If COLTYPE is 'DISTINCT', the name of the distinct type. Otherwise, the value is the same as the value of the COLTYPE column. TYPENAME is set only for columns created in DB2 version 6 or later. The value for columns created earlier is not filled in.	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Timestamp when the column was created. The value is '0001-01-01.00.00.00.000000' if the column was created prior to migration to DB2 version 6 or if the column is in a catalog table.	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
STATS_FORMAT	CHAR(1) NOT NULL WITH DEFAULT	The type of statistics gathered: blank Statistics have not been collected or varchar column statistical values are padded. N Varchar column statistical values are not padded. This is an updatable column.	G
PARTKEY_COLSEQ	SMALLINT NOT NULL WITH DEFAULT	The numeric position of the column within the partitioning key of the table. The value is 0 if it is not part of the partitioning key. This column is applicable only if the table uses table-controlled partitioning.	G
PARTKEY_ORDERING	CHAR(1) NOT NULL WITH DEFAULT	Order of the column in the partitioning key: A Ascending D Descending blank Column is not used as part of a partitioning key This column is applicable only if the table uses table-controlled partitioning.	G
ALTEREDTS	TIMESTAMP NOT NULL WITH DEFAULT	Timestamp when alter occurred.	G
CCSID	INTEGER NOT NULL WITH DEFAULT	CCSID of the column. 0 if the object was created prior to Version 8, or is not a character of graphic string column. CCSID is not 0 if COLTYPE is VARBINARY because the object is a Db2 11 Unicode column in an EBCDIC table.	G
HIDDEN	CHAR(1) NOT NULL WITH DEFAULT 'N'	Indicates whether the column is implicitly hidden: P Partially hidden. The column is implicitly hidden from SELECT *. R Partially hidden. The column is a ROWID column that was explicitly defined with the IMPLICITLY HIDDEN attribute. N Not hidden. The column is visible to all SQL statements.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
CONTROL_ID	INTEGER NOT NULL WITH DEFAULT	Internal identifier of the column access control mask defined for this column. 0 if no column access control mask is defined for the column.	S
XML_TYPEMOD_ID	INTEGER NOT NULL WITH DEFAULT	The ID of the XML type modifier. It is set to 0 if the column is not an XML column or has no XML type modifier.	G
PERIOD	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether the column is the start or the end of the period for a SYSTEM_TIME or BUSINESS_TIME period: B Column is the start of period BUSINESS_TIME. C Column is the end of period BUSINESS_TIME with an exclusive end point. I Column is the end of period BUSINESS_TIME with an inclusive end point. S Column is the start of period SYSTEM_TIME. T Column is the end of period SYSTEM_TIME. blank Column is not used as either the start or the end of a period.	G
GENERATED_ATTR	CHAR(1) NOT NULL WITH DEFAULT	Indicates the columns generated attribute: A Column is defined as GENERATED_ALWAYS. D Column is defined as GENERATED BY DEFAULT. blank Not applicable or the value of the DEFAULT column is A, D, E, F, I, or J or defined from a prior release of Db2.	G
HASHKEY_COLSEQ	SMALLINT NOT NULL WITH DEFAULT	The column's numeric position within the table's hash key. The value is 0 if the column is not part of the hash key. This column is applicable only if the table that use hash organization.	G

Table 288. SYSIBM.SYSCOLUMNS table column descriptions (continued)

Column name	Data type	Description	Use
ENCODING_SCHEME	CHAR(1) NOT NULL WITH DEFAULT 'E'	Encoding scheme of the column: blank The column has a data type that does not have an encoding scheme, or the column was created prior to Db2 12. A ASCII E EBCDIC U Unicode	G

SYSCOLUMNS_HIST catalog table

The SYSCOLUMNS_HIST catalog table contains rows from SYSCOLUMNS. The schema is SYSIBM.

Rows are added or changed in the SYSCOLUMNS_HIST catalog table when RUNSTATS collects history statistics. Rows in this table can also be inserted, updated, and deleted.

Table 289. SYSIBM.SYSCOLUMNS_HIST table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the column.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table or view that contains the column.	G
TBCREATOR	VARCHAR(128) NOT NULL	Schema or qualifier of the table or view that contains the column.	G
COLNO	SMALLINT NOT NULL	Numeric place of the column in the table or view. For example 4 (out of 10).	G

Table 289. SYSIBM.SYSCOLUMNS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
COLTYPE	CHAR(8) NOT NULL	<p>The type of the column specified in the definition of the column:</p> <p>INTEGER Large integer</p> <p>SMALLINT Small integer</p> <p>FLOAT Floating-point</p> <p>CHAR Fixed-length character string</p> <p>VARCHAR Varying-length character string</p> <p>LONGVAR Varying-length character string (for columns that were added before Version 9)</p> <p>DECIMAL Decimal</p> <p>GRAPHIC Fixed-length graphic string</p> <p>VARG Varying-length graphic string</p> <p>LONGVARG Varying-length graphic string (for columns that were added before Version 9)</p> <p>DATE Date</p> <p>TIME Time</p> <p>TIMESTAMP Timestamp</p> <p>TIMESTZ Timestamp with time zone</p> <p>BLOB Binary large object</p> <p>CLOB Character large object</p> <p>DBCLOB Double-byte character large object</p> <p>ROWID Row ID data type</p>	G

Table 289. SYSIBM.SYSCOLUMNS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
COLTYPE (continued)		DISTINCT Distinct type	
		XML XML data type	
		BIGINT Big integer	
		BINARY Fixed-length binary string	
		VARBIN Varying-length binary string	
		DECFLOAT Decimal floating point	

Table 289. SYSIBM.SYSCOLUMNS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH	SMALLINT NOT NULL	<p>Length attribute of the column or, in the case of a decimal column, its precision. The number does not include the internal prefixes that are used to record the actual length and null state, where applicable.</p> <p>INTEGER 4</p> <p>SMALLINT 2</p> <p>FLOAT 4 or 8</p> <p>CHAR Length of string</p> <p>VARCHAR Maximum length of string</p> <p>LONGVAR Maximum length of string (for columns that were added before Version 9)</p> <p>DECIMAL Precision of number</p> <p>GRAPHIC Number of DBCS characters</p> <p>VARGRAPHIC Maximum number of DBCS characters</p> <p>LONGVARG Maximum number of DBCS characters (for columns that were added before Version 9)</p> <p>DATE 4</p> <p>TIME 3</p> <p>TIMESTAMP WITHOUT TIME ZONE The integral part of $((p+1)/2) + 7$ where p is the precision of the timestamp</p> <p>TIMESTAMP WITH TIME ZONE The integral part of $((p+1)/2) + 9$ where p is the precision of the timestamp</p> <p>BLOB 4 - The length of the field that is stored in the base table. The maximum length of the LOB column is found in LENGTH2.</p> <p>CLOB 4 - The length of the field that is stored in the base table. The maximum length of the CLOB</p>	G

Table 289. SYSIBM.SYSCOLUMNS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH (continued)		<p>DBCLOB 4 - The length of the field that is stored in the base table. The maximum length of the DBCLOB column is found in LENGTH2.</p> <p>ROWID 17 - The maximum length of the stored portion of the identifier.</p> <p>DISTINCT The length of the source data type.</p> <p>XML 6</p> <p>BIGINT 8</p> <p>BINARY The length of the string</p> <p>VARBINARY The maximum length of string</p> <p>DECFLOAT 8 or 16</p>	
LENGTH2	INTEGER NOT NULL	<p>Maximum length of the data retrieved from the column. Possible values are:</p> <p>0 Column is not a LOB or ROWID column</p> <p>40 For a ROWID column, the length of the returned value</p> <p>1–2,147,483,647 bytes For a LOB column, the maximum length</p>	G
NULLS	CHAR(1) NOT NULL	<p>Whether the column can contain null values:</p> <p>N No</p> <p>Y Yes</p>	G
HIGH2KEY	VARCHAR(2000) NOT NULL FOR BIT DATA	Second highest value of the column. Blank if statistics have not been gathered, or the column is an indicator column or a column of an auxiliary table. If the column has a non-character data type, the data might not be printable.	S
LOW2KEY	VARCHAR(2000) NOT NULL FOR BIT DATA	Second lowest value of the column. Blank if statistics have not been gathered, or the column is an indicator column or a column of an auxiliary table. If the column has a non-character data type, the data might not be printable.	S

Table 289. SYSIBM.SYSCOLUMNS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated. The value '0001-01-02-00.00.00.000000' indicates that an ALTER TABLE statement was executed to change the length of a VARCHAR column and RUNSTATS should be run to update the statistics before they are used.	G
COLCARDF	FLOAT(8) NOT NULL WITH DEFAULT -1	Estimated number of distinct values in the column. For an indicator column, this is the number of LOBs that are not null and have a length greater than zero. The value is -1 if statistics have not been gathered. The value is -2 if the column is a LOB column.	S
IBMREQD	CHAR(1) NOT NULL DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
STATS_FORMAT	CHAR(1) NOT NULL WITH DEFAULT	The type of statistics gathered: blank Statistics have not been collected or varchar column statistical values are padded. N Varchar column statistical values are not padded. This is an updatable column.	G

SYSCONSTDEP catalog table

The SYSCONSTDEP table records dependencies on check constraints or user-defined defaults for a column. The schema is SYSIBM.

Table 290. SYSIBM.SYSCONSTDEP table column descriptions

Column name	Data type	Description	Use
BNAME	VARCHAR(128) NOT NULL	Name of the object on which the dependency exists.	G
BSHEMA	VARCHAR(128) NOT NULL	Schema of the object on which the dependency exists.	G
BTYPE	CHAR(1) NOT NULL	Type of object on which the dependency exists: F Function instance	G

Table 290. SYSIBM.SYSCONSTDEP table column descriptions (continued)

Column name	Data type	Description	Use
DTBNAME	VARCHAR(128) NOT NULL	Name of the table to which the dependency applies.	G
DTBCREATOR	VARCHAR(128) NOT NULL	The schema of the table to which the dependency applies.	G
DCONSTNAME	VARCHAR(128) NOT NULL	If DTYPE = 'C', the unqualified name of the check constraint. If DTYPE = 'D', a column name.	G
DTYPE	CHAR(1) NOT NULL	Type of object: C Check constraint D User-defined default constant	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
DTBOWNER	VARCHAR(128) NOT NULL WITH DEFAULT	Authorization ID of the owner of the table or a zero length string for tables that were created in a Db2 release prior to Version 9.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner: blank Authorization ID R Role	G

SYSCONTEXT catalog table

The SYSCONTEXT table contains one row for each trusted context. The schema is SYSIBM.

Table 291. SYSIBM.SYSCONTEXT table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the trusted context.	G
CONTEXTID	INTEGER NOT NULL GENERATED ALWAYS AS IDENTITY	Internal context ID.	G

Table 291. SYSIBM.SYSCONTEXT table column descriptions (continued)

Column name	Data type	Description	Use
DEFINER	VARCHAR(128) NOT NULL	Authorization ID or role that defined the trusted context.	G
DEFINERTYPE	CHAR(1) NOT NULL	The type of the definer: L Role blank Authorization ID	G
SYSTEMAUTHID	VARCHAR(128) NOT NULL	The Db2 primary authorization ID that is used to establish the connection. For remote requests, SYSTEMAUTHID is derived from the system user ID that is provided by an external entity, such as a middleware server. For local requests, SYSTEMAUTHID depends on one of the following sources of the address space: BATCH USER parameter on JOB statement RRSAF USER parameter on JOB statement or RACF user TSO TSO logon ID	G
DEFAULTROLE	VARCHAR(128) NOT NULL	Name of the trusted context default role.	G
OBJECTOWNERTYPE	CHAR(1) NOT NULL	Whether the ROLE AS OBJECT OWNER AND QUALIFIER clause is specified in the definition of this trusted context: L ROLE AS OBJECT OWNER AND QUALIFIER is specified. A role owns any object created in the trusted context. The role is used as the default for the CURRENT SCHEMA special register. The role is included in the SQL PATH. blank ROLE AS OBJECT OWNER is not specified. An authorization ID owns any object created in the trusted context.	G
CREATEDTS	TIMESTAMP NOT NULL	The time when the trusted context is created.	G
ALTEREDTS	TIMESTAMP NOT NULL	The time when the trusted context is last altered.	G

Table 291. SYSIBM.SYSCONTEXT table column descriptions (continued)

Column name	Data type	Description	Use
ENABLED	CHAR(1) NOT NULL	The status of the trusted context: Y Enabled N Disabled	G
ALLOWPUBLIC	CHAR(1) NOT NULL	Whether the connection is allowed to be reused for PUBLIC: Y Connection reuse is allowed N Connection reuse is not allowed	G
AUTHENTICATEPUBLIC	CHAR(1) NOT NULL	Whether authentication is required for PUBLIC when ALLOWPUBLIC is Y: Y Authentication token is required for PUBLIC. For local requests, the token is the password. For remote requests, the token can be a password, a RACF passticket, or a KERBEROS token N Authentication is not required	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
REMARKS	VARCHAR(762) NOT NULL	A character string that is provided using the COMMENT statement.	G
DEFAULTSECURITYLABEL	VARCHAR(24) NOT NULL	Name of the context default RACF security label.	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G

Table 291. SYSIBM.SYSCONTEXT table column descriptions (continued)

Column name	Data type	Description	Use
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSCONTEXTAUTHIDS catalog table

The SYSCONTEXTAUTHIDS table contains one row for each authorization ID with which the trusted context can be used. The schema is SYSIBM.

Table 292. SYSIBM.SYSCONTEXTAUTHIDS table column descriptions

Column name	Data type	Description	Use
CONTEXTID	INTEGER NOT NULL	The internal trusted context ID.	G
AUTHID	VARCHAR(128) NOT NULL	The primary authorization ID that can reuse a connection. When RACF is used, this is a RACF profile name that contains the primary authorization IDs that are permitted to use the connection in the identified trusted context. A RACF profile name in this column has an ampersand (&) sign as the first character, to distinguish it from an authorization ID.	G
AUTHENTICATE	CHAR(1) NOT NULL	Whether authentication is required for the authorization ID in the AUTHID column: Y Authentication token is required for the authorization ID. For local requests, the token is the password. For remote requests, the token can be a password, a RACF passticket, or a Kerberos token N Authentication is not required	G
ROLE	VARCHAR(128) NOT NULL	The role for the authorization ID in the AUTHID column. The role supersedes the default role that is defined for the trusted context.	G
CREATEDTS	TIMESTAMP NOT NULL	The time when the authorization ID is added to the trusted context.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
SECURITYLABEL	VARCHAR(24) NOT NULL	RACF security label for AUTHID. The security label supersedes the default security label, if any, that is defined for the context.	G

Table 292. SYSIBM.SYSCONTEXTAUTHIDS table column descriptions (continued)

Column name	Data type	Description	Use
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSCONTROLS catalog table

The SYSCONTROLS table contains one row for each row permission and column mask. The schema is SYSIBM.

Table 293. SYSIBM.SYSCONTROLS table column descriptions

Column name	Data type	Description	Use
SCHEMA	VARCHAR(128) NOT NULL	Schema of the row permission or column mask.	G
NAME	VARCHAR(128) NOT NULL	Name of the row permission or column mask.	G
OWNER	VARCHAR(128) NOT NULL	Owner of the row permission or column mask.	G
OWNERTYPE	CHAR(1) NOT NULL	Indicates the type of the owner: blank An authorization ID L Role	G
TBSHEMA	VARCHAR(128) NOT NULL	Schema of the table for which the row permission or column mask is defined.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table for which the row permission or column mask is defined.	G
TBCORRELATION	VARCHAR(128) NOT NULL WITH DEFAULT	If specified, the correlation name of the table for which the row permission or column mask is defined. Otherwise, the value is an empty string.	G

Table 293. SYSIBM.SYSCONTROLS table column descriptions (continued)

Column name	Data type	Description	Use
COLNAME	VARCHAR(128) NOT NULL	Column name for which the column mask is defined. Blank if this is a row permission.	G
COLNO	SMALLINT NOT NULL	Column number for which the column mask is defined. 0 if this is a row permission.	G
CONTROL_ID	INTEGER NOT NULL GENERATED ALWAYS AS IDENTITY	Internal access control ID.	S
CONTROL_TYPE	CHAR(1) NOT NULL	Indicates the type of the access control object: R Row permission M Column mask	G
ENFORCED	CHAR(1) NOT NULL	Indicates the type of the access enforced by the row permission. Column mask always has a value of 'A'. A All access	G
IMPLICIT	CHAR(1) NOT NULL	Indicates whether the row permission was implicitly created: N The row permission was explicitly created or this is a column mask Y The row permission was implicitly created	G
ENABLE	CHAR(1) NOT NULL	Indicates whether the row permission or the column mask is enabled for access control: N Not enabled Y Enabled	G
STATUS	CHAR(1) NOT NULL	Indicates the status of the row permission or column mask definition: blank The definition of the row permission or column mask is complete. R An error occurred when an attempt was made to regenerate the row permission or column mask.	G
CREATEDTS	TIMESTAMP NOT NULL	The timestamp when the row permission or column mask was created.	G

Table 293. SYSIBM.SYSCONTROLS table column descriptions (continued)

Column name	Data type	Description	Use
RELCREATED	CHAR(1) NOT NULL	The release of Db2 in which the row permission or column mask was created. See Release dependency indicators for values.	G
ALTEREDTS	TIMESTAMP NOT NULL	The timestamp when the row permission or column mask was last changed.	G
REMARKS	VARCHAR(762) NOT NULL	A character string provided by using the COMMENT ON statement.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
ENVID	INTEGER NOT NULL	Internal identifier of the environment.	G
ROWID	ROWID	Row identifier to support LOB columns in the table.	G
RULETEXT	CLOB(2MB) NOT NULL	The source text of the search condition or expression portion of the CREATE PERMISSION or CREATE MASK statement. Note: The lowercase letters in ordinary tokens are folded to uppercase in the text. However, lowercase letters in ordinary tokens are folded to uppercase in a C or Java program only if the appropriate precompiler option is specified.	G
DESCRIPTOR	BLOB(2MB) NOT NULL	Internal description of the row permission or column mask	S
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

Table 293. SYSIBM.SYSCONROLS table column descriptions (continued)

Column name	Data type	Description	Use
REGENERATETS	TIMESTAMP(12) NOT NULL	The time when the object was regenerated. The value is valid only for objects that can be regenerated. If no regeneration has occurred, this column contains the same value as the CREATEDTS column.	G

SYSCOPY catalog table

The SYSCOPY table contains information needed for recovery. The schema is SYSIBM.

Table 294. SYSIBM.SYSCOPY table column descriptions

Column name	Data type	Description	Use
DBNAME	CHAR(8) NOT NULL	Name of the database.	G
TSNAME	CHAR(8) NOT NULL	Name of the target table space or index space.	G
DSNUM	INTEGER NOT NULL	Data set number within the table space. For partitioned table spaces, this value corresponds to the partition number for a single partition copy, or 0 for a copy of an entire partitioned table space or index space.	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
ICTYPE	CHAR(1) NOT NULL	Type of operation: A ALTER B REBUILD INDEX C CREATE D CHECK DATA LOG(NO) (no log records for the range are available for RECOVER utility) E RECOVER (to current point) F COPY FULL YES I COPY FULL NO J REORG TABLESPACE or LOAD REPLACE compression dictionary write to log L SQL (type of operation) M MODIFY RECOVERY utility P RECOVER TOCOPY, RECOVER TOLOGPOINT, or RECOVER TORBA (to a point in time) Q QUIESCE R LOAD REPLACE LOG(YES) S LOAD REPLACE LOG(NO) T TERM UTILITY command V REPAIR CATALOG utility W REORG LOG(NO) X REORG LOG(YES) Y LOAD LOG(NO) Z LOAD LOG(YES)	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
ICDATE	CHAR(6) NOT NULL	Date of the last image copy	N
START_RBA	CHAR(10) NOT NULL FOR BIT DATA	<p>An 80-bit positive integer that contains the RBA/LRSN of a point in the Db2 recovery log. (The LRSN is the RBA in a data-sharing environment.)</p> <ul style="list-style-type: none"> • For ICTYPE I or F, the starting point for all updates since the image copy was taken • For ICTYPE J, the RBA/LRSN of the compression dictionary • For ICTYPE M, the RBA of the highest deleted SYSCOPY or SYSLGRNX record • For ICTYPE P, the point after the log-apply phase of point-in-time recovery • For ICTYPE Q, the point after all data sets have been successfully quiesced • For ICTYPE R or S, the end of the log before the start of the LOAD utility and before any data is changed • For ICTYPE T, the end of the log when the utility is terminated • For other values of ICTYPE, the end of the log before the start of the RELOAD phase of the LOAD or REORG utility. 	G
FILESEQNO	INTEGER NOT NULL	Tape file sequence number of the copy.	G
DEVTYPE	CHAR(8) NOT NULL	Device type the copy is on.	G
IBMREQD	CHAR(1) NOT NULL	<p>A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators.</p> <p>The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.</p>	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
DSNAME	CHAR(44) NOT NULL	<p>For ICTYPE='P' (RECOVER TOCOPY only), 'I', or 'F', DSNAME contains the data set name. Otherwise, DSNAME contains the name of the database and table space or index space in the form, <i>database-name.space-name</i>, or DSNAME is blank for any row migrated from a release prior to Version 4. For redirected recoveries, DSNAME contains the source table space or index space name, in the form, <i>database-name.space-name</i>.</p> <p>FL 508 A SYSCOPY record with ICTYPE='W' and STYPE='M' for the target table space indicates that a REORG moved a table into the target table space. In this case, the DSNAME column contains the name of the source table space, <i>database-name.tablespace-name</i>. The DBNAME column contains the name of the target database, <i>database-name</i>, and the TSNAME column contains the name of the target table space, <i>tablespace-name</i>.</p>	G
ICTIME	CHAR(6) NOT NULL	Time of the last image copy.	N
SHRLEVEL	CHAR(1) NOT NULL	<p>SHRLEVEL parameter value on COPY (for ICTYPE F or I only):</p> <p>C CHANGE</p> <p>R REFERENCE</p> <p>blank Does not describe an image copy or was migrated from Version 1 Release 1 of Db2.</p>	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
DSVOLSER	VARCHAR(1784) NOT NULL	<p>If the operation is not an image copy operation that creates a FlashCopy image copy with consistency (an image copy operation with the FLASHCOPY CONSISTENT option), this value is:</p> <ul style="list-style-type: none"> • A comma-separated list of 6-byte volume serial numbers of the data set, if the data set is not cataloged. • Blank if the data set is cataloged. <p>If the operation is a FlashCopy image copy with consistency that had uncommitted units of work backed out or a sequential image copy that was created from such a FlashCopy image copy by COPY or COPYTOCOPY, this value is a comma-separated list of values in one of the following forms:</p> <p>memberID-ckptrba</p> <p>This format is used for SYSCOPY records that were inserted before SYSCOPY was converted to the Db2 11 enabling-new-function mode format. <i>ckptrba</i> is the 12-byte hexadecimal checkpoint RBA for the member.</p> <p>memberID+ckptrba</p> <p>This format is used for SYSCOPY records that were inserted after SYSCOPY was converted to the Db2 11 new-function mode format or later.</p> <p><i>ckptrba</i> is the 20-byte hexadecimal checkpoint RBA for the member.</p> <p><i>memberID</i> is a 3-digit ID for a member of a data sharing group. For a non-data sharing environment, <i>memberID</i> is 000.</p>	G
TIMESTAMP	TIMESTAMP NOT NULL WITH DEFAULT	<p>The date and time when the row was inserted. For the COPYTOCOPY utility, this value is the date and time when the row was inserted for the primary local site or primary recovery site copy. For an EXCHANGE DATA statement, this is the time that the statement is run.</p>	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
ICBACKUP	CHAR(2) NOT NULL WITH DEFAULT	Specifies the type of image copy contained in the data set: blank LOCALSITE primary copy (first data set named with COPYDDN) FC FlashCopy copy LB LOCALSITE backup copy (second data set named with COPYDDN) RP RECOVERYSITE primary copy (first data set named with RECOVERYDDN) RB RECOVERYSITE backup copy (second data set named with RECOVERYDDN)	G
ICUNIT	CHAR(1) NOT NULL WITH DEFAULT	Indicates the media that the image copy data set is stored on: D DASD T Tape blank Medium is neither tape nor DASD, the image copy is from a Db2 release prior to Version 2 Release 3, or ICTYPE is not 'I' or 'F'.	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
STYPE	CHAR(1) NOT NULL WITH DEFAULT	<p>When ICTYPE=A, the values are:</p> <p>A A partition was added or inserted to a table.</p> <p>B The MEMBER CLUSTER value was changed.</p> <p>C A column was added to a table and an index in different commit scopes, index compression was activated or deactivated, or a column was dropped from a table. A column was added to a table and an index in different commit scopes, or a column was dropped from a table.</p> <p>D Either the DSSIZE attribute of the table space was altered or the default value of a column of a table was altered.</p> <p>E The data set numbers of a base table and its associated clone table are exchanged.</p> <p>F The page size attribute of the table space or index was altered.</p> <p>G An index was regenerated</p> <p>H The table was altered to hash organization, the size of the hash space was changed, or the hash organization was dropped. The value of the TTYPE column indicates the action taken.</p> <p>I The inline length attribute of the LOB column was altered by REORG.</p> <p>L The logging attribute of the table space was altered to LOGGED.</p> <p>M The MAXPARTITIONS attribute of the table space was altered.</p> <p>N An index was altered to not padded</p> <p>O The logging attribute of the table space was altered to NOT LOGGED.</p> <p>P An index was altered to padded</p> <p>R A table was altered to rotate partitions.</p>	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
STYPE (continued)		<p>When ICTYPE=A, the values are (continued):</p> <p>S The SEGSIZE attribute of the table space was altered.</p> <p>T FL 508 A table space attribute was altered.</p> <p>U An ALTER TABLE ALTER COLUMN DROP DEFAULT statement was executed on a column that was previously added with an ALTER TABLE ADD COLUMN statement.</p> <p>V A column in a table was altered for a numeric data type change and the column is in an index.</p> <p>X A REORG dropped one or more empty partitions from the related table space.</p> <p>Y An index was altered to COPY YES</p> <p>Z A column that is in the key of an index that was versioned prior to DB2 version 8 was altered.</p> <p>When ICTYPE=C, the values are:</p> <p>L The logging attribute of the table space was LOGGED.</p> <p>O The logging attribute of the table space was NOT LOGGED.</p> <p>When ICTYPE=E, the values are:</p> <p>B RECOVER utility with the BACKOUT keyword.</p> <p>blank RECOVER utility without the BACKOUT keyword.</p> <p>When ICTYPE=F, the values are:</p> <p>C DFSMS concurrent copy ("I" instance of the table space)</p> <p>J DFSMS concurrent copy ("J" instance of the table space)</p> <p>N A FlashCopy copy is not consistent.</p> <p>Q Sequential copy is consistent</p>

STYPE (continued)		<p>When ICTYPE=W, the values are:</p> <p>M FL 508 REORG on the source table space materialized an ALTER TABLESPACE MOVE TABLE statement</p> <p>When ICTYPE=W or X, the values are:</p> <p>A Resetting REORG pending status or REBALANCE</p> <p>T First materializing the default value for a row change timestamp column</p> <p>For other values of ICTYPE, the value is blank.</p>	

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
PIT_RBA	CHAR(10) NOT NULL WITH DEFAULT FOR BIT DATA	<p>The meaning of the value depends on the value of the ICTYPE column:</p> <p>ICTYPE='P' The LRSN for the point in the Db2 log. (The LRSN is the RBA in a non-data-sharing environment) The value indicates the stop location of a point-in-time recovery.</p> <p>If a record contains ICTYPE='P' and PIT_RBA=X'000000000000', the copy pending status is active and a full image copy is required. If such a record is encountered during fallback processing of RECOVER, the recover job fails, and a point-in-time recovery is required. PIT_RBA can be zero if the point-in-time recovery is completed by the fall-back processing of RECOVER, or if ICTYPE=P from a prior release of Db2.</p> <p>ICTYPE='F' or 'I' and SHRLEVEL='C' The current RBA or LRSN that corresponds to the point in the Db2 log when the SHRLEVEL CHANGE copy completes.</p> <p>ICTYPE='F', SHRLEVEL='R' or 'C', and ICBACKUP='FC' The RBA or LRSN that corresponds to the point in the Db2 log when the FlashCopy completes.</p> <p>CTYPE='F' and SHRLEVEL 'R' or 'C', STYPE= 'T', 'N', 'Q', or 'U' The RBA or LRSN that corresponds to the point in the Db2 log when the FlashCopy completes.</p> <p>ICTYPE=J The RBA where the compression dictionary is written to the log. In data sharing environments, it is the RBA of the member writing to the log.</p> <p>ICTYPE='M' The RBA/LRSN for the end of the log when the utility completes.</p> <p>For other all other ICTYPE values, this field contains X'00000000000000000000'.</p>	G
GROUP_MEMBER	CHAR(8) NOT NULL WITH DEFAULT	The Db2 data sharing member name of the Db2 subsystem that performed the operation. This column is blank if the Db2 subsystem was not in a Db2 data sharing environment at the time the operation was performed.	G
OTYPE	CHAR(1) NOT NULL WITH DEFAULT 'T'	<p>Type of object that the recovery information is for:</p> <p>I Index space</p> <p>T Table space</p>	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
LOWDSNUM	INTEGER NOT NULL WITH DEFAULT	Partition number of the lowest partition in the range for SYSCOPY records created for REORG and LOAD REPLACE for resetting a REORG pending status. Version number of an index for SYSCOPY records created for a COPY (ICTYPE=F) of an index space (OTYPE=I). (An index is versioned when a VARCHAR column in the index key is lengthened.) <ul style="list-style-type: none"> When ICTYPE = F or I, DSNUM = 0 and OTYPE is not equal to I, LOWDSNUM = 1. When ICTYPE=A and STYPE=X, this value is the lowest partition number that was dropped by REORG. 	G
HIGHDSNUM	INTEGER NOT NULL WITH DEFAULT	Partition number of the highest partition in the range. This column is valid only for SYSCOPY records created for REORG and LOAD REPLACE for resetting REORG pending status. <ul style="list-style-type: none"> When ICTYPE = F or I, DSNUM = 0 and OTYPE is not equal to I, this value is the number of the highest partition that is copied. When ICTYPE=A and STYPE=X, this value is the highest partition number that was dropped by REORG. 	G
COPYPAGESF	FLOAT(8) NOT NULL WITH DEFAULT -1	Number of pages written to the copy data set. For inline copies, this number might include pages appearing more than once in the copy data set.	G
NPAGESF	FLOAT(8) NOT NULL WITH DEFAULT -1	The number of pages in the table space or index at the time of COPY. This number might include pre-formatted pages that are not actually copied. When ICTYPE=A, SYTPE=H, and TTYPE=S or D , this column contains the previous HASHDATAPAGES value. When ICTYPE=A, SYTPE=H, and TTYPE=A this column contains zero.	G
CPAGESF	FLOAT(8) NOT NULL WITH DEFAULT -1	Total number of changed pages since last copy.	G
JOBNAME	CHAR(8) NOT NULL WITH DEFAULT	Job name of the utility. For changes that cause pending definition changes to object, this column might not be accurate.	G
AUTHID	CHAR(8) NOT NULL WITH DEFAULT	Authorization ID of the utility. For changes that cause pending definition changes to object, this column might not be accurate.	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
OLDEST_VERSION	SMALLINT NOT NULL WITH DEFAULT	<p>When ICTYPE= B, F, I, R, S, W, or X:</p> <ul style="list-style-type: none"> • For a single-table table space, this value is the version number of the oldest format of data for an object. • For a multiple-table table space: <ul style="list-style-type: none"> – A value of zero indicates that there is a least one table in the table space that has data rows in version 0 format. – When ICTYPE=B, F, I, W, or X, a value greater than 0 is the oldest version for tables that are not at version 0. Any tables that are at version 0 have system pages for a version 0 format. – When ICTYPE=R or S: <ul style="list-style-type: none"> - A value greater than 0 is the oldest version for tables that are not at version 0. Any tables that are at version 0 have system pages for a version 0 format. - A value of -1 means that the oldest version number cannot be determined. <p>For other values of ICTYPE, the value is -1. The default value of this column is 0.</p>	G
LOGICAL_PART	INTEGER NOT NULL WITH DEFAULT	Logical partition number.	G
LOGGED	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates the logging attribute of the table space at the time the SYSCOPY record is written:</p> <ul style="list-style-type: none"> • Y – indicates that the logging attribute of the table space is LOGGED • N – indicates that the logging attribute of the table spaces is NOT LOGGED • blank – indicates that the row was inserted prior to DB2 9 or is not specified. For non-LOB table spaces or an index space, blank indicates that the logging attribute is LOGGED. 	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
TTYPE	CHAR(8) NOT NULL WITH DEFAULT	<p>The value of TTYPE column indicates different information depending on the values of the ICTYPE, STYPE, and in some cases, OTYPE column.</p> <p>When ICTYPE=A and STYPE=B:</p> <p>Y The previous member cluster attribute of the table space is being used.</p> <p>N The previous member cluster attribute of the table space is not being used.</p> <p>When ICTYPE=A and STYPE=C:</p> <p>blank A column was added to a table.</p> <p>D A column was dropped from a table.</p> <p>CMP=N Index compression was activated with the ALTER INDEX COMPRESS YES statement.</p> <p>CMP=Y Index compression was deactivated with the ALTER INDEX COMPRESS NO statement.</p> <p>When ICTYPE=A and STYPE=D:</p> <p>x The previous DSSIZE attribute value for the table space in units of G, M, or K.</p> <p>blank The default value of a column of a table was altered.</p> <p>When ICTYPE=A and STYPE=F:</p> <p>x The previous page size attribute value for the table space in units of K.</p> <p>When ICTYPE=A and STYPE=H:</p> <p>A Hash organization was added. The record is written when the hash space is materialized at REORG.</p> <p>D Hash organization was dropped. The record is written immediately when the ALTER statement is issued.</p> <p>S The size of the hash space was changed. The value of the NAPGESF column contains the previous HASHDATAPAGES value. The record is written when the hash space is materialized at REORG.</p>	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
TTYPE (continued)		<p>When ICTYPE=A and STYPE=I:</p> <p>D REORG decremented the inline length of the LOB column</p> <p>I REORG incremented the inline length of the LOB column</p> <p>When ICTYPE=A and STYPE=M:</p> <p>I The table space was converted from a single-table simple table space to a partition-by-growth table space.</p> <p>n The previous value of the MAXPARTITIONS attribute for the table space.</p> <p>S The table space was converted from single-table segmented table space to a partition-by-growth table space.</p> <p>When ICTYPE=A and STYPE=P:</p> <p>ABSOLUTE The table space was converted from absolute to relative page numbering.</p> <p>When ICTYPE=A and STYPE=S:</p> <p>n The previous value of the SEGSIZE attribute for the table space.</p> <p>P The table space was converted from a partitioned (non-UTS) table space to a partition-by-range table space.</p> <p><u>FL 508</u> When ICTYPE=A and STYPE=T:</p> <p>M One or more tables were moved by the ALTER TABLESPACE MOVE TABLE statement</p> <p>When ICTYPE=E:</p> <p>blank The full recovery reset the object</p> <p>N The full recovery did not reset the object</p>	

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
TTYPE (continued)		<p>When ICTYPE=F and OTYPE=I:</p> <p>S indicates that the directory pages for the index image copy are at the front of each partition and are indicated with a 'V' or '8'.</p> <p>When ICTYPE=F and STYPE=N, Q, T, or U, this column indicates the utility that made the FlashCopy:</p> <p>A LOAD RESUME LOG NO</p> <p>B REBUILD</p> <p>C COPY</p> <p>D LOAD RESUME LOG YES</p> <p>E LOAD SHRLEVEL CHANGE</p> <p>L LOAD</p> <p>P REPAIR</p> <p>R LOAD REPLACE LOG YES</p> <p>S LOAD REPLACE LOG NO</p> <p>T COPYTOCOPY</p> <p>W REORG TABLESPACE LOG NO</p> <p>X REORG TABLESPACE LOG YES</p> <p>When ICTYPE=F and STYPE=R, S, Y, or Z:</p> <p>V This inline sequential image copy created by LOAD contains pages updated during the INDEXVAL and ENFORCE phases. Rows that were loaded with unique index violations, referential constraint violations, or index evaluation errors were removed from pages in the image copy.</p>	

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
TTYPE (continued)		<p>When ICTYPE=I:</p> <p>N Indicates that no system pages are in this incremental image copy.</p> <p>blank Indicates that system pages are in this incremental image copy.</p> <p>I Indicates that the incremental copy was created for a table space or partition with the TRACKMOD YES attribute using the RBA or LRSN in each page instead of the modified page indicator bits in the space map pages.</p> <p>When ICTYPE=P, R, S, W, X, this column provides additional diagnostic information:</p> <p>B Indicates that the RBA or LRSN format changed to basic 6-byte format.</p> <p>BRF Indicates that the row format is the basic row format.</p> <p>BRF I Indicates that the row format is the basic row format, and the FORMAT INTERNAL option was specified.</p> <p>E Indicates that the RBA or LRSN format changed to extended 10-byte format.</p> <p>F Indicates that the REORG utility was run with the FASTSWITCH YES option.</p> <p>RRF I Indicates that the row format is the reordered row format, and the FORMAT INTERNAL option was specified.</p> <p>S Indicates that the REORG utility was run with the FASTSWITCH NO option.</p> <p>When ICTYPE=M and STYPE=R:</p> <p>blank MODIFY RECOVERY deleted rows from SYSIBM.SYSLGRNX.</p> <p>N MODIFY RECOVERY did not delete rows from SYSIBM.SYSLGRNX.</p>	

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
TTYE (continued)		<p>When ICTYPE=T:</p> <p>B Indicates that a broken page was detected during copy.</p> <p>When ICTYPE=W or X and STYPE=H:</p> <p>n the previous value of HASHDATAPAGES</p> <p>When ICTYPE=Y or Z:</p> <p>blank Indicates that the FORMAT INTERNAL option was not specified during LOAD.</p> <p>I Indicates that the FORMAT INTERNAL option was specified during LOAD.</p> <p>When ICTYPE=A-A, A-R, B, C, P, R, S, W, or X, indicates that the page format was changed by the ALTER ADD PARTITION, ALTER ROTATE PARTITION, or CREATE statement, or by the LOAD REPLACE, REBUILD, REORG, or RECOVER utilities:</p> <p>B Indicates that the page format was created or converted to basic page format with 6-byte RBA or LRSN values</p> <p>E Indicates that the page format was created or converted to extended page format with 10-byte RBA or LRSN values.</p> <p>When ICTYPE=A and STYPE=A or R:</p> <p>B Indicates that the page format was converted to basic page format with 6-byte RBA or LRSN values.</p> <p>E Indicates that the page format was converted to extended page format with 10-byte RBA or LRSN values.</p>	
INSTANCE	SMALLINT NOT NULL WITH DEFAULT 1	<p>When STYPE = E and ICTYPE = A, INSTANCE indicates the data set instance number of a base object after an EXCHANGE statement completes. The value of the INSTANCE column for the last data exchange will match the value of the INSTANCE column for the SYSIBM.SYSTABLESPACE table.</p> <p>For an image copy, INSTANCE indicates the instance number of the current base objects (table and index).</p>	G

Table 294. SYSIBM.SYSCOPY table column descriptions (continued)

Column name	Data type	Description	Use
RELCREATED	CHAR(1) NOT NULL WITH DEFAULT	The Db2 release that created the object. Blank if created prior to DB2 9. For other values, see "Release dependency indicators" in Appendix H, "Db2 catalog tables," on page 2353.	G
MODECREATED	CHAR(2) NOT NULL WITH DEFAULT	The latest mode to which the Db2 subsystem had been migrated when the SYSCOPY record was written: C Conversion mode or CM* E Enabling-new-function mode or ENFM* N New-function mode blank Prior to Db2 11	G

SYSCTXTTRUSTATTRS catalog table

The SYSCTXTTRUSTATTRS table contains one row for each list of attributes for a given trusted context. The schema is SYSIBM.

Table 295. SYSIBM.SYSCTXTTRUSTATTRS table column descriptions

Column name	Data type	Description	Use
CONTEXTID	INTEGER NOT NULL	The internal trusted context ID.	G
NAME	VARCHAR(128) NOT NULL	The name of the trust attribute. Possible values include the following: <ul style="list-style-type: none"> • 'ADDRESS' • 'ENCRYPTION' • 'JOBNAME' • 'SERVAUTH' 	G

Table 295. SYSIBM.SYSCTXTTRUSTATTRS table column descriptions (continued)

Column name	Data type	Description	Use
VALUE	VARCHAR(254) NOT NULL	The value of the trust attribute. Possible values including the following attributes: <ul style="list-style-type: none"> An IPv4 address is represented as a dotted decimal IP address. An example of an IPv4 address is '9.112.46.111'. An IPv6 address is represented as a colon hexadecimal address. An example of an IPv6 address is '2001:0DB8:0000:0000:0008:0800:200C:417A', which can also be expressed in a compressed form as '2001:DB8::8:800:200C:417A'. A domain name which is converted to an IP address by the domain name server where a resulting IPv4 or IPv6 address is determined. The minimum level of encryption of the data stream (network encryption) for the connection. Supported values are 'NONE', 'LOW', and 'HIGH'. A job or started task name for local applications. If the job name ends with *, any job name that matches the characters prior to * in the specified job name are considered for establishing the trusted connection. A network access security zone name in the RACF SERVAUTH class. 	G
CREATEDTS	TIMESTAMP NOT NULL	The time when the attribute is created.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSDATABASE catalog table

The SYSDATABASE table contains one row for each database. The schema is SYSIBM.

Table 296. SYSIBM.SYSDATABASE table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(24) NOT NULL	Database name.	G
CREATOR	VARCHAR(128) NOT NULL	Authorization ID of the owner of the database.	G
STGROUP	VARCHAR(128) NOT NULL	Name of the default storage group of the database; blank for a system database.	G
BPOOL	CHAR(8) NOT NULL	Name of the default buffer pool of the table space; blank for a system table space.	G
DBID	SMALLINT NOT NULL	Internal identifier of the database. If there were 32511 databases or more when this database was created, the DBID is a negative number.	S
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
CREATEDBY	VARCHAR(128) NOT NULL WITH DEFAULT	Primary authorization ID of the user who created the database.	G
ROSHARE	CHAR(1) NOT NULL WITH DEFAULT	Not used.	N
TIMESTAMP	TIMESTAMP NOT NULL WITH DEFAULT	Not used.	N
TYPE	CHAR(1) NOT NULL WITH DEFAULT	Type of database: blank Not a work file database or a TEMP database. T A TEMP file database. W A work file database. The database is DSND07, or it was created with the WORKFILE clause and used as a work file database by a member of a Db2 data sharing group.	G

Table 296. SYSIBM.SYSDATABASE table column descriptions (continued)

Column name	Data type	Description	Use
GROUP_MEMBER	VARCHAR(24) NOT NULL WITH DEFAULT	The Db2 data sharing member name of the Db2 subsystem that uses this work file database. This column is blank if the work file database was not created in a Db2 data sharing environment, or if the database is not a work file database as indicated by the TYPE column.	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the CREATE statement was executed for the database. For DSNDB04 and DSNDB06, the value is '1985-04-01.00.00.00.000000'.	G
ALTEREDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the most recent ALTER DATABASE statement was applied. If no ALTER DATABASE statement has been applied, ALTEREDTS has the value of CREATEDTS.	G
ENCODING_SCHEME	CHAR(1) NOT NULL WITH DEFAULT 'E'	Default encoding scheme for the database: E EBCDIC A ASCII U Unicode blank For DSNDB04, a work file database, and a TEMP database.	G
SBCS_CCSID	INTEGER NOT NULL WITH DEFAULT	Default SBCS CCSID for the database. For a TEMP database, a work file database, or a database created in a Db2 release prior to Version 5, the value is 0.	G
DBCS_CCSID	INTEGER NOT NULL WITH DEFAULT	Default DBCS CCSID for the database. If mixed data is not used and the CCSID for the database is defined as EBCDIC or ASCII, the default value is 0. For a TEMP database, a work file database, or a database created in a Db2 release prior to Version 5, the value is 0.	G
MIXED_CCSID	INTEGER NOT NULL WITH DEFAULT	Default mixed CCSID for the database. If mixed data is not used and the CCSID for the database is defined as EBCDIC or ASCII, the default value is 0. For a TEMP database, a work file database, or a database created in a Db2 release prior to Version 5, the value is 0.	G
INDEXBP	CHAR(8) NOT NULL WITH DEFAULT 'BPO'	Name of the default buffer pool for indexes.	G

Table 296. SYSIBM.SYSDATABASE table column descriptions (continued)

Column name	Data type	Description	Use
IMPLICIT	CHAR(1) NOT NULL WITH DEFAULT 'N'	Indicates whether the database was implicitly created: Y The database was implicitly created N The database was explicitly created	G
CREATORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of creator: blank Authorization ID L Role	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G

SYSDATATYPES catalog table

The SYSDATATYPES table contains one row for each user-defined type defined to the system. The schema is SYSIBM.

Table 297. SYSIBM.SYSDATATYPES table column descriptions

Column name	Data type	Description	Use
SCHEMA	VARCHAR(128) NOT NULL	Schema of the data type.	G
OWNER	VARCHAR(128) NOT NULL	Owner of the data type.	G
NAME	VARCHAR(128) NOT NULL	Name of the data type.	G
CREATEDBY	VARCHAR(128) NOT NULL	Primary authorization ID of the user who created the data type.	G
SOURCESCHEMA	VARCHAR(128) NOT NULL	Schema of the source data type.	G
SOURCETYPE	VARCHAR(128) NOT NULL	Name of the source type.	G
METATYPE	CHAR(1) NOT NULL	The class of data type: A User-defined ordinary array type L User-defined associative array type T Distinct type	G

Table 297. SYSIBM.SYSDATATYPES table column descriptions (continued)

Column name	Data type	Description	Use
DATATYPEID	INTEGER NOT NULL	Internal identifier of the data type.	S
SOURCETYPEID	INTEGER NOT NULL	Internal ID of the built-in data type on which the distinct type or array elements are based.	S
LENGTH	INTEGER NOT NULL	Maximum length or precision for a data type that is based on the IBM-defined DECIMAL data type. The data type can be a distinct type or an array type.	G
SCALE	SMALLINT NOT NULL	<p>One of the following values:</p> <ul style="list-style-type: none"> For a data type that is based on the IBM-defined DECIMAL data type, the scale. The data type can be a distinct type or an array type. Number of fractional second digits for a data type that is based on the IBM-defined timestamp or timestamp with time zone type. For a data type that is based on the IBM-defined TIMESTAMP or TIMESTAMP WITH TIME ZONE type, the number of fractional-second digits. For any other data type, the value is 0. <p>If the value is a timestamp, the LENGTH is 10 and the SCALE is 0, the number of fractional second digits is 6.</p>	G
SUBTYPE	CHAR(1) NOT NULL	<p>Subtype of the data type, if the source type is one of the character types. The data type can be a distinct type or an array type. Possible values are:</p> <p>B The subtype is FOR BIT DATA.</p> <p>S The subtype is FOR SBCS DATA.</p> <p>M The subtype is FOR MIXED DATA.</p> <p>blank The source type is not a character type.</p>	G
CREATEDTS	TIMESTAMP NOT NULL	Time when the data type was created.	G
ENCODING_SCHEME	CHAR(1) NOT NULL	<p>Encoding scheme of the data type:</p> <p>A ASCII</p> <p>E EBCDIC</p> <p>U Unicode</p>	G

Table 297. SYSIBM.SYSDATATYPES table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
REMARKS	VARCHAR(762) NOT NULL	A character string provided by the user with the COMMENT statement.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner: blank Authorization ID L Role	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G
INLINE_LENGTH	INTEGER NOT NULL WITH DEFAULT -1	The inline length attribute of the type if it is based on a LOB source type: -1 This type does not specify INLINE LENGTH greater than or equal to 0 The inline length attribute (in byte) of the type if it is based on a LOB source type	G
ARRAYLENGTH	BIGINT NOT NULL WITH DEFAULT	Maximum cardinality, if the data type is an ordinary array type. For all other data types, the value is 0.	G
ARRAYINDEXTYPEID	INTEGER NOT NULL WITH DEFAULT	Data type of the index, if the data types is an associative array type. For all other data types, the value is 0.	G
ARRAYINDEXTYPELEN	BIGINT NOT NULL WITH DEFAULT	Maximum length of the array index, if the data types is an associative array type. For all other data types, the value is 0.	G
ARRAYINDEXSUBTYPE	CHAR(1) NOT NULL WITH DEFAULT	Subtype of the array index: B The subtype is FOR BIT DATA. S The subtype is FOR SBCS DATA. M The subtype is FOR MIXED DATA. blank The array index is not a character type.	G

SYSDBAUTH catalog table

The SYSDBAUTH table records the privileges that are held by users over databases. The schema is SYSIBM.

Table 298. SYSIBM.SYSDBAUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID or role of the user who granted the privileges. Could also be PUBLIC.	G
GRANTEE	VARCHAR(128) NOT NULL	Application ID of the user who holds the privilege. Could also be PUBLIC for a grant to PUBLIC.	G
NAME	VARCHAR(24) NOT NULL	Database name.	G
—	CHAR(12) NOT NULL	Internal use only.	I
DATEGRANTED	CHAR(6) NOT NULL	Not used.	N
TIMEGRANTED	CHAR(8) NOT NULL	Not used.	N
GRANTEETYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantee: blank Authorization ID L Role	G

Table 298. SYSIBM.SYSDBAUTH table column descriptions (continued)

Column name	Data type	Description	Use
AUTHHOWGOT	CHAR(1) NOT NULL	Authorization level of the user from whom the privileges were received. This authorization level is not necessarily the highest authorization level of the grantor. blank Not applicable C DBCTRL D DBADM E SECADM G ACCESSCTRL L SYSCTRL M DBMAINT S SYSADM	G
CREATETABAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can create tables within the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
CREATETSAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can create table spaces within the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
DBADMAUTH	CHAR(1) NOT NULL	Whether the GRANTEE has DBADM authority over the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G

Table 298. SYSIBM.SYSDBAUTH table column descriptions (continued)

Column name	Data type	Description	Use
DBCTRLAUTH	CHAR(1) NOT NULL	Whether the GRANTEE has DBCTRL authority over the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
DBMAINTAUTH	CHAR(1) NOT NULL	Whether the GRANTEE has DBMAINT authority over the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
DISPLAYDBAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can issue the DISPLAY command for the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
DROPAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can issue the ALTER DATABASE and DROP DATABASE statement: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
IMAGCOPYAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the COPY, MERGECOPY, MODIFY, and QUIESCE utilities on the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G

Table 298. SYSIBM.SYSDBAUTH table column descriptions (continued)

Column name	Data type	Description	Use
LOADAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the LOAD utility to load tables in the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
REORGAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the REORG utility to reorganize table spaces and indexes in the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
RECOVERDBAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the RECOVER and REPORT utilities on table spaces in the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
REPAIRAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the DIAGNOSE and REPAIR utilities on table spaces and indexes in the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
STARTDBAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the START command against the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G

Table 298. SYSIBM.SYSDBAUTH table column descriptions (continued)

Column name	Data type	Description	Use
STATSAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the CHECK and RUNSTATS utilities against the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
STOPAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can issue the STOP command against the database: blank Privilege is not held G Privilege held with the GRANT option Y Privilege is held without the GRANT option	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
GRANTEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the GRANT statement was executed.	G
GRANTORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantor: blank Authorization ID L Role	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSDBRM catalog table

The SYSDBRM table contains one row for each DBRM of each application plan. The schema is SYSIBM.

Table 299. SYSIBM.SYSDBRM table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(24) NOT NULL	Name of the DBRM.	G
TIMESTAMP	CHAR(8) NOT NULL FOR BIT DATA	Consistency token.	S
PDSNAME	VARCHAR(132) NOT NULL	Name of the partitioned data set of which the DBRM is a member.	G
PLNAME	VARCHAR(24) NOT NULL	Name of the application plan of which this DBRM is a part.	G
PLCREATOR	VARCHAR(128) NOT NULL	Authorization ID of the owner of the application plan.	G
PRECOMPTIME	CHAR(8) NOT NULL	Not used.	N
PRECOMPDATE	CHAR(6) NOT NULL	Not used.	N
QUOTE	CHAR(1) NOT NULL	SQL string delimiter for the SQL statements in the DBRM: N Apostrophe Y Quotation mark	G
COMMA	CHAR(1) NOT NULL	Decimal point representation for SQL statements in the DBRM: N Period Y Comma	G

Table 299. SYSIBM.SYSDBRM table column descriptions (continued)

Column name	Data type	Description	Use
HOSTLANG	CHAR(1) NOT NULL	The host language used: B Assembler language C OS/VS COBOL D C F Fortran P PL/I 2 VS COBOL II or IBM COBOL Release 1 (formerly called COBOL/370) 3 IBM COBOL (Release 2 or subsequent releases) 4 C++	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
CHARSET	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether the system CCSID for SBCS data was 290 (Katakana) when the program was precompiled: A No K Yes	G
MIXED	CHAR(1) NOT NULL WITH DEFAULT	Indicates if mixed data was in effect when the application program was precompiled (for more on when mixed data is in effect, see “Character strings” on page 104): N No Y Yes	G

Table 299. SYSIBM.SYSDBRM table column descriptions (continued)

Column name	Data type	Description	Use
DEC31	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether DEC31 was in effect when the program was precompiled: blank No Y Yes For more information, see “Arithmetic operators in expressions” on page 253.	G
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	Version identifier for the DBRM.	G
PRECOMPTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the DBRM was precompiled.	G
PLCREATORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of creator: blank Authorization ID L Role	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G

SYSDEPENDENCIES catalog table

The SYSDEPENDENCIES table records the dependencies between objects. The schema is SYSIBM.

Table 300. SYSIBM.SYSDEPENDENCIES table column descriptions

Column name	Data type	Description	Use
BNAME	VARCHAR(128) NOT NULL	Name of the object on which another object is dependent. If BTYPE is F, the name is the specific name of the function. If BTYPE is W or Z, the name is the name of the table for which the period is defined.	G
BSCHEMA	VARCHAR(128) NOT NULL	Schema or qualifier of the object on which another object is dependent.	G
BCOLNAME	VARCHAR(128) NOT NULL WITH DEFAULT	Column name of the object on which another object is dependent.	G

Table 300. SYSIBM.SYSDEPENDENCIES table column descriptions (continued)

Column name	Data type	Description	Use
BCOLNO	SMALLINT NOT NULL WITH DEFAULT	Column number of the object on which another object is dependent.	G
BTYPE	CHAR(1) NOT NULL	<p>The type of object that is identified by BNAME, BSCHEMA, and BCOLNAME:</p> <p>C Column</p> <p>E INSTEAD OF trigger</p> <p>F Function</p> <p>G Global temporary table</p> <p>H Global variable</p> <p>I Index</p> <p>M Materialized query table</p> <p>O Procedure</p> <p>P Partitioned table space</p> <p>Q Sequence</p> <p>R Table space</p> <p>S Synonym</p> <p>T Table</p> <p>U User-defined type, which is a distinct type or an array type.</p> <p>V View</p> <p>W SYSTEM_TIME period</p> <p>Z BUSINESS_TIME period</p> <p>0 (zero) Alias</p>	G
BOWNER	VARCHAR(128) NOT NULL WITH DEFAULT	Authorization ID of the owner of the object on which another object is dependent.	G

Table 300. SYSIBM.SYSDEPENDENCIES table column descriptions (continued)

Column name	Data type	Description	Use
BOWNERTYPE	CHAR(1) NOT NULL	Type of creator of the object on which another object is dependent: L Role blank Authorization ID that is not a role	G
DNAME	VARCHAR(128) NOT NULL	Name of the object that has dependencies on another object.	G
DSHEMA	VARCHAR(128) NOT NULL	Schema or qualifier of the object that has dependencies on another object.	G
DCOLNAME	VARCHAR(128) NOT NULL	Column name of the object that has dependencies on another object.	G
DCOLNO	SMALLINT NOT NULL WITH DEFAULT	Column number of the object that has dependencies on another object.	G
DTYPE	CHAR(1) NOT NULL	The type of the object that is identified by DSHEMA, DNAME, DCOLNAME, and DVERSION: B Trigger package for basic trigger "1" on page 2464 C Generated column F Function I Index M Materialized query table "1" on page 2464 O Procedure "1" on page 2464 V View "1" on page 2464 X Row permission Y Column mask 1 Trigger package for an advanced trigger	G
DOWNER	VARCHAR(128) NOT NULL	Authorization ID of the owner of the object that has dependencies on another object.	G

Table 300. SYSIBM.SYSDEPENDENCIES table column descriptions (continued)

Column name	Data type	Description	Use
DOWNERTYPE	CHAR(1) NOT NULL	Type of creator of the object that has dependencies on another object: L Role blank Authorization ID if not a role	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
BAUTH	SMALLINT NOT NULL WITH DEFAULT	The privilege that is held on the object on which another object is dependent.	G
DVERSION	VARCHAR(122) NOT NULL WITH DEFAULT	The version identifier of the object that is identified by DSCHEMA and DNAME if the object has a version. This column contains a zero length string for the objects that are created prior to DB2 10 and for the rows that correspond to objects without versions.	G

Notes:

- For base objects that were created in DB2 10 or earlier, the SYSDEPENDENCIES catalog table contains no information for dependencies on objects of the following types:
 - For views or materialized query tables, see [“SYSVIEWDEP catalog table” on page 2757](#).
 - For SQL scalar functions, procedures, or triggers, see [“SYSPACKDEP catalog table” on page 2577](#) and [“SYSSEQUENCESDEP catalog table” on page 2671](#).

SYSDDUMMY1 catalog table

The SYSDDUMMY1 catalog table contains one row. It is used for SQL statements in which a table reference is required, but the contents of the table are not important. The schema is SYSIBM.

Unlike most other catalog tables, which reside in Unicode table spaces, the SYSIBM.SYSDDUMMY1 table resides in the SYSEBCDC table space, which is defined with the EBCDIC encoding scheme.

Table 301. SYSIBM.SYSDDUMMY1 table column descriptions

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSDUMMYA catalog table

The SYSDUMMYA table contains one row. It is used for SQL statements in which a table reference is required, but the contents of the table are not important. The schema is SYSIBM.

The SYSIBM.SYSDUMMYA table resides in the SYSTSASC table space, which is defined with the CCSID ASCII encoding scheme.

Table 302. SYSIBM.SYSDUMMYA table column descriptions

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSDUMMYE catalog table

The SYSDUMMYE table contains one row. It is used for SQL statements in which a table reference is required, but the contents of the table are not important. The schema is SYSIBM.

The SYSIBM.SYSDUMMYE table resides in the SYSEBCDC table space, which is defined with the EBCDIC encoding scheme.

Table 303. SYSIBM.SYSDUMMYE table column descriptions

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSDUMMYU catalog table

The SYSDUMMYU table contains one row. It is used for SQL statements in which a table reference is required, but the contents of the table are not important. The schema is SYSIBM.

The SYSIBM.SYSDUMMYU table resides in SYSTSUNI table space, which is defined with the Unicode encoding scheme.

Table 304. SYSIBM.SYSDUMMYU table column descriptions

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSDYNQRY catalog table

The SYSDYNQRY table contains information for the stabilization of access paths for dynamic SQL statements. The schema is SYSIBM.

Table 305. SYSIBM.SYSDYNQRY table column descriptions

Column name	Data type	Description	Use
SDQ_STMT_ID	BIGINT NOT NULL GENERATED BY DEFAULT AS IDENTITY	The identifier of the stabilized dynamic query.	
STBLGRP	VARCHAR(128) NOT NULL	The name of the stabilization group.	
COPYID	SMALLINT NOT NULL WITH DEFAULT	The copy type of the stabilized runtime structures for the query in this row: 0 The current copy. 4 An invalid copy.	
CURSQLID	VARCHAR (128) NOT NULL	The current SQLID for the stabilized dynamic query.	
CURSCHEMA	VARCHAR (128) NOT NULL	Current schema for stabilized dynamic query.	
CURAPPLCOMPAT	VARCHAR (10) NOT NULL	Current application compatibility for stabilized dynamic query.	
QUERY_HASH	CHAR(16) NOT NULL FOR BIT DATA	The hash key generated by the SQL statement text of the stabilized dynamic query.	
QUERY_HASH_VERSION	INTEGER NOT NULL	The version of the query hash.	

Table 305. SYSIBM.SYSDYNQRY table column descriptions (continued)

Column name	Data type	Description	Use
VALID	CHAR(1) NOT NULL	<p>Whether the stabilized dynamic query is valid.</p> <p>'A' An ALTER statement changed the description of the table or base table of a view referred to by the query. For a CREATE INDEX statement involving data sharing, VALID is also marked as 'A'. The changes do not invalidate the query.</p> <p>'H' An ALTER TABLE statement changed the description of the table or base table of a view referred to by the query. For objects that were created in Db2 releases prior to Version 5, the change invalidates the query.</p> <p>'N' The stabilized access path is not valid.</p> <p>'Y' The stabilized access path for the dynamic query is valid.</p>	
LASTUSED	DATE WITH DEFAULT	The date on which the query that uses the stabilized runtime structures was last run.	
RELBOUND	CHAR(1) NOT NULL	The Db2 release in which the query was stabilized. See Release dependency indicators .	
GROUP_MEMBER	VARCHAR(24) NOT NULL	The data sharing member name that updates the row.	
UPDATEDTS	TIMESTAMP NOT NULL	Timestamp when statement was stabilized.	
ROWID	ROWID NOT NULL GENERATED ALWAYS	Internal use only.	
STMTTEXT	CLOB (2M) NOT NULL	The text of the SQL statement and any attribute string.	
DATA1	BLOB(2G) INLINE LENGTH (32329)	Internal use only.	
DATA2	BLOB(2G) NOT NULL	Internal use only.	
DATA3	BLOB(2G) NOT NULL	Internal use only.	
DATA4	BLOB(2G) NOT NULL	Internal use only.	
DATA5	VARCHAR(128) NOT NULL	Internal use only.	

Table 305. SYSIBM.SYSDYNQRY table column descriptions (continued)

Column name	Data type	Description	Use
DATA6	CHAR(8) NOT NULL FOR BIT DATA	Internal use only.	
FUNCTION_LVL	VARCHAR(10)	The function level of the query.	G

SYSDYNQRYDEP catalog table

The SYSDYNQRYDEP table contains information about dependencies for dynamic query packages. The schema is SYSIBM.

Access paths for SQL statements might depend on objects that Db2 does not actually use when it processes the selected access paths. Such dependencies are recorded in the SYSDYNQRYDEP catalog table, but they are not be shown in EXPLAIN output.

Table 306. SYSIBM.SYSDYNQRYDEP table column descriptions

Column name	Data type	Description	Use
SDQ_STMT_ID	BIGINT NOT NULL	The identifier of the stabilized dynamic SQL statement.	G
COPYID	SMALLINT NOT NULL	The copy type of the stabilized runtime structures for the query in this row: 0 The current copy. 1 The previous copy. 2 The original copy.	G
BQUALIFIER	VARCHAR(128) NOT NULL	The value of the column depends on the type of object: <ul style="list-style-type: none"> If BNAME identifies a table space (BTYPE is 'R'), the value is the name of its database. If BNAME identifies a table on which a period is defined (BTYPE is 'W' or 'Z'), the value is the qualifier of that table. If BNAME identifies user-defined function, a cast function, a stored procedure, or a sequence (BTYPE is 'F', 'O', or 'Q'), the value is the schema name. If BNAME identifies a role, the value is blank. Otherwise, the value is the schema of BNAME. 	G
BNAME	VARCHAR(128) NOT NULL	The name of the object that the query depends on.	G

Table 306. SYSIBM.SYSDYNQRYDEP table column descriptions (continued)

Column name	Data type	Description	Use
BTYPE	CHAR(1) NOT NULL	Type of object identified by BNAME and BQUALIFIER: 'E' INSTEAD OF trigger 'F' User-defined function or cast function 'G' Global temporary table. 'I' Index. 'M' Materialized query table 'O' Stored procedure 'P' Partitioned table space if it is defined as LARGE or with the DSSIZE parameter 'Q' Sequence object 'R' Table space 'S' Synonym 'T' Table 'U' Distinct type 'V' View 'W' SYSTEM_TIME period 'Z' BUSINESS_TIME period '0' (zero) Alias	G
CLASS	CHAR(1) NOT NULL	'A' Authorization dependency 'D' Data Definition Language dependency	G

Table 306. SYSIBM.SYSDYNQRYDEP table column descriptions (continued)

Column name	Data type	Description	Use
BAUTH	SMALLINT NOT NULL WITH DEFAULT	<p>The privilege that is held on the object on which the query depends. The privilege applies only when CLASS is 'A'.</p> <p>50 SELECTAUTH</p> <p>51 INSERTAUTH</p> <p>52 DELETEAUTH</p> <p>53 UDPATEAUTH</p> <p>64 EXECUTEAUTH</p> <p>263 USAGEAUTH</p> <p>291 READAUTH</p> <p>292 WRITEAUTH</p> <p>0 The column is not used. CLASS is 'D'.</p>	G
AUTHID_TYPE	CHAR(1) NOT NULL WITH DEFAULT	<p>The type of authorization indicated by AUTHID.</p> <p>" (blank) The value of CLASS is 'D', or the value of CLASS is 'A' and AUTHID contains the name of an authorization ID.</p> <p>'L' AUTHID contains the name of a role.</p>	G
AUTHID	VARCHAR(128) NOT NULL WITH DEFAULT	The owner of the privilege on the object on which the query is dependent, or a zero-length string if the value of CLASS is 'D'.	G
DBNAME	VARCHAR(128) NOT NULL WITH DEFAULT	If the value of SDBADMAUTH is 'Y', DBNAME contains the name of the database on which the user or role indicated by AUTHID holds DBADM authority. Otherwise the value is blank.	G

Table 306. SYSIBM.SYSDYNQRYDEP table column descriptions (continued)

Column name	Data type	Description	Use
BADMINAUTH	CHAR(1) NOT NULL	The authority that allowed access to the object on which the query is dependent. The admin authority only applies when CLASS is 'A'. 'B' SDBADMAUTH 'D' DBADMAUTH 'G' ACCESSCTRLAUTH 'K' SQLADMAUTH 'L' SYSCTRLAUTH 'S' SYSADMAUTH 'T' DATAACCESSAUTH " Authority not held	G

Table 313. SYSIBM.SYSFIELDS table column descriptions (continued)

Column name	Data type	Description	Use
TBNAME	VARCHAR(128) NOT NULL	Name of the table that contains the column.	G
COLNO	SMALLINT NOT NULL	Numeric place of this column in the table.	G
NAME	VARCHAR(128) NOT NULL	Name of the column.	G
FLDTYPE	VARCHAR(24) NOT NULL	Data type of the encoded values in the field (This column might contain statistical values from a prior release.): INTEGER Large integer SMALLINT Small integer FLOAT Floating-point CHAR Fixed-length character string VARCHAR Varying-length character string DECIMAL Decimal GRAPHIC Fixed-length graphic string VARG Varying-length graphic string	G

Table 313. SYSIBM.SYSFIELDS table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH	SMALLINT NOT NULL	The length attribute of the field; or, for a decimal field, its precision.(This column might contain statistical values from a prior release.) The number does not include the internal prefixes that can be used to record actual length and null state. INTEGER 4 SMALLINT 2 FLOAT 8 CHAR Length of string VARCHAR Maximum length of string DECIMAL Precision of number GRAPHIC Number of DBCS characters VARG Maximum number of DBCS characters	G
SCALE	SMALLINT NOT NULL	Scale if FLDTYPE is DECIMAL; otherwise, the value is 0.	G
FLDPROC	VARCHAR(24) NOT NULL	For a row describing a field procedure, the name of the procedure. (This column might contain statistical values from a prior release.)	G
WORKAREA	SMALLINT NOT NULL	For a row describing a field procedure, the size, in bytes, of the work area required for the encoding and decoding of the procedure. (This column might contain statistical values from a prior release.)	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
EXITPARML	SMALLINT NOT NULL	For a row describing a field procedure, the length of the field procedure parameter value block. (This column might contain statistical values from a prior release.)	G
PARMLIST	VARCHAR(735) NOT NULL	For a row describing a field procedure, the parameter list following FLDPROC in the statement that created the column, with insignificant blanks removed. (This column might contain statistical values from a prior release.)	G

Table 313. SYSIBM.SYSFIELDS table column descriptions (continued)

Column name	Data type	Description	Use
EXITPARM	VARCHAR(1530) NOT NULL FOR BIT DATA	For a row describing a field procedure, the parameter value block of the field procedure (the control block passed to the field procedure when it is invoked). (This column might contain statistical values from a prior release.)	G

SYSFOREIGNKEYS catalog table

The SYSFOREIGNKEYS table contains one row for every column of every foreign key. The schema is SYSIBM.

Table 314. SYSIBM.SYSFOREIGNKEYS table column descriptions

Column name	Data type	Description	Use
CREATOR	VARCHAR(128) NOT NULL	Schema or qualifier of the table that contains the column.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table that contains the column.	G
RELNAME	VARCHAR(128) NOT NULL	Constraint name for the constraint for which the column is part of the foreign key.	G
COLNAME	VARCHAR(128) NOT NULL	Name of the column.	G
COLNO	SMALLINT NOT NULL	Numeric place of the column in its table.	G
COLSEQ	SMALLINT NOT NULL	Numeric place of the column in the foreign key.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSINDEXCLEANUP catalog table

The rows in the SYSIBM.SYSINDEXCLEANUP table specify time windows to control index cleanup processing. Each row specifies a time window to enable or disable the cleanup of pseudo-deleted index entries for specific database objects. The schema is SYSIBM.

Table 315. SYSIBM.SYSINDEXCLEANUP table column descriptions

Column name	Data type	Description	Use
DBNAME	VARCHAR(24)	The name of the database that contains the index space.	G
INDEXSPACE	VARCHAR(24)	The name of the index space.	G

Table 315. SYSIBM.SYSINDEXCLEANUP table column descriptions (continued)

Column name	Data type	Description	Use
ENABLE_DISABLE	CHAR(1) NOT NULL	Specifies whether the row enables or disables cleanup for the specified index space. 'E' Enabled 'D' Disabled	G
MONTH_WEEK	CHAR(1) NOT NULL	Indicates the meaning of the value of the DAY column: 'M' The value indicates the day of the month. 'W' The value indicates a day of the week.	G
MONTH	SMALLINT	The month in which the time window applies. For example a 1 value indicates January and a 12 value indicates December. If this column contains NULL, the time window applies to all months. If the value of the MONTH_WEEK column is 'W', this value must be NULL.	G
DAY	SMALLINT	The day of the month or the day of the week for which the time window applies, as specified by the value of the MONTH_WEEK column. For example, if MONTH_WEEK='W', a 1 value indicates Monday and 7 indicates Sunday. If the value of this column is NULL, the time window applies to every day of the month or every day of the week.	G
START_TIME	TIME	The local time at the beginning of the time window specified by the row. When this column contains a null value, the row applies at all times on the specified days. This column must contain NULL if the END_TIME column contains NULL.	G
END_TIME	TIME	The local time at the end of the time window specified by the row. When this column contains a null value, the row applies at all times on the specified days. This column must contain NULL if the START_TIME column contains NULL.	G

SYSINDEXCONTROL catalog table

The SYSINDEXCONTROL table contains rows that specify time windows to control the use of memory allocated for an index. Each row specifies a time window for enabling or disabling the use of memory for a specific index object. The schema is SYSIBM.

Tip: Fast index traversal is intended to be automatically controlled by Db2. Use the SYSIBM.SYSINDEXCONTROL catalog table only to define exceptions, when the automatic processing is unacceptable. Index performance optimization might be impeded if the number of rows in this catalog table becomes too large.

Table 316. SYSIBM.SYSINDEXCONTROL table column descriptions

Column name	Data type	Description	Use
SSID	CHAR(4)	The name of a Db2 subsystem. In data sharing, if this column is NULL, this row applies to all members of the data sharing group.	G
PARTITION	SMALLINT	Partition number. If this column is NULL, then the action is applicable to all partitions of the specified index.	G
IXNAME	VARCHAR(128) NOT NULL	The name of the index.	G
IXCREATOR	VARCHAR(128) NOT NULL	The schema of the index.	G
TYPE	CHAR(1) NOT NULL WITH DEFAULT 'F'	The purpose for which memory is being used: F A structure for fast index traversal (FTB)	G
ACTION	CHAR(1) NOT NULL WITH DEFAULT 'A'	The action that is being performed: A The index is candidate for FTB creation when the INDEX_MEMORY_CONTROL subsystem parameter setting is (SELECTED, <i>n</i>) D Disable FTB creation F Force FTB creation	G
MONTH_WEEK	CHAR(1)	The meaning of the value in the DAY column. M A day of the month W A day of the week	G
MONTH	SMALLINT	Month during which the time window applies. Valid values are 1 (January) to 12 (December), or NULL. If this column contains NULL, the time window applies to all months. If MONTH_WEEK is 'W', this column value must be NULL.	G

Table 316. SYSIBM.SYSINDEXCONTROL table column descriptions (continued)

Column name	Data type	Description	Use
DAY	SMALLINT	Day of the month or day of the week for which the time window applies. <ul style="list-style-type: none"> If MONTH_WEEK='M', valid values are 1 (first day of the month) to the number of the last day of the month, or NULL. If MONTH_WEEK='W', valid values are 1 (Monday) to 7 (Sunday), or NULL. If this column contains NULL, the time window applies to every day of the month, or to every day of the week, depending on the value of the MONTH_WEEK column.	G
FROM_TIME	TIME	The time of day at which the time window begins. <p>If this column contains NULL, no limitation on the time exists. This column contains NULL if the TO_TIME column contains NULL.</p>	G
TO_TIME	TIME	The time of day at which the time window ends. <p>If this column contains NULL, no limitation on the time exists. This column contains NULL if the FROM_TIME column contains NULL.</p>	G

SYSINDEXES catalog table

The SYSINDEXES table contains one row for every index. The schema is SYSIBM.

Table 317. SYSIBM.SYSINDEXES table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the index.	G
CREATOR	VARCHAR(128) NOT NULL	The schema of the index.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table on which the index is defined.	G
TBCREATOR	VARCHAR(128) NOT NULL	The schema of the table.	G

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
UNIQUERULE	CHAR(1) NOT NULL	<p>Whether the index is unique:</p> <p>C Yes, and it is used to enforce the uniqueness of a UNIQUE constraint or hash key columns.</p> <p>D No (duplicates are allowed)</p> <p>U Yes</p> <p>P Yes, and it is a primary index (As in prior releases of Db2, a value of P is used for primary keys that are used to enforce a referential constraint.)</p> <p>N Yes, and it is defined with UNIQUE WHERE NOT NULL</p> <p>R Yes, and it is an index used to enforce the uniqueness of a non-primary parent key</p> <p>G Yes, and it is an index used to enforce the uniqueness of values in a column defined as ROWID GENERATED BY DEFAULT</p> <p>X Yes, and it is an index used to enforce the uniqueness of values in a column that is used to identify or find XML values associated with a specific row.</p>	G
COLCOUNT	SMALLINT NOT NULL	The number of columns in the key.	G
CLUSTERING	CHAR(1) NOT NULL	<p>Whether CLUSTER was specified for the index:</p> <p>N No</p> <p>Y Yes</p>	G

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
CLUSTERED	CHAR(1) NOT NULL	Whether the table is actually clustered by the index: N A significant number of rows are not in clustering order, or statistics have not been gathered. Y Most of the rows are in clustering order. blank Not applicable. This is an updatable column that can also be changed by the RUNSTATS utility. For a sparse index, the statistic is based on the actual contents of the index.	G
DBID	SMALLINT NOT NULL	Internal identifier of the database.	S
OBID	SMALLINT NOT NULL	Internal identifier of the index fan set descriptor.	S
ISOBID	SMALLINT NOT NULL	Internal identifier of the index page set descriptor.	S
DBNAME	VARCHAR(24) NOT NULL	Name of the database that contains the index.	G
INDEXSPACE	VARCHAR(24) NOT NULL	Name of the index space.	G
FIRSTKEYCARD	INTEGER NOT NULL	Db2 utilities might populate this column value, but its use is not recommended in DB2 version 5 and later. For best results use its replacement, the FIRSTKEYCARDF column.	N
FULLKEYCARD	INTEGER NOT NULL	Db2 utilities might populate this column value, but its use is not recommended in DB2 version 5 and later. For best results use its replacement, the FULLKEYCARDF column.	N
NLEAF	INTEGER NOT NULL	Number of active leaf pages in the index. The value is -1 if statistics have not been gathered. This is an updatable column.	S
NLEVELS	SMALLINT NOT NULL	Number of levels in the index tree. If the index is partitioned, it is the maximum of the number of levels in the index tree for all the partitions. The value is -1 if statistics have not been gathered. This is an updatable column.	S
BPOOL	CHAR(8) NOT NULL	Name of the buffer pool used for the index.	G

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
PGSIZE	SMALLINT NOT NULL	Contains the value 4, 8, 16, or 32 which indicates the size, in KB, of the leaf pages in the index. If the index was created prior to DB2 9, the value will be 4096 for a 4 KB page size.	G
ERASERULE	CHAR(1) NOT NULL	Whether the data sets are erased when dropped. The value is meaningless if the index is partitioned: N No Y Yes	G
DSETPASS	VARCHAR(24) NOT NULL	Not used	N
CLOSERULE	CHAR(1) NOT NULL	Whether the data sets are candidates for closure when the limit on the number of open data sets is reached: N No Y Yes	G
SPACE	INTEGER NOT NULL	Number of kilobytes of DASD storage allocated to the index, as determined by the last execution of the STOSPACE utility. The value is 0 if the index is not related to a storage group, or if STOSPACE has not been run. If the index space is partitioned, the value is the total kilobytes of DASD storage allocated to all partitions that are defined in a storage group.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
CLUSTERRATIO	SMALLINT NOT NULL WITH DEFAULT	Percentage of rows that are in clustering order. For a partitioning index, it is the weighted average of all index partitions in terms of the number of rows in the partition. The value is 0 if statistics have not been gathered. The value is -2 if the index is for an auxiliary table. This is an updatable column. For a sparse index, the statistic is based on the actual contents of the index.	S
CREATEDBY	VARCHAR(128) NOT NULL WITH DEFAULT	Primary authorization ID of the user who created the index.	G

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
IOFACTOR	SMALLINT NOT NULL	Internal use only.	I
PREFETCHFACTOR	SMALLINT NOT NULL	Not used	N
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
INDEXTYPE	CHAR(1) NOT NULL WITH DEFAULT	The index type: 2 Type 2 index or a hash overflow index on non-partitioned tables. blank Type 1 index D Data-partitioned secondary index P An index that is both partitioned and is a partitioning index (index that is on a table that uses table-controlled partitioning).	G
FIRSTKEYCARDF	FLOAT NOT NULL WITH DEFAULT -1	Number of distinct values of the first key column. This number is an estimate if updated while collecting statistics on a single partition. The value is -1 if statistics have not been gathered. This is an updatable column. For a sparse index, the statistic is based on the actual contents of the index.	S
FULLKEYCARDF	FLOAT NOT NULL WITH DEFAULT -1	Number of distinct values of the key. The value is -1 if statistics have not been gathered. This is an updatable column. For a sparse index, the statistic is based on the actual contents of the index.	S
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the CREATE statement was executed for the index. If the index was created in a Db2 release prior to Version 5, the value is '0001-01-01.00.00.00.000000'.	G
ALTEREDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the most recent ALTER INDEX statement was executed for the index. If no ALTER INDEX statement has been applied, ALTEREDTS has the value of CREATEDTS. If the index was created in a Db2 release prior to Version 5, the value is '0001-01-01.00.00.00.000000'.	G

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
PIECESIZE	INTEGER NOT NULL WITH DEFAULT	Maximum size of a data set in KB for non-partitioned indexes. A value of 0 indicates a partitioned index or an index was created in an earlier release than DB2 version 5.	G
COPY	CHAR(1) NOT NULL WITH DEFAULT 'N'	Whether COPY YES was specified for the index, which indicates if the index can be copied and if SYSIBM.SYSLGRNX recording is enabled for the index. N No Y Yes	G
COPYLRSN	CHAR(10) NOT NULL WITH DEFAULT X'0000000000000000' FOR BIT DATA	The value can be either an RBA or LRSN. (LRSN is only for data sharing.) If the index is currently defined as COPY YES, the value is the RBA or LRSN when the index was created with COPY YES or altered to COPY YES, not the current RBA or LRSN. If the index is currently defined as COPY NO, the value is set to X'00000000000000000000' if the index was created with COPY NO; otherwise, if the index was altered to COPY NO, the value in COPYLRSN is not changed when the index is altered to COPY NO.	G
CLUSTERRATIOF	FLOAT NOT NULL WITH DEFAULT	When multiplied by 100, the value of the column is the percentage of rows that are in clustering order. For example, a value of '.9125' indicates 91.25%. For a partitioning index, it is the weighted average of all index partitions in terms of the number of rows in the partition. The value is 0 if statistics have not been gathered. The value is -2 if the index is for an auxiliary table, a node ID index or an XML index. This is an updatable column. For a sparse index, the statistic is based on the actual contents of the index.	G
SPACEF	FLOAT(8) NOT NULL WITH DEFAULT -1	Kilobytes of DASD storage. The value is -1 if statistics have not been gathered. This is an updatable column.	G
REMARKS	VARCHAR(762) NOT NULL WITH DEFAULT	A character field string provided by the user with the COMMENT statement.	G

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
PADDED	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether keys within the index are padded for varying-length column data: Y The index contains varying-length character or graphic data and is PADDED (the varying-length columns are padded to their maximum length). N The index contains varying-length character or graphic data and is NOT PADDED (the varying-length columns are not padded to their maximum length). Index-only access to all column data is possible. blank The index does not contain varying-length character or graphic data, or the index was created or altered prior to DB2 version 8.	G
VERSION	SMALLINT NOT NULL WITH DEFAULT	The version of the data row format for this index. A value of zero indicates that a version-creating alter has never occurred against this index.	G
OLDEST_VERSION	SMALLINT NOT NULL WITH DEFAULT	The version number describing the oldest format of data in the index space and any image copies of the index.	G
CURRENT_VERSION	SMALLINT NOT NULL WITH DEFAULT	The version number describing the newest format of data in the index space. A zero indicates that the index space has never had been versioned. After the version number reaches the maximum value, the number will wrap back to one.	G
RELCREATED	CHAR(1) NOT NULL WITH DEFAULT	Release of Db2 that was used to create the object, blank for indexes created before Version 8. For all other values, see Release dependency indicators .	G
AVGKEYLEN	INTEGER NOT NULL WITH DEFAULT -1	Average length of keys within the index. The value is -1 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	G
KEYTARGET_COUNT	SMALLINT NOT NULL WITH DEFAULT	The number of key-targets for an extended index. The value is 0 for a simple index.	G
UNIQUE_COUNT	SMALLINT NOT NULL WITH DEFAULT	The number of columns or key-targets that make up the unique constraint of an index, when other non-constraint enforcing columns or key-targets exist. Otherwise the value is 0.	G

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
IX_EXTENSION_T E	CHAR(1) NOT NULL WITH DEFAULT	Identifies the type of extended index: N Node ID index S Index on a scalar expression T Spatial index V XML index blank Simple index	G
COMPRESS	CHAR(1) NOT NULL WITH DEFAULT ' N'	Indicates whether index compression is active: N Index compression is not active Y Index compression is active	G
OWNER	VARCHAR(128) NOT NULL WITH DEFAULT	Authorization ID of the owner of the index. The value is an empty string for indexes created in a Db2 release prior to DB2 9.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner: blank Authorization ID L Role	G
DATAREPEATFA CTOR F	FLOAT NOT NULL WITH DEFAULT -1	The anticipated number of data pages that will be touched following an index key order. This number is -1 if statistics have not been collected. This is an updatable column. For a sparse index, the statistic is based on the actual contents of the index.	G
ENVID	INTEGER NOT NULL WITH DEFAULT	Internal environment identifier.	G
ROWID	ROWID NOT NULL GENERATED ALWAYS	ROWID column, created for the lob columns in this table.	G

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
HASH	CHAR(1) NOT NULL WITH DEFAULT N	Whether the index is the hash overflow index for a hash table. N No. N is the default. Y Yes	G
SPARSE	CHAR(1) NOT NULL WITH DEFAULT N	Whether the index is sparse or not. N No. N is the default. Every data row has an index entry. Y Yes. This index might not have an entry for each data row in the table. X Excluded. This index will not have an index entry when every data row for a key column contains the NULL value.	G
PARSETREE	BLOB(1G) NOT NULL WITH DEFAULT	Internal use only.	I
RTSECTION	BLOB(1G) NOT NULL WITH DEFAULT	Internal use only.	I
DSSIZE	INTEGER WITH DEFAULT NULL	The maximum size in KB of a partitioned index data set for a table space with relative page numbers. 0 for nonpartitioned indexes or partitioned indexes for table spaces with absolute page numbering. NULL for indexes that were created before Db2 12.	G
PAGENUM	CHAR(1) NOT NULL WITH DEFAULT 'A'	Format of page numbers for the index, indicating absolute or relative page numbering. A Indicates absolute addressing. The page number is an absolute number from the first page of the index. If the index is partitioned, the partition number is embedded in the page number. R Indicates relative addressing for partitioned indexes. The page number is relative to the start of the partition. NULL for objects that were created before Db2 12	G
PARTKEYCOLNUM	SMALLINT NOT NULL WITH DEFAULT	Reserved for future IBM use.	I

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
STATUS	CHAR(1) NOT NULL WITH DEFAULT	Reserved for future IBM use.	I
INDEXSTATUS	VARCHAR(30) NOT NULL WITH DEFAULT	Reserved for future IBM use.	I
PARTITIONS	SMALLINT	Reserved for future IBM use.	I
PQTY	INTEGER WITH DEFAULT NULL	<p>For user-managed data sets, the value is the primary space allocation in units of 4 KB storage blocks or -1.</p> <p>PQTY is based on a value of PRIQTY in the appropriate CREATE or ALTER TABLESPACE statement. Unlike PQTY, however, PRIQTY accepts space in 1 KB units.</p> <p>A value of -1 indicates that one of the following cases is true:</p> <ul style="list-style-type: none"> • PRIQTY was not specified for a CREATE TABLESPACE statement or for any subsequent ALTER TABLESPACE statements. • -1 was the most recently specified value for PRIQTY, either on the CREATE TABLESPACE statement or a subsequent ALTER TABLESPACE statement. <p>This column contains the null value when the value is unknown for objects created prior to Db2 12.</p>	
STORTYPE	CHAR(1) WITH DEFAULT NULL	<p>Type of storage allocation:</p> <p>E Explicit (storage group not used)</p> <p>I Implicit (storage group used)</p> <p>This column is not used for rows representing catalog indexes. Catalog data sets are managed by Db2</p> <p>This column contains the null value when the value is unknown for objects created prior to Db2 12.</p>	
STORNAME	VARCHAR(128) WITH DEFAULT NULL	<p>Name of storage group used for space allocation. Blank if storage group not used.</p> <p>This column is not used for rows representing catalog indexes. Catalog data sets are managed by Db2</p> <p>This column contains the null value when the value is unknown for objects created prior to Db2 12.</p>	

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
VCATNAME	VARCHAR(24) WITH DEFAULT NULL	Name of integrated catalog facility catalog used for space allocation. This column is not used for rows representing catalog indexes. Catalog data sets are managed by Db2 This column contains the null value when the value is unknown for objects created prior to Db2 12.	
FREEPAGE	SMALLINT WITH DEFAULT NULL	Number of pages loaded before a page is left as free space. This column contains the null value when the value is unknown for objects created prior to Db2 12.	
PCTFREE	SMALLINT WITH DEFAULT NULL	Percentage of each page left as free space. This column contains the null value when the value is unknown for objects created prior to Db2 12.	
GBPCACHE	CHAR(1) WITH DEFAULT NULL	Group buffer pool cache option specified for this index or index partition. Blank Only changed pages are cached in the group buffer pool. A Changed and unchanged pages are cached in the group buffer pool. N No data is cached in the group buffer pool. This column contains the null value when the value is unknown for objects created prior to Db2 12.	
SECQTYI	INTEGER WITH DEFAULT NULL	Secondary space allocation in units of 4 KB storage. For user-managed data sets, the value is the secondary space allocation in units of 4 KB blocks. This column contains the null value when the value is unknown for objects created prior to Db2 12.	
ENFORCED_CONS	CHAR(1) NOT NULL WITH DEFAULT	Whether the index is an enforcing non-unique constraint. Blank The index does not enforce a non-unique constraint. F The index enforces a foreign key for a temporal referential constraint.	

Table 317. SYSIBM.SYSINDEXES table column descriptions (continued)

Column name	Data type	Description	Use
IMPLICIT	CHAR(1) NOT NULL WITH DEFAULT	Whether the index was implicitly created. Possible values are: Blank n/a N The index was explicitly created. Y The index was implicitly created.	
REGENERATETS	TIMESTAMP(12) NOT NULL	The time when the object was regenerated. The value is valid only for objects that can be regenerated. If no regeneration has occurred, this column contains the same value as the CREATEDTS column.	G
<u>FL 502</u> KEYLABEL	VARCHAR(192) NOT NULL WITH DEFAULT	The key label that is specified at the table level. Otherwise, the value is an empty string.	

SYSINDEXES_HIST catalog table

The SYSINDEXES_HIST catalog table contains rows from SYSINDEXES. The schema is SYSIBM.

Rows are added or changed in the SYSINDEXES_HIST catalog table when RUNSTATS collects history statistics. Rows in this table can also be inserted, updated, and deleted.

Table 318. SYSIBM.SYSINDEXES_HIST table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the index.	G
CREATOR	VARCHAR(128) NOT NULL	The schema of the index.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table on which the index is defined.	G
TBCREATOR	VARCHAR(128) NOT NULL	The schema of the table.	G
CLUSTERING	CHAR(1) NOT NULL	Whether CLUSTER was specified when the index was created: N No Y Yes	G
NLEAF	INTEGER NOT NULL WITH DEFAULT -1	Number of active leaf pages in the index. The value is -1 if statistics have not been gathered.	S

Table 318. SYSIBM.SYSINDEXES_HIST table column descriptions (continued)

Column name	Data type	Description	Use
NLEVELS	SMALLINT NOT NULL WITH DEFAULT -1	Number of levels in the index tree. If the index is partitioned, it is the maximum of the number of levels in the index tree for all the partitions. The value is -1 if statistics have not been gathered.	S
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
FIRSTKEYCARDF	FLOAT(8) NOT NULL WITH DEFAULT -1	Number of distinct values of the first key column. This number is an estimate if updated while collecting statistics on a single partition. The value is -1 if statistics have not been gathered.	S
FULLKEYCARDF	FLOAT(8) NOT NULL WITH DEFAULT -1	Number of distinct values of the key. The value is -1 if statistics have not been gathered.	S
CLUSTERRATIOF	FLOAT(8) NOT NULL	Percentage of rows that are in clustering order. For a partitioning index, it is the weighted average of all index partitions in terms of the number of rows in the partition. The value is 0 if statistics have not been gathered. The value is -2 if the index is for an auxiliary table. For a sparse index, the statistic is based on the actual contents of the index.	G
SPACEF	FLOAT(8) NOT NULL WITH DEFAULT -1	Number of kilobytes of DASD storage allocated to the index space partition. The value is -1 if statistics have not been gathered.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
AVGKEYLEN	INTEGER NOT NULL WITH DEFAULT -1	Average length of keys within the index. The value is -1 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	G
DATAREPEATFACTORF	FLOAT NOT NULL WITH DEFAULT -1	The anticipated number of data pages that will be touched following an index key order. This number is -1 if statistics have not been collected. This is an updatable column. For a sparse index, the statistic is based on the actual contents of the index.	G

SYSINDEXES_RTSECT catalog table

The SYSINDEXES_RTSECT catalog table is an auxiliary table for the RTSECTION column of the SYSIBM.SYSINDEXES table and is required to hold LOB data. The schema is SYSIBM.

Table 319. SYSIBM.SYSINDEXES_RTSECT table column descriptions

Column name	Data type	Description	Use
—	BLOB(1G) NOT NULL WITH DEFAULT	Internal use only.	I

SYSINDEXES_TREE catalog table

The SYSINDEXES_TREE catalog table is an auxiliary table for the PARSETREE column of the SYSINDEXES table and is required to hold LOB data. The schema is SYSIBM.

Table 320. SYSIBM.SYSINDEXES_TREE table column descriptions

Column name	Data type	Description	Use
—	BLOB(1G) NOT NULL WITH DEFAULT	Internal use only.	I

SYSINDEXPART catalog table

The SYSINDEXPART table contains one row for each nonpartitioned secondary index (NPSI) and one row for each partition of a partitioning index or a data-partitioned secondary index. The schema is SYSIBM.

Table 321. SYSIBM.SYSINDEXPART table column descriptions

Column name	Data type	Description	Use
PARTITION	SMALLINT NOT NULL	Partition number; Zero if index is not partitioned.	G
IXNAME	VARCHAR(128) NOT NULL	Name of the index.	G
IXCREATOR	VARCHAR(128) NOT NULL	The schema of the index.	G

Table 321. SYSIBM.SYSINDEXPART table column descriptions (continued)

Column name	Data type	Description	Use
PQTY	INTEGER NOT NULL	<p>For user-managed data sets, the value is the primary space allocation in units of 4KB storage blocks or -1.</p> <p>PQTY is based on a value of PRIQTY in the appropriate CREATE or ALTER INDEX statement. Unlike PQTY, however, PRIQTY asks for space in 1KB units.</p> <p>A value of -1 indicates that either of the following cases is true:</p> <ul style="list-style-type: none"> • PRIQTY was not specified for a CREATE INDEX statement or for any subsequent ALTER INDEX statements. • -1 was the most recently specified value for PRIQTY, either on the CREATE INDEX statement or a subsequent ALTER INDEX statement. 	G
SQTY	SMALLINT NOT NULL	<p>For user-managed data sets, the value is the secondary space allocation in units of 4KB storage blocks or -1.</p> <p>SQTY is based on a value of SECQTY in the appropriate CREATE or ALTER INDEX statement. Unlike SQTY, however, SECQTY asks for space in 1KB units.</p> <p>A value of -1 indicates that either of the following cases is true:</p> <ul style="list-style-type: none"> • SECQTY was not specified for a CREATE INDEX statement or for any subsequent ALTER INDEX statements. • -1 was the most recently specified value for SECQTY, either on the CREATE INDEX statement or a subsequent ALTER INDEX statement. <p>If the value does not fit into the column, the value of the column is 32767. See the description of column SECQTYI.</p>	G
STORTYPE	CHAR(1) NOT NULL	<p>Type of storage allocation:</p> <p>E Explicit, and STORNAME names an integrated catalog facility catalog</p> <p>I Implicit, and STORNAME names a storage group</p> <p>This column is not used for rows representing catalog indexes. Catalog data sets are managed by Db2</p>	G
STORNAME	VARCHAR(128) NOT NULL	<p>Name of storage group or integrated catalog facility catalog used for space allocation.</p> <p>This column is not used for rows representing catalog indexes. Catalog data sets are managed by Db2</p>	G

Table 321. SYSIBM.SYSINDEXPART table column descriptions (continued)

Column name	Data type	Description	Use
VCATNAME	VARCHAR(24) NOT NULL	Name of integrated catalog facility catalog used for space allocation. This column is not used for rows representing catalog indexes. Catalog data sets are managed by Db2	G
CARD	INTEGER NOT NULL	Db2 utilities might populate this column value, but its use is not recommended in DB2 version 5 and later. For best results use its replacement, the CARDF column.	N
FAROFFPOS	INTEGER NOT NULL	Db2 utilities might populate this column value, but its use is not recommended in DB2 version 5 and later. For best results use its replacement, the FAROFFPOSF column.	N
LEAFDIST	INTEGER NOT NULL	100 times the average number of leaf pages between successive active leaf pages of the index. The value is -1 if statistics have not been gathered. The value is -2 if the index is an auxiliary index, a node ID index, or an XML index.	S
NEAROFFPOS	INTEGER NOT NULL	Db2 utilities might populate this column value, but its use is not recommended in DB2 version 5 and later. For best results use its replacement, the NEAROFFPOS column.	S
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
LIMITKEY	VARCHAR(512) NOT NULL FOR BIT DATA	The high value of the limit key of the partition in an internal format. An empty string if the index is not partitioned or for a data-partitioned secondary index (DPSI). If any column of the key has a field procedure, the internal format is the encoded form of the value.	S
FREEPAGE	SMALLINT NOT NULL	Number of pages that are loaded before a page is left as free space.	G
PCTFREE	SMALLINT NOT NULL	Percentage of each leaf or nonleaf page that is left as free space.	G

Table 321. SYSIBM.SYSINDEXPART table column descriptions (continued)

Column name	Data type	Description	Use
SPACE	INTEGER NOT NULL WITH DEFAULT	<p>Number of kilobytes of DASD storage allocated to the index space partition, as determined by the last execution of the STOSPACE utility.</p> <p>0 The STOSPACE or RUNSTATS utility has not been run or the data set for the index has been created during the first insert operation or when the LOAD utility was run.</p> <p>-1 The index was defined with the DEFINE NO clause, which defers the physical creation of the data sets until data is first inserted into the index, and data has yet to be inserted into the index.</p> <p>-2 The value exceeds the maximum size for an integer value. See the SPACEF column value.</p> <p>A non-negative value Indicates that the data sets for the index space are defined with the underlying data sets allocated.</p> <p>The STOSPACE utility updates this value if the index is related to a storage group. The RUNSTATS utility updates this value if run with RUNSTATS INDEX and UPDATE(ALL) or UPDATE(SPACE).</p>	G
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	<p>If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected.</p>	G
INDEXTYPE	CHAR(1) NOT NULL	Not used.	N
GBPCACHE	CHAR(1) NOT NULL WITH DEFAULT	<p>Group buffer pool cache option specified for this index or index partition.</p> <p>blank Only changed pages are cached in the group buffer pool.</p> <p>A Changed and unchanged pages are cached in the group buffer pool.</p> <p>N No data is cached in the group buffer pool.</p>	G

Table 321. SYSIBM.SYSINDEXPART table column descriptions (continued)

Column name	Data type	Description	Use
FAROFFPOSF	FLOAT NOT NULL WITH DEFAULT -1	Number of referred to rows far from optimal position because of an insert into a full page. The value is -1 if statistics have not been gathered. The value is -2 if the index is an auxiliary index, a node ID index, or an XML index. The column is not applicable for an index on an auxiliary table. For a sparse index, the statistic is based on the actual contents of the index.	S
NEAROFFPOSF	FLOAT NOT NULL WITH DEFAULT -1	Number of referred to rows near, but not at optimal position, because of an insert into a full page. The value is -2 if the index is an auxiliary index, a node ID index, or an XML index. Not applicable for an index on an auxiliary table. For a sparse index, the statistic is based on the actual contents of the index.	S
CARDF	FLOAT NOT NULL WITH DEFAULT -1	Number of RIDs in the index that refer to data rows or LOBs. The value is -1 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	S
SECQTYI	INTEGER NOT NULL WITH DEFAULT	Secondary space allocation in units of 4KB storage. For user-managed data sets, the value is the secondary space allocation in units of 4KB blocks.	G
IPREFIX	CHAR(1) NOT NULL WITH DEFAULT 'I'	The first character of the instance qualifier for this index's data set name. 'I' or 'J' are the only valid characters for this field. The default is 'I'.	G
ALTEREDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the most recent ALTER INDEX statement was executed for the index. If no ALTER INDEX statement has been applied, the value is '0001-01-01.00.00.00.000000'.	G
SPACEF	FLOAT(8) NOT NULL WITH DEFAULT -1	Kilobytes of DASD storage. The value is -1 if statistics have not been gathered. This is an updatable column.	G
DSNUM	INTEGER NOT NULL WITH DEFAULT -1	Number of data sets. The value is -1 if statistics have not been gathered. This is an updatable column.	G
EXTENTS	INTEGER NOT NULL WITH DEFAULT -1	Number of data set extents. The value is -1 if statistics have not been gathered. This is an updatable column. This value is only for the last DSNUM for the object.	G

Table 321. SYSIBM.SYSINDEXPART table column descriptions (continued)

Column name	Data type	Description	Use
PSEUDO_DEL_ENTRIES	INTEGER NOT NULL WITH DEFAULT -1	Number of pseudo deleted entries (entries that are logically deleted but still physically present in the index). For a non-unique index, value is the number of RIDs that are pseudo deleted. For a unique index, the value is the number of keys and RIDs that are pseudo deleted. The value is -1 if statistics have not been gathered. This is an updatable column.	G
LEAFNEAR	INTEGER NOT NULL WITH DEFAULT -1	Number of leaf pages physically near previous leaf page for successive active leaf pages. The value is -1 if statistics have not been gathered. This is an updatable column.	S
LEAFFAR	INTEGER NOT NULL WITH DEFAULT -1	Number of leaf pages located physically far away from previous leaf pages for successive (active leaf) pages accessed in an index scan. The value is -1 if statistics have not been gathered. This is an updatable column.	S
OLDEST_VERSION	SMALLINT NOT NULL WITH DEFAULT	The version number describing the oldest format of data in the index part and any image copies of the index part.	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT -1	Time when the partition was created.	G
AVGKEYLEN	INTEGER NOT NULL WITH DEFAULT -1	Average length of keys within the index. The value is -1 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	G
RBA_FORMAT	CHAR(1) NOT NULL WITH DEFAULT	The RBA and LRSN format for the page sets of the index partition: B The page sets are still in the basic 6-byte format. E The page sets are converted to the extended 10-byte format. U The format is undefined because DEFINE NO was specified when the index was created. blank The page sets are still in the basic 6-byte format, the index was created before Db2 11 new-function mode (NFM), and no utility that sets the RBA_FORMAT value has run for the index partition in Db2 11 NFM or higher.	G

Table 321. SYSIBM.SYSINDEXPART table column descriptions (continued)

Column name	Data type	Description	Use
DSSIZE	INTEGER WITH DEFAULT NULL	The maximum size in KB of a partitioned index data set for a table space with relative page numbers. 0 for nonpartitioned indexes or partitioned indexes for table spaces with absolute page numbering. NULL for indexes that were created before Db2 12.	G
PAGENUM	CHAR(1) NOT NULL WITH DEFAULT 'A'	Format of pages for the index, indicating absolute or relative page numbering. A Indicates absolute addressing so that PAGENUM contains the embedded partition number. R Indicates relative addressing so that PAGENUM contains only the relative page number. NULL for objects that were created before Db2 12.	G
LIMITKEY_EXTERNAL	VARCHAR(765) NOT NULL	Reserved for future IBM use.	I

SYSINDEXPART_HIST catalog table

The SYSINDEXPART_HIST catalog table contains rows from SYSINDEXPART. The schema is SYSIBM.

Rows are added or changed in the SYSINDEXPART_HIST catalog table when RUNSTATS collects history statistics. Rows in this table can also be inserted, updated, and deleted.

Table 322. SYSIBM.SYSINDEXPART_HIST table column descriptions

Column name	Data type	Description	Use
PARTITION	SMALLINT NOT NULL	Partition number. Zero if index is not partitioned.	G
IXNAME	VARCHAR(128) NOT NULL	Name of the index.	G
IXCREATOR	VARCHAR(128) NOT NULL	The schema of the index.	G

Table 322. SYSIBM.SYSINDEXPART_HIST table column descriptions (continued)

Column name	Data type	Description	Use
PQTY	INTEGER NOT NULL	<p>For user-managed data sets, the value is the primary space allocation in units of 4KB storage blocks or -1.</p> <p>For user-specified values of PRIQTY other than -1, the value is set to the primary space allocation only if RUNSTATS INDEX with UPDATE(ALL) or UPDATE(SPACE) is executed; otherwise, the value is zero. PQTY is based on a value of PRIQTY in the appropriate CREATE or ALTER INDEX statement. Unlike PQTY, however, PRIQTY asks for space in 1KB units.</p> <p>A value of -1 indicates that either of the following cases is true:</p> <ul style="list-style-type: none"> • PRIQTY was not specified for a CREATE INDEX statement or for any subsequent ALTER INDEX statements. • -1 was the most recently specified value for PRIQTY, either on the CREATE INDEX statement or a subsequent ALTER INDEX statement. <p>If a storage group is not used, the value is 0.</p>	G
SECQTYI	INTEGER NOT NULL	<p>For user-managed data sets, the value is the secondary space allocation in units of 4KB storage blocks or -1.</p> <p>For user-specified values of SECQTY other than -1, the value is set to the secondary space allocation only if RUNSTATS INDEX with UPDATE(ALL) or UPDATE(SPACE) is executed; otherwise, the value is zero. SQTY is based on a value of SECQTY in the appropriate CREATE or ALTER INDEX statement. Unlike SQTY, however, SECQTY asks for space in 1KB units.</p> <p>A value of -1 indicates that either of the following cases is true:</p> <ul style="list-style-type: none"> • SECQTY was not specified for a CREATE INDEX statement or for any subsequent ALTER INDEX statements. • -1 was the most recently specified value for SECQTY, either on the CREATE INDEX statement or a subsequent ALTER INDEX statement. <p>If a storage group is not used, the value is 0.</p>	G
LEAFDIST	INTEGER NOT NULL WITH DEFAULT -1	<p>100 times the average number of leaf pages between successive active leaf pages of the index. The value is -1 if statistics have not been gathered.</p>	S
SPACEF	FLOAT(8) NOT NULL WITH DEFAULT -1	<p>Number of kilobytes of DASD storage allocated to the index space partition. The value is -1 if statistics have not been gathered.</p>	G

Table 322. SYSIBM.SYSINDEXPART_HIST table column descriptions (continued)

Column name	Data type	Description	Use
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
FAROFFPOSF	FLOAT(8) NOT NULL WITH DEFAULT -1	Number of referred to rows far from optimal position because of an insert into a full page. The value is -1 if statistics have not been gathered. The column is not applicable for an index on an auxiliary table. For a sparse index, the statistic is based on the actual contents of the index.	S
NEAROFFPOSF	FLOAT(8) NOT NULL WITH DEFAULT -1	Number of referred to rows near, but not at optimal position, because of an insert into a full page. Not applicable for an index on an auxiliary table. The value is -1 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	S
CARDF	FLOAT(8) NOT NULL WITH DEFAULT -1	Number of RIDs in the index that refer to data rows or LOBs. The value is -1 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	S
EXTENTS	INTEGER NOT NULL WITH DEFAULT -1	Number of data set extents. The value is -1 if statistics have not been gathered. This value is only for the last DSNUM for the object.	G
PSEUDO_DEL_ENTRIES	INTEGER NOT NULL WITH DEFAULT -1	Number of pseudo deleted entries. The value is -1 if statistics have not been gathered.	G
DSNUM	INTEGER NOT NULL WITH DEFAULT -1	Data set number within the table space. For partitioned index spaces, this value corresponds to the partition number for a single partition copy, or 0 for a copy of an entire partitioned index space. The value is -1 if statistics have not been gathered.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
LEAFNEAR	INTEGER NOT NULL WITH DEFAULT -1	Number of leaf pages physically near previous leaf page for successive active leaf pages. The value is -1 if statistics have not been gathered. This is an updatable column.	S

Table 322. SYSIBM.SYSINDEXPART_HIST table column descriptions (continued)

Column name	Data type	Description	Use
LEAFFAR	INTEGER NOT NULL WITH DEFAULT -1	Number of leaf pages located physically far away from previous leaf pages for successive (active leaf) pages accessed in an index scan. The value is -1 if statistics have not been gathered. This is an updatable column.	S
AVGKEYLEN	INTEGER NOT NULL WITH DEFAULT -1	Average length of keys within the index. The value is -1 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	G

SYSINDEXSPACESTATS catalog table

The SYSINDEXSPACESTATS table contains real time statistics for index spaces. The schema is SYSIBM.

Rows in this table can be inserted, updated, and deleted. However, the following columns cannot be updated: SYS_START, SYS_END, and TRANS_START.

In data sharing environments, the values in SYSIBM.SYSINDEXSPACESTATS can be negative for short periods of time for certain situations.

SYSIBM.SYSINDEXSPACESTATS has an associated history table, SYSIBM.SYSIXSPACESTATS_H, which provides temporal versioning of the catalog table. Both tables contain the same columns, with the same data types. The temporal relationship must be enabled before the history table can be used. Rows in the history table can be inserted, updated, and deleted with proper authorization. For information about enabling the temporal relationship, see [“Temporal versioning for Db2 catalog tables”](#) on page 2789.

Table 323. SYSIBM.SYSINDEXSPACESTATS table column descriptions

Column name	Data type	Description	Use
UPDATESTATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	The timestamp that the row in the SYSINDEXSPACESTATS table is inserted or last updated.	G
NLEVELS	SMALLINT	The number of levels in the index tree. A null value indicates that the number of levels is unknown.	G
NPAGES	INTEGER	The number of pages in the index tree that contain only pseudo-deleted index entries. This is an updatable column.	G
NLEAF	INTEGER	The number of leaf pages in the index. This is an updatable column.	G
NACTIVE	INTEGER	The number of active pages in the index space or partition. This value is equivalent to the number of pre-formatted pages. A null value indicates that the number of active pages is unknown.	G
SPACE	INTEGER	The amount of space, in KB, that is allocated to the index space or partition. For multi-piece, linear page sets, this value is the amount of space in all data sets. A null value indicates the amount of space is unknown.	G

Table 323. SYSIBM.SYSINDEXSPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
EXTENTS	SMALLINT	The number of extents in the index space or partition. For multi-piece index spaces, this value is the number of extents for the last data sets. For a data set that is stripped across multiple volumes, the value is the number of logical extents. A null value indicates the number of extents is unknown.	G
LOADRLASTTIME	TIMESTAMP	The timestamp that the LOAD REPLACE utility was last run on the index space or partition. A null value indicates that the LOAD REPLACE utility has never been run on the index space or partition or that the timestamp is unknown.	G
REBUILDLASTTIME	TIMESTAMP	The timestamp that the REBUILD INDEX utility was last run on the index space or partition. A null value indicates that the timestamp that the REBUILD INDEX was last run is unknown.	G
REORGLASTTIME	TIMESTAMP	The timestamp when the REORG INDEX utility was last run on the index space or partition, or if the REORG INDEX utility has not been run, the time when the index space or partition was created. A null value indicates that the timestamp is unknown.	G
REORGINSERTS	INTEGER	The number of index entries that have been inserted into the index space or partition since the last time the REORG, REBUILD INDEX, or LOAD REPLACE utilities were run, or since the object was created. A null value indicates that the number of inserted index entries is unknown.	G
REORGDELETES	INTEGER	The number of index entries that have been deleted from the index space or partition since the last time the REORG, REBUILD INDEX, or LOAD REPLACE utilities were run, or since the object was created. A null value indicates that the number of deleted index entries is unknown.	G
REORGAPPENDINSERT	INTEGER	The number of index entries that have a key value that is greater than the maximum key value in the index or partition that have been inserted into the index space or partition since the last time the REORG, REBUILD INDEX, or LOAD REPLACE utilities were run, or since the object was created. A null value indicates that the number of inserted index entries is unknown.	G

Table 323. SYSIBM.SYSINDEXSPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
REORGPSEUDODELETES	INTEGER	<p>The number of pseudo-deleted index entries stored in the index space or partition. A pseudo-delete is a RID entry that has been marked as deleted.</p> <p>A null value indicates that the number of pseudo-deleted index entries is unknown.</p>	G
REORGMASDELETE	INTEGER	<p>The number of mass deletes from a segmented or LOB table space, or the number of dropped tables from a segmented table space since the last time the REORG or LOAD REPLACE utilities were run, or since the object was created.</p> <p>A null value indicates that the number of mass deletes is unknown.</p>	G
REORGLEAFNEAR	INTEGER	<p>The net number of leaf pages located physically near (within 2–16 pages) previous pages for successive active leaf pages since the object was created.</p> <p>A null value means that the value is unknown. A negative value is possible in some cases.</p> <p>Two index leaf pages are considered near if the distance is within 2–16 pages. (The optimal distance is 1 page.)</p> <p>Conditions that can increase the value of this counter</p> <ul style="list-style-type: none"> • A leaf page is added during a page split and the distance between the predecessor page and new page, or between the new page and the successor page, is near. • An index page is deleted and the distance between the new predecessor and successor pages is near <p>Conditions that can decrease the value of this counter</p> <ul style="list-style-type: none"> • A leaf page is deleted the distance between the predecessor page and the deleted page, or between the successor page and the deleted page, was near. • An index page is added during a page split and the distance between the original predecessor and successor pages was near. 	G

Table 323. SYSIBM.SYSINDEXSPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
REORGLEAFFAR	INTEGER	<p>The net number of leaf pages located physically far away (more than 16 pages away) from previous leaf pages for successive active leaf pages since the object was created.</p> <p>A null value means that the value is unknown.</p> <p>Two index leaf pages are considered <i>far</i> apart if the distance is greater than 16 pages.</p> <p>Conditions that can increase the value of this counter</p> <ul style="list-style-type: none"> • A leaf page is added during a page split and the distance between the predecessor page and new page, or between the new page and successor page, is far. • An index page is deleted the distance between the new predecessor and successor pages is far. <p>Conditions that can decrease the value of this counter</p> <ul style="list-style-type: none"> • A leaf page is deleted and the distance between the predecessor page and the deleted page, or between the successor page and the deleted page, was far. • An index page is added during a page split and the distance between the predecessor and successor pages was far. 	G
REORGNUMLEVELS	INTEGER	<p>The number of levels in the index tree that were added or removed since the last REORG, REBUILD INDEX, or LOAD REPLACE, or the object was created.</p> <p>A null value means that the number of added or deleted levels is unknown.</p>	G
STATSLASTTIME	TIMESTAMP	<p>The timestamp of the last time that the RUNSTATS utility is run on the index space or partition, or the time when the index space or partition was created.</p>	G
STATSINSERTS	INTEGER	<p>The number of index entries that have been inserted into the index space or partition since the last time that the RUNSTATS utility was run, or since the object was created.</p> <p>A null value indicates that the number of inserted index entries is unknown.</p>	G

Table 323. SYSIBM.SYSINDEXSPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
STATSDELETES	INTEGER	The number of index entries that have been deleted since the last RUNSTATS on the index space or partition, or since the object was created. A null value means that the number of deleted index entries is unknown.	G
STATSMASSDELETE	INTEGER	The number of times that the index or index space partition was mass deleted since the last RUNSTATS, or the object was created. A null value indicates that the number of mass deletes is unknown.	G
COPYLASTTIME	TIMESTAMP	The timestamp of the last full image copy on the index space or partition. A null value means that COPY has never been run on the index space or partition, or that the timestamp of the last full image copy is unknown.	G
COPYUPDATEDPAGES	INTEGER	If the COPY utility was run with a SHRLEVEL value other than CHANGE, this value is the number of distinct pages that have been updated since the last time that the COPY utility was run. If the COPY utility was run with SHRLEVEL CHANGE, this value is the total number of distinct pages that were updated during the time that the last COPY utility was run, and since the last time that the COPY utility was run. A null value indicates that the number of updated pages is unknown.	G
COPYCHANGES	INTEGER	If the COPY utility was run with a SHRLEVEL value other than CHANGE, this value is the number of insert, update, and delete operations since the last time that the COPY utility was run. If the COPY utility was run with SHRLEVEL CHANGE, this value is the total number of insert, update, and delete operations, or the number of rows loaded, during the time that the last COPY utility was run, and since the last time that the COPY utility was run. A null value indicates that the number of insert, update, and delete operations is unknown.	G
COPYUPDATELRSN	CHAR(10) FOR BIT DATA	The LRSN or RBA of the first update that occurs after the last time the COPY utility was run. A null value indicates that the LRSN or RBA is unknown.	G

Table 323. SYSIBM.SYSINDEXSPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
COPYUPDATETIME	TIMESTAMP	<p>If the COPY utility was run with a SHRLEVEL value other than CHANGE, this value is the timestamp of the first update that occurred after the last time that the COPY utility was run.</p> <p>If the COPY utility was run with SHRLEVEL CHANGE, this value is the timestamp of the first update that occurred during the time that the last COPY utility was run, or since the last time that the COPY utility was run.</p> <p>A null value indicates that the timestamp is unknown.</p>	G
IBMREQD	CHAR(1) NOT NULL	<p>A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators.</p> <p>The value in this field is not a reliable indicator of release dependencies.</p>	G
DBID	SMALLINT NOT NULL	The internal identifier of the database.	G
ISOBID	SMALLINT NOT NULL	The internal identifier of the index space page set descriptor.	I
PSID	SMALLINT NOT NULL	The internal identifier of the table space page set descriptor for the table space that is associated with the index.	G
PARTITION	SMALLINT NOT NULL	The data set number within the index space. For partitioned index spaces, this value corresponds to the partition number for a single partition. For non-partitioned index spaces, this value is 0.	G
INSTANCE	SMALLINT NOT NULL WITH DEFAULT 1	Indicates if the object is associated with data set 1 or 2. This is an updatable column.	G
TOTALENTRIES	BIGINT	<p>The number of entries, including duplicate entries, G in the index space or partition.</p> <p>A null value indicates that the number of entries is unknown.</p>	G
DBNAME	VARCHAR(24) NOT NULL	The name of the database.	G
NAME	VARCHAR(128) NOT NULL	The name of the index.	G
CREATOR	VARCHAR(128) NOT NULL	The schema of the index.	G

Table 323. SYSIBM.SYSINDEXSPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
INDEXSPACE	VARCHAR(24) NOT NULL	The name of the index space.	G
LASTUSED	DATE	<p>The date when the index was last used in an access path for a SELECT, FETCH, searched UPDATE, or searched DELETE statement, or was used to enforce referential integrity constraints. If this field value indicates that an index has not been used for an extended period of time, consider dropping the index.</p> <p>For a data-partitioned secondary index, this column is only updated for one partition, even though more than one partition is accessed.</p> <p>The default value is NULL.</p>	G
REORGINDEXACCESS	BIGINT	<p>The number of times since the object was created, or since the last REORG, REBUILD INDEX, or LOAD REPLACE, that the index was used in one of the following situations:</p> <ul style="list-style-type: none"> • In an access path for a SELECT, FETCH, searched UPDATE, or searched DELETE statement • For enforcement of referential integrity constraints <p>For hash overflow indexes, this value is the number of times that Db2 used the hash overflow index.</p> <p>Use this value with other recommendations to determine when to run REORG INDEX. For example, when the ratio of SYSTABLESPACESTATS.TOTALROWS to SYSINDEXSPACESTATS.TOTALENTRIES indicates that REORG INDEX needs to be run, but this value is very low, REORG INDEX might not yet be necessary.</p> <p>A null value indicates that the number of times the index was used is unknown.</p>	G
DRIVETYPE	CHAR(3) NOT NULL WITH DEFAULT	<p>The drive type on which the index or index partition data set is defined.</p> <p>HDD Hard Disk Drive</p> <p>SSD Solid State Drive</p> <p>For multi-volume data sets, the drive type is set to SSD if any volume is SSD. For multi-piece linear page sets, the drive type of the first data set is used.</p>	G

Table 323. SYSIBM.SYSINDEXSPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
—	BIGINT	Reserved for future IBM use.	R
GETPAGES	BIGINT	The number of getpage requests for the index space since the object was created, or since the last REORG, LOAD RELACE, or REBUILD INDEX was run. The value wraps if it exceeds the largest possible BIGINT value, which is 9223372036854775807.	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	The transaction-start-ID column, for system-period data versioning.	G

[Setting up your system for real-time statistics \(Db2 Performance\)](#)

SYSINDEXSTATS catalog table

The SYSINDEXSTATS table contains one row for each partition of a partitioning index or a data-partitioned secondary index. The schema is SYSIBM.

Rows in this table can be inserted, updated, and deleted.

Important: Use care when issuing SQL statements or using tools to update statistics values in catalog tables. If such updates introduce invalid data, unpredictable results can occur, including abends for RUNSTATS and other utilities. If such problems occur, you can run the RUNSTATS utility and collect statistics at the table space level to resolve the problems, in most cases.

Table 324. SYSIBM.SYSINDEXSTATS table column descriptions

Column name	Data type	Description	Use
FIRSTKEYCARD	INTEGER NOT NULL	For the index partition, number of distinct values of the first key column. For a sparse index, the statistic is based on the actual contents of the index.	S

Table 324. SYSIBM.SYSINDEXSTATS table column descriptions (continued)

Column name	Data type	Description	Use
FULLKEYCARD	INTEGER NOT NULL	For the index partition, number of distinct values of the key. For a sparse index, the statistic is based on the actual contents of the index.	S
NLEAF	INTEGER NOT NULL	Number of active leaf pages in the index partition.	S
NLEVELS	SMALLINT NOT NULL	Number of levels in the index tree.	S
IOFACTOR	SMALLINT NOT NULL	Not used.	N
PREFETCHFACTOR	SMALLINT NOT NULL	Not used.	N
CLUSTERRATIO	SMALLINT NOT NULL	For the index partition, the percentage of rows that are in clustering order. The value is 0 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	N
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
PARTITION	SMALLINT NOT NULL	Partition number of the index.	G
OWNER	VARCHAR(128) NOT NULL	The schema of the index.	G
NAME	VARCHAR(128) NOT NULL	Name of the index.	G

Table 324. SYSIBM.SYSINDEXSTATS table column descriptions (continued)

Column name	Data type	Description	Use
KEYCOUNT	INTEGER NOT NULL	Total number of RIDs in the index partition. The value is -1 if statistics have not been gathered.Total number of rows in the partition. For a sparse index, the statistic is based on the actual contents of the index.	S
FIRSTKEYCARDF	FLOAT NOT NULL WITH DEFAULT -1	For the index partition, number of distinct values of the first key column. For a sparse index, the statistic is based on the actual contents of the index.	S
FULLKEYCARDF	FLOAT NOT NULL WITH DEFAULT -1	For the index partition, number of distinct values of the key. For a sparse index, the statistic is based on the actual contents of the index.	S
KEYCOUNTF	FLOAT WITH DEFAULT -1	Total number of RIDs in the index partition. The value is -1 if statistics have not been gathered.Total number of rows in the partition. For a sparse index, the statistic is based on the actual contents of the index.	S
CLUSTERRATIOF	FLOAT NOT NULL WITH DEFAULT	For the index partition, the value, when multiplied by 100, is the percentage of rows that are in clustering order. For example, a value of '.9125' indicates 91.25%. The value is 0 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	G
—	VARCHAR(1000) NOT NULL WITH DEFAULT FOR BIT DATA	Internal use only.	I
DATAREPEATFACTORF	FLOAT NOT NULL WITH DEFAULT -1	The anticipated number of data pages that will be touched following an index key order. This number is -1 if statistics have not been collected. This is an updatable column. For a sparse index, the statistic is based on the actual contents of the index.	G

SYSINDEXSTATS_HIST catalog table

The SYSINDEXSTATS_HIST catalog table contains rows from the SYSINDEXSTATS table. The schema is SYSIBM.

Rows are added or changed in the SYSINDEXSTATS_HIST catalog table when RUNSTATS collects history statistics. Rows in this table can also be inserted, updated, and deleted.

Table 325. SYSIBM.SYSINDEXSTATS_HIST table column descriptions

Column name	Data type	Description	Use
NLEAF	INTEGER NOT NULL WITH DEFAULT -1	Number of active leaf pages in the index partition. The value is -1 if statistics have not been gathered.	S
NLEVELS	SMALLINT NOT NULL WITH DEFAULT -1	Number of levels in the index tree. The value is -1 if statistics have not been gathered.	S
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
PARTITION	SMALLINT NOT NULL	Partition number of the index.	G
OWNER	VARCHAR(128) NOT NULL	The schema of the index.	G
NAME	VARCHAR(128) NOT NULL	Name of the index.	G
FIRSTKEYCARDF	FLOAT(8) NOT NULL WITH DEFAULT -1	For the index partition, number of distinct values of the first key column. The value is -1 if statistics have not been gathered.	S
FULLKEYCARDF	FLOAT(8) NOT NULL WITH DEFAULT -1	For the index partition, number of distinct values of the key. The value is -1 if statistics have not been gathered.	S
KEYCOUNTF	FLOAT(8) NOT NULL WITH DEFAULT -1	Total number of RIDs in the index partition. The value is -1 if statistics have not been gathered. Total number of rows in the partition. The value is -1 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	S
CLUSTERRATIOF	FLOAT(8) NOT NULL	For the index partition, the value, when multiplied by 100, is the percentage of rows that are in clustering order. For example, a value of '0.9125' indicates 91.25%. The value is 0 if statistics have not been gathered. For a sparse index, the statistic is based on the actual contents of the index.	G

Table 325. SYSIBM.SYSINDEXSTATS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
DATAREPEATFACTORF	FLOAT NOT NULL WITH DEFAULT -1	The anticipated number of data pages that will be touched following an index key order. This number is -1 if statistics have not been collected. This is an updatable column. For a sparse index, the statistic is based on the actual contents of the index.	G

SYSJARCLASS_SOURCE catalog table

The SYSJARCLASS_SOURCE catalog table is an auxiliary table for SYSIBM.SYSJARCONTENTS. The schema is SYSIBM.

Table 326. SYSIBM.SYSJARCLASS_SOURCE table column descriptions

Column name	Data type	Description	Use
CLASS_SOURCE	CLOB(10M) NOT NULL	The contents of the class in the JAR file.	G

SYSJARCONTENTS catalog table

The SYSJARCONTENTS table contains Java class source for an installed JAR file. The schema is SYSIBM.

Table 327. SYSIBM.SYSJARCONTENTS table column descriptions

Column name	Data type	Description	Use
JARSCHEMA	VARCHAR(128) NOT NULL	The schema of the JAR file.	G
JAR_ID	VARCHAR(128) NOT NULL	The name of the JAR file.	G
CLASS	VARCHAR(384) NOT NULL	The class name contained in the JAR file.	G
CLASS_SOURCE_ROWID	ROWID NOT NULL GENERATED ALWAYS	ID used to support CLOB data type.	G
CLASS_SOURCE	CLOB(10M) NOT NULL	The contents of the class in the JAR file.	G

Table 327. SYSIBM.SYSJARCONTENTS table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSJARDATA catalog table

The SYSJARDATA table is an auxiliary table for SYSIBM.SYSJAROBJECTS. The schema is SYSIBM.

Table 328. SYSIBM.SYSJARDATA table column descriptions

Column name	Data type	Description	Use
JAR_DATA	BLOB(100M) NOT NULL	The contents of the JAR file.	G

SYSJAROBJECTS catalog table

The SYSJAROBJECTS table contains binary large object representing the installed JAR file. The schema is SYSIBM.

Table 329. SYSIBM.SYSJAROBJECTS table column descriptions

Column name	Data type	Description	Use
JARSCHEMA	VARCHAR(128) NOT NULL	The schema of the JAR file.	G
JAR_ID	VARCHAR(128) NOT NULL	The name of the JAR file.	G
OWNER	VARCHAR(128) NOT NULL	Authorization ID of the owner of the JAR object.	G
JAR_DATA_ROWID	ROWID NOT NULL GENERATED ALWAYS	ID used to support BLOB data type.	G
JAR_DATA	BLOB(100M) NOT NULL	The contents of the JAR file. This is an updatable column.	G
PATH	VARCHAR(2048) NOT NULL	The class resolution path of the JAR file. This is an updatable column.	G
CREATEDTS	TIMESTAMP NOT NULL	Time when the JAR object was created.	G

Table 329. SYSIBM.SYSJAROBJECTS table column descriptions (continued)

Column name	Data type	Description	Use
ALTEREDTS	TIMESTAMP NOT NULL	Time when the JAR object was altered.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner: blank Authorization ID L Role	G

SYSJAVAOPTS catalog table

The SYSJAVAOPTS table contains build options used during INSTALL_JAR. The schema is SYSIBM.

Table 330. SYSIBM.SYSJAVAOPTS table column descriptions

Column name	Data type	Description	Use
JARSCHEMA	VARCHAR(128) NOT NULL	The schema of the JAR file.	G
JAR_ID	VARCHAR(128) NOT NULL	The name of the JAR file.	G
BUILDSHEMA	VARCHAR(128) NOT NULL	Schema name for BUILDNAME.	G
BUILDNAME	VARCHAR(128) NOT NULL	Procedure used to create the routine.	G
BUILDOWNER	VARCHAR(128) NOT NULL	Authorization ID used to create the routine.	G
DBRMLIB	VARCHAR(256) NOT NULL	PDS name where DBRM is located.	G
HPJCOMPILE_OPTS	VARCHAR(512) NOT NULL	HPJ compile options used to install the routine.	G
BIND_OPTS	VARCHAR(2048) NOT NULL	Bind options used to install the routine.	G
POBJECT_LIB	VARCHAR(256) NOT NULL	PDSE name where program object is located.	G

Table 330. SYSIBM.SYSJAVA_OPTS table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSJAVAPATHS catalog table

The SYSJAVAPATHS table contains the complete class resolution path of a JAR file, and records the dependencies that one JAR file has on the JAR files in its Java path. The schema is SYSIBM.

Table 331. SYSIBM.SYSJAVAPATHS table column descriptions

Column name	Data type	Description	Use
JARSCHEMA	VARCHAR(128) NOT NULL	The schema of the JAR file.	G
JAR_ID	VARCHAR(128) NOT NULL	The name of the JAR file.	G
OWNER	VARCHAR(128) NOT NULL	Authorization ID of the owner of the JAR object.	G
ORDINAL	SMALLINT NOT NULL	The ordinal number of the path element within the JAR file's Java path.	G
PE_CLASS_PATTERN	VARCHAR(2048) NOT NULL	The pattern for the names of the classes that are to be searched for in this path element's JAR file.	G
PE_JARSCHEMA	VARCHAR(128) NOT NULL	The schema of this path element's JAR file.	G
PE_JAR_ID	VARCHAR(128) NOT NULL	The name of this path element's JAR file.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSKEYCOLUSE catalog table

The SYSKEYCOLUSE table contains a row for every column in a unique constraint (primary key or unique key) from the SYSIBM.SYSTABCONST table. The schema is SYSIBM.

Table 332. SYSIBM.SYSKEYCOLUSE table column descriptions

Column name	Data type	Description	Use
CONSTNAME	VARCHAR(128) NOT NULL	Name of the constraint.	G
TBCREATOR	VARCHAR(128) NOT NULL	Schema or qualifier of the table on which the constraint is defined.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table on which the constraint is defined.	G
COLNAME	VARCHAR(128) NOT NULL	Name of the column	G
COLSEQ	SMALLINT NOT NULL	Numeric position of the column in the key (the first position in the key is 1).	G
COLNO	SMALLINT NOT NULL	Numeric position of the column in the table on which the constraint is defined.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
PERIOD	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether the column is the start or end column for the BUSINESS_TIME period: B The column is the start of the period BUSINESS_TIME. C Column is the end of period BUSINESS_TIME with an exclusive end point. I Column is the end of period BUSINESS_TIME with an inclusive end point. blank Column is not used as either the start or the end of a BUSINESS_TIME period.	G

SYSKEYS catalog table

The SYSKEYS table contains one row for each column of an index key. The schema is SYSIBM.

Table 333. SYSIBM.SYSKEYS table column descriptions

Column name	Data type	Description	Use
IXNAME	VARCHAR(128) NOT NULL	Name of the index.	G
IXCREATOR	VARCHAR(128) NOT NULL	Schema or qualifier of the index.	G
COLNAME	VARCHAR(128) NOT NULL	Name of the column of the key.	G
COLNO	SMALLINT NOT NULL	Numeric position of the column in the table. For example, 4 (out of 10).	G
COLSEQ	SMALLINT NOT NULL	Numeric position of the column in the key for an index on columns. For example, 4 (out of 4). The value is meaningless for an expression-based index.	G
ORDERING	CHAR(1) NOT NULL	Order of the column in the key: blank Index is an expression-based index or the column is specified for the index using the INCLUDE clause A Ascending order D Descending order R Random order	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

Table 333. SYSIBM.SYSKEYS table column descriptions (continued)

Column name	Data type	Description	Use
PERIOD	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether the column is the start or end column for the BUSINESS_TIME period: B The column is the start of the period BUSINESS_TIME. C Column is the end of period BUSINESS_TIME with an exclusive end point. I Column is the end of period BUSINESS_TIME with an inclusive end point. blank Column is not used as either the start or the end of a BUSINESS_TIME period, or the index is not used as an enforcing index.	G
CREATEDTS	TIMESTAMP(12) NOT NULL WITH DEFAULT	Time when the CREATE statement was executed for the index.	G

SYSKEYTARGETS catalog table

The SYSKEYTARGETS table contains one row for each key-target that is participating in an extended index definition. The schema is SYSIBM.

Table 334. SYSIBM.SYSKEYTARGETS table column descriptions

Column name	Data type	Description	Use
IXNAME	VARCHAR(128) NOT NULL	Name of the index.	G
IXSCHEMA	VARCHAR(128) NOT NULL	Qualifier of the index.	G
KEYSEQ	SMALLINT NOT NULL	Numeric position of the key-target in the index.	G
COLNO	SMALLINT NOT NULL	Numeric position of the column in the table if the expression is a single column. Otherwise the value is 0. For XML indexes, this field is also 0.	G
ORDERING	CHAR(1) NOT NULL	Order of the key: A Ascending	G
TYPESCHEMA	VARCHAR(128) NOT NULL	Schema of the data type.	G

Table 334. SYSIBM.SYSKEYTARGETS table column descriptions (continued)

Column name	Data type	Description	Use
TYPENAME	VARCHAR(128) NOT NULL	Name of the data type.	G
DATATYPEID	INTEGER NOT NULL	The internal ID of the data type. The DATATYPEID value corresponds to one of the SQLTYPE values in “SQLTYPE and SQLLEN fields of the SQLDA” on page 2341. However, the DATATYPEID value is not a reliable indicator of the nullability of the column. A column with an even DATATYPEID value might allow nulls, and a column with an odd DATATYPEID value might not allow nulls. To determine the nullability of the column, use the NULLS column value.	G
SOURCETYPEID	INTEGER NOT NULL	For a built-in data type, this column contains 0. For a distinct type, this column contains the internal ID of the built-in type on which the distinct type is based.	G

Table 334. SYSIBM.SYSKEYTARGETS table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH	SMALLINT NOT NULL	<p>The length attribute of the key-target or its precision for a decimal key-target. The number does not include the internal prefixes that are used to record the actual length and null states, when applicable.</p> <p>data type value of the LENGTH column</p> <p>INTEGER 4</p> <p>SMALLINT 2</p> <p>FLOAT 4 or 8</p> <p>CHAR The length of the string</p> <p>VARCHAR The maximum length of the string</p> <p>DECIMAL The precision of the number</p> <p>GRAPHIC The number of DBCS characters</p> <p>VARGRAPHIC The maximum number of DBCS characters</p> <p>DATE 4</p> <p>TIME 3</p> <p>TIMESTAMP WITHOUT TIME ZONE The integral part of $((p+1)/2) + 7$ where p is the precision of the timestamp</p> <p>TIMESTAMP WITH TIME ZONE The integral part of $((p+1)/2) + 9$ where p is the precision of the timestamp</p> <p>BIGINT 8</p> <p>BINARY The length of the string</p> <p>VARBINARY The maximum length of the string</p> <p>DECFLOAT 8 or 16</p>	G

Table 334. SYSIBM.SYSKEYTARGETS table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH2	INTEGER NOT NULL	The maximum length of the data that is retrieved from the column. Possible values include the following values: 0 Not a ROWID column 40 For a ROWID column, the length of the value that is returned	G
SCALE	SMALLINT NOT NULL	The scale of decimal data or number of fractional second digits of timestamp or timestamp with time zone data. Otherwise the value is 0. If the column is a timestamp type, the LENGTH is 10 and the SCALE is 0, the number of fractional second digits is 6.	G
NULLS	CHAR(1) NOT NULL	Whether the key can contain null values: N No Y Yes. Y also indicates that the index is an XML index.	G
CCSID	INTEGER NOT NULL	The CCSID of the key. CCSID contains 0 if the key is a non-character type key.	G
SUBTYPE	CHAR(1) NOT NULL	SUBTYPE applies to character keys only and indicated the subtype of the data: B BIT data M MIXED data S SBCS data blank non-character data	G
—	VARCHAR(512) NOT NULL FOR BIT DATA	Internal use only.	I
CREATEDTS	TIMESTAMP NOT NULL	The timestamp for when the key-target is created.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 in which the key-target is created. See Release dependency indicators for values.	G

Table 334. SYSIBM.SYSKEYTARGETS table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
DERIVED_FROM	VARCHAR(4000) NOT NULL	For an index on a scalar expression, DERIVED_FROM contains the text of the scalar expression that is used to generated the key-target value. For an XML index, this is the XML pattern that is used to generate the key-target value. Otherwise DERIVED_FROM contains an empty string.	G
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	The estimated number of distinct values for the key-target. The value is -2 if the index is a node ID index. For an XML value index, the statistic is collected for the second key target (the DOCID column). For all other key targets of the XML value index, a value of -2 is set.	S
HIGH2KEY	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	The second highest key-value. HIGH2KEY is an updatable column.	S
LOW2KEY	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	The second lowest key-value. LOW2KEY is an updatable column.	S
STATS_FORMAT	CHAR(1) NOT NULL WITH DEFAULT	The type of statistics that are gathered: N VARCHAR column statistical values are not padded blank Statistics have not been collects or VARCHAR column statistical values are padded STATS_FORMAT is an updatable column.	G

SYSKEYTARGETSTATS catalog table

The SYSKEYTARGETSTATS table contains partition statistics for selected key-targets. For each key-target, a row exists for each partition in the table.

Rows are inserted when RUNSTATS collects indexed key statistics or non-indexed key statistics for a partitioned table space. No row is inserted if the table space is nonpartitioned. Rows in this table can be inserted, updated, and deleted.

Important: Use care when issuing SQL statements or using tools to update statistics values in catalog tables. If such updates introduce invalid data, unpredictable results can occur, including abends for RUNSTATS and other utilities. If such problems occur, you can run the RUNSTATS utility and collect statistics at the table space level to resolve the problems, in most cases.

Table 335. SYSIBM.SYSKEYTARGETSTATS table column descriptions

Column name	Data type	Description	Use
IXSCHEMA	VARCHAR(128) NOT NULL	The qualifier of the index.	G
IXNAME	VARCHAR(128) NOT NULL	The name of the index.	G
KEYSEQ	SMALLINT NOT NULL	Numeric position of the key-target in the index.	G
HIGHKEY	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	The highest key value.	S
HIGH2KEY	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	The second highest key-value.	S
LOWKEY	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	The lowest key value.	S
LOW2KEY	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	The second lowest key-value.	S
PARTITION	SMALLINT NOT NULL	The partition number of the table space.	G
—	VARCHAR(1000) NOT NULL WITH DEFAULT FOR BIT DATA	Internal use only.	I
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G

Table 335. SYSIBM.SYSKEYTARGETSTATS table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
STATS_FORMAT	CHAR(1) NOT NULL WITH DEFAULT	The type of statistics that are gathered: N VARIABLE column statistical values are not padded blank Statistics have not been collected or VARIABLE column statistical values are padded	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	Number of distinct values for the key target.	S

SYSKEYTARGETS_HIST catalog table

The SYSKEYTARGETS_HIST table contains rows from the SYSKEYTARGETS table. The schema is SYSIBM.

Whenever rows are added or changed in SYSKEYTARGETS, the rows are also written to this table. Rows in this table can be inserted, updated, and deleted.

Table 336. SYSIBM.SYSKEYTARGETS_HIST table column descriptions

Column name	Data type	Description	Use
IXNAME	VARCHAR(128) NOT NULL	Name of the index.	G
IXSCHEMA	VARCHAR(128) NOT NULL	Qualifier of the index.	G
KEYSEQ	SMALLINT NOT NULL	Numeric position of the key-target in the index.	G
TYPESHEMA	VARCHAR(128) NOT NULL	Schema of the data type.	G
TYPENAME	VARCHAR(128) NOT NULL	Name of the data type.	G

Table 336. SYSIBM.SYSKEYTARGETS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
DATATYPEID	INTEGER NOT NULL	The internal ID of the data type. The DATATYPEID value corresponds to one of the SQLTYPE values in “SQLTYPE and SQLLEN fields of the SQLDA” on page 2341. However, the DATATYPEID value is not a reliable indicator of the nullability of the column. A column with an even DATATYPEID value might allow nulls, and a column with an odd DATATYPEID value might not allow nulls. To determine the nullability of the column, use the NULLS column value.	G
SOURCETYPEID	INTEGER NOT NULL	For a built-in data type, this field contains 0. For a distinct type, this field contains the internal ID of the built-in type on which the distinct type is based.	G

Table 336. SYSIBM.SYSKEYTARGETS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH	SMALLINT NOT NULL	<p>The length attribute of the key-target or its precision for a decimal key-target. The number does not include the internal prefixes that are used to record the actual length and null states, when applicable.</p> <p>data type value of the LENGTH column</p> <p>INTEGER 4</p> <p>SMALLINT 2</p> <p>FLOAT 4 or 8</p> <p>CHAR The length of the string</p> <p>VARCHAR The maximum length of the string</p> <p>DECIMAL The precision of the number</p> <p>GRAPHIC The number of DBCS characters</p> <p>VARGRAPHIC The maximum number of DBCS characters</p> <p>DATE 4</p> <p>TIME 3</p> <p>TIMESTAMP WITHOUT TIME ZONE The integral part of $((p+1)/2) + 7$ where p is the precision of the timestamp</p> <p>TIMESTAMP WITH TIME ZONE The integral part of $((p+1)/2) + 9$ where p is the precision of the timestamp</p> <p>BIGINT 8</p> <p>BINARY The length of the string</p> <p>VARBINARY The maximum length of the string</p> <p>DECFLOAT 8 or 16</p>	G

Table 336. SYSIBM.SYSKEYTARGETS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH2	INTEGER NOT NULL	The maximum length of the data that is retrieved from the column. Possible values include the following values: 0 Not a ROWID column 40 For a ROWID column, the length of the value that is returned	G
SCALE	SMALLINT NOT NULL	The scale of decimal data or number of fractional second digits of timestamp or timestamp with time zone data. Otherwise the value is 0. If the column is a timestamp type, the LENGTH is 10 and the SCALE is 0, the number of fractional second digits is 6.	G
NULLS	CHAR(1) NOT NULL	Whether the key can contain null values: N No Y Yes	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	The estimated number of distinct values for the key-target. The value is -2 if the index is a node ID index. For an XML value index, the statistic is collected for the second key target (the DOCID column). For all other key targets of the XML value index, a value of -2 is set.	G
HIGH2KEY	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	The second highest key-value.	G

Table 336. SYSIBM.SYSKEYTARGETS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
STATS_FORMAT	CHAR(1) NOT NULL WITH DEFAULT	The type of statistics that are gathered: N VARCHAR column statistical values are not padded blank Statistics have not been collects or VARCHAR column statistical values are padded	G

SYSKEYTGTDIST catalog table

The SYSKEYTGTDIST table contains one or more rows for the first key-target of an extended index key. The schema is SYSIBM.

Rows in this table can be inserted, updated, and deleted.

Important: Use care when issuing SQL statements or using tools to update statistics values in catalog tables. If such updates introduce invalid data, unpredictable results can occur, including abends for RUNSTATS and other utilities. If such problems occur, you can run the RUNSTATS utility and collect statistics at the table space level to resolve the problems, in most cases.

Table 337. SYSIBM.SYSKEYTGTDIST table column descriptions

Column name	Data type	Description	Use
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
IXSCHEMA	VARCHAR(128) NOT NULL	The qualifier of the index.	G
IXNAME	VARCHAR(128) NOT NULL	The name of the index.	G
KEYSEQ	SMALLINT NOT NULL	The numeric position of the key-target in the index.	G
KEYVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	KEYVALUE contains the data of a frequently occurring value. If the value has a non-character data type, the data might not be printable.	S

Table 337. SYSIBM.SYSKEYTGTDIST table column descriptions (continued)

Column name	Data type	Description	Use
TYPE	CHAR(1) NOT NULL WITH DEFAULT 'F'	The type of statistics that are gathered: C Cardinality F Frequent value N Non-padded frequent value H Histogram statistics	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	When TYPE='C', CARDF contains the number of distinct values for the key group. When TYPE='H', CARDF contains the number of distinct values for the key group in a quantile indicated by QUANTILENO.	S
KEYGROUPKEYNO	VARCHAR(254) NOT NULL WITH DEFAULT FOR BIT DATA	KEYGROUPKEYNO contains a value that identifies the set of keys that are associated with the statistics. KEYGROUPKEYNO contains 0 if the statistics are only associated with a single key. If the statistics are associated with more than a single key, KEYGROUPKEYNO contains an array of SMALLINT key numbers with a dimension that is equal to the value in NUMKEYS.	S
NUMKEYS	SMALLINT NOT NULL WITH DEFAULT -1	The number of keys that are associated with the statistics. The value is always 1 when the object is an XML index.	G
FREQUENCYF	FLOAT NOT NULL WITH DEFAULT -1	When TYPE='F' or 'N', FREQUENCYF contains a value that indicates the percentage of entries in the index that have the value that is contained in the KEYVALUE column. When TYPE='H', FREQUENCYF contains a value that indicates the percentage of entries in the index that have a value that is in the range of the quantile that is indicated in the QUANTILENO column. To determine the percentage from the value of FREQUENCYF, multiply the value by 100. For example, a value of '1' indicates 100 percent. A value of '.153' indicates '15.3' percent.	G
QUANTILENO	SMALLINT NOT NULL WITH DEFAULT -1	QUANTILENO contains an ordinary sequence number of a quantile in the whole consecutive value range, from low to high.	G

Table 337. SYSIBM.SYSKEYTGTDIST table column descriptions (continued)

Column name	Data type	Description	Use
LOWVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	When TYPE='H', LOWVALUE contains the lower bound for the quantile that is in QUANTILENO. LOWVALUE is not used if TYPE does not equal 'H'.	G
HIGHVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	When TYPE='H', HIGHVALUE contains the upper bound for the quantile that is in QUANTILENO. HIGHVALUE is not used if TYPE does not equal 'H'.	G

SYSKEYTGTDISTSTATS catalog table

The SYSKEYTGTDISTSTATS table contains zero or more rows per partition for the first key-target of a data-partitioned secondary index.

Rows are inserted when RUNSTATS scans a data-partitioned secondary index. No row is inserted if the index is a secondary index. Rows in this table can be inserted, updated, and deleted.

Important: Use care when issuing SQL statements or using tools to update statistics values in catalog tables. If such updates introduce invalid data, unpredictable results can occur, including abends for RUNSTATS and other utilities. If such problems occur, you can run the RUNSTATS utility and collect statistics at the table space level to resolve the problems, in most cases.

Table 338. SYSIBM.SYSKEYTGTDISTSTATS table column descriptions

Column name	Data type	Description	Use
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
PARTITION	SMALLINT NOT NULL	The partition number of the table space that contains the index in which the key is defined.	G
IXSCHEMA	VARCHAR(128) NOT NULL	The qualifier of the index.	G
IXNAME	VARCHAR(128) NOT NULL	The name of the index.	G
KEYSEQ	SMALLINT NOT NULL	Numeric position of the key-target in the index.	G

Table 338. SYSIBM.SYSKEYTGTDISTSTATS table column descriptions (continued)

Column name	Data type	Description	Use
KEYVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	KEYVALUE contains the data of a frequently occurring value. If the value has a non-character data type, the data might not be printable.	S
TYPE	CHAR(1) NOT NULL WITH DEFAULT 'F'	The type of statistics that are gathered: C Cardinality F Frequent value N Non-padded frequent value H Histogram statistics	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	When TYPE='C', CARDF contains the number of distinct values for the key group. When TYPE='H', CARDF contains the number of distinct values for the key group in the quantile that is in QUANTILENO.	S
KEYGROUPKEYNO	VARCHAR(254) NOT NULL WITH DEFAULT	Identifies the set of keys that are associated with the statistics. If the statistics are only associated with a single key, KEYGROUPKEYNO contains a zero length value. Otherwise, KEYGROUPKEYNO contains an array of SMALLINT key numbers that have a dimension that is equal to the value in NUMKEYS.	S
NUMKEYS	SMALLINT NOT NULL WITH DEFAULT	Identifies the number of keys that are associated with the statistics.	G
FREQUENCYF	FLOAT NOT NULL WITH DEFAULT -1	When TYPE='F' or 'N', FREQUENCYF contains the percentage of entries in the index that have the value that is specified in KEYVALUE when the number of entries is multiplied by 100. For example, a value of '1' indicates 100 percent. A value of '.153' indicates 15.3 percent. When TYPE='H', FREQUENCYF contains the percentage of entries in the index that have a value that is in the range of the quantile that is indicated in QUANTILENO.	G
QUANTILENO	SMALLINT NOT NULL WITH DEFAULT -1	QUANTILENO contains an ordinary sequence number of a quantile in the whole consecutive value range, from low to high.	G
LOWVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	When TYPE='H', LOWVALUE is the lower bound for the quantile that is indicated in QUANTILENO. LOWVALUE is not used if TYPE does not equal 'H'.	G

Table 338. SYSIBM.SYSKEYTGTDISTSTATS table column descriptions (continued)

Column name	Data type	Description	Use
HIGHVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	When TYPE='H', HIGHVALUE is the upper bound for the quantile that is indicated in QUANTILENO. HIGHVALUE is not used if TYPE does not equal 'H'.	G
—	VARCHAR(1000)	Internal use only.	I

SYSKEYTGTDIST_HIST catalog table

The SYSKEYTGTDIST_HIST table contains rows from the SYSKEYTGTDIST table. Whenever rows are added or changed in SYSKEYTGTDIST, the rows are also written to this table.

Rows in this table can be inserted, updated, and deleted.

Table 339. SYSIBM.SYSKEYTGTDIST_HIST table column descriptions

Column name	Data type	Description	Use
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
IXSCHEMA	VARCHAR(128) NOT NULL	The qualifier of the index.	G
IXNAME	VARCHAR(128) NOT NULL	The name of the index.	G
KEYSEQ	SMALLINT NOT NULL	The numeric position of the key-target in the index.	G
KEYVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	KEYVALUE contains the data of a frequently occurring value. If the value has a non-character data type, the data might not be printable.	G

Table 339. SYSIBM.SYSKEYTGTDIST_HIST table column descriptions (continued)

Column name	Data type	Description	Use
TYPE	CHAR(1) NOT NULL WITH DEFAULT 'F'	The type of statistics that are gathered: C Cardinality F Frequent value N Non-padded frequent value H Histogram statistics	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	When TYPE='C', CARDF contains the number of distinct values for the key group. When TYPE='H', CARDF contains the number of distinct values for the key group in a quantile indicated by QUANTILENO.	G
KEYGROUPKEYNO	VARCHAR(254) NOT NULL WITH DEFAULT FOR BIT DATA	KEYGROUPKEYNO contains a value that identifies the set of keys that are associated with the statistics. KEYGROUPKEYNO contains 0 if the statistics are only associated with a single key. If the statistics are associated with more than a single key, KEYGROUPKEYNO contains an array of SMALLINT key numbers with a dimension that is equal to the value in NUMKEYS.	G
NUMKEYS	SMALLINT NOT NULL WITH DEFAULT -1	The number of keys that are associated with the statistics.	G
FREQUENCYF	FLOAT NOT NULL WITH DEFAULT -1	When TYPE='F' or 'N', FREQUENCYF contains the percentage of entries in the index that have the value that is specified in KEYVALUE when the number of entries is multiplied by 100. For example, a value of '1' indicates 100 percent. A value of '.153' indicates 15.3 percent. When TYPE='H', FREQUENCYF contains the percentage of entries in the index that have a value that is in the range of the quantile that is indicated in QUANTILENO.	G
QUANTILENO	SMALLINT NOT NULL WITH DEFAULT -1	QUANTILENO contains an ordinary sequence number of a quantile in the whole consecutive value range, from low to high.	G
LOWVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	When TYPE='H', LOWVALUE contains the lower bound for the quantile that is in QUANTILENO. LOWVALUE is not used if TYPE does not equal 'H'.	G

Table 339. SYSIBM.SYSKEYTGTDIST_HIST table column descriptions (continued)

Column name	Data type	Description	Use
HIGHVALUE	VARCHAR(2000) NOT NULL WITH DEFAULT FOR BIT DATA	When TYPE='H', HIGHVALUE contains the upper bound for the quantile that is in QUANTILENO. HIGHVALUE is not used if TYPE does not equal 'H'.	G

SYSLEVELUPDATES catalog table

The SYSLEVELUPDATES table contains information about the catalog level and function level of the Db2 subsystem or data sharing group. The schema is SYSIBM.

Table 340. SYSIBM.SYSLEVELUPDATES table column descriptions

Column name	Data type	Description	Use
FUNCTION_LVL	VARCHAR(10)	Function level in effect when this record was inserted.	G
PREV_FUNCTION_LVL	VARCHAR(10)	Previous function level.	G
HIGH_FUNCTION_LVL	VARCHAR(10)	Highest activated function level.	G
CATALOG_LVL	VARCHAR(10)	The catalog level.	G
OPERATION_TYPE	CHAR(1)	Type of operation: 'C' Catalog level change. 'F' Function level change. 'M' Code level change.	G
EFFECTIVE_TIME	TIMESTAMP(12)	Time when the operation completed.	G
EFFECTIVE_LRSN		RBA (or LRSN for data sharing) depicting the time that an operation completed.	G
OPERATION_TEXT	VARCHAR(256)	The text of the operation.	G
GROUP_MEMBER	VARCHAR(24)	Name of the group member on which the operation was run.	G

SYSLOBSTATS catalog table

The SYSLOBSTATS table contains one row for each LOB table space. The schema is SYSIBM.

Table 341. SYSIBM.SYSLOBSTATS table column descriptions

Column name	Data type	Description	Use
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
AVGSIZE	INTEGER NOT NULL	Average size of a LOB, measured in bytes, in the LOB table space.	S
FREESPACE	INTEGER NOT NULL	Number of kilobytes of available space in the LOB table space.	S
ORGRATIO	DECIMAL(5,2) NOT NULL	The percentage of organization in the LOB table space. A value of '100' indicates perfect organization of the LOB table space. A value of '1' indicates that the LOB table space is disorganized. A value of '0' indicates that the LOB table space is totally disorganized.	S
DBNAME	VARCHAR(24) NOT NULL	Name of the database that contains the LOB table space named in NAME.	G
NAME	VARCHAR(24) NOT NULL	Name of the LOB table space.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSLOBSTATS_HIST catalog table

The SYSLOBSTATS_HIST table contains rows from SYSIBM.SYSLOBSTATS. The schema is SYSIBM.

Rows are added or changed in the SYSLOBSTATS_HIST catalog table when RUNSTATS collects history statistics. Rows in this table can also be inserted, updated, and deleted.

Table 342. SYSIBM.SYSLOBSTATS_HIST table column descriptions

Column name	Data type	Description	Use
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G

Table 342. SYSIBM.SYSLOBSTATS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
FREESPACE	INTEGER NOT NULL	Number of pages of free space in the LOB table space.	S
ORGRATIO	DECIMAL(5,2) NOT NULL	The percentage of organization in the LOB table space. A value of '100' indicates perfect organization of the LOB table space. A value of '1' indicates that the LOB table space is disorganized. A value of '0' indicates that the LOB table space is totally disorganized.	S
DBNAME	VARCHAR(24) NOT NULL	Name of the database that contains the LOB table space named in NAME.	G
NAME	VARCHAR(24) NOT NULL	Name of the LOB table space.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSOBJROLEDEP catalog table

The SYSOBJROLEDEP table lists the dependent objects for each role. The schema is SYSIBM.

Table 343. SYSIBM.SYSOBJROLEDEP table column descriptions

Column name	Data type	Description	Use
DEFINER	VARCHAR(128) NOT NULL	The authorization ID or role that created the object.	G
DEFINERTYPE	CHAR(1) NOT NULL	The type of definer: L Role blank Authorization ID	G
ROLENAME	VARCHAR(128) NOT NULL	Name of the role on which there is a dependency.	G
DSHEMA	VARCHAR(128) NOT NULL	Name of the schema of the dependent object.	G
DNAME	VARCHAR(762) NOT NULL	Name of the dependent object.	G

Table 343. SYSIBM.SYSOBJROLEDEP table column descriptions (continued)

Column name	Data type	Description	Use
DTYPE	CHAR(1) NOT NULL	The type of the dependent object in DNAME: B Trigger D Database E Distinct type F User-defined function H Global variable I Index J JAR file L Role M Materialized query table N Trusted context O Stored procedure Q Sequence R Table space S Storage group T Table V View X Row permission Y Column mask 0 (zero) Alias	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSPACKAGE catalog table

The SYSPACKAGE table contains a row for every package. The schema is SYSIBM.

Table 344. SYSIBM.SYSPACKAGE table column descriptions

Column name	Data type	Description	Use
LOCATION	VARCHAR(128) NOT NULL	Always contains blanks	S
COLLID	VARCHAR(128) NOT NULL	Name of the package collection. For a trigger package, it is the schema name of the trigger.	G
NAME	VARCHAR(128) NOT NULL	Name of the package.	G
CONTOKEN	CHAR(8) NOT NULL FOR BIT DATA	Consistency token for the package. For a package derived from a Db2 DBRM, it is one of the following values: <ul style="list-style-type: none"> The "level" as specified by the LEVEL option when the package's program was precompiled The timestamp indicating when the package's program was precompiled, in an internal format. 	S
OWNER	VARCHAR(128) NOT NULL	Authorization ID of the package owner. For a trigger package, the value is the authorization ID of the owner of the trigger, which is set to the current authorization ID (the plan or package owner for static CREATE TRIGGER statement; the CURRENT SQLID for a dynamic CREATE TRIGGER statement).	G
CREATOR	VARCHAR(128) NOT NULL	Authorization ID of the creator of the package. The creator is the authorization ID under which the package was bound or rebound. For a trigger package, the value is determined differently. For dynamic SQL, it is the primary authorization ID of the user who issued the CREATE TRIGGER statement. For static SQL, it is the authorization ID of the plan or package owner.	G
TIMESTAMP	TIMESTAMP NOT NULL	Timestamp indicating when the package was created.	G
BINDTIME	TIMESTAMP NOT NULL	Timestamp indicating when the package was last bound.	G
QUALIFIER	VARCHAR(128) NOT NULL	Implicit qualifier for the unqualified table, view, index, and alias names in the static SQL statements of the package.	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
PKSIZE	INTEGER NOT NULL	Size of the base section of the package, in bytes. Tip: Packages are divided into <i>sections</i> . The base section of the package must be in the EDM pool during the entire time the package is executing. Other sections of the package, corresponding roughly to sets of related SQL statements, are brought into the pool as needed.	G
AVGSIZE	INTEGER NOT NULL	Average size, in bytes, of those sections of the plan that contain SQL statements processed at bind time.	G
SYSENTRIES	SMALLINT NOT NULL	Number of enabled or disabled entries for this package in SYSIBM.SYSPKSYSTEM. A value of 0 if all types of connections are enabled.	G
VALID	CHAR(1) NOT NULL	Whether the package is valid: A An ALTER statement changed the description of the table or base table of a view referred to by the package. The changes do not invalidate the package. However, a rebind might be required for the package to pick up the changes from the ALTER statement. H An ALTER TABLE statement changed the description of the table or base table of a view referred to by the package. For releases of Db2 prior to Version 5, the change invalidates the package. N No Y Yes	G
OPERATIVE	CHAR(1) NOT NULL	Whether the package can be allocated: N A package with package-level dependency cannot be allocated. An explicit BIND or REBIND is required before the package can be allocated. Y Yes	G
VALIDATE	CHAR(1) NOT NULL	Whether validity checking can be deferred until run time: B All checking must be performed at bind time. R Validation is done at run time for tables, views, and privileges that do not exist at bind time.	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
ISOLATION	CHAR(1) NOT NULL	Isolation level when the package was last bound or rebound R RR (repeatable read) S CS (cursor stability) T RS (read stability) U UR (uncommitted read) blank Not specified, and therefore at the level specified for the plan executing the package	G
RELEASE	CHAR(1) NOT NULL	The value used for RELEASE when the package was last bound or rebound: C Value used was COMMIT. D Value used was DEALLOCATE. I The local package is inheriting the value from the plan blank Not specified, and therefore the value specified for the plan executing the package.	G
EXPLAIN	CHAR(1) NOT NULL	EXPLAIN option specified for the package; that is, whether information on the package's statements was added to the owner of the PLAN_TABLE table: N No Y Yes	G
QUOTE	CHAR(1) NOT NULL	SQL string delimiter for SQL statements in the package: N Apostrophe Y Quotation mark	G
COMMA	CHAR(1) NOT NULL	Decimal point representation for SQL statements in package: N Period Y Comma	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
HOSTLANG	CHAR(1) NOT NULL	<p>Host language, or a value set by the program preparation process:</p> <p>B Assembler language</p> <p>C OS/VS COBOL</p> <p>D C</p> <p>F Fortran</p> <p>J Java</p> <p>P PL/I</p> <p>R REST</p> <p>2 VS COBOL II or IBM COBOL Release 1 (formerly called COBOL/370)</p> <p>3 IBM COBOL (Release 2 or subsequent releases)</p> <p>4 C++</p> <p>blank For remotely bound packages, trigger packages (TYPE='T' or '1'), SQL procedure packages (TYPE='N'), or non-inline SQL scalar function packages (TYPE='F').</p>	G
CHARSET	CHAR(1) NOT NULL	<p>Indicates whether the system CCSID for SBCS data was 290 (Katakana) when the program was precompiled:</p> <p>K Yes</p> <p>A No</p>	G
MIXED	CHAR(1) NOT NULL	<p>Indicates if mixed data was in effect when the package's program was precompiled (for more on when mixed data is in effect, see "Character strings" on page 104):</p> <p>N No</p> <p>Y Yes</p>	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
DEC31	CHAR(1) NOT NULL	Indicates whether DEC31 was in effect when the package's program was precompiled (for more on when DEC31 is in effect, see "Arithmetic with two decimal operands" on page 254): N No Y Yes	G
DEFERPREP	CHAR(1) NOT NULL	Indicates the CURRENTDATA option when the package was bound or rebound: A Data currency is required for all cursors. Inhibit blocking for all cursors. B Data currency is not required for ambiguous cursors. C Data currency is required for ambiguous cursors. blank The package was created before the CURRENTDATA option was available.	G
SQLERROR	CHAR(1) NOT NULL	Indicates the SQLERROR option on the most recent subcommand that bound or rebound the package: C CONTINUE N NOPACKAGE	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
REMOTE	CHAR(1) NOT NULL	<p>Source of the package:</p> <p>C Package was created by BIND COPY.</p> <p>D Package was created by BIND COPY with the OPTIONS(COMMAND) option.</p> <p>K The package was copied from a package that was originally bound on behalf of a remote requester.</p> <p>L The package was copied with the OPTIONS(COMMAND) option from a package that was originally bound on behalf of a remote requester.</p> <p>N Package was locally bound from a DBRM.</p> <p>Y Package was bound on behalf of a remote requester.</p>	G
PCTIMESTAMP	TIMESTAMP NOT NULL	Date and time the application program was precompiled, or '0001-01-01-00.00.00.000000' if the LEVEL precompiler option was used, or if the package came from a non-Db2 location.	G
IBMREQD	CHAR(1) NOT NULL	<p>A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators.</p> <p>The value in this field is not a reliable indicator of release dependencies. RELBOUND should be used instead.</p>	G
VERSION	VARCHAR(122) NOT NULL	<p>Version identifier for the package.</p> <p>The value is an empty string for:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T'). • A package for an application that was precompiled without SQL processing option VERSION, or was precompiled with an empty string for the VERSION value. (TYPE=blank). 	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
PDSNAME	VARCHAR(132) NOT NULL	For a locally bound package, the name of the PDS (library) in which the package's DBRM is a member. For a locally copied package, the value in SYSPACKAGE.PDSNAME for the source package. Otherwise, the product signature of the bind requester followed by one of the following: <ul style="list-style-type: none"> • For Db2 for z/OS remote requesters, the requester's location name, or IP address, or LU name enclosed in angle brackets (for example, "<LUSQLDS>"). • For non-Db2 for z/OS remote requesters, the requester's IP address or LU name enclosed in angle brackets. 	G
DEGREE	CHAR(3) NOT NULL WITH DEFAULT	The DEGREE option used when the package was last bound: <p>ANY DEGREE(ANY)</p> <p>1 or blank DEGREE(1). Blank if the package was migrated.</p>	G
GROUP_MEMBER	VARCHAR(24) NOT NULL WITH DEFAULT	The Db2 data sharing member name of the Db2 subsystem that performed the most recent bind. This column is blank if the Db2 subsystem was not in a Db2 data sharing environment when the bind was performed.	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
DYNAMICRULES	CHAR(1) NOT NULL WITH DEFAULT	<p>The DYNAMICRULES option used when the package was last bound:</p> <p>B BIND. Dynamic SQL statements are executed with DYNAMICRULES bind behavior.</p> <p>D DEFINEBIND. When the package is run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES define behavior.</p> <p>When the package is not run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES bind behavior.</p> <p>E DEFINERUN. When the package is run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES define behavior.</p> <p>When the package is not run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES run behavior.</p> <p>H INVOKEBIND. When the package is run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES invoke behavior.</p> <p>When the package is not run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES bind behavior.</p>	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
DYNAMICRULES (continued)		<p>I INVOKERUN. When the package is run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES invoke behavior.</p> <p>When the package is not run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES run behavior.</p> <p>R RUN. Dynamic SQL statements are executed with DYNAMICRULES run behavior.</p> <p>blank DYNAMICRULES is not specified for the package. The package uses the DYNAMICRULES value of the plan to which the package is appended at execution time.</p> <p>For a description of the DYNAMICRULES behaviors, see “Authorization IDs and dynamic SQL” on page 94.</p>	
REOPTVAR	CHAR(1) NOT NULL WITH DEFAULT 'N'	<p>Whether the access path is determined again at execution time using input variable values:</p> <p>A Bind option REOPT(AUTO) indicates that the access path is determined multiple times at execution time depending on the parameter value.</p> <p>N Bind option REOPT(NONE) indicates that the access path is determined at bind time.</p> <p>Y Bind option REOPT(ALWAYS) indicates that the access path is determined at execution time for SQL statements with variable values.</p> <p>1 Bind option REOPT(ONCE) indicates that the access path is determined only once at execution time, using the first set of input variable values, regardless of how many times the same statement is executed.</p>	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
DEFERPREPARE	CHAR(1) NOT NULL WITH DEFAULT	<p>Whether PREPARE processing is deferred until OPEN is executed:</p> <p>N Bind option NODEFER(PREPARE) indicates that PREPARE processing is not deferred until OPEN is executed.</p> <p>Y Bind option DEFER(PREPARE) indicates that PREPARE processing is deferred until OPEN is executed.</p> <p>I The local package is inheriting the value from the plan</p> <p>blank Blank for a trigger package. Otherwise, the bind option was not specified for the package and is inherited from the plan.</p>	G
KEEPDYNAMIC	CHAR(1) NOT NULL WITH DEFAULT 'N'	<p>Whether prepared dynamic statements are to be purged at each commit point:</p> <p>N The bind option is KEEPDYNAMIC(NO). Prepared dynamic SQL statements are destroyed at each commit point or rollback operation.</p> <p>Y The bind option is KEEPDYNAMIC(YES). Prepared dynamic SQL statements are kept past each commit point or rollback operation.</p>	G
PATHSCHEMAS	VARCHAR(2048) NOT NULL WITH DEFAULT	SQL path specified on the BIND or REBIND command that bound the package. The path is used to resolve unqualified data type, function, and stored procedure names used in certain contexts. If the PATH bind option was not specified, the value in the column is a zero length string; however, Db2 uses the default SQL path.	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
TYPE	CHAR(1) NOT NULL WITH DEFAULT	Type of package. Identifies how the package is created: F A CREATE FUNCTION or ALTER FUNCTION statement, or a BIND PACKAGE DEPLOY command created the package, and this package is a compiled SQL scalar function package. N A CREATE PROCEDURE or ALTER PROCEDURE statement, or BIND PACKAGE DEPLOY command created the package, and this package is a native SQL routine package. T A CREATE TRIGGER or ALTER TRIGGER statement for a basic trigger created the package. blank BIND PACKAGE command created the package. 1 A CREATE TRIGGER or ALTER TRIGGER statement for an advanced trigger created the package.	G
DBPROTOCOL	CHAR(1) NOT NULL WITH DEFAULT 'D'	Whether remote access for SQL is implemented with DRDA access or DRDA access with the capability for package-based continuous block fetch: D DRDA C DRDA access with package-based continuous block fetch enabled.	G
FUNCTIONTS	TIMESTAMP NOT NULL WITH DEFAULT	Timestamp when the function was resolved. This value is set by the BIND and REBIND commands, but not by automatic rebinds (autobind).	G
OPTHINT	VARCHAR(128) NOT NULL WITH DEFAULT	Value of the OPTHINT bind option. Identifies rows in owner.PLAN_TABLE that are to be used as input to Db2. Refer to the ACCESSPATH column in the “SYSPACKSTMT catalog table” on page 2581 for information about which statements are using the specified hints.	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
ENCODING_CCSID	INTEGER NOT NULL WITH DEFAULT	The CCSID corresponding to the encoding scheme or CCSID as specified for the bind option ENCODING. The Encoding Scheme specified on the bind command: ccsid The specified or derived CCSID. 0 The default CCSID as specified on panel DSNTIPF at installation time. Used when the package was bound prior to Version 7.	G
IMMEDWRITE	CHAR(1) NOT NULL WITH DEFAULT	Indicates when writes of updated group buffer pool dependent pages are to be done. This option is only applicable for data sharing environments. I The local package is inheriting the value from the plan N Bind option IMMEDIATEWRITE(NO) indicates normal write activity is done. Y Bind option IMMEDIATEWRITE(YES) indicates that immediate writes are done for updated group buffer pool dependent pages. 1 Bind option IMMEDIATEWRITE(PH1) indicates that updated group buffer pool dependent pages are written at or before phase 1 commit. blank A migrated package.	G
RELBOUND	CHAR(1) NOT NULL WITH DEFAULT	The release when the package was bound or rebound. blank Bound prior to Version 7 For all other values, see Release dependency indicators	G
CATENCODE	CHAR(1)	Not used.	N
REMARKS	VARCHAR(550) NOT NULL WITH DEFAULT	A character string provided by the user with the COMMENT statement.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner blank Authorization ID L Role	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
ROUNDING	CHAR(1) NOT NULL WITH DEFAULT	<p>The ROUNDING option used when the package was last bound:</p> <p>C ROUND_CEILING</p> <p>D ROUND_DOWN</p> <p>F ROUND_FLOOR</p> <p>G ROUND_HALF_DOWN</p> <p>E ROUND_HALF_EVEN</p> <p>H ROUND_HALF_UP</p> <p>U ROUND_UP</p> <p>blank The package created in a Db2 release prior to Version 9.</p>	G
DISTRIBUTE	CHAR(1) NOT NULL WITH DEFAULT 'N'	<p>Determines if Db2 should gather location names from SQL statements, and create remote packages for the user (This only has effect during local bind):</p> <p>A Db2 will collect remote location names from SQL statements during local bind, and automatically create remote packages at those sites. The site names are gathered from object names in static SQL statements and literals on CONNECT statements. The sites at which the package is remotely bound can be determined by the location (BTYPE='X') records in SYSIBM.SYSPACKDEP for this package.</p> <p>L Db2 will automatically create remote packages at the sites specified in the list of location-names. The sites at which the package is remotely bound can be determined by the location (BTYPE='X') records in SYSIBM.SYSPACKDEP for this package.</p>	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
LASTUSED	DATE NOT NULL WITH DEFAULT	<p>The last date that the package was used. The LASTUSED value is set to '0001-01-01' when the package is created, and the value is updated after the package is allocated. The LASTUSED value is not always updated immediately, and it might be updated after delay of one or more days.</p> <p>Note: A package that contains only certain static SQL statements, such as COMMIT or ROLLBACK, can be used without being allocated, and the LASTUSED value is not updated in these situations.</p> <p>The following commands preserve the existing LASTUSED value:</p> <ul style="list-style-type: none"> • BIND REPLACE of the same package version • REBIND 	G
CONCUR_ACC_RES	CHAR(1) NOT NULL	<p>Indicates the CONCURRENTACCESSRESOLUTION option when the package was bound or rebound:</p> <p>blank Not specified</p> <p>U USECURRENTLYCOMMITTED</p> <p>W WAITFOROUTCOME</p>	G
EXTENDEDINDICATOR	CHAR(1) NOT NULL WITH DEFAULT	<p>The value of the EXTENDEDINDICATOR bind option:</p> <p>blank Not specified</p> <p>N EXTENDEDINDICATOR NO</p> <p>Y EXTENDEDINDICATOR YES</p>	G
COPYID	INTEGER NOT NULL	The current copy of the package.	G
PLANMGMT	CHAR(1) NOT NULL WITH DEFAULT	<p>The value of the PLANMGMT bind option:</p> <p>E PLANMGMT EXTENDED</p> <p>B PLANMGMT BASIC</p> <p>blank PLANMGMT OFF</p>	G
PLANMGMTSCOPE	CHAR(1) NOT NULL WITH DEFAULT	<p>The value of the PLANMGMTSCOPE bind option:</p> <p>S PLANMGMTSCOPE STATIC</p>	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
APREUSE	CHAR(1) NOT NULL WITH DEFAULT	The value of the APREUSE bind option at the conclusion of a successful bind operation. N NO or NONE: Access paths were not reused. W WARN: Db2 attempted to reuse access paths. If an access path could not be reused, Db2 generated a new access path. E ERROR: Access paths were successfully reused. No error condition prevented Db2 from reusing access paths.	G
APRETAINDUP	CHAR(1) NOT NULL WITH DEFAULT	The value of the APRETAINDUP bind option: Y APRETAINDUP YES specified. All copies were retained. 0 APRETAINDUP NO specified; however, the previous or original package copy is still retained due to access path differences. 1 APRETAINDUP NO specified, and the previous package copy is not retained as the access paths are identical to the current copy. 2 APRETAINDUP NO specified, and the previous and original package copies are not retained as the access paths are identical to the current copy.	G
SYSTIMESENSITIVE	CHAR(1) NOT NULL WITH DEFAULT 'N'	The value of the SYSTIMESENSITIVE bind option: Y References to system-period temporal tables are affected by the value of the CURRENT TEMPORAL SYSTEM_TIME special register. N References to system-period temporal tables are not affected by the value of the CURRENT TEMPORAL SYSTEM_TIME special register.	G
RECORDTEMPORALHIST	CHAR(1) NOT NULL WITH DEFAULT 'Y'	Not used.	N

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
BUSTIMESENSITIVE	CHAR(1) NOT NULL WITH DEFAULT 'N'	The value of the BUSTIMESENSITIVE bind option: Y References to application-period temporal tables are affected by the value of the CURRENT TEMPORAL BUSINESS_TIME special register. N References to application-period temporal tables are not affected by the value of the CURRENT TEMPORAL BUSINESS_TIME special register.	G
APPLCOMPAT	VARCHAR(10) NOT NULL WITH DEFAULT	The application compatibility level of the package, or blank if the package was bound before Db2 11, or not determined. V12R1M5nn Compatibility with the behavior of the identified Db2 12 function level. For example, V12R1M510 specifies compatibility with the highest available Db2 12 function level. The equivalent function level or higher must be activated. For information about the new capabilities that become available in each application compatibility level, see V12R1Mnnn application compatibility levels (Db2 Application programming and SQL) . Tip: Extra program preparation steps might be required to increase the application compatibility level for applications that use data server clients or drivers to access Db2 for z/OS. For more information, see Setting application compatibility levels for data server clients and drivers (Db2 Application programming and SQL) . V12R1 Compatibility with the behavior of Db2 12 function level 500. This value has the same result as specifying V12R1M500. V11R1 Compatibility with the behavior of Db2 11 new-function mode. After migration to Db2 12, this value has the same result as specifying V12R1M100. For more information, see V11R1 application compatibility level (Db2 Application programming and SQL) V10R1 Compatibility with the behavior of DB2 10 new-function mode. For more information, see V10R1 application compatibility level (Db2 Application programming and SQL) .	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
ARCHIVESENSITIVE	CHAR(1) NOT NULL WITH DEFAULT 'N'	The value of the ARCHIVESENSITIVE bind option. Y References to archive-enabled tables are affected by the value of the SYSIBMADM.GET_ARCHIVE built-in global variable. Y is the default value. N References to archive-enabled tables are not affected by the value of the SYSIBMADM.GET_ARCHIVE built-in global variable.	G
EXTSEQNO	INTEGER NOT NULL WITH DEFAULT 0	Internal use only.	I
DESCSTAT	CHAR(1) NOT NULL WITH DEFAULT	The value of the DESCSTAT bind option. Y The Db2 database manager generates a DESCRIBE SQLDA at bind time so that DESCRIBE requests for static SQL can be satisfied during execution. N The Db2 database manager does not generate a DESCRIBE SQLDA at bind time for static SQL statements. blank The package was bound before Db2 11, or not determined.	G

Table 344. SYSIBM.SYSPACKAGE table column descriptions (continued)

Column name	Data type	Description	Use
ORIGIN	CHAR(1) NOT NULL WITH DEFAULT	<p>The origin of the EXPLAIN records:</p> <p>A Automatic bind</p> <p>B BIND command</p> <p>G Implicit automatic regeneration of the SQL routine or trigger for changed options, or an explicit ALTER REGENERATE of the SQL routine or trigger for the package</p> <p>I Implicit automatic regeneration of the SQL routine or trigger for the package because of fallback, coexistence, or deployment to a different release where the routines or triggers are incompatible.</p> <p>R REBIND command</p> <p>blank The row existed before Db2 12. This is the default value.</p>	G
APREUSE_NO_FL	VARCHAR(10) NOT NULL WITH DEFAULT	The function level when the package was bound with APREUSE(NO), or blank if the package was bound before Db2 12, or not determined. This is the default value.	G
APREUSE_NO_TS	TIMESTAMP NOT NULL WITH DEFAULT	<p>The bind time when the package was bound with APREUSE(NO):</p> <p>0001-01-01-00.00.00.000000 The package was bound before Db2 12. This is the default value.</p>	G
CONC_STMT	CHAR(1) NOT NULL WITH DEFAULT 'N'	<p>Whether statement concentration is enabled:</p> <p>N No. This is the default value.</p> <p>Y Yes</p>	G
FUNCTION_LVL	VARCHAR(10) NOT NULL WITH DEFAULT	The function level of the package, or blank if the package was bound before Db2 12, or not determined.	G

SYSPACKAUTH catalog table

The SYSPACKAUTH table records the privileges that are held by users over packages. The schema is SYSIBM.

Table 345. SYSIBM.SYSPACKAUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID of the user who granted the privilege. Could also be PUBLIC.	G
GRANTEE	VARCHAR(128) NOT NULL	Authorization ID of the user who holds the privileges, the name of a plan that uses the privileges or PUBLIC for a grant to PUBLIC.	G
LOCATION	VARCHAR(128) NOT NULL	Always contains blanks	S
COLLID	VARCHAR(128) NOT NULL	Collection name for the package or packages on which the privilege was granted.	G
NAME	VARCHAR(128) NOT NULL	Name of the package on which the privileges are held. An asterisk (*) if the privileges are held on all packages in a collection.	G
CONTOKEN	CHAR(8) NOT NULL FOR BIT DATA	Consistency token for the package, as stored in the SYSPACKAGE catalog table. The value can also be blank. Db2 does not use this value to determine authorization for package operations such as bind, copy, or execution.	S
TIMESTAMP	TIMESTAMP NOT NULL	Timestamp indicating when the privilege was granted.	G
GRANTEETYPE	CHAR(1) NOT NULL	Type of grantee: blank An authorization ID L Role P An application plan	G

Table 345. SYSIBM.SYSPACKAUTH table column descriptions (continued)

Column name	Data type	Description	Use
AUTHHOWGOT	CHAR(1) NOT NULL	<p>Authorization level of the user from whom the privileges were received. This authorization level is not necessarily the highest authorization level of the grantor.</p> <p>blank Not applicable</p> <p>A PACKADM (on collection *)</p> <p>C DBCTRL</p> <p>D DBADM</p> <p>E SECADM</p> <p>G ACCESSCTRL</p> <p>L SYSCTRL</p> <p>M DBMAINT</p> <p>P PACKADM (on a specific collection)</p> <p>S SYSADM</p> <p>T DATAACCESS</p>	G
BINDAUTH	CHAR(1) NOT NULL	<p>Whether GRANTEE can use the BIND and REBIND subcommands on the package:</p> <p>blank Privilege is not held</p> <p>G Privilege is held with the GRANT option</p> <p>Y Privilege is held without the GRANT option</p>	G
COPYAUTH	CHAR(1) NOT NULL	<p>Whether GRANTEE can COPY the package:</p> <p>blank Privilege is not held</p> <p>G Privilege is held with the GRANT option</p> <p>Y Privilege is held without the GRANT option</p>	G

Table 345. SYSIBM.SYSPACKAUTH table column descriptions (continued)

Column name	Data type	Description	Use
EXECUTEAUTH	CHAR(1) NOT NULL	Whether GRANTEE can execute the package: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
GRANTORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantor: blank Authorization ID L Role	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSPACKCOPY catalog table

The SYSPACKCOPY table contains one row for the previous version of each package and one row for the original version of each package. The schema is SYSIBM.

⁴⁰ Packages are divided into *sections*. The base section of the package must be in the EDM pool during the entire time the package is executing. Other sections of the package, corresponding roughly to sets of related SQL statements, are brought into the pool as needed.

Table 346. SYSIBM.SYSPACKCOPY table column descriptions

Column name	Data type	Description	Use
LOCATION	VARCHAR(128) NOT NULL	Always contains blanks	S
COLLID	VARCHAR(128) NOT NULL	Name of the package collection. For a trigger package, it is the schema name of the trigger.	G
NAME	VARCHAR(128) NOT NULL	Name of the package.	G
CONTOKEN	CHAR(8) NOT NULL WITH DEFAULT FOR BIT DATA	Consistency token for the package. For a package derived from a Db2 DBRM, this is either: <ul style="list-style-type: none"> The "level" as specified by the LEVEL option when the package's program was precompiled The timestamp indicating when the package's program was precompiled, in an internal format. 	S
OWNER	VARCHAR(128) NOT NULL	Authorization ID of the package owner. For a trigger package, the value is the authorization ID of the owner of the trigger, which is set to the current authorization ID (the plan or package owner for static CREATE TRIGGER statement; the CURRENT SQLID for a dynamic CREATE TRIGGER statement).	G
CREATOR	VARCHAR(128) NOT NULL	Authorization ID of the creator of the package. The creator is the authorization ID under which the package was bound or rebound. For a trigger package, the value is determined differently. For dynamic SQL, it is the primary authorization ID of the user who issued the CREATE TRIGGER statement. For static SQL, it is the authorization ID of the plan or package owner.	G
TIMESTAMP	TIMESTAMP NOT NULL	Timestamp indicating when the package was created. For the previous or original copy, this is the timestamp that indicates when the package was created. For the phased-out copy, this is the timestamp indicating when the copy became phased-out.	G
BINDTIME	TIMESTAMP NOT NULL	Timestamp indicating when the package was last bound.	G
QUALIFIER	VARCHAR(128) NOT NULL	Implicit qualifier for the unqualified table, view, index, and alias names in the static SQL statements of the package.	G
PKSIZE	INTEGER NOT NULL	Size of the base section ⁴⁰ of the package, in bytes.	G
AVGSIZE	INTEGER NOT NULL	Average size, in bytes, of those sections ⁴⁰ of the plan that contain SQL statements processed at bind time.	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
SYSENTRIES	SMALLINT NOT NULL	Number of enabled or disabled entries for this package in SYSIBM.SYSPKSYSTEM. A value of 0 if all types of connections are enabled.	G
VALID	CHAR(1) NOT NULL	Whether the package is valid: A An ALTER statement changed the description of the table or base table of a view referred to by the package. For a CREATE INDEX statement involving data sharing, VALID is also marked as "A". The changes do not invalidate the package. H An ALTER TABLE statement changed the description of the table or base table of a view referred to by the package. For releases of Db2 prior to Version 5, the change invalidates the package. N No Y Yes	G
OPERATIVE	CHAR(1) NOT NULL	Whether the package can be allocated: N No; an explicit BIND or REBIND is required before the package can be allocated. Y Yes	G
VALIDATE	CHAR(1) NOT NULL	Whether validity checking can be deferred until run time: B All checking must be performed at bind time. R Validation is done at run time for tables, views, and privileges that do not exist at bind time.	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
ISOLATION	CHAR(1) NOT NULL	Isolation level when the package was last bound or rebound R RR (repeatable read) S CS (cursor stability) T RS (read stability) U UR (uncommitted read) blank Not specified, and therefore at the level specified for the plan executing the package	G
RELEASE	CHAR(1) NOT NULL	The value used for RELEASE when the package was last bound or rebound: C Value used was COMMIT. D Value used was DEALLOCATE. blank Not specified, and therefore the value specified for the plan executing the package.	G
EXPLAIN	CHAR(1) NOT NULL	EXPLAIN option specified for the package; that is, whether information on the package's statements was added to the owner of the PLAN_TABLE table: N No Y Yes	G
QUOTE	CHAR(1) NOT NULL	SQL string delimiter for SQL statements in the package: N Apostrophe Y Quotation mark	G
COMMA	CHAR(1) NOT NULL	Decimal point representation for SQL statements in package: N Period Y Comma	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
HOSTLANG	CHAR(1) NOT NULL	Host language, or a value set by the program preparation process: B Assembler language C OS/VS COBOL D C F Fortran J Java P PL/I R REST 2 VS COBOL II or IBM COBOL Release 1 (formerly called COBOL/370) 3 IBM COBOL (Release 2 or subsequent releases) 4 C++ blank For remotely bound packages, trigger packages (TYPE='T'), SQL procedure packages (TYPE='N'), or non-inline SQL scalar function packages (TYPE='F').	G
CHARSET	CHAR(1) NOT NULL	Indicates whether the system CCSID for SBCS data was 290 (Katakana) when the program was precompiled: K Yes A No	G
MIXED	CHAR(1) NOT NULL	Indicates if mixed data was in effect when the package's program was precompiled (for more on when mixed data is in effect, see "Character strings" on page 104): N No Y Yes	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
DEC31	CHAR(1) NOT NULL	Indicates whether DEC31 was in effect when the package's program was precompiled (for more on when DEC31 is in effect, see "Arithmetic with two decimal operands" on page 254): N No Y Yes	G
DEFERPREP	CHAR(1) NOT NULL	Indicates the CURRENTDATA option when the package was bound or rebound: A Data currency is required for all cursors. Inhibit blocking for all cursors. B Data currency is not required for ambiguous cursors. C Data currency is required for ambiguous cursors. blank The package was created before the CURRENTDATA option was available.	G
SQLERROR	CHAR(1) NOT NULL	Indicates the SQLERROR option on the most recent subcommand that bound or rebound the package: C CONTINUE N NOPACKAGE	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
REMOTE	CHAR(1) NOT NULL	Source of the package: C Package was created by BIND COPY. D Package was created by BIND COPY with the OPTIONS(COMMAND) option. K The package was copied from a package that was originally bound on behalf of a remote requester. L The package was copied with the OPTIONS(COMMAND) option from a package that was originally bound on behalf of a remote requester. N Package was locally bound from a DBRM. Y Package was bound on behalf of a remote requester.	G
PCTIMESTAMP	TIMESTAMP NOT NULL	Date and time the application program was precompiled, or '0001-01-01-00.00.000000' if the LEVEL precompiler option was used, or if the package came from a non-Db2 location.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELBOUND should be used instead.	G
VERSION	VARCHAR(122) NOT NULL	Version identifier for the package. The value is blank for a trigger package (TYPE='T').	G
PDSNAME	VARCHAR(132) NOT NULL	For a locally bound package, the name of the PDS (library) in which the package's DBRM is a member. For a locally copied package, the value in SYSPACKAGE.PDSNAME for the source package. Otherwise, the product signature of the bind requester followed by one of the following: <ul style="list-style-type: none"> • For Db2 for z/OS remote requesters, the requester's location name, or IP address, or LU name enclosed in angle brackets (for example, "<LUSQLDS>"). • For non-Db2 for z/OS remote requesters, the requester's IP address or LU name enclosed in angle brackets. 	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
DEGREE	CHAR(3) NOT NULL WITH DEFAULT	The DEGREE option used when the package was last bound: ANY DEGREE(ANY) 1 or blank DEGREE(1). Blank if the package was migrated.	G
GROUP_MEMBER	VARCHAR(24) NOT NULL WITH DEFAULT	The Db2 data sharing member name of the Db2 subsystem that performed the most recent bind. This column is blank if the Db2 subsystem was not in a Db2 data sharing environment when the bind was performed.	G
DYNAMICRULES	CHAR(1) NOT NULL WITH DEFAULT	The DYNAMICRULES option used when the package was last bound: B BIND. Dynamic SQL statements are executed with DYNAMICRULES bind behavior. D DEFINEBIND. When the package is run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES define behavior. When the package is not run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES bind behavior. E DEFINERUN. When the package is run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES define behavior. When the package is not run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES run behavior. H INVOKEBIND. When the package is run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES invoke behavior. When the package is not run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES bind behavior.	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
DYNAMICRULES (cont.)		<p>I INVOKERUN. When the package is run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES invoke behavior.</p> <p>When the package is not run under an active stored procedure or user-defined function, dynamic SQL statements in the package are executed with DYNAMICRULES run behavior.</p> <p>R RUN. Dynamic SQL statements are executed with DYNAMICRULES run behavior.</p> <p>blank DYNAMICRULES is not specified for the package. The package uses the DYNAMICRULES value of the plan to which the package is appended at execution time.</p> <p>For a description of the DYNAMICRULES behaviors, see “Authorization IDs and dynamic SQL” on page 94.</p>	
REOPTVAR	CHAR(1) NOT NULL WITH DEFAULT 'N'	<p>Whether the access path is determined again at execution time using input variable values:</p> <p>A Bind option REOPT(AUTO) indicates that the access path is determined multiple times at execution time depending on the parameter value.</p> <p>N Bind option REOPT(NONE) indicates that the access path is determined at bind time.</p> <p>Y Bind option REOPT(ALWAYS) indicates that the access path is determined at execution time for SQL statements with variable values.</p> <p>1 Bind option REOPT(ONCE) indicates that the access path is determined only once at execution time, using the first set of input variable values, regardless of how many times the same statement is executed.</p>	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
DEFERPREPARE	CHAR(1) NOT NULL WITH DEFAULT	<p>Whether PREPARE processing is deferred until OPEN is executed:</p> <p>N Bind option NODEFER(PREPARE) indicates that PREPARE processing is not deferred until OPEN is executed.</p> <p>Y Bind option DEFER(PREPARE) indicates that PREPARE processing is deferred until OPEN is executed.</p> <p>blank Bind option not specified for the package. It is inherited from the plan.</p>	G
KEEPDYNAMIC	CHAR(1) NOT NULL WITH DEFAULT 'N'	<p>Whether prepared dynamic statements are to be purged at each commit point:</p> <p>N The bind option is KEEPDYNAMIC(NO). Prepared dynamic SQL statements are destroyed at each commit point.</p> <p>Y The bind option is KEEPDYNAMIC(YES). Prepared dynamic SQL statements are kept past each commit point.</p>	G
PATHSCHEMAS	VARCHAR(2048) NOT NULL WITH DEFAULT	SQL path specified on the BIND or REBIND command that bound the package. The path is used to resolve unqualified data type, function, and stored procedure names used in certain contexts. If the PATH bind option was not specified, the value in the column is a zero length string; however, Db2 uses the default SQL path.	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
TYPE	CHAR(1) NOT NULL WITH DEFAULT	Type of package. Identifies how the package is created: F CREATE FUNCTION or ALTER FUNCTION statement, or a BIND PACKAGE DEPLOY command created the package, and this package is a non-inline SQL scalar function package. N CREATE PROCEDURE or ALTER PROCEDURE statement, or BIND PACKAGE DEPLOY command created the package, and this package is a native SQL routine package. R CREATE TRIGGER or ALTER TRIGGER statement created the package, and the package is a trigger package that has been created or regenerated in Db2 11 new-function mode or later. T CREATE TRIGGER statement prior to Db2 11 new-function mode has created the package, and the package is a trigger package. CREATE TRIGGER statement created the package, and the package is a trigger package. blank BIND PACKAGE command created the package.	G
DBPROTOCOL	CHAR(1) NOT NULL WITH DEFAULT 'P'	Whether remote access for SQL is implemented with DRDA access or DRDA access with the capability for package-based continuous block fetch: D DRDA C DRDA access with the capability for package-based continuous block fetch.	G
FUNCTIONTS	TIMESTAMP NOT NULL WITH DEFAULT	Timestamp when the function was resolved. This value is set by the BIND and REBIND commands, but not by automatic rebinds (autobind).	G
OPTHINT	VARCHAR(128) NOT NULL WITH DEFAULT	Value of the OPTHINT bind option. Identifies rows in owner.PLAN_TABLE that are to be used as input to Db2. Refer to the ACCESSPATH column in the "SYSPACKSTMT catalog table" on page 2581 for information about which statements are using the specified hints.	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
ENCODING_CCSID	INTEGER NOT NULL WITH DEFAULT	The CCSID corresponding to the encoding scheme or CCSID as specified for the bind option ENCODING. The Encoding Scheme specified on the bind command: ccsid The specified or derived CCSID. 0 The default CCSID as specified on panel DSNTIPF at installation time. Used when the package was bound prior to Version 7.	G
IMMEDWRITE	CHAR(1) NOT NULL WITH DEFAULT	Indicates when writes of updated group buffer pool dependent pages are to be done. This option is only applicable for data sharing environments. N Bind option IMMEDIATEWRITE(NO) indicates normal write activity is done. Y Bind option IMMEDIATEWRITE(YES) indicates that immediate writes are done for updated group buffer pool dependent pages. 1 Bind option IMMEDIATEWRITE(PH1) indicates that updated group buffer pool dependent pages are written at or before phase 1 commit. blank A migrated package.	G
RELBOUND	CHAR(1) NOT NULL WITH DEFAULT	The release when the package was bound or rebound. blank Bound prior to Version 7 For all other values, see Release dependency indicators	G
CATENCODE	CHAR(1)	Not used.	N
REMARKS	VARCHAR(550) NOT NULL WITH DEFAULT	A character string provided by the user with the COMMENT statement.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner blank Authorization ID L Role	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
ROUNDING	CHAR(1) NOT NULL WITH DEFAULT	<p>The ROUNDING option used when the package was last bound:</p> <p>C ROUND_CEILING</p> <p>D ROUND_DOWN</p> <p>F ROUND_FLOOR</p> <p>G ROUND_HALF_DOWN</p> <p>E ROUND_HALF_EVEN</p> <p>H ROUND_HALF_UP</p> <p>U ROUND_UP</p> <p>blank The package created in a Db2 release prior to Version 9.</p>	G
DISTRIBUTE	CHAR(1) NOT NULL WITH DEFAULT 'N'	<p>Determines if Db2 should gather location names from SQL statements, and create remote packages for the user (This only has effect during local bind):</p> <p>A Db2 will collect remote location names from SQL statements during local bind, and automatically create remote packages at those sites. The site names are gathered from object names in static SQL statements and literals on CONNECT statements. The sites at which the package is remotely bound can be determined by the location (BTYPE='X') records in SYSIBM.SYSPACKDEP for this package.</p> <p>L Db2 will automatically create remote packages at the sites specified in the list of location-names. The sites at which the package is remotely bound can be determined by the location (BTYPE='X') records in SYSIBM.SYSPACKDEP for this package.</p>	G
LASTUSED	DATE NOT NULL WITH DEFAULT	The last date that the corresponding objects are used.	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
CONCUR_ACC_RES	CHAR(1) NOT NULL	Indicates the CONCURRENTACCESSRESOLUTION option when the package was bound or rebound: blank Not specified U USECURRENTLYCOMMITTED W WAITFOROUTCOME	G
EXTENDEDINDICATOR	CHAR(1) NOT NULL WITH DEFAULT	The value of the EXTENDEDINDICATOR bind option: N EXTENDEDINDICATOR NO Y EXTENDEDINDICATOR YES	G
COPYID	INTEGER NOT NULL	The version of the copy of the package that this row explains: 0 or 4 through 16 The phased-out copy of the package 1 The previous copy of the package 2 The original copy of the package	G
PLANMGMT	CHAR(1) NOT NULL WITH DEFAULT	The value of the PLANMGMT bind option: E PLANMGMT EXTENDED B PLANMGMT BASIC blank PLANMGMT OFF	G
PLANMGMTSCOPE	CHAR(1) NOT NULL WITH DEFAULT	The value of the PLANMGMTSCOPE bind option: S PLANMGMTSCOPE STATIC	G
APREUSE	CHAR(1) NOT NULL WITH DEFAULT	The value of the APREUSE bind option: N NO or NONE: Access paths are not reused. E ERROR: Db2 tries to reuse access paths. Processing ends when an access path cannot be reused.	I

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
APRETAINDUP	CHAR(1) NOT NULL WITH DEFAULT	The value of the APRETAINDUP bind option: Y APRETAINDUP YES specified. All copies were retained. 0 APRETAINDUP NO specified; however, the previous or original package copy is still retained due to access path differences. 1 APRETAINDUP NO specified, and the previous package copy is not retained as the access paths are identical to the current copy. 2 APRETAINDUP NO specified, and the previous and original package copies are not retained as the access paths are identical to the current copy.	G
SYSTIMESENSITIVE	CHAR(1) NOT NULL WITH DEFAULT 'N'	The value of the SYSTIMESENSITIVE bind option: Y References to system-period temporal tables are affected by the value of the CURRENT TEMPORAL SYSTEM_TIME special register. N References to system-period temporal tables are not affected by the value of the CURRENT TEMPORAL SYSTEM_TIME special register.	G
RECORDTEMPORALHIST	CHAR(1) NOT NULL WITH DEFAULT 'Y'	Not used.	N
BUSTIMESENSITIVE	CHAR(1) NOT NULL WITH DEFAULT 'N'	The value of the BUSTIMESENSITIVE bind option: Y References to application-period temporal tables are affected by the value of the CURRENT TEMPORAL BUSINESS_TIME special register. N References to application-period temporal tables are not affected by the value of the CURRENT TEMPORAL BUSINESS_TIME special register.	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
APPLCOMPAT	VARCHAR(10) NOT NULL WITH DEFAULT 'Y'	The value of the APPLCOMPAT bind option: V10R1 SQL statements in the package have V10R1 compatibility behavior. V11R1 SQL statements in the package have V11R1 compatibility behavior.	G
ARCHIVESENSITIVE	CHAR(1) NOT NULL WITH DEFAULT 'N'	The value of the ARCHIVESENSITIVE bind option. Y References to archive-enabled tables are affected by the value of the SYSIBMADM.GET_ARCHIVE built-in global variable. Y is the default value. N References to archive-enabled tables are not affected by the value of the SYSIBMADM.GET_ARCHIVE built-in global variable.	G
EXTSEQNO	INTEGER NOT NULL WITH DEFAULT 0	Internal use only.	I
DESCSTAT	CHAR(1) NOT NULL WITH DEFAULT	The value of the DESCSTAT bind option. Y The Db2 database manager generates a DESCRIBE SQLDA at bind time so that DESCRIBE requests for static SQL can be satisfied during execution. N The Db2 database manager does not generate a DESCRIBE SQLDA at bind time for static SQL statements.	G

Table 346. SYSIBM.SYSPACKCOPY table column descriptions (continued)

Column name	Data type	Description	Use
ORIGIN	CHAR(1) NOT NULL WITH DEFAULT	The origin of the EXPLAIN records: A Automatic bind B BIND command G Explicit ALTER REGENERATE of the SQL procedure for the package I Implicit automatic regeneration of the SQL procedure for the package R REBIND command blank The row existed before Db2 12. This is the default value.	G
APREUSE_NO_FL	VARCHAR(10) NOT NULL WITH DEFAULT	The function level when the package was bound with APREUSE(NO), or blank if the package was bound before Db2 12, or not determined. This is the default value.	G
APREUSE_NO_TS	TIMESTAMP NOT NULL WITH DEFAULT	The bind time when the package was bound with APREUSE(NO): 0001-01-01-00.00.00.000000 The package was bound before Db2 12. This is the default value.	G
CONC_STMT	CHAR(1) NOT NULL WITH DEFAULT 'N'	Whether statement concentration is enabled: N No. This is the default value. Y Yes	G
FUNCTION_LVL	VARCHAR(10)	The function level of the package.	G

SYSPACKDEP catalog table

The SYSPACKDEP table records the dependencies of packages on local tables, views, synonyms, table spaces, indexes, aliases, functions, and stored procedures. The schema is SYSIBM.

Access paths for SQL statements might depend on objects that Db2 does not actually use when it processes the selected access paths. Such dependencies are recorded in the SYSPACKDEP catalog table, but they are not shown in EXPLAIN output.

Table 347. SYSIBM.SYSPACKDEP table column descriptions

Column name	Data type	Description	Use
BNAME	VARCHAR(128) NOT NULL	The name of an object that a package depends on. If BTYPE is W or Z, the value is the name of the table on which the period is defined.	G

Table 347. SYSIBM.SYSPACKDEP table column descriptions (continued)

Column name	Data type	Description	Use
BQUALIFIER	VARCHAR(128) NOT NULL	The value of the column depends on the type of object: <ul style="list-style-type: none">• If BNAME identifies a table space (BTYPE is R), the value is the name of its database.• If BNAME identifies a table on which a period is defined (BTYPE is W or Z), the value is the qualifier of that table.• If BNAME identifies user-defined function, a cast function, a stored procedure, or a sequence (BTYPE is F, O, or Q), the value is the schema name.• If BNAME identifies a role, the value is blank.• Otherwise, the value is the schema of BNAME.	G

Table 347. SYSIBM.SYSPACKDEP table column descriptions (continued)

Column name	Data type	Description	Use
BTYPE	CHAR(1) NOT NULL	Type of object identified by BNAME and BQUALIFIER: A Alias E INSTEAD OF trigger F User-defined function or cast function H Global variable G Global temporary table I Index M Materialized query table O Stored procedure P Partitioned table space if it is defined as LARGE or with the DSSIZE parm Q Sequence object R Table space S Synonym T Table U User-defined type, which is a distinct type or an array type. DOWNER	VARCHAR(128) NOT NULL WITH DEFAULT	Owner of the package:	G
DTYPE	CHAR(1) NOT NULL WITH DEFAULT	Type of package: <p>F Compiled SQL scalar function</p> <p>N Native SQL routine package</p> <p>O Original copy of a package</p> <p>P Previous copy of a package</p> <p>R Reserved for IBM use</p> <p>T Trigger package for a basic trigger</p> <p>blank Not a trigger package or a native SQL routine package</p> <p>1 Trigger package for an advanced trigger</p>	G
DOWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner of the package: <p>blank Authorization ID</p> <p>L Role</p>	G
COPYID	INTEGER NULLABLE	The copy ID of the package.	G

Related reference

[SYSDYNQRYDEP catalog table](#)

The SYSDYNQRYDEP table contains information about dependencies for dynamic query packages. The schema is SYSIBM.

SYSPACKLIST catalog table

The SYSPACKLIST table contains one or more rows for every local application plan bound with a package list. Each row represents a unique entry in the plan's package list. The schema is SYSIBM.

Table 348. SYSIBM.SYSPACKLIST table column descriptions

Column name	Data type	Description	Use
PLANNAME	VARCHAR(24) NOT NULL	Name of the application plan.	G
SEQNO	SMALLINT NOT NULL	Sequence number of the entry in the package list.	G
LOCATION	VARCHAR(128) NOT NULL	Location of the package. Blank if this is local. An asterisk (*) indicates location to be determined at run time.	G
COLLID	VARCHAR(128) NOT NULL	Collection name for the package. An asterisk (*) indicates that the collection name is determined at run time.	G
NAME	VARCHAR(128) NOT NULL	Name of the package. An asterisk (*) indicates an entire collection.	G
TIMESTAMP	TIMESTAMP NOT NULL	Timestamp indicating when the row was created.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSPACKSTMT catalog table

The SYSPACKSTMT table contains one or more rows for each SQL statement in a package that is bound locally, and one or more rows for a subset of the SQL statements in a package that is bound remotely. The schema is SYSIBM.

Table 349. SYSIBM.SYSPACKSTMT table column descriptions

Column name	Data type	Description	Use
LOCATION	VARCHAR(128) NOT NULL	Always contains blanks	S
COLLID	VARCHAR(128) NOT NULL	Name of the package collection.	G

Table 349. SYSIBM.SYSPACKSTMT table column descriptions (continued)

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the package.	G
CONTOKEN	CHAR(8) NOT NULL FOR BIT DATA	Consistency token for the package. This is either: <ul style="list-style-type: none"> The "level" as specified by the LEVEL option when the package's program was precompiled The timestamp indicating when the package's program was precompiled, in an internal format 	S
SEQNO	INTEGER NOT NULL	Sequence number of the statement. Rows that contain zero in the SEQNO, STMTNO, and SECTNO column values are for IBM internal use only.	G
STMTNO	SMALLINT NOT NULL	The statement number of the statement in the source program. If the STMTNO value is zero, the statement number is greater 32767 and the STMTNOI column contains the statement number. A negative value indicates a statement number greater than 32767 in a DRBM created in DB2 version 2.2 or earlier. To convert a negative value to a meaningful statement number, add 65536 to the negative STMTNO value. For example, -26472 is equivalent to +39064 (-26472 + 65536). Rows that contain zero in the SEQNO, STMTNO, and SECTNO column values are for IBM internal use only.	G
SECTNO	SMALLINT NOT NULL	The section number of the statement. For generated packages for SQL routines, such as procedures and user-defined functions, and advanced triggers, a value of 1 indicates the control statement for the routine or advanced trigger. For basic trigger packages, a value of 1 indicates the WHEN clause for activating the trigger. Rows that contain zero in the SEQNO, STMTNO, and SECTNO column values are for IBM internal use only.	G
BINDERROR	CHAR(1) NOT NULL	Whether an SQL error was detected at bind time: N No Y Yes	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

STATUS (cont.)		<p>J Indefinite - statement is dynamic. The statement will be bound at execution time using values for input variables during access path selection.</p> <p>K Control - CALL statement.</p> <p>L Bad - the statement has some allowable error. The bind continues but the statement cannot be executed.</p> <p>M Parsed - statement references a table that is qualified with SESSION and was not bound because the table reference could be for a declared temporary table that will not be defined until the package or plan is run. The SQL statement will be rebound at execution time using values for input variables during access path selection.</p> <p>O Compiled for acceleration. The static query was bound successfully for acceleration and will be routed to an accelerator when executed.</p> <p>blank The statement is non-executable, or was bound in a Db2 release prior to Version 5.</p>	
ACCESSPATH	CHAR(1) NOT NULL WITH DEFAULT	<p>For static statements, indicates if the access path for the statement is based on user-specified optimization hints:</p> <p>H Optimization hints were used.</p> <p>A The access path was reused because of the APREUSE bind option.</p> <p>blank One of the following situations:</p> <ul style="list-style-type: none"> • The access path was determined without the use of hints, and a previous access path was not reused. • No access path is associated with the statement. • The statement is a dynamic SQL statement 	G
STMTNOI	INTEGER NOT NULL WITH DEFAULT	<p>The statement number of the statement in the source program.</p> <p>A negative value indicates a statement number greater than 32767 in a DRBM created in DB2 version 2.2 or earlier. To convert a negative value to a meaningful statement number, add 65536 to the negative STMTNOI value. For example, -26472 is equivalent to +39064 (-26472 + 65536).</p>	G

Table 349. SYSIBM.SYSPACKSTMT table column descriptions (continued)

Column name	Data type	Description	Use
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. For generated packages for SQL routines, such as procedures and user-defined functions, and advanced triggers, a value of 1 indicates the control statement for the routine or advanced trigger. For basic trigger packages, a value of 1 indicates the WHEN clause for activating the trigger.	G
EXPLAINABLE	CHAR(1) NOT NULL WITH DEFAULT	Contains one of the following values: Y Indicates that the SQL statement can be used with the EXPLAIN function and might have rows describing its access path in the owner.PLAN_TABLE. N Indicates that the SQL statement does not have any rows describing its access path in the owner.PLAN_TABLE. blank Indicates that the SQL statement was bound prior to Version 7.	G
QUERYNO	INTEGER NOT NULL WITH DEFAULT -1	The query number of the SQL statement in the source program. SQL statements bound prior to Version 7 have a default value of -1. Statements bound in Version 7 or later use the value specified on the QUERYNO clause on SELECT, UPDATE, INSERT, DELETE, EXPLAIN, DECLARE CURSOR, or REFRESH TABLE statements. If the QUERYNO clause is not specified, the query number is set to the statement number.	G
ROWID	ROWID NULL GENERATED ALWAYS	ROWID column, created for the lob columns in this table.	G
STMT_ID	BIGINT NOT NULL	A unique statement identifier.	G
STATEMENT	CLOB(2M) NOT NULL WITH DEFAULT	The complete text for the SQL statement that the row represents.	G
-	BLOB(2M) NOT NULL WITH DEFAULT	Internal use only.	I

Table 349. SYSIBM.SYSPACKSTMT table column descriptions (continued)

Column name	Data type	Description	Use
EXPANSION_REASON	CHAR(2) NOT NULL	<p>For dynamic statements, this column is blank. For static statements, one of the following values to indicate the reason that an implicit query transformation occurred when the package was bound:</p> <p>A The statement was bound with implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>B The statement was bound with implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>S The statement was bound with implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>SB The statement was bound with implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank One of the following occurred:</p> <ul style="list-style-type: none"> The statement did not bind successfully and the VALIDATE(RUN) bind option was used. The statement was bound without implicit query transformation. 	G
QUERYID	BIGINT NOT NULL WITH DEFAULT -1	The unique identifier for locating records in the SYSIBM.SYSQUERY catalog table. The -1 default value indicates that no QUERYID value was found for the SQL statement when the package was bound.	G
QUERY_HASH	CHAR(16) NOT NULL WITH DEFAULT FOR BIT DATA	<p>The hash key for locating records in the SYSIBM.SYSQUERY catalog table. This value is not unique for each statement. Other columns for the collection ID, package name, section number, and query number can be used with the hash key for uniqueness.</p> <p>The '00'x default value indicates that no hash key was generated for the SQL statement when the package was bound.</p>	G
QUERY_HASH_VERSION	INTEGER NOT NULL WITH DEFAULT -1	The hash version for locating records in the SYSIBM.SYSQUERY catalog table. The -1 default value indicates that no hash key was generated for the SQL statement when the package was bound.	G
COPYID	INTEGER NULLABLE	The copy ID of the package.	G

SYSPACKSTMT_STMB catalog table

The SYSPACKSTMT_STMB table is an auxiliary table for the STMTBLOB column of the SYSPACKSTMT table and is required to hold LOB data. The schema is SYSIBM.

Table 350. SYSIBM.SYSPACKSTMT_STMB table column descriptions

Column name	Data type	Description	Use
—	BLOB(2M) NOT NULL WITH DEFAULT	Internal use only.	I

SYSPACKSTMT_STMT catalog table

The SYSPACKSTMT_STMT table is an auxiliary table for the STATEMENT column of the SYSPACKSTMT table and contains the LOB data. The schema is SYSIBM.

Table 351. SYSIBM.SYSPACKSTMT_STMT table column descriptions

Column name	Data type	Description	Use
STATEMENT	CLOB(2M) NOT NULL WITH DEFAULT	The complete text for the SQL statement that the row represents.	G

SYSPARMS catalog table

The SYSPARMS table contains a row for each parameter of a routine or multiple rows for table parameters (one for each column of the table). The schema is SYSIBM.

Table 352. SYSIBM.SYSPARMS table column descriptions

Column name	Data type	Description	Use
SCHEMA	VARCHAR(128) NOT NULL	Schema of the routine.	G
OWNER	VARCHAR(128) NOT NULL	Owner of the routine.	G
NAME	VARCHAR(128) NOT NULL	Name of the routine.	G
SPECIFICNAME	VARCHAR(128) NOT NULL	Specific name of the routine.	G
ROUTINETYPE	CHAR(1) NOT NULL	Type of routine: F User-defined function or cast function P Stored procedure	G

Table 352. SYSIBM.SYSPARMS table column descriptions (continued)

Column name	Data type	Description	Use
CAST_FUNCTION	CHAR(1) NOT NULL	Whether the routine is a cast function: N Not a cast function Y A cast function The only way to get a value of Y is if a user creates a distinct type when Db2 implicitly generates cast functions for the distinct type.	G
PARAMNAME	VARCHAR(128) NOT NULL	Name of the parameter. For a table parameter, the parameter name in the row corresponding to the first column of the table is the parameter name specified on CREATE; an empty string or blanks are stored for the parameter name for the rows corresponding to the remaining columns.	G
ROUTINEID	INTEGER NOT NULL	Internal identifier of the routine.	S

Table 352. SYSIBM.SYSPARMS table column descriptions (continued)

Column name	Data type	Description	Use
ROWTYPE	CHAR(1) NOT NULL	<p>The following values indicate the type of parameter described by this row:</p> <p>P Input parameter.</p> <p>O Output parameter; not applicable for functions</p> <p>B Both an input and an output parameter; not applicable for functions</p> <p>R Result before casting; not applicable for stored procedures</p> <p>C Result after casting; not applicable for stored procedures</p> <p>S Input parameter of the underlying built-in source function. For a sourced function and a given ORDINAL value:</p> <ul style="list-style-type: none"> • The row with ROWTYPE = P describes the input parameter of the user-defined function (identified by ROUTINEID). • The row with ROWTYPE = S describes the corresponding input parameter of the built-in function that is the underlying source function (identified by the SOURCESHEMA and SOURCESPECIFIC values). <p>A value of 'X' indicates that the row is not used to describe a particular parameter of the routine. Instead, for a routine that was created prior to Version 9, the row is used to record a CCSID for the encoding scheme specified in a PARAMETER CCSID clause, or a DATATYPEID for the representation of the variable length character string parameters of a LANGUAGE C routine, as specified in a PARAMETER VARCHAR clause. For routines created with Version 8 (new function mode) or later releases, the CCSID is recorded in the PARAMETER_CCSID column of SYSROUTINES. For routines created with Version 9 or later releases, the DATATYPEID information to support PARAMETER VARCHAR is recorded in the PARAMETER_VARCHARFORM column of SYSIBM.SYSROUTINES.</p>	G

Table 352. SYSIBM.SYSPARMS table column descriptions (continued)

Column name	Data type	Description	Use
ORDINAL	SMALLINT NOT NULL	<p>If ROWTYPE is B, O, P, or S, the value is the ordinal number of the parameter within the routine signature.</p> <p>If ROWTYPE is C or R, the value depends on the type of function:</p> <ul style="list-style-type: none"> • For a scalar function, the value is 0. • For a table function, the value is the ordinal number of the column of the output table. <p>If ROWTYPE is X, the value is 0.</p>	G
TYPESHEMA	VARCHAR(128) NOT NULL	Schema of the data type of the parameter.	G
TYPENAME	VARCHAR(128) NOT NULL	Name of the data type of the parameter.	G
DATATYPEID	INTEGER NOT NULL	<p>For a built-in data type, the internal ID of the built-in type. For a distinct type, the internal ID of the distinct type.</p> <p>When ROWTYPE is X and ORDINAL is 0, a non-zero DATATYPEID indicates that actual representation, for a LANGUAGE C routine, of any varying length string parameters that appear in the routine's parameter list ot in the RETURNS clause.</p>	S
SOURCETYPEID	INTEGER NOT NULL	For a built-in data type, 0. For a distinct type, the internal ID of the built-in data type upon which the distinct type is based.	S
LOCATOR	CHAR(1) NOT NULL	<p>Indicates whether a locator to a value, instead of the actual value, is to be passed or returned when the routine is called:</p> <p>N The actual value is to be passed.</p> <p>Y A locator to a value is to be passed</p>	G
TABLE	CHAR(1) NOT NULL	<p>The data type of a column for a table parameter:</p> <p>N This is not a table parameter.</p> <p>Y This is a table parameter.</p>	G
TABLE_COLNO	SMALLINT NOT NULL	For table parameters, the column number of the table. Otherwise, the value is 0.	G

Table 352. SYSIBM.SYSPARMS table column descriptions (continued)

Column name	Data type	Description	Use
LENGTH	INTEGER NOT NULL	Length attribute of the parameter or result; If the parameter or result length is determined during function resolution, the length attribute can also be 0. In the case of a decimal parameter or result this is the precision. If the parameter is an array, the value is 0.	G
SCALE	SMALLINT NOT NULL	Scale of the data type of the parameter or number of fractional second digits of timestamp or timestamp with time zone parameter. If it is TIMESTAMP parameter where LENGTH is 10 and SCALE is 0, the number of fractional second digits is 6.	G
SUBTYPE	CHAR(1) NOT NULL	If the data type is a distinct type, the subtype of the distinct type, which is based on the subtype of its source type: B The subtype is FOR BIT DATA. S The subtype is FOR SBCS DATA. M The subtype is FOR MIXED DATA. blank The source type is not a character type. If the parameter is an array type, the value is blank.	G
CCSID	INTEGER NOT NULL	CCSID of the data type for a character, date, time, timestamp or graphic data type. If the parameter is a datetime array, the value is 0. (not null) When ROWTYPE is X and ORDINAL is 0, the CCSID column is the CCSID for all character and graphic string parameters.	G
CAST_FUNCTION_ID	INTEGER NOT NULL	Internal function ID of the function used to cast the argument, if this function is sourced on another function, or result. Otherwise, the value is 0. Not applicable for stored procedures.	S
ENCODING_SCHEME	CHAR(1) NOT NULL	Encoding scheme of the parameter: A ASCII E EBCDIC U Unicode blank The source type is not a character, graphic, or datetime type. If the parameter is an array type, the value is blank.	G

Table 352. SYSIBM.SYSPARMS table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	The version identifier for a parameter of a native SQL procedure or a parameter of a non-inline SQL scalar function. This value is a zero-length string for rows that were created prior to Version 9, or for rows for parameters that correspond to neither native SQL procedures nor non-inline SQL scalar functions.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner: blank Authorization ID L Role	G

SYSPENDINGDDL catalog table

The SYSPENDINGDDL table contains information about which objects have pending definition changes. The entries only exist during the window between when the pending option is executed and when the utility applies these pending changes to the object. The schema is SYSIBM.

Table 353. SYSIBM.SYSPENDINGDDL table column descriptions

Column name	Data type	Description	Use
DBNAME	VARCHAR(24) NOT NULL	Name of the database for the pending option.	G
TSNAME	VARCHAR(24) NOT NULL	Name of the table space for the pending option.	G
DBID	SMALLINT NOT NULL	Internal identifier of the database.	S
PSID	SMALLINT NOT NULL	Internal identifier of the table space page set descriptor.	S
OBJSHEMA	VARCHAR(128) NOT NULL	The qualifier of the object that contains the pending option.	G
OBJNAME	VARCHAR(128) NOT NULL	Name of the object that contains the pending option.	G
OBJJOBID	SMALLINT NOT NULL	Internal identifier of the object.	S

Table 353. SYSIBM.SYSPENDINGDDL table column descriptions (continued)

Column name	Data type	Description	Use
OBJTYPE	CHAR(1) NOT NULL	Type of object that is identified by OBJSCHEMA and OBJNAME. I The object is an index S The object is a table space T The object is a table	G
STATEMENT_TYPE	CHAR(1) NOT NULL	The type of the statement for the pending option. A An ALTER statement R A RECOVER statement	G
OPTION_ENVID	INTEGER NOT NULL	Internal identifier of the environment for the pending option.	G
OPTION_KEYWORD	VARCHAR(128) NOT NULL	If the row is inserted into this table during execution of a data definition statement, this value is the name of the pending option. If the row is inserted into this table during recovery to a prior point in time, this value is the name of the RECOVER option.	G
OPTION_VALUE	VARCHAR(4000) NOT NULL	If the row is inserted into this table during execution of a data definition statement, this value is the value of the pending option. If the row is inserted into this table during recovery to a prior point in time, this value is the value of the RECOVER option.	G
OPTION_SEQNO	SMALLINT NOT NULL	The sequence of the pending option within the statement.	G
CREATEDTS	TIMESTAMP(12) NOT NULL	Timestamp when the pending option was created.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
ROWID	ROWID	ID to support LOB columns for source text	G
STATEMENT_TEXT	CLOB(2M) NOT NULL	The source text of the original statement for the pending option.	G

Table 353. SYSIBM.SYSPENDINGDDL table column descriptions (continued)

Column name	Data type	Description	Use
COLNAME	VARCHAR(128) NOT NULL WITH DEFAULT	The name of the column with a pending definition change.	G
PARTITION	SMALLINT NOT NULL	The physical partition number that was specified in the alter statement. The value is 0 if no physical partition number was specified.	G
PARTITION_ KEYWORD	VARCHAR(18) NOT NULL WITH DEFAULT	<p>This column is populated if the PARTITION column has a non-zero value.</p> <p>The keyword that is associated with the PARTITION clause of the ALTER TABLE statement.</p> <p>For example, suppose that you issued the following statement:</p> <pre>ALTER TABLE ALTER PARTITION</pre> <p>In that case, this column contains ALTER.</p>	G
COLUMN_ KEYWORD	VARCHAR(18) NOT NULL WITH DEFAULT	This column contains the keyword that corresponds to the column that is listed in COLNAME.	G
REORG_SCOPE_ LOWPART	SMALLINT	<p>Logical partition number of the lowest partition in the range for REORG to materialize pending definition changes. Adjacent logical partitions must be reorganized together to materialize pending definition changes.</p> <p>The value is 0 if the range is the entire partitioned table space or index space, or if the record is generated by the RECOVER utility.</p> <p>This column contains the null value when the value is unknown for pending definition changes executed prior to Db2 12.</p>	
REORG_SCOPE_ HIGHPART	SMALLINT	<p>Logical partition number of the highest partition in the range for REORG to materialize pending definition changes. Adjacent logical partitions must be reorganized together to materialize pending definition changes.</p> <p>The value is 0 if the range is the entire partitioned table space or index space, or if the record is generated by the RECOVER utility.</p> <p>This column contains the null value when the value is unknown for pending definition changes executed prior to Db2 12.</p>	

SYSPENDINGOBJECTS catalog table

The SYSPENDINGOBJECTS table contains the name of and OBID information about objects that are the pending creation. The data sets for these objects are created but the object definition have not been materialized to the catalog. The entries in this table only exist during the time between when the names

of the new objects are generated and when the catalog definition of the new objects are materialized. The schema is SYSIBM.

Table 354. SYSIBM.SYSPENDINGOBJECTS table column descriptions

Column name	Data type	Description	Use
DBNAME	VARCHAR(24) NOT NULL	Name of the database.	G
TSNAME	VARCHAR(24) NOT NULL	Name of the base table space.	G
DBID	SMALLINT NOT NULL	Internal identifier of the database.	S
PSID	SMALLINT NOT NULL	Internal identifier of the base table space page set descriptor.	S
PARTITION	SMALLINT NOT NULL	Partition number with which the object is associated.	G
COLNAME	VARCHAR(128) NOT NULL	Name of the column contained in the base table space with which the object is associated.	G
OBJSCHEMA	VARCHAR(128) NOT NULL	The qualifier of the object.	G
OBJNAME	VARCHAR(128) NOT NULL	Name of the object.	G
OBJTYPE	CHAR(1) NOT NULL	Type of object identified by OBJSCHEMA and OBJNAME. I The object is an index S The object is a table space T The object is a table	G
INDEXSPACE	VARCHAR(24) NOT NULL	Name of the index space. An empty string if the object is not an index.	G
OBJJOBID	SMALLINT NOT NULL	Internal identifier of the object.	S
OBJPSID	SMALLINT NOT NULL	Internal identifier of the object page set descriptor, or 0 if the object does not have a page set descriptor.	S

SYSPKSYSTEM catalog table

The SYSPKSYSTEM table contains zero or more rows for each package. Each row for a given package represents one or more connections to an environment where the package can be executed. The schema is SYSIBM.

Table 355. SYSIBM.SYSPKSYSTEM table column descriptions

Column name	Data type	Description	Use
LOCATION	VARCHAR(128) NOT NULL	Always contains blanks	S
COLLID	VARCHAR(128) NOT NULL	Name of the package collection.	G
NAME	VARCHAR(128) NOT NULL	Name of the package.	G
CONTOKEN	CHAR(8) NOT NULL FOR BIT DATA	Consistency token for the package. This is either: <ul style="list-style-type: none"> • The "level" as specified by the LEVEL option when the package's program was precompiled • The timestamp indicating when the package's program was precompiled, in an internal format. 	S
SYSTEM	VARCHAR(24) NOT NULL	Environment. Values can be: <p>BATCH TSO batch</p> <p>CICS Customer Information Control System</p> <p>DB2CALL Db2 call attachment facility</p> <p>DLIBATCH DLI batch support facility</p> <p>IMSBMP IMS BMP region</p> <p>IMSMPP IMS MPP and IFP region</p> <p>REMOTE remote server</p> <p>RRSAF Resource Recovery Services attachment facility</p> <p>UNKNOWN The environment is unknown.</p>	G
ENABLE	CHAR(1) NOT NULL	Indicates whether the connections represented by the row are enabled or disabled: <p>N Disabled</p> <p>Y Enabled</p>	G

Table 355. SYSIBM.SYSPKSYSTEM table column descriptions (continued)

Column name	Data type	Description	Use
CNAME	VARCHAR(60) NOT NULL	Identifies the connection or connections to which the row applies. Interpretation depends on the environment specified by SYSTEM. Values can be: <ul style="list-style-type: none"> • Blank if SYSTEM=BATCH or SYSTEM=DB2CALL • The LU name for a database server if SYSTEM=REMOTE • Either the requester's location (if the product is Db2) or the requester's LU name enclosed in angle brackets if SYSTEM=REMOTE. • The name of a single connection if SYSTEM has any other value. CNAME can also be blank when SYSTEM is not equal to BATCH or DB2CALL. When this is so, the row applies to all servers or connections for the indicated environment.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSPLAN catalog table

The SYSPLAN table contains one row for each application plan. The schema is SYSIBM.

Table 356. SYSIBM.SYSPLAN table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(24) NOT NULL	Name of the application plan.	G
CREATOR	VARCHAR(128) NOT NULL	Authorization ID of the owner of the application plan.	G
BINDDATE	CHAR(6) NOT NULL	Not used.	N
VALIDATE	CHAR(1) NOT NULL	Whether validity checking can be deferred until run time: <p>B All checking must be performed during BIND.</p> <p>R Validation is done at run time for tables, views, and privileges that do not exist at bind time.</p>	G

⁴¹ Plans are divided into *sections*. The base section of the plan must be in the EDM pool during the entire time the application program is executing. Other sections of the plan, corresponding roughly to sets of related SQL statements, are brought into the pool as needed.

Table 356. SYSIBM.SYSPLAN table column descriptions (continued)

Column name	Data type	Description	Use
ISOLATION	CHAR(1) NOT NULL	Isolation level for the plan: R RR (repeatable read) T RS (read stability) S CS (cursor stability) U UR (uncommitted read)	G
VALID	CHAR(1) NOT NULL	Whether the application plan is valid: A An ALTER TABLE statement changed the description of the table or base table of a view that is referred to by the application plan. For a CREATE INDEX statement involving data sharing, VALID is also marked as "A". H An ALTER TABLE statement changed the description of the table or base table of a view that is referred to by the application plan. N No Y Yes	G
OPERATIVE	CHAR(1) NOT NULL	Whether the application plan can be allocated: N No; an explicit BIND or REBIND is required before the plan can be allocated Y Yes	G
BINDTIME	CHAR(8) NOT NULL	Not used.	N
PLSIZE	INTEGER NOT NULL	Size of the base section ⁴¹ of the plan, in bytes.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELBOUND should be used instead.	G
AVGSIZE	INTEGER NOT NULL	Average size, in bytes, of those sections ⁴¹ of the plan that contain SQL statements processed at bind time.	G

Table 356. SYSIBM.SYSPLAN table column descriptions (continued)

Column name	Data type	Description	Use
ACQUIRE	CHAR(1) NOT NULL	When resources are acquired: A At allocation U At first use	G
RELEASE	CHAR(1) NOT NULL	When resources are released: C At commit D At deallocation	G
EXREFERENCE	CHAR(1) NOT NULL	Not used.	N
EXSTRUCTURE	CHAR(1) NOT NULL	Not used.	N
EXCOST	CHAR(1) NOT NULL	Not used.	N
EXPLAN	CHAR(1) NOT NULL	EXPLAIN option specified for the plan; that is, whether information on the plan's statements was added to the owner's PLAN_TABLE table: N No Y Yes	G
EXPREDICATE	CHAR(1) NOT NULL	Indicates the CURRENTDATA option when the plan was bound or rebound: B Data currency is not required for ambiguous cursors. Allow blocking for ambiguous cursors. C Data currency is required for ambiguous cursors. Inhibit blocking for ambiguous cursors. N Blocking is inhibited for ambiguous cursors, but the plan was created before the CURRENTDATA option was available.	G
BOUNDBY	VARCHAR(128) NOT NULL WITH DEFAULT	Primary authorization ID of the binder of the plan.	G
QUALIFIER	VARCHAR(128) NOT NULL WITH DEFAULT	Implicit qualifier for the unqualified table, view, index, and alias names in the static SQL statements of the plan.	G

Table 356. SYSIBM.SYSPLAN table column descriptions (continued)

Column name	Data type	Description	Use
CACHESIZE	SMALLINT NOT NULL WITH DEFAULT	Size, in bytes, of the cache to be acquired for the plan. A value of zero indicates that no cache is used.	G
PLENTRIES	SMALLINT NOT NULL WITH DEFAULT	Number of package list entries for the plan. The negative of that number if there are rows for the plan in SYSIBM.SYSPACKLIST but the plan was bound in a prior release after fall back.	G
DEFERPREP	CHAR(1) NOT NULL WITH DEFAULT	Whether the package was last bound with the DEFER(PREPARE) option: N No Y Yes	G
CURRENTSERVER	VARCHAR(128) NOT NULL WITH DEFAULT	Location name specified with the CURRENTSERVER option when the plan was last bound. Blank if none was specified, implying that the first server is the local Db2 subsystem.	G
SYSENTRIES	SMALLINT NOT NULL WITH DEFAULT	Number of rows associated with the plan in SYSIBM.SYSPSYSTEM. The negative of that number if such rows exist but the plan was bound in a prior release after fall back. A negative value or zero means that all connections are enabled.	G
DEGREE	CHAR(3) NOT NULL WITH DEFAULT	The DEGREE option used when the plan was last bound: ANY DEGREE(ANY) 1 or blank DEGREE(1). Blank if the plan was migrated.	G
SQLRULES	CHAR(1) NOT NULL WITH DEFAULT	The SQLRULES option used when the plan was last bound: D or blank SQLRULES(DB2) S SQLRULES(STD) blank A migrated plan	G

Table 356. SYSIBM.SYSPLAN table column descriptions (continued)

Column name	Data type	Description	Use
DISCONNECT	CHAR(1) NOT NULL WITH DEFAULT	The DISCONNECT option used when the plan was last bound: E or blank DISCONNECT(EXPLICIT) A DISCONNECT(AUTOMATIC) C DISCONNECT(CONDITIONAL) blank A migrated plan	G
GROUP_MEMBER	VARCHAR(24) NOT NULL WITH DEFAULT	The Db2 data sharing member name of the Db2 subsystem that performed the most recent bind. This column is blank if the Db2 subsystem was not in a Db2 data sharing environment when the bind was performed.	G
DYNAMICRULES	CHAR(1) NOT NULL WITH DEFAULT	The DYNAMICRULES option used when the plan was last bound: B BIND. Dynamic SQL statements are executed with DYNAMICRULES bind behavior. blank RUN. Dynamic SQL statements in the plan are executed with DYNAMICRULES run behavior.	G
BOUNDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the plan was bound.	G
REOPTVAR	CHAR(1) NOT NULL WITH DEFAULT 'N'	Whether the access path is determined again at execution time using input variable values: A Bind option REOPT(AUTO) indicates that the access path is determined multiple times at execution time depending on the parameter value. N Bind option REOPT(NONE) indicates that the access path is determined at bind time. Y Bind option REOPT(ALWAYS) indicates that the access path is determined at execution time for SQL statements with variable values. 1 Bind option REOPT(ONCE) indicates that the access path is determined only once at execution time, using the first set of input variable values, regardless of how many times the same statement is executed.	G

Table 356. SYSIBM.SYSPLAN table column descriptions (continued)

Column name	Data type	Description	Use
KEEPDYNAMIC	CHAR(1) NOT NULL WITH DEFAULT 'N'	Whether prepared dynamic statements are to be purged at each commit point: N The bind option is KEEPDYNAMIC(NO). Prepared dynamic SQL statements are destroyed at commit or rollback. Y The bind option is KEEPDYNAMIC(YES). Prepared dynamic SQL statements are kept past commit or rollback.	G
PATHSCHEMAS	VARCHAR(2048) NOT NULL WITH DEFAULT	SQL path specified on the BIND or REBIND command that bound the plan. The path is used to resolve unqualified data type, function, and stored procedure names used in certain contexts. If the PATH bind option was not specified, the value in the column is a zero length string; however, Db2 uses a default SQL path of: SYSIBM, SYSFUN, SYSPROC, <i>plan qualifier</i> .	G
DBPROTOCOL	CHAR(1) NOT NULL WITH DEFAULT 'P'	Whether remote access for SQL with three-part names is implemented with DRDA or Db2 private protocol access: D DRDA P Db2 private protocol	G
FUNCTIONTS	TIMESTAMP NOT NULL WITH DEFAULT	Timestamp when the function was resolved. This value is set by the BIND and REBIND commands, but not by automatic rebinds (autobind).	G
OPTHINT	VARCHAR(128) NOT NULL WITH DEFAULT	Value of the OPTHINT bind option. Identifies rows in the <i>owner.PLAN_TABLE</i> to be used as input to Db2. Contains blanks if no rows in the <i>owner.PLAN_TABLE</i> are to be used as input.	G
ENCODING_CCSID	INTEGER NOT NULL WITH DEFAULT	The CCSID corresponding to the encoding scheme or CCSID as specified for the bind option ENCODING. The Encoding Scheme specified on the bind command: ccsid The specified or derived CCSID. 0 The default CCSID as specified on panel DSNTIPF at installation time. Used when the plan was bound prior to Version 7	G

Table 356. SYSIBM.SYSPLAN table column descriptions (continued)

Column name	Data type	Description	Use
IMMEDWRITE	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates when writes of updated group buffer pool dependent pages are to be done. This option is only applicable for data sharing environments.</p> <p>N Bind option IMMEDIATEWRITE(NO) indicates normal write activity is done.</p> <p>Y Bind option IMMEDIATEWRITE(YES) indicates that immediate writes are done for updated group buffer pool dependent pages.</p> <p>1 Bind option IMMEDIATEWRITE(PH1) indicates that updated group buffer pool dependent pages are written at or before phase 1 commit.</p> <p>blank A migrated package.</p>	G
RELBOUND	CHAR(1) NOT NULL WITH DEFAULT	<p>The release when the package was bound or rebound.</p> <p>blank Bound prior to Version 7</p> <p>For all other values, see Release dependency indicators</p>	G
CATENCODE	CHAR(1)	Not used.	N
REMARKS	VARCHAR(762) NOT NULL WITH DEFAULT	A character string provided by the user with the COMMENT statement.	G
CREATORTYPE	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates the type of creator:</p> <p>blank Authorization ID</p> <p>L Role</p>	G

Table 356. SYSIBM.SYSPLAN table column descriptions (continued)

Column name	Data type	Description	Use
ROUNDING	CHAR(1) NOT NULL WITH DEFAULT	The ROUNDING option used when the plan was last bound: C ROUND_CEILING D ROUND_DOWN F ROUND_FLOOR G ROUND_HALF_DOWN E ROUND_HALF_EVEN H ROUND_HALF_UP U ROUND_UP blank The plan was created in a Db2 release prior to Version 9.	G
LASTUSED	DATE NOT NULL WITH DEFAULT	Not used.	N
CONCUR_ACC_RES	CHAR(1) NOT NULL	Indicates the CONCURRENTACCESSRESOLUTION option when the package was bound or rebound: blank Not specified U USECURRENTLYCOMMITTED W WAITFOROUTCOME	G
PROGAUTH	CHAR(1) NOT NULL WITH DEFAULT 'D'	Indicates whether Db2 checks if a program is authorized to run a plan: D DISABLE E ENABLE	G

SYSPLANAUTH catalog table

The SYSPLANAUTH table records the privileges that are held by users over application plans. The schema is SYSIBM.

Table 357. SYSIBM.SYSPLANUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID of the user who granted the privileges.	G
GRANTEE	VARCHAR(128) NOT NULL	Authorization ID of the user who holds the privileges. Could also be PUBLIC for a grant to PUBLIC.	G
NAME	VARCHAR(24) NOT NULL	Name of the application plan on which the privileges are held.	G
—	CHAR(12) NOT NULL	Internal use only.	I
DATEGRANTED	CHAR(6) NOT NULL	Not used.	N
TIMEGRANTED	CHAR(8) NOT NULL	Not used.	N
GRANTEETYPE	CHAR(1) NOT NULL	Not used.	N
AUTHHOWGOT	CHAR(1) NOT NULL	Authorization level of the user from whom the privileges were received. This authorization level is not necessarily the highest authorization level of the grantor. blank Not applicable C DBCTRL D DBADM E SECADM G ACCESSCTRL L SYSCTRL M DBMAINT S SYSADM	G

Table 357. SYSIBM.SYSPLANUTH table column descriptions (continued)

Column name	Data type	Description	Use
BINDAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the BIND, REBIND, or FREE subcommands against the plan: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
EXECUTEAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can run application programs that use the application plan: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
GRANTEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the GRANT statement was executed.	G
GRANTEETYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantee: blank Authorization ID L Role	G
GRANTORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantor: blank Authorization ID L Role	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G

Table 357. SYSIBM.SYSPLANUTH table column descriptions (continued)

Column name	Data type	Description	Use
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSPLANDEP catalog table

The SYSPLANDEP table records the dependencies of plans on tables, views, aliases, synonyms, table spaces, indexes, functions, and stored procedures. The schema is SYSIBM.

Table 358. SYSIBM.SYSPLANDEP table column descriptions

Column name	Data type	Description	Use
BNAME	VARCHAR(128) NOT NULL	The name of an object the plan depends on.	G
BCREATOR	VARCHAR(128) NOT NULL	If BNAME is a table space, its database. Otherwise, the schema of BNAME. If BNAME is a role, the value is blank.	G

Table 358. SYSIBM.SYSPLANDEP table column descriptions (continued)

Column name	Data type	Description	Use
BTYPE	CHAR(1) NOT NULL	Type of object identified by BNAME: A Alias E INSTEAD OF trigger F User-defined function or cast function H Global variable G Global temporary table I Index M Materialized query table O Stored procedure P Partitioned table space if it is defined as LARGE or with the DSSIZE parm Q Sequence object R Table space S Synonym T Table V View	G
DNAME	VARCHAR(24) NOT NULL	Name of the plan.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSPLSYSTEM catalog table

The SYSPLSYSTEM table contains zero or more rows for every plan. Each row for a given plan represents one or more connections to an environment in which the plan could be used. The schema is SYSIBM.

Table 359. SYSIBM.SYSPLSYSTEM table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(24) NOT NULL	Name of the plan.	G
SYSTEM	VARCHAR(24) NOT NULL	Environment. Values can be: BATCH TSO batch DB2CALL Db2 call attachment facility CICS Customer Information Control System DLIBATCH DLI batch support facility IMSBMP IMS BMP region IMSMPP IMS MPP or IFP region	G
ENABLE	CHAR(1) NOT NULL	Indicates whether the connections represented by the row are enabled or disabled: N Disabled Y Enabled	G
CNAME	VARCHAR(60) NOT NULL	Identifies the connection or connections to which the row applies. Interpretation depends on the environment specified by SYSTEM. Values can be: <ul style="list-style-type: none">• Blank if SYSTEM=BATCH or SYSTEM=DB2CALL• The name of a single connection if SYSTEM has any other value CNAME can also be blank when SYSTEM is not equal to BATCH or DB2CALL. When this is so, the row applies to all connections for the indicated environment.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSQUERY catalog table

Each SYSIBM.SYSQUERY table row identifies a SQL statement. The information is used to influence access path selection when matching statements are optimized. The schema is SYSIBM.

Table 360. SYSIBM.SYSQUERY table column descriptions

Column name	Data type	Description	Use
QUERYID	BIGINT NOT NULL GENERATED BY DEFAULT AS IDENTITY	Unique identifier for the query.	G
QUERY_HASH	CHAR(16) NOT NULL FOR BIT DATA	The hash key generated by statement text.	G
SCHEMA	VARCHAR(128) NOT NULL	The default schema name for unqualified objects in the query or blank. If the query contains unqualified objects and access path hints exist for the query, the access path hints are applied only if the default schema matches the schema in the access path hint.	G
QUERY_SEC_HASH	CHAR(16) NOT NULL FOR BIT DATA	The hash key generated by the modified statement text.	G
QUERY_HASH_VERSION	INTEGER NOT NULL	The version of the query hash.	G
SOURCE	SMALLINT NOT NULL	The source of the row: 0 Statement-level optimization hints.	G
USERFILTER	CHAR(8) NOT NULL	Filter name that is used to group a set of queries or blank.	G
—	CHAR(128) NOT NULL	Internal use only.	I

Table 360. SYSIBM.SYSQUERY table column descriptions (continued)

Column name	Data type	Description	Use
PLAN_VALID	CHAR(1) NOT NULL	Whether plan hints are valid: blank No access path is specified for the statement, but optimization parameters exist in SYSQUERYOPTS Y An access path is specified in SYSQUERYPLAN for the statement. The access path is also valid if the statement has already been executed and the access path was used. N An access path is specified in SYSQUERYPLAN, but the access path is invalid and not used.	G
INVALID_REASON	INTEGER NOT NULL	When PLAN_VALID is N, this column contains the reason that the access path is invalid. If PLAN_VALID is Y or blank, this column contains -1. For descriptions of the reason code values, see: +395 (Db2 Codes) .	S
LOCATION	VARCHAR(128) NOT NULL	Not used.	N
COLLECTION	VARCHAR(128) NOT NULL	Name of the collection of the originating query or blank.	G
PACKAGE	VARCHAR(128) NOT NULL	Name of the package of the originating query or blank.	G
VERSION	VARCHAR(128) NOT NULL	Version of the package or blank.	G
AUTHID	VARCHAR(128) NOT NULL	Authorization ID that was in effect when the query was captured or blank.	G
BINDTIME	TIMESTAMP NOT NULL	Timestamp when the package was bound or when BIND QUERY was run	G
RELBOUND	CHAR(1) NOT NULL	The release of Db2 in which the package was bound, or blank. See Release dependency indicators for values.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELBOUND should be used instead.	G
STMTNO	INTEGER NOT NULL	The statement number in the package. -1 when not applicable.	G

Table 360. SYSIBM.SYSQUERY table column descriptions (continued)

Column name	Data type	Description	Use
SECTNO	INTEGER NOT NULL	The section number in the package. -1 when not applicable.	G
STMTTEXT	CLOB(2M) INLINE LENGTH 2048	The text of the matching SQL statement. The value is populated from the value of the QUERY_TEXT column of the DSN_USERQUERY_TABLE table, with the following items removed: <ul style="list-style-type: none"> • Blanks including leading and trailing blanks, and embedded blanks that are not within literal strings between pairs of quotation mark symbols • White space, including leading and trailing white space, and white space that is not within a literal string between a pair of quotation mark symbols • SQL comments • EXPLAIN clauses 	G
QUERYNO	INTEGER NOT NULL WITH DEFAULT '-1'	The query number.	G
CLIENT_USERID	VARCHAR(255)	User ID of the client.	G
CLIENT_WRKSTNNAME	VARCHAR(255)	Name of the client workstation.	G
CLIENT_APPLNAME	VARCHAR(255)	Name of the client application.	G
SELECTVTY_OVERRIDE	CHAR(1) NOT NULL	Whether selectivity overrides are in effect for the query: <p>'Y' Selectivity overrides are in effect</p> <p>'N' Selectivity overrides are not in effect.</p>	G
ACCESSPATH_HINT	CHAR(1) NOT NULL	Whether access paths are specified for the matching statements: <p>'Y' An access paths is specified and in effect</p> <p>'N' An access path hints is specified and in effect</p> <p>blank An access path might be specified. When the value is blank you must query the SYSIBM.SYSQUERYPLAN catalog table to determine whether an access path is specified</p>	G

Table 360. SYSIBM.SYSQUERY table column descriptions (continued)

Column name	Data type	Description	Use
OPTION_OVERRIDE	CHAR(1) NOT NULL	Whether statement-level optimization parameters are in effect for matching statements: 'Y' Optimization parameters are in effect. 'N' Optimization parameters are not in effect. blank Optimization parameters might be in effect. When the value is blank you must query the SYSIBM.SYSQUERYOPTS catalog table to determine whether option overrides are in effect.	G
SELECTIVITY_VALID	CHAR(1) NOT NULL	Whether selectivity overrides are valid: blank No selectivity overrides exist for the statement. 'Y' Selectivity overrides exist for the query. The overrides are valid if the statement has already been executed and the overrides were used. 'N' Selectivity overrides exist but the overrides are invalid and not used.	G
FUNCTION_LVL	VARCHAR(10)	The function level of the query.	G

SYSQUERYOPTS catalog table

The SYSQUERYOPTS table contains optimization parameters for the queries that are in the SYSQUERY table. The schema is SYSIBM.

Table 361. SYSIBM.SYSQUERYOPTS table column descriptions

Column name	Data type	Description	Use
QUERYID	BIGINT NOT NULL ON DELETE CASCADE	Unique identifier for the query. This column corresponds to the QUERYID column in the SYSIBM.SYSQUERY table.	G

Table 361. SYSIBM.SYSQUERYOPTS table column descriptions (continued)

Column name	Data type	Description	Use
COPYID	SMALLINT NOT NULL	The version of the plan hints for the query in this row. 0 Current version of the plan hints. 1 Previous version of the plan hints used by PLAN STABILITY 2 Original version of the plan hints used by PLAN STABILITY	G
REOPT	CHAR(1) NOT NULL	The value of the REOPT bind option that is in effect for the plan: 1 REOPT(ONCE) A REOPT(AUTO) N REOPT(NONE) Y REOPT(ALWAYS) blank REOPT is not specified	G
STARJOIN	CHAR(1) NOT NULL	Whether star join is enabled: Y Star join is enabled N Star join is disabled blank Star join is not specified	G
MAX_PAR_DEGREE	INTEGER NOT NULL	The maximum parallel degree. This column will contain a value in the range 0–254. If the value of the column is -1, the maximum parallel degree is not specified.	G
DEF_CURR_DEGREE	CHAR(3) NOT NULL	Whether query parallelism is enabled: ONE Query parallelism is disabled ANY Query parallelism is enabled blank Query parallelism is disabled	G
SJTABLES	INTEGER NOT NULL	The number of tables specified in a query to qualify for star join processing. If this column contains -1, star join processing is not specified.	G
—	VARCHAR(128) NOT NULL	Internal use only.	I

Table 361. SYSIBM.SYSQUERYOPTS table column descriptions (continued)

Column name	Data type	Description	Use
GROUP_MEMBER	VARCHAR(24) NOT NULL	The group member name to which the parameters are to be applied. This column contains blank if the group member name is not specified.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSQUERYPLAN catalog table

The SYSQUERYPLAN table contains the plan hint information for the queries in the SYSIBM.SYSQUERY table. It correlates to the SYSQUERY table by the QUERYID column. For a query, there can be up to 3 copies of plan hints stored in the SYSQUERYPLAN table, distinguished by the value of the COPYID column. The schema is SYSIBM.

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions

Column name	Data type	Description	Use
QUERYID	BIGINT NOT NULL ON DELETE CASCADE	Unique identifier for the query. The value of QUERYID corresponds to the value of the QUERYID column in the SYSIBM.SYSQUERY column.	G
COPYID	SMALLINT NOT NULL	The version of the plan hints for the query in this row. 0 Current version of the plan hints. 1 Previous version of the plan hints used by PLAN STABILITY 2 Original version of the plan hints used by PLAN STABILITY	G
PLAN_VALID	CHAR(1) NOT NULL	Whether the plan hints are valid: N The plan hints are invalid Y The plan hints are valid	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
QBLOCKNO	SMALLINT NOT NULL	A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.	G
PLANNO	SMALLINT NOT NULL	The number of the step in which the query that is indicated in QBLOCKNO was processed. This column indicates the order in which the steps were executed.	G
METHOD	SMALLINT NOT NULL	A number that indicates the join method that is used for the step: 0 The table in this step is the first table that is accessed, a continuation of a previous table that was accessed, or a table that is not used. 1 A nested loop join is used. For each row of the current composite table, matching rows of a new table are found and joined. 2 A merge scan join is used. The current composite table and the new table are scanned in the order of the join columns, and matching rows are joined. 3 Sorts are needed by ORDER BY, GROUP BY, SELECT DISTINCT, UNION, INTERSECT, EXCEPT, a quantified predicate, or an IN predicate. This step does not access a new table. 4 A hybrid join was used. The current composite table is scanned in the order of the join-column rows of the new table. The new table is accessed using list prefetch.	G
CREATOR	VARCHAR(128) NOT NULL	The creator of the new table that is accessed in this step, blank if METHOD is 3.	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
TNAME	VARCHAR(128) NOT NULL	<p>The name of one of the following objects:</p> <ul style="list-style-type: none"> • Materialized query table • Created or declared temporary table • Materialized view • materialized table expression <p>The value is blank if METHOD is 3. The column can also contain the name of a table in the form DSNWFQB(<i>qblockno</i>). DSNWFQB(<i>qblockno</i>) is used to represent the intermediate result of a UNION ALL, INTERSECT ALL, EXCEPT ALL, or an outer join that is materialized. If a view is merged, the name of the view does not appear. DSN_DIM_TBLX(<i>qblockno</i>) is used to the represent the work file of a star join dimension table.</p>	G
—	SMALLINT NOT NULL	Internal use only.	I

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
ACCESSTYPE	CHAR(2) NOT NULL	<p>The method of accessing the new table:</p> <p>A Accelerated query table access.</p> <p>DI By an intersection of multiple DOCID lists to return the final DOCID list</p> <p>DU By a union of multiple DOCID lists to return the final DOCID list</p> <p>DX By an XML index scan on the index that is named in ACCESSNAME to return a DOCID list</p> <p>E By direct row access using a row change timestamp column.</p> <p>H By hash overflow index (identified in ACCESSCREATOR and ACCESSNAME)</p> <p>I By an index (identified in ACCESSCREATOR and ACCESSNAME)</p> <p>IN By an index scan when the matching predicate contains an IN predicate and the IN-list is accessed through an in-memory table.</p> <p>I1 By a one-fetch index scan</p> <p>M By a multiple index scan (followed by MX, MI, MU, or MH)</p> <p>MH By the hash overflow index named in ACCESSNAME</p> <p>MI By an intersection of multiple indexes</p> <p>MU By a union of multiple indexes</p> <p>MX By an index scan on the index named in ACCESSNAME. When the access method MX follows the access method DX, DI, or DU, the table is accessed by the DOCID index by using the DOCID list that is returned by DX, DI, or DU.</p>	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
ACCESSTYPE (continued)		<p>N</p> <ul style="list-style-type: none"> By an index scan when the matching predicate contains the IN keyword By an index scan when Db2 rewrites a query using the IN keyword By hash access with the IN keyword By hash access when Db2 rewrites a query using the IN keyword <p>NR Range list access.</p> <p>P By a dynamic pair-wise index scan</p> <p>R By a table space scan</p> <p>RW By a work file scan of the result of a materialized user-defined table function</p> <p>V By buffers for an INSERT statement within a SELECT</p> <p>blank Not applicable to the current row</p>	
MATCHCOLS	SMALLINT NOT NULL	For ACCESSTYPE I, I1, N, NR, MX, or DX, the number of index keys that are used in an index scan; otherwise, 0.	G
ACCESSCREATOR	VARCHAR(128) NOT NULL	For ACCESSTYPE I, I1, N, NR, MX, or DX, the creator of the index; otherwise, blank.	G
ACCESSNAME	VARCHAR(128) NOT NULL	For ACCESSTYPE I, I1, H, MH, N, NR, MX, or DX, the name of the index; for ACCESSTYPE P, DSNPJW(<i>mixopseqno</i>) is the starting pair-wise join leg in MIXOPSEQNO; otherwise, blank.	G
INDEXONLY	CHAR(1) NOT NULL	<p>Indication of whether access to an index alone is enough to perform the step, or Indication of whether data too must be accessed.</p> <p>Y Yes</p> <p>N No</p>	G
SORTN_UNIQ	CHAR(1) NOT NULL	<p>Indication of whether the new table is sorted to remove duplicate rows.</p> <p>Y Yes</p> <p>N No</p>	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
SORTN_JOIN	CHAR(1) NOT NULL	Indication of whether the new table is sorted for join method 2 or 4. Y Yes N No	G
SORTN_ORDERBY	CHAR(1) NOT NULL	Indication of whether the new table is sorted for ORDER BY. Y Yes N No	G
SORTN_GROUPBY	CHAR(1) NOT NULL	Indication of whether the new table is sorted for GROUP BY. Y Yes N No	G
SORTC_UNIQ	CHAR(1) NOT NULL	Indication of whether the composite table is sorted to remove duplicate rows. Y Yes N No	G
SORTC_JOIN	CHAR(1) NOT NULL	Indication of whether the composite table is sorted for join method 1, 2 or 4. Y Yes N No	G
SORTC_ORDERBY	CHAR(1) NOT NULL	Indication of whether the composite table is sorted for an ORDER BY clause or a quantified predicate. Y Yes N No	G
SORTC_GROUPBY	CHAR(1) NOT NULL	Indication of whether the composite table is sorted for a GROUP BY clause. Y Yes N No	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
TSLOCKMOD	CHAR(3) NOT NULL	<p>An indication of the mode of lock that is acquired on either the new table, or its table space or table space partitions. If the isolation can be determined at bind time, the values are:</p> <p>IS Intent share lock</p> <p>IX Intent exclusive lock</p> <p>S Share lock</p> <p>U Update lock</p> <p>X Exclusive lock</p> <p>SIX Share with intent exclusive lock</p> <p>N UR isolation; no lock</p> <p>If the isolation level cannot be determined at bind time, the lock mode is determined by the isolation level at run time is shown by the following values.</p> <p>NS For UR isolation, no lock; for CS, RS, or RR, an S lock.</p> <p>NIS For UR isolation, no lock; for CS, RS, or RR, an IS lock.</p> <p>NSS For UR isolation, no lock; for CS or RS, an IS lock; for RR, an S lock.</p> <p>SS For UR, CS, or RS isolation, an IS lock; for RR, an S lock.</p> <p>The data in this column is right justified. For example, IX appears as a blank, followed by I, followed by X. If the column contains a blank, then no lock is acquired.</p> <p>If the access method in the ACCESSTYPE column is DX, DI, or DU, no latches are acquired on the XML index page and no lock is acquired on the new base table data page or row, nor on the XML table and the corresponding table spaces. The value of TSLOCKMODE is a blank in this case.</p>	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
PREFETCH	CHAR(1) NOT NULL	Indication of whether data pages are to be read in advance by prefetch: D Optimizer expects dynamic prefetch S Pure sequential prefetch L Prefetch through a page list blank Unknown or no prefetch	G
COLUMN_FN_EVAL	CHAR(1) NOT NULL	When an SQL aggregate function is evaluated: R While the data is being read from the table or index S While performing a sort to satisfy a GROUP BY clause blank After data retrieval and after any sorts	G
MIXOPSEQ	SMALLINT NOT NULL	The sequence number of a step in a multiple index operation. 1, 2, ... n For the steps of the multiple index procedure (ACCESSTYPE is MX, MI, MU, DX, DI, or DU), or the sequence number of range list access (ACCESSTYPE is 'NR'). 0 For any other rows.	G
ACCESS_DEGREE	SMALLINT	The number of parallel tasks or operations that are activated by a query. This value is determined at bind time; the actual number of parallel operations that are used at execution time could be different. This column contains 0 if a host variable is used. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.	G
ACCESS_PGROUP_ID	SMALLINT	The identifier of the parallel group for accessing the new table. A parallel group is a set of consecutive operations, executed in parallel, that have the same number of parallel tasks. This value is determined at bind time; it could change at execution time. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
JOIN_DEGREE	SMALLINT	The number of parallel operations or tasks that are used in joining the composite table with the new table. This value is determined at bind time and can be 0 if a host variable is used. The actual number of parallel operations or tasks used at execution time could be different. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.	G
JOIN_PGROUP_ID	SMALLINT	The identifier of the parallel group for joining the composite table with the new table. This value is determined at bind time; it could change at execution time. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.	G
SORTC_PGROUP_ID	SMALLINT	The parallel group identifier for the parallel sort of the composite table. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.	G
SORTN_PGROUP_ID	SMALLINT	The parallel group identifier for the parallel sort of the new table. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.	G
PARALLELISM_MODE	CHAR(1)	The kind of parallelism, if any, that is used at bind time: I Query I/O parallelism C Query CP parallelism This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.	G
MERGE_JOIN_COLS	SMALLINT	The number of columns that are joined during a merge scan join (Method=2). This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.	G
CORRELATION_NAME	VARCHAR(128)	The correlation name of a table or view that is specified in the statement. If no correlation name exists, then the column is null. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
PAGE_RANGE	CHAR(1) NOT NULL WITH DEFAULT	Indication of whether the table qualifies for page range screening, so that plans scan only the partitions that are needed. Y Yes blank No	G
JOIN_TYPE	CHAR(1) NOT NULL WITH DEFAULT	The type of join: F FULL OUTER JOIN L LEFT OUTER JOIN P Pair-wise join S Star join blank INNER JOIN or no join RIGHT OUTER JOIN converts to a LEFT OUTER JOIN when you use it, so that JOIN_TYPE contains L.	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
QBLOCK_TYPE	CHAR(6) NOT NULL WITH DEFAULT	<p>For each query block, an indication of the type of SQL operation that is performed. For the outermost query, this column identifies the statement type. Possible values include:</p> <p>SELECT SELECT</p> <p>INSERT INSERT</p> <p>UPDATE UPDATE</p> <p>MERGE MERGE</p> <p>DELETE DELETE</p> <p>SELUPD SELECT with FOR UPDATE OF</p> <p>DELCUR DELETE WHERE CURRENT OF CURSOR</p> <p>UPDCUR UPDATE WHERE CURRENT OF CURSOR</p> <p>CORSUB Correlated subselect or fullselect</p> <p>TRUNCA TRUNCATE</p> <p>NCOSUB Noncorrelated subselect or fullselect</p> <p>TABLEX Table expression</p> <p>TRIGGR WHEN clause on CREATE TRIGGER</p> <p>UNION UNION</p> <p>UNIONA UNION ALL</p> <p>INTERS INTERSECT</p> <p>INTERA INTERSECT ALL</p> <p>EXCEPT EXCEPT</p> <p>EXCEPTA EXCEPT ALL</p>	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
PRIMARY_ ACCESSTYPE	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates Indication of whether direct row access is attempted first:</p> <p>D Db2 tries to use direct row access with a rowid column. If Db2 cannot use direct row access with a rowid column at run time, it uses the access path that is described in the ACCESSTYPE column of PLAN_TABLE.</p> <p>T The base table or result file is materialized into a work file, and the work file is accessed via sparse index access. If a base table is involved, then ACCESSTYPE indicates how the base table is accessed.</p> <p>blank Db2 does not try to use direct row access by using a rowid column or sparse index access for a work file. The value of the ACCESSTYPE column of PLAN_TABLE provides information on the method of accessing the table.</p>	G
PARENT_QBLOCKNO	SMALLINT NOT NULL	A number that indicates the QBLOCKNO of the parent query block.	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
TABLE_TYPE	CHAR(1)	<p>The type of new table:</p> <p>B Buffers for SELECT from INSERT, SELECT from UPDATE, SELECT from MERGE, or SELECT from DELETE statement.</p> <p>C Common table expression</p> <p>F Table function</p> <p>I The new table is generated from an IN-LIST predicate. If the IN-LIST predicate is selected as the matching predicate, it will be accessed as an in-memory table.</p> <p>M Materialized query table</p> <p>Q Temporary intermediate result table (not materialized). For the name of a view or nested table expression, a value of Q indicates that the materialization was virtual and not actual. Materialization can be virtual when the view or nested table expression definition contains a UNION ALL that is not distributed.</p> <p>R Recursive common table expression</p> <p>S Subquery (correlated or non-correlated)</p> <p>T Table</p> <p>W Work file</p> <p>The value of the column is null if the query uses GROUP BY, ORDER BY, or DISTINCT, which requires an implicit sort.</p>	G
TABLE_ENCODE	CHAR(1)	<p>The encoding scheme of the table. The possible values are:</p> <p>A ASCII</p> <p>E EBCDIC</p> <p>U Unicode</p> <p>M The table contains multiple CCSID sets</p>	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
TABLE_SCCSID	SMALLINT NOT NULL WITH DEFAULT	The SBCS CCSID value of the table. If column TABLE_ENCODE is M, the value is 0.	G
TABLE_MCCSID	SMALLINT NOT NULL WITH DEFAULT	The mixed CCSID value of the table. If the value of the TABLE_ENCODE column is M, the value is 0. If MIXED=NO in the DSNHDECP module, the value is -2.	G
TABLE_DCCSID	SMALLINT NOT NULL WITH DEFAULT	The DBCS CCSID value of the table. If the value of the TABLE_ENCODE column is M, the value is 0. If MIXED=NO in the DSNHDECP module, the value is -2.	G
	INTEGER NOT NULL WITH DEFAULT	The values in this column are for IBM use only.	I
CTEREF	SMALLINT NOT NULL WITH DEFAULT	If the referenced table is a common table expression, the value is the top-level query block number.	G
PARENT_PLANNO	SMALLINT NOT NULL	Corresponds to the plan number in the parent query block where a correlated subquery is invoked. Or, for non-correlated subqueries, corresponds to the plan number in the parent query block that represents the work file for the subquery.	G

Table 362. SYSIBM.SYSQUERYPLAN table column descriptions (continued)

Column name	Data type	Description	Use
EXPANSION_REASON	CHAR(2) NOT NULL	<p>This column applies to only static statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>If one of these special registers or the global variable is set to Y and the corresponding bind option is set to YES, Db2 implicitly adds certain syntax to the statement. This column indicates whether the query contains this implicit query transformation and why.</p> <p>This column can have one of the following values:</p> <p>A The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>B The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>S The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>SB The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p> <p>Related information</p> <p>“GET_ARCHIVE built-in global variable” on page 334</p> <p>“CURRENT TEMPORAL BUSINESS_TIME special register” on page 211</p> <p>“CURRENT TEMPORAL SYSTEM_TIME special register” on page 213</p> <p>BIND and REBIND options for packages, plans, and services (Db2 Commands)</p>	G

SYSQUERYPREDICATE catalog table

The SYSQUERYPREDICATE table contains information about predicates for queries in the SYSQUERY table that have been identified for extended optimization. It correlates to the SYSQUERY table by the QUERYID column. The schema is SYSIBM.

Table 363. SYSIBM.SYSQUERYPREDICATE table column descriptions

Column name	Data type	Description	Use
QUERYID	BIGINT	Identifier of the query.	S
QUERYNO	INTEGER NOT NULL	A number that identifies the statement that is being explained. The origin of the value depends on the context of the row: For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax. For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program. When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.	S
QBLOCKNO	SMALLINT NOT NULL	A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.	S
APPLNAME	VARCHAR(24) NOT NULL	The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.	S
PROGNAME	VARCHAR(128) NOT NULL	The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.	S
PREDNO	INTEGER NOT NULL	The predicate number, a number used to identify a predicate within a query.	S

Table 363. SYSIBM.SYSQUERYPRDICATION table column descriptions (continued)

Column name	Data type	Description	Use
TYPE	CHAR(8) NOT NULL	<p>A string used to indicate the type or the operation of the predicate. The possible values are:</p> <ul style="list-style-type: none"> • 'AND' • 'OR' • 'EQUAL' • 'RANGE' • 'BETWEEN' • 'IN' • 'LIKE' • 'NOT LIKE' • 'EXISTS' • 'NOTEXIST' • 'SUBQUERY' • 'HAVING' • 'OTHERS' 	S
LEFT_HAND_SIDE	VARCHAR(128) NOT NULL	<p>If the LHS of the predicate is a table column (LHS_TABNO > 0), then this column indicates the column name. Other possible values are:</p> <ul style="list-style-type: none"> • 'VALUE' • 'COLEXP' • 'NONCOLEXP' • 'CORSUB' • 'NONCORSUB' • 'SUBQUERY' • 'EXPRESSION' • Blanks 	S
LEFT_HAND_PNO	INTEGER NOT NULL	<p>If the LHS of the predicate is a table column (LHS_TABNO > 0), then this column indicates the column name. Other possible values are:</p> <ul style="list-style-type: none"> • 'VALUE' • 'COLEXP' • 'NONCOLEXP' • 'CORSUB' • 'NONCORSUB' • 'SUBQUERY' • 'EXPRESSION' • Blanks 	S
LHS_TABNO	SMALLINT NOT NULL	<p>If the LHS of the predicate is a table column, then this column indicates a number which uniquely identifies the corresponding table reference within a query.</p>	S

Table 363. SYSIBM.SYSQUERYPREDICATE table column descriptions (continued)

Column name	Data type	Description	Use
LHS_QBNO	SMALLINT NOT NULL	If the LHS of the predicate is a table column, then this column indicates a number which uniquely identifies the corresponding table reference within a query.	S
RIGHT_HAND_SIDE	VARCHAR(128) NOT NULL	If the RHS of the predicate is a table column (RHS_TABNO > 0), then this column indicates the column name. Other possible values are: <ul style="list-style-type: none"> • 'VALUE' • 'COLEXP' • 'NONCOLEXP' • 'CORSUB' • 'NONCORSUB' • 'SUBQUERY' • 'EXPRESSION' • Blanks 	S
RIGHT_HAND_PNO	INTEGER NOT NULL	If the predicate is a compound predicate (AND/OR), then this column indicates the second child predicate. However, this column is not reliable when the predicate tree consolidation happens. Use PARENT_PNO instead to reconstruct the predicate tree.	S
RHS_TABNO	SMALLINT NOT NULL	If the RHS of the predicate is a table column, then this column indicates a number which uniquely identifies the corresponding table reference within a query.	S
RHS_QBNO	SMALLINT NOT NULL	If the RHS of the predicate is a subquery, then this column indicates a number which uniquely identifies the corresponding query block within a query.	S
FILTER_FACTOR	FLOAT NOT NULL	The estimated filter factor.	S
BOOLEAN_TERM	CHAR(1) NOT NULL	Whether this predicate can be used to determine the truth value of the whole WHERE clause.	S
SEARCHARG	CHAR(1) NOT NULL	Whether this predicate can be processed by data manager (DM). If it is not, then the relational data service (RDS) needs to be used to take care of it, which is more costly.	S
JOIN	CHAR(1) NOT NULL	Whether the predicate can be used as a simple join predicate between two tables.	S
AFTER_JOIN	CHAR(1) NOT NULL	Indicates the predicate evaluation phase: <ul style="list-style-type: none"> 'A' After join 'D' During join blank Not applicable 	S

Table 363. SYSIBM.SYSQUERYPREDICATE table column descriptions (continued)

Column name	Data type	Description	Use
ADDED_PRED	CHAR(1) NOT NULL	Whether it is generated by transitive closure, which means Db2 can generate additional predicates to provide more information for access path selection, when the set of predicates that belong to a query logically imply other predicates.	S
REDUNDANT_PRED	CHAR(1) NOT NULL	Whether it is a redundant predicate, which means evaluation of other predicates in the query already determines the result that the predicate provides.	S
DIRECT_ACCESS	CHAR(1) NOT NULL	Whether the predicate is direct access, which means one can navigate directly to the row through ROWID.	S
KEYFIELD	CHAR(1) NOT NULL	Whether the predicate includes the index key column of the involved table for all applicable indexes considered by Db2.	S
EXPLAIN_TIME	TIMESTAMP NOT NULL	The time when the EXPLAIN information was captured: All cached statements When the statement entered the cache, in the form of a full-precision timestamp value. Non-cached static statements When the statement was bound, in the form of a full precision timestamp value. Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.	S
CATEGORY	SMALLINT NOT NULL,	IBM internal use only.	S
CATEGORY_B	SMALLINT NOT NULL	IBM internal use only.	S
TEXT	VARCHAR(2000) NOT NULL	The transformed predicate text; truncated if exceeds 2000 characters.	S
PRED_ENCODE	CHAR(1) NOT NULL WITH DEFAULT	IBM internal use only.	S
PRED_CCsid	SMALLINT NOT NULL WITH DEFAULT	IBM internal use only.	S
PRED_MCCsid	SMALLINT NOT NULL WITH DEFAULT	IBM internal use only.	S
MARKER	CHAR(1) NOT NULL WITH DEFAULT	Whether this predicate includes host variables, parameter markers, or special registers.	S
PARENT_PNO	INTEGER NOT NULL	The parent predicate number. If this predicate is a root predicate within a query block, then this column is 0.	S
NEGATION	CHAR(1) NOT NULL	Whether this predicate is negated via NOT.	S
LITERALS	VARCHAR(128) NOT NULL	This column indicates the literal value or literal values separated by colon symbols.	S

Table 363. SYSIBM.SYSQUERYPREDICATE table column descriptions (continued)

Column name	Data type	Description	Use
CLAUSE	CHAR(8) NOT NULL	The clause where the predicate exists: 'HAVING ' The HAVING clause 'ON ' The ON clause 'WHERE ' The WHERE clause SELECT The SELECT clause	S
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.	S
ORIGIN	CHAR(1) NOT NULL WITH DEFAULT	Indicates the origin of the predicate. Blank Generated by Db2 C Column mask R Row permission U Specified by the user	S
UNCERTAINTY	FLOAT(4) NOT NULL WITH DEFAULT	Describes the uncertainty factor of a predicate's estimated filter factor. A bigger value indicates a higher degree of uncertainty. Value zero indicates no uncertainty or uncertainty not considered.	S
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements.	S
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	The collection ID: DSNDYNAMICSQLCACHE The row originates from the dynamic statement cache DSNEXPLAINMODEYES The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register. DSNEXPLAINMODEEXPLAIN The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.	S
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package. A blank indicates that the column is not applicable.	S

The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p>	S
QBLOCKNO	SMALLINT NOT NULL	A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.	S
APPLNAME	VARCHAR(24) NOT NULL	The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.	S
PROGNAME	VARCHAR(128) NOT NULL	The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.	S
SECTNOI	INTEGER NOT NULL	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements.	S

Table 364. SYSIBM.SYSQUERYSEL table column descriptions (continued)

Column name	Data type	Description	Use
COLLID	VARCHAR(128) NOT NULL	The collection ID: DSNDYNAMICSQLCACHE The row originates from the dynamic statement cache DSNEXPLAINMODEYES The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register. DSNEXPLAINMODEEXPLAIN The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register. When the SQL statement is embedded in a non-inline SQL function or native SQL procedure, this column is not used and is blank.	S
VERSION	VARCHAR(122) NOT NULL	The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package. A blank indicates that the column is not applicable. When the SQL statement is embedded in a non-inline SQL function or native SQL procedure, this column is not used and is blank.	S
PREDNO	INTEGER NOT NULL	Identifies the predicate	S
INSTANCE	SMALLINT NOT NULL	The selectivity instance, which is used to group related selectivities.	S
SELECTIVITY	FLOAT NOT NULL	The selectivity of the predicate.	S
WEIGHT	FLOAT (4) NOT NULL	The weight of the selectivity instance. For example, a value of .25 means that 25% of the time when a query is executed the predicate will have this selectivity.	S
ASSUMPTION	VARCHAR(128) NOT NULL	Indicates how the selectivity was estimated, or will be used: One of the following values: 'NORMAL' Estimated using the normal selectivity assumptions. 'OVERRIDE' To be used as input to the Optimizer and override it's selectivity estimation.	S

Table 364. SYSIBM.SYSQUERYSEL table column descriptions (continued)

Column name	Data type	Description	Use
INSERT_TIME	TIMESTAMP NOT NULL GENERATED ALWAYS AS ROW CHANGE TIMESTAMP	The time when the row was inserted.	S
EXPLAIN_TIME	TIMESTAMP	The time when the EXPLAIN information was captured: All cached statements When the statement entered the cache, in the form of a full-precision timestamp value. Non-cached static statements When the statement was bound, in the form of a full precision timestamp value. Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.	S
REMARKS	VARCHAR(762)	Internal use only.	S

SYSQUERY_AUX catalog table

The SYSQUERY_AUX table is an auxiliary table for the STMTTEXT column of the SYSQUERY table. The schema is SYSIBM.

Table 365. SYSIBM.SYSQUERY_AUX table column descriptions

Column name	Data type	Description	Use
STMTTEXT	CLOB(2M)	The full text of the query.	G

SYSRELS catalog table

The SYSRELS table contains one row for every referential constraint. The schema is SYSIBM.

Table 366. SYSIBM.SYSRELS table column descriptions

Column name	Data type	Description	Use
CREATOR	VARCHAR(128) NOT NULL	The schema of the dependent table of the referential constraint.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the dependent table of the referential constraint.	G

Table 366. SYSIBM.SYSRELS table column descriptions (continued)

Column name	Data type	Description	Use
RELNAME	VARCHAR(128) NOT NULL	Constraint name.	G
REFTBNAME	VARCHAR(128) NOT NULL	Name of the parent table of the referential constraint.	G
REFTBCREATOR	VARCHAR(128) NOT NULL	The schema of the parent table.	G
COLCOUNT	SMALLINT NOT NULL	Number of columns in the foreign key.	G
DELETERULE	CHAR(1) NOT NULL	Type of delete rule for the referential constraint: A NO ACTION C CASCADE N SET NULL R RESTRICT	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
RELOBID1	SMALLINT NOT NULL WITH DEFAULT	Internal identifier of the constraint with respect to the database that contains the parent table.	S
RELOBID2	SMALLINT NOT NULL WITH DEFAULT	Internal identifier of the constraint with respect to the database that contains the dependent table.	S
TIMESTAMP	TIMESTAMP NOT NULL WITH DEFAULT	Date and time the constraint was defined. If the constraint is between catalog tables prior to Version 2 Release 3, the value is '1985-04-01-00.00.00.000000!'.	G
IXOWNER	VARCHAR(128) NOT NULL WITH DEFAULT	Schema for a unique non-primary index used to enforce the parent key of a referential constraint. Blank or empty string for a primary key used to enforce the parent key of a referential constraint which is a primary key.	G

Table 366. SYSIBM.SYSRELS table column descriptions (continued)

Column name	Data type	Description	Use
IXNAME	VARCHAR(128) NOT NULL WITH DEFAULT	Name of a unique non-primary index used to enforce the parent key of a referential constraint. Empty string for a primary index used to enforce the parent key of a referential constraint which is a primary key.	G
ENFORCED	CHAR(1) NOT NULL WITH DEFAULT 'Y'	Enforced by the system or not: Y Enforced by the system N Not enforced by the system (trusted)	G
CHECKEXISTINGDATA	CHAR(1) NOT NULL WITH DEFAULT	Option for checking existing data: I Immediately check existing data. If ENFORCED = 'Y' and this is not a temporal referential constraint, this column will have a value of 'I'. N Never check existing data. If ENFORCED = 'N', this column will have a value of 'N'. T Immediately check existing data for a temporal referential constraint.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G

SYSRESAUTH catalog table

The SYSRESAUTH table records CREATE IN and PACKADM ON privileges for collections; USAGE privileges for user-defined types; USE privileges for buffer pools, storage groups, and table spaces; and REVOKE privileges for Java archive (JAR) files. The schema is SYSIBM.

Table 367. SYSIBM.SYSRESAUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID of the user who granted the privilege.	G
GRANTEE	VARCHAR(128) NOT NULL	Authorization ID of the user who holds the privilege. Could also be PUBLIC for a grant to PUBLIC.	G
QUALIFIER	VARCHAR(128) NOT NULL	Qualifier of the table space (the database name) if the privilege is for a table space (OBTYP='R'). The schema name of the user-defined type if the privilege is for a user-defined type (OBTYP='D'). The schema name of the JAR file if the privilege is for a JAR file (OBTYP='J'). The value is PACKADM if the privilege is for a collection (OBTYP='C') and the authority held is PACKADM. Otherwise, the value is blank.	G

Table 367. SYSIBM.SYSRESAUTH table column descriptions (continued)

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the buffer pool, collection, Db2 storage group, JAR file, table space, or user-defined type. This value is ALL when USE OF ALL BUFFERPOOLS is granted.	G
—	CHAR(1) NOT NULL	Internal use only.	I
AUTHHOWGOT	CHAR(1) NOT NULL	Authorization level of the user from whom the privileges were received. This authorization level is not necessarily the highest authorization level of the grantor. blank Not applicable A PACKADM (on collection *) C DBCTRL D DBADM E SECADM G ACCESSCTRL L SYSCTRL M DBMAINT P PACKADM (on a specific collection) S SYSADM T DATAACCESS	G
OBTYPE	CHAR(1) NOT NULL	Type of object: B Buffer pool C Collection D User-defined type R Table space S Storage group J JAR file (Java archive file)	G

Table 367. SYSIBM.SYSRESAUTH table column descriptions (continued)

Column name	Data type	Description	Use
—	CHAR(12) NOT NULL	Internal use only.	I
DATEGRANTED	CHAR(6) NOT NULL	Not used.	N
TIMEGRANTED	CHAR(8) NOT NULL	Not used.	N
USEAUTH	CHAR(1) NOT NULL	Whether the privilege is held with the GRANT option: G Privilege is held with the GRANT option Y Privilege is held without the GRANT option The authority held is PACKADM when the OBTYPE is C (a collection) and QUALIFIER is PACKADM. The authority held is CREATE IN when the OBTYPE is C and QUALIFIER is blank.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
GRANTEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the GRANT statement was executed.	G
GRANTEETYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantee: blank Authorization ID L Role R Internal use only	G
GRANTORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantor: blank Authorization ID L Role	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use. The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G

Table 367. SYSIBM.SYSRESAUTH table column descriptions (continued)

Column name	Data type	Description	Use
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSROLES catalog table

The SYSROLES table contains one row for each role. The schema is SYSIBM.

Table 368. SYSIBM.SYSROLES table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	The name of the role.	G
DEFINER	VARCHAR(128) NOT NULL	The authorization ID or role that defined this role listed in the NAME column.	G
DEFINERTYPE	CHAR(1) NOT NULL	The type of definer: L Role blank Authorization ID	G
CREATEDTS	TIMESTAMP NOT NULL	The time when the role is created.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the role. See Release dependency indicators for the values.	G
REMARKS	VARCHAR(762) NOT NULL	A character string that is provided using the COMMENT statement.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G

SYSROUTINEAUTH catalog table

The SYSROUTINEAUTH table records the privileges that are held by users on routines. (A routine can be a user-defined function, cast function, or stored procedure.) The schema is SYSIBM.

Table 369. SYSIBM.SYSROUTINEAUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID of the user who granted the privilege.	G
GRANTEE	VARCHAR(128) NOT NULL	Authorization ID of the user who holds the privilege or the name of a plan or package that uses the privilege. Can also be PUBLIC for a grant to PUBLIC.	G
SCHEMA	VARCHAR(128) NOT NULL	Schema of the routine	G
SPECIFICNAME	VARCHAR(128) NOT NULL	Specific name of the routine. An asterisk (*) if the privilege is held on all routines in the schema.	G
GRANTEDTS	TIMESTAMP NOT NULL	Time when the GRANT statement was executed.	G
ROUTINETYPE	CHAR(1) NOT NULL	Type of routine: F User-defined function or cast function P Stored procedure	G
GRANTEETYPE	CHAR(1) NOT NULL	Type of grantee: blank An authorization ID L Role P An application plan or package. The grantee is a package if COLLID is not blank. R Internal use only	G

Table 369. SYSIBM.SYSROUTINEAUTH table column descriptions (continued)

Column name	Data type	Description	Use
AUTHHOWGOT	CHAR(1) NOT NULL	<p>Authorization level of the user from whom the privileges were received. This authorization level is not necessarily the highest authorization level of the grantor.</p> <p>This field is also used to indicate that the privilege was held on all schemas by the grantor.</p> <p>blank Not applicable</p> <p>1 Grantor had privilege on schema.* at time of grant</p> <p>E SECADM</p> <p>G ACCESSCTRL</p> <p>L SYSCTRL</p> <p>S SYSADM</p> <p>T DATAACCESS</p>	G
EXECUTEAUTH	CHAR(1) NOT NULL	<p>Whether GRANTEE can execute the routine:</p> <p>Y Privilege is held without GRANT option.</p> <p>G Privilege is held with GRANT option.</p>	G
COLLID	VARCHAR(128) NOT NULL	<p>If the GRANTEE is a package, its collection name. Otherwise, the value is blank.</p>	G
CONTOKEN	CHAR(8) NOT NULL FOR BIT DATA	<p>If the GRANTEE is a package, the consistency token of the DBRM from which the package was derived. Otherwise, the value is blank.</p>	G
IBMREQD	CHAR(1) NOT NULL	<p>A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators.</p> <p>The value in this field is not a reliable indicator of release dependencies.</p>	G
GRANTORTYPE	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates the type of grantor:</p> <p>blank Authorization ID</p> <p>L Role</p>	G

Table 369. SYSIBM.SYSROUTINEAUTH table column descriptions (continued)

Column name	Data type	Description	Use
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSROUTINES catalog table

The SYSROUTINES table contains a row for every routine. (A routine can be a user-defined function, cast function, or stored procedure.) The schema is SYSIBM.

Table 370. SYSIBM.SYSROUTINES table column descriptions

Column name	Data type	Description	Use
SCHEMA	VARCHAR(128) NOT NULL	Schema of the routine.	G
OWNER	VARCHAR(128) NOT NULL	Owner of the routine.	G
NAME	VARCHAR(128) NOT NULL	Name of the routine.	G
ROUTINETYPE	CHAR(1) NOT NULL	Type of routine: F User-defined function or cast function P Stored procedure	G
CREATEDBY	VARCHAR(128) NOT NULL	Primary authorization ID of the user who created the routine.	G
SPECIFICNAME	VARCHAR(128) NOT NULL	Specific name of the routine.	G
ROUTINEID	INTEGER NOT NULL	Internal identifier of the routine.	S

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
RETURN_TYPE	INTEGER NOT NULL	Internal identifier of the result data type of the function. The column contains a -2 if the function is a table function.	S
ORIGIN	CHAR(1) NOT NULL	Origin of the routine: E External routine or external SQL procedure N Native SQL procedure Q SQL function S System-generated function U Sourced on user-defined function or built-in function	G
FUNCTION_TYPE	CHAR(1) NOT NULL	Type of function: C Aggregate function S Scalar function T Table function blank For a stored procedure (ROUTINETYPE = 'P')	G
PARAM_COUNT	SMALLINT NOT NULL	Number of parameters for the routine.	G
LANGUAGE	VARCHAR(24) NOT NULL	Implementation language of the routine: <ul style="list-style-type: none"> • ASSEMBLE • C • COBOL • COMPJAVA • JAVA • PLI • REXX • SQL The value is blank if ROUTINETYPE = 'F' and ORIGIN is not 'E' or not 'Q'.	G
COLLID	VARCHAR(128) NOT NULL	Name of the package collection to be used when the routine is executed. A blank value indicates the package collection is the same as the package collection of the program that invoked the routine.	G

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
SOURCESHEMA	VARCHAR(128) NOT NULL	If ORIGIN is 'U' and ROUTINETYPE is 'F', the schema of the source user-defined function ('SYSIBM' for a source built-in function). Otherwise, the value is blank.	G
SOURCESPECIFIC	VARCHAR(128) NOT NULL	If ORIGIN is 'U' and ROUTINETYPE is 'F', the specific name of the source user-defined function or source built-in function name. Otherwise, the value is blank.	G
DETERMINISTIC	CHAR(1) NOT NULL	The deterministic option of an external function or a stored procedure: N Indeterminate (results might differ with a given set of input values). Y Deterministic (results are consistent). blank ROUTINETYPE='F' and ORIGIN is not 'E' or not 'Q' (the routine is a function, but not an external function or an SQL function).	G
EXTERNAL_ACTION	CHAR(1) NOT NULL	The external action option of an external function or SQL function: N Function has no side effects. E Function has external side effects so that the number of invocations is important. blank ORIGIN is not 'E' or 'Q' for the function (ROUTINETYPE='F'), or it is a stored procedure (ROUTINETYPE='P').	G
NULL_CALL	CHAR(1) NOT NULL	The CALLED ON NOT NULL INPUT option of an external function or stored procedure: N The routine is not called if any parameter has a NULL value. Y The routine is called if any parameter has a NULL value. blank ROUTINETYPE='F' and ORIGIN is not 'E' (the routine is a function, but not an external function).	G

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
CAST_FUNCTION	CHAR(1) NOT NULL	Whether the routine is a cast function: N The routine is not a cast function. Y The routine is a cast function. blank ORIGIN is not 'E' for the function (ROUTINETYPE='F'), or it is a stored procedure (ROUTINETYPE='P'). A cast function is generated by Db2 for a CREATE TYPE statement.	G
SCRATCHPAD	CHAR(1) NOT NULL	The SCRATCHPAD option of an external function: N This function does not have a SCRATCHPAD. Y This function has a SCRATCHPAD. blank ORIGIN is not 'E' for the function (ROUTINETYPE='F'), or it is a stored procedure (ROUTINETYPE='P').	G
SCRATCHPAD_LENGTH	INTEGER NOT NULL	Length of the scratchpad if the ORIGIN is 'E' for the function (ROUTINETYPE='F') and NO SCRATCHPAD is not specified. Otherwise, the value is 0.	G
FINAL_CALL	CHAR(1) NOT NULL	The FINAL CALL option of an external function: N A final call will not be made to the function. Y A final call will be made to the function. blank ORIGIN is not 'E' for the function (ROUTINETYPE='F'), or it is a stored procedure (ROUTINETYPE='P').	G
PARALLEL	CHAR(1) NOT NULL	The PARALLEL option of an external function: A This function can be invoked by parallel tasks. D This function cannot be invoked by parallel tasks. blank ORIGIN is not 'E' for the function (ROUTINETYPE='F'), or it is a stored procedure (ROUTINETYPE='P').	G

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
PARAMETER_STYLE	CHAR(1) NOT NULL	<p>The PARAMETER STYLE option of an external function or stored procedure:</p> <p>D DB2SQL. All parameters are passed to the external function or stored procedure according to the DB2SQL standard convention.</p> <p>G GENERAL. All parameters are passed to the stored procedure according to the GENERAL standard convention.</p> <p>N GENERAL CALL WITH NULLS. All parameters are passed to the stored procedure according to the GENERAL WITH NULLS convention.</p> <p>J JAVA. All parameters are passed to the function or procedure according to the conventions for JAVA and SQLJ specifications.</p> <p>blank The column is blank if the ORIGIN is not 'E' or if LANGUAGE is SQL.</p>	G
FENCED	CHAR(1) NOT NULL	<p>Y Indicates that this routine runs separately from the Db2 address space in a WLM managed Db2 address space. All user-defined routines that are not marked with Y in this column run in the Db2 address space.</p> <p>blank ORIGIN is 'Q' or ORIGIN is 'N'.</p>	G
SQL_DATA_ACCESS	CHAR(1) NOT NULL	<p>The SQL statements that are allowed in an external function, SQL function, or stored procedure:</p> <p>C CONTAINS SQL - Only SQL that does not read or modify data is allowed.</p> <p>M MODIFIES SQL DATA - All SQL is allowed, including SQL that reads or modifies data.</p> <p>N NO SQL - SQL is not allowed.</p> <p>R READS SQL DATA - Only SQL that reads data is allowed.</p> <p>blank Not applicable.</p>	G

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
DBINFO	CHAR(1) NOT NULL	<p>The DBINFO option of an external function or stored procedure:</p> <p>N No, the DBINFO parameter will not be passed to the external function or stored procedure.</p> <p>Y Yes, the DBINFO parameter will be passed to the external function or stored procedure.</p> <p>blank ORIGIN is not 'E'.</p>	G
STAYRESIDENT	CHAR(1) NOT NULL	<p>The STAYRESIDENT option of the routine, which determines whether the routine is to be deleted from memory when the routine ends.</p> <p>N The load module is to be deleted from memory after the routine terminates.</p> <p>Y The load module is to remain resident in memory after the routine terminates.</p> <p>blank ORIGIN is not 'E'.</p>	G
ASUTIME	INTEGER NOT NULL	<p>Number of CPU service units permitted for any single invocation of this routine. If ASUTIME is zero, the number of CPU service units is unlimited. The value is 0 if ROUTINETYPE = 'F' and ORIGIN is not 'E'.</p> <p>If a routine consumes more CPU service units than the ASUTIME value allows, Db2 cancels the routine.</p>	G
WLM_ENVIRONMENT	VARCHAR(96) NOT NULL	<p>Name of the WLM environment to be used to run this routine.</p> <p>When ORIGIN = 'N', this is the name of the WLM ENVIRONMENT FOR DEBUG MODE that is to be used when debugging a native SQL procedure.</p> <p>The column is blank if ROUTINETYPE = 'F' and ORIGIN is not 'E'. If the ROUTINETYPE = 'P', the value might be blank. If this value is blank the stored procedure cannot be run.</p>	G

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
WLM_ENV_FOR_NESTED	CHAR(1) NOT NULL	<p>For nested routine calls, indicates whether the address space of the calling stored procedure or user-defined function is used to run the nested stored procedure or user-defined function:</p> <p>N The nested stored procedure or user-defined function runs in an address space other than the specified WLM environment if the calling stored procedure or user-defined function is not running in the specified WLM environment. 'WLM ENVIRONMENT name' was specified.</p> <p>Y The nested stored procedure or user-defined function runs in the environment used by the calling stored procedure or user-defined function. 'WLM ENVIRONMENT(name,*)' was specified.</p> <p>blank WLM_ENVIRONMENT is blank. The column is blank if ROUTINETYPE = 'F' and ORIGIN is not 'E'.</p>	G
PROGRAM_TYPE	CHAR(1) NOT NULL	<p>Indicates whether the routine runs as a Language Environment main routine or a subroutine:</p> <p>M The routine runs as a main routine.</p> <p>S The routine runs as a subroutine.</p> <p>blank ORIGIN is not 'E'.</p>	G
EXTERNAL_SECURITY	CHAR(1) NOT NULL	<p>Specifies the authorization ID to be used if the routine accesses resources protected by an external security product:</p> <p>D Db2 - The authorization ID associated with the WLM-established stored procedure address space.</p> <p>U SESSION_USER - The authorization ID of the SQL user that invoked the routine.</p> <p>C DEFINER - The authorization ID of the owner of the routine.</p> <p>blank ORIGIN is not 'E'.</p>	G

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
COMMIT_ON_RETURN	CHAR(1) NOT NULL	If ROUTINETYPE = 'P', whether the transaction is always to be committed immediately on successful return (non-negative SQLCODE) from this stored procedure: N The unit of work is to continue. Y The unit of work is to be committed immediately. A The unit of work of the autonomous procedure is committed immediately, but other work of the calling application is not committed. If ROUTINETYPE = 'F', the value is blank.	G
RESULT_SETS	SMALLINT NOT NULL	If ROUTINETYPE = 'P', the maximum number of ad hoc result sets that this stored procedure can return. If no ad hoc result sets exist or ROUTINETYPE = 'F', the value is zero.	G
LOBCOLUMNS	SMALLINT NOT NULL	If ORIGIN = 'E' or 'Q', the number of LOB columns found in the parameter list for this user-defined function. If no LOB columns are found in the parameter list or ORIGIN is not 'E' or not 'Q', the value is 0.	S
CREATEDTS	TIMESTAMP NOT NULL	Time when the routine was created or re-created.	G
ALTEREDTS	TIMESTAMP NOT NULL	Time when the last ALTER statement was executed for this routine.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see <u>Release dependency indicators</u> . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
PARM1	SMALLINT NOT NULL	Internal use only.	I

PARM29	SMALLINT NOT NULL	Internal use only.	I
PARM30	SMALLINT NOT NULL	Internal use only.	I
IOS_PER_INVOC	FLOAT NOT NULL WITH DEFAULT -1	Estimated number of I/Os that required to execute the routine. The value is -1 if the estimated number is not known.	S
INSTS_PER_INVOC	FLOAT NOT NULL WITH DEFAULT -1	Estimated number of machine instructions that required to execute the routine. The value is -1 if the estimated number is not known.	S
INITIAL_IOS	FLOAT NOT NULL WITH DEFAULT -1	Estimated number of I/O's that are performed the first time or the last time the routine is invoked. The value is -1 if the estimated number is not known.	S
INITIAL_INSTS	FLOAT NOT NULL WITH DEFAULT -1	Estimated number of machine instructions that are performed the first time or the last time the routine is invoked. The value is -1 if the estimated number is not known.	S

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
CARDINALITY	FLOAT NOT NULL WITH DEFAULT -1	The predicted cardinality of the routine, -1 to trigger the use of the default value (10,000).	S
RESULT_COLS	SMALLINT NOT NULL DEFAULT 1	For a table function, the number of columns in the result table. Otherwise, the value is 1.	S
EXTERNAL_NAME	VARCHAR(762) NOT NULL	The path/module/function that Db2 should load to execute the routine. The column is blank if ROUTINETYPE = 'F' and ORIGIN is not 'E'.	G
—	VARCHAR(150) NOT NULL FOR BIT DATA	Internal use only.	I
RUNOPTS	VARCHAR(762) NOT NULL	The Language Environment run time options to be used for this routine. An empty string indicates that the installation default Language Environment run time options are to be used. The column is blank if ROUTINETYPE = 'F' and ORIGIN is not 'E'.	G
REMARKS	VARCHAR(762) NOT NULL	A character string provided by the user with the COMMENT statement.	G
JAVA_SIGNATURE	VARCHAR(3072) NOT NULL WITH DEFAULT	The signature of the JAR file. blank When PARAMETER STYLE is not JAVA. The column is also blank if ROUTINETYPE = 'F' and ORIGIN is not 'E'.	G
CLASS	VARCHAR(384) NOT NULL WITH DEFAULT	The class name contained in the JAR file. blank When PARAMETER STYLE is not JAVA. The column is also blank if ROUTINETYPE = 'F' and ORIGIN is not 'E'.	G
JARSCHEMA	VARCHAR(128) NOT NULL WITH DEFAULT	The schema of the JAR file. blank When PARAMETER STYLE is not JAVA. The column is also blank if ROUTINETYPE = 'F' and ORIGIN is not 'E'.	G
JAR_ID	VARCHAR(128) NOT NULL WITH DEFAULT	The name of the JAR file. blank When PARAMETER STYLE is not JAVA. The column is also blank if ROUTINETYPE = 'F' and ORIGIN is not 'E'.	G

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
SPECIAL_REGS	CHAR(1) NOT NULL WITH DEFAULT 'I'	The SPECIAL REGISTER option for a routine. I INHERIT SPECIAL REGISTERS D DEFAULT SPECIAL REGISTERS blank ROUTINETYPE = 'F' and ORIGIN is not 'E' or not 'Q'.	G
NUM_DEP_MQTS	SMALLINT NOT NULL WITH DEFAULT	Number of dependent materialized query tables. The value is 0 if the row does not describe a user-defined table function, or if no materialized query tables are defined on the table function.	G
MAX_FAILURE	SMALLINT NOT NULL WITH DEFAULT -1	Allowable failures for this routine (0-32767). If zero is specified, the routine will never be stopped. If no value is specified for this routine, the default will be -1 to indicate that the Db2 installation parameter (STORMXAB) will be used.	G
PARAMETER_CCSID	INTEGER NOT NULL WITH DEFAULT	A CCSID that specifies how character, graphic, date, time, and timestamp data types for system generated parameters to the routine such as message tokens and DBINFO should be passed. The value is dependent on the encoding scheme specified implicitly or explicitly for the PARAMETER CCSID clause defined at the system for that encoding scheme. The following list describes the CCSID for each encoding scheme: ASCII If mixed data is allowed, this CCSID is for mixed ASCII data, SBCS data uses the corresponding SBCS CCSID, and graphic data uses the corresponding DBCS CCSID. Otherwise, this CCSID is for SBCS ASCII data. EBCDIC If mixed data is allowed, this CCSID is for mixed EBCDIC data, SBCS data uses the corresponding SBCS CCSID, and graphic data uses the corresponding DBCS CCSID. Otherwise, this is the CCSID for SBCS EBCDIC data. Unicode This CCSID is for mixed data (1208). A value of zero means that the CCSIDs used are those CCSIDs for the encoding scheme of other string or datetime parameters in the parameter list or RETURNS clause CCSID clauses, or the value in the DEF ENCODING SCHEME on installation panel DSNTIPF.	G

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	The version identifier for a native SQL procedure (indicated by the value 'N' in the column ORIGIN) or a non-inline SQL scalar function (indicated by the value 'Q' in the column ORIGIN and 'N' in the column INLINE). A zero length string for the rows that are created prior to Version 9 and for the rows that correspond to neither native SQL procedures or non-inline SQL scalar functions.	G
CONTOKEN	CHAR(8) NOT NULL WITH DEFAULT FOR BIT DATA	The consistency token for the routine. The column is set to X'20' if the value of ORIGIN is not 'N'	G
ACTIVE	CHAR(1) NOT NULL WITH DEFAULT	Identifies the active version of the routine: Y This version is active. N This version is not active. blank The value of ORIGIN is not 'N' or the row was created prior to Version 9.	G
DEBUG_MODE	CHAR(1) NOT NULL WITH DEFAULT	Identifies whether or not this routine is enabled for debugging: 1 This routine is enabled for debugging and can be debugged in a client debug session using the Db2 Unified Debugger. 0 This routine is not enabled for debugging. N This routine can never be enabled for debugging. blank The LANGUAGE is not specified as JAVA, the value of ORIGIN is not 'N', or the row was created prior to Version 9.	G
TEXT_ENVID	INTEGER NOT NULL WITH DEFAULT	Internal identifier of the environment. The column value is 0 if the value of ORIGIN is not 'N' or 'Q', or if the row was created prior to Version 9.	G
TEXT_ROWID	ROWID NOT NULL GENERATED ALWAYS	ID to support LOB columns for source text.	G

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
TEXT	CLOB(2M) NOT NULL WITH DEFAULT	The text of the statement that created the SQL routine, including the body of the routine. In some cases, this column might instead contain the text of a statement that altered the SQL routine. In many cases, changes to routines or to objects on which routines are dependent do not update this value. The value is a zero-length string if the value of ORIGIN is not 'N' or if the row was created prior to Version 9.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner: blank Authorization ID L Role	G
PARAMETER_ VARCHARFORM	INTEGER NOT NULL WITH DEFAULT	A non-zero value that indicates the actual representation, to a LANGUAGE C routine, of any varying length string parameter that appears in the parameter list or RETURNS clause for that routine.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to Version 9. See Release dependency indicators for all other values.	G
PACKAGEPATH	VARCHAR(4096)	The value of the PACKAGE PATH option of the CREATE FUNCTION, CREATE PROCEDURE, ALTER FUNCTION, or ALTER PROCEDURE statement that created or last changed the routine. PACKAGE PATH identifies the package path to use when the routine is executed. A blank value indicates the package path is the same as the package path of the program that invoked the routine.	G
SECURE	CHAR(1) NOT NULL WITH DEFAULT 'N'	Indicates if the routine is secured: N The routine is not secured Y The routine is secured	G
INLINE	CHAR(1) NOT NULL WITH DEFAULT	Specifies if the SQL function is inline: Y The SQL function is inline when referenced. No package is associated with this type of routine. N The SQL function has an associated package. blank Not an SQL function (the ORIGIN column has a value other than 'Q')	G

Table 370. SYSIBM.SYSROUTINES table column descriptions (continued)

Column name	Data type	Description	Use
—	BLOB(1G) NOT NULL WITH DEFAULT	Internal use only.	I
SYSTEM_DEFINED	CHAR(1) NOT NULL WITH DEFAULT	Identifies whether this routine is system defined: blank This routine is not system defined S This routine is system defined	G
WRAPPED	CHAR(1)	'Y' The routine text is obfuscated. Obfuscating source code of SQL procedures, SQL functions, and triggers (Db2 Administration Guide) . blank The routine text is not obfuscated.	G
REGENERATEDTS	TIMESTAMP(12) NOT NULL	The time when the object was regenerated. The value is valid only for objects that can be regenerated. If no regeneration has occurred, this column contains the same value as the CREATEDTS column.	G

SYSROUTINESTEXT catalog table

The SYSROUTINESTEXT is an auxiliary table for the TEXT column of SYSIBM.SYSROUTINES and is required to hold the LOB data. The schema is SYSIBM.

Table 371. SYSIBM.SYSROUTINESTEXT table column descriptions

Column name	Data type	Description	Use
TEXT	CLOB(2M) NOT NULL WITH DEFAULT	See the description of the TEXT column in “SYSROUTINES catalog table” on page 2646 .	G

SYSROUTINES_OPTS catalog table (deprecated)

The SYSROUTINES_OPTS table Contains a row for each generated routine, such as one created by Db2 for z/OS Procedure Processor DSNTPSMP, that records the build options for the routine. The schema is SYSIBM.

Deprecated function: External SQL procedures are deprecated and not as fully supported as native SQL procedures. For best results, create native SQL procedures instead. For more information, see [Creating native SQL procedures \(Db2 Application programming and SQL\)](#) and [Migrating an external SQL procedure to a native SQL procedure \(Db2 Application programming and SQL\)](#).

Rows in this table can be inserted, updated, and deleted.

Table 372. SYSIBM.SYSROUTINES_OPTS table column descriptions

Column name	Data type	Description	Use
SCHEMA	VARCHAR(128) NOT NULL	Schema of the routine.	G

Table 372. SYSIBM.SYSROUTINES_OPTS table column descriptions (continued)

Column name	Data type	Description	Use
ROUTINENAME	VARCHAR(128) NOT NULL	Name of the routine.	G
BUILDDATE	DATE NOT NULL WITH DEFAULT	Date the routine was built.	G
BUILDTIME	TIME NOT NULL WITH DEFAULT	Time the routine was built.	G
BUILDSTATUS	CHAR(1) NOT NULL WITH DEFAULT 'C'	Whether this version of the routine's options is the current version.	G
BUILDSHEMA	VARCHAR(128) NOT NULL	Schema name for BUILDNAME.	G
BUILDNAME	VARCHAR(128) NOT NULL	Procedure used to create the routine.	G
BUILDOWNER	VARCHAR(128) NOT NULL	Authorization ID used to create the routine.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
PRECOMPILE_OPTS	VARCHAR(765) NOT NULL WITH DEFAULT	SQL processing (precompiler or coprocessor) options used to build the routine.	G
COMPILE_OPTS	VARCHAR(765) NOT NULL WITH DEFAULT	Compiler options used to build the routine.	G
PRELINK_OPTS	VARCHAR(765) NOT NULL WITH DEFAULT	Prelink-edit options used to build the routine.	G
LINK_OPTS	VARCHAR(765) NOT NULL WITH DEFAULT	Link-edit options used to build the routine.	G

Table 372. SYSIBM.SYSROUTINES_OPTS table column descriptions (continued)

Column name	Data type	Description	Use
BIND_OPTS	VARCHAR(3072) NOT NULL WITH DEFAULT	Bind options used to build the routine.	G
SOURCEDSN	VARCHAR(765) NOT NULL WITH DEFAULT	Name of the source data set.	G
DEBUG_MODE	CHAR(1) NOT NULL	Debugging is on or off for this object. 0 Debugging is off. Default and value on migration are both 0. 1 Debugging is on.	G

SYSROUTINES_TREE catalog table

The SYSROUTINES_TREE table is an auxiliary table for the PTREE column of the SYSROUTINES table. The schema is SYSIBM.

Table 373. SYSIBM.SYSROUTINES_TREE table column descriptions

Column name	Data type	Description	Use
PTREE	BLOB(1G) NOT NULL WITH DEFAULT	Internal use only.	I

SYSROUTINES_SRC catalog table (deprecated)

The SYSROUTINES_SRC table contains source for generated routines, such as those created by Db2 for z/OS Procedure Processor DSNTPSMP. The schema is SYSIBM.

Deprecated function: External SQL procedures are deprecated and not as fully supported as native SQL procedures. For best results, create native SQL procedures instead. For more information, see [Creating native SQL procedures \(Db2 Application programming and SQL\)](#) and [Migrating an external SQL procedure to a native SQL procedure \(Db2 Application programming and SQL\)](#).

Rows in this table can be inserted, updated, and deleted.

Table 374. SYSIBM.SYSROUTINES_SRC table column descriptions

Column name	Data type	Description	Use
SCHEMA	VARCHAR(128) NOT NULL	Schema of the routine.	G
ROUTINENAME	VARCHAR(128) NOT NULL	Name of the routine.	G

Table 374. SYSIBM.SYSROUTINES_SRC table column descriptions (continued)

Column name	Data type	Description	Use
BUILDDATE	DATE NOT NULL WITH DEFAULT	Date the routine was built.	G
BUILDTIME	TIME NOT NULL WITH DEFAULT	Time the routine was built.	G
BUILDSTATUS	CHAR(1) NOT NULL WITH DEFAULT 'C'	Whether this version of the routine's source is the current version.	G
SEQNO	INTEGER NOT NULL	Number of the source statement piece in CREATESTMT.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
CREATESTMT	VARCHAR(7500) NOT NULL	Routine source statement.	G

SYSSCHEMAAUTH catalog table

The SYSSCHEMAAUTH table contains one or more rows for each user that is granted a privilege on a particular schema in the database. The schema is SYSIBM.

Table 375. SYSIBM.SYSSCHEMAAUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID of the user who granted the privileges or SYSADM.	G
GRANTEE	VARCHAR(128) NOT NULL	Authorization ID of the user or group who holds the privileges. Can also be PUBLIC for a grant to PUBLIC.	G
SCHEMANAME	VARCHAR(128) NOT NULL	Name of the schema or '*' for all schemas.	G

Table 375. SYSIBM.SYSSCHEMAAUTH table column descriptions (continued)

Column name	Data type	Description	Use
AUTHHOWGOT	CHAR(1) NOT NULL	<p>Authorization level of the user from whom the privileges were received. This authorization level is not necessarily the highest authorization level of the grantor.</p> <p>This field is also used to indicate that the privilege was held on all schemas by the grantor.</p> <p>1 Grantor had privilege on all schemas at time of grant</p> <p>E SECADM</p> <p>G ACCESSCTRL</p> <p>L SYSCTRL</p> <p>S SYSADM</p>	G
CREATEINAUTH	CHAR(1) NOT NULL	<p>Indicates whether grantee holds CREATEIN privilege on the schema:</p> <p>blank Privilege is not held</p> <p>G Privilege is held with the GRANT option</p> <p>Y Privilege is held without the GRANT option</p>	G
ALTERINAUTH	CHAR(1) NOT NULL	<p>Indicates whether grantee holds ALTERIN privilege on the schema:</p> <p>blank Privilege is not held</p> <p>G Privilege is held with the GRANT option</p> <p>Y Privilege is held without the GRANT option</p>	G
DROPINAUTH	CHAR(1) NOT NULL	<p>Indicates whether grantee holds DROPIN privilege on the schema:</p> <p>blank Privilege is not held</p> <p>G Privilege is held with the GRANT option</p> <p>Y Privilege is held without the GRANT option</p>	G
GRANTEDTS	TIMESTAMP NOT NULL	Time when the GRANT statement was executed.	G

Table 375. SYSIBM.SYSSCHEMAAUTH table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
GRANTEETYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantee: blank Authorization ID L Role	G
GRANTORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantor: blank Authorization ID L Role	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSSEQUENCEAUTH catalog table

The SYSSEQUENCEAUTH table records the privileges that are held by users over sequences. The schema is SYSIBM.

Table 376. SYSIBM.SYSSEQUENCEAUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID of the user who granted the privileges.	G
GRANTEE	VARCHAR(128) NOT NULL	Authorization ID of the user or group that holds the privileges or the name of an application plan or package that uses the privileges. PUBLIC for a grant to PUBLIC.	G

Table 376. SYSIBM.SYSSEQUENCEAUTH table column descriptions (continued)

Column name	Data type	Description	Use
SCHEMA	VARCHAR(128) NOT NULL	Schema of the sequence.	G
NAME	VARCHAR(128) NOT NULL	Name of the sequence.	G
GRANTEETYPE	CHAR(1) NOT NULL	Type of grantee: blank An authorization ID. L Role P An application plan or package. The grantee is a package if COLLID is not blank. R Internal use only.	G
AUTHHOWGOT	CHAR(1) NOT NULL	Authorization level of the user from whom the privileges were received. This authorization level is not necessarily the highest authorization level of the grantor: blank Not applicable E SECADM G ACCESSCTRL L SYSCTRL S SYSADM T DATAACCESS	G
ALTERAUTH	CHAR(1) NOT NULL	Indicates whether grantee holds ALTER privilege on the sequence: blank Privilege is not held. G Privilege is held with the GRANT option. Y Privilege is held without the GRANT option.	G

Table 376. SYSIBM.SYSSEQUENCEAUTH table column descriptions (continued)

Column name	Data type	Description	Use
USEAUTH	CHAR(1) NOT NULL	Indicates whether grantee holds USAGE privilege on the sequence: blank Privilege is not held. G Privilege is held with the GRANT option. Y Privilege is held without the GRANT option.	G
COLLID	VARCHAR(128) NOT NULL	If the GRANTEE is a package, its collection name. Otherwise, a string of length zero.	G
CONTOKEN	CHAR(8) NOT NULL FOR BIT DATA	If the GRANTEE is a package, the consistency token of the DBRM from which the package was derived. Otherwise, blank.	G
GRANTEDTS	TIMESTAMP NOT NULL	Time when the GRANT statement was executed.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
GRANTORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantor: blank Authorization ID L Role	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSSEQUENCES catalog table

The SYSSEQUENCES table contains one row for each identity column or user-defined sequence. The schema is SYSIBM.

Table 377. SYSIBM.SYSSEQUENCES table column descriptions

Column name	Data type	Description	Use
SCHEMA	VARCHAR(128) NOT NULL	Schema of the alias or sequence. For an identity column, the value of TBCREATOR from the SYSCOLUMNS entry for the column.	G
OWNER	VARCHAR(128) NOT NULL	Owner of the alias or sequence. For an identity column, the value of TBCREATOR from the SYSCOLUMNS entry for the column.	G
NAME	VARCHAR(128) NOT NULL	Name of the alias, identity column, or sequence. The name for an identity column is generated by Db2.	G
SEQTYPE	CHAR(1) NOT NULL	Type of sequence object: A Alias for a sequence I An identity column S A user-defined sequence X An implicitly created DOCID column for a base table that contains XML data.	G
SEQUENCEID	INTEGER NOT NULL	Internal identifier of the alias, identity column, or sequence.	G
CREATEDBY	VARCHAR(128) NOT NULL	Primary authorization ID of the user who created the alias, identity column, or sequence.	G
INCREMENT	DECIMAL(31,0) NOT NULL	Increment value (positive or negative, within INTEGER scope). The value is 0 if the row describes an alias.	G
START	DECIMAL(31,0) NOT NULL	Start value. The value is 0 if the row describes an alias.	G
MAXVALUE	DECIMAL(31,0) NOT NULL	Maximum value allowed for the identity column or sequence. The value is 0 if the row describes an alias.	G
MINVALUE	DECIMAL(31,0) NOT NULL	Minimum value allowed for the identity column or sequence. The value is 0 if the row describes an alias.	G

Table 377. SYSIBM.SYSSEQUENCES table column descriptions (continued)

Column name	Data type	Description	Use
CYCLE	CHAR(1) NOT NULL	Whether cycling will occur when a boundary is reached: N No Y Yes, cycling will occur blank The row describes an alias	G
CACHE	INTEGER NOT NULL	Number of sequence values to preallocate in memory for faster access. A value of 0 indicates that values are not to be preallocated. The value is 0 if the row describes an alias.	G
ORDER	CHAR(1) NOT NULL	Whether the values must be generated in order: Y Yes N No R The values must be generated in pseudo-random order for an XML document ID column that was created when subsystem parameter XML_RANDOMIZE_DOCID was set to YES. blank The row describes an alias	G
DATATYPEID	INTEGER NOT NULL	For a built-in data type, the internal ID of the built-in type. For a distinct type, the internal ID of the distinct type. The value is 0 if the row describes an alias.	S
SOURCETYPEID	INTEGER NOT NULL	For a built-in data type, 0. For a distinct type, the internal ID of the built-in data type upon which the distinct type is based. The value is 0 if the row describes an alias.	S
CREATEDTS	TIMESTAMP NOT NULL	Timestamp of the creation of the alias, identity column, or sequence.	G
ALTEREDTS	TIMESTAMP NOT NULL	Timestamp when the last ALTER statement was executed for this alias, identity column, or sequence.	G

Table 377. SYSIBM.SYSSEQUENCES table column descriptions (continued)

Column name	Data type	Description	Use
MAXASSIGNEDVAL	DECIMAL(31,0)	<p>Last possible assigned value. MAXASSIGNEDVAL is updated each time that the next chunk of <i>n</i> values is cached. <i>n</i> is the CACHE column value. MAXASSIGNEDVAL is initialized to null when the object is created or when it is altered to restart the sequence. The value is also null when the object is an alias.</p> <p>The LOAD utility updates MAXASSIGNEDVAL for identity columns in the following ways:</p> <ul style="list-style-type: none"> • For sequence or identity column values that are generated by the Db2 database manager, LOAD updates MAXASSIGNEDVAL each time that the next chunk of <i>n</i> values is cached. <i>n</i> is the CACHE column value. • For identity column values that are generated by the user, LOAD updates MAXASSIGNEDVAL with the MAXVALUE column value or MINVALUE column value. MAXVALUE is used if the INCREMENT column value is positive. MINVALUE is used if the INCREMENT column value is negative. • LOAD with REPLACE sets MAXASSIGNEDVAL to null before loading any data. • LOAD with FORMAT INTERNAL does not update MAXASSIGNEDVAL if the data that is being loaded is in basic row format. <p>The value is 0 if the row describes an alias.</p>	G
IBMREQD	CHAR(1) NOT NULL	<p>A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators.</p> <p>The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.</p>	G
REMARKS	VARCHAR(762) NOT NULL	Character string provided by user with the COMMENT statement. The value is blank for an identity column.	G
PRECISION	SMALLINT NOT NULL WITH DEFAULT	<p>The precision defined for a sequence with a decimal or numeric type. The value is 5 for SMALLINT, 10 for INTEGER, 19 for BIGINT, or the actual precision specified by the user for the decimal data type. The value is 0 for rows created prior to Version 8.</p> <p>The value is 0 if the row describes an alias.</p>	G
RESTARTWITH	DECIMAL(31,0) NULLABLE WITH DEFAULT	<p>The sequence RESTART value for an ALTER SEQUENCE statement.</p> <p>The value is NULL for the following:</p> <ul style="list-style-type: none"> • There have been no ALTER statements with the RESTART option. • The row describes an alias 	G

Table 377. SYSIBM.SYSSEQUENCES table column descriptions (continued)

Column name	Data type	Description	Use
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner: blank Authorization ID L Role	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to Version 9. See Release dependency indicators for all other values.	G
SEQSCHEMA	VARCHAR(128) NOT NULL WITH DEFAULT	For a sequence alias, identifies the schema of the sequence for which the alias is defined. Otherwise, the value is blank.	G
SEQNAME	VARCHAR(128) NOT NULL WITH DEFAULT	For a sequence alias, identifies the name of the sequence for which the alias is defined. Otherwise, the value is blank.	G

SYSSEQUENCESDEP catalog table

The SYSSEQUENCESDEP table records the dependencies of identity columns and sequences. The schema is SYSIBM.

Table 378. SYSIBM.SYSSEQUENCEDEP table column descriptions

Column name	Data type	Description	Use
BSEQUENCEID	INTEGER NOT NULL	Internal identifier of the identity column or sequence.	G
DCREATOR	VARCHAR(128) NOT NULL	The owner of the object that is dependent on this identity column or sequence.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
DNAME	VARCHAR(128) NOT NULL	Name of the object that is dependent on this identity column or sequence.	G
DCOLNAME	VARCHAR(128) NOT NULL	Name of the identity column. Blank for SQL function rows.	G

Table 378. SYSIBM.SYSSEQUENCEDEP table column descriptions (continued)

Column name	Data type	Description	Use
DTYPE	CHAR(1) NOT NULL WITH DEFAULT 'I'	The type of object that is dependent on this sequence: F SQL function I Identity column X Implicit DOCID column that is created on a base table with XML blank Represents an identity column created prior to Version 8	G
BSCHEMA	VARCHAR(128) NOT NULL WITH DEFAULT	The schema name of the sequence, will be a string of length zero for an object created prior to Version 8.	G
BNAME	VARCHAR(128) NOT NULL WITH DEFAULT	The sequence name (generated by Db2 for an identity column), will be a string of length zero for an object created prior to Version 8.	G
DSHEMA	VARCHAR(128) NOT NULL WITH DEFAULT	The qualifier of the object that is dependent on this sequence, will be a string of length zero for an object created prior to Version 8.	G
DOWNER	VARCHAR(128) NOT NULL WITH DEFAULT	The owner of the object that is dependent on this sequence. This will be a string of length zero for an object that was created prior to Version 9.	G
DOWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	The type of owner: Blank An authorization ID L A role	G

SYSSESSION catalog table

The SYSSESSION table stores the session token that generated by the server and associated session data. The schema is SYSIBM.

Table 379. SYSIBM.SYSSESSION table column descriptions

Column name	Data type	Description	Use
TOKEN	CHAR(40) FOR BIT DATA NOT NULL	Session token for the session.	
CORRTKN	VARCHAR(256) FOR BIT DATA	Extended client correlation token in use.	
GV_FLAGS	CHAR(2) FOR BIT DATA	Flags for internal classification of global variables (such as whether it contains arrays or LOBs.)	

Table 379. SYSIBM.SYSSESSION table column descriptions (continued)

Column name	Data type	Description	Use
TOTAL	CHAR(4) FOR BIT DATA NOT NULL	The number of entries in the SYSIBM.SYSSESSION_EX table that correspond to the session token.	
SPECIAL_REGISTERS	VARCHAR(16000) FOR BIT DATA NOT NULL	Special register values (as chained SQLSTTs).	
GLOBAL_VARIABLES	BLOB(2G)	global variable values(as GLBVRB). Arrays/lobs are stores as locator values that reference a row in the SYSIBM.SYSSESSION_EX table.	
ROWID	ROWID NOT NULL GENERATED ALWAYS	Generated ROWID.	

SYSSESSION_EX catalog table

The SYSSESSION_EX table contains global variable data of LOB or array type that corresponds to the locator stored in the GLOBAL_VARIABLES column of the SYSSESSION table. The schema is SYSIBM.

Table 380. SYSIBM.SYSSESSION_EX table column descriptions

Column name	Data type	Description	Use
TOKEN	CHAR(40) FOR BIT DATA NOT NULL	Session token representing the session.	
LOCATOR	CHAR(8) FOR BIT DATA NOT NULL	Locator value corresponding to one of the global variables with DATATYPE as array of lobs.	
HEADER	CHAR(89) FOR BIT DATA NOT NULL	Array static descriptor header when locator value corresponds to array type.	
GVID	CHAR(8) FOR BIT DATA NOT NULL	Global variable identifier.	
DATATYPE	CHAR(2) FOR BIT DATA NOT NULL	Data type of the global variable.	
CCSID	CHAR(2) FOR BIT DATA NOT NULL	CCSID of the global variable.	
GVSHEMA	VARCHAR(130) FOR BIT DATA	Schema name of the global variable.	
GVNAME	VARCHAR(130) FOR BIT DATA	Name of the global variable.	
DATA	BLOB(2G)	Data value stored in the global variable.	

SYSSESSION_STATUS catalog table

The SYSSESSION_STATUS table contains session token and timestamp values for when the corresponding session data was last referenced. The schema is SYSIBM.

Table 381. SYSIBM.SYSSESSION_STATUS table column descriptions

Column name	Data type	Description	Use
TOKEN	CHAR(40) FOR BIT DATA NOT NULL	Session token representing the session.	

Table 381. SYSIBM.SYSSESSION_STATUS table column descriptions (continued)

Column name	Data type	Description	Use
TOKEN_TS	CHAR(16) FOR BIT DATA NOT NULL	Timestamp value when row was last referenced.	
TOKEN_MEMBER	CHAR(16) FOR BIT DATA	Member where row was last accessed.	
STATUS	CHAR(2) FOR BIT DATA	Status of session corresponding to the token (such as timed-out/clean disconnect).	

SYSSTATFEEDBACK catalog table

The SYSSTATFEEDBACK table contains information about missing or conflicting catalog statistics for SQL statements. The schema is SYSIBM.

The following values control the collection of statistics feedback data in the SYSSTATFEEDBACK catalog table:

- The STATFDBK_SCOPE subsystem parameter controls whether the data is collected, and whether it is collected only for static SQL statements, only for dynamic SQL statements, or for both.
- The STATSINT subsystem parameter controls when and how frequently the data is externalized.
- The STATS_FEEDBACK column of the SYSTABLES catalog table controls whether the data is collected for a particular table.

The RUNSTATS utility removes data from the SYSSTATFEEDBACK catalog table when the recommended statistics are collected.

Tip: The SYSSTATFEEDBACK table might contain rows that recommend collection of statistics for DEFINE NO objects, or empty table space partitions. However, statistics cannot be collected for such objects until after data is inserted and the underlying data sets are created. For more information, see [Effect of utilities on objects that have the DEFINE NO attribute \(Db2 Utilities\)](#).

Table 382. SYSIBM.SYSSTATFEEDBACK table column descriptions

Column name	Data type	Description	Use
TBCREATOR	VARCHAR(128)	The creator of the table.	S
TBNAME	VARCHAR(128)	The name of the table.	S
IXCREATOR	VARCHAR(128)	The creator of the index.	S
IXNAME	VARCHAR(128)	The name of the index.	S
COLNAME	VARCHAR(128)	The name of the column.	S
NUMCOLUMNS	SMALLINT	The number of columns in the column group.	S
COLGROUPCOLNO	VARCHAR(254) FOR BIT DATA	A hex representation that identifies the set of columns associated with the statistics. If the statistics are only associated with a single column, the field contains a zero length. Otherwise, the field is an array of SMALLINT column numbers with a dimension equal to the value in NUMCOLUMNS.	S

Table 382. SYSIBM.SYSSTATFEEDBACK table column descriptions (continued)

Column name	Data type	Description	Use
TYPE	CHAR(1)	The type of statistic to collect: 'C' Cardinality. 'F' Frequency. 'H' Histogram. 'I' Index. 'T' Table.	I
DBNAME	VARCHAR(24)	The name of the database.	S
TSNAME	VARCHAR(24)	The name of the table space.	S
REASON	CHAR(8)	The reason for the statistics collection recommendation: 'BASIC' A basic statistical value for a column table or index is missing. 'CONFLICT' Another statistic conflicts with this statistic. 'COMPFFIX' Multi-column cardinality statistics are needed for an index compound filter factor. 'DEFAULT' A predicate references a value that is probably a default value. 'KEYCARD' The cardinalities of index key columns are missing. 'LOWCARD' The cardinality of the column is a low value, which indicates that data skew is likely. 'NULLABLE' Distribution statistics are not available for a nullable column. 'RNGPRED' Histogram statistics are not available for a range predicate. 'PARALLEL' Parallelism could be improved by uniform partitioning of key ranges. 'STALE' A statistic appears likely to be out of sync with other statistics, based on comparison of the time that it was collected to statistics collection times for related objects.	S

Table 382. SYSIBM.SYSSTATFEEDBACK table column descriptions (continued)

Column name	Data type	Description	Use
BLOCK_RUNSTATS	CHAR(1)	Whether the row is used when optimization tools collect statistics based on the recommendations. Db2 inserts a blank value in this column for all new rows. Db2 does not refer to or change the value of this column. This is an updatable column.	S
REMARKS	VARCHAR(254)	Free form text for extensibility.	S
LASTDATE	DATE	The last date that this statistics recommendation was updated by Db2.	S

[SYSTABLES catalog table](#)

The SYSTABLES table contains one row for each table, view, or alias. The schema is SYSIBM. Each SYSTABLES table row indicates whether the object that it describes is a table, view, or alias, its name, who created it, the database that it belongs to, the table space it belongs to, and other information. The SYSTABLES table also has a REMARKS column in which you can store your own information about the table in question.

[RUNSTATS \(Db2 Utilities\)](#)

SYSSTMT catalog table

The SYSSTMT table contains one or more rows for each SQL statement of each DBRM. The schema is SYSIBM.

Table 383. SYSIBM.SYSSTMT table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(24) NOT NULL	Name of the DBRM.	G
PLNAME	VARCHAR(24) NOT NULL	Name of the application plan.	G
PLCREATOR	VARCHAR(128) NOT NULL	Authorization ID of the owner of the application plan.	G
SEQNO	INTEGER NOT NULL	Sequence number of this row with respect to a statement of the plan. Rows in which the values of SEQNO, STMTNO, and SECTNO are zero are for internal use. The numbering starts with zero.	G

Table 383. SYSIBM.SYSSTMT table column descriptions (continued)

Column name	Data type	Description	Use
STMTNO	SMALLINT NOT NULL	The statement number of the statement in the source program. A statement number greater than 32767 is stored as zero. If the value is zero, see STMTNOI for the statement number. Rows in which the values of SEQNO, STMTNO, and SECTNO are zero are for internal use.	G
SECTNO	SMALLINT NOT NULL	The section number of the statement. Rows in which the values of SEQNO, STMTNO, and SECTNO are zero are for internal use.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
TEXT	VARCHAR(3800) NOT NULL FOR BIT DATA	Text or portion of the text of the SQL statement.	S
ISOLATION	CHAR(1) NOT NULL WITH DEFAULT	Isolation level for the SQL statement: R RR (repeatable read) T RS (read stability) S CS (cursor stability) U UR (uncommitted read) L RS isolation, with a <i>lock-clause</i> X RR isolation, with a <i>lock-clause</i> blank The WITH clause was not specified on this statement. The isolation level is recorded in SYSPACKAGE.ISOLATION and in SYSPLAN.ISOLATION.	G

Table 383. SYSIBM.SYSSTMT table column descriptions (continued)

Column name	Data type	Description	Use
STATUS	CHAR(1) NOT NULL WITH DEFAULT	<p>Status of binding the statement:</p> <p>A Distributed - statement uses Db2 private protocol access. The statement will be parsed and executed at the server using defaults for input variables during access path selection.</p> <p>B Distributed - statement uses Db2 private protocol access. The statement will be parsed and executed at the server using values for input variables during access path selection.</p> <p>C Compiled - statement was bound successfully using defaults for input variables during access path selection.</p> <p>D Distributed - statement references a remote object using a three-part name. Db2 will implicitly use DRDA access either because the DBPROTOCOL bind option was not specified (defaults to DRDA), or the bind option DBPROTOCOL(DRDA) was explicitly specified. This option allows the use of three-part names with DRDA access but it requires that the package be bound at the target remote site.</p> <p>E Explain - statement is an SQL EXPLAIN statement. The explain is done at bind time using defaults for input variables during access path selection.</p> <p>F Parsed - statement did not bind successfully and VALIDATE(RUN) was used. The statement will be rebound at execution time using values for input variables during access path selection.</p> <p>G Compiled - statement bound successfully, but REOPT is specified. The statement will be rebound at execution time using values for input variables during access path selection.</p> <p>H Parsed - statement is either a data definition statement or a statement that did not bind successfully and VALIDATE(RUN) was used. The statement will be rebound at execution time using defaults for input variables during access path selection. Data manipulation statements use defaults for input variables during access path selection.</p> <p>I Indefinite - statement is dynamic. The statement will be bound at execution time using defaults for input variables during access path selection.</p>	S

Table 383. SYSIBM.SYSSTMT table column descriptions (continued)

Column name	Data type	Description	Use
STATUS		<p>J Indefinite - statement is dynamic. The statement will be bound at execution time using values for input variables during access path selection.</p> <p>K Control - CALL statement.</p> <p>L Bad - the statement has some allowable error. The bind continues but the statement cannot be executed.</p> <p>M Parsed - statement references a table that is qualified with SESSION and was not bound because the table reference could be for a declared temporary table that will not be defined until the package or plan is run. The SQL statement will be rebound at execution time using values for input variables during access path selection.</p> <p>blank The statement is non-executable, or was bound in a Db2 release prior to Version 5.</p>	
ACCESSPATH	CHAR(1) NOT NULL WITH DEFAULT	<p>For static statements, indicates if the access path for the statement is based on user-specified optimization hints. A value of 'H' indicates that optimization hints were used. A blank value indicates that the access path was determined without the use of optimization hints, or that there is no access path associated with the statement.</p> <p>For dynamic statements, the value is blank.</p>	G
STMTNOI	INTEGER NOT NULL WITH DEFAULT	If the value of STMTNOI is not zero, the column contains the statement number of the statement in the source program.	G
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement.	G
EXPLAINABLE	CHAR(1) NOT NULL WITH DEFAULT	<p>Contains one of the following values:</p> <p>Y Indicates that the SQL statement can be used with the EXPLAIN function and might have rows describing its access path in the owner.PLAN_TABLE.</p> <p>N Indicates that the SQL statement does not have any rows describing its access path in the owner.PLAN_TABLE.</p> <p>blank Indicates that the SQL statement was bound prior to Version 7.</p>	G

Table 383. SYSIBM.SYSSTMT table column descriptions (continued)

Column name	Data type	Description	Use
QUERYNO	INTEGER NOT NULL WITH DEFAULT -1	The query number of the SQL statement in the source program. SQL statements bound prior to Version 7 have a default value of -1. Statements bound in Version 7 or later use the value specified on the QUERYNO clause on SELECT, UPDATE, INSERT, DELETE, EXPLAIN, and DECLARE CURSOR statements. If the QUERYNO clause is not specified, the query number is set to the statement number.	G
PLCREATORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of creator: blank Authorization ID L Role	G

SYSSTOGROUP catalog table

The SYSSTOGROUP table contains one row for each storage group. The schema is SYSIBM.

Table 384. SYSIBM.SYSSTOGROUP table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the storage group.	G
CREATOR	VARCHAR(128) NOT NULL	Authorization ID of the owner of the storage group.	G
VCATNAME	VARCHAR(24) NOT NULL	Name of the integrated catalog facility catalog.	G
VPASSWORD	VARCHAR(24) NOT NULL	Not used.	N
SPACE	INTEGER NOT NULL	Number of kilobytes of DASD storage allocated to the storage group as determined by the last execution of the STOSPACE utility.	G
SPCDATE	CHAR(5) NOT NULL	Not used.	N
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G

Table 384. SYSIBM.SYSSTOGROUP table column descriptions (continued)

Column name	Data type	Description	Use
CREATEDBY	VARCHAR(128) NOT NULL WITH DEFAULT	Primary authorization ID of the user who created the storage group.	G
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If the STOSPACE utility was executed for the storage group, date and time when STOSPACE was last executed.	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the CREATE statement was executed for the storage group.	G
ALTEREDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the most recent ALTER STOGROUP statement was executed for the storage group. If no ALTER STOGROUP statement has been applied, ALTEREDTS has the value of CREATEDTS.	G
SPACEF	FLOAT NOT NULL WITH DEFAULT	Kilobytes of DASD storage for the storage group. The value is -1 if statistics have not been gathered. This is an updatable column.	G
DATACLAS	VARCHAR(24) NOT NULL	Name of the SMS data class. Blank if data class is not used.	G
MGMTCLAS	VARCHAR(24) NOT NULL	Name of the SMS management class. Blank if management class is not used.	G
STORCLAS	VARCHAR(24) NOT NULL	Name of the SMS storage class. Blank if storage class is not used.	G
CREATOR	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of creator: blank Authorization ID L Role	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to Version 9. See Release dependency indicators for all other values.	G
FL 502 KEYLABEL	VARCHAR(192) NOT NULL WITH DEFAULT	The default key label that is used for encrypting all the table spaces and index spaces using the storage group. Otherwise the value is an empty string	

SYSSTRINGS catalog table

The SYSSTRINGS table contains information about character conversion. Each row describes a conversion from one coded character set to another. The schema is SYSIBM.

Also refer to [Building and using Dynamic Link Libraries \(DLLs\) \(XL C/C++ Programming Guide\)](#) for information on the additional conversions that are supported.

Each row in the table must have a unique combination of values for its INCCSID, OUTCCSID, and IBMREQD columns. Rows for which the value of IBMREQD is N can be deleted, inserted, and updated subject to this uniqueness constraint and to the constraints imposed by a VALIDPROC defined on the table. An inserted row could have values for the INCCSID and OUTCCSID columns that match those of a row for which the value of IBMREQD is Y. Db2 then uses the information in the inserted row instead of the information in the IBM-supplied row. Rows for which the value of IBMREQD is Y cannot be deleted, inserted, or updated. For information about the use of inserted rows for character conversion, see [How an entry in SYSIBM.SYSSTRINGS works with character conversion \(Db2 Installation and Migration\)](#).

Db2 has two methods for character conversions and applies them in the following order:

1. Conversions specified by the various combinations of the INCCSID and OUTCCSID columns in the SYSIBM.SYSSTRINGS catalog table.
2. Conversions provided by z/OS support for Unicode. For more information, see [z/OS Unicode Services User's Guide and Reference](#).

If neither of these methods can be used for a particular character conversion, Db2 returns an error.

Table 385. SYSIBM.SYSSTRINGS table column descriptions

Column name	Data type	Description	Use
INCCSID	INTEGER NOT NULL	The source CCSID for the character conversion represented by this row. The value of the source CCSID must be in the range of 1 to 65533 and must not be the same as the value for the OUTCCSID column.	G
OUTCCSID	INTEGER NOT NULL	The target CCSID for the character conversion represented by this row. The value of the target CCSID must be in the range of 1 to 65533 and must not be the same as the value for the INCCSID column.	G
TRANSTYPE	CHAR(2) NOT NULL	Indicates the nature of the conversion. Values can be: GG GRAPHIC to GRAPHIC MM EBCDIC MIXED to EBCDIC MIXED MS EBCDIC MIXED to SBCS PM ASCII MIXED to EBCDIC MIXED PS ASCII MIXED to SBCS SM SBCS to EBCDIC MIXED SS SBCS to SBCS MP EBCDIC MIXED to ASCII MIXED PP ASCII MIXED to ASCII MIXED SP SBCS to ASCII MIXED	G

Table 385. SYSIBM.SYSSTRINGS table column descriptions (continued)

Column name	Data type	Description	Use
ERRORBYTE	CHAR(1) FOR BIT DATA (Nulls are allowed)	The byte used in the conversion table as an error byte. Any non-null value that is specified for the ERRORBYTE column must not be the same as the value that is specified for the SUBBYTE column. Null indicates the absence of an error byte.	S
SUBBYTE	CHAR(1) FOR BIT DATA (Nulls are allowed)	The byte used in the conversion table as a substitution character. Any non-null value that is specified for the SUBBYTE column must not be the same as the value that is specified for the ERRORBYTE column. Null indicates the absence of a substitution character.	S
TRANSPROC	VARCHAR(24) NOT NULL WITH DEFAULT	The name of a module or blanks. A nonblank value must conform to the rules for z/OS program names. If IBMREQD is 'N', a nonblank value is the name of a conversion procedure provided by the user. The first five characters of the name of a user-provided conversion procedure must not be 'DSNXV'; these characters are used to distinguish user-provided conversion procedures from Db2 modules that contain DBCS conversion tables. If IBMREQD is 'Y', a nonblank value is the name of a Db2 module that contains DBCS conversion tables.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
TRANSTAB	VARCHAR(256) FOR BIT DATA NOT NULL WITH DEFAULT	Either a 256-byte conversion table or an empty (0 length) string.	S

SYSSYNONYMS catalog table

The SYSSYNONYMS table contains one row for each synonym of a table or view. The schema is SYSIBM.

Table 386. SYSIBM.SYSSYNONYMS table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Synonym for the table or view.	G
CREATOR	VARCHAR(128) NOT NULL	Authorization ID of the owner of the synonym.	G

Table 386. SYSIBM.SYSSYNONYMS table column descriptions (continued)

Column name	Data type	Description	Use
TBNAME	VARCHAR(128) NOT NULL	Name of the table or view.	G
TBCREATOR	VARCHAR(128) NOT NULL	The schema of the table or view.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
CREATEDBY	VARCHAR(128) NOT NULL WITH DEFAULT	Primary authorization ID of the user who created the synonym.	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the CREATE statement was executed for the synonym. The value is '0001-01.01.00.00.000000' for synonyms created in a Db2 release prior to Version 5.	G
CREATORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of creator: blank Authorization ID L Role	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to Version 9. See Release dependency indicators for all other values.	G

SYSTABAUTH catalog table

The SYSTABAUTH table records the privileges that users hold on tables and views. The schema is SYSIBM.

Table 387. SYSIBM.SYSTABAUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID or role of the user who granted the privileges. Could also be PUBLIC.	G
GRANTEE	VARCHAR(128) NOT NULL	Authorization ID or role of the user who holds the privileges or the name of an application plan or package that uses the privileges. PUBLIC for a grant to PUBLIC.	G

Table 387. SYSIBM.SYSTABAUTH table column descriptions (continued)

Column name	Data type	Description	Use
GRANTEETYPE	CHAR(1) NOT NULL	Type of grantee: blank An authorization ID L Role P An application plan or a package. The grantee is a package if COLLID is not blank.	G
DBNAME	VARCHAR(24) NOT NULL	If the privileges were received from a user with DBADM, DBCTRL, or DBMAINT authority, DBNAME is the name of the database on which the GRANTOR has that authority. Otherwise, DBNAME is blank.	G
SCREATOR	VARCHAR(128) NOT NULL	If the SYSIBM.SYSTABAUTH row was created as the result of a CREATE VIEW statement or CREATE TABLE statement for a materialized query table, SCREATOR is the schema of the table or view referenced in the fullselect of the CREATE VIEW or CREATE TABLE statement. Otherwise, SCREATOR is the same as TCREATOR.	G
STNAME	VARCHAR(128) NOT NULL	If the SYSIBM.SYSTABAUTH row was created as the result of a CREATE VIEW statement or CREATE TABLE statement for a materialized query table, STNAME is the name of the table or view referenced in the fullselect of the CREATE VIEW or CREATE TABLE statement. Otherwise, STNAME is the same as TTNAME.	G
TCREATOR	VARCHAR(128) NOT NULL	The schema of the table or view.	G
TTNAME	VARCHAR(128) NOT NULL	Name of the table or view.	G

Table 387. SYSIBM.SYSTABAUTH table column descriptions (continued)

Column name	Data type	Description	Use
AUTHHOWGOT	CHAR(1) NOT NULL WITH DEFAULT	Authorization level of the user from whom the privileges were received. This authorization level is not necessarily the highest authorization level of the grantor. blank Not applicable B System DBADM C DBCTRL D DBADM E SECADM G ACCESSCTRL K SQLADM L SYSCTRL M DBMAINT S SYSADM T DATAACCESS	G
—	CHAR(12) NOT NULL	Internal use only.	I
DATEGRANTED	CHAR(6) NOT NULL	Not used.	N
TIMEGRANTED	CHAR(8) NOT NULL	Not used.	N
UPDATECOLS	CHAR(1) NOT NULL	The value of this column is blank if the value of UPDATEAUTH applies uniformly to all columns of the table or view. The value is an asterisk (*) if the value of UPDATEAUTH applies to some columns but not to others. In this case, rows will exist in SYSIBM.SYSCOLAUTH with matching timestamps and PRIVILEGE = blank. These rows list the columns on which update privileges have been granted.	G

Table 387. SYSIBM.SYSTABAUTH table column descriptions (continued)

Column name	Data type	Description	Use
ALTERAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can alter the table: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
DELETEAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can delete rows from the table or view: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
INDEXAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can create indexes on the table: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
INSERTAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can insert rows into the table or view: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
SELECTAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can select rows from the table or view: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G

Table 387. SYSIBM.SYSTABAUTH table column descriptions (continued)

Column name	Data type	Description	Use
UPDATEAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can update rows of the table or view: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
GRANTEELLOCATION	VARCHAR(128) NOT NULL WITH DEFAULT	Not used.	N
LOCATION	VARCHAR(128) NOT NULL WITH DEFAULT	Not used.	N
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	If the GRANTEE is a package, its collection name. Otherwise, the value is blank.	G
CONTOKEN	CHAR(8) NOT NULL WITH DEFAULT FOR BIT DATA	If the GRANTEE is a package, the consistency token of the DBRM from which the package was derived. Otherwise, the value is blank.	S
CAPTUREAUTH	CHAR(1) NOT NULL WITH DEFAULT	Not used.	N
REFERENCESAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE can create or drop referential constraints in which the table is a parent. blank Privilege is not held G Privilege held with the GRANT option Y Privilege held without the GRANT option	G

Table 387. SYSIBM.SYSTABAUTH table column descriptions (continued)

Column name	Data type	Description	Use
REFCOLS	CHAR(1) NOT NULL WITH DEFAULT	The value of this column is blank if the value of REFERENCESAUTH applies uniformly to all columns of the table. The value is an asterisk(*) if the value of REFERENCESAUTH applies to some columns but not to others. In this case, rows will exist in SYSIBM.SYSCOLAUTH with PRIVILEGE = R and matching timestamps that list the columns on which reference privileges have been granted.	G
GRANTEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the GRANT statement was executed.	G
TRIGGERAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE can create triggers in which the table is named as the subject table: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
GRANTORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantor: blank Authorization ID L Role	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

Table 387. SYSIBM.SYSTABAUTH table column descriptions (continued)

Column name	Data type	Description	Use
UNLOADAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE can use the UNLOAD utility to unload data: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G

SYSTABCONST catalog table

The SYSTABCONST table contains one row for each unique constraint (primary key or unique key) created in DB2 version 7 or later. The schema is SYSIBM.

Table 388. SYSIBM.SYSTABCONST table column descriptions

Column name	Data type	Description	Use
CONSTNAME	VARCHAR(128) NOT NULL	Name of the constraint.	G
TBCREATOR	VARCHAR(128) NOT NULL	The schema of the table on which the constraint is defined.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table on which the constraint is defined.	G
CREATOR	VARCHAR(128) NOT NULL	Authorization ID under which the constraint was created.	G
TYPE	CHAR(1) NOT NULL	Type of constraint: F Foreign key P Primary key U Unique key	G
IXOWNER	VARCHAR(128) NOT NULL	The schema of the index enforcing the constraint or blank if index has not been created yet.	G
IXNAME	VARCHAR(128) NOT NULL	Name of the index enforcing the constraint or blank if index has not been created yet.	G
CREATEDTS	TIMESTAMP NOT NULL	Time when the statement to create the constraint was executed.	G

Table 388. SYSIBM.SYSTABCONST table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
COLCOUNT	SMALLINT NOT NULL	Number of columns in the constraint.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to DB2 9. See Release dependency indicators for all other values.	G

SYSTABLEPART catalog table

The SYSTABLEPART table contains one row for each nonpartitioned table space and one row for each partition of a partitioned table space. The schema is SYSIBM.

Table 389. SYSIBM.SYSTABLEPART table column descriptions

Column name	Data type	Description	Use
PARTITION	SMALLINT NOT NULL	Partition number; 0 if table space is not partitioned.	G
TSNAME	VARCHAR(24) NOT NULL	Name of the table space.	G
DBNAME	VARCHAR(24) NOT NULL	Name of the database that contains the table space.	G
IXNAME	VARCHAR(128) NOT NULL	Name of the partitioning index. This column is blank unless the table uses index-controlled partitioning.	G
IXCREATOR	VARCHAR(128) NOT NULL	The schema of the partitioning index. This column is blank unless the table uses index-controlled partitioning.	G

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
PQTY	INTEGER NOT NULL	<p>For user-managed data sets, the value is the primary space allocation in units of 4 KB storage blocks or -1.</p> <p>PQTY is based on a value of PRIQTY in the appropriate CREATE or ALTER TABLESPACE statement. However, unlike PQTY, PRIQTY asks for space in 1 KB units.</p> <p>A value of -1 indicates that either of the following cases is true:</p> <ul style="list-style-type: none"> • PRIQTY was not specified for a CREATE TABLESPACE statement or for any subsequent ALTER TABLESPACE statements. • -1 was the most recently specified value for PRIQTY, either on the CREATE TABLESPACE statement or a subsequent ALTER TABLESPACE statement. 	G
SQTY	SMALLINT NOT NULL	<p>For user-managed data sets, the value is the secondary space allocation in units of 4 KB storage blocks or -1.</p> <p>SQTY is based on a value of SECQTY in the appropriate CREATE or ALTER TABLESPACE statement. Unlike SQTY, however, SECQTY asks for space in 1 KB units.</p> <p>A value of -1 indicates that either of the following cases is true:</p> <ul style="list-style-type: none"> • SECQTY was not specified for a CREATE TABLESPACE statement or for any subsequent ALTER TABLESPACE statements. • -1 was the most recently specified value for SECQTY, either on the CREATE TABLESPACE statement or a subsequent ALTER TABLESPACE statement. <p>If the value does not fit into the column, the value of the column is 32767. See the description of column SECQTYI.</p>	G
STORATYPE	CHAR(1) NOT NULL	<p>Type of storage allocation:</p> <p>E Explicit (storage group not used)</p> <p>I Implicit (storage group used)</p> <p>This column is not used for rows that represent catalog table spaces. Catalog data sets are managed by Db2</p>	G
STORNAME	VARCHAR(128) NOT NULL	<p>Name of storage group used for space allocation. Blank if storage group not used.</p> <p>This column is not used for rows that represent catalog table spaces. Catalog data sets are managed by Db2</p>	G
VCATNAME	VARCHAR(24) NOT NULL	<p>Name of integrated catalog facility catalog used for space allocation.</p> <p>This column is not used for rows that represent catalog table spaces. Catalog data sets are managed by Db2</p>	G

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
CARD	INTEGER NOT NULL	Number of rows in the table space or partition or, if the table space is a LOB table space, the number of LOBs in the table space. The value is '2147483647' if the number of rows is greater than or equal to '2147483647'. The value is -1 if statistics were not gathered.	G
FARINDREF	INTEGER NOT NULL	Number of rows that are relocated far from their original page. The value is -1 if statistics were not gathered. Not applicable if the table space is a LOB table space.	S
NEARINDREF	INTEGER NOT NULL	Number of rows that are relocated near their original page. The value is -1 if statistics were not gathered. Not applicable if the table space is a LOB table space.	S
PERCACTIVE	SMALLINT NOT NULL	Percentage of space occupied by rows of data from active tables. The value is -1 if statistics were not gathered. The value is -2 if the table space is a LOB table space. This value is not applicable for understanding data distribution in tables that are organized for hash access.	S
PERCDROP	SMALLINT NOT NULL	Percentage of space that rows of dropped tables occupy. The value is -1 if statistics were not gathered. The value is 0 for segmented table spaces. Not applicable if the table is an auxiliary table.	S
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
LIMITKEY	VARCHAR(765) NOT NULL	<p>The high value of the partition in external format. If the table space was converted from index-controlled partitioning to table-controlled partitioning, the value is the highest possible value for an ascending key, or the lowest possible value for a descending key. If the table is not in a partition-by-range table space, the value is an empty string.</p> <p>This column can contain a mixture of values with differing formats:</p> <ul style="list-style-type: none"> • Date and time values are delimited by single quotation marks (for example, '2001-01-01'). However, values that were added before Db2 11 do not contain these delimiters. • When comma decimal point indicators are used, a space follows any comma delimiter in the value. The comma decimal point indicator is used when the DECIMAL POINT IS field setting is , (comma) or a COBOL program that executes the ALTER statement uses the COMMA processing option. No spaces follow comma delimiters when period decimal point indicators are used, or for values added before Db2 11. 	S
FREEPAGE	SMALLINT NOT NULL	Number of pages loaded before a page is left as free space.	G
PCTFREE	SMALLINT NOT NULL	Percentage of each page that is left as free space.	G
CHECKFLAG	CHAR(1) NOT NULL WITH DEFAULT	<p>blank The table space is not a partition, or does not contain rows that might violate referential constraints, check constraints, or both.</p> <p>C The table space partition is in a check-pending status and the table contains rows that can violate referential constraints, check constraints, or both.</p> <p>D The inline length of the LOB column that is associated with this LOB table space was decremented when the inline length was altered.</p> <p>I The inline length of the LOB column that is associated with this LOB table space was incremented when the inline length was altered.</p>	G
CHECKRID	CHAR(4) NOT NULL WITH DEFAULT FOR BIT DATA	Not used.	N

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
SPACE	INTEGER NOT NULL WITH DEFAULT	<p>Number of kilobytes of DASD storage that is allocated to the table space partition, as determined by the last execution of the STOSPACE utility or RUNSTATS utility.</p> <p>0 The STOSPACE or RUNSTATS utility was not run.</p> <p>-1 The table space was defined with the DEFINE NO clause, which defers the physical creation of the data sets until data is first inserted into one of the partitions, and data has yet to be inserted.</p> <p>-2 The value exceeds the maximum size for an integer value. See the SPACEF column value.</p> <p>Nonzero or nonnegative value An auxiliary table in the LOB table space.</p> <p>The STOSPACE utility updates this value if the table space is related to a storage group. The RUNSTATS utility updates this value when RUNSTATS TABLESPACE is run with UPDATE(ALL) or UPDATE(SPACE).</p>	G
COMPRESS	CHAR(1) NOT NULL WITH DEFAULT	<ul style="list-style-type: none"> For a table space partition, indicates the COMPRESS attribute for the partition. For a nonpartitioned table space, indicates the COMPRESS attribute for the table space. <p>Values for the column can be:</p> <p>Y The table space or partition is defined to use compression. If the table space is not a LOB table space, the compression algorithm is determined by the TS_COMPRESSION_TYPE subsystem parameter.</p> <p>F FL 509The table space or partition is defined to use fixed-length compression.</p> <p>H FL 509The table space or partition is defined to use Huffman compression.</p> <p>blank The table space or partition is not defined to use compression.</p>	G

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
PAGESAVE	SMALLINT NOT NULL WITH DEFAULT	Percentage of pages that are saved in the table space or partition as a result of defining the table space with compression. For example, a value of 25 indicates a savings of 25 percent, so that the pages required are only 75 percent of what would be required without data compression. The calculation includes overhead bytes for each row, the bytes required for dictionary, and the bytes required for the current FREEPAGE and PCTFREE specification for the table space or partition. This calculation is based on an average row length, and the result varies depending on the actual lengths of the rows. The value is 0 if there are no savings from using data compression, or if statistics were not gathered. The value can be negative, if for example, data compression causes an increase in the number of pages in the data set.	S
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected.	G
GBPCACHE	CHAR(1) NOT NULL WITH DEFAULT	Group buffer pool cache option that is specified for this table space or table space partition. A Changed and unchanged pages are cached in the group buffer pool. N No data is cached in the group buffer pool. S Only changed system pages, such as space map pages that do not contain actual data values, are cached in the group buffer pool. blank Only changed pages are cached in the group buffer pool.	G
CHECKRID5B	CHAR(5) NOT NULL WITH DEFAULT FOR BIT DATA	Blank if the table or partition is not in a check-pending status (CHECKFLAG is blank), or if the table space is not partitioned. Otherwise, the RID of the first row of the table space partition that can violate referential constraints, check constraints, or both; or the value is X'0000000000', indicating that any row can violate referential constraints.	S

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
TRACKMOD	CHAR(1) NOT NULL WITH DEFAULT	Whether to track the page modifications in the space map pages: N No blank Yes This column is not applicable for LOB table spaces.	G
EPOCH	INTEGER NOT NULL WITH DEFAULT	A number that increments whenever a utility operation that changes the location of rows in a table occurs.	G
SECQTYI	INTEGER NOT NULL WITH DEFAULT	Secondary space allocation in units of 4KB storage. For user-managed data sets, the value is the secondary space allocation in units of 4KB blocks.	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	Number of rows in the table space or partition, or if the table space is a LOB table space, the number of LOBs in the table space. The value is -1 if statistics were not gathered.	G
IPREFIX	CHAR(1) NOT NULL WITH DEFAULT 'I'	The first character of the instance qualifier for the data set name for the table space or partition. 'I' or 'J' are the only valid characters for this field. The default is 'I'.	G
ALTEREDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the most recent ALTER TABLESPACE statement was executed for the table space or partition. If no ALTER TABLESPACE statement was applied, the value is '0001-01-01.00.00.00.000000'.	G
SPACEF	FLOAT(8) NOT NULL WITH DEFAULT -1	DASD storage in KB. The value is -1 if statistics were not gathered. The value might be nonzero for an auxiliary table in the LOB table space. This column can be updated.	G
DSNUM	INTEGER NOT NULL WITH DEFAULT -1	Number of data sets. The value is -1 if statistics were not gathered. This column can be updated.	G
EXTENTS	INTEGER NOT NULL WITH DEFAULT -1	Number of data set extents. The value is -1 if statistics were not gathered. This column can be updated. This value is only for the last DSNUM for the object.	G
LOGICAL_PART	SMALLINT NOT NULL WITH DEFAULT	The logical partition number (logical ascending or descending order) for partitioned table spaces. The physical partition number is kept in column PARTITION. LOGICAL_PART is 0 for nonpartitioned table spaces. For partitioned table spaces that were created before Version 8, LOGICAL_PART is originally 0, but might be changed later to a nonzero value by processes such as conversion to table-controlled partitioning.	G

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
LIMITKEY_INTERNAL	VARCHAR(512) NOT NULL WITH DEFAULT FOR BIT DATA	The highest value of the limit key of the partition in an internal format. If the table uses index-controlled partitioning instead of table-controlled partitioning or the table is not partitioned, the value is an empty string. If the table space was converted from index-controlled partitioning to table-controlled partitioning, the value is the highest possible value for an ascending key, or the lowest possible value for a descending key. If any column of the key has a field procedure, the internal format is the encoded form of the value.	S
OLDEST_VERSION	SMALLINT NOT NULL WITH DEFAULT	The version number of the oldest format of data in the table part and any image copies at the part level.	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the partition was created.	G
AVGROWLEN	INTEGER NOT NULL WITH DEFAULT -1	Average length of rows for the tables in the table space or part. If the table space or part is compressed, the value is the compressed row length. If the table space or part is not compressed, the value is the uncompressed row length. The value is -1 if statistics were not gathered.	G
FORMAT	CHAR(1) NOT NULL WITH DEFAULT	Indicates the format of the rows in the table space or partition: R Indicates reordered row format. blank Indicates basic row format or a LOB table space.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created before Version 9. See Release dependency indicators for all other values.	G
REORG_LR_TS	TIMESTAMP NOT NULL WITH DEFAULT	The time when the REORG or LOAD REPLACE utility last occurred. The default value is '0001-01-01.00.00.00.000000'.	G
HASHSPACE	BIGINT NOT NULL WITH DEFAULT	For partition-by-range (UTS) table spaces, the amount of space, in KB, specified at the partition level to override the space specification at the table level. If no override is provided it is the same as the value of HASHSPACE in the SYSIBM.SYSTABLESPACE catalog table. For partition-by-growth table spaces, this value is zero.	G

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
HASHDATAPAGES	BIGINT NOT NULL WITH DEFAULT	For partition-by-range table spaces, the number of hash data pages that correspond to the value of the HASHSPACE column for each partition. The value is 0 for table spaces that are changed to use hash access but not reorganized. For partition-by-growth table spaces, the value is zero.	G
RBA_FORMAT	CHAR(1) NOT NULL WITH DEFAULT	The RBA and LRSN format for the page sets of the table partition: B The page sets are still in the basic 6-byte format. E The page sets are converted to the extended 10-byte format. U The format is undefined because DEFINE NO was specified when the table space was created. blank The page sets are still in the basic 6-byte format, the table partition was created before Db2 11 new-function mode (NFM), and no utility that sets the RBA_FORMAT value was run for the table partition in Db2 11 NFM or higher.	G
PCTFREE_UPD	SMALLINT NOT NULL WITH DEFAULT	The percentage of free space that is reserved for updates to variable length records, as defined when the object as created or altered.	G
PCTFREE_UPD_CALC	SMALLINT NOT NULL WITH DEFAULT	The percentage of free space that is reserved for updates to variable length records, which are calculated by Db2 or utilities.	G

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
TYPE	CHAR(1) WITH DEFAULT NULL	<p>The type of partition.</p> <p>blank The table space was created without the LOB or MEMBER CLUSTER options. If the DSSIZE column is zero, the table space is not greater than 64 gigabytes.</p> <p>G The table space was defined with the MAXPARTITIONS option (a partitioned-by-growth table space) with the underlying structure of a universal table space.</p> <p>L The table space can be greater than 64 gigabytes.</p> <p>O The table space was defined with the LOB option (the table space is a LOB table space).</p> <p>P Implicit table space created for XML columns.</p> <p>R partition-by-range table space.</p> <p>This value might be NULL for table spaces that were created before Db2 12. In that case, Db2 uses the value from the SYSTABLESPACE.TYPE column.</p>	G
PAGENUM	CHAR(1) NOT NULL WITH DEFAULT 'A'	<p>Format of pages for the table space and indexes created on tables in the table space, indicating absolute or relative page numbering.</p> <p>A Indicates absolute addressing so that PAGENUM contains the embedded partition number.</p> <p>R Indicates relative addressing so that PAGENUM contains only the relative page number.</p>	G
BPOOL	CHAR(8) WITH DEFAULT NULL	<p>Name of the buffer pool used for the partition.</p> <p>The value might be NULL for table spaces that were created before Db2 12. In that case, Db2 uses the value in the SYSTABLESPACE.BPOOL column.</p>	G
PGSIZE	SMALLINT WITH DEFAULT NULL	<p>Size of pages in the table space in kilobytes.</p> <p>The value might be NULL for table spaces that were created before Db2 12. In that case, Db2 uses the value in the SYSTABLESPACE.PGSIZE column.</p>	G
DSSIZE	INTEGER WITH DEFAULT NULL	<p>Maximum size on a partitioned table space data set. 0 for a nonpartitioned table space.</p> <p>The value might be NULL for table spaces that were created before Db2 12. In that case, Db2 uses the value in SYSTABLESPACE.DSSIZE column.</p>	G

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
MEMBER_CLUSTER	CHAR(1) WITH DEFAULT NULL	<p>Indicates whether MEMBER CLUSTER is specified for the table space.</p> <p>Y MEMBER CLUSTER is specified for the table space.</p> <p>blank MEMBER CLUSTER is not specified for the table space.</p> <p>The value might be NULL for table spaces that were created before Db2 12. In that case, Db2 uses the value in the SYSTABLESPACE.MEMBER_CLUSTER column.</p>	G
COMPRESSRATIO	SMALLINT NOT NULL WITH DEFAULT	<p>Average percentage of bytes saved by compression on each compressed data record in the partition when the table space is defined with compression. This calculation includes overhead bytes for each row. The value is based on an average row length and varies depending on the actual length of the data rows.</p> <p>For example, a value of 25 indicates that the average compressed record size is approximately 75% the size of the uncompressed record.</p> <p>The value is -1 or 0 in the following cases:</p> <p>-1 This value is not collected.</p> <p>0 No compression exists or the average compressed record length is the same as or longer than the uncompressed record length.</p>	G

Table 389. SYSIBM.SYSTABLEPART table column descriptions (continued)

Column name	Data type	Description	Use
FL 509 COMPRESS_USED	CHAR(1) WITH DEFAULT NULL	<p>For a partitioned table space, this column indicates whether the partition is compressed. If the partition is compressed, the column indicates which compression algorithm is used.</p> <p>For a nonpartitioned table space, this column indicates whether the table space is compressed. If the table space is compressed, the column indicates which compression algorithm is used.</p> <p>In rare cases, this column is not updated when compression occurs. For more information, see Determining the effectiveness of compression (Db2 Performance).</p> <p>F Indicates that the table space or partition is compressed with fixed-length compression</p> <p>H Indicates that the table space or partition is compressed with Huffman compression</p> <p>blank If the table space is a LOB table space and COMPRESS is Y, zEnterprise data compression (zEDC) hardware manages compression, if the hardware is available. Otherwise the table space or partition is not compressed.</p> <p>See Support for compressing LOB data (Db2 for z/OS What's New?).</p> <p>NULL The object was created before catalog level V12R1M509, and the value is unknown. The LOAD, REORG, RUNSTATS, RECOVER, or REPAIR CATALOG utility can be used to update this column for objects with a COMPRESS_USED value of NULL.</p>	G

SYSTABLEPART_HIST catalog table

The SYSTABLEPART_HIST table contains rows from the SYSTABLEPART table. The schema is SYSIBM.

Rows are added or changed in the SYSTABLEPART_HIST catalog table when RUNSTATS collects history statistics. Rows in this table can also be inserted, updated, and deleted.

Table 390. SYSIBM.SYSTABLEPART_HIST table column descriptions

Column name	Data type	Description	Use
PARTITION	SMALLINT NOT NULL	Partition number. 0 if table space is not partitioned.	G
TSNAME	VARCHAR(24) NOT NULL	Name of the table space.	G

Table 390. SYSIBM.SYSTABLEPART_HIST table column descriptions (continued)

Column name	Data type	Description	Use
DBNAME	VARCHAR(24) NOT NULL	Name of the database that contains the table space.	G
PQTY	INTEGER NOT NULL	<p>For user-managed data sets, the value is the primary space allocation in units of 4 KB storage blocks or -1.</p> <p>For user-specified values of PRIQTY other than -1, the value is set to the primary space allocation only if RUNSTATS TABLESPACE with UPDATE(ALL) or UPDATE(SPACE) is executed; otherwise, the value is zero. PQTY is based on a value of PRIQTY in the appropriate CREATE or ALTER TABLESPACE statement. Unlike PQTY, however, PRIQTY asks for space in 1 KB units.</p> <p>A value of -1 indicates that either of the following cases is true:</p> <ul style="list-style-type: none"> • PRIQTY was not specified for a CREATE TABLESPACE statement or for any subsequent ALTER TABLESPACE statements. • -1 was the most recently specified value for PRIQTY, either on the CREATE TABLESPACE statement or a subsequent ALTER TABLESPACE statement. <p>If a storage group is not used, the value is 0.</p>	G
SECQTYI	INTEGER NOT NULL	<p>For user-managed data sets, the value is the secondary space allocation in units of 4 KB storage blocks or -1.</p> <p>For user-specified values of SECQTY other than -1, the value is set to the secondary space allocation only if RUNSTATS TABLESPACE with UPDATE(ALL) or UPDATE(SPACE) is executed; otherwise, the value is zero. SQTY is based on a value of SECQTY in the appropriate CREATE or ALTER TABLESPACE statement. Unlike SQTY, however, SECQTY asks for space in 1 KB units.</p> <p>A value of -1 indicates that either of the following cases is true:</p> <ul style="list-style-type: none"> • SECQTY was not specified for a CREATE TABLESPACE statement or for any subsequent ALTER TABLESPACE statements. • -1 was the most recently specified value for SECQTY, either on the CREATE TABLESPACE statement or a subsequent ALTER TABLESPACE statement. <p>If a storage group is not used, the value is 0.</p>	G
FARINDREF	INTEGER NOT NULL WITH DEFAULT -1	Number of rows that have been relocated far from their original page. The value is -1 if statistics have not been gathered. Not applicable if the table space is a LOB table space.	S

Table 390. SYSIBM.SYSTABLEPART_HIST table column descriptions (continued)

Column name	Data type	Description	Use
NEARINDREF	INTEGER NOT NULL WITH DEFAULT -1	Number of rows that have been relocated near their original page. The value is -1 if statistics have not been gathered. Not applicable if the table space is a LOB table space.	S
PERCACTIVE	SMALLINT NOT NULL WITH DEFAULT -1	Percentage of space occupied by rows of data from active tables. The value is -1 if statistics have not been gathered. The value is -2 if the table space is a LOB table space.	S
PERCDROP	SMALLINT NOT NULL WITH DEFAULT -1	Percentage of space occupied by rows of dropped tables. The value is -1 if statistics have not been gathered. The value is 0 for segmented table spaces. Not applicable if the table is an auxiliary table.	S
SPACEF	FLOAT(8) NOT NULL WITH DEFAULT -1	Number of kilobytes of DASD storage allocated to the table space partition. The value is -1 if statistics have not been gathered.	G
PAGESAVE	SMALLINT NOT NULL	<p>Percentage of pages saved in the table space or partition as a result of defining the table space with compression. For example, a value of 25 indicates a savings of 25 percent, so that the pages required are only 75 percent of what would be required without data compression.</p> <p>The calculation includes overhead bytes for each row, the bytes required for dictionary, and the bytes required for the current FREEPAGE and PCTFREE specification for the table space or partition. This calculation is based on an average row length, and the result varies depending on the actual lengths of the rows.</p> <p>The value is 0 if there are no savings from using data compression, or if statistics have not been gathered. The value can be negative, if for example, data compression causes an increase in the number of pages in the data set.</p>	S
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
CARDF	FLOAT(8) NOT NULL WITH DEFAULT -1	Number of rows in the table space or partition, or if the table space is a LOB table space, the number of LOBS in the table space. The value is '-1' if statistics have not been gathered.	S
EXTENTS	INTEGER NOT NULL WITH DEFAULT -1	Number of data set extents. The value is '-1' if statistics have not been gathered. This value is only for the last DSNUM for the object.	G

Table 390. SYSIBM.SYSTABLEPART_HIST table column descriptions (continued)

Column name	Data type	Description	Use
DSNUM	INTEGER NOT NULL WITH DEFAULT -1	Data set number within the table space. For partitioned table spaces, this value corresponds to the partition number for a single partition copy, or 0 for a copy of an entire partitioned table space or index space. The value is '-1' if statistics have not been gathered.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
AVGROWLEN	INTEGER NOT NULL WITH DEFAULT -1	Average length of rows for the tables in the table space or part. If the table space or part is compressed, the value is the compressed row length. If the table space or part is not compressed, the value is the uncompressed row length. The value is '-1' if statistics have not been gathered.	G

SYSTABLES catalog table

The SYSTABLES table contains one row for each table, view, or alias. The schema is SYSIBM. Each SYSTABLES table row indicates whether the object that it describes is a table, view, or alias, its name, who created it, the database that it belongs to, the table space it belongs to, and other information. The SYSTABLES table also has a REMARKS column in which you can store your own information about the table in question.

For an example query for the SYSTABLES catalog table, see [Retrieving catalog information about a table \(Db2 Administration Guide\)](#).

Table 391. SYSIBM.SYSTABLES table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the table, view, or alias.	G
CREATOR	VARCHAR(128) NOT NULL	The schema of the table, view, or alias.	G

Table 391. SYSIBM.SYSTABLES table column descriptions (continued)

Column name	Data type	Description	Use
TYPE	CHAR(1) NOT NULL	Type of object: A Alias C Clone table D Accelerator-only table G Created global temporary table H History table M Materialized query table P Table that was implicitly created for XML columns R Archive table T Table V View X Auxiliary table	G
DBNAME	VARCHAR(24) NOT NULL	For a table, or a view of tables, the name of the database that contains the table space that is named in TSNAME. For a created temporary table, an alias, or a view of a view, the value is DSNDB06.	G
TSNAME	VARCHAR(24) NOT NULL	For a table, or a view of one table, the name of the table space that contains the table. For a view of more than one table, the name of a table space that contains one of the tables. For a created temporary table, a view of a view, or an alias, it is SYSTSTAB.	G
DBID	SMALLINT NOT NULL	Internal identifier of the database; 0 if the row describes a view or alias. Non-zero if the view has an INSTEAD OF trigger defined.	S
OBID	SMALLINT NOT NULL	Internal identifier of the table; 0 if the row describes a view, an alias, or a created temporary table. Non-zero if the view has an INSTEAD OF trigger defined.	S
COLCOUNT	SMALLINT NOT NULL	Number of columns in the table or view. The value is 0 if the row describes an alias.	G
EDPROC	VARCHAR(24) NOT NULL	Name of the edit procedure; blank if the row describes a view or alias or a table without an edit procedure.	G

Table 391. SYSIBM.SYSTABLES table column descriptions (continued)

Column name	Data type	Description	Use
VALPROC	VARCHAR(24) NOT NULL	Name of the validation procedure; blank if the row describes a view or alias or a table without a validation procedure.	G
CLUSTERTYPE	CHAR(1) NOT NULL	Whether RESTRICT ON DROP applies: blank No Y Yes. You cannot drop the table or any table space or database that contains the table.	G
CLUSTERRID	INTEGER NOT NULL	1 The table is a system-period temporal table with versioning, and the table is defined with the ON DELETE ADD EXTRA ROW clause. 0 All other tables.	N
CARD	INTEGER NOT NULL	Db2 utilities might populate this column value, but its use is not recommended in DB2 version 5 and later. For best results use its replacement, the CARDF column.	N
NPAGES	INTEGER NOT NULL	Total number of pages that include rows of the table. The value is -1 if statistics have not been gathered, or the row describes a view, an alias, a created temporary table, an accelerator-only table, or an auxiliary table. This column can be updated.	S
PCTPAGES	SMALLINT NOT NULL	Percentage of active table space pages that contain rows of the table. A page is termed active if it is formatted for rows, regardless of whether it contains any. If the table space is segmented, the percentage is based on the number of active pages in the set of segments that are assigned to the table. The value is -1 if statistics have not been gathered, or the row describes a view, alias, created temporary table, an accelerator-only table, or auxiliary table. This column can be updated.	S
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
REMARKS	VARCHAR(762) NOT NULL	A character string that is provided by the user with the COMMENT statement.	G
PARENTS	SMALLINT NOT NULL	Number of relationships in which the table is a dependent. The value is 0 if the row describes a view, an alias, a created temporary table, or a materialized query table.	G

Table 391. SYSIBM.SYSTABLES table column descriptions (continued)

Column name	Data type	Description	Use
CHILDREN	SMALLINT NOT NULL	Number of relationships in which the table is a parent. The value is 0 if the row describes a view, an alias, a created temporary table, or a materialized query table.	G
KEYCOLUMNS	SMALLINT NOT NULL	Number of columns in the primary key of the table. The value is 0 if the row describes a view, an alias, or a created temporary table.	G
RECLENGTH	SMALLINT NOT NULL	<p>For user tables, the maximum length of any record in the table. Length is $8+N+L$, where:</p> <ul style="list-style-type: none"> • The number 8 accounts for the header (6 bytes) and the ID map entry (2 bytes). • N is 10 if the table has an edit procedure, or 0 otherwise. • L is the sum of the maximum column lengths. In determining the maximum length of a column, take into account whether the column allows nulls and the data type of the column. If the column can contain nulls and is not a LOB or ROWID column, add 1 byte for a null indicator. Use 4 bytes for the length of a LOB column and 19 bytes for the length of a ROWID column. If the column has a varying-length data type (for example, VARCHAR, CLOB, or BLOB), add 2 bytes for a length indicator. For more information about column lengths, see “Data types in Db2 for z/OS” on page 98. <p>The value is 0 if the row describes a view, alias, or auxiliary table. For maximum row and record sizes, see the note on the maximum record size in “CREATE TABLE statement” on page 1664.</p>	G
STATUS	CHAR(1) NOT NULL	<p>Indicates the status of the table definition:</p> <p>I The definition of the table is incomplete. The TABLESTATUS column indicates the reason why the table definition is incomplete.</p> <p>R An error occurred when an attempt was made to regenerate the internal representation of the view.</p> <p>X The table has a unique constraint (primary key or unique key) and the table definition is complete.</p> <p>blank The table has no unique constraint (primary key or unique key), the table is a catalog table, or the row describes a view or alias. The definition of the table, view, or alias is complete.</p>	G
KEYOBID	SMALLINT NOT NULL	Internal Db2 identifier of the index that enforces uniqueness of the primary key of the table; 0 if not applicable.	S

Table 391. SYSIBM.SYSTABLES table column descriptions (continued)

Column name	Data type	Description	Use
LABEL	VARCHAR(90) NOT NULL	The label as given by a LABEL statement; otherwise, the value is an empty string.	G
CHECKFLAG	CHAR(1) NOT NULL WITH DEFAULT	<p>C</p> <p>The table space that contains the table is in CHECK-pending status. One of the following conditions is true:</p> <ul style="list-style-type: none"> • There are rows in the table that violate referential constraints, check constraints, or both • The table is a materialized query table that might contain inconsistent data <p>blank</p> <p>Indicates one of the following conditions:</p> <ul style="list-style-type: none"> • The table contains no rows that violate referential constraints, check constraints, or both • The table is a materialized query table that contains consistent data • The row describes a view, an alias, or a temporary table 	G
CHECKRID	CHAR(4) NOT NULL WITH DEFAULT FOR BIT DATA	A value of 'FFFFFF00' in this column indicates that the edit procedure on this table is defined without row attribute sensitivity. Any other value indicates that the edit procedure is defined with row attribute sensitivity.	G
AUDITING	CHAR(1) NOT NULL WITH DEFAULT	<p>Value of the audit option:</p> <p>A</p> <p>AUDIT ALL</p> <p>C</p> <p>AUDIT CHANGE</p> <p>blank</p> <p>AUDIT NONE, or the row describes a view, an alias, or a created temporary table.</p>	G
CREATEDBY	VARCHAR(128) NOT NULL WITH DEFAULT	Primary authorization ID of the user who created the table, view, or alias.	G
LOCATION	VARCHAR(128) NOT NULL WITH DEFAULT	Location name of the object of an alias. The value is blank for a table, a view, an alias that was not defined with a three-part object name, or a materialized query table.	G

Table 391. SYSIBM.SYSTABLES table column descriptions (continued)

Column name	Data type	Description	Use
TBCREATOR	VARCHAR(128) NOT NULL WITH DEFAULT	<ul style="list-style-type: none"> For an alias, the schema of the referenced table or view For a base table that is involved in a clone relationship, the name of the creator of the clone table For a clone table that is involved in a clone relationship, the name of the creator of the base table Otherwise, TBCREATOR is blank 	G
TBNAME	VARCHAR(128) NOT NULL WITH DEFAULT	<ul style="list-style-type: none"> For an alias, the name for the referenced table or view For a base table that is involved in a clone relationship, the name of the clone table For a clone table that is involved in a clone relationship, the name of the base table Otherwise, TBNAME is blank 	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the CREATE statement was executed for the table, view, or alias	G
ALTEREDTS	TIMESTAMP NOT NULL WITH DEFAULT	For a table, the time when the latest ALTER TABLE statement was applied. If no ALTER TABLE statement was applied, or if the row is for an alias, ALTEREDTS has the value of CREATEDTS. For a view, the time when the last ALTER VIEW REGENERATE statement was applied.	G
DATA_CAPTURE	CHAR(1) NOT NULL WITH DEFAULT	<p>Records the value of the DATA CAPTURE option for a table:</p> <p>blank No</p> <p>Y Yes</p> <p>For a created temporary table, DATA_CAPTURE is always blank.</p>	G
RBA1	CHAR(10) NOT NULL WITH DEFAULT FOR BIT DATA	The log RBA when the table was created. Otherwise, RBA1 is X'00000000000000000000', indicating that the log RBA is not known, or that the object is a view, an alias, or a created temporary table. In a data sharing environment, RBA1 is the LRSN (Log Record Sequence Number) value.	S
RBA2	CHAR(10) NOT NULL WITH DEFAULT FOR BIT DATA	The log RBA when the table was last altered. Otherwise, RBA2 is X'00000000000000000000' indicating that the log RBA is not known, or that the object is a view, an alias, or a created temporary table. RBA1 equals RBA2 if the table has not been altered. In a data sharing environment, RBA2 is the LRSN (Log Record Sequence Number) value.	S

Table 391. SYSIBM.SYSTABLES table column descriptions (continued)

Column name	Data type	Description	Use
PCTROWCOMP	SMALLINT NOT NULL WITH DEFAULT	Percentage of rows that are compressed within the total number of active rows in the table. This number includes any row in a table space that is defined with compression. The value is -1 if statistics have not been gathered, or the row describes a view, alias, created temporary table, an accelerator-only table, or auxiliary table. This column can be updated.	S
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated. For a created temporary table, the value of STATSTIME is always the default value.	G
CHECKS	SMALLINT NOT NULL WITH DEFAULT	Number of check constraints that are defined on the table. The value is 0 if either of the following conditions are true: <ul style="list-style-type: none"> The row describes a view, an alias, a created temporary table, or a materialized query table. No constraints are defined on the table. 	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	Total number of rows in the table or total number of LOBs in an auxiliary table. The value is -1 if statistics have not been gathered or the row describes a view, alias, accelerator-only table, or created temporary table. This column can be updated.	S
CHECKRID5B	CHAR(5) NOT NULL WITH DEFAULT FOR BIT DATA	RID of the first row of the table space partition that can violate referential constraints, check constraints, or both. The value of X'0000000000' indicates that any row can violate referential constraints. The value is blank if any of the following conditions are true: <ul style="list-style-type: none"> The table or partition is not in CHECK-pending status (CHECKFLAG is blank) The table space is not partitioned The table is a created temporary table 	S

Table 391. SYSIBM.SYSTABLES table column descriptions (continued)

Column name	Data type	Description	Use
ENCODING_SCHEME	CHAR(1) NOT NULL WITH DEFAULT 'E'	<p>Encoding scheme for a table, view, or the table or view that is referred to by a local alias:</p> <p>E EBCDIC. This value is 'E' even if the table contains a Unicode column.</p> <p>A ASCII</p> <p>M Multiple CCSID set or multiple encoding schemes</p> <p>U Unicode</p> <p>blank For remote aliases</p> <p>The value is 'E' for tables in non-work file databases. The value is blank for tables in work file databases that were created before Version 5 or in the default database, DSNDB04.</p> <p>This column is not applicable for objects that were created before Db2 for z/OS Version 5.</p> <p>This field contains the default encoding scheme for table columns for which a CCSID is not explicitly defined. The ENCODING_SCHEME column in SYSIBM.SYSCOLUMNS table contains the encoding schemes for columns for which a CCSID is explicitly defined.</p>	G
TABLESTATUS	VARCHAR(30) NOT NULL WITH DEFAULT	<p>Indicates the reason for an incomplete table definition:</p> <p>F The table lacks a required BUSINESS_TIME WITHOUT OVERLAPS index on a foreign key.</p> <p>L An auxiliary table or auxiliary index has not been defined for a LOB column.</p> <p>P The table lacks a primary index.</p> <p>R The table lacks a required index on a row ID.</p> <p>U The table lacks a required index on a unique key.</p> <p>V An error occurred when an attempt was made to regenerate the internal representation of the view.</p> <p>blank Definition is complete.</p>	G
NPAGESF	FLOAT(8) NOT NULL WITH DEFAULT -1	<p>Number of pages that are used by the table. The value is -1 if statistics have not been gathered or the table is an auxiliary table or accelerator-only table. This column can be updated.</p>	G

Table 391. SYSIBM.SYSTABLES table column descriptions (continued)

Column name	Data type	Description	Use
SPACEF	FLOAT(8) NOT NULL WITH DEFAULT -1	Kilobytes of DASD storage. The value is -1 if statistics have not been gathered. The value might be non-zero for an auxiliary table in the LOB table space. This column can be updated.	G
AVGROWLEN	INTEGER NOT NULL WITH DEFAULT -1	Average length of rows for the tables in the table space. If the table space is compressed, the value is the compressed row length. If the table space is not compressed, the value is the uncompressed row length. The value is -1 if statistics have not been gathered.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G
NUM_DEP_MQTS	SMALLINT NOT NULL WITH DEFAULT	Number of dependent materialized query tables. The value is zero if the row describes an alias or a created temporary table, or if no materialized query tables are defined on the table.	G
VERSION	SMALLINT NOT NULL WITH DEFAULT	The version of the data row format for this table. <ul style="list-style-type: none"> • A value of zero indicates that an alter operation that creates a new version has never occurred for this table. • A value of -1 indicates that the view has been regenerated because a column of the base table has been altered. • A value of 800 indicates that a successful CREATE VIEW or ALTER VIEW statement has occurred against this view in Version 8 or later. • A value of 900 indicates that a successful ALTER TABLE statement with a DROP COLUMN clause has occurred against this view. 	G
PARTKEYCOLNUM	SMALLINT NOT NULL WITH DEFAULT	The number of columns in the partitioning key. This value is zero for tables that do not have partitioning or use index-controlled partitioning. The value is non-zero for tables that use table-controlled partitioning.	G
SPLIT_ROWS	CHAR(1) NOT NULL WITH DEFAULT	This column is blank except for volatile tables. For volatile table, this column contains 'Y' to indicate to Db2 to use index access on this table whenever possible.	G
SECURITY_LABEL	CHAR(1) NOT NULL	This column is only meaningful if the TYPE column is a T (for table) or M (for materialized query table). The value indicates whether the table has multilevel security: <p>Blank The table does not have multilevel security.</p> <p>R The table has multilevel security with row granularity.</p>	G

Table 391. SYSIBM.SYSTABLES table column descriptions (continued)

Column name	Data type	Description	Use
OWNER	VARCHAR(128) NOT NULL WITH DEFAULT	Authorization ID of the owner of the table, view, or alias. This column is blank for tables, views, or aliases that were created before Db2 for z/OSDB2 9.	G
APPEND	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether the APPEND option is specified for the table. Y The APPEND option is specified. N The APPEND option is not specified.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner: blank Authorization ID L Role	G
CONTROL	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether access to the table is enforced by using row or column access control: blank No access control enforcement B The table is enforced by using both row and column access control C The table is enforced by using column access control R The table is enforced by using row access control	G
VERSIONING_SCHEMA	VARCHAR(128) NOT NULL WITH DEFAULT	Indicates the schema name of the history table if the table is a system-period temporal table with versioning. Indicates the schema name of the system-period temporal table if the table is a history table. Otherwise, the value is blank.	G
VERSIONING_TABLE	VARCHAR(128) NOT NULL WITH DEFAULT	Indicates the table name of the history table if the table is a system-period temporal table with versioning. Indicates the table name of system-period temporal table if the table is a history table. Otherwise, the value is blank.	G
HASHKEYCOLUMNS	SMALLINT NOT NULL WITH DEFAULT	The number of columns in the hash key of the table. The value is 0 if the row describes a view, an alias, or a created temporary table.	G

Table 391. SYSIBM.SYSTABLES table column descriptions (continued)

Column name	Data type	Description	Use
ARCHIVING_SCHEMA	VARCHAR(128) NOT NULL WITH DEFAULT	Contains a schema name as follows: <ul style="list-style-type: none"> If the table is an archive-enabled table, this column contains the schema name of the archive table. If the table is an archive table, this column contains the schema name of the archive-enabled table. If the table is not an archive-enabled table or an archive table, the value is blank. 	G
ARCHIVING_TABLE	VARCHAR(128) NOT NULL WITH DEFAULT	Contains a table name as follows: <ul style="list-style-type: none"> If the table is an archive-enabled table, this column contains the table name of the archive table. If the table is an archive table, this column contains the table name of the archive-enabled table. If the table is not an archive-enabled table or an archive table, the value is blank. 	G
STATS_FEEDBACK	CHAR (1) NOT NULL WITH DEFAULT	When a query qualifies for statistics collection based on DSNZPARM STATFDBK_SCOPE, this column controls whether statistics recommendations for this table are placed in SYSIBM.SYSSTATFEEDBACK. You can update this flag to 'Y' or 'N' to enable or disable collection for the table. The default value is 'Y'.	G
REGENERATEDTS	TIMESTAMP(12) NOT NULL	The time when the object was regenerated. The value is valid only for objects that can be regenerated. If no regeneration has occurred, this column contains the same value as the CREATEDTS column.	G
FL 502 KEYLABEL	VARCHAR(192) NOT NULL WITH DEFAULT	The key label that is specified at the table level. Otherwise, the value is an empty string.	

SYSTABLESPACE catalog table

The SYSTABLESPACE table contains one row for each table space. The schema is SYSIBM.

Table 392. SYSIBM.SYSTABLESPACE table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(24) NOT NULL	Name of the table space.	G
CREATOR	VARCHAR(128) NOT NULL	Authorization ID of the owner of the table space.	G
DBNAME	VARCHAR(24) NOT NULL	Name of the database that contains the table space.	G
DBID	SMALLINT NOT NULL	Internal identifier of the database which contains the table space.	S

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
OBID	SMALLINT NOT NULL	Internal identifier of the table space file descriptor.	S
PSID	SMALLINT NOT NULL	Internal identifier of the table space page set descriptor.	S
BPOOL	CHAR(8) NOT NULL	Name of the buffer pool used for the table space.	G
PARTITIONS	SMALLINT NOT NULL	Number of partitions of the table space; 0 if the table space is not partitioned.	G
LOCKRULE	CHAR(1) NOT NULL	Lock size of the table space: A Any L Large object (LOB) P Page R Row S Table space T Table X implicitly created XML table space	G
PGSIZE	SMALLINT NOT NULL	Size of pages in the table space in kilobytes.	G
ERASERULE	CHAR(1) NOT NULL	Whether the data sets are to be erased when dropped. The value is meaningless if the table space is a partition-by-range table space. N No erase Y Erase	G

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
STATUS	CHAR(1) NOT NULL	Availability status of the table space: A Available C Definition is incomplete because the table space does not use table-controlled partitioning and a partitioning index has not been created. P Table space is in a check pending status. S Table space is in a check pending status with the scope less than the entire table space. T Definition is incomplete because no table has been created.	G
IMPLICIT	CHAR(1) NOT NULL	Whether the table space was created implicitly: N No Y Yes	G
NTABLES	SMALLINT NOT NULL	Number of tables defined in the table space.	G
NACTIVE	INTEGER NOT NULL	Number of active pages in the table space. A page is termed active if it is formatted for rows, even if it currently contains none. The value is 0 if statistics have not been gathered. This is an updatable column.	S
	VARCHAR(24) NOT NULL	Not used	N
CLOSERULE	CHAR(1) NOT NULL	The priority for closure of data sets for this table space when the limit on the number of open data sets is reached. N The data sets for this table space are eligible for closing after all eligible data sets for table space with CLOSERULE='Y'. Y The data sets for this table space are eligible for closing before data sets for tables spaces with CLOSERULE='N'. Db2 always uses CLOSE NO behavior for tables spaces in work file databases.	G

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
SPACE	INTEGER NOT NULL	Number of kilobytes of DASD storage allocated to the table space, as determined by the last execution of the STOSPACE utility. The value is 0 if the table space is not related to a storage group, or if STOSPACE has not been run. If the table space is partitioned, the value is the total kilobytes of DASD storage allocated to all partitions that are storage group defined.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . If ALTER TABLESPACE changes the DSSIZE value to 128G or 256G, this column value is changed to O, which is the release dependency indicator for Version 10. The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
—	VARCHAR(54) NOT NULL	Internal use only.	I
—	VARCHAR(24) NOT NULL	Internal use only.	I
SEGSIZE	SMALLINT NOT NULL WITH DEFAULT	Number of pages in each segment of a segmented table space. The value is 0 if the table space is not segmented.	G
CREATEDBY	VARCHAR(128) NOT NULL WITH DEFAULT	Primary authorization ID of the user who created the table space.	G
STATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
LOCKMAX	INTEGER	<p>The maximum number of locks per user to acquire for the table or table space before escalating to the next locking level.</p> <p>0 Lock escalation does not occur.</p> <p>n <i>n</i>, where <i>n</i> > 0, is the maximum number of locks (row, page, or LOB locks for the table or table space) an application process can acquire before lock escalation occurs.</p> <p>-1 FL 507 Indicates that LOCKMAX SYSTEM is in effect for the table space.</p>	G
TYPE	CHAR(1) NOT NULL WITH DEFAULT	<p>The type of table space:</p> <p>G Partition-by-growth table space (PBG UTS)</p> <p>R Partition-by-range table space (PBR UTS)</p> <p>O LOB table space</p> <p>P XML table space</p> <p>L Partitioned (non-UTS) table space created with the LARGE option (deprecated)</p> <p>blank One of the following deprecated types:</p> <ul style="list-style-type: none"> • Partitioned (non-UTS) table space • Segmented (non-UTS) table space • Simple table space 	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the CREATE statement was executed for the table space. If the table space was created in a Db2 release prior to Version 5, the value is '0001-01-01.00.00.00.000000'.	G
ALTEREDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the most recent ALTER TABLESPACE statement was executed for the table space. If no ALTER TABLESPACE statement has been applied, ALTEREDTS has the value of CREATEDTS. If the index was created in a Db2 release prior to Version 5, the value is '0001-01-01.00.00.00.000000'.	G

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
ENCODING_SCHEME	CHAR(1) NOT NULL WITH DEFAULT 'E'	Default encoding scheme for the table space: E EBCDIC A ASCII U Unicode blank For table spaces in a work file database or a TEMP database (a database that was created AS TEMP, which is for declared temporary tables.) The value is 'E' for tables in non work file databases and blank for tables in work file databases created prior to Version 5 or the default database, DSNDB04.	G
SBCS_CCSID	INTEGER NOT NULL WITH DEFAULT	Default SBCS CCSID for the table space. For a table space in a work file database, a TEMP database, or a database created in a Db2 release prior to Version 5, the value is 0.	G
DBCS_CCSID	INTEGER NOT NULL WITH DEFAULT	Default DBCS CCSID for the table space. For a table space in a work file database, a TEMP database, or a database created in a Db2 release prior to Version 5, the value is 0.	G
MIXED_CCSID	INTEGER NOT NULL WITH DEFAULT	Default mixed CCSID for the table space. For a table space in a work file database, a TEMP database, or a database created in a Db2 release prior to Version 5, the value is 0.	G
MAXROWS	SMALLINT NOT NULL DEFAULT 255	The maximum number of rows that Db2 will place on a data page. The default value is 255. For a LOB table space, the value is 0 to indicate that the column is not applicable.	G
LOCKPART	CHAR(1) NOT NULL WITH DEFAULT	Not used.	N

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
LOG	CHAR(1) NOT NULL WITH DEFAULT 'Y'	<p>Whether the changes to a table space are to be logged.</p> <p>N This table space has the NOT LOGGED attribute. Undo and redo logging for the table space and all indexes for tables in the table space is suppressed. Logging is also suppressed for the auxiliary indexes for all auxiliary tables associated with tables in the table space.</p> <p>Y This table space has the LOGGED attribute. Normal logging is associated with modifications to this table space, all indexes for tables in this table space, and all auxiliary indexes for all auxiliary tables associated with tables in the table space.</p> <p>X This LOB or XML table space has the NOT LOGGED attribute. Undo and redo logging for the table space is suppressed. Also, the logging attribute for this LOB or XML table space is linked to the logging attribute of the associated base table space and might not be able to be altered independently. If the logging attribute of the base table space is altered to LOGGED, the logging attribute of the LOB or XML table space will also be altered to LOGGED.</p>	G
NACTIVEF	FLOAT NOT NULL WITH DEFAULT -1	Number of active pages in the table space. A page is termed active if it is formatted for rows, even if it currently contains none. The value is -1 if statistics have not been gathered. This is an updatable column.	S
DSSIZE	INTEGER NOT NULL WITH DEFAULT	Maximum size of a data set in kilobytes. The value might be 0 if the table space was created prior to DB2 10, but will contain the actual value after the table space is converted to a partitioned by growth table space.	G
OLDEST_VERSION	SMALLINT NOT NULL WITH DEFAULT	The version number of the oldest format of data in the table space and any image copies.	G
CURRENT_VERSION	SMALLINT NOT NULL WITH DEFAULT	The version number describing the newest format of data in the table space. A zero indicates that the table space has never had versioning. After the version number reaches the maximum value, the number wraps back to one.	G
AVGROWLEN	INTEGER NOT NULL WITH DEFAULT -1	Average length of rows for the tables in the table space or part. If the table space or part is compressed, the value is the compressed row length. If the table space or part is not compressed, the value is the uncompressed row length. The value is -1 if statistics have not been gathered.	G

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
SPACEF	FLOAT NOT NULL WITH DEFAULT	Kilobytes of DASD storage for the storage group. The value is -1 if statistics have not been gathered. This is an updatable column.	G
CREATORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of creator: blank Authorization ID L Role	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to DB2 9. See Release dependency indicators for all other values.	G
INSTANCE	SMALLINT NOT NULL WITH DEFAULT	INSTANCE indicates the data set instance number of the current base object (table and index).	G
CLONE	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether the table space contains any objects that are involved in a clone relationship: Y Table space contains objects that are involved in a clone relationship N Table space does not contain any objects that are involved in a clone relationship	G
MAXPARTITIONS	SMALLINT NOT NULL WITH DEFAULT	Identifies the maximum number of partitions to which the table space can grow. 0 if the table space is not a partition-by-growth table space.	G
MEMBER_CLUSTER	CHAR(1) NOT NULL WITH DEFAULT	Whether MEMBER CLUSTER is specified for the table space: Y MEMBER CLUSTER is specified for the table space blank MEMBER CLUSTER is not specified for the table space	G
ORGANIZATIONTYPE	CHAR(1) NOT NULL WITH DEFAULT	Type of table space organization: blank Not known. Blank is the default. H Hash organization	G
HASHSPACE	BIGINT NOT NULL WITH DEFAULT	The amount of space, in KB, that is to be allocated to the table space or partition as hash space. For partition-by-growth table spaces, the space applies to the whole table space. For partition-by-range table spaces, the space is applicable for each partition.	G

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
HASHDATAPAGES	BIGINT NOT NULL WITH DEFAULT	The total number of hash data pages to preallocate for hash space. For partition-by-growth table spaces, this includes all pages in the fixed part of the table space. For partition-by-range table spaces, this is the number of pages in the fixed hash space in each partition unless it is overridden by providing hash space at the partition level. This is calculated by Db2 from the value specified with the HASH SPACE option or when the REORG utility is run with automatic estimation of space. The calculated value is used in the hash algorithm. The value is 0 for non-hash table spaces. The value is also 0 for table spaces which have been changed to use hash access but have not been reorganized.	G
PAGENUM	CHAR(1) NOT NULL WITH DEFAULT 'A'	Format of pages for the table space and indexes created on tables in the table space, indicating absolute or relative page numbering. A Indicates absolute addressing so that PAGENUM contains the embedded partition number. R Indicates relative addressing so that PAGENUM contains only the relative page number.	G
INSERTALG	SMALLINT NOT NULL WITH DEFAULT	The insert algorithm level for tables in this table space. 0 The insert algorithm level for tables in this table space is determined by the DEFAULT_INSERT_ALGORITHM subsystem parameter. 0 is the default value. 1 The insert algorithm level for tables in this table space is the basic insert algorithm. 2 The insert algorithm level for tables in this table space is the fast insert algorithm when the MEMBER CLUSTER option is specified.	

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
PQTY	INTEGER WITH DEFAULT NULL	<p>For user-managed data sets, the value is the primary space allocation in units of 4 KB storage blocks or -1.</p> <p>PQTY is based on a value of PRIQTY in the appropriate CREATE or ALTER TABLESPACE statement. Unlike PQTY, however, PRIQTY accepts space in 1 KB units.</p> <p>A value of -1 indicates that one of the following cases is true:</p> <ul style="list-style-type: none"> • PRIQTY was not specified for a CREATE TABLESPACE statement or for any subsequent ALTER TABLESPACE statements. • -1 was the most recently specified value for PRIQTY, either on the CREATE TABLESPACE statement or a subsequent ALTER TABLESPACE statement. <p>This column contains the null value when the value is unknown for objects created prior to Db2 12.</p>	
STORTYPE	CHAR(1) WITH DEFAULT NULL	<p>Type of storage allocation:</p> <p>E Explicit (storage group not used)</p> <p>I Implicit (storage group used)</p> <p>This column is not used for rows representing catalog table spaces. Catalog data sets are managed by Db2</p> <p>This column contains the null value when the value is unknown for objects created prior to Db2 12.</p>	
STORNAME	VARCHAR(128) WITH DEFAULT NULL	<p>Name of storage group used for space allocation. Blank if storage group not used.</p> <p>This column is not used for rows representing catalog table spaces. Catalog data sets are managed by Db2</p> <p>This column contains the null value when the value is unknown for objects created prior to Db2 12.</p>	
VCATNAME	VARCHAR(24) WITH DEFAULT NULL	<p>Name of integrated catalog facility catalog used for space allocation.</p> <p>This column is not used for rows representing catalog table spaces. Catalog data sets are managed by Db2</p> <p>This column contains the null value when the value is unknown for objects created prior to Db2 12.</p>	
FREEPAGE	SMALLINT WITH DEFAULT NULL	<p>Number of pages loaded before a page is left as free space.</p> <p>This column contains the null value when the value is unknown for objects created prior to Db2 12.</p>	

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
PCTFREE	SMALLINT WITH DEFAULT NULL	Percentage of each page left as free space. This column contains the null value when the value is unknown for objects created prior to Db2 12.	
COMPRESS	CHAR(1) WITH DEFAULT NULL	Indicates the COMPRESS attribute for the table space. The following values are valid for the column: Y The table space is defined to use compression. If the table space is not a LOB table space, the compression algorithm is determined by the TS_COMPRESSION_TYPE subsystem parameter. F FL 509The table space or partition is defined to use fixed-length compression H FL 509The table space or partition is defined to use Huffman compression blank The table space or partition is not defined to use compression. This column contains the null value when the value is unknown for objects created prior to Db2 12.	G
GBPCACHE	CHAR(1) WITH DEFAULT NULL	Group buffer pool cache option specified for this table space or table space partition. A Changed and unchanged pages are cached in the group buffer pool. N No data is cached in the group buffer pool. S Only changed system pages, such as space map pages that do not contain actual data values, are cached in the group buffer pool. Blank Only changed pages are cached in the group buffer pool. This column contains the null value when the value is unknown for objects created prior to Db2 12.	

Table 392. SYSIBM.SYSTABLESPACE table column descriptions (continued)

Column name	Data type	Description	Use
TRACKMOD	CHAR(1) WITH DEFAULT NULL	Whether to track the page modifications in the space map pages: N No blank Yes This column contains the null value when the value is unknown for objects created prior to Db2 12. This column is not applicable for LOB table spaces.	
SECQTYI	INTEGER WITH DEFAULT NULL	Secondary space allocation in units of 4 KB storage. For user-managed data sets, the value is the secondary space allocation in units of 4 KB blocks. This column contains the null value when the value is unknown for objects created prior to Db2 12.	
PCTFREE_UPD	SMALLINT WITH DEFAULT NULL	The percentage of free space that is reserved for updates to variable length records, as defined when the object as created or altered. This column contains the null value when the value is unknown for objects created prior to Db2 12.	
PCTFREE_UPD_CALC	SMALLINT WITH DEFAULT NULL	The percentage of free space that is reserved for updates to variable length records, calculated by Db2 or utilities. This column contains the null value when the value is unknown for objects created prior to Db2 12.	
COMPRESSRATIO	SMALLINT NOT NULL WITH DEFAULT	Average percentage of bytes saved by compression on each compressed data record in the table space when the table space is defined with compression. This calculation includes overhead bytes for each row. The value is based on an average row length and varies depending on the actual length of the data rows. For example, a value of 25 indicates that the average compressed record size is approximately 75% the size of the uncompressed record. The value is -1 or 0 in the following cases: -1 This value has not been collected 0 No compression exists or the average compressed record length is the same as or longer than the uncompressed record length.	G
FL 502 KEYLABEL	VARCHAR(192) NOT NULL WITH DEFAULT	The key label that is specified at the table level. Otherwise, the value is an empty string.	

SYSTABLESPACESTATS catalog table

The SYSTABLESPACESTATS table contains real time statistics for table spaces. The schema is SYSIBM.

Rows in this table can be inserted, updated, and deleted. However, the following columns cannot be updated: SYS_START, SYS_END, and TRANS_START.

Important: Use care when issuing SQL statements or using tools to update statistics values in catalog tables. If such updates introduce invalid data, unpredictable results can occur, including abends for RUNSTATS and other utilities. If such problems occur, you can run the RUNSTATS utility and collect statistics at the table space level to resolve the problems, in most cases.

In data sharing environments, the values in SYSIBM.SYSTABLESPACESTATS can be negative for short periods of time for certain situations.

Table 393. SYSIBM.SYSTABLESPACESTATS table column descriptions

Column name	Data type	Description	Use
UPDATESTATSTIME	TIMESTAMP NOT NULL WITH DEFAULT	The timestamp that the row in the SYSTABLESPACESTATS table is inserted or updated.	G
NACTIVE	INTEGER	The number of active pages in the table space or partition.	G
NPAGES	INTEGER	The number of distinct pages with active rows in the partition or table space. This is an updatable column. This column can be used to calculate an estimate of the size of LOB data in a table space. To produce an estimate, use the following formula: <i>value of NPAGES * page size = approximate size of LOB data</i>	G
EXTENTS	SMALLINT	The number of extents in the table space. For multi-piece table spaces, this value is the number of extents for the last data set. For a data set that is striped across multiple volumes, the value is the number of logical extents. A null value indicates the number of extents is unknown.	G
LOADRLASTTIME	TIMESTAMP	The timestamp that the LOAD REPLACE utility was last run on the table space or partition. A null value indicates that the LOAD REPLACE utility has never been run on the table space or partition or that the timestamp is unknown.	G
REORGLASTTIME	TIMESTAMP	The timestamp the REORG utility was last run on the table space or partition, or when the REORG utility has not been run, the time when the table space or partition was created. A null value indicates that the timestamp is unknown.	G

Table 393. SYSIBM.SYSTABLESPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
REORGINSERTS	INTEGER	<p>The number of rows or LOBs that have been inserted into the table space or partition or loaded into the table space or partition using the LOAD utility specified without the REPLACE option since the last time the REORG or LOAD REPLACE utilities were run, or since the object was created.</p> <p>A null value indicates that the number of inserted rows or LOBs is unknown.</p> <p>If the value is 2147483647, the actual number of inserted rows or LOBs might be greater than this value.</p>	G
REORGDELETES	INTEGER	<p>The number of rows or LOBs that have been deleted from the table space or partition since the last time the REORG or LOAD REPLACE utilities were run, or since the object was created.</p> <p>A null value indicates that the number of deleted rows or LOBs is unknown.</p> <p>If the value is 2147483647, the actual number of deleted rows or LOBs might be greater than this value.</p>	G
REORGUPDATES	INTEGER	<p>The number of rows that have been updated in the table space or partition since the last time the REORG or LOAD REPLACE utilities were run, or since the object was created.</p> <p>A null value indicates that the number of updated rows is unknown.</p> <p>If the value is 2147483647, the actual number of updated rows or LOBs might be greater than this value.</p>	G
REORGUNCLUSTINS	INTEGER	<p>The number of rows that were inserted that are not well-clustered with respect to the clustering index since the last REORG or LOAD REPLACE, or since the object was created. A record is well-clustered if the record is inserted into a page that is within 16 pages of the ideal candidate page. The clustering index determines the ideal candidate page.</p> <p>A null value indicates that the number of pages that are not well clustered is unknown.</p> <p>For a table space that has the MEMBER CLUSTER attribute, the clustering index is not used to identify the ideal candidate page. Therefore, this value is not updated.</p>	G

Table 393. SYSIBM.SYSTABLESPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
REORGDISORGLOB	INTEGER	The number of LOBs that were inserted that are not perfectly chunked since the last REORG or LOAD REPLACE, or since the object was created. A LOB is perfectly chunked if the allocated pages are in the minimum number of chunks. A null value indicates that the number of not perfectly chunked LOBs is unknown.	G
REORGMASDELETE	INTEGER	The number of mass deletes from a segmented or LOB table space, or the number of dropped tables from a segmented table space since the last time the REORG or LOAD REPLACE utilities were run, or since the object was created. A null value indicates that the number of mass deletes is unknown.	G
REORGNEARINDREF	INTEGER	The number of overflow rows that are created and relocated near the pointer record since the last time the REORG and LOAD REPLACE utilities were run, or since the object was created. For non-segmented table spaces, a page is near the present page if the two page numbers differ by 16 or less. For segmented table spaces, a page is near the present page if the two page numbers differ by SEGSIZE*2 or less. A null value indicates that the number of overflow rows that are near the pointer record is unknown.	G
REORGFARINDREF	INTEGER	The number of overflow rows that are created and relocated far from the pointer record since the last time the REORG and LOAD REPLACE utilities were run, or since the object was created. For non-segmented table spaces, a page is far from the present page if the two page numbers differ by more than 16. For segmented table spaces, a page is far from the present page if the two page numbers differ by at least (SEGSIZE*2)+1. A null value indicates that the number of overflow rows that are near the pointer record is unknown.	G
STATSLASTTIME	TIMESTAMP	The timestamp of the last time that the RUNSTATS utility is run on the table space or partition, or the time that table space or partition was created.	G

Table 393. SYSIBM.SYSTABLESPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
STATSINSERTS	INTEGER	<p>The number of rows or LOBs that have been inserted into the table space or partition or loaded into the table space or partition using the LOAD utility specified without the REPLACE option since the last time that the RUNSTATS utility was run, or since the object was created.</p> <p>A null value indicates that the number of inserted rows or LOBs is unknown.</p> <p>If the value is 2147483647, the actual number of inserted rows or LOBs might be greater than this value.</p>	G
STATSDELETES	INTEGER	<p>The number of rows or LOBs that have been deleted from the table space or partition since the last time that the RUNSTATS utility was run, or since the object was created.</p> <p>A null value indicates that the number of deleted rows or LOBs is unknown.</p> <p>If the value is 2147483647, the actual number of deleted rows or LOBs might be greater than this value.</p>	G
STATSUPDATES	INTEGER	<p>The number of rows that have been updated in the table space or partition since the last time that the RUNSTATS utility was run, or since the object was created.</p> <p>A null value indicates that the number of updated rows is unknown.</p> <p>If the value is 2147483647, the actual number of updated rows or LOBs might be greater than this value.</p>	G
STATSMASSDELETE	INTEGER	<p>The number of mass deletes from a segmented or LOB table space, or the number of tables that are dropped from a segmented table space, since the last time the RUNSTATS utility was run, or since the object was created.</p> <p>A null value indicates that the number of mass deletes is unknown.</p>	G
COPYLASTTIME	TIMESTAMP	<p>The timestamp of the last full or incremental image copy of the table space or partition.</p> <p>A null value indicates that the COPY utility has never been run on the table space or partition. A null value can also indicate that the timestamp of the last image copy is unknown.</p>	G

Table 393. SYSIBM.SYSTABLESPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
COPYUPDATEDPAGES	INTEGER	<p>If the COPY utility was run with a SHRLEVEL value other than CHANGE, this value is the number of distinct pages that have been updated since the last time that the COPY utility was run.</p> <p>If the COPY utility was run with SHRLEVEL CHANGE, this value is the total number of distinct pages that were updated during the time that the last COPY utility was run, and since the last time that the COPY utility was run.</p> <p>A null value indicates that the number of updated pages is unknown.</p>	G
COPYCHANGES	INTEGER	<p>If the COPY utility was run with a SHRLEVEL value other than CHANGE, this value is the number of insert, update, and delete operations, or the number of rows loaded, since the last time that the COPY utility was run.</p> <p>If the COPY utility was run with SHRLEVEL CHANGE, this value is the total number of insert, update, and delete operations, or the number of rows loaded, during the time that the last COPY utility was run, and since the last time that the COPY utility was run.</p> <p>This value does not include operations that result in no change to the data, such as an update that sets the value of a column to its existing value.</p> <p>A null value indicates that the number of insert, update, and delete operations or the number of rows loaded is unknown.</p>	G
COPYUPDATELRSN	CHAR(10) FOR BIT DATA	<p>The LRSN or RBA of the first update that occurs after the last time the COPY utility was run.</p> <p>A null value indicates that the LRSN or RBA is unknown.</p>	G
COPYUPDATETIME	TIMESTAMP	<p>If the COPY utility was run with a SHRLEVEL value other than CHANGE, this value is the timestamp of the first update that occurred after the last time that the COPY utility was run.</p> <p>If the COPY utility was run with SHRLEVEL CHANGE, this value is the timestamp of the first update that occurred during the time that the last COPY utility was run, or since the last time that the COPY utility was run.</p> <p>A null value indicates that the timestamp is unknown.</p>	G

Table 393. SYSIBM.SYSTABLESPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
DBID	SMALLINT NOT NULL	The internal identifier of the database. This column is used to map a DBID to its statistics.	G
PSID	SMALLINT NOT NULL	The internal identifier of the table space page set descriptor. This column is used to map a PSID to its statistics.	G
PARTITION	SMALLINT NOT NULL	The data set number within the table space. This column is used to map a data set number in a table space to its statistics. For partitioned table spaces, this value corresponds to the partition number for a single partition. For non-partitioned table spaces, this value is 0.	G
INSTANCE	SMALLINT NOT NULL WITH DEFAULT 1	Indicates if the object is associated with data set instance 1 or 2. This is an updatable column.	G
SPACE	BIGINT	The amount of space, in KB, that is allocated to the table space or partition. For multi-piece, linear page sets, this value is the amount of space in all data sets. A null value indicates the amount of space is unknown.	G
TOTALROWS	BIGINT	The number of rows or LOBs that are in the table space or partition, calculated from the in-memory counters for inserts and deletes. For XML, this column contains the number of physical rows in the table space or partition. Each XML document might have more than one physical record in a table space or partition.	G
DATASIZE	BIGINT	The total number of bytes that row data occupy. For LOB table spaces this column is always 0. This is an updatable column.	G
UNCOMPRESSED DATASIZE	BIGINT	This column is not used. The value is always set to 0.	G
DBNAME	VARCHAR(24) NOT NULL	The name of the database. This column is used to map a database to its statistics.	G
NAME	VARCHAR(24) NOT NULL	The name of the table space. This column is used to map a table space to its statistics.	G

Table 393. SYSIBM.SYSTABLESPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
REORGSCANACCESS	BIGINT	The number of times data is accessed for SELECT, FETCH, searched UPDATE, or searched DELETE since the last CREATE, LOAD REPLACE or REORG, or since the object was created. A null value indicates that the number of times data is accessed is unknown.	G
REORGHASHACCESS	BIGINT	The number of times data is accessed using hash access for SELECT, FETCH, searched UPDATE, searched DELETE, or used to enforce referential integrity constraints since the last CREATE, LOAD REPLACE or REORG, or since the object was created. A null value indicates that the number of times data is accessed is unknown.	G
HASHLASTUSED	DATE	The date when hash access was last used for SELECT, FETCH, searched UPDATE, searched DELETE, or used to enforce referential integrity constraints.	G
REORGCLUSTERSENS	BIGINT	The number of times that data has been read by SQL statements that are sensitive to the clustering sequence of the data since the last REORG or LOAD REPLACE, or since the object was created. For a table space that has the MEMBER CLUSTER attribute, when records are inserted, the clustering index is not used. Therefore, this value is not updated.	G
DRIVETYPE	CHAR(3) NOT NULL WITH DEFAULT	The drive type on which the table space or table space partition data set is defined. HDD Hard Disk Drive SSD Solid State Drive For multi-volume data sets, the drive type is set to SSD if any volume is SSD. For multi-piece linear page sets, the drive type of the first data set is used. This is an updatable column.	G
LPFACILITY	CHAR(1)	Whether the disk control unit has the high performance list prefetch facility. N No Y Yes A NULL value indicates that it is unknown whether the disk control unit has the high performance list prefetch facility. This is an updatable column.	G

Table 393. SYSIBM.SYSTABLESPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
	BIGINT	Reserved for future IBM use.	R
UPDATESIZE	BIGINT	The net number of bytes that were added or removed by UPDATE operations since the object was created, or since the last REORG or LOAD REPLACE operation. Valid values can be positive or negative.	G
LASTDATACHANGE	TIMESTAMP	<p>The timestamp when one of the following events occurred:</p> <ul style="list-style-type: none"> The last utility operation affected the data in a table space or partition, and Db2 did not log the changes. <p>Some utility operations that update this column are:</p> <ul style="list-style-type: none"> REORG with the DISCARD option REORG with the REBALANCE option A REORG operation that moves data across partitions of a partition-by-growth table space that has more than one partition. (A REORG operation that reorders data within the same partition does not result in an update of this column.) <ul style="list-style-type: none"> An SQL statement affected the data in a table space or partition. <p>SQL statements that update this column are INSERT, UPDATE, DELETE, MERGE, and TRUNCATE.</p> <p>The timestamp reflects the time at which the real-time statistics table was updated, and not the time at which the data in the table space or partition was modified.</p> <p>This value can also be updated when an -ACCESS DATABASE command is issued with the MODE(STATS) keyword, but an object in UTRO or UTRW state prevents the externalization of real-time statistics. In such cases, Db2 preserves the in-memory statistics until next possible externalization cycle.</p>	G
GETPAGES	BIGINT	<p>The number of getpage requests for the table space since the object was created, or since the last REORG or LOAD REPLACE was run.</p> <p>The value wraps if it exceeds the largest possible BIGINT value, 9223372036854775807.</p>	G

Table 393. SYSIBM.SYSTABLESPACESTATS table column descriptions (continued)

Column name	Data type	Description	Use
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	The transaction-start-ID column, for system-period data versioning.	G

SYSTABLES_HIST catalog table

The SYSTABLES_HIST table contains rows from the SYSTABLES table. The schema is SYSIBM.

Rows are added or changed in this table when RUNSTATS collects history statistics. Rows in this table can also be inserted, updated, and deleted.

Table 394. SYSIBM.SYSTABLES_HIST table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the table, view, or alias.	G
CREATOR	VARCHAR(128) NOT NULL	The schema of the table, view, or alias.	G
DBNAME	VARCHAR(24) NOT NULL	For a table, or a view of tables, the name of the database that contains the table space named in TSNAME. For a temporary table, an alias, or a view of a view, the value is DSNDB06.	G
TSNAME	VARCHAR(24) NOT NULL	For a table, or a view of one table, the name of the table space that contains the table. For a view of more than one table, the name of a table space that contains one of the tables. For a temporary table, a view of a view, or an alias, it is SYSTSTAB.	G
COLCOUNT	SMALLINT NOT NULL	Number of columns in the table or view. The value is 0 if the row describes an alias.	G

Table 394. SYSIBM.SYSTABLES_HIST table column descriptions (continued)

Column name	Data type	Description	Use
PCTPAGES	SMALLINT NOT NULL WITH DEFAULT -1	Percentage of active table space pages that contain rows of the table. A page is termed active if it is formatted for rows, regardless of whether it contains any. If the table space is segmented, the percentage is based on the number of active pages in the set of segments assigned to the table. The value is -1 if statistics have not been gathered, or the row describes a view, alias, temporary table, accelerator-only table, or auxiliary table.	S
PCTROWCOMP	SMALLINT NOT NULL WITH DEFAULT -1	Percentage of rows compressed within the total number of active rows in the table. This includes any row in a table space that is defined with compression. The value is -1 if statistics have not been gathered, or the row describes a view, alias, temporary table, accelerator-only table, or auxiliary table.	G
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated. For a temporary table, the value of STATSTIME is always the default value.	G
CARDF	FLOAT(8) NOT NULL WITH DEFAULT -1	Total number of rows in the table or total number of LOBs in an auxiliary table. The value is -1 if statistics have not been gathered or the row describes a view, alias, accelerator-only table, or temporary table.	S
NPAGESF	FLOAT(8) NOT NULL WITH DEFAULT -1	Total number of pages on which rows of the partition appear. The value is -1 if statistics have not been gathered.	S
AVGROWLEN	INTEGER NOT NULL WITH DEFAULT -1	Average row length of the table specified in the table space. The value is -1 if statistics have not been gathered.	G
SPACEF	FLOAT(8) NOT NULL WITH DEFAULT -1	Kilobytes of DASD storage. The value is -1 if statistics have not been gathered. This is an updatable column.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSTABLES_PROFILES catalog table

The SYSTABLES_PROFILES table contains one row for each profile that is associated with a table in SYSIBM.SYSTABLES. The schema is SYSIBM.

Rows in this table can be inserted, updated, and deleted.

Table 395. SYSIBM.SYSTABLES_PROFILES table column descriptions

Column name	Data type	Description	Use
SCHEMA	VARCHAR(128) NOT NULL	The schema (qualifier) for the table.	G
TBNAME	VARCHAR(128) NOT NULL	The table name.	G
PROFILE_TYPE	VARCHAR(32) NOT NULL	The type of profile. Allowed values are 'RUNSTATS'.	G
—	VARCHAR(32)	Internal use only.	I
PROFILE_TEXT	CLOB(1M)	The text of the profile.	G
ROWID	ROWID NOT NULL GENERATED ALWAYS	The ROWID value for the LOB column of this table.	G
PROFILE_UPDATE	TIMESTAMP NOT NULL	The last time the profile was updated, or the timestamp for when the profile was inserted into the table.	G
—	TIMESTAMP	Internal use only.	I

Related concepts

SYSTABLES_PROFILE_TEXT catalog table

The SYSTABLES_PROFILE_TEXT table is an auxiliary table for the PROFILE_TEXT column of the SYSIBM.SYSTABLES_PROFILES table and is required to hold LOB data. The schema is SYSIBM.

Table 396. SYSIBM.SYSTABLES_PROFILE_TEXT table column descriptions

Column name	Data type	Description	Use
PROFILE_TEXT	CLOB(2M) NOT NULL WITH DEFAULT	The complete text for the profile that the row represents.	G

SYSTABSTATS catalog table

The SYSTABSTATS table contains one row for each partition of a partitioned table space. The schema is SYSIBM.

Rows in this table can be inserted, updated, and deleted.

Important: Use care when issuing SQL statements or using tools to update statistics values in catalog tables. If such updates introduce invalid data, unpredictable results can occur, including abends for RUNSTATS and other utilities. If such problems occur, you can run the RUNSTATS utility and collect statistics at the table space level to resolve the problems, in most cases.

Table 397. SYSIBM.SYSTABSTATS table column descriptions

Column name	Data type	Description	Use
CARD	INTEGER NOT NULL	Total number of rows in the partition.	S
NPAGES	INTEGER NOT NULL	Total number of pages on which rows of the partition appear.	S
PCTPAGES	SMALLINT NOT NULL	Percentage of total active pages in the partition that contain rows of the table.	S
NACTIVE	INTEGER NOT NULL	Number of active pages in the partition.	S
PCTROWCOMP	SMALLINT NOT NULL	Percentage of rows compressed within the total number of active rows in the partition. This includes any row in a table space that is defined with compression.	S
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
DBNAME	VARCHAR(24) NOT NULL	Database that contains the table space named in TSNAME.	G
TSNAME	VARCHAR(24) NOT NULL	Table space that contains the table.	G
PARTITION	SMALLINT NOT NULL	Partition number of the table space that contains the table.	G
OWNER	VARCHAR(128) NOT NULL	The schema of the table.	G

Table 397. SYSIBM.SYSTABSTATS table column descriptions (continued)

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the table.	G
CARDF	FLOAT NOT NULL WITH DEFAULT -1	Total number of rows in the partition.	S

SYSTABSTATS_HIST catalog table

The SYSTABSTATS_HIST table contains rows from the SYSTABSTATS table.

Rows are added or changed in this table when RUNSTATS collects history statistics. Rows in this table can also be inserted, updated, and deleted.

Table 398. SYSIBM.SYSTABSTATS_HIST table column descriptions

Column name	Data type	Description	Use
NPAGES	INTEGER NOT NULL	Total number of pages on which rows of the partition appear.	S
STATSTIME	TIMESTAMP NOT NULL	If RUNSTATS or another utility with inline statistics updated the statistics, the date and time when the last utility invocation updated the statistics. The default value is '0001-01-01-00.00.00.000000'. The default value indicates that statistics were not collected. This column can be updated.	G
DBNAME	VARCHAR(24) NOT NULL	Database that contains the table space named in TSNAME.	G
TSNAME	VARCHAR(24) NOT NULL	Table space that contains the table.	G
PARTITION	SMALLINT NOT NULL	Partition number of the table space that contains the table.	G
OWNER	VARCHAR(128) NOT NULL	The schema of the table.	G
NAME	VARCHAR(128) NOT NULL	Name of the table.	G
CARDF	FLOAT(8) NOT NULL WITH DEFAULT -1	Total number of rows in the partition. The value is -1 if statistics have not been gathered.	S

Table 398. SYSIBM.SYSTABSTATS_HIST table column descriptions (continued)

Column name	Data type	Description	Use
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSTRIGGERS catalog table

The SYSTRIGGERS table contains one row for each trigger. The schema is SYSIBM.

Table 399. SYSIBM.SYSTRIGGERS table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the trigger and trigger package.	G
SCHEMA	VARCHAR(128) NOT NULL	Schema of the trigger. This implicit or explicit qualifier for the trigger name is also used for the collection ID of the trigger package.	G
SEQNO	SMALLINT NOT NULL	Not used.	N
DBID	SMALLINT NOT NULL	Internal identifier of the database for the trigger.	G
OBID	SMALLINT NOT NULL	Internal identifier of the trigger.	G
OWNER	VARCHAR(128) NOT NULL	Owner of the trigger.	G
CREATEDBY	VARCHAR(128) NOT NULL	Primary authorization ID of the user who created the trigger.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the table or view.	G
TBOWNER	VARCHAR(128) NOT NULL	Qualifier of the name of the table or view to which this trigger applies.	G
TRIGTIME	CHAR(1) NOT NULL	Time when triggered actions are applied to the base table, relative to the event that activated the trigger: A Trigger is applied after the event. B Trigger is applied before the event. I Trigger is applied instead of the event	G

Table 399. SYSIBM.SYSTRIGGERS table column descriptions (continued)

Column name	Data type	Description	Use
TRIGEVENT	CHAR(1) NOT NULL	Operation that activates the trigger: I Insert D Delete U Update	G
GRANULARITY	CHAR(1) NOT NULL	Trigger is executed once per: S Statement R Row	G
CREATEDTS	TIMESTAMP NOT NULL	The time when the trigger was created, the existing trigger version was replaced, or the new trigger version was added.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
TEXT	VARCHAR(6000) NOT NULL	Not used.	N
REMARKS	VARCHAR(762) NOT NULL	A character string provided by the user with the COMMENT statement.	G
TRIGNAME	VARCHAR(128) NOT NULL	Not used.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of creator: blank Authorization ID L Role	G
ENVID	INTEGER NOT NULL WITH DEFAULT	Internal environment identifier.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to Version 9. See Release dependency indicators for all other values.	G

Table 399. SYSIBM.SYSTRIGGERS table column descriptions (continued)

Column name	Data type	Description	Use
SECURE	CHAR(1) NOT NULL WITH DEFAULT 'N'	Indicates if the trigger is secured: N The trigger is not secured Y The trigger is secured	G
ALTEREDTS	TIMESTAMP NOT NULL	Indicates when the trigger was last changed.	G
ROWID	ROWID NULL GENERATED ALWAYS	ROWID column, created for the lob columns in this table.	G
SQLPL	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether the trigger supports SQL PL: Y Advanced trigger that supports SQL PL. blank Basic trigger that does not support SQL PL.	G
DEBUG_MODE	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether the trigger is enabled for debugging: 1 This trigger is enabled for debugging, and can be debugged in a client debug session using the Db2 Unified Debugger. 0 This trigger is not enabled for debugging. N This trigger can never be enabled for debugging. blank This trigger is a basic trigger that cannot be debugged.	G
ASUTIME	INTEGER NOT NULL	Number of CPU service units that are allowed for a single invocation of this trigger. If ASUTIME is zero, the number of CPU service units is unlimited. If the trigger consumes more CPU service units than the ASUTIME value allows, Db2 cancels the trigger.	G
WLM_ENVIRONMENT	VARCHAR(96) NOT NULL	The WLM ENVIRONMENT FOR DEBUG MODE value in the trigger definition. This value is the name of the WLM environment that is used when a trigger is debugged. If this value is blank, the trigger cannot be debugged.	G
STATEMENT	CLOB(2M) NOT NULL WITH DEFAULT	The text of the entire CREATE TRIGGER statement that was used to create the object.	G
VERSION	VARCHAR(122) NOT NULL	The version identifier for a trigger. A zero length string for a basic trigger.	G

Table 399. SYSIBM.SYSTRIGGERS table column descriptions (continued)

Column name	Data type	Description	Use
ORIGINAL_CONTOK	CHAR(8) NOT NULL FOR BIT DATA	The consistency token for the trigger. For triggers created before Db2 12, this column value is X'20'.	G
REGENERATETS	TIMESTAMP NOT NULL	The time when the object was regenerated. The value is valid only for objects that can be regenerated. If no regeneration has occurred, this column contains the same value as the CREATEDTS column.	G
ACTIVE	CHAR(1) NOT NULL	Identifies the active version of the trigger: Y The version is the active version. N The version is not the active version. blank The value of VERSION is a zero length string.	G
WRAPPED	CHAR(1) NOT NULL	'Y' The trigger text is obfuscated. blank The trigger text is not obfuscated.	G

SYSTRIGGERS_STMT catalog table

The SYSTRIGGERS_STMT table is an auxiliary table for the STATEMENT column of the SYSTRIGGERS table and contains LOB data. The schema is SYSIBM.

Table 400. SYSIBM.SYSTRIGGERS_STMT table column descriptions

Column name	Data type	Description	Use
STATEMENT	CLOB(2M) NOT NULL WITH DEFAULT	The text of the entire CREATE TRIGGER statement that was used to create the object.	G

SYSUSERAUTH catalog table

The SYSUSERAUTH table records the system privileges that are held by users. The schema is SYSIBM.

Table 401. SYSIBM.SYSUSERAUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID of the user who granted the privileges.	G
GRANTEE	VARCHAR(128) NOT NULL	Authorization ID of the user that holds the privilege. Could also be PUBLIC for a grant to PUBLIC.	G
—	CHAR(12) NOT NULL	Internal use only.	I

Table 401. SYSIBM.SYSUSERAUTH table column descriptions (continued)

Column name	Data type	Description	Use
DATEGRANTED	CHAR(6) NOT NULL	Not used.	N
TIMEGRANTED	CHAR(8) NOT NULL	Not used.	N
GRANTEETYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantee: blank Authorization ID L Role	N
AUTHHOWGOT	CHAR(1) NOT NULL WITH DEFAULT	Authorization level of the user from whom the privileges were received. This authorization level is not necessarily the highest authorization level of the grantor. blank Not applicable. AUTHHOWGOT is also blank when the privilege that is held is BINDAGENT. C DBCTRL D DBADM E SECADM G ACCESSCTRL K SQLADM L SYSCTRL M DBMAINT O SYSOPR S SYSADM	G
ALTERBPAUTH	CHAR(1) NOT NULL	Not used.	N

Table 401. SYSIBM.SYSUSERAUTH table column descriptions (continued)

Column name	Data type	Description	Use
BINDADDAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the BIND subcommand with the ADD option: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
BSDSAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can issue the RECOVER BSDS command: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
CREATEDBAAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can create databases and automatically receive DBADM authority over the new databases: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
CREATEDBCAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can execute the CREATE DATABASE statement to create new databases and automatically receive DBCTRL authority over the new databases: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
CREATESGAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can execute the CREATE STOGROUP statement to create new storage groups: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G

Table 401. SYSIBM.SYSUSERAUTH table column descriptions (continued)

Column name	Data type	Description	Use
DISPLAYAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the DISPLAY commands: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
RECOVERAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the RECOVER INDOUBT command: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
STOPALLAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the STOP command: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
STOSPACEAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can use the STOSPACE utility: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
SYSADMAUTH	CHAR(1) NOT NULL	Whether the GRANTEE has system administration authority: blank Privilege is not held G Privilege was granted with the GRANT option Y Privilege was granted without the GRANT option GRANTEE has the privilege with the GRANT option for a value of either Y or G.	G

Table 401. SYSIBM.SYSUSERAUTH table column descriptions (continued)

Column name	Data type	Description	Use
SYSOPRAUTH	CHAR(1) NOT NULL	Whether the GRANTEE has system operator authority: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
TRACEAUTH	CHAR(1) NOT NULL	Whether the GRANTEE can issue the START TRACE and STOP TRACE commands: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
MON1AUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE can obtain IFC serviceability data: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
MON2AUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE can obtain IFC data: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
CREATEALIASAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE can execute the CREATE ALIAS statement: blank Privilege is not held G Privilege held with the GRANT option Y Privilege held without the GRANT option	G

Table 401. SYSIBM.SYSUSERAUTH table column descriptions (continued)

Column name	Data type	Description	Use
SYSCTRLAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE has SYSCTRL authority: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option GRANTEE has the privilege with the GRANT option for a value of either Y or G.	G
BINDAGENTAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE has BINDAGENT privilege: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
ARCHIVEAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE is privileged to use the ARCHIVE LOG command: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
CAPTURE1AUTH	CHAR(1) NOT NULL WITH DEFAULT	Not used.	N
CAPTURE2AUTH	CHAR(1) NOT NULL WITH DEFAULT	Not used.	N
GRANTEDTS	TIMESTAMP NOT NULL WITH DEFAULT	Time when the GRANT statement was executed. The value is '1985-04-01.00.00.00.000000' for the one installation row.	G
CREATETMTABAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE has CREATETMTABAUTH privilege: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G

Table 401. SYSIBM.SYSUSERAUTH table column descriptions (continued)

Column name	Data type	Description	Use
GRANTORTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of grantor: blank Authorization ID L Role	G
DEBUGSESSIONAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE has DEBUGSESSION privilege: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
EXPLAINAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE can explain and prepare statements: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
SQLADMAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE has SQLADM authority: blank Privilege is not held G Privilege is held with the GRANT option Y Privilege is held without the GRANT option	G
SDBADMAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE has system DBADM authority: blank Privilege is not held Y Privilege is held without the GRANT option	G
DATAACCESSAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE has DATAACCESS authority: blank Privilege is not held Y Privilege is held without the GRANT option	G

Table 401. SYSIBM.SYSUSERAUTH table column descriptions (continued)

Column name	Data type	Description	Use
ACCESSCTRLAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE has ACCESSCTRL authority: blank Privilege is not held Y Privilege is held without the GRANT option	G
CREATESECUREAUTH	CHAR(1) NOT NULL WITH DEFAULT	Whether the GRANTEE can create secured objects (triggers and user-defined functions): blank Privilege is not held Y Privilege is held without the GRANT option	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.The row-begin column of the SYSTEM_TIME period, for system-period data versioning.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.The row-end column of the SYSTEM_TIME period, for system-period data versioning.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSVARIABLEAUTH catalog table

The SYSVARIABLEAUTH table contains one row for each privilege of each authorization ID that has privileges on a global variable. The schema is SYSIBM.

Table 402. SYSIBM.SYSVARIABLEAUTH table column descriptions

Column name	Data type	Description	Use
GRANTOR	VARCHAR(128) NOT NULL	The grantor of the privilege.	G
GRANTORTYPE	CHAR(1) NOT NULL	The type of grantor: blank Grantor is an authorization ID L Grantor is a role	G
GRANTEE	VARCHAR(128) NOT NULL	The holder of the privilege.	G

Table 402. SYSIBM.SYSVARIABLEAUTH table column descriptions (continued)

Column name	Data type	Description	Use
GRANTEETYPE	CHAR(1) NOT NULL	The type of grantee: blank Grantee is an authorization ID L Grantee is a role P Grantee is a package. The grantee is a package if COLLID is a value other than blank. R Internal use only	G
SCHEMA	VARCHAR(128) NOT NULL	The schema name of the global variable.	G
NAME	VARCHAR(128) NOT NULL	The unqualified name of the global variable.	G
COLLID	VARCHAR(128) NOT NULL	If the grantee is a package, this value is the COLLID of the package.	G
CONTOKEN	CHAR(8) NOT NULL FOR BIT DATA	If the grantee is a package, this value is the consistency token of the DBRM from which the package is derived. Otherwise, this value is blank.	G
READAUTH	CHAR(1) NOT NULL	The privilege to read the global variable: blank The READ privilege is not held G The READ privilege is held with the GRANT option Y The READ privilege is held without the GRANT option	G
WRITEAUTH	CHAR(1) NOT NULL	The privilege to write to the global variable: blank The WRITE privilege is not held G The WRITE privilege is held with the GRANT option Y The WRITE privilege is held without the GRANT option	G

Table 402. SYSIBM.SYSVARIABLEAUTH table column descriptions (continued)

Column name	Data type	Description	Use
AUTHHOWGOT	CHAR(1) NOT NULL	The authorization level of the user who granted the privileges: blank Not applicable E SECADM G ACCESSCTRL S SYSADM T DATAACCESS This authorization level is not necessarily the highest authority level of the grantor.	G
GRANTEDTS	TIMESTAMP NOT NULL	The time when the GRANT statement was executed.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSVARIABLES catalog table

The SYSVARIABLES table contains one row for each global variable that is created. The schema is SYSIBM.

Table 403. SYSIBM.SYSVARIABLES table column descriptions

Column name	Data type	Description	Use
VARID	BIGINT NOT NULL GENERATED ALWAYS AS IDENTITY	The identifier of the global variable.	G
SCHEMA	VARCHAR(128) NOT NULL	The schema name of the global variable.	G
NAME	VARCHAR(128) NOT NULL	The unqualified name of the global variable.	G
OWNER	VARCHAR(128) NOT NULL	The authorization ID of the owner of the global variable.	G

Table 403. SYSIBM.SYSVARIABLES table column descriptions (continued)

Column name	Data type	Description	Use
OWNERTYPE	CHAR(1) NOT NULL	The type of owner of the global variable: L The owner is a role blank The owner is an authorization ID	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for all other values.	G
CREATEDTS	TIMESTAMP NOT NULL	Time at which the global variable was created.	G
TYPESHEMA	VARCHAR(128) NOT NULL	The schema name of the data type. For built-in data types, this value is SYSIBM.	G
TYPENAME	VARCHAR(128) NOT NULL	The unqualified name of the data type.	G
DATATYPEID	INTEGER NOT NULL	For a built-in data type, the internal ID of the built-in type. For a user-defined type, the internal ID of the user-defined type.	S
SOURCETYPEID	INTEGER NOT NULL	For a built-in data type, 0. For a user-defined type, the internal ID of the built-in data type on which the user-defined type is based.	S
LENGTH	INTEGER NOT NULL	The maximum length of the global variable. If the variable is an array type, the value is 0.	G
SCALE	SMALLINT NOT NULL	The scale of the global variable.	G
CCSID	INTEGER NOT NULL	If the variable is an array type, the value is 0. Otherwise, the CCSID of the global variable.	G

Table 403. SYSIBM.SYSVARIABLES table column descriptions (continued)

Column name	Data type	Description	Use
DEFAULT	CHAR(3) NOT NULL	<p>The default value of the global variable.</p> <p>This column can contain one of the following values:</p> <p>N The global variable does not have a default value. If the variable is an array type, the value is N.</p> <p>S The default value is the value of the SQL authorization ID of the process at the time that a default value is used.</p> <p>1 The default value is a string constant.</p> <p>2 The default value is a floating-point constant.</p> <p>3 The default value is a decimal constant.</p> <p>4 The default value is an integer constant.</p> <p>5 The default value is a hexadecimal character string.</p> <p>6 The default value is a UX string.</p> <p>7 The global variable has a graphic data type and has a default value that is a character string constant.</p> <p>8 The global variable has a character data type and has a default value that is a character string constant.</p> <p>9 The default value is a DECFLOAT constant</p> <p>If this column contains one of the following values, the default value of the global variable is the value of the indicated special register at the time that a default value is used:</p> <p>AES <u>CURRENT APPLICATION ENCODING SCHEME</u></p> <p>ACT <u>CURRENT CLIENT_ACCTNG</u></p> <p>APN <u>CURRENT CLIENT_APPLNAME</u></p> <p>CID <u>CURRENT CLIENT_USERID</u></p>	G

Table 403. SYSIBM.SYSVARIABLES table column descriptions (continued)

Column name	Data type	Description	Use
DEFAULT (continued)		WSN <u>CURRENT CLIENT_WRKSTNNAME</u>	
		DAT <u>CURRENT DATE</u>	
		DBG <u>CURRENT DEBUG MODE</u>

Table 403. SYSIBM.SYSVARIABLES table column descriptions (continued)

Column name	Data type	Description	Use
ROWID	ROWID NOT NULL GENERATED ALWAYS	The ROWID value for the lob columns in this table.	G
DEFAULTTEXT	CLOB(2M) NOT NULL WITH DEFAULT	The text of the default value of the global variable.	G
—	BLOB(2M) NOT NULL	Reserved for future IBM use.	I
ENVID	INTEGER NOT NULL	Internal environment identifier.	G
REMARKS	VARCHAR(762) NOT NULL	A character string about this global variable that is provided by using the COMMENT statement.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G

SYSVARIABLES_DESC catalog table

The SYSVARIABLES_DESC table is an auxiliary table for the SYSIBM.SYSVARIABLES table. The schema is SYSIBM.

Table 404. SYSIBM.SYSVARIABLES_DESC table column descriptions

Column name	Data type	Description	Use
—	BLOB(2M)	Internal use only.	I

SYSVARIABLES_TEXT catalog table

The SYSVARIABLES_TEXT table is an auxiliary table for the DEFAULTTEXT column of the SYSVARIABLES table. The schema is SYSIBM.

Table 405. SYSIBM.SYSVARIABLES_TEXT table column descriptions

Column name	Data type	Description	Use
DEFAULTTEXT	CLOB(2M)	The text of the default value of the global variable.	G

SYSVIEWDEP catalog table

The SYSVIEWDEP table records the dependencies of views, SQL function tables, and materialized query tables on other objects. The schema is SYSIBM.

Table 406. SYSIBM.SYSVIEWDEP table column descriptions

Column name	Data type	Description	Use
BNAME	VARCHAR(128) NOT NULL	Name of the object on which the view, SQL function, or materialized query table is dependent. If the object type is a function (BTYP='F'), the name is the specific name of the function.	G
BCREATOR	VARCHAR(128) NOT NULL	Authorization ID of the owner of BNAME.	G
BTYPE	CHAR(1) NOT NULL	Type of object: F Function G Created global temporary table M Materialized query table T Table V View W SYSTEM_TIME period Z BUSINESS_TIME period	G
DNAME	VARCHAR(128) NOT NULL	Name of the view.	G
DCREATOR	VARCHAR(128) NOT NULL	The schema of the view.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G
BSCHEMA	VARCHAR(128) NOT NULL WITH DEFAULT	Schema of BNAME.	G

Table 406. SYSIBM.SYSVIEWDEP table column descriptions (continued)

Column name	Data type	Description	Use
DTYPE	CHAR(1) NOT NULL	Type of dependent object: F SQL function M Materialized query table V View	G
DOWNER	VARCHAR(128) NOT NULL WITH DEFAULT	Authorization ID of the dependent object. Blank for views that were created in a Db2 release prior to Version 9.	G
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner: blank Authorization ID L Role	G
SYS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW BEGIN	Reserved for future IBM use.	G
SYS_END	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS ROW END	Reserved for future IBM use.	G
TRANS_START	TIMESTAMP(12) NOT NULL GENERATED ALWAYS AS TRANSACTION START ID	Reserved for future IBM use.	G

SYSVIEWS catalog table

The SYSVIEWS table contains one or more rows for each view, materialized query table, or user-defined SQL function. The schema is SYSIBM.

Table 407. SYSIBM.SYSVIEWS table column descriptions

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	Name of the object.	G
CREATOR	VARCHAR(128) NOT NULL	The schema of the object.	G

Table 407. SYSIBM.SYSVIEWS table column descriptions (continued)

Column name	Data type	Description	Use
SEQNO	SMALLINT NOT NULL	Not used.	N
CHECK	CHAR(1) NOT NULL	Whether the WITH CHECK OPTION clause was specified in the CREATE VIEW statement: N No C Yes with the <i>cascaded</i> semantic Y Yes with the <i>local</i> semantic The value is N if the view has no WHERE clause, or the object is not a view.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
TEXT	VARCHAR(1500) NOT NULL	Not used.	N
PATHSCHEMAS	VARCHAR(2048) NOT NULL WITH DEFAULT	SQL path at the time the object was defined. The path is used to resolve unqualified data type and function names used in the object definition.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to Version 9. See Release dependency indicators for all other values.	G
TYPE	CHAR(1) NOT NULL	Type of table: F SQL function M Materialized query table V View	G
REFRESH	CHAR(1) NOT NULL WITH DEFAULT	Refresh mode: D A materialized query table with a deferred refresh mode blank Not a materialized query table	G

Table 407. SYSIBM.SYSVIEWS table column descriptions (continued)

Column name	Data type	Description	Use
ENABLE	CHAR(1) NOT NULL WITH DEFAULT	Indicates whether query optimization is enabled: Y Enabled N Disabled blank Not a materialized query table	G
MAINTENANCE	CHAR(1) NOT NULL WITH DEFAULT	Maintenance mode: S For a REFRESH = 'D', a materialized query table that is maintained by the system. U For a REFRESH = 'D', a materialized query table that is maintained by the user. blank Not a materialized query table.	G
REFRESH_TIME	TIMESTAMP NOT NULL WITH DEFAULT	For REFRESH = 'D' and MAINTENANCE = 'S', the timestamp of the REFRESH TABLE statement that last refreshed the data. Otherwise, this is the default timestamp ('0001-01-01.00.00.00.000000').	G
ISOLATION	CHAR(1) NOT NULL WITH DEFAULT	Isolation level when the materialized query table is created or altered from a base table: R RR (repeatable read) S CS (cursor stability) T RS (read stability) U UR (uncommitted read) blank Not a materialized query table	G
SIGNATURE	VARCHAR(1024) NOT NULL WITH DEFAULT FOR BIT DATA	Contains an internal description. Used for materialized query tables.	G
APP_ENCODING_CCSID	INTEGER NOT NULL WITH DEFAULT	CCSID of the current application encoding scheme at the time the object was created. For objects created prior to Version 8 of Db2, the value is 0.	G
OWNER	VARCHAR(128) NOT NULL WITH DEFAULT	Authorization ID of the owner of the view, blank for views that were created in a Db2 release prior to Version 9.	G

Table 407. SYSIBM.SYSVIEWS table column descriptions (continued)

Column name	Data type	Description	Use
OWNERTYPE	CHAR(1) NOT NULL WITH DEFAULT	Indicates the type of owner: blank Authorization ID L Role	G
ENVID	INTEGER NOT NULL WITH DEFAULT	Internal environment identifier.	G
ROWID	ROWID NULL GENERATED ALWAYS	ROWID column, created for the lob columns in this table	G
STATEMENT	CLOB(2M) NOT NULL WITH DEFAULT	The text of the statement that created the view. In some cases, this column might instead contain the text of a statement that altered the view. In many cases, changes to views or to objects on which views are dependent do not update this value.	G
—	BLOB(1G) NOT NULL WITH DEFAULT	Internal use only.	I

SYSVIEWS_STMT catalog table

The SYSVIEWS_STMT table is an auxiliary table for the STATEMENT column of the SYSIBM.SYSVIEWS table and is required to hold LOB data. The schema is SYSIBM.

Table 408. SYSIBM.SYSVIEWS_STMT table column descriptions

Column name	Data type	Description	Use
STATEMENT	CLOB(2M) NOT NULL WITH DEFAULT	See the description of the STATEMENT column in “SYSVIEWS catalog table” on page 2758	G

SYSVIEWS_TREE catalog table

The SYSVIEWS_TREE table is an auxiliary table for the PARSETREE column of the SYSVIEWS table and is required to hold LOB data. The schema is SYSIBM.

Table 409. SYSIBM.SYSVIEWS_TREE table column descriptions

Column name	Data type	Description	Use
—	BLOB(1G) NOT NULL WITH DEFAULT	Internal use only.	I

SYSVOLUMES catalog table

The SYSVOLUMES table contains one row for each volume of each storage group. The schema is SYSIBM.

Table 410. SYSIBM.SYSVOLUMES table column descriptions

Column name	Data type	Description	Use
SGNAME	VARCHAR(128) NOT NULL	Name of the storage group.	G
SGCREATOR	VARCHAR(128) NOT NULL	Authorization ID of the owner of the storage group. To determine the type of authorization ID for the storage group creator, see the CREATORTYPE column of the SYSIBM.SYSSTOGROUP catalog table.	G
VOLID	VARCHAR(18) NOT NULL	Serial number of the volume or * if SMS-managed.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. Blank if created prior to Version 9. See Release dependency indicators for all other values.	G

SYSXMLRELS catalog table

The SYSXMLRELS table contains one row for each XML table that is created for an XML column. The schema is SYSIBM.

Table 411. SYSIBM.SYSXMLRELS table column descriptions

Column name	Data type	Description	Use
TBOWNER	VARCHAR(128) NOT NULL	Schema or qualifier of the base table.	G
TBNAME	VARCHAR(128) NOT NULL	Name of the base table.	G
COLNAME	VARCHAR(128) NOT NULL	Name of the XML column in the base table.	G
XMLTBOWNER	VARCHAR(128) NOT NULL	Schema or qualifier of the XML table.	G
XMLTBNAME	VARCHAR(128) NOT NULL	Name of the XML table.	G

Table 411. SYSIBM.SYSXMLRELS table column descriptions (continued)

Column name	Data type	Description	Use
XMLRELOBID	INTEGER NOT NULL	Internal identifier of the relationship between the base table and the XML table.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
CREATEDTS	TIMESTAMP NOT NULL	Time when the XML table was created.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G

SYSXMLSTRINGS catalog table

Each row of the SYSXMLSTRINGS table contains a single string and its unique ID that are used to condense XML data. The string can be an element name, attribute name, name space prefix, or a namespace URI. The schema is SYSIBM.

Table 412. SYSIBM.SYSXMLSTRINGS table column descriptions

Column name	Data type	Description	Use
STRINGID	INTEGER NOT NULL GENERATED ALWAYS AS IDENTITY	Unique ID for the string.	G
STRING	VARCHAR(1000) NOT NULL	The string data.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies.	G

SYSXMLTYPMOD catalog table

The SYSXMLTYPMOD table contains rows about the XML type modifiers of XML columns. Rows in this table can be inserted, updated and deleted. The schema is SYSIBM.

Table 413. SYSIBM.SYSXMLTYPMOD table column descriptions

Column name	Data type	Description	Use
XML_TYPMOD_ID	INTEGER NOT NULL GENERATED ALWAYS AS IDENTITY	An id generated for the XML type modifier, it is an identity column and primary key.	G
TYPE_ANNOTATION	CHAR(1) NOT NULL	Indicate whether there is type annotation. Y WITH type annotation N with no type annotation.	G
CREATEDTS	TIMESTAMP NOT NULL	The timestamp when this type modifier is created.	G
ALTEREDTS	TIMESTAMP NOT NULL	The timestamp when this type modifier is altered	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G
CREATEDBY	VARCHAR(128) NOT NULL	Primary authorization ID of the user who created the database.	G

SYSXMLTYPMSHEMA catalog table

The SYSXMLTYPMSHEMA table contains the XML schema information for an XML type modifier. It contains one row per XML schema for an XML type modifier. The schema is SYSIBM.

Table 414. SYSIBM.SYSXMLTYPMSHEMA table column descriptions

Column name	Data type	Description	Use
XML_TYPMOD_ID	INTEGER NOT NULL	The id for the XML type modifier.	G
XROBJECTID	INTEGER NOT NULL	The id for an XML schema registered in XSR.	G

Table 414. SYSIBM.SYSXMLTYPMSHEMA table column descriptions (continued)

Column name	Data type	Description	Use
ELEMENT_NAMESPACE	INTEGER NOT NULL	String id for the namespace name of the root element node. By default, it is the TARGETNAMESPACE of the XML schema. It would be 0 if it is NO NAMESPACE.	G
ELEMENT_NAME	INTEGER NOT NULL	String id for the local name of the root element node. It would be 0 if it is not specified.	G
CREATEDTS	TIMESTAMP NOT NULL	The timestamp when this type modifier is created.	G
ALTEREDTS	TIMESTAMP NOT NULL	The timestamp when this type modifier is altered	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G
IBMREQD	CHAR(1) NOT NULL	A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators . The value in this field is not a reliable indicator of release dependencies. RELCREATED should be used instead.	G

USERNAMES table

Each row in the USERNAMES table is used to carry out one outbound ID translation or inbound ID translation and "come from" checking. The schema is SYSIBM.

Rows in this table can be inserted, updated, and deleted.

Table 415. SYSIBM.USERNAMES table column descriptions

Column name	Data type	Description	Use
TYPE	CHAR(1) NOT NULL	How the row is to be used: I For inbound translation and "come from" checking. O For outbound translation. S For outbound system AUTHID to establish a trusted connection.	G
AUTHID	VARCHAR(128) NOT NULL WITH DEFAULT	Authorization ID to be translated. Applies to any authorization ID if blank.	G

Table 415. SYSIBM.USERNAMES table column descriptions (continued)

Column name	Data type	Description	Use
LINKNAME	VARCHAR(24) NOT NULL	<p>Identifies the VTAM or TCP/IP network locations associated with this row. A blank value in this column indicates this name translation rule applies to any TCP/IP or SNA partner.</p> <p>If a non-blank LINKNAME is specified, one or both of the following statements must be true:</p> <ul style="list-style-type: none"> • A row exists in SYSIBM.LUNAMES whose LUNAME matches the value specified in the SYSIBM.USERNAMES LINKNAME column. This row specifies the VTAM site associated with this name translation rule. • A row exists in SYSIBM.IPNAMES whose LINKNAME matches the value specified in the SYSIBM.USERNAMES LINKNAME column. This row specifies the TCP/IP host associated with this name translation rule. <p>Inbound name translation and "come from" checking are not performed for TCP/IP clients.</p>	G
NEWAUTHID	VARCHAR(128) NOT NULL WITH DEFAULT	Translated value of AUTHID. Blank specifies no translation. NEWAUTHID can be stored as encrypted data by calling the DSNLEUSR stored procedure. To send the encrypted value of AUTHID across a network, one of the encryption security options in the SYSIBM.IPNAMES table should be specified.	G
PASSWORD	VARCHAR(255) NOT NULL WITH DEFAULT	Password to accompany an outbound request, if passwords are not encrypted by RACF. If passwords are encrypted, or the row is for inbound requests, the column is not used. PASSWORD can be stored as encrypted data by calling the DSNLEUSR stored procedure. To send the encrypted value of PASSWORD across a network, one of the encryption security options in the SYSIBM.IPNAMES table should be specified.	G
IBMREQD	CHAR(1) NOT NULL WITH DEFAULT 'N'	<p>A value of Y indicates that the row was provided with the Db2 product code. For all other values, see Release dependency indicators.</p> <p>The value in this field is not a reliable indicator of release dependencies.</p>	G

Catalog indexes

Indexes are defined on most catalog tables to improve catalog access.

The following table identifies the Db2 catalog tables on which indexes are defined, the columns that are in each of the indexes, and the data types of those columns.

Table 416. Indexes on Db2 catalog tables

Table	Index (type "1" on page 2789)	Columns (data type)
IPLIST	DSNDUX01 (U)	LINKNAME (CHAR(8)) IPADDR (VARCHAR(254))
IPNAMES	DSNFPX01 (UC)	LINKNAME (CHAR(8))
LOCATIONS	DSNFCX01 (UC)	LOCATION (VARCHAR(128))

Temporal versioning for Db2 catalog tables

Db2 12 can use temporal versioning to record historical information for certain catalog tables. You can use the historical information in statistics-related catalog tables to analyze, predict, and help prevent specific conditions in a subsystem.

Temporal versioning for Db2 statistics-related catalog tables

You can use the historical information in Db2 12 statistics-related catalog tables to analyze, predict, and help prevent specific conditions in a subsystem.

[FL 500](#)

The historical information for real-time statistics catalog tables can be used to analyze the rate of change in size, organization, and activity for table space and index space partitions. This information can then be used to develop an automated response to conditions such as table spaces and index spaces running out of space or becoming too disorganized.

The following table lists the statistics-related catalog tables that have an associated history table for system-period temporal versioning.

Catalog table	History table
SYSINDEXSPACESTATS	SYSIBM.SYSIXSPACESTATS_H
SYSTABLESPACESTATS	SYSIBM.SYSTABSPACESTATS_H

Enabling the temporal relationship

The temporal relationship between a history table and its associated catalog table must be enabled before the history table can be used to record historical information. Each member Db2 externalizes rows whenever the interval specified by the STATSINT subsystem parameter is reached.

Tip: It is best to develop and test an aggregation and purge strategy before enabling the temporal relationship.

To enable the temporal relationship for SYSIBM.SYSINDEXSPACESTATS and its associated history table, SYSIBM.SYSIXSPACESTATS_H, issue the following statement:

```
ALTER TABLE SYSIBM.SYSINDEXSPACESTATS
ADD VERSIONING
USE HISTORY TABLE SYSIBM.SYSIXSPACESTATS_H;
```

To enable the temporal relationship for SYSIBM.SYSTABLESPACESTATS and its associated history table, SYSIBM.SYSTABSPACESTATS_H, issue the following statement:

```
ALTER TABLE SYSIBM.SYSTABLESPACESTATS
ADD VERSIONING
USE HISTORY TABLE SYSIBM.SYSTABSPACESTATS_H;
```

If the temporal relationship between a catalog table and its associated history table later needs to be removed, you can issue the ALTER TABLE statement with the DROP VERSIONING clause on the catalog table.

Multiple inserts into a temporal history table for one insert into a real-time statistics table

In rare cases, statistics-related catalog history tables might contain multiple rows that correspond to a single insert into a real-time statistics table. This can happen when real-time statistics are externalized to one of the real-time statistics tables, and the real-time statistics table is unavailable.

When temporal versioning is enabled, and Db2 inserts a row into a real-time statistics table, Db2 also inserts a row into the corresponding temporal history table. If the insert operation for the real-time statistics table fails because the table is unavailable, Db2 does not delete the row from the temporal history table. Db2 makes additional attempts to insert the row into the real-time statistics table, and with each attempt, Db2 inserts another row into the temporal history table. When the real-time statistics table becomes available, and the insert into the real-time statistics table is successful, Db2 writes another row into the temporal history table.

The following example shows the contents of the SYS_START and SYS_END columns in system-period temporal table SYSIBM.SYSTABSPACESTATS_H when two unsuccessful attempts and one successful attempt are made to insert rows into a real-time statistics table. All column values other than SYS_END are the same. The first row corresponds to the successful attempt to insert into SYSIBM.SYSTABLESPACESTATS, and the second and third rows correspond to the unsuccessful attempts.

SYS_START	SYS_END
2020-05-13-13.03.42.279115	2020-05-13-13.39.04.139589

Maintaining the Db2 catalog and directory

For best results, periodically check the integrity of Db2 catalog, and especially before you update the Db2 catalog for a version migration function level activation.

Procedure

To ensure the health of the Db2 catalog, use the following approaches. For best results, do these the actions before and after each Db2 version migration, and periodically outside of the migration process, such as when you update the Db2 catalog for new function levels in continuous delivery.

- Use the DSN1COPY and CHECK INDEX utilities to verify the integrity of the Db2 directory and catalog table spaces on the subsystem, by completing the following steps:
 - a) Run the DSN1COPY utility with the CHECK option on all catalog table spaces to ensure that the table space pages are physically correct and that the catalog table spaces are clustered. For more information, see [DSN1COPY \(Db2 Utilities\)](#).

When you run this utility on segmented table spaces or LOB table spaces, you can ignore message DSN1985I for objects of these types.

- b) Run the CHECK DATA and CHECK INDEX utilities for the Db2 catalog objects. For more information about these utilities, see [CHECK DATA \(Db2 Utilities\)](#) and [CHECK INDEX \(Db2 Utilities\)](#).
- c) Back up the Db2 catalog and directory routinely, and before and after a catalog update for a Db2 version migration or function level activation. For more information, see [“Backing up the Db2 catalog and directory” on page 2792](#).
- d) Run the following query on catalog tables to ensure that you do not have a storage group that is defined with both specific and non-specific volume IDs.

GUPI

```
SELECT * FROM SYSIBM.SYSVOLUMES V1
       WHERE VOLID <=> '*' AND
          EXISTS (SELECT * FROM SYSIBM.SYSVOLUMES V2
                 WHERE V1.SGNAME = V2.SGNAME AND
                       V2.VOLID = '*')
```

GUPI

If the preceding query returns any rows, the identified storage groups have both specific and non-specific volume IDs. Table spaces in databases that use these storage group cannot be image-copied or recovered until ALTER STOGROUP is used to remove volumes, so that the storage group has either specific or non-specific volume IDs.

- Check for consistency between catalog tables by completing the following steps:
 - a) Run the queries that are not commented out in member DSNTESQ of the *prefix.SDSNSAMP* library.

If you are completing this task before migration to a new Db2 version, use the DSNTESQ member *prefix.SDSNSAMP* library that is provided with the release you are migrating from.

 - You can execute the SQL statements in DSNTESQ from SPUFI or from a dynamic SQL program like DSNTPE2.
 - You can run the queries on the actual catalog tables or on "mirror" copies of the catalog tables. If you run the queries on the copies, use the comment lines in member DSNTESQ for guidance. By running queries on copies of the catalog table, you reduce contention on the catalog.
- Any time that you tailor the Db2 catalog for a new Db2 version or Db2 13 function level, use the following process to check the integrity of the catalog:
 - a) Run the CHECK INDEX utilities on all the indexes in the catalog and directory by using the DSNTIJCX and DSNTIJCX2 jobs that were generated when you last ran the Db2 installation CLIST.
 - b) Run the queries in member DSNTESQ of the *prefix.SDSNSAMP* member.
 - c) Run the DSN1COPY utility with the CHECK option on the catalog table spaces.

Migrating a Db2 for z/OS subsystem to Db2 12 at function level 100 (Db2 Installation and Migration)

Related information

DSN1985I (Db2 Messages)

Backing up the Db2 catalog and directory

You can take periodic image copies of your Db2 catalog and directory for backup purposes.

About this task

You can reduce the amount of time that is required for recovering the Db2 directory or catalog by routinely taking image copies of the Db2 catalog and directory. The copied data and log data sets are needed for recovery.

For best results, make plans to periodically run the DSNTIJIC job that is provided with Db2 against the directory and catalog after migration, perhaps daily or weekly, and do this before updating the Db2 catalog for version migrations or function level activation.

Procedure

To create an image copy of the directory and catalog, complete the following steps with a DSNTIJIC job that was generated when you last ran the Db2 installation CLIST. If you are backing up the catalog during migration to a new Db2 version, use the DSNTIJIC job from the version you are migrating from.

1. Examine job DSNTIJIC for the following items, and modify it as needed. For example, you might need to update the following items in the job:
 - The tape unit name. The job lists the tape unit name as TAPE. If this is incorrect for your site, correct it. The name TAPE is also used as the unit name for the default archive log data sets.
 - Expiration date or retention period. You can add a retention period or an expiration date to the job.

- The user on the JOB statement. Ensure that the user is authorized. If Db2 is started under ACCESS(MAINT), this must be the same user that you specified for either the SYSTEM ADMIN 1 option or the SYSTEM ADMIN 2 option on installation panel DSNTIPP1.
2. Run the DSNTIJIC job.
 3. If the DSNTIJIC job fails or an abend occurs, look for problems with the tape that is set up for image copy. If you do not find a problem, examine the log for problems. For example, look for incorrect size or I/O errors.

Reorganizing the Db2 catalog and directory

The REORG TABLESPACE utility can be run on all the table spaces in the catalog database (DSNDB06) to reclaim unused or wasted space, which can affect performance.

For detailed information about completing this task and other important consideration, see [Reorganizing the catalog and directory \(Db2 Utilities\)](#).

For best results, also run the REORG TABLESPACE utility for any altered Db2 catalog objects that a CATMAINT utility job places in REORG-pending (AREO*) advisory status.

The REORG TABLESPACE utility observes the PCTFREE and FREEPAGE values specified in the ALTER INDEX statement for all the catalog indexes and the following table spaces:

- DSNDB06.SYSDDF
- DSNDB06.SYSGPAUT
- DSNDB06.SYSGRTNS
- DSNDB06.SYSHIST
- DSNDB06.SYSJAVA
- DSNDB06.SYSJAUXA
- DSNDB06.SYSJAUXB
- DSNDB06.SYSSEQ
- DSNDB06.SYSSEQ2
- DSNDB06.SYSSTATS
- DSNDB06.SYSTSCHX
- DSNDB06.SYSTSCKD
- DSNDB06.SYSTSCKS
- DSNDB06.SYSTSCPY
- DSNDB06.SYSTSSRG
- DSNDB06.SYSUSER
- DSNDB01.SCT02
- DSNDB01.SPT01

Table 417. SQL statements that can be used to change existing catalog indexes, sequences, and table spaces, or to add indexes to any of the catalog tables (continued)

SQL statement	Index	Allowable clauses and usage notes
CREATE INDEX	User-created	<p>All clauses are allowed, except for:</p> <ul style="list-style-type: none"> CLOSE YES CLUSTER UNIQUE DEFER YES (only on tables SYSINDEXES, SYSINDEXPART, and SYSKEYS) COMPRESS YES Any partitioning clause <p>The USING clause is ignored.</p> <p>Indexes that are created with <i>key-expressions</i> are not allowed on the catalog.</p> <p>The only value allowed for BUFFERPOOL is BP0.</p> <p>You can create up to 500 indexes on the catalog.</p>
DROP INDEX	User-created	The statement has no clauses.

Appendix I. Db2 directory tables

Db2 for z/OS maintains a set of tables (in database DSNDB01) called the Db2 directory. Authorized users can query the directory; however, it is primarily intended for use by Db2 and is therefore subject to change.

About these topics

These topics describe the directory tables that allow SELECT operations by describing the columns of those tables.

Authorization for SELECT for Db2 directory tables

Users must have one of the following privileges to execute SELECT statements on the directory tables:

- Installation SYSADM
- SYSADM
- SYSCTRL
- ACCESSCTRL
- DATAACCESS
- SECADM
- SQLADM
- System DBADM
- DBADM on DSNDB01
- The SELECT privilege on a specific table

All directory tables are qualified by SYSIBM. Do not use this qualifier for user-defined tables.

The directory tables are not, in most cases, updated as part of Db2 operations.

The following table lists restrictions on SQL statements that reference directory tables:

SQL statement	Restriction
ALTER TABLE	<i>table-name</i> cannot specify a directory table.
ALTER TABLESPACE	The table space cannot be altered if it is associated with a directory table.
CREATE INDEX	ON <i>table-name</i> or <i>aux-table-name</i> cannot specify a directory table.
CREATE TRIGGER (basic)	ON <i>table-name</i> cannot specify a directory table.
CREATE TRIGGER (advanced)	ON <i>table-name</i> cannot specify a directory table.
DELETE	FROM <i>table-name</i> cannot specify a directory table.
DROP	<i>table-name</i> cannot specify a directory table.
INSERT	INTO <i>table-name</i> cannot specify a directory table.
MERGE	INTO <i>table-name</i> cannot specify a directory table.
RENAME	<i>source-table-name</i> cannot specify a directory table.
TRANSFER OWNERSHIP	TABLE <i>table-name</i> cannot specify a directory table.
UPDATE	<i>table-name</i> cannot specify a directory table.

Programming interface information

None of the directory table columns are part of the general-use programming interface. The column labeled "Use" in the table that describes the column indicates whether the column is part of the product-sensitive interface or is for internal, IBM use, only. The values that "Use" can assume are as follows:

Value

Meaning

S

Column is part of the product-sensitive interface

I

Column is for internal use only

For columns for which "Use" is I, the name of the column and its description do not appear in the explanation of the column.

Db2 directory table spaces and indexes

The following table lists the table space and indexes for each directory table and lists the index fields for each index. The indexes are in ascending order.

The directory table space, tables, and indexes are primarily intended for use by Db2 and are therefore subject to change.

Table 418. Table spaces and indexes for the directory tables

TABLE SPACE DSNDB01. ...	TABLE SYSIBM. ...	INDEX SYSIBM. ...	INDEX FIELDS
DBD01	<u>DBDR</u>	DSNDB01X	DBID.SECTION
SYSDBDXA	<u>SYSDBD_DATA</u>	DSNDB1XA	DBD_DATA

SYSUTILX	<u>SYSUTILX</u>	DSNLUX02	UTILID.SEQNO

SYSIBM.DBDR table

The DBDR table stores one row for each DBD section. The schema is SYSIBM.

Table 419. SYSIBM.SYSDBDR table column descriptions

Column name	Data type	Description	Use
	INTEGER	Not used	S
DBID	SMALLINT	DBID of the database	S
SECTION	SMALLINT	DBD section number	S
DBD_ROWID	ROWID	ID that is used to support the DBD_DATA column	S
DBD_DATA	BLOB(2G)	DBD data for the section	I

SYSIBM.SYSDBD_DATA table

The SYSDBD_DATA table is an auxiliary table for the SYSIBM.DBDR table. The schema is SYSIBM.

Table 420. SYSIBM.SYSDBD_DATA table column descriptions

Column name	Data type	Description	Use
DBD_DATA	BLOB(2G)	Contents of the DBD section.	I

SYSIBM.SCTR table

The SCTR table stores Skeleton Cursor Tables (SKCT) information. The schema is SYSIBM.

Table 421. SYSIBM.SCTR table column descriptions

Column name	Data type	Description	Use
SCTLL	CHAR (4) FOR BIT DATA	The length of the record.	S
SCTNAME	CHAR (14) FOR BIT DATA	The plan name, section number, and sequence number.	S
SCTDAT	VARCHAR(4028)	SKCT data.	I

SYSIBM.SPTR table

The SPTR table stores skeleton package table (SKPT) information. The schema is SYSIBM.

Table 422. SYSIBM.SPTR table column descriptions

Column name	Data type	Description	Use
SPTLL	INTEGER	The length of the record.	S
SPTLOCID	VARCHAR(128)	Package location.	S
SPTCOLID	VARCHAR(128)	Package collection ID.	S
SPTNAME	VARCHAR(128)	Package name.	S

Table 422. SYSIBM.SPTR table column descriptions (continued)

Column name	Data type	Description	Use
SPTCONID	CHAR(8) FOR BIT DATA	Package consistency token.	S
SPTRESV	CHAR(2) FOR BIT DATA	Internal use only.	I
SPTSEC	CHAR(4) FOR BIT DATA	Section number.	S
SPTSEQ	CHAR(2) FOR BIT DATA	Sequence number within the section.	S
SPTBODY	VARCHAR(1)	Reserved for future IBM use.	I
SPTVER	VARCHAR(64)	Package version.	S
SPT_ROWID	ROWID	ROWID that Db2 creates for the LOB columns in this table.	S
SPT_DATA	BLOB(2G)	Internal use only.	I
SPT_EXPLAIN	BLOB(2G)	Internal use only.	I

SYSIBM.SYSSPTSEC_DATA table

The SYSSPTSEC_DATA table is an auxiliary table that contains package data for the SPTR table. The schema is SYSIBM.

Table 423. SYSIBM.SYSSPTSEC_DATA table column descriptions

Column name	Data type	Description	Use
SPT_DATA	BLOB(2G)	Contents of the SKPT section	I

SYSIBM.SYSSPTSEC_EXPL table

The SYSSPTSEC_EXPL table is an auxiliary table that contains static package explain data for the SPTR table. The schema is SYSIBM.

Table 424. SYSIBM.SYSSPTSEC_EXPL table column descriptions

Column name	Data type	Description	Use
SPT_EXPLAIN	BLOB(2G)	Contents of the SKPT section explain block	I

SYSIBM.SYSLGRNX table

The SYSLGRNX table stores recovery log ranges that record the time an index space defined with COPY YES or a table space was open for updates. This provides an efficient way for Db2 to access the appropriate log records for recovery, rather than having to scan every record in the recovery log for a particular table. The schema is SYSIBM.

Table 425. SYSIBM.SYSLGRNX table column descriptions

Column name	Data type	Description	Use
LGRDBID	CHAR(2) FOR BIT DATA	DBID of the modified object	S
LGRPSID	CHAR(2) FOR BIT DATA	OBID of the modified object	S
LGRUCDT	CHAR(6)	Modification date in the form <i>mmdyy</i>	S
LGRUCTM	CHAR(8)	Modification time in the form <i>hhmmssst</i>	S
LGRSRBA	CHAR(10) FOR BIT DATA	Starting RBA	S
LGRSPBA	CHAR(10) FOR BIT DATA	Stopping RBA	S
LGRPRT	SMALLINT	Partition number in the table space or index space	S
LGRSLRSN	CHAR(10) FOR BIT DATA	Starting LRSN of update log records for data sharing. Otherwise, the system clock value that corresponds to the first update log record.	S
LGRELRSN	CHAR(10) FOR BIT DATA	Ending LRSN of update log records for data sharing. Otherwise, the system clock value that corresponds to the last update log record.	S
LGRMEMB	CHAR(2)	Data sharing member ID of the modifying Db2 subsystem. X'0000' for a non-data-sharing environment.	S

SYSIBM.SYSUTIL table

The SYSUTIL table stores status information about Db2 utilities that are active or stopped. Each record is uniquely identified by the utility identifier. Each row of the table contains the information for one utility execution step. When the utility completes, the corresponding entries in the SYSUTIL table are deleted. The schema is SYSIBM.

Table 426. SYSIBM.SYSUTIL table column descriptions

Name	Data type	Description	Use
USUUID	CHAR(16)	UTILID value that was passed in a JOB statement parameter	S
USUJOBNM	CHAR(8)	Job name from the JOB statement	S
USUAUID	CHAR(8)	Authorization ID of the invoker	S
USURDATE	CHAR(4) FOR BIT DATA	Date of the utility	S
USUREL	CHAR(3)	Utility release level at restart time	S
USUIRQD	CHAR(1)	IBM required field	S

Table 426. SYSIBM.SYSUTIL table column descriptions (continued)

Name	Data type	Description	Use
USULSIZE	CHAR(4) FOR BIT DATA	List size	S
USULCUR	CHAR(4) FOR BIT DATA	The object that is currently being processed or was last processed	S
USUUTNAM	CHAR(8)	Name of the currently executing utility	S
USUPHASE	CHAR(8)	Current phase of the currently executing utility	S
USUDSNU	CHAR(2) FOR BIT DATA	Data set or piece number	S
USUDSNU2	CHAR(2) FOR BIT DATA	Ending number of the partition range	S
USUSTATU	CHAR(1)	Reserved	I
USUTREQ	CHAR(1)	Termination requested (Y or N)	S
USUFORCE	CHAR(1)	Element of USO forced (Y or N)	S
USURLOK	CHAR(1)	Reload was successful (Y or N)	S
USUCMPOK	CHAR(1)	Compatibility check passed (Y or N)	S
USURSFLG	BIT(8)	Utility restriction flags	S
USURTF LG	BIT(8)	Term settings	S
USURSFLG2	BIT(8)	Utility flags	S
USUPOS	CHAR(4) FOR BIT DATA	Relative USM position in the SYSIN DD statement	S
USUDONE	CHAR(8) FOR BIT DATA	Number of objects processed	S
USUCKSUM	CHAR(4) FOR BIT DATA	USU checksum	S
USUDBOB	CHAR(2) FOR BIT DATA	DBID for the table space	S
USUPSID	CHAR(2) FOR BIT DATA	PSID for the table space or index space	S
USUPSDD	CHAR(2) FOR BIT DATA	Secondary PSID for RECOVER INDEX data page set	S
USUCATMGFRM	CHAR(1) FOR BIT DATA	Saved catalog level for the release from which migration is done, from the DBD01 header page	S

Table 426. SYSIBM.SYSUTIL table column descriptions (continued)

Name	Data type	Description	Use
USUOFLAG	CHAR(1) FOR BIT DATA	Flags for object properties	S
USUDBNAM	CHAR(8)	Database name	S
USUSPNAM	CHAR(8)	Table space or index space name	S
USUMEMBR	CHAR(8)	Member name	S
USUOCATR	CHAR(1) FOR BIT DATA	Saved catalog release level, from the DBD01 header page	S
USUOCATV	CHAR(1) FOR BIT DATA	Saved catalog version level, from the DBD01 header page	S
USUOCATCV	CHAR(1) FOR BIT DATA	Saved migration mode, from the DBD01 header page	S
USUOCATH	CHAR(1) FOR BIT DATA	Saved highest version of the catalog	S
USUUDA	CHAR(150) FOR BIT DATA	Utility-dependent data	S
USURTIME	CHAR(4) FOR BIT DATA	Latest utility start time	S
USURLSN	CHAR(6) FOR BIT DATA	Latest utility start LRSN	S
USURDATO	CHAR(4) FOR BIT DATA	Original utility start date	S
USURTIMO	CHAR(4) FOR BIT DATA	Original utility start time	S
USURLSNO	CHAR(4) FOR BIT DATA	Original utility start LRSN	S
USUR5	CHAR(10) FOR BIT DATA	Reserved	I
USURCNTR	CHAR(31) FOR BIT DATA	Generic counter or value holder	S
USURLSNX	CHAR(10) FOR BIT DATA	Latest utility start LRSN value	S

Table 426. SYSIBM.SYSUTIL table column descriptions (continued)

Name	Data type	Description	Use
USURLSOX	CHAR(10) FOR BIT DATA	Original utility start LRSN value	S
USUR6		Reserved	I
USUWSTRN	CHAR(27000) FOR BIT DATA	Utility-dependent restart information	S

SYSIBM.SYSUTILX table

The SYSUTILX table is a dependent of the SYSUTIL table. A record is created in the SYSUTILX table when the amount of information in the parent record exceeds the record size of SYSUTIL. The rows in SYSUTILX are uniquely identified by the utility identifier and sequence number.

Table 427. SYSIBM.SYSUTILX table column descriptions

Column name	Data type	Description	Use
UTILID	CHAR(16)	The utility ID that identifies the parent record in SYSIBM.SYSUTIL	S
SEQNO	SMALLINT	The sequence number of this row	S
	CHAR(12)	Reserved	I
CHECKPOINT	VARCHAR(32000)	The overflow checkpoint/restart information	S

Appendix J. Performance information for SQL application programming

Efficient applications are an important first step to good system and application performance. As you code applications that access data in Db2, consider performance objectives in your application design.

The following topics can help you understand how application programmers can consider performance as they write applications that access data in Db2 for z/OS.

Concurrency and programming

The goal is to program and prepare applications in a way that:

- Protects the integrity of the data that is being read or updated from being changed by other applications.
- Minimizes the length of time that other access to the data is prevented.

For more information about data concurrency in Db2 and recommendations for improving concurrency in your application programs, see the following topics:

- [Programming for concurrency \(Db2 Performance\)](#)
- [Designing databases for concurrency \(Db2 Performance\)](#)
- [Concurrency and locks \(Db2 Performance\)](#)
- [Improving concurrency \(Db2 Performance\)](#)
- [Improving concurrency in data sharing environments \(Db2 Data Sharing Planning and Administration\)](#)

Writing efficient queries

The predicates, subqueries, and other structures in SQL statements affect the access paths that Db2 uses to access the data.

For information about how to write SQL statements that access data efficiently, see the following topics:

- [Ways to improve query performance \(Introduction to Db2 for z/OS\)](#)
- [Writing efficient SQL queries \(Db2 Performance\)](#)

Analyzing access paths

By analyzing the access path that Db2 uses to access the data for an SQL statement, you can discover potential problems. You can use this information to modify your statement to perform better.

Tip: Query tuning capabilities that can help you with this task, such as *visual explain* and *statistics advisor*, are available in [IBM Db2 Administration Foundation for z/OS](#) and [IBM Db2 for z/OS Developer Extension](#).

For information about how you can use EXPLAIN tables to analyze the access paths for your SQL statements, see the following topics:

- [Investigating access path problems \(Db2 Performance\)](#)
- [00C200A4 \(Db2 Codes\)](#)
- [Investigating SQL performance by using EXPLAIN \(Db2 Performance\)](#)
- [Interpreting data access by using EXPLAIN \(Db2 Performance\)](#)
- [EXPLAIN tables \(Db2 Performance\)](#)
- [“EXPLAIN statement” on page 1931](#)

Distributed data access performance

The goal is to reduce the amount of network traffic that is required to access the distributed data, and to manage the use of system resources such as distributed database access threads and connections.

For information about improving the performance of applications that access distributed data, see the following topics:

- [Ways to reduce network traffic \(Introduction to Db2 for z/OS\)](#)
- [Managing Db2 threads \(Db2 Performance\)](#)
- [Improving performance for applications that access distributed data \(Db2 Performance\)](#)
- [Improving performance for SQL statements in distributed applications \(Db2 Performance\)](#)

Stored procedures performance

For information about stored procedures and Db2 performance, see the following topics:

- [Implementing Db2 stored procedures \(Stored procedures provided by Db2\)](#)
- [Improving the performance of stored procedures and user-defined functions \(Db2 Performance\)](#)

Related concepts

[SQL: The language of Db2](#)

The language that you use to access the data in Db2 tables is the *structured query language (SQL)*. SQL is a standardized language for defining and manipulating data in a relational database.

Appendix K. Db2 XML schema repository tables

The Db2 for z/OS XML schema repository (XSR) is a set of Db2 tables where you can store XML schemas.

Db2 creates the XSR tables during installation or migration. After you add XML schemas to the Db2 XSR, you can use them to validate XML documents before you store them in XML columns.

An XML schema consists of a set of XML schema documents. To add an XML schema to the Db2 XSR, you register XML schema documents to Db2. The XML schema documents must be in the Unicode encoding scheme.

Programming interface information

Not all XSR table columns are part of the general-use programming interface. Whether a column is part of this interface is indicated in a column labeled "Use" in the row that describes the table column. The meaning of the values for the "Use" column is indicated in the following table.

Table 428. Meaning of values in the "Use" column if table descriptions

Value	Meaning
G	Column is part of the general-use programming interface
S	Column is part of the product-sensitive interface
I	Column is for IBM use only
N	Column is not used

For columns for which "Use" is N or I, the name of the column and its description do not appear in the explanation of the column.

XML schema repository (XSR) table spaces and indexes

Db2 XSR tables are contained in certain table spaces and have indexes.

The following tables list the table space and indexes for each XRS table and lists the index fields for each index. The indexes are in ascending order, except where noted.

Table 429. Table spaces and indexes for the DSNXSR database tables

Table space DSNXSR. ...	Table SYSIBM. ...	Index SYSIBM. ...	Index fields
SYSXSR	XSROBJECTS	XSROBJ01	XSROBJECTID
		XSROBJ02	XSROBJECTSCHEMA.XSROBJECTNAME
		XSROBJ03	TARGETNAMESPACE.SCHEMALOCATION

Table 429. Table spaces and indexes for the DSNXSR database tables (continued)

Table space DSNXSR. ...	Table SYSIBM. ...	Index SYSIBM. ...	Index fields
		XSRBJ04	SCHEMALOCATION
	XSROBJECT- COMPONENTS	XSRCOMP01	XSRCOMPONENTID
		XSRCOMP02	TARGETNAMESPACE.SCHEMALOCATION
	XSROBJECT- HIERARCHIES	XSRHIER01	XSROBJECTID.TARGETNAMESPACE. SCHEMALOCATION
		XSRHIER02	XSROBJECTID.TARGETNAMESPACE
SYSXSRA1	XSROBJECTGRAMMAR	XSRXOG01	GRAMMAR
SYSXSRA2	XSROBJECTPROPERTY	XSRXOP01	PROPERTIES
SYSXSRA3	XSRCOMPONENT	XSRXCC01	COMPONENT
SYSXSRA4	XSRPROPERTY	XSRXCP01	PROPERTIES

Note: Index field is in descending order

XSRANNOTATIONINFO table

The XSRANNOTATIONINFO table contains one row for each annotation in an XML schema to record the table and column information for the annotation. The schema is SYSIBM.

Table 430. SYSIBM.XSRANNOTATIONINFO table column descriptions

Column name	Data type	Description	Use
XSROBJECTID	INTEGER	Internal identifier of the XML schema	G
ANNID	INTEGER	Internal identifier of the XML schema annotation	G
TABSCHEMA	VARCHAR(128)	Schema of the table for which annotation information is recorded	G
TABNAME	VARCHAR(128)	Name of the table for which annotation information is recorded	G
ROWSET	INTEGER	Name of the rowset for this annotation	G
COLNAME	VARCHAR(30)	Name of the column for this annotation	G
COLTYPE	INTEGER	Data type of the column for this annotation	G

Table 430. SYSIBM.XSRANNOTATIONINFO table column descriptions (continued)

Column name	Data type	Description	Use
INSTANCETYPE	INTEGER	Type of data that is provided by the parser during decomposition: 2 Decimal 4 Long integer 5 Integer 6 Short integer 16 String 30 Datetime 41 Float 42 Double	G
TRUNCATE	INTEGER	Indication of whether data can be truncated: 0 Data cannot be truncated 1 Data can be truncated	G
EXPRESSION	VARCHAR(1024)	Expression to be applied to data on insert by Db2	G
CONDITION	VARCHAR(1024)	Condition to be applied before any data is inserted by Db2	G
CASTEXPRESSION	VARCHAR(20)	Cast expression to be applied when the column data is inserted by Db2 during decomposition.	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See the information on release dependency indicators in Db2 catalog tables for the values.	G

XSRCOMPONENT table

The XSRCOMPONENT table is an auxiliary table for the BLOB column COMPONENT in the SYSIBM.XSROBJECTCOMPONENTS table. It is in LOB table space SYSXSRA3. The schema is SYSIBM.

Table 431. SYSIBM.XSRCOMPONENT table column descriptions

Column name	Data type	Description	Use
COMPONENT	BLOB(30M)	Contents of the XML schema document	G

XSROBJECTS table

The XSROBJECTS table contains one row for each registered XML schema. The schema is SYSIBM.

Rows in this table can only be changed using static SQL statements issued by the Db2-supplied XSR stored procedures.

Table 432. SYSIBM.XSROBJECTS table column descriptions

Column name	Data type	Description	Use
XSROBJECTID	INTEGER NOT NULL	Internal identifier of the XML schema. XSROBJECTID is generated as an identity column.	G
XSROBJECTSCHEMA	VARCHAR(128) NOT NULL	Qualifier of the XML schema name. This is always set to 'SYSXSR'.	G
XSROBJECTNAME	VARCHAR(128) NOT NULL	Name of the XML schema.	G
TARGETNAMESPACE	INTEGER	The value of the STRINGID column in SYSIBM.SYSXMLSTRINGS when the target namespace URI of the primary XML schema document is stored in SYSIBM.SYSXMLSTRINGS	G
SCHEMALOCATION	INTEGER	The value of the STRINGID column in SYSIBM.SYSXMLSTRINGS when the schema location URI of the primary XML schema document is stored in SYSIBM.SYSXMLSTRINGS	G
ROWID	ROWID NOT NULL GENERATED ALWAYS	The ID that is used to support BLOB data type values.	G
GRAMMAR	BLOB(250M)	The internal binary representation of the XML schema.	G
PROPERTIES	BLOB(5M)	Additional property information of the entire XML schema.	G
CREATEDBY	VARCHAR(128) NOT NULL	Authorization ID under which the XML schema was created.	G
CREATEDTS	TIMESTAMP NOT NULL	The time that the Db2-supplied stored procedure XSR_REGISTER was executed for the XML schema.	G
STATUS	CHAR(1) NOT NULL WITH DEFAULT	Registration status of the XML schema: C Complete I Incomplete T Temporary	G

Table 432. SYSIBM.XSROBJECTS table column descriptions (continued)

Column name	Data type	Description	Use
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G
	CHAR(1)	Not used.	N
	VARCHAR(128)	Not used.	N
REMARKS	VARCHAR(762)	Character string that contains comments about this XML schema.	G

XSROBJECTCOMPONENTS table

The XSROBJECTCOMPONENTS table contains one row for each component (document) in an XML schema. The schema is SYIBM.

Rows in this table can only be changed using static SQL statements issued by the Db2-supplied XSR stored procedures.

Table 433. SYSIBM.XSROBJECTCOMPONENTS table column descriptions

Column name	Data type	Description	Use
XSRCOMPONENTID	INTEGER NOT NULL	Internal identifier of the XML schema document. XSRCOMPONENTID is generated as an identity column.	G
TARGETNAMESPACE	INTEGER	The value of the STRINGID column in SYSIBM.SYSXMLSTRINGS when the target namespace URI of the primary XML schema document is stored in SYSIBM.SYSXMLSTRINGS.	G
SCHEMALOCATION	INTEGER	The value of the STRINGID column in SYSIBM.SYSXMLSTRINGS when the schema location URI of the primary XML schema document is stored in SYSIBM.SYSXMLSTRINGS.	G
ROWID	ROWID NOT NULL GENERATED ALWAYS	The ID that is used to support BLOB data type values.	G
COMPONENT	BLOB(30M) NOT NULL	Contents of the XML schema document.	G
PROPERTIES	BLOB(5M)	If available, additional property information of the XML schema document	G
CREATEDTS	TIMESTAMP NOT NULL	The time that the XML schema document was registered.	G

Table 433. SYSIBM.XSROBJECTCOMPONENTS table column descriptions (continued)

Column name	Data type	Description	Use
STATUS	CHAR(1) NOT NULL WITH DEFAULT	Registration status of the XML schema: C Complete I Incomplete	G
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G

XSROBJECTGRAMMAR table

The XSROBJECTGRAMMAR table is an auxiliary table for the BLOB column GRAMMAR in SYSIBM.XSROBJECTS. It is in LOB table space SYSXSRA1. The schema is SYSIBM.

Table 434. SYSIBM.XSROBJECTGRAMMAR table column descriptions

Column name	Data type	Description	Use
GRAMMAR	BLOB(250M)	Internal binary representation of the XML schema	G

XSROBJECTHIERARCHIES table

The XSROBJECTHIERARCHIES table contains one row for each component (document) in an XML schema to record the XML schema document hierarchy relationship. The schema is SYSIBM.

Rows in this table can only be changed using static SQL statements issued by the Db2-supplied XSR stored procedures.

Table 435. SYSIBM.XSROBJECTHIERARCHIES table column descriptions

Column name	Data type	Description	Use
XSROBJECTID	INTEGER	Internal identifier of the XML schema.	G
XSRCOMPONENTID	INTEGER	Internal identifier of the XML schema document.	G
HTYPE	CHAR(1)	Hierarchy type: D Document P Primary document	G
TARGETNAMESPACE	INTEGER	The value of the STRINGID column in SYSIBM.SYSXMLSTRINGS when the target namespace URI of the primary XML schema document is stored in SYSIBM.SYSXMLSTRINGS.	G
SCHEMALOCATION	INTEGER	The value of the STRINGID column in SYSIBM.SYSXMLSTRINGS when the schema location URI of the primary XML schema document is stored in SYSIBM.SYSXMLSTRINGS.	G

Table 435. SYSIBM.XSROBJECTHIERARCHIES table column descriptions (continued)

Column name	Data type	Description	Use
RELCREATED	CHAR(1) NOT NULL	The release of Db2 that is used to create the object. See Release dependency indicators for the values.	G

XSROBJECTPROPERTY table

The XSROBJECTPROPERTY table is an auxiliary table for the BLOB column PROPERTIES in SYSIBM.XSROBJECTS. It is in LOB table space SYSXSRA2. The schema is SYSIBM.

Table 436. SYSIBM.XSROBJECTPROPERTY table column descriptions

Column name	Data type	Description	Use
PROPERTIES	BLOB(5M)	Contents of the additional property information of the entire XML schema.	G

XSRPROPERTY table

The XSRPROPERTY table is an auxiliary table for the BLOB column PROPERTIES in SYSIBM.XSROBJECTCOMPONENTS. It is in LOB table space SYSXSRA4. The schema is SYSIBM.

Table 437. SYSIBM.XSRPROPERTY table column descriptions

Column name	Data type	Description	Use
COMPONENT	BLOB(5M)	Contents of the additional property information of the XML schema document.	G

Appendix L. EXPLAIN tables

EXPLAIN tables contain information about SQL statements and functions that run on Db2 for z/OS.

You can create and maintain a set of *EXPLAIN tables* to capture and analyze information about the performance of SQL statements and functions that run on Db2 for z/OS. Each row in an EXPLAIN table describes some aspect of a step in the execution of a query or subquery in an explainable statement. The column values for the row identify, among other things, the query or subquery, the tables and other objects involved, the methods used to carry out each step, and cost information about those methods. Db2 creates EXPLAIN output and populates EXPLAIN tables in the following situations:

- When an EXPLAIN statement is executed.
- At BIND or REBIND with the EXPLAIN(YES) or (ONLY) bind options. Rows are added for every explainable statement in the plan or package being bound. For a plan, these do not include statements in the packages that can be used with the plan. For either a package or plan, they do not include explainable statements within EXPLAIN statements nor do they include explainable statements that refer to declared temporary tables, which are incrementally bound at run time.
- When an explainable dynamic statement is executed and the value of the CURRENT EXPLAIN MODE special register is set to YES or EXPLAIN.

Important: It is best to convert EXPLAIN tables to Db2 12 format during migration, or soon after migration. In Db2 12, the EXPLAIN function supports tables in Db2 12 or Db2 11 formats only. However, Db2 11 format EXPLAIN tables are deprecated. If you invoke EXPLAIN and Db2 11 tables are used, Db2 issues SQL code +20520. If tables of an unsupported format are found, Db2 issues SQL code -20008 and the EXPLAIN operation fails. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See [“ADMIN_EXPLAIN_MAINT stored procedure” on page 765](#) for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Related reference

[BIND and REBIND options for packages, plans, and services \(Db2 Commands\)](#)

[EXPLAIN statement](#)

[ADMIN_EXPLAIN_MAINT stored procedure](#)

You can use the ADMIN_EXPLAIN_MAINT stored procedure to create EXPLAIN tables, upgrade the tables to the format for the current Db2 version, and complete other administrative tasks.

PLAN_TABLE

The plan table, PLAN_TABLE, contains information about access paths that is collected from the results of EXPLAIN statements.

Tip: You can generate diagrams of the access paths used for your SQL statements by using the *visual explain* capability in tools such as [IBM Db2 Administration Foundation for z/OS](#) and [IBM Db2 for z/OS Developer Extension](#).

PSPI

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix.SDSNSAMP* library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See [“ADMIN_EXPLAIN_MAINT stored procedure” on page 765](#) for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Optional PLAN_TABLE formats

A PLAN_TABLE instance can have a format with fewer columns than those shown in the sample CREATE TABLE statement. However instances of PLAN_TABLE must have one of the following formats:

Db2 12 format

All columns shown in the sample CREATE TABLE statement, up to and including the PER_STMT_ID column (COLCOUNT=67).

Db2 11 format

All columns shown in the sample CREATE TABLE statement, up to and including the EXPANSION_REASON column (COLCOUNT=66). This format is deprecated in Db2 12.

Important: If the EXPLAIN tables have any format older than the Db2 11 format, Db2 returns an error for any operation that tries to insert rows in the EXPLAIN tables. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See [“ADMIN_EXPLAIN_MAINT stored procedure” on page 765](#) for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

Your subsystem or data sharing group can contain more than one of these tables, including a table with the qualifier SYSIBM, a table with the qualifier DB2OSCA, and additional tables that are qualified by user IDs.

The following table shows the descriptions of the columns in PLAN_TABLE.

Table 438. Descriptions of columns in PLAN_TABLE

Column name	Data Type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	<p>A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.</p>
APPLNAME	VARCHAR(24) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
PLANNO	SMALLINT NOT NULL	The number of the step in which the query that is indicated in QBLOCKNO was processed. This column indicates the order in which the steps were executed.
METHOD	SMALLINT NOT NULL	<p>A number that indicates the join method that is used for the step:</p> <p>0 The table in this step is the first table that is accessed, a continuation of a previous table that was accessed, or a table that is not used.</p> <p>1 A nested loop join is used. For each row of the current composite table, matching rows of a new table are found and joined.</p> <p>2 A merge scan join is used. The current composite table and the new table are scanned in the order of the join columns, and matching rows are joined.</p> <p>3 Sorts are needed by ORDER BY, GROUP BY, SELECT DISTINCT, UNION, INTERSECT, EXCEPT, a quantified predicate, or an IN predicate. This step does not access a new table.</p> <p>4 A hybrid join was used. The current composite table is scanned in the order of the join-column rows of the new table. The new table is accessed using list prefetch.</p>
CREATOR	VARCHAR(128) NOT NULL	The creator of the new table that is accessed in this step, blank if METHOD is 3.

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
TNAME	VARCHAR(128) NOT NULL	<p>The name of one of the following objects:</p> <ul style="list-style-type: none"> • Table • Materialized query table • Created or declared temporary table • Materialized view • Materialized table expression • Any of the following object names that identify intermediate results: <p>'DSNWFQB(qblockno)' The intermediate result of a UNION ALL, INTERSECT ALL, EXCEPT ALL, or an outer join that is materialized. If a view is merged, the name of the view does not appear.</p> <p>'DSN_DIM_TBLX(qblockno)' The work file of a star join dimension table.</p> <p>'DSN_SPIX_TBLX(qblockno)' A sparse index used for a sideways table reference.</p> <p>The value is blank if METHOD is 3.</p>
TABNO	SMALLINT NOT NULL	Values are for IBM use only.
ACCESSTYPE ^{"1" on page 2836}	CHAR(2) NOT NULL	The method of accessing the new table. ^{"4" on page 2836}
MATCHCOLS	SMALLINT NOT NULL	For ACCESSTYPE I, IN, I1, N, NR, MX, or DX, the number of index keys that are used in an index scan; otherwise, 0.
ACCESSCREATOR	VARCHAR(128) NOT NULL	For ACCESSTYPE I, I1, N, NR, MX, or DX, the creator of the index; otherwise, blank.
ACCESSNAME	VARCHAR(128) NOT NULL	For ACCESSTYPE I, I1, H, MH, N, NR, MX, or DX, the name of the index; for ACCESSTYPE P, DSNPJW(<i>mixopseqno</i>) is the starting pair-wise join leg in MIXOPSEQ; otherwise, blank.
INDEXONLY	CHAR(1) NOT NULL	<p>Indication of whether access to an index alone is enough to perform the step, or Indication of whether data too must be accessed.</p> <p>Y Yes</p> <p>N No</p>

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
SORTN_UNIQ	CHAR(1) NOT NULL	Indication of whether the new table is sorted to remove duplicate rows. Y Yes N No
SORTN_JOIN	CHAR(1) NOT NULL	Indication of whether the new table is sorted for join method 2 or 4. Y Yes N No
SORTN_ORDERBY	CHAR(1) NOT NULL	Indication of whether the new table is sorted for ORDER BY. Y Yes N No
SORTN_GROUPBY	CHAR(1) NOT NULL	Indication of whether the new table is sorted for GROUP BY. Y Yes N No
SORTC_UNIQ	CHAR(1) NOT NULL	Indication of whether the composite table is sorted to remove duplicate rows. Y Yes N No
SORTC_JOIN	CHAR(1) NOT NULL	Indication of whether the composite table is sorted for join method 1, 2 or 4. Y Yes N No
SORTC_ORDERBY	CHAR(1) NOT NULL	Indication of whether the composite table is sorted for an ORDER BY clause or a quantified predicate. Y Yes N No

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
SORTC_GROUPBY	CHAR(1) NOT NULL	<p>Indication of whether the composite table is sorted for a GROUP BY clause.</p> <p>Y Yes</p> <p>N No</p>
TSLOCKMODE	CHAR(3) NOT NULL	<p>An indication of the mode of lock that is acquired on either the new table, or its table space or table space partitions. If the isolation can be determined at bind time, the values are:</p> <p>IS Intent share lock</p> <p>IX Intent exclusive lock</p> <p>S Share lock</p> <p>U Update lock</p> <p>X Exclusive lock</p> <p>SIX Share with intent exclusive lock</p> <p>N UR isolation; no lock</p> <p>If the isolation level cannot be determined at bind time, the lock mode is determined by the isolation level at run time is shown by the following values.</p> <p>NS For UR isolation, no lock; for CS, RS, or RR, an S lock.</p> <p>NIS For UR isolation, no lock; for CS, RS, or RR, an IS lock.</p> <p>NSS For UR isolation, no lock; for CS or RS, an IS lock; for RR, an S lock.</p> <p>SS For UR, CS, or RS isolation, an IS lock; for RR, an S lock.</p> <p>Continues in next row.</p>

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
TSLOCKMODE (continued)		Continued from previous row. The data in this column is right justified. For example, IX appears as a blank, followed by I, followed by X. If the column contains a blank, then no lock is acquired. If the access method in the ACESSTYPE column is DX, DI, or DU, no latches are acquired on the XML index page and no lock is acquired on the new base table data page or row, nor on the XML table and the corresponding table spaces. The value of TSLOCKMODE is a blank in this case.
TIMESTAMP	CHAR(16) NOT NULL	This column is deprecated. Use EXPLAIN_TIME instead.
REMARKS	VARCHAR(762) NOT NULL	A field into which you can insert any character string of 762 or fewer characters. Db2 inserts a value into this column in certain situations. “6” on page 2838 , “7” on page 2839
PREFETCH	CHAR(1) NOT NULL WITH DEFAULT	Indication of whether data pages are to be read in advance by prefetch: 'D' Optimizer expects dynamic prefetch 'S' Pure sequential prefetch 'L' Prefetch through a page list 'U' List prefetch with an unsorted RID list blank Unknown or no prefetch

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
COLUMN_FN_EVAL	CHAR(1) NOT NULL WITH DEFAULT	<p>When an SQL aggregate function is evaluated:</p> <p>'R' While the data is being read from the table or index</p> <p>'S' While performing a sort to satisfy a GROUP BY clause</p> <p>'X' While data is read from a table or index, for aggregate functions when an OFFSET clause is specified</p> <p>'Y' While performing a sort, for aggregate functions when an OFFSET clause is specified</p> <p>blank After data retrieval and after any sorts</p>
MIXOPSEQ	SMALLINT NOT NULL WITH DEFAULT	<p>The sequence number of a step in a multiple index operation.</p> <p>1, 2, ... n For the steps of the multiple index procedure (ACCESSTYPE is MX, MI, MU, DX, DI, or DU), the sequence number of the OR predicate in the SQL statement. (ACCESSTYPE is 'NR').</p> <p>0 For any other rows.</p>

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package, to a statement that is explained when binding a package, or to a manually created PLAN_TABLE row for an optimization hint.</p> <p>If the value is not blank, the value is the same as one of the following:</p> <ul style="list-style-type: none"> • The VERSION value for the package that was used to create this EXPLAIN table row. • For a manually created EXPLAIN table row, the VERSION value that identifies the statement for which the hint is used. <p>For a row that is created by execution of an EXPLAIN statement or by binding a package with the EXPLAIN option, the version is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The collection ID:</p> <p>'DSNDYNAMICSQLCACHE' The row originates from the dynamic statement cache.</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
ACCESS_DEGREE	SMALLINT	The number of parallel tasks or operations that are activated by a query. This value is determined at bind time; the actual number of parallel operations that are used at execution time could be different. This column contains 0 if a host variable is used. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.
ACCESS_PGROUP_ID ^{“2”} on page 2836	SMALLINT	The identifier of the parallel group for accessing the new table. A parallel group is a set of consecutive operations, executed in parallel, that have the same number of parallel tasks. This value is determined at bind time; it could change at execution time. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.
JOIN_DEGREE	SMALLINT	The number of parallel operations or tasks that are used in joining the composite table with the new table. This value is determined at bind time and can be 0 if a host variable is used. The actual number of parallel operations or tasks used at execution time could be different. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.
JOIN_PGROUP_ID ^{“2”} on page 2836	SMALLINT	The identifier of the parallel group for joining the composite table with the new table. This value is determined at bind time; it could change at execution time. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.
SORTC_PGROUP_ID ^{“3”} on page 2836	SMALLINT	The parallel group identifier for the parallel sort of the composite table. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.
SORTN_PGROUP_ID ^{“3”} on page 2836	SMALLINT	The parallel group identifier for the parallel sort of the new table. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
PARALLELISM_ MODE“2” on page 2836	CHAR(1)	The kind of parallelism, if any, that is used at bind time: C Query CP parallelism. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns, if the method that it refers to does not apply, or if the plan or package was bound prior to DB2 10.
MERGE_ JOIN_ COLS	SMALLINT	The number of columns that are joined during a merge scan join (Method=2). This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.
CORRELATION_ NAME	VARCHAR(128)	The correlation name of a table or view that is specified in the statement. If no correlation name exists, then the column is null. This column contains the null value if the plan or package was bound using a plan table with fewer than 43 columns. Otherwise, it can contain null if the method that it refers to does not apply.
PAGE_RANGE	CHAR(1) NOT NULL WITH DEFAULT	Indication of whether the table qualifies for page range screening, so that plans scan only the partitions that are needed. Y Yes blank No
JOIN_TYPE	CHAR(1) NOT NULL WITH DEFAULT	The type of join: F FULL OUTER JOIN L LEFT OUTER JOIN P Pair-wise join S Star join blank INNER JOIN or no join RIGHT OUTER JOIN converts to a LEFT OUTER JOIN when you use it, so that JOIN_TYPE contains L.

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
GROUP_MEMBER	VARCHAR(24) NOT NULL WITH DEFAULT	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
IBM_SERVICE_DATA	VARCHAR(254) FOR BIT DATA	This column contains values that are for IBM use only.
WHEN_OPTIMIZE	CHAR(1) NOT NULL WITH DEFAULT	When the access path was determined: blank At bind time, using a default filter factor for any host variables, parameter markers, or special registers. B At bind time, using a default filter factor for any host variables, parameter markers, or special registers; however, the statement is re-optimized at run time using input variable values for input host variables, parameter markers, or special registers. The bind option REOPT(ALWAYS), REOPT(AUTO), or REOPT(ONCE) must be specified for reoptimization to occur. R At run time, using input variables for any host variables, parameter markers, or special registers. The bind option REOPT(ALWAYS), REOPT(AUTO), or REOPT(ONCE) must be specified for this to occur.
QBLOCK_TYPE ^{“1” on page 2836}	CHAR(6) NOT NULL WITH DEFAULT	For each query block, an indication of the type of SQL operation that is performed. For the outermost query, this column identifies the statement type. ^{“5” on page 2837}
BIND_TIME	TIMESTAMP NOT NULL WITH DEFAULT	This column is deprecated. Use EXPLAIN_TIME instead.
OPTHINT	VARCHAR(128) NOT NULL WITH DEFAULT	A string that you use to identify this row as an optimization hint for Db2. Db2 uses this row as input when choosing an access path.

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
HINT_USED	VARCHAR(128) NOT NULL WITH DEFAULT	<p>One of the following values:</p> <p>'APREUSE' When an access path was successfully reused because the APREUSE option was specified at bind or rebind.</p> <p>'opthint-value' When PLAN_TABLE access path hints are used. <i>opthint-value</i> is the value of the OPTHINT column for the hint that was used.</p> <p>'SYSQUERYPLAN query-id' When statement-level access path hints are used. <i>query-id</i> is the value of the QUERYID column in the SYSQUERYPLAN catalog table for the hint.</p> <p>'SYSQUERYSEL query-id' When a predicate selectivity override is used. <i>query-id</i> is the value of the QUERYID column of the SYSQUERYSEL catalog table row for the hint.</p> <p>'EXPLAIN PACKAGE: COPY copy-id' When the row is the result of an EXPLAIN PACKAGE statement. <i>copy-id</i> is one of the following values:</p> <p>CURRENT The current copy of the package.</p> <p>PREVIOUS The previous copy of the package.</p> <p>ORIGINAL The original copy of the package.</p> <p>'EXPLAIN SDQ: copy-id-number' The string <i>copy-id-number</i> can have one of the following values:</p> <p>CURRENT The current copy.</p> <p>INVALID The invalid copy.</p>

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
PRIMARY_ ACCESSTYPE	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates whether direct row access is attempted first:</p> <p>'D' Db2 tries to use direct row access with a rowid column. If Db2 cannot use direct row access with a rowid column at run time, it uses the access path that is described in the ACCESSTYPE column of PLAN_TABLE.</p> <p>'P' Db2 used data partitioned secondary index and a part-level operation to access the data.</p> <p>'S' Db2 used sparse index access for a sideways table reference.</p> <p>'T' The base table or result file is materialized into a work file, and the work file is accessed via sparse index access. If a base table is involved, then ACCESSTYPE indicates how the base table is accessed.</p> <p>blank Db2 does not try to use direct row access by using a rowid column or sparse index access for a work file. The value of the ACCESSTYPE column of PLAN_TABLE provides information on the method of accessing the table.</p>
PARENT_QBLOCKNO	SMALLINT NOT NULL WITH DEFAULT	A number that indicates the QBLOCKNO of the parent query block.

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
TABLE_TYPE	CHAR(1)	<p>The type of new table:</p> <p>'B' Buffers for SELECT from INSERT, SELECT from UPDATE, SELECT from MERGE, or SELECT from DELETE statement.</p> <p>'C' Common table expression</p> <p>'F' Table function</p> <p>'I' The new table is generated from an IN-LIST predicate. If the IN-LIST predicate is selected as the matching predicate, it will be accessed as an in-memory table.</p> <p>'M' Materialized query table</p> <p>'Q' Temporary intermediate result table (not materialized). For the name of a view or nested table expression, a value of Q indicates that the materialization was virtual and not actual. Materialization can be virtual when the view or nested table expression definition contains a UNION ALL that is not distributed.</p> <p>'R' Recursive common table expression</p> <p>'S' Subquery (correlated or non-correlated)</p> <p>'T' Table</p> <p>'W' Work file</p> <p>The value of the column is null if the query uses GROUP BY, ORDER BY, or DISTINCT, which requires an implicit sort.</p>
TABLE_ENCODE	CHAR(1) NOT NULL WITH DEFAULT	<p>The encoding scheme of the table. The possible values are:</p> <p>'A' ASCII</p> <p>'E' EBCDIC</p> <p>'U' Unicode</p> <p>'M' The table contains multiple CCSID sets</p>

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
TABLE_SCCSID	SMALLINT NOT NULL WITH DEFAULT	The SBCS CCSID value of the table. If column TABLE_ENCODE is M, the value is 0.
TABLE_MCCSID	SMALLINT NOT NULL WITH DEFAULT	The mixed CCSID value of the table. If the value of the TABLE_ENCODE column is M, the value is 0. If MIXED=NO in the application defaults module, the value is -2.
TABLE_DCCSID	SMALLINT NOT NULL WITH DEFAULT	The DBCS CCSID value of the table. If the value of the TABLE_ENCODE column is M, the value is 0. If MIXED=NO in the application defaults module, the value is -2.
ROUTINE_ID	INTEGER NOT NULL WITH DEFAULT	The values in this column are for IBM use only.
CTEREF	SMALLINT NOT NULL WITH DEFAULT	If the referenced table is a common table expression, the value is the top-level query block number.
STMTTOKEN	VARCHAR(240)	User-specified statement token.
PARENT_PLANNO	SMALLINT NOT NULL	Corresponds to the plan number in the parent query block where a correlated subquery is invoked. Or, for non-correlated subqueries, corresponds to the plan number in the parent query block that represents the work file for the subquery.
BIND_EXPLAIN_ONLY	CHAR(1) NOT NULL WITH DEFAULT	Identifies whether the row was inserted because a command specified the EXPLAIN(ONLY) option.
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
EXPLAIN_TIME	TIMESTAMP NOT NULL WITH DEFAULT	<p>The time when the EXPLAIN information was captured:</p> <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>
MERGC	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates whether the composite table is consolidated before the join.</p> <p>'Y' Yes</p> <p>'N' No</p>
MERGN	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates whether the new table is consolidated before the join, or whether access that used a data partitioned secondary index (DPSI) involved a merge operation.</p> <p>'Y' Yes, the new table is consolidated before the join.</p> <p>'N' No, the new table is not consolidated before the join</p> <p>'D' Access through a DPSI involved a merge operation.</p> <p>'U' Access through a DPSI that did not involve a merge operation.</p>
SCAN_DIRECTION	CHAR(1)	<p>For index access, the direction of the index scan:</p> <p>'F' Forward</p> <p>'R' Reverse</p> <p>blank Index scan is not used</p>

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES
EXPANSION_REASON (continued)		<p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>

Table 438. Descriptions of columns in PLAN_TABLE (continued)

Column name	Data Type	Description
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

Notes:

1. For PLAN_TABLE rows in which ACCESSTYPE='A' and QBLOCK_TYPE='SELECT', the values of all other columns except QUERYNO, APPLNAME, and PROGRAM are the default values for those columns.
2. In rows that are used for optimization hints, NULL values in the following columns indicate a hint for no parallelism:
 - PARALLELISM_MODE
 - ACCESS_PGROUP_ID
 - JOIN_PGROUP_ID
3. In rows that are used for optimization hints, NULL values in the following columns indicate a hint for no parallel sort:
 - SORTN_PGROUP_ID
 - SORTC_PGROUP_ID
4. The ACCESSTYPE column contains the following values:
 - 'A'
The query is sent to an accelerator server.
 - 'DI'
By an intersection of multiple DOCID lists to return the final DOCID list
 - 'DU'
By a union of multiple DOCID lists to return the final DOCID list
 - 'DX'
By an XML index scan on the index that is named in ACCESSNAME to return a DOCID list
 - 'E'
By direct row access using a row change timestamp column.
 - 'H'
By hash access. IF an overflow condition occurs, the hash overflow index that is identified by ACCESSCREATOR and ACCESSNAME is used.
 - 'HN'
By hash access using an IN predicate, or an IN predicate that Db2 generates. If a hash overflow condition occurs, the hash overflow index that is identified in ACCESSCREATOR and ACCESSNAME is used.
 - 'I'
By an index (identified in ACCESSCREATOR and ACCESSNAME)

'IN'

By an index scan when the matching predicate contains an IN predicate and the IN-list is accessed through an in-memory table.

'I1'

By a one-fetch index scan

'M'

By a multiple index scan. A row that contains this value might be followed by a row that contains one of the following values:

- 'DI'
- 'DU'
- 'MH'
- 'MI'
- 'MU'
- 'MX'

'MH'

By the hash overflow index named in ACCESSNAME. A row that contains this value always follows a row that contains M.

'MI'

By an intersection of multiple indexes. A row that contains this value always follows a row that contains M.

'MU'

By a union of multiple indexes. A row that contains this value always follows a row that contains M.

'MX'

By an index scan on the index named in ACCESSNAME. When the access method MX follows the access method DX, DI, or DU, the table is accessed by the DOCID index by using the DOCID list that is returned by DX, DI, or DU. A row that contains this value always follows a row that contains M.

'N'

One of the following types:

- By an index scan when the matching predicate contains the IN keyword
- By an index scan when Db2 rewrites a query using the IN keyword

'O'

Use of a work file was avoided when processing the result of a subquery, table expression, view, or intermediate result table.

'NR'

Range list access.

'P'

By a dynamic pair-wise index scan

'R'

By a table space scan

'RW'

By a work file scan of the result of a materialized user-defined table function

'V'

By buffers for an INSERT statement within a SELECT

blank

Not applicable to the current row

5. The QBLOCK_TYPE column contains the following values:

'SELECT'

SELECT

'INSERT'

INSERT

'UPDATE'

UPDATE

'MERGE'

MERGE

'DELETE'

DELETE

'SELUPD'

SELECT with FOR UPDATE OF

'DELCUR'

DELETE WHERE CURRENT OF CURSOR

'UPDCUR'

UPDATE WHERE CURRENT OF CURSOR

'CORSUB'

Correlated subselect or fullselect

'COTBLX'

A table expression with a sideways reference.

'TRUNCA'

TRUNCATE

'NCOSUB'

Noncorrelated subselect or fullselect

'TABLEX'

Table expression

'TRIGGR'

WHEN clause on CREATE TRIGGER

'UNION'

UNION

'UNIONA'

UNION ALL

'INTERS'

INTERSECT

'INTERA'

INTERSECT ALL

'EXCEPT'

EXCEPT

'EXCPTA'

EXCEPT ALL

'PRUNED'

Db2 does not generate an access path for the query because the query is guaranteed to qualify zero rows, such as the case of an always-false WHERE clause. For example: WHERE 0=1

6. Db2 inserts a value into the REMARKS column at bind or rebind when the EXPLAIN(ONLY) option is specified and reuse or comparison fails for an access path. The value might include the following information:

- A reason code that corresponds to the reason codes in [SQLCODE +395](#) when reuse fails
- The name of the unmatched PLAN_TABLE column for which comparison failed
- The string 'UNMATCHED ROW(S)', which indicates that there are extra rows in addition to the rows in the original access path, or there are fewer rows than in the original access path.

The values that are in the REMARKS column as a result of a reuse or comparison failure do not describe all the access path differences. The REMARKS values are not sufficient to determine if an access path change is acceptable. They are an indication that further analysis might be necessary to determine how the access path has changed, and whether the changes warrant any further action.

7. Db2 inserts a value into the REMARKS column when selectivity overrides cannot be used for a statement. The value contains a reason code that indicates why the selectivity override was not used. The value might also contain additional diagnostic information.

The reason code values correspond to [SQLCODE +395](#) reason codes:

'1'-'41'

Indicate that an optimization hint that was generated as part of the extended optimization process cannot be applied. Use only a single selectivity instance.

'42'

Indicates that the structure of the selectivity override is not valid. Generate the selectivity override again.

'43'

The selectivity override cannot be applied because of an unexpected error. If the problem persists, you might need to contact IBM Support.

'44'-'99'

Indicate that an optimization hint that was generated as part of the extended optimization process cannot be applied. Use only a single selectivity instance.

The PLAN_TABLE_HINT_IX index

The PLAN_TABLE_HINT_IX index improves prepare performance when access path hints are used. This index is required for statement-level access paths and optimization parameters. The PLAN_TABLE_HINT_IX index is optional, although strongly recommended, for PLAN_TABLE access path hints.

The statement that creates the PLAN_TABLE_HINT_IX index is included as part of the DSNTEESC member of the SDSNSAMP library.

DSN_COLDIST_TABLE

The column distribution table contains non-uniform column group statistics that are obtained dynamically by Db2 from non-index leaf pages.

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix*.SDSNSAMP library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See “ADMIN_EXPLAIN_MAINT stored procedure” on page 765 for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

PSPI

The following table shows the descriptions of the columns in the DSN_COLDIST_TABLE table.

Table 439. Descriptions of columns in DSN_COLDIST_TABLE

Column name	Data Type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>

Table 439. Descriptions of columns in DSN_COLDIST_TABLE (continued)

Column name	Data Type	Description
APPLNAME	VARCHAR(128) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
COLLID	VARCHAR(128) NOT NULL	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>
GROUP_MEMBER	VARCHAR(128) NOT NULL	<p>The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.</p>

Table 439. Descriptions of columns in DSN_COLDIST_TABLE (continued)

Column name	Data Type	Description
SECTNOI	INTEGER NOT NULL	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.
VERSION	VARCHAR(122) NOT NULL	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>
EXPLAIN_TIME	TIMESTAMP NOT NULL	<p>The time when the EXPLAIN information was captured:</p> <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>
SCHEMA	VARCHAR(128) NOT NULL	The schema of the table that contains the column.

Table 439. Descriptions of columns in DSN_COLDIST_TABLE (continued)

Column name	Data Type	Description
TBNAME	VARCHAR(128) NOT NULL	The name of the table that contains the column.
NAME	VARCHAR(128) NOT NULL	Name of the column. If the value of NUMCOLUMNS is greater than 1, this name identifies the first column name of the set of columns associated with the statistics.
COLVALUE	VARCHAR(2000) NOT NULL FOR BIT DATA	<p>Contains the data of a frequently occurring value in the column. Statistics are not collected for an index on a ROWID column. If the value has a non-character data type, the data might not be printable.</p> <p>This column might contain values that depend on the value of the type column:</p> <p>TYPE='T' One of the following values:</p> <ul style="list-style-type: none"> • 'E3C2C1C3C1D9C4C6' for TBACARDF • 'E3C2C1D5C1C3E3C6' for TBANPAGF • 'E3C2C1D5D7C1C7C6' for TBANACTF <p>TYPE='L' 'C3C1E3C6D3C4C3C6' for CATFLDCF</p> <p>TYPE='P' One of the following values:</p> <ul style="list-style-type: none"> • 'D7C3C1D7D5D9E6C6' for PCAPNRWF • 'D7C3C1D7D5D7C7C6' for PCAPNPGF
TYPE	CHAR(1) NOT NULL	<p>The type of statistics:</p> <p>C Cardinality</p> <p>F Frequent value</p> <p>H Histogram</p> <p>T Real-time table cardinality</p> <p>L Real-time column cardinality (unique index only)</p> <p>P real-time partition cardinality</p>

Table 439. Descriptions of columns in DSN_COLDIST_TABLE (continued)

Column name	Data Type	Description
CARDF	FLOAT NOT NULL	<p>For TYPE='C', the number of distinct values for the column group. For TYPE='H', the number of distinct values for the column group in a quantile indicated by the value of the QUANTILENO column.</p> <p>For TYPE='T', a value related to real-time statistics table values that are determined by the COLVALUE column.</p> <p>For TYPE='L', a value related to a real-time statistics column value that is determined by the COLVALUE column. The QUANTILENO column contains the column number. The NAME column contains the column name.</p> <p>For TYPE='P' a value related to real-time statistics partition value that is determined by the COLVALUE column. The QUANTILENO column contains the partition number.</p>
COLGROUPCOLNO	VARCHAR(254) NOT NULL FOR BIT DATA	The identity of the set of columns associated with the statistics. If the statistics are only associated with a single column, the field contains a zero length. Otherwise, the field is an array of SMALLINT column numbers with a dimension equal to the value in the NUMCOLUMNS column. This is an updatable column.
NUMCOLUMNS	SMALLINT NOT NULL	Identifies the number of columns associated with the statistics.
FREQUENCYF	FLOAT NOT NULL	The percentage of rows in the table with the value that is specified in the COLVALUE column when the number is multiplied by 100. For example, a value of '1' indicates 100%. A value of '.153' indicates 15.3%.
QUANTILENO	SMALLINT NOT NULL	<p>The ordinary sequence number of a quantile in the whole consecutive value range, from low to high. This column is not updatable.</p> <p>For TYPE='L', this column contains the column number.</p> <p>For TYPE='P', the column contains the partition number.</p>
LOWVALUE	VARCHAR(2000) NOT NULL FOR BIT DATA	For TYPE='H', this is the lower bound for the quantile indicated by the value of the QUANTILENO column. Not used if the value of the TYPE column is not 'H'. This column is not updatable.

Table 439. Descriptions of columns in DSN_COLDIST_TABLE (continued)

Column name	Data Type	Description
HIGHVALUE	VARCHAR(2000) NOT NULL FOR BIT DATA	For TYPE='H', this is the higher bound for the quantile indicated by the value of the QUANTILENO column. This column is not used if the value of the TYPE column is not 'H'. This column is not updatable.
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES

Table 439. Descriptions of columns in DSN_COLDIST_TABLE (continued)

Column name	Data Type	Description
EXPANSION_REASON (continued)		<p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

DSN_DETCOST_TABLE

The detailed cost table, DSN_DETCOST_TABLE, contains information about detailed cost estimation of the mini-plans in a query.

PSP1

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix*.SDSNSAMP library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See [“ADMIN_EXPLAIN_MAINT stored procedure” on page 765](#) for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

The following table describes the columns of DSN_DETCOST_TABLE.

Table 440. DSN_DETCOST_TABLE description

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.
APPLNAME	VARCHAR(24) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
PLANNO	SMALLINT NOT NULL	The plan number, a number used to identify each mini-plan with a query block.
OPENIO	FLOAT(4) NOT NULL	The Do-at-open IO cost for non-correlated subquery.
OPENCPU	FLOAT(4) NOT NULL	The Do-at-open CPU cost for non-correlated subquery.
OPENCOST	FLOAT(4) NOT NULL	The Do-at-open total cost for non-correlated subquery.

Table 440. DSN_DETCOST_TABLE description (continued)

Column name	Data type	Description
DMIO	FLOAT(4) NOT NULL	IBM internal use only.
DMCPU	FLOAT(4) NOT NULL	IBM internal use only.
DMTOT	FLOAT(4) NOT NULL	IBM internal use only.
SUBQIO	FLOAT(4) NOT NULL	IBM internal use only.
SUBQCOST	FLOAT(4) NOT NULL	IBM internal use only.
BASEIO	FLOAT(4) NOT NULL	IBM internal use only.
BASECPU	FLOAT(4) NOT NULL	IBM internal use only.
BASETOT	FLOAT(4) NOT NULL	IBM internal use only.
ONECOMPROWS	FLOAT(4) NOT NULL	The number of rows qualified after applying local predicates.
IMLEAF	FLOAT(4) NOT NULL	The number of index leaf pages scanned by Data Manager.
IMIO	FLOAT(4) NOT NULL	IBM internal use only.
IMPREFH	CHAR(2) NOT NULL	IBM internal use only.
IMMPRED	INTEGER NOT NULL	IBM internal use only.
IMFF	FLOAT(4) NOT NULL	The filter factor of matching predicates only.
IMSRPRED	INTEGER NOT NULL	IBM internal use only.
IMFFADJ	FLOAT(4) NOT NULL	The filter factor of matching and screening predicates.
IMSCANCST	FLOAT(4) NOT NULL	IBM internal use only.
IMROWCST	FLOAT(4) NOT NULL	IBM internal use only.
IMPAGECST	FLOAT(4) NOT NULL	IBM internal use only.
IMRIDSORT	FLOAT(4) NOT NULL	IBM internal use only.
IMMERCST	FLOAT(4) NOT NULL	IBM internal use only.

Table 440. DSN_DETCOST_TABLE description (continued)

Column name	Data type	Description
IMCPU	FLOAT(4) NOT NULL	IBM internal use only.
IMTOT	FLOAT(4) NOT NULL	IBM internal use only.
IMSEQNO	SMALLINT NOT NULL	IBM internal use only.
DMPEREFH	FLOAT(4) NOT NULL	IBM internal use only.
DMCLUDIO	FLOAT(4) NOT NULL	IBM internal use only.
DMPREDS	INTEGER NOT NULL	IBM internal use only.
DMSROWS	FLOAT(4) NOT NULL	IBM internal use only.
DMSCANCST	FLOAT(4) NOT NULL	IBM internal use only.
DMCOLS	FLOAT(4) NOT NULL	The number of data manager columns.
DMROWS	FLOAT(4) NOT NULL	The number of data manager rows returned (after all stage 1 predicates are applied).
RDSROWCST	FLOAT(4) NOT NULL	IBM internal use only.
DMPAGECST	FLOAT(4) NOT NULL	IBM internal use only.
DMDATAIO	FLOAT(4) NOT NULL	IBM internal use only.
DMDATAIO	FLOAT(4) NOT NULL	IBM internal use only.
DMDATACPU	FLOAT(4) NOT NULL	IBM internal use only.
DMDATATOT	FLOAT(4) NOT NULL	IBM internal use only.
RDSROW	FLOAT(4) NOT NULL	The number of RDS rows returned (after all stage 1 and stage 2 predicates are applied).
SNCOLS	SMALLINT NOT NULL	The number of columns as sort input for new table.
SNROWS	FLOAT(4) NOT NULL	The number of rows as sort input for new table.
SNRECSZ	INTEGER NOT NULL	The record size for new table.
SNPAGES	FLOAT(4) NOT NULL	The page size for new table.

Table 440. DSN_DETCOST_TABLE description (continued)

Column name	Data type	Description
SNRUNS	FLOAT(4) NOT NULL	The number of runs generated for sort of new table.
SNMERGES	FLOAT(4) NOT NULL	The number of merges needed during sort.
SNIOCOST	FLOAT(4) NOT NULL	IBM internal use only.
SNCPUCOST	FLOAT(4) NOT NULL	IBM internal use only.
SNCOST	FLOAT(4) NOT NULL	IBM internal use only.
SNSCANIO	FLOAT(4) NOT NULL	IBM internal use only.
SNSCANCPU	FLOAT(4) NOT NULL	IBM internal use only.
SNCCOLS	FLOAT(4) NOT NULL	The number of columns as sort input for Composite table.
SCROWS	FLOAT(4) NOT NULL	The number of rows as sort input for Composite Table.
SCRECSZ	FLOAT(4) NOT NULL	The record size for Composite table.
SCPAGES	FLOAT(4) NOT NULL	The page size for Composite table.
SCRUNS	FLOAT(4) NOT NULL	The number of runs generated during sort of composite.
SCMERGES	FLOAT(4) NOT NULL	The number of merges needed during sort of composite.
SCIOCOST	FLOAT(4) NOT NULL	IBM internal use only.
SCCPUCOST	FLOAT(4) NOT NULL	IBM internal use only.
SCCOST	FLOAT(4) NOT NULL	IBM internal use only.
SCSCANIO	FLOAT(4) NOT NULL	IBM internal use only.
SCSCANCPU	FLOAT(4) NOT NULL	IBM internal use only.
SCSCANCOST	FLOAT(4) NOT NULL	IBM internal use only.
COMPCARD	FLOAT(4) NOT NULL	The total composite cardinality.
COMPIOCOST	FLOAT(4) NOT NULL	IBM internal use only.

Table 440. DSN_DETCOST_TABLE description (continued)

Column name	Data type	Description
COMPCPUCOST	FLOAT(4) NOT NULL	IBM internal use only.
COMPCOST	FLOAT(4) NOT NULL	The total cost.
JOINCOLS	SMALLINT NOT NULL	IBM internal use only.
EXPLAIN_TIME	TIMESTAMP NOT NULL	The time when the EXPLAIN information was captured: All cached statements When the statement entered the cache, in the form of a full-precision timestamp value. Non-cached static statements When the statement was bound, in the form of a full precision timestamp value. Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.
COSTBLK	INTEGER NOT NULL	IBM internal use only.
COSTSTOR	INTEGER NOT NULL	IBM internal use only.
MPBLK	INTEGER NOT NULL	IBM internal use only.
MPSTOR	INTEGER NOT NULL	IBM internal use only.
COMPOSITES	INTEGER NOT NULL	IBM internal use only.
CLIPPED	INTEGER NOT NULL	IBM internal use only.
TABREF	VARCHAR(64) NOT NULL FOR BIT DATA	IBM internal use only.
MAX_COMPOSITES	INTEGER NOT NULL	IBM internal use only.
MAX_STOR	INTEGER NOT NULL	IBM internal use only.
MAX_CPU	INTEGER NOT NULL	IBM internal use only.
MAX_ELAP	INTEGER NOT NULL	IBM internal use only.
TBL_JOINED_THRESH	INTEGER NOT NULL	IBM internal use only.

Table 440. DSN_DETCOST_TABLE description (continued)

Column name	Data type	Description
STOR_USED	INTEGER NOT NULL	IBM internal use only.
CPU_USED	INTEGER NOT NULL	IBM internal use only.
ELAPSED	INTEGER NOT NULL	IBM internal use only.
MIN_CARD_KEEP	FLOAT(4) NOT NULL	IBM internal use only.

MAX_CARD_CLIP	FLOAT(4) NOT NULL	IBM internal use only.
MIN_COST_CLIP	FLOAT(4) NOT NULL	IBM internal use only.
MAX_COST_CLIP	FLOAT(4) NOT NULL	IBM internal use only.
MIN_VALUE_CLIP	FLOAT(4) NOT NULL	IBM internal use only.
MIN_VALUE_CARD_CLIP	FLOAT(4) NOT NULL	IBM internal use only.
MIN_VALUE_COST_CLIP	FLOAT(4) NOT NULL	IBM internal use only.
MAX_VALUE_CLIP	FLOAT(4) NOT NULL	IBM internal use only.
MAX_VALUE_CARD_CLIP	FLOAT(4) NOT NULL	IBM internal use only.
MAX_VALUE_COST_CLIP	FLOAT(4) NOT NULL	IBM internal use only.

Table 440. DSN_DETCOST_TABLE description (continued)

Column name	Data type	Description
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
PSEQIOCOST	FLOAT(4) NOT NULL	IBM internal use only.
PSEQIOCOST	FLOAT(4) NOT NULL	IBM internal use only.
PSEQCPCUCOST	FLOAT(4) NOT NULL	IBM internal use only.
PSEQCOST	FLOAT(4) NOT NULL	IBM internal use only.
PADJIOCOST	FLOAT(4) NOT NULL	IBM internal use only.
PADJCPUCOST	FLOAT(4) NOT NULL	IBM internal use only.
PADJCOST	FLOAT(4) NOT NULL	IBM internal use only.
UNCERTAINTY	FLOAT(4) NOT NULL WITH DEFAULT	Describes the uncertainty factor of inner table index access. It is aggregated from uncertainty of inner table probing predicates. A larger value indicates a higher uncertainty. 0 indicates no uncertainty or uncertainty not considered.
UNCERTAINTY_1T	FLOAT(4) NOT NULL WITH DEFAULT	Describes the uncertainty factor of ONECOMPROWS column of the table. It is aggregated from all local predicates on the table. A larger value indicates a higher uncertainty. 0 indicates no uncertainty or uncertainty not considered.
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.
COLLID	VARCHAR(128) NOT NULL	The collection ID: 'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register. 'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register. When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.

Table 440. DSN_DETCOST_TABLE description (continued)

Column name	Data type	Description
VERSION	VARCHAR(128) NOT NULL WITH DEFAULT	The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package. A blank indicates that the column is not applicable. When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.
IMNP	FLOAT(4) NOT NULL WITH DEFAULT	IBM internal use only.
DMNP	FLOAT(4) NOT NULL WITH DEFAULT	IBM internal use only.
IMJC	FLOAT(4) NOT NULL WITH DEFAULT	IBM internal use only.
IMFC	FLOAT(4) NOT NULL WITH DEFAULT	IBM internal use only.
IMJBC	FLOAT(4) NOT NULL WITH DEFAULT	IBM internal use only.
IMJFC	FLOAT(4) NOT NULL WITH DEFAULT	IBM internal use only.
CRED	INTEGER NOT NULL WITH DEFAULT	IBM internal use only.
IXSCAN_SKIP_DUPS	CHAR(1) NOT NULL WITH DEFAULT 'N'	Whether duplicate index key values are skipped during an index scan. 'Y' Duplicate key values are skipped. 'N' Duplicate key values are not skipped.
IXSCAN_SKIP_SCREEN	CHAR(1) NOT NULL WITH DEFAULT 'N'	Whether key ranges that are disqualified by index screening predicates are skipped during an index scan. 'Y' Disqualified key ranges are skipped. 'N' Key ranges are not skipped.

Table 440. DSN_DETCOST_TABLE description (continued)

Column name	Data type	Description
EARLY_OUT	CHAR(1) NOT NULL WITH DEFAULT ''	<p>Whether fetching from the table stops after the first qualified row.</p> <p>'Y' Internal fetching stops after the first qualified row</p> <p>'N' Internal fetching continues after the first qualified row.</p> <p>blank The EXPLAIN information was captured in a previous release, or the EXPLAIN information was captured for a package that was bound in a previous release.</p>
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>

Table 440. DSN_DETCOST_TABLE description (continued)

Column name	Data type	Description
BLOCK_FETCH	CHAR(1) NOT NULL WITH DEFAULT 'N'	Indicates whether block fetch was used for the query. 'Y' Block fetch was used. 'N' Block fetch was not used.
PER_STMT_ID	BIGINT NOT NULL	The persistent statement identifier for SQL statements in Db2 catalog tables. For example, this column corresponds to the following catalog table columns that identify SQL statements: <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

PSPI

Related information

[IBM Db2 Analytics Accelerator for z/OS documentation](#)

DSN_FILTER_TABLE

The filter table, DSN_FILTER_TABLE, contains information about how predicates are used during query processing.

PSPI

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix*.SDSNSAMP library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See “ADMIN_EXPLAIN_MAINT stored procedure” on page 765 for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading

EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

The following table describes the columns of DSN_FILTER_TABLE.

Table 441. DSN_FILTER_TABLE description

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	<p>A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.</p>
PLANNO	SMALLINT	<p>The plan number, a number used to identify each miniplan with a query block.</p>
APPLNAME	VARCHAR(24) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>

Table 441. DSN_FILTER_TABLE description (continued)

Column name	Data type	Description
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	The collection ID: 'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register. 'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register. When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.
ORDERNO	INTEGER NOT NULL	The sequence number of evaluation. Indicates the order in which the predicate is applied within each stage
PREDNO	INTEGER NOT NULL	The predicate number, a number used to identify a predicate within a query.
STAGE	CHAR(9) NOT NULL	The processing stage in which the predicate is evaluated: MATCHING During the index matching stage. SCREENING During the index screening stage. PAGERANGE Db2 used page range screening to limit the number of partitions that were accessed to evaluate the predicate in a join context. STAGE1 During stage 1 processing, after data page access. STAGE2 During stage 2 processing on the returned data rows.
ORDERCLASS	INTEGER NOT NULL	IBM internal use only.
EXPLAIN_TIME	TIMESTAMP NOT NULL	The time when the EXPLAIN information was captured: All cached statements When the statement entered the cache, in the form of a full-precision timestamp value. Non-cached static statements When the statement was bound, in the form of a full precision timestamp value. Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.
MIXOPSEQNO	SMALLINT NOT NULL	IBM internal use only.
REEVAL	CHAR(1) NOT NULL	IBM internal use only.

Table 441. DSN_FILTER_TABLE description (continued)

Column name	Data type	Description
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>
PUSHDOWN	CHAR(1) NOT NULL WITH DEFAULT	<p>Whether the predicate is pushed down the Index Manager or Data Manager subcomponents for evaluation:</p> <p>'I' The Index Manager subcomponent evaluates the predicate.</p> <p>'D' The Data Manager subcomponent evaluates the predicate.</p> <p>blank The predicate is not pushed down for evaluation.</p>

Table 441. DSN_FILTER_TABLE description (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

DSN_FUNCTION_TABLE

The function table, DSN_FUNCTION_TABLE, contains descriptions of functions that are used in specified SQL statements.

PSPI

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix*.SDSNSAMP library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See [“ADMIN_EXPLAIN_MAINT stored procedure” on page 765](#) for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

PSPI

The following table describes the columns of DSN_FUNCTION_TABLE.

Table 442. Descriptions of columns in DSN_FUNCTION_TABLE

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL WITH DEFAULT	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	INTEGER NOT NULL WITH DEFAULT	<p>A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.</p>
APPLNAME	VARCHAR(24) NOT NULL WITH DEFAULT	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>

Table 442. Descriptions of columns in DSN_FUNCTION_TABLE (continued)

Column name	Data type	Description
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	The collection ID: 'DSNDYNAMICSQLCACHE' The row originates from the dynamic statement cache. 'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register. 'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register. When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.
GROUP_MEMBER	VARCHAR(24) NOT NULL WITH DEFAULT	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
EXPLAIN_TIME	TIMESTAMP NOT NULL WITH DEFAULT	The time when the EXPLAIN information was captured: All cached statements When the statement entered the cache, in the form of a full-precision timestamp value. Non-cached static statements When the statement was bound, in the form of a full precision timestamp value. Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.
SCHEMA_NAME	VARCHAR(128) NOT NULL WITH DEFAULT	The schema name of the function invoked in the explained statement.
FUNCTION_NAME	VARCHAR(128) NOT NULL WITH DEFAULT	The name of the function invoked in the explained statement.
SPEC_FUNC_NAME	VARCHAR(128) NOT NULL WITH DEFAULT	The specific name of the function invoked in the explained statement.
FUNCTION_TYPE	CHAR(2) NOT NULL WITH DEFAULT	The type of function invoked in the explained statement. Possible values are: CU Column function SU Scalar function TU Table function

Table 442. Descriptions of columns in DSN_FUNCTION_TABLE (continued)

Column name	Data type	Description
VIEW_CREATOR	VARCHAR(128) NOT NULL WITH DEFAULT	If the function specified in the FUNCTION_NAME column is referenced in a view definition, the creator of the view. Otherwise, blank.
VIEW_NAME	VARCHAR(128) NOT NULL WITH DEFAULT	If the function specified in the FUNCTION_NAME column is referenced in a view definition, the name of the view. Otherwise, blank.
PATH	VARCHAR(2048) NOT NULL WITH DEFAULT	The value of the SQL path that was used to resolve the schema name of the function.
FUNCTION_TEXT	VARCHAR(1500) NOT NULL WITH DEFAULT	The text of the function reference (the function name and parameters). If the function reference is over 100 bytes, this column contains the first 100 bytes. For functions specified in infix notation, FUNCTION_TEXT contains only the function name. For example, for a function named /, which overloads the SQL divide operator, if the function reference is A/B, FUNCTION_TEXT contains only /.
FUNC_VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	For a version of a non-inline SQL scalar function, this column contains the version identifier. For all other cases, this column contains a zero length string. A version of a non-inline SQL scalar function is defined in the SYSIBM.SYSROUTINES table with ORIGIN='Q', FUNCTION_TYPE='S', INLINE='N', and VERSION column containing the version identifier.
SECURE	CHAR(1) NOT NULL WITH DEFAULT	Whether the user-defined function is secure.
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>

Table 442. Descriptions of columns in DSN_FUNCTION_TABLE (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
AP_PLANID	CHAR(16) FOR BIT DATA	Used to uniquely identify the BIND or PREPARE optimizations for a SQL statement. Contains an extended timestamp value.

Checking how Db2 resolves functions by using DSN_FUNCTION_TABLE (Db2 Application programming and SQL)

DSN_KEYTGTDIST_TABLE

The key-target distribution table contains non-uniform index expression statistic that are obtained dynamically by the Db2 optimizer.

PSPI

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix*.SDSNSAMP library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See “ADMIN_EXPLAIN_MAINT stored procedure” on page 765 for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

COLUMN descriptions

The following table shows the descriptions of the columns in the DSN_KEYTGTDIST_TABLE table.

Table 443. Descriptions of columns in DSN_KEYTGTDIST_TABLE

Column name	Data Type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
APPLNAME	VARCHAR(128) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>

Table 443. Descriptions of columns in DSN_KEYTGTDIST_TABLE (continued)

Column name	Data Type	Description
COLLID	VARCHAR(128) NOT NULL	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>
GROUP_MEMBER	VARCHAR(128) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
SECTNOI	INTEGER NOT NULL	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.

Table 443. Descriptions of columns in DSN_KEYTGTDIST_TABLE (continued)

Column name	Data Type	Description
VERSION	VARCHAR(122) NOT NULL	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>
EXPLAIN_TIME	TIMESTAMP NOT NULL	<p>The time when the EXPLAIN information was captured:</p> <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>
IXSCHEMA	VARCHAR(128) NOT NULL	The qualifier of the index.
IXNAME	VARCHAR(128) NOT NULL	The name of the index.
KEYSEQ	VARCHAR(128) NOT NULL	The numeric position of the key-target in the index.

Table 443. Descriptions of columns in DSN_KEYTGTDIST_TABLE (continued)

Column name	Data Type	Description
KEYVALUE	VARCHAR(2000) NOT NULL FOR BIT DATA	<p>Contains the data of a frequently occurring value. Statistics are not collected for an index on a ROWID column. If the value has a non-character data type, the data might not be printable.</p> <p>When the value of the TYPE column contains 'I', this column contains one of the following values:</p> <ul style="list-style-type: none"> • 'C9C4E7C6E4D3D2C6' for IDXFULKF • 'C9C4E7D3C5C1C6C6' for IDXLEAFF • 'C9C4E7D5D3E5D3C6' for IDXNLVLF
TYPE	CHAR(1) NOT NULL	<p>The type of statistics:</p> <p>C Cardinality</p> <p>F Frequent value</p> <p>H Histogram</p> <p>I Real-time index statistics</p>
CARDF	FLOAT NOT NULL	<p>For TYPE='C', the number of distinct values for the column group. For TYPE='H', the number of distinct values for the column group in a quantile indicated by the value of the QUANTILENO column.</p> <p>For TYPE='I', a value related to real-time index statistics values determined by the KEYVALUE column.</p>
KEYGROUPKEYNO	VARCHAR(254) NOT NULL FOR BIT DATA	<p>Contains a value that identifies the set of keys that are associated with the statistics. If the statistics are associated with more than a single key, it contains an array of SMALLINT key numbers with a dimension that is equal to the value in NUMKEYS. If the statistics are only associated with a single key, it contains 0.</p>
NUMKEYS	SMALLINT NOT NULL	<p>The number of keys that are associated with the statistics.</p>
FREQUENCYF	FLOAT NOT NULL	<p>The percentage of rows in the table with the value that is specified in the COLVALUE column when the number is multiplied by 100. For example, a value of '1' indicates 100%. A value of '.153' indicates 15.3%.</p>
QUANTILENO	SMALLINT NOT NULL	<p>The ordinary sequence number of a quantile in the whole consecutive value range, from low to high. This column is not updatable</p>

Table 443. Descriptions of columns in DSN_KEYTGTDIST_TABLE (continued)

Column name	Data Type	Description
LOWVALUE	VARCHAR(2000) NOT NULL FOR BIT DATA	For TYPE='H', this is the lower bound for the quantile indicated by the value of the QUANTILENO column. Not used if the value of the TYPE column is not 'H'. This column is not updatable.
HIGHVALUE	VARCHAR(2000) NOT NULL FOR BIT DATA	For TYPE='H', this is the higher bound for the quantile indicated by the value of the QUANTILENO column. This column is not used if the value of the TYPE column is not 'H'. This column is not updatable.
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES

Table 443. Descriptions of columns in DSN_KEYTGTDIST_TABLE (continued)

Column name	Data Type	Description
EXPANSION_REASON (continued)		<p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

Column descriptions

The following table describes the columns of DSN_PGRANGE_TABLE.

Table 444. DSN_PGRANGE_TABLE description

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.
TABNO	SMALLINT NOT NULL	The table number, a number which uniquely identifies the corresponding table reference within a query.
RANGE	SMALLINT NOT NULL	The sequence number of the current page range.
FIRSTPART	SMALLINT NOT NULL	The starting partition in the current page range.
LASTPART	SMALLINT NOT NULL	The ending partition in the current page range.
NUMPARTS	SMALLINT NOT NULL	The number of partitions in the current page range.
EXPLAIN_TIME	TIMESTAMP NOT NULL	<p>The time when the EXPLAIN information was captured:</p> <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.

Table 444. DSN_PGRANGE_TABLE description (continued)

Column name	Data type	Description
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.
APPLNAME	VARCHAR(24) NOT NULL WITH DEFAULT	The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable. When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.
PROGNAME	VARCHAR(128) NOT NULL WITH DEFAULT	The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable. When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	The collection ID: 'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register. 'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register. When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.

Table 444. DSN_PGRANGE_TABLE description (continued)

Column name	Data type	Description
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none">• A package for a basic trigger (TYPE='T')• A package for an application that was precompiled without SQL processing option VERSION• A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>

Table 444. DSN_PGRANGE_TABLE description (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.

Table 444. DSN_PGRANGE_TABLE description (continued)

Column name	Data type	Description
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

PSPI

DSN_PGROUP_TABLE

The parallel group table, DSN_PGROUP_TABLE, contains information about the parallel groups in a query.

PSPI

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix.SDSNSAMP* library. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See “ADMIN_EXPLAIN_MAINT stored procedure” on page 765 for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

The following table describes the columns of DSN_PGROUP_TABLE

Table 445. DSN_PGROUPTABLE description

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.
PLANNAME	VARCHAR(24) NOT NULL	The application plan name.
COLLID	VARCHAR(128) NOT NULL	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>

Table 445. DSN_PGROUPTABLE description (continued)

Column name	Data type	Description
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
EXPLAIN_TIME	TIMESTAMP NOT NULL	<p>The time when the EXPLAIN information was captured:</p> <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>
VERSION	VARCHAR(122) NOT NULL	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>
GROUPID	SMALLINT NOT NULL	The parallel group identifier within the current query block.
FIRSTPLAN	SMALLINT NOT NULL	The plan number of the first contributing mini-plan associated within this parallel group.
LASTPLAN	SMALLINT NOT NULL	The plan number of the last mini-plan associated within this parallel group.

Table 445. DSN_PGROUP_TABLE description (continued)

Column name	Data type	Description
CPUCOST	REAL NOT NULL	The estimated total CPU cost of this parallel group in milliseconds.
IO COST	REAL NOT NULL	The estimated total I/O cost of this parallel group in milliseconds.
BESTTIME	REAL NOT NULL	The estimated elapsed time for each parallel task for this parallel group.
DEGREE	SMALLINT NOT NULL	The degree of parallelism for this parallel group determined at bind time. Max parallelism degree if the Table space is large is 255, otherwise 64.
MODE	CHAR(1) NOT NULL	The parallel mode: 'I' I/O parallelism 'C' CPU parallelism 'N' No parallelism
REASON	SMALLINT NOT NULL	The reason code for downgrading parallelism mode.
LOCALCPU	SMALLINT NOT NULL	The number of CPUs currently online when preparing the query.
TOTALCPU	SMALLINT NOT NULL	The total number of CPUs in sysplex. LOCALCPU and TOTALCPU are different only for the Db2 coordinator in a sysplex.
FIRSTBASE	SMALLINT	The table number of the table that partitioning is performed on.
LARGETS	CHAR(1)	'Y' if the TableSpace is large in this group.
PARTKIND	CHAR(1)	The partitioning type: 'L' Logical partitioning 'P' Physical partitioning
GROUPTYPE	CHAR(3)	Determines what operations this parallel group contains: table Access, Join, or Sort 'A' 'AJ' 'AJS'
ORDER	CHAR(1)	The ordering requirement of this parallel group : 'N' No order. Results need no ordering. 'T' Natural Order. Ordering is required but results already ordered if accessed via index. 'K' Key Order. Ordering achieved by sort. Results ordered by sort key. This value applies only to parallel sort.

Table 445. DSN_PGROUUP_TABLE description (continued)

Column name	Data type	Description
STYLE	CHAR(4)	The Input/Output format style of this parallel group. Blank for IO Parallelism. For other modes: 'RIRO' Records IN, Records OUT 'WIRO' Work file IN, Records OUT 'WIWO' Work file IN, Work file OUT
RANGEKIND	CHAR(1)	The range type: 'K' Key range 'L' IN-list elements partitioning 'P' Page range 'R' Record range partitioning
NKEYCOLS	SMALLINT	The number of interesting key columns, that is, the number of columns that will participate in the key operation for this parallel group.
LOWBOUND	VARCHAR(40) FOR BIT DATA	The low bound of parallel group.
HIGHBOUND	VARCHAR(40) FOR BIT DATA	The high bound of parallel group.
LOWKEY	VARCHAR(40) FOR BIT DATA	The low key of range if partitioned by key range.
HIGHKEY	VARCHAR(40) FOR BIT DATA	The high key of range if partitioned by key range.
FIRSTPAGE	CHAR(4) FOR BIT DATA	The first page in range if partitioned by page range.
LASTPAGE	CHAR(4) FOR BIT DATA	The last page in range if partitioned by page range.
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
HOST_REASON	SMALLINT	IBM internal use only.
PARA_TYPE	CHAR(4)	IBM internal use only.
PART_INNER	CHAR(1)	IBM internal use only.
GRNU_KEYRNG	CHAR(1)	IBM internal use only.
OPEN_KEYRNG	CHAR(1)	IBM internal use only.

Table 445. DSN_PGROUPTABLE description (continued)

Column name	Data type	Description
APPLNAME	VARCHAR(24) NOT NULL WITH DEFAULT	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.
STRAW_MODEL	CHAR(1) NOT NULL WITH DEFAULT	IBM internal use only.

Table 445. DSN_PGROUUP_TABLE description (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.

Table 445. DSN_PGROUP_TABLE description (continued)

Column name	Data type	Description
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

PSPI

DSN_PREDICAT_TABLE

The predicate table, DSN_PREDICAT_TABLE, contains information about all of the predicates in a query. It is also used as input when you issue a BIND QUERY command to override the selectivity of predicates for matching SQL statements.

PSPI

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix.SDSNSAMP* library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See [“ADMIN_EXPLAIN_MAINT stored procedure” on page 765](#) for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

The following table describes the columns of the DSN_PREDICAT_TABLE

Table 446. DSN_PREDICAT_TABLE description

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	<p>A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.</p>
APPLNAME	VARCHAR(24) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
PREDNO	INTEGER NOT NULL	<p>The predicate number, a number used to identify a predicate within a query.</p>

Table 446. DSN_PREDICAT_TABLE description (continued)

Column name	Data type	Description
TYPE	CHAR(8) NOT NULL	<p>A string used to indicate the type or the operation of the predicate. The possible values are:</p> <ul style="list-style-type: none"> • 'AND' • 'BETWEEN' • 'EQUAL' • 'EXISTS' • 'COMPOUND' • 'HAVING' • 'IN' • 'LIKE' • 'NOT LIKE' • 'NOTEXIST' • 'OTHERS' • 'OR' • 'RANGE' • 'SUBQUERY' • 'XEXISTS' • 'NXEXISTS'
LEFT_HAND_SIDE	VARCHAR(128) NOT NULL	<p>Describes the left side of the predicate.</p> <p>If the left side of the predicate is a table column, this value indicates the name of that column.</p> <p>This column can also contain the following values or blank values.</p> <p>'VALUE' The left side is a literal value.</p> <p>'COLEXP' The left side is column expression.</p> <p>'NONCOLEXP' The left side is a non-column expression.</p> <p>'SUBQUERY' The left side is a subquery.</p> <p>'CORSUB' The left side is a correlated subquery.</p> <p>'NONCORSUB' The left side is a non-correlated subquery.</p> <p>'EXPRESSION' The left side is some type of expression.</p>
LEFT_HAND_PNO	INTEGER NOT NULL	<p>If the predicate is a compound predicate (AND/OR), then this column indicates the first child predicate. However, this column is not reliable when the predicate tree consolidation happens. Use PARENT_PNO instead to reconstruct the predicate tree.</p>

Table 446. DSN_PREDICAT_TABLE description (continued)

Column name	Data type	Description
LHS_TABNO	SMALLINT NOT NULL	If the left side of the predicate is a table column or a column expression in an expression-based index, then this column indicates a number which uniquely identifies the corresponding table reference within a query.
LHS_QBNO	SMALLINT NOT NULL	If the left side of the predicate is a table column or a column expression in expression-based index, then this column indicates a number which uniquely identifies the corresponding query block within a query.
RIGHT_HAND_SIDE	VARCHAR(128) NOT NULL	<p>Describes the right side of the predicate.</p> <p>If the right side of the predicate is a table column, this value column indicates the column name.</p> <p>This column can also contain the following values or blank values.</p> <p>'VALUE' The right side is a literal value.</p> <p>'COLEXP' The right side is column expression.</p> <p>'NONCOLEXP' The right side is a non-column expression.</p> <p>'SUBQUERY' The right side is a subquery.</p> <p>'CORSUB' The right side is a correlated subquery.</p> <p>'NONCORSUB' The right side is a non-correlated subquery.</p> <p>'EXPRESSION' The right side is some type of expression.</p>
RIGHT_HAND_PNO	INTEGER NOT NULL	If the predicate is a compound predicate (AND/OR), then this column indicates the second child predicate. However, this column is not reliable when the predicate tree consolidation happens. Use PARENT_PNO instead to reconstruct the predicate tree.
RHS_TABNO	CHAR(1) NOT NULL	If the right side of the predicate is a table column or a column expression in an index on expression, then this column indicates a number which uniquely identifies the corresponding table reference within a query.
RHS_QBNO	CHAR(1) NOT NULL	If the right side of the predicate is a subquery or a column expression in an expression-based index, then this column indicates a number which uniquely identifies the corresponding query block within a query.
FILTER_FACTOR	FLOAT NOT NULL	The estimated filter factor.
BOOLEAN_TERM	CHAR(1) NOT NULL	Whether this predicate can be used to determine the truth value of the whole WHERE clause.
SEARCHARG	CHAR(1) NOT NULL	Whether this predicate can be processed by data manager (DM). If it is not, then the relational data service (RDS) needs to be used to take care of it, which is more costly.

Table 446. DSN_PREDICAT_TABLE description (continued)

Column name	Data type	Description
JOIN	CHAR(1) NOT NULL	Whether the predicate can be used as a simple join predicate between two tables.
AFTER_JOIN	CHAR(1) NOT NULL	Indicates the predicate evaluation phase: 'A' After join 'D' During join blank Not applicable
ADDED_PRED	CHAR(1) NOT NULL	Whether the predicate is generated by Db2, and the reason why the predicate is added: blank Db2 did not add the predicate. 'B' For bubble up. 'C' For correlation. 'J' For join. 'K' For LIKE for expression-based index. 'L' For localization. 'P' For push down. 'R' For page range. 'S' For simplification. 'T' For transitive closure.
REDUNDANT_PRED	CHAR(1) NOT NULL	Whether it is a redundant predicate, which means evaluation of other predicates in the query already determines the result that the predicate provides.
DIRECT_ACCESS	CHAR(1) NOT NULL	Whether the predicate is direct access, which means one can navigate directly to the row through ROWID.
KEYFIELD	CHAR(1) NOT NULL	Whether the predicate includes the index key column of the involved table for all applicable indexes considered by Db2.

Table 446. DSN_PREDICAT_TABLE description (continued)

Column name	Data type	Description
EXPLAIN_TIME	TIMESTAMP NOT NULL	The time when the EXPLAIN information was captured: All cached statements When the statement entered the cache, in the form of a full-precision timestamp value. Non-cached static statements When the statement was bound, in the form of a full precision timestamp value. Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.
CATEGORY	SMALLINT NOT NULL	IBM internal use only.
CATEGORY_B	SMALLINT NOT NULL	IBM internal use only.
TEXT	VARCHAR(2000) NOT NULL	The text of the transformed predicate text. If the text of the predicate contains more than 2000 characters, it is truncated.
PRED_ENCODE	CHAR(1) NOT NULL WITH DEFAULT	IBM internal use only.
PRED_CCSID	SMALLINT NOT NULL WITH DEFAULT	IBM internal use only.
PRED_MCCSID	SMALLINT NOT NULL WITH DEFAULT	IBM internal use only.
MARKER	CHAR(1) NOT NULL WITH DEFAULT	Whether this predicate includes host variables, parameter markers, or special registers.
PARENT_PNO	INTEGER NOT NULL	The parent predicate number. If this predicate is a root predicate within a query block, then this column is 0.
NEGATION	CHAR(1) NOT NULL	Whether this predicate is negated via NOT.
LITERALS	VARCHAR(128) NOT NULL	This column indicates the literal value or literal values separated by colon symbols.
CLAUSE	CHAR(8) NOT NULL	The clause where the predicate exists: 'HAVING ' The HAVING clause 'ON ' The ON clause 'WHERE ' The WHERE clause SELECT The SELECT clause

Table 446. DSN_PREDICAT_TABLE description (continued)

Column name	Data type	Description
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
ORIGIN	CHAR(1) NOT NULL WITH DEFAULT	Indicates the origin of the predicate. Blank Generated by Db2 C Column mask R Row permission U Specified by the user
UNCERTAINTY	FLOAT(4) NOT NULL WITH DEFAULT	Describes the uncertainty factor of a predicate's estimated filter factor. A bigger value indicates a higher degree of uncertainty. Value zero indicates no uncertainty or uncertainty not considered.
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	The collection ID: 'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register. 'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register. When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.

Table 446. DSN_PREDICAT_TABLE description (continued)

Column name	Data type	Description
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>

Table 446. DSN_PREDICAT_TABLE description (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

PSPI

Related concepts

[Predicates](#)

A *predicate* specifies a condition that is true, false, or unknown about a given value, row, or group.

DSN_PREDICATE_SELECTIVITY table

The predicate selectivity table contains information about the selectivity of predicates that are used for access path selection. It is used as an input table for the BIND QUERY command when selectivity overrides are specified.

PSPI

When selectivity overrides are not specified, or specified selectivity overrides cannot be used by Db2, the DSN_PREDICATE_SELECTIVITY table contains one row for each predicate in DSN_PREDICAT_TABLE that is used for access path selection. These rows contain ASSUMPTION='NORMAL' values.

DSN_PREDICATE_SELECTIVITY does not contain rows from DSN_PREDICAT_TABLE for predicates that are not used for access path selection.

When selectivity overrides are specified and used by Db2, this table also contains one row for each selectivity override that was used. These rows contain ASSUMPTION='OVERRIDE' values.

Additionally, if the sum of the weights for all specified selectivity override instances is less than one, this table contains one row for each predicate in DSN_PREDICAT_TABLE that is used for access path selection. These rows contain ASSUMPTION='NORMAL' values and WEIGHT values equal to one minus the sum of the specified override weight values.

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix*.SDSNSAMP library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See “ADMIN_EXPLAIN_MAINT stored procedure” on page 765 for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

Your subsystem or data sharing group can contain more than one of these tables, including a table with the qualifier SYSIBM, a table with the qualifier DB2OSCA, and additional tables that are qualified by user IDs.

The following table shows the descriptions of the columns in the DSN_PREDICATE_SELECTIVITY table.

Table 447. Descriptions of columns in the DSN_PREDICATE_SELECTIVITY table

Column name	Data Type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	<p>A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.</p>
APPLNAME	VARCHAR(24) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>

Table 447. Descriptions of columns in the DSN_PREDICATE_SELECTIVITY table (continued)

Column name	Data Type	Description
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
SECTNOI	INTEGER NOT NULL WITH DEFAULT	<p>The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.</p>
COLLID	VARCHAR(128) NOT NULL	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>

Table 447. Descriptions of columns in the DSN_PREDICATE_SELECTIVITY table (continued)

Column name	Data Type	Description
VERSION	VARCHAR(122) NOT NULL	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>
PREDNO	INTEGER NOT NULL	The predicate number, a number used to identify a specific predicate within a query.
INSTANCE	SMALLINT NOT NULL	The selectivity instance. Used to group related selectivities.
SELECTIVITY	FLOAT NOT NULL	The selectivity estimate.
WEIGHT	FLOAT(4) NOT NULL	The percentage of executions that have the specified selectivity. For example, a value of 0.25 means that 25% of the time when query is executed it has this selectivity.
ASSUMPTION	VARCHAR(128) NOT NULL	<p>Indicates how the selectivity was estimated, or is used. One of the following values:</p> <p>'NORMAL' Selectivity is estimated by using the normal selectivity assumptions.</p> <p>'OVERRIDE' Selectivity is based on an override.</p>
INSERT_TIME	TIMESTAMP NOT NULL GENERATED ALWAYS FOR EACH ROW ON UPDATE AS ROW CHANGE TIMESTAMP	The time when the row was inserted or updated.

Table 447. Descriptions of columns in the DSN_PREDICATE_SELECTIVITY table (continued)

Column name	Data Type	Description
EXPLAIN_TIME	TIMESTAMP	<p>The time when the EXPLAIN information was captured:</p> <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>
REMARKS	VARCHAR(762)	IBM internal use only.
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES

Table 447. Descriptions of columns in the DSN_PREDICATE_SELECTIVITY table (continued)

Column name	Data Type	Description
EXPANSION_REASON (continued)		<p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.

DSN_PTASK_TABLE

The parallel tasks table, DSN_PTASK_TABLE, contains information about all of the parallel tasks in a query.

PSP1

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix*.SDSNSAMP library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See [“ADMIN_EXPLAIN_MAINT stored procedure” on page 765](#) for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

The following table describes the columns of DSN_PTASK_TABLE.

Table 448. DSN_PTASK_TABLE description

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.
PGDNO	SMALLINT NOT NULL	The parallel group identifier within the current query block. This value corresponds to the value of the GROUPID column in DSN_PGGROUP_TABLE table rows.
APPLNAME	VARCHAR(24) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
LPTNO	SMALLINT NOT NULL	The parallel task number.
KEYCOLID	SMALLINT	The key column ID (KEY range only).
DPSI	CHAR(1) NOT NULL	Indicates if a data partition secondary index (DPSI) is used.

Table 448. DSN_PTASK_TABLE description (continued)

Column name	Data type	Description
LPTLOKEY	VARCHAR(40) FOR BIT DATA	The low key value for this key column for this parallel task (KEY range only).
LPTHIKEY	VARCHAR(40) FOR BIT DATA	The high key value for this key column for this parallel task (KEY range only).
LPTLOPAG	CHAR(4) FOR BIT DATA	The low page information if partitioned by page range.
LPTLHIPAG	CHAR(4) FOR BIT DATA	The high page information if partitioned by page range.
LPTLOPG ^{“1” on page 2905}	CHAR(4) FOR BIT DATA	The lower bound page number for this parallel task (Page range or DPSI enabled only).
LPTHIPG ^{“1” on page 2905}	CHAR(4) FOR BIT DATA	The upper bound page number for this parallel task (Page range or DPSI enabled only).
LPTLOPT ^{“1” on page 2905}	SMALLINT	The lower bound partition number for this parallel task (Page range or DPSI enabled only).
LPTHIPT ^{“1” on page 2905}	SMALLINT	The upper bound partition number for this parallel task (Page range or DPSI enabled only).
KEYCOLDT	SMALLINT	The data type for this key column (KEY range only).
KEYCOLPREC	SMALLINT	The precision/length for this key column (KEY range only).
KEYCOLSCAL	SMALLINT	The scale for this key column (KEY range with Decimal datatype only).
EXPLAIN_TIME	TIMESTAMP NOT NULL	The time when the EXPLAIN information was captured: All cached statements When the statement entered the cache, in the form of a full-precision timestamp value. Non-cached static statements When the statement was bound, in the form of a full precision timestamp value. Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
SECTNOI	INTEGER NOT NULL WITH DEFAULT WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.

Table 448. DSN_PTASK_TABLE description (continued)

Column name	Data type	Description
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>

Table 448. DSN_PTASK_TABLE description (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

Notes:

1. The name of these columns originally contained the # symbol as the last character in the names. However, the names that contain these characters are obsolete and are no longer supported.

DSN_QUERYINFO_TABLE

The query information table, DSN_QUERYINFO_TABLE, contains information about the eligibility of query blocks for automatic query rewrite, information about the materialized query tables that are considered for eligible query blocks, reasons why ineligible query blocks are not eligible, and information about acceleration of query blocks.

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain more than one of these tables:

userID

You can create additional instances of EXPLAIN tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind, or rebind, a plan or package with the EXPLAIN(YES) option. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix*.SDSNSAMP library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See “ADMIN_EXPLAIN_MAINT stored procedure” on page 765 for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

Table 449. Descriptions of columns in DSN_QUERYINFO_TABLE

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.
QINAME1	VARCHAR(128) NOT NULL WITH DEFAULT	<p>When TYPE='A':</p> <ul style="list-style-type: none"> When REASON_CODE=0, this value is the name of the accelerator server to which the statement is sent. When REASON_CODE<>0, the statement was not sent to an accelerator server. The REASON_CODE value indicates why the statement was not sent to the accelerator server. <p>When TYPE='ACCELMDL', this statement used accelerator modeling.</p> <p>For static queries, the value in this field might be the name of the accelerator server that is available at execution time.</p>
QINAME2	VARCHAR(128) NOT NULL WITH DEFAULT	<p>When TYPE='A' and REASON_CODE=0, this value is the name of the location name of the accelerator server to which the statement is sent.</p> <p>For static queries, the value in this field might be the name of the accelerator server that is available at execution time.</p>
APPLNAME	VARCHAR(24) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>

Table 449. Descriptions of columns in DSN_QUERYINFO_TABLE (continued)

Column name	Data type	Description
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
VERSION	VARCHAR(122) NOT NULL	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>
COLLID	VARCHAR(128) NOT NULL	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>
GROUP_MEMBER	VARCHAR(24) NOT NULL	<p>The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.</p>

Table 449. Descriptions of columns in DSN_QUERYINFO_TABLE (continued)

Column name	Data type	Description
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.
SEQNO	INTEGER NOT NULL WITH DEFAULT	The sequence number for this row if QI_DATA exceeds the size of its column.
EXPLAIN_TIME	TIMESTAMP NOT NULL	The time when the EXPLAIN information was captured: All cached statements When the statement entered the cache, in the form of a full-precision timestamp value. Non-cached static statements When the statement was bound, in the form of a full precision timestamp value. Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.
TYPE	CHAR(8) NOT NULL WITH DEFAULT	The type of the output for this row: A This row is for a statement that Db2 attempts to run on an accelerator server. The value in column REASON_CODE indicates the outcome.
REASON_CODE	SMALLINT NOT NULL WITH DEFAULT	The reason code for the row when TYPE='A'. For a description of the meaning, see “REASON_CODE values” on page 2910 . You can also check the QI_DATA column value, which might contain more specific information.
QI_DATA	CLOB(2M) NOT NULL WITH DEFAULT	When TYPE='A': <ul style="list-style-type: none"> For REASON_CODE values other than 0, this value is a description of the REASON_CODE value. For more information, see “REASON_CODE values” on page 2910. For a REASON_CODE value of 0, this value is the statement text, after it is converted for processing by the accelerator.
SERVICE_INFO	BLOB(2M) NOT NULL WITH DEFAULT	IBM internal use only.
QB_INFO_ROWID	ROWID NOT NULL GENERATED ALWAYS	IBM internal use only.

Table 449. Descriptions of columns in DSN_QUERYINFO_TABLE (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

REASON_CODE values

The REASON_CODE values correspond in most cases to the *reason-code* values that are returned with SQL code [-4742](#).

For rows with non-zero REASON_CODE values, the QI_DATA column contains a description of reason code, sometimes with specific values included.

0

The query block qualifies for routing to an accelerator server. The values of QINAME1 and QINAME2 identify the accelerator server.

For example, for version 1 of IBM Db2 Analytics Accelerator for z/OS, the associated data mart name is recorded in the QINAME2 column, with the following naming convention: *data-mart-name@accelerator-name@digits*.

The QI_DATA column contains the statement text, after it is converted for processing by the accelerator.

- 1** No active accelerator server was found or the table was not enabled for query acceleration when the statement was executed.
- 2** The CURRENT QUERY ACCELERATION special register is set to NONE.
- 3** Db2 classified the query as a short-running query, or Db2 determined that sending the query to an accelerator server provided no performance advantage.
- 4** The query is not read-only.
- 6** The cursor is defined as scrollable or is a rowset-positioned cursor.
- 7** The query references objects with multiple encoding schemes.
- 8** The FROM clause of the query specifies a *data-change-table-reference*.
- 9** The query contains a table expression with one or more correlated references to other tables in the same FROM clause.
- 10** The query contains a recursive reference to a common table expression.
- 11** The query contains an unsupported expression. The text of the expression is in QI_DATA.
- 12** The query references a table that has any of the following characteristics:
 - Is not defined in the accelerator server
 - Is defined in a different accelerator server from another table in the query
 - Is defined in the accelerator server, but is not enabled for query acceleration
- 13** The accelerator server that contains the tables that are referenced in the query is not started.
- 14** A column that is referenced in the query was altered in Db2 after the data was loaded in the accelerator server.
- 15** The query uses functionality that is available only in DB2 10 or later, and the functionality is not supported by the accelerator server.
- 17** The query is an INSERT from SELECT statement. Subsystem parameter QUERY_ACCEL_OPTIONS does not specify option 2 to enable the acceleration of INSERT from SELECT statements.
- 18** The query uses functionality that is available only in Db2 11 or later, and the functionality is not supported by the accelerator server.

19

The accelerator server is not at the correct level and does not support a function in the SQL statement. The QI_DATA column contains the function text or expression text that is using the unsupported function for the accelerator server.

20

The query is a rowset cursor that is declared WITH RETURN, executes remotely, or executes under an SQL PL routine.

21

The query contains a correlated subquery that is not supported for acceleration.

22

The statement references an accelerator-only table, but the statement cannot run on the accelerator. For example:

- MERGE statement references an accelerator-only table.
- UPDATE or DELETE statement references an accelerator-only table, but the target table of the UPDATE, DELETE is a normal Db2 table: UPDATE DB2_TABLE SET .. (SELECT .. FROM ACCEL_ONLY_TABLE).
- INSERT, UPDATE or DELETE of a *row-fullselect* with subselect. UPDATE ACCEL_ONLY_TABLE SET (C1, C2) = (SELECT C3, C4 FROM TABLE2);

23

The SELECT INTO statement is bound for acceleration but is run as a remote SELECT INTO statement, which is not supported for acceleration.

24

The DDL or DML statement cannot run on the accelerator because the connection to the accelerator server does not allow updates. This problem can occur when a two-phase commit requester (for example, a Db2 for z/OS requester) connects to a Db2 for z/OS server to run a DDL or DML statement on an accelerator.

25

The statement contains a reference to a column with an unsupported data type.

26

FL 509 The CREATE TABLE statement clause IN ACCELERATOR specifies an accelerator alias that resolves to more than one accelerator and at least one of the following conditions is true:

- Your Db2 function level is lower than V12R1M509.
- The SYSACCEL.SYSACCELERATEDTABLES table does not have the FEATURE column.

27

The DROP TABLE statement specifies a referencing accelerator-only table, which cannot be removed by using the DROP TABLE statement.

28

FL 509 The SQL INSERT, UPDATE, or DELETE statement references a high availability accelerator-only table (AOT) that is defined in multiple accelerators and one of the following conditions is true:

- Neither the CURRENT ACCELERATOR special register nor the ACCELERATOR bind option is used.
- The CURRENT ACCELERATOR special register or the ACCELERATOR bind option specifies one of the following values:
 - An alias that resolves to multiple accelerators. The alias must resolve to one V7 or later accelerator.
 - An accelerator that is not a V7 or later accelerator. A V7 or later accelerator is required to execute the SQL statement.
 - An accelerator that does not exist or is not available when the SQL statement is executed.
 - An accelerator that is not qualified to execute the SQL statement for a high availability AOT.

29

During a Db2 for z/OS special runtime incremental bind of a static query that was originally bound for acceleration with the QUERYACCELERATION bind option value of ELIGIBLE or ENABLE (not ENABLEWITHFAILBACK), the query cannot be bound for acceleration to the target accelerator that Db2 has selected for this particular run of the query. This special incremental bind usually occurs for one of the following reasons:

- The user table has been dropped and re-created in Db2 for z/OS but has not been refreshed in the target accelerator since the last time the static query was bound for acceleration.
- The archive status of the user table in the target accelerator has changed since the last time the static query was bound for acceleration.

Failure to bind the static query for acceleration during this incremental bind can occur if the user table in the target accelerator is down-level from the current definition of that table in the Db2 for z/OS catalog. This failure might also occur due to other reasons.

30

Accelerator WAITFORDATA behavior is requested but cannot be achieved for this query. The query will not be accelerated. The query specifies a Db2 accelerated table, but the same Db2 unit of work includes a previous uncommitted Db2 change that will not be available to the query when it is run on the accelerator. The Db2 change might or might not be related to the Db2 accelerated table that is referenced in the query.

31

Accelerator WAITFORDATA behavior is requested but cannot be achieved for this query that specifies both an accelerator-only table (AOT) and a Db2 accelerated table. The query will not be accelerated and cannot be run in Db2. The same Db2 unit of work includes a previous uncommitted Db2 change that will not be available to the query when it is run on the accelerator. The change might or might not be related to the Db2 accelerated table that is referenced in the query.

32

Accelerator WAITFORDATA behavior is requested but cannot be achieved for this query. The query will not be accelerated. The query specifies a Db2 accelerated table, but the same Db2 unit of work includes a previous uncommitted accelerator-only table (AOT) change. This uncommitted change resulted in the creation of an accelerator database *snapshot isolation* (SI) for this unit of work before the query was run. This accelerator database SI can prevent committed and replicated Db2 changes, made either by this transaction or by a different transaction, from being available to the accelerated query, even if the Db2 changes are replicated to the accelerator before the query is run there.

33

The query could not run on the accelerator due to different reasons on different versions of the accelerator.

34

The statement included an expression that can run on an accelerator server only when the CURRENT QUERY ACCELERATION special register is set to ALL, ENABLE, or ELIGIBLE. However, the CURRENT QUERY ACCELERATION special register is set to NONE or ENABLE WITH FAILBACK.

See the programmer responses for the two different REASON_CODE values for the corresponding version of the accelerator.

35

The query uses functionality that is available only in Db2 12 or later, and the accelerator server does not support the functionality.

36

The USE ONLY NEW ACCELERATOR_TYPE subsystem parameter is set to YES; however, either an active V7 or later accelerator was not found or the table was not enabled for query acceleration in the V7 or later accelerator when the statement was executed.

37

The USE ONLY NEW ACCELERATOR_TYPE subsystem parameter is set to YES, but the V7 or later accelerator that contains the tables of the query is not started.

38

The USE ONLY NEW ACCELERATOR_TYPE subsystem parameter is set to YES, but the V7 or later accelerator is not at the correct level.

42

The SYSACCEL.SYSACCELERATORS or SYSACCEL.SYSACCELERATEDTABLES tables are not found.

900-999

For IBM internal use only.

Related information

[IBM Db2 Analytics Accelerator for z/OS documentation](#)

DSN_QUERY_TABLE

The query table, DSN_QUERY_TABLE, contains information about a SQL statement, and displays the statement before and after query transformation.

PSPI

Unlike other EXPLAIN tables, rows in DSN_QUERY_TABLE are not populated for static SQL statements at BIND or REBIND with the EXPLAIN(YES) option.

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix*.SDSNSAMP library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See “ADMIN_EXPLAIN_MAINT stored procedure” on page 765 for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

The following table describes the columns of DSN_QUERY_TABLE.

Table 450. DSN_QUERY_TABLE description

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
TYPE	CHAR(8) NOT NULL	The type of the data in the NODE_DATA column.
QUERY_STAGE	CHAR(8) NOT NULL WITH DEFAULT	The stage during query transformation when this row is populated.
SEQNO	NOT NULL	The sequence number for this row if NODE_DATA exceeds the size of its column.
NODE_DATA	CLOB(2M)	The XML data containing the SQL statement and its query block, table, and column information.
EXPLAIN_TIME	TIMESTAMP	The EXPLAIN timestamp.
QUERY_ROWID	ROWID NOT NULL GENERATED ALWAYS	The ROWID of the statement.
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 subsystem that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
HASHKEY	INTEGER NOT NULL	The hash value of the contents in NODE_DATA
HAS_PRED	CHAR(1) NOT NULL	When NODE_DATA contains an SQL statement, this column indicates if the statement contains a parameter marker literal, non-parameter marker literal, or no predicates.
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.

Table 450. DSN_QUERY_TABLE description (continued)

Column name	Data type	Description
APPLNAME	VARCHAR(24) NOT NULL WITH DEFAULT	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>

Table 450. DSN_QUERY_TABLE description (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>

◀ PSPI

DSN_SORTKEY_TABLE

The sort key table, DSN_SORTKEY_TABLE, contains information about sort keys for all of the sorts required by a query.

PSPI ▶

Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	<p>A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.</p>
PLANNO	SMALLINT NOT NULL	<p>The plan number, a number used to identify each miniplan with a query block.</p>

Table 451. DSN_SORTKEY_TABLE description (continued)

Column name	Data type	Description
APPLNAME	VARCHAR(24) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>
SORTNO	SMALLINT NOT NULL	The sequence number of the sort
ORDERNO	SMALLINT NOT NULL	The sequence number of the sort key
EXPTYPE	CHAR(3) NOT NULL	<p>The type of the sort key. The possible values are:</p> <ul style="list-style-type: none"> • 'COL' • 'EXP' • 'QRY'
TEXT	VARCHAR(128) NOT NULL	The sort key text, can be a column name, an expression, or a scalar subquery, or 'Record ID'.
TABNO	SMALLINT NOT NULL	The table number, a number which uniquely identifies the corresponding table reference within a query.
COLNO	SMALLINT NOT NULL	The column number, a number which uniquely identifies the corresponding column within a query. Only applicable when the sort key is a column.

Table 451. DSN_SORTKEY_TABLE description (continued)

Column name	Data type	Description
DATATYPE	CHAR(18)	The data type of sort key. The possible values are <ul style="list-style-type: none"> • 'HEXADECIMAL' • 'CHARACTER' • 'PACKED FIELD ' • 'FIXED(31)' • 'FIXED(15)' • 'DATE' • 'TIME' • 'VARCHAR' • 'PACKED FLD' • 'FLOAT' • 'TIMESTAMP' • 'UNKNOWN DATA TYPE'
LENGTH	INTEGER NOT NULL	The length of sort key.
CCSID	INTEGER NOT NULL	IBM internal use only.
ORDERCLASS	INTEGER NOT NULL	IBM internal use only.
EXPLAIN_TIME	TIMESTAMP NOT NULL	The time when the EXPLAIN information was captured: <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.

Table 451. DSN_SORTKEY_TABLE description (continued)

Column name	Data type	Description
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none">• A package for a basic trigger (TYPE='T')• A package for an application that was precompiled without SQL processing option VERSION• A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>

Table 451. DSN_SORTKEY_TABLE description (continued)

Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>

Table 452. DSN_SORT_TABLE description (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

DSN_STATEMENT_CACHE_TABLE

The statement cache table, DSN_STATEMENT_CACHE_TABLE, contains information about the SQL statements in the statement cache, information captured as the results of an EXPLAIN STATEMENT CACHE ALL statement.

PSPI

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix.SDSNSAMP* library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See [“ADMIN_EXPLAIN_MAINT stored procedure” on page 765](#) for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

The following table shows the descriptions of the columns in DSN_STATEMENT_CACHE_TABLE.

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE

Column name	Data Type	Description
STMT_ID	INTEGER NOT NULL	The statement ID; this value is the EDM unique token for the statement.
STMT_TOKEN	VARCHAR(240)	The statement token; you provide this value as an identification string.
COLLID	VARCHAR(128) NOT NULL	The collection ID: 'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register. 'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE (continued)

Column name	Data Type	Description
PROGRAM_NAME	VARCHAR(128) NOT NULL	The name of the package that performed the initial PREPARE for the statement.
INV_DROPALT	CHAR(1) NOT NULL	This column is not used.
INV_REVOKE	CHAR(1) NOT NULL	This column is not used.
INV_LRU	CHAR(1) NOT NULL	This column is not used.
INV_RUNSTATS	CHAR(1) NOT NULL	This column is not used.
CACHED_TS	TIMESTAMP NOT NULL	The timestamp when the statement was stored in the dynamic statement cache. “3” on page 2938
USERS	INTEGER NOT NULL	The number of current users of the statement. This number indicates the users that have prepared or run the statement during their current unit of work. “1” on page 2938 , “3” on page 2938
COPIES	INTEGER NOT NULL	The number of copies of the statement that are owned by all threads in the system. “1” on page 2938 , “3” on page 2938
LINES	INTEGER NOT NULL	The precompiler line number from the initial PREPARE of the statement. “1” on page 2938
PRIMAUTH	VARCHAR(128) NOT NULL	The primary authorization ID that did the initial PREPARE of the statement.
CURSQLID	VARCHAR(128) NOT NULL	The CURRENT SQLID that did the initial PREPARE of the statement.
BIND_QUALIFIER	VARCHAR(128) NOT NULL	The BIND qualifier. For unqualified table names, this is the object qualifier.
BIND_ISO	CHAR(2) NOT NULL	The value of the ISOLATION BIND option that is in effect for this statement. The value will be one of the following values: 'UR' Uncommitted read 'CS' Cursor stability 'RS' Read stability 'RR' Repeatable read
BIND_CDATA	CHAR(1) NOT NULL	The value of the CURRENTDATA BIND option that is in effect for this statement. The value will be one of the following values: 'Y' CURRENTDATA(YES) 'N' CURRENTDATA(NO)

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE (continued)

Column name	Data Type	Description
BIND_DYNRL	CHAR(1) NOT NULL	The value of the DYNAMICRULES BIND option that is in effect for this statement. The value will be one of the following values: 'B' DYNAMICRULE(BIND) 'R' DYNAMICRULES(RUN)
BIND_DEGRE	CHAR(1) NOT NULL	The value of the CURRENT DEGREE special register that is in effect for this statement. The value will be one of the following values: 'A' CURRENT DEGREE = ANY '1' CURRENT DEGREE = 1
BIND_SQLRL	CHAR(1) NOT NULL	The value of the CURRENT RULES special register that is in effect for this statement. The value will be one of the following values: 'D' CURRENT RULES = DB2 'S' CURRENT RULES = SQL
BIND_CHOLD	CHAR(1) NOT NULL	The value of the WITH HOLD attribute of the PREPARE for this statement. The value will be one of the following values: 'Y' Initial PREPARE specified WITH HOLD 'N' Initial PREPARE specified WITHOUT HOLD
STAT_TS	TIMESTAMP NOT NULL	Timestamp of the statistics. This is the timestamp when IFCID 318 is started. “2” on page 2938
STAT_EXEC	INTEGER NOT NULL	This column is deprecated. Use STAT_EXECB instead.
STAT_GPAG	INTEGER NOT NULL	This column is deprecated. Use STAT_GPAGB instead. “1” on page 2938
STAT_SYNR	INTEGER NOT NULL	This column is deprecated. Use STAT_SYNRB instead. “1” on page 2938
STAT_WRIT	INTEGER NOT NULL	This column is deprecated. Use STAT_WRITB instead. “1” on page 2938
STAT_EROW	INTEGER NOT NULL	This column is deprecated. Use STAT_EROWB instead. “1” on page 2938
STAT_PROW	INTEGER NOT NULL	This column is deprecated. Use STAT_PROWB instead. “1” on page 2938
STAT_SORT	INTEGER NOT NULL	This column is deprecated. Use STAT_SORTB instead. “1” on page 2938

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE (continued)

Column name	Data Type	Description
STAT_INDX	INTEGER NOT NULL	This column is deprecated. Use STAT_INDXB instead.
STAT_RSCN	INTEGER NOT NULL	This column is deprecated. Use STAT_RSCNB instead.
STAT_PGRP	INTEGER NOT NULL	This column is deprecated. Use STAT_PGRPB instead.
STAT_ELAP	FLOAT NOT NULL	The accumulated elapsed time that is used for the statement. “2” on page 2938
STAT_CPU	FLOAT NOT NULL	The accumulated CPU time that is used for the statement. “2” on page 2938
STAT_SUS_SYNIO	FLOAT NOT NULL	The accumulated wait time for synchronous I/O operations for the statement. “2” on page 2938
STAT_SUS_LOCK	FLOAT NOT NULL	The accumulated wait time for lock requests for the statement. “2” on page 2938
STAT_SUS_SWIT	FLOAT NOT NULL	The accumulated wait time for synchronous execution unit switch for the statement. “2” on page 2938
STAT_SUS_GLCK	FLOAT NOT NULL	The accumulated wait time for global parent L-locks for this statement. “2” on page 2938
STAT_SUS_OTHR	FLOAT NOT NULL	The accumulated wait time for read activity that is done by another thread. “2” on page 2938
STAT_SUS_OTHW	FLOAT NOT NULL	The accumulated wait time for write activity done by another thread. “2” on page 2938
STAT_RIDLIMT	INTEGER NOT NULL	This column is deprecated. Use STAT_SORTB instead.
STAT_RIDSTOR	INTEGER NOT NULL	This column is deprecated. Use STAT_SORTB instead.
EXPLAIN_TS	TIMESTAMP NOT NULL	The timestamp for when the statement cache table is populated.
SCHEMA	VARCHAR(128) NOT NULL	The value of the CURRENT SCHEMA special register.
STMT_TEXT	CLOB(2M) NOT NULL	The statement that is being explained.
STMT_ROWID	ROWID NOT NULL GENERATED ALWAYS	The ROWID of the statement.
BIND_RO_TYPE	CHAR(1) NOT NULL WITH DEFAULT	The current specification of the REOPT option for the statement “3” on page 2938 : 'N' REOPT(NONE) or its equivalent '1' REOPT(ONCE) or its equivalent 'A' REOPT(AUTO) or its equivalent 'O' The current plan is deemed optimal and there is no need for REOPT(AUTO)

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE (continued)

Column name	Data Type	Description
BIND_RA_TOT	INTEGER NOT NULL WITH DEFAULT	The total number of REBIND commands that have been issued for the dynamic statement because of the REOPT(AUTO) option. “1” on page 2938 , “3” on page 2938
GROUP_MEMBER	VARCHAR(24) NOT NULL WITH DEFAULT	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
STAT_EXECB	BIGINT NOT NULL WITH DEFAULT	The number of times this statement has been run. For a statement with a cursor, this is the number of OPENS. “2” on page 2938
STAT_GPAGB	BIGINT NOT NULL WITH DEFAULT	The number of getpage operations that are performed for the statement. “2” on page 2938
STAT_SYNRB	BIGINT NOT NULL WITH DEFAULT	The number of synchronous buffer reads that are performed for the statement. “2” on page 2938
STAT_WRITB	BIGINT NOT NULL WITH DEFAULT	The number of buffer write operations that are performed for the statement. “2” on page 2938
STAT_EROWB	BIGINT NOT NULL WITH DEFAULT	The number of rows that are examined for the statement. “2” on page 2938
STAT_PROWB	BIGINT NOT NULL WITH DEFAULT	The number of rows that are processed for the statement. “2” on page 2938
STAT_SORTB	BIGINT NOT NULL WITH DEFAULT	The number of sorts that are performed for the statement. “2” on page 2938
STAT_INDXB	BIGINT NOT NULL WITH DEFAULT	The number of index scans that are performed for the statement. “2” on page 2938
STAT_RSCNB	BIGINT NOT NULL WITH DEFAULT	The number of table space scans that are performed for the statement. “2” on page 2938
STAT_PGRPB	BIGINT NOT NULL WITH DEFAULT	The number of parallel groups that are created for the statement. “2” on page 2938
STAT_RIDLIMTB	BIGINT NOT NULL WITH DEFAULT	The number of times a RID list was not used because the number of RIDs would have exceeded Db2 limits. “2” on page 2938
STAT_RIDSTORB	BIGINT NOT NULL WITH DEFAULT	The number of times a RID list was not used because there is not enough storage available to hold the list of RIDs. “2” on page 2938

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE (continued)

Column name	Data Type	Description
LITERAL_REPL	CHAR(1) NOT NULL WITH DEFAULT	Identifies cached statements where the literal values are replaced by the '&' symbol:“3” on page 2938 'R' The statement is prepared with CONCENTRATE STATEMENTS WITH LITERALS behavior and the literal constants in the statement have been replaced with '&' . 'D' This statement is a duplicate statement instance with different literal reusability criteria. blank Literal values are not replaced.
STAT_SUS_LATCH	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for latch requests for the statement.
STAT_SUS_PLATCH	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for page latch requests for the statement.
STAT_SUS_DRAIN	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for drain lock requests for the statement.
STAT_SUS_CLAIM	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for claim count requests for the statement.
STAT_SUS_LOG	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for log writer requests for the statement.

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE (continued)

Column name	Data Type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE (continued)

Column name	Data Type	Description
ACCELERATED	CHAR(10)	<p>Identifies whether a cached dynamic statement was prepared for acceleration to an accelerator server. Possible values are:</p> <p>'NO'</p> <p>The cached statement was not prepared for acceleration. This is the default value.</p> <p>This value also applies to cached statements under the following conditions:</p> <ul style="list-style-type: none">• The query acceleration behavior was not specified or was explicitly set to NONE when the dynamic statement was prepared.• A query acceleration behavior other than ALL was specified when the dynamic statement was prepared. Db2 did not prepare the statement for acceleration because it did not qualify for acceleration based on the query acceleration behavior that was specified. <p>'YES'</p> <p>The cached statement was prepared for acceleration to an accelerator server based on the query acceleration behavior that was specified. If query acceleration behavior is specified when a dynamic statement is prepared, Db2 can consider this cache entry for a possible cache match during the prepare operation of the dynamic statement. If query acceleration behavior is not specified, or is explicitly set to NONE when the statement is prepared, Db2 does not consider this cache entry for a cache match during the prepare operation.</p> <p>'NEVER'</p> <p>The cached statement was not prepared for acceleration to an accelerated server, because the statement can never be accelerated.</p> <ul style="list-style-type: none">• If the query acceleration behavior is set to ENABLE, ENABLE WITH FAILBACK, or ELIGIBLE for the prepare of the statement, Db2 considers this cache entry first as a possible cache match during the prepare operation. This action verifies whether the statement was cached previously as one that can never be accelerated. <p>(Continued in the following row.)</p>

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE (continued)

Column name	Data Type	Description
ACCELERATED (continued)		(Continued from the previous row.) 'NEVER' (continued) <ul style="list-style-type: none"> • If the query acceleration behavior is set to ALL for the prepare of the statement, Db2 does not consider this cache entry as a possible cache match during the prepare operation. • If the query acceleration behavior is not specified, or is explicitly set to NONE for the prepare of the statement, Db2 does not consider this cache entry as a possible cache match during the prepare operation. 'ACCEL_ONLY' The cached statement was prepared for acceleration to an accelerator. The statement references at least one accelerator-only table and can only be prepared to execute in the accelerator server. If query acceleration behavior is specified when a dynamic statement is prepared, Db2 can consider this cache entry for a possible cache match during the prepare operation of the dynamic statement. If query acceleration behavior is not specified, or is explicitly set to NONE when the statement is prepared, Db2 does not consider this cache entry for a cache match during the prepare operation. Query acceleration behavior is specified by either the QUERY_ACCELERATION subsystem parameter, the QUERYACCELERATION bind option, or the CURRENT QUERY ACCELERATION special register, and depends on their order of precedence. The order of precedence (lowest to highest) is: <ul style="list-style-type: none"> • The QUERY_ACCELERATION subsystem parameter • The QUERYACCELERATION bind option, if specified • An explicit SET CURRENT QUERY ACCELERATION statement
STAT_ACC_ELAP	BIGINT	The accumulated elapsed time for the accelerator.
STAT_ACC_CPU	BIGINT	The accumulated CPU time for the accelerator.
STAT_ACC_ROW	BIGINT	The accumulated number of rows that are returned from the accelerator.
STAT_ACC_BYTE	BIGINT	The accumulated number of bytes that are returned from the accelerator.
STAT_ACC_1ROW	BIGINT	The time waited for the first row of the query result to be available from the accelerator.
STAT_ACC_DB2	BIGINT	The total time the accelerator waited for Db2 to request query results.
STAT_ACC_EXEC	BIGINT	The accumulated execution time for the accelerator.

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE (continued)

Column name	Data Type	Description
STAT_ACC_WAIT	BIGINT	The accumulated queue wait time for the accelerator.
ACCEL_OFFLOAD_ELIGIBLE	CHAR(1)	'NO' The statement is not eligible for acceleration. This is the default value. 'YES' The statement is a candidate for acceleration when an accelerator server is available to the Db2 subsystem.
ACCELERATOR_NAME	VARCHAR(128)	The concatenated name of the accelerator server that processed the query.
PER_STMT_ID	BIGINT NOT NULL	The statement identifier of the stabilized dynamic SQL statement. This value is set if this entry was stabilized to or loaded from the SYSIBM.SYSDNQRY catalog table
STBLGRP	VARCHAR(128) NOT NULL	The stabilization group name specified in a START DYNQRY command. This value is set if this entry was stabilized to or loaded from the SYSIBM.SYSDNQRY catalog table.
QUERY_HASH	CHAR(16) NOT NULL FOR BIT DATA	The hash key generated by the statement text.
QUERY_HASH_VERSION	INTEGER NOT NULL	The version of QUERY_HASH.
STABILIZED	CHAR(1) NOT NULL	Indicates whether the statement was stabilized.
APPLCOMPAT	VARCHAR(10) NOT NULL	The application compatibility level of a dynamic SQL statement.
CNO	BIGINT NOT NULL	The command number for the dynamic query capture monitor if applicable. Otherwise 0.
STAT_SUS_CHILDLLOCK	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for child L-locks for the statement.
STAT_SUS_OTHERLLOCK	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for other L-locks for the statement.
STAT_SUS_PAGESETPLOCK	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for global pageset or partition L-locks for the statement.
STAT_SUS_PAGEPLOCK	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for page P-locks for the statement.
STAT_SUS_OTHERPLOCK	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for other P-locks for the statement.
STAT_SUS_PIPE	FLOAT NOT NULL WITH DEFAULT	The accumulated wait time for pipe requests for the statement.
STAT_SUS_PQSYNC	FLOAT NOT NULL WITH DEFAULT	The accumulated waittime for parallel query waits for the statement.
STAT_ACC_TWDP	BIGINT	The accumulated wait time for the accelerator delay protocol.
STAT_ACC_NWDP	BIGINT	The accumulated number of statements for which the wait time for the accelerator delay protocol has expired.

Table 453. Descriptions of columns in DSN_STATEMENT_CACHE_TABLE (continued)

Column name	Data Type	Description
STMT_HASHID2	CHAR(8) FOR BIT DATA	Used to identify an SQL statement. Based on normalized SQL statement text. <ul style="list-style-type: none"> Includes certain BIND options for static SQL, and PREPARE attributes for dynamic SQL. Includes COLLID and PACKAGE name for static SQL. Excludes COLLID and PACKAGE name for dynamic SQL. Excludes VERSION name for static SQL.
STMT_HASH2VER	INTEGER	Used to identify the version of the hash algorithm that is used to compute the STMT_HASHID2 value.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.
AP_PLANHASH	CHAR(16) FOR BIT DATA	Used to identifier an access path based on selected columns of the PLAN_TABLE that contribute to the access path. This value excludes columns that do not affect the access path, such as APPLNAME, PROGNAME, VERSION, and others.
AP_PLANHASHVER	INTEGER	Used to identify the version of the hash algorithm that is used to compute the AP_PLANHASH value.
CONNECTION_TYPE	CHAR(8)	Connection type which did the PREPARE or BIND for the statement.
CLIENT_USERID	VARCHAR(128)	The client user ID name information.
CLIENT_APPLNAME	VARCHAR(255)	The client application name information.
CLIENT_WRKSTNNAME	VARCHAR(255)	The client workstation name information.

Notes:

1. If the specified value exceeds 2147483647, the column contains the value 2147483647.
2. Statistics are cumulative, across executions of the same statement, and across threads, if the value of COLLID is DSNDYNAMICSQLCACHE. If the value of COLLID is DSNEXPAINMODEYES, the values are for a single run of the statement only. If the value of COLLID is DSNEXPAINMODE EXPLAIN, the values of all statistics columns are 0.
3. The column is not applicable when the value of the COLLID column is 'DSNEXPAINMODEYES' or 'DSNEXPAINMODEEXPLAIN'

PSPI

DSN_STATEMNT_TABLE

The statement table, DSN_STATEMNT_TABLE, contains information about the estimated cost of specified SQL statements.

PSPI

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various

EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix.SDSNSAMP* library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See [“ADMIN_EXPLAIN_MAINT stored procedure” on page 765](#) for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

The following table describes the content of each column in STATEMNT_TABLE.

Table 454. Descriptions of columns in DSN_STATEMNT_TABLE

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL WITH DEFAULT	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>

Table 454. Descriptions of columns in DSN_STATEMNT_TABLE (continued)

Column name	Data type	Description
APPLNAME	VARCHAR(24) NOT NULL WITH DEFAULT	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The collection ID:</p> <p>'DSNDYNAMICSQLCACHE' The row originates from the dynamic statement cache.</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>
GROUP_MEMBER	VARCHAR(24) NOT NULL WITH DEFAULT	<p>The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.</p>
EXPLAIN_TIME	TIMESTAMP NOT NULL WITH DEFAULT	<p>The time when the EXPLAIN information was captured:</p> <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>

Table 454. Descriptions of columns in DSN_STATEMNT_TABLE (continued)

Column name	Data type	Description
STMT_TYPE	CHAR(6) NOT NULL WITH DEFAULT	<p>The type of statement being explained. Possible values are:</p> <p>SELECT SELECT</p> <p>INSERT INSERT</p> <p>UPDATE UPDATE</p> <p>MERGE MERGE</p> <p>DELETE DELETE</p> <p>TRUNCA TRUNCATE</p> <p>SELUPD SELECT with FOR UPDATE OF</p> <p>DELCUR DELETE WHERE CURRENT OF CURSOR</p> <p>UPDCUR UPDATE WHERE CURRENT OF CURSOR</p> <p>PRUNED A query that always returns 0 rows.</p> <p>blank None of the above statement types.</p>
COST_CATEGORY	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates if Db2 was forced to use default values when making its estimates. Possible values:</p> <p>A Indicates that Db2 had enough information to make a cost estimate without using default values.</p> <p>B Indicates that some condition exists for which Db2 was forced to use default values. See the values in REASON to determine why Db2 was unable to put this estimate in cost category A.</p>
PROCMS	INTEGER NOT NULL WITH DEFAULT	<p>The estimated processor cost, in milliseconds, for the SQL statement. The estimate is rounded up to the next integer value. The maximum value for this cost is 2147483647 milliseconds, which is equivalent to approximately 24.8 days. If the estimated value exceeds this maximum, the maximum value is reported. If an accelerator is used, the difference is reflected in this value.</p>
PROCSU	INTEGER NOT NULL WITH DEFAULT	<p>The estimated processor cost, in service units, for the SQL statement. The estimate is rounded up to the next integer value. The maximum value for this cost is 2147483647 service units. If the estimated value exceeds this maximum, the maximum value is reported. If an accelerator is used, this value represents the estimated cost including any impact of acceleration.</p>

Table 454. Descriptions of columns in DSN_STATEMNT_TABLE (continued)

Column name	Data type	Description
REASON	VARCHAR(254) WITH DEFAULT	<p>A string that indicates the reasons for putting an estimate into cost category B.</p> <p>ACCELMODEL ELIGIBLE The query is eligible for acceleration.</p> <p>ACCELMODEL NOT ELIGIBLE The query is not eligible for acceleration.</p> <p>HAVING CLAUSE A subselect in the SQL statement contains a HAVING clause.</p> <p>HOST VARIABLES The statement uses host variables, parameter markers, or special registers.</p> <p>OPTIMIZATION HINTS An statement-level access path, or PLAN_TABLE access path hint is applied to the statement, or APREUSE(ERROR/WARN) is applied for the package.</p> <p>PROFILEID value When profile monitoring is used for the statement, the value of the PROFILEID column in SYSIBM.DSN_PROFILE_TABLE.</p> <p>REFERENTIAL CONSTRAINTS Referential constraints of the type CASCADE or SET NULL exist on the target table of a DELETE statement.</p> <p>TABLE CARDINALITY The cardinality statistics are missing for one or more of the tables that are used in the statement, or the statement used materialized views or table expressions.</p> <p>TRIGGERS Triggers are defined on the target table of an insert, update, or delete operation.</p> <p>UDF The statement uses user-defined functions.</p>
STMT_ENCODE	CHAR(1) WITH DEFAULT	<p>Encoding scheme of the statement. If the statement represents a single CCSID set, the possible values are:</p> <p>A ASCII</p> <p>E EBCDIC</p> <p>U Unicode</p> <p>If the statement has multiple CCSID sets, the value is M.</p>
TOTAL_COST	FLOAT NOT NULL WITH DEFAULT	<p>The overall estimated cost of the statement. If an accelerator is used, the benefit is reflected in this value. . Use this value for reference purposes only. Db2 does not always choose the access path that has the lowest TOTAL_COST value. Db2 also uses other factors during access path selection, such as the reliability of the filter factor estimates.</p>

Table 454. Descriptions of columns in DSN_STATEMNT_TABLE (continued)

Column name	Data type	Description
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>

Table 454. Descriptions of columns in DSN_STATEMNT_TABLE (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>

Table 454. Descriptions of columns in DSN_STATEMNT_TABLE (continued)

Column name	Data type	Description
APCOMPARE_STATUS	CHAR(1) NOT NULL WITH DEFAULT	<p>The status of the access path comparison operation for the APCOMPARE option of a BIND or REBIND command.</p> <p>'S' Access path comparison succeeded, and the structure of the new access path matches the previous access path.</p> <p>'F' The structure of the new access path does not match the previous access path, or the access path comparison operation failed.</p> <p>'N' No match was found.</p> <p>blank This is the default value. APCOMPARE is not used, APCOMPARE was used prior to Db2 12, or APCOMPARE was used before this column was added to the table.</p>
APREUSE_STATUS	CHAR(1) NOT NULL WITH DEFAULT	<p>The status of the access path reuse operation for the APREUSE option of a BIND or REBIND command.</p> <p>'S' Access path reuse succeeded.</p> <p>'F' Access path reuse failed.</p> <p>'N' No match was found.</p> <p>blank This is the default value. APREUSE was not used, APREUSE was used prior to Db2 12, or APREUSE was used before this column was added to the table.</p>
APREUSE_VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. The value is the bind version of the package whose access path is reused. The default value blank is used when APREUSE_STATUS is blank.</p>
APREUSE_COPYID	INTEGER NOT NULL WITH DEFAULT	<p>The copy number of identifier for the package. The value is the copy number of the package whose access plan is being taken to be reused. The default value -1 blank is used when APREUSE_STATUS is blank.</p>

Table 454. Descriptions of columns in DSN_STATEMNT_TABLE (continued)

Column name	Data type	Description
EXPLAIN_TYPE	CHAR(1)	<p>The type of action that created the row:</p> <p>'A' Automatic bind</p> <p>'B' BIND command</p> <p>'C' EXPLAIN STATEMENT CACHE statement</p> <p>'D' Dynamic EXPLAIN statement</p> <p>'R' REBIND command</p> <p>'S' EXPLAIN STABILIZED DYNAMIC QUERY statement.</p> <p>blank The row existed before this column was added to the table. This is the default value.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
QUERY_HASH	CHAR(16) NOT NULL FOR BIT DATA	<p>The hash key that is generated by the statement text. This value is not unique for each statement. Other columns for the collection ID, package name, section number, and query number can be used with the hash key for uniqueness.</p>
FUNCTION_LVL	VARCHAR(10) NOT NULL WITH DEFAULT	<p>The function level of the Db2 subsystem when the access path was selected for the statement.</p>
STMT_HASHID2	CHAR(8) FOR BIT DATA	<p>Used to identify an SQL statement. Based on normalized SQL statement text.</p> <ul style="list-style-type: none"> • Includes certain BIND options for static SQL, and PREPARE attributes for dynamic SQL. • Includes COLLID and PACKAGE name for static SQL. • Excludes COLLID and PACKAGE name for dynamic SQL. • Excludes VERSION name for static SQL.
STMT_HASH2VER	INTEGER	<p>Used to identify the version of the hash algorithm that is used to compute the STMT_HASHID2 value.</p>
AP_PLANID	CHAR(16) FOR BIT DATA	<p>A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.</p>

Table 454. Descriptions of columns in DSN_STATEMNT_TABLE (continued)

Column name	Data type	Description
AP_PLANHASH	CHAR(16) FOR BIT DATA	Used to identify an access path. Based on selected columns of the PLAN_TABLE which contribute to the access path. Excludes cols that don't affect the access path, such as APPLNAME, PROGRAMNAME, VERSION, etc.
AP_PLANHASHVER	INTEGER	Used to identify the version of the hash algorithm that is used to compute the AP_PLANHASH value.
AP_SERVICE_DATA	VARCHAR(512) FOR BIT DATA	Used to save optimizer-sensitive environment variables at the time of optimization.
CONNECTION_TYPE	CHAR(8)	Connection type which did the PREPARE or BIND for the statement.
CLIENT_USERID	VARCHAR(128)	The client user ID name information.
CLIENT_APPLNAME	VARCHAR(255)	The client application name information.
CLIENT_WRKSTNNAME	VARCHAR(255)	The client workstation name information.

PSPI

Related information

[IBM Db2 Analytics Accelerator for z/OS documentation](#)

DSN_STAT_FEEDBACK

The DSN_STAT_FEEDBACK table contains recommendations for capturing missing or conflicting statistics that are defined during EXPLAIN.

Collecting these statistics by the RUNSTATS utility might improve the performance of the query.

PSPI The values in this table are updated only at EXPLAIN time, and are not modified by the RUNSTATS utility.

Information is captured in this table only for EXPLAIN operations that use the access path selection process. The access path selection process is not used when you issue an EXPLAIN statement with the STMTCACHE or PACKAGE options.

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. These tables are populated with statement cost information when you issue the EXPLAIN statement or bind. They are also populated when you specify EXPLAIN(YES) or EXPLAIN(ONLY) in a BIND or REBIND command. SQL optimization tools might also create EXPLAIN tables that are qualified by a user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix.SDSNSAMP* library. To upgrade the EXPLAIN tables to the format of the current Db2, you can

call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See “ADMIN_EXPLAIN_MAINT stored procedure” on page 765 for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

The following table contains descriptions of the columns in the DSN_STAT_FEEDBACK table.

Table 455. Descriptions of columns in the DSN_STAT_FEEDBACK table

Column name	Data Type	Descriptions
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
APPLNAME	VARCHAR(24) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>

Table 455. Descriptions of columns in the DSN_STAT_FEEDBACK table (continued)

Column name	Data Type	Descriptions
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
EXPLAIN_TIME	TIMESTAMP NOT NULL	<p>The time when the EXPLAIN information was captured:</p> <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>
SECTNOI	INTEGER NOT NULL WITH DEFAULT WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.

Table 455. Descriptions of columns in the DSN_STAT_FEEDBACK table (continued)

Column name	Data Type	Descriptions
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>
TBCREATOR	VARCHAR(128) NOT NULL	The creator of the table.
TBNAME	VARCHAR(128) NOT NULL	The name of the table.
IXCREATOR	VARCHAR(128) NOT NULL	The creator of the index.
IXNAME	VARCHAR(128) NOT NULL	The name of the index.
COLNAME	VARCHAR(128) NOT NULL	The name of the column.
NUMCOLUMNS	SMALLINT NOT NULL	The number of columns in the column group.
COLGROUPCOLNO	VARCHAR(254) NOT NULL FOR BIT DATA	A hex representation that identifies the set of columns associated with the statistics. If the statistics are only associated with a single column, the field contains a zero length. Otherwise, the field is an array of SMALLINT column numbers with a dimension equal to the value in NUMCOLUMNS.

Table 455. Descriptions of columns in the DSN_STAT_FEEDBACK table (continued)

Column name	Data Type	Descriptions
TYPE	CHAR(1) NOT NULL	<p>The type of statistic to collect:</p> <p>'C' Cardinality.</p> <p>'F' Frequency.</p> <p>'H' Histogram.</p> <p>'I' Index.</p> <p>'T' Table.</p>
DBNAME	VARCHAR(24) NOT NULL	The name of the database.
TSNAME	VARCHAR(24) NOT NULL	The name of the table space.
REASON	CHAR(8) NOT NULL	<p>The reason for the statistics collection recommendation:</p> <p>'BASIC' A basic statistic value for a column, table, or index is missing. No statistics were collected for the identified object.</p> <p>'CONFLICT' Another statistic contains a value that conflicts with the value of this statistic. Such conflicts usually occur because statistics were collected for related objects at different times.</p> <p>'COMPFFIX' Multi-column cardinality statistics are needed for an index compound filter factor.</p> <p>'DEFAULT' A predicate references a value that is probably a default value, which indicates that data might be skewed.</p> <p>'KEYCARD' The cardinalities of index key columns are missing.</p> <p>'LOWCARD' The cardinality of the column is a low value, which indicates that data might be skewed.</p> <p>'NULLABLE' Distribution statistics are not available for a nullable column, which indicates that data might be skewed.</p> <p>'RANGEPRD' Histogram statistics are not available for a range predicate.</p> <p>'PARALLEL' Parallelism might be improved by uniform partitioning of key ranges.</p> <p>'STALE' A statistic appears likely to be out of sync with other statistics, based on comparison of the time that it was collected to statistics collection times for related objects.</p>

Table 455. Descriptions of columns in the DSN_STAT_FEEDBACK table (continued)

Column name	Data Type	Descriptions
REMARKS	VARCHAR(254) NOT NULL	Free form text for extensibility.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

Column descriptions

The following table describes the columns of DSN_STRUCT_TABLE

Table 456. DSN_STRUCT_TABLE description

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
QBLOCKNO	SMALLINT NOT NULL	<p>A number that identifies each query block within a query. The value of the numbers are not in any particular order, nor are they necessarily consecutive.</p>
APPLNAME	VARCHAR(24) NOT NULL	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>
PARENT	SMALLINT NOT NULL	<p>The parent query block number of the current query block in the structure of SQL text; this is the same as the PARENT_QBLOCKNO in PLAN_TABLE.</p>
TIMES	FLOAT NOT NULL	<p>The estimated number of rows returned by Data Manager; also the estimated number of times this query block is executed.</p>
ROWCOUNT	INTEGER NOT NULL	<p>The estimated number of rows returned by RDS (Query Cardinality).</p>

Table 456. DSN_STRUCT_TABLE description (continued)

Column name	Data type	Description
ATOPEN	CHAR(1) NOT NULL	Whether the query block is moved up for do-at-open processing; 'Y' if done-at-open; 'N': otherwise.
CONTEXT	CHAR(10) NOT NULL	This column indicates what the context of the current query block is. The possible values are: <ul style="list-style-type: none"> • 'TOP LEVEL' • 'UNION' • 'UNION ALL' • 'PREDICATE' • 'TABLE EXP' • 'UNKNOWN'
ORDERNO	SMALLINT NOT NULL	Not currently used.
DOATOPEN_PARENT	SMALLINT NOT NULL	The parent query block number of the current query block; Do-at-open parent if the query block is done-at-open, this may be different from the PARENT_QBLOCKNO in PLAN_TABLE.
QBLOCK_TYPE	CHAR(6) NOT NULL WITH DEFAULT	This column indicates the type of the current query block. The possible values are <ul style="list-style-type: none"> • 'SELECT' • 'INSERT' • 'UPDATE' • 'DELETE' • 'SELUPD' • 'DELCUR' • 'UPDCUR' • 'CORSUB' • 'NCOSUB' • 'TABLEX' • 'TRIGGR' • 'UNION' • 'UNIONA' • 'CTE' <p>It is equivalent to QBLOCK_TYPE column in PLAN_TABLE, except for CTE.</p>

Table 456. DSN_STRUCT_TABLE description (continued)

Column name	Data type	Description
EXPLAIN_TIME	TIMESTAMP NOT NULL	<p>The time when the EXPLAIN information was captured:</p> <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>
QUERY_STAGE	CHAR(8) NOT NULL	IBM internal use only.
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
ORIGIN	CHAR(1) NOT NULL WITH DEFAULT	<p>Indicates the origin of the query block:</p> <p>Blank Generated by Db2</p> <p>C Column mask</p> <p>R Row permission</p> <p>U Specified by the user</p>
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>

Table 456. DSN_STRUCT_TABLE description (continued)

Column name	Data type	Description
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none">• A package for a basic trigger (TYPE='T')• A package for an application that was precompiled without SQL processing option VERSION• A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>

Table 456. DSN_STRUCT_TABLE description (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
PER_STMT_ID	BIGINT NOT NULL	<p>The persistent statement identifier for SQL statements in Db2 catalog tables.</p> <p>For example, this column corresponds to the following catalog table columns that identify SQL statements:</p> <ul style="list-style-type: none"> • STMT_ID in SYSIBM.SYSPACKSTMT, for SQL statements in packages. • SDQ_STMT_ID in SYSIBM.SYSDYNQUERY, for stabilized dynamic SQL statements.
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

DSN_VIEWREF_TABLE

The view reference table, DSN_VIEWREF_TABLE, contains information about all of the views and materialized query tables that are used to process a query.

PSP1

Recommendation: Do not manually insert data into system-maintained EXPLAIN tables, and use care when deleting obsolete EXPLAIN table data. The data is intended to be manipulated only by the Db2 EXPLAIN function and optimization tools. Certain optimization tools depend on instances of the various EXPLAIN tables. Be careful not to delete data from or drop instances EXPLAIN tables that are created for these tools.

Qualifiers

Your subsystem or data sharing group can contain multiple instances of these tables that are qualified by user ID. You can find the SQL statement for creating an instance of these tables in member DSNTESC of the SDSNSAMP library.

Sample CREATE TABLE statement

You can find a sample CREATE TABLE statement for each EXPLAIN table in member DSNTESC of the *prefix*.SDSNSAMP library. To upgrade the EXPLAIN tables to the format of the current Db2, you can call the ADMIN_EXPLAIN_MAINT stored procedure. ADMIN_EXPLAIN_MAINT can also create EXPLAIN tables, upgrade them to the format for the current Db2 release, or complete other maintenance tasks. See [“ADMIN_EXPLAIN_MAINT stored procedure” on page 765](#) for information about using the *action* input parameter to request each of these tasks. Alternatively, to perform only the task of upgrading EXPLAIN tables to the format of the current Db2, you can run job DSNTIJXA. DSNTIJXA invokes REXX exec DSNTXTA to perform the upgrade. See [Migration step 25: Convert EXPLAIN tables to the current format \(Db2 Installation and Migration\)](#) for more information on running DSNTIJXA.

Column descriptions

The following table describes the columns of DSN_VIEWREF_TABLE.

Table 457. DSN_VIEWREF_TABLE description

Column name	Data type	Description
QUERYNO	INTEGER NOT NULL WITH DEFAULT	<p>A number that identifies the statement that is being explained. The origin of the value depends on the context of the row:</p> <p>For rows produced by EXPLAIN statements The number specified in the QUERYNO clause, which is an optional part of the SELECT, INSERT, UPDATE, MERGE, and DELETE statement syntax.</p> <p>For rows not produced by EXPLAIN statements Db2 assigns a number that is based on the line number of the SQL statement in the source program.</p> <p>When the values of QUERYNO are based on the statement number in the source program, values that exceed 32767 are reported as 0. However, in certain rare cases, the value is not guaranteed to be unique.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, if the QUERYNO clause is specified, its value is used by Db2. Otherwise Db2 assigns a number based on the line number of the SQL statement in the compiled SQL function, native SQL procedure, or advanced trigger.</p>
APPLNAME	VARCHAR(24) NOT NULL WITH DEFAULT	<p>The name of the application plan for the row. Applies only to embedded EXPLAIN statements that are executed from a plan or to statements that are explained when binding a plan. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column is not used, and is blank.</p>
PROGNAME	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The name of the program or package containing the statement being explained. Applies only to embedded EXPLAIN statements and to statements explained as the result of binding a plan or package. A blank indicates that the column is not applicable.</p> <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the specific name of the compiled SQL function or native SQL procedure. When the SQL statement is embedded in an advanced trigger, this column contains the name of the trigger.</p>

Table 457. DSN_VIEWREF_TABLE description (continued)

Column name	Data type	Description
VERSION	VARCHAR(122) NOT NULL WITH DEFAULT	<p>The version identifier for the package. Applies only to an embedded EXPLAIN statement executed from a package or to a statement that is explained when binding a package.</p> <p>If the value is not blank, the value is the same as the VERSION value for the package that was used to create this EXPLAIN table row.</p> <p>The value is blank for a statement in:</p> <ul style="list-style-type: none"> • A package for a basic trigger (TYPE='T') • A package for an application that was precompiled without SQL processing option VERSION • A package that was precompiled with an empty string for the VERSION value (TYPE=blank) <p>When the SQL statement is embedded in a compiled SQL function or native SQL procedure, this column indicates the version identifier of the function or procedure. When the SQL statement is embedded in an advanced trigger body, this column is not used and will be blank.</p>
COLLID	VARCHAR(128) NOT NULL WITH DEFAULT	<p>The collection ID:</p> <p>'DSNEXPLAINMODEYES' The row originates from an application that specifies YES for the value of the CURRENT EXPLAIN MODE special register.</p> <p>'DSNEXPLAINMODEEXPLAIN' The row originates from an application that specifies EXPLAIN for the value of the CURRENT EXPLAIN MODE special register.</p> <p>When the SQL statement is embedded in a compiled SQL function, native SQL procedure, or advanced trigger, this column indicates the schema name of the compiled SQL function, native SQL procedure, or advanced trigger.</p>
CREATOR	VARCHAR(128) NOT NULL WITH DEFAULT	Authorization ID of the owner of the object.
NAME	VARCHAR(128)	Name of the object.
TYPE	CHAR(1) NOT NULL WITH DEFAULT	<p>The type of the object:</p> <p>'V' View</p> <p>'R' MQT that has been used to replace the base table for rewrite</p> <p>'M' MQT</p>
MQTUSE	SMALLINT WITH DEFAULT	IBM internal use only.

Table 457. DSN_VIEWREF_TABLE description (continued)

Column name	Data type	Description
EXPLAIN_TIME	TIMESTAMP NOT NULL WITH DEFAULT	<p>The time when the EXPLAIN information was captured:</p> <p>All cached statements When the statement entered the cache, in the form of a full-precision timestamp value.</p> <p>Non-cached static statements When the statement was bound, in the form of a full precision timestamp value.</p> <p>Non-cached dynamic statements When EXPLAIN was executed, in the form of a value equivalent to a CHAR(16) representation of the time appended by 4 zeros.</p>
GROUP_MEMBER	VARCHAR(24) NOT NULL	The member name of the Db2 that executed EXPLAIN. The column is blank if the Db2 subsystem was not in a data sharing environment when EXPLAIN was executed.
SECTNOI	INTEGER NOT NULL WITH DEFAULT	The section number of the statement. The value is taken from the same column in SYSPACKSTMT or SYSSTMT tables and can be used to join tables to reconstruct the access path for the statement. This column is applicable only for static statements. The default value of -1 indicates EXPLAIN information that was captured in DB2 9 or earlier.

Table 457. DSN_VIEWREF_TABLE description (continued)

Column name	Data type	Description
EXPANSION_REASON	CHAR(2) NOT NULL WITH DEFAULT	<p>This column applies only to statements that reference archive tables or temporal tables. For other statements, this column is blank.</p> <p>Indicates the effect of the CURRENT TEMPORAL BUSINESS_TIME special register, the CURRENT TEMPORAL SYSTEM_TIME special register, and the SYSIBMADM.GET_ARCHIVE built-in global variable. These items are controlled by the BUSTIMESENSITIVE, SYSTIMESENSITIVE, and ARCHIVESENSITIVE bind options.</p> <p>Db2 implicitly adds certain syntax to the query if one of the following conditions are true:</p> <ul style="list-style-type: none"> • The SYSIBMADM.GET_ARCHIVE global variable is set to Y and the ARCHIVESENSITIVE bind option is set to YES • The CURRENT TEMPORAL BUSINESS_TIME special register is not null and the BUSTIMESENSITIVE bind option is set to YES • The CURRENT TEMPORAL SYSTEM_TIME special register is not null and the SYSTIMESENSITIVE bind option is set to YES <p>This column can have one of the following values:</p> <p>'A' The query contains implicit query transformation as a result of the SYSIBMADM.GET_ARCHIVE built-in global variable.</p> <p>'B' The query contains implicit query transformation as a result of the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>'S' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register.</p> <p>'SB' The query contains implicit query transformation as a result of the CURRENT TEMPORAL SYSTEM_TIME special register and the CURRENT TEMPORAL BUSINESS_TIME special register.</p> <p>blank The query does not contain implicit query transformation.</p>
AP_PLANID	CHAR(16) FOR BIT DATA	A unique identifier for BIND or PREPARE optimizations for an SQL statement, in the form of an extended timestamp value.

Appendix M. Tables that support query acceleration

To interact with accelerator servers, Db2 requires several tables that record characteristics of accelerated servers and tables.

The following table lists these tables, the table spaces and indexes for these tables, and the index fields for each index. The indexes are in ascending order, except where noted.

Table 458. Tables, table spaces, and indexes for tables that support acceleration of queries

Table	Description	Table space*	Indexes	Index fields
“SYSACCEL.SYSACCELERATORS table” on page 2963	Records the characteristics of accelerator servers.	SYSTSACC	DSNACC01	ACCELERATORNAME
“SYSACCEL.SYSACCELERATEDTABLES table” on page 2964	Records the characteristics of each table that is marked for acceleration.	SYSTSACT	DSNACT01	CREATOR, NAME, ACCELERATORNAME
“SYSACCEL.SYSACCELERATEDPACKAGES table” on page 2966	Records the characteristics of Db2 packages that are bound with the QUERYACCELERATION and GETACCELARCHIVE bind options.	SYSTSACP	DSNACP01	LOCATION, COLLID, NAME, VERSION
			DSNACP02	LOCATION, COLLID, NAME, CONTOKEN
“SYSACCEL.SYSACCELERATEDTABLESAUTH table” on page 2966	Records the privileges that are held by user users over tables that are enabled for acceleration.	SYSTSATA	DSNATA01	T_CREATOR, T_NAME, ACCELERATORNAME, GRANTEE

* The table spaces listed in this table are universal table spaces (UTSs). Prior to these table spaces being migrated to type UTS, all of the catalog tables for accelerated queries used the SYSACCEL segmented table space. SYSACCEL is still supported; however, segmented table spaces have been deprecated. If you want to migrate from the single SYSACCEL segmented table space, see [Migrating query acceleration tables to universal table spaces \(Db2 Installation and Migration\)](#).

[Creating database objects that support query acceleration \(Db2 Installation and Migration\)](#)

SYSACCEL.SYSACCELERATORS table

The SYSACCEL.SYSACCELERATORS table contains rows that describe the characteristics of each accelerator server.

Rows in this table can be inserted, updated, and deleted.

Column name	Data type	Description	Use
ACCELERATOR-NAME	VARCHAR(128) NOT NULL	A unique name for the accelerator server. This is the name by which the accelerator server is known to the local Db2 accelerated query tables.	G

Column name	Data type	Description	Use
LOCATION	VARCHAR(128)	Identifies the location name that is associated with the accelerator server.	G
ACCELERATORSRL	CHAR(64) FOR BIT DATA	Internal use only	I
ACCELERATOR_TYPE	SMALLINT NOT NULL	The type of accelerator: 1 Indicates Version 5 or earlier of IBM Db2 Analytics Accelerator for z/OS (an <i>on-premises</i> accelerator hardware appliance based on IBM PureData® System for Analytics and IBM Netezza® technology). 2 Indicates Version 7 of IBM Db2 Analytics Accelerator for z/OS. The default value is 1.	G

SYSACCEL.SYSACCELERATEDTABLES table

The SYSACCEL.SYSACCELERATEDTABLES table contains rows that describe the characteristics of each table that is marked for acceleration.

Rows in this table can be inserted, updated, and deleted.

Column name	Data type	Description	Use
NAME	VARCHAR(128) NOT NULL	The name of the table.	G
CREATOR	VARCHAR(128) NOT NULL	The schema of the table.	G
ACCELERATORNAME	VARCHAR(128) NOT NULL	A unique name for the accelerator server. This is the name by which the accelerator server is known to the local Db2 accelerated query tables.	G
REMOTENAME	VARCHAR(128) NOT NULL	The name of the base alias object.	G
REMOTECREATOR	VARCHAR(128) NOT NULL	The owner of the base alias object.	G
ENABLE	CHAR(1) NOT NULL	Indicates whether the remote table is enabled or disabled for query acceleration: Y Enabled N Disabled T Transition state. Queries are not sent to an accelerator server.	G

Column name	Data type	Description	Use
CREATEDBY	VARCHAR(128) NOT NULL	The primary authorization ID of the user who created the table.	G
CREATEDTS	TIMESTAMP NOT NULL WITH DEFAULT	The time when the CREATE statement was executed for the table.	G
ALTEREDTS	TIMESTAMP NOT NULL WITH DEFAULT	The time when the table was last altered.	G
REFRESH_TIME	TIMESTAMP NOT NULL WITH DEFAULT	The timestamp when the data was last refreshed. If the data was not refreshed, this column contains the default timestamp ('0001-01-01.00.00.00.000000').	G
SUPPORTLEVEL	SMALLINT NOT NULL	Internal use only.	I
ARCHIVE	CHAR(1)	The archive status of the table in the accelerator database: A The table is archived in the accelerator server that is specified by the ACCELERATORNAME value. The accelerator server contains active and archived data. B The table is partially archived in the accelerator server that is specified by the ACCELERATORNAME value. The accelerator server can answer queries that contain active data. C The table is archived in other accelerator servers. The accelerator server that is specified by the ACCELERATORNAME value contains only active data. X The table was restored on another accelerator server. The accelerator server that is specified by the ACCELERATORNAME value cannot answer queries. blank The table is not archived in an accelerator server.	G
REMOTELLOCATION	VARCHAR(128) NOT NULL WITH DEFAULT	The location of the owner table of the referenced accelerator-only table. For tables that are not referenced accelerator-only tables, this column is blank.	G
<u>FL 509</u> FEATURE	INTEGER NOT NULL	Indicates additional features of the table: 0 The table does not have any of the additional features that are indicated by the other values. 0 is the default value. 1 The table is a high availability accelerator-only table.	G

SYSACCEL.SYSACCELERATEDTABLESAUTH table

The SYSACCEL.SYSACCELERATEDTABLESAUTH table records the privileges that are held by users over tables that are enabled for acceleration.

Column name	Data type	Description	Use
ACCELERATORNAME	VARCHAR(128) NOT NULL	A unique name for the accelerator server. This is the name by which the accelerator server is known to the local Db2 accelerated query tables.	G
GRANTOR	VARCHAR(128) NOT NULL	Authorization ID of the user who granted the privilege.	G
GRANTEE	VARCHAR(128) NOT NULL	Grantee who holds the privileges to access the table in the accelerator. Currently, only a location name for a referencing Db2 for z/OS subsystem is supported. The location name must be the name of a Db2 for z/OS subsystem that was paired to the accelerator when the ACCEL_GRANT_TABLES_REFERENCE stored procedure granted the privilege.	G
GRANTEETYPE	CHAR(1) NOT NULL	Indicates the type of grantee: S Subsystem location name	G
TCREATOR	VARCHAR(128) NOT NULL	The schema of the table.	G
TNAME	VARCHAR(128) NOT NULL	The name of the table.	G
SELECTAUTH	CHAR(1) NOT NULL	Indicates whether the GRANTEE can select rows from the table or view: blank Privilege is not held. Y Privilege is held without the GRANT option.	G
GRANTEDTS	TIMESTAMP NOT NULL WITH DEFAULT	The time when the GRANT statement was executed for the table.	G

SYSACCEL.SYSACCELERATEDPACKAGES table

The SYSACCEL.SYSACCELERATEDPACKAGES table contains rows that describe the characteristics of Db2 packages that are bound with the QUERYACCELERATION and GETACCELARCHIVE bind options.

Do not modify the definition of the SYSACCEL.SYSACCELERATEDPACKAGES table or its indexes unless directed by IBM Support.

Column name	Data type	Description	Use
LOCATION	VARCHAR(128) NOT NULL	Always contains blanks.	S
COLLID	VARCHAR(128) NOT NULL	The name of the package collection.	G
NAME	VARCHAR(128) NOT NULL	The name of the package.	G
CONTOKEN	CHAR(8) NOT NULL FOR BIT DATA	Consistency token for the package.	S
VERSION	VARCHAR(122) NOT NULL	Version identifier for the package.	G
OWNER	VARCHAR(128) NOT NULL	Authorization ID of the package owner.	G
CREATOR	VARCHAR(128) NOT NULL	Authorization ID of the owner of the creator of the package version.	G
TIMESTAMP	TIMESTAMP NOT NULL	Timestamp indicating when the package was created.	G
BINDTIME	TIMESTAMP NOT NULL	Timestamp indicating when the package was last bound.	G
RELBOUND	CHAR(1) NOT NULL	The Db2 release when the package was bound or rebound.	G
TYPE	CHAR(1) NOT NULL	Type of package. Identifies how the package is created: F A CREATE FUNCTION or ALTER FUNCTION statement, or a BIND PACKAGE DEPLOY command created the package, and this package is a non-inline SQL scalar function package. N A CREATE PROCEDURE or ALTER PROCEDURE statement, or a BIND PACKAGE DEPLOY command created the package, and this package is a native SQL routine package. blank A BIND PACKAGE command created the package.	G
COPYID	INTEGER NOT NULL	Internal use only. The value is zero.	I

Column name	Data type	Description	Use
QUERYACCELERATION	CHAR(1) NOT NULL	<p>Indicates the query acceleration behavior that is specified for the static SQL queries in the package. This behavior can also apply to dynamic queries in the package if the package does not issue an explicit SET for the CURRENT QUERY ACCELERATION special register. The QUERYACCELERATION bind option does not have a default value.</p> <p>N NONE. No static SQL query in the package is bound for acceleration or will be accelerated when the package runs. NONE is not a default value.</p> <p>E ENABLE. A static SQL query is bound for acceleration if it satisfies the acceleration criteria, including the cost and heuristics criteria. The query is routed to an accelerator when the application runs.</p> <p>If a static query does not satisfy the acceleration criteria, the query is bound for execution in Db2.</p> <p>F ENABLEWITHFAILBACK. Same behavior as ENABLE, except if an error occurs on the first OPEN of the accelerated static query when the application runs. In this case, instead of failing the query and returning a negative SQL code to the application, Db2 performs a temporary <i>statement-level</i> incremental bind of the query and runs the query in Db2.</p> <p>L ELIGIBLE. A static SQL query is bound for acceleration if the query meets the basic acceleration criteria, regardless of the cost or heuristics criteria. The query is routed to the accelerator when the application runs.</p> <p>A ALL. All static SQL queries in the application are to be bound for acceleration and routed to the accelerator when the application runs. If Db2 determines that a static query cannot be bound to run on the accelerator and the query references a user base table or view, Db2 fails the BIND or REBIND PACKAGE operation with an error message for that query.</p>	G

Column name	Data type	Description	Use
GETACCELARCHIVE	CHAR(1) NOT NULL	<p>Indicates whether a static SQL query should retrieve archived data from the accelerator instead of active data from the accelerator. This behavior can also apply to dynamic queries in the package if the package does not issue an explicit SET for the CURRENT GET_ACCEL_ARCHIVE special register. The GETACCELARCHIVE bind option does not have a default value.</p> <p>N</p> <p>NO. No static SQL query is bound to retrieve archived data from the accelerator. If the static query also is not bound for acceleration, the query is bound to run in Db2.</p> <p>If the static query is bound for acceleration because the QUERYACCELERATION bind option is specified, when the application is run the query is routed to the accelerator. However, the query retrieves only active data on the accelerator. Archived data is not retrieved.</p> <p>Y</p> <p>YES. If the static query is bound for acceleration, the query retrieves archived data on the accelerator when the application runs if the following criteria is met:</p> <ul style="list-style-type: none"> • The QUERYACCELERATION bind option is also specified. • The static SQL query references an accelerated table that has partitioned data archived on an accelerator. <p>If the static query cannot be bound for acceleration, Db2 fails the BIND or REBIND PACKAGE operation with an error message for that query.</p>	G
ACCELERATOR	VARCHAR(128) NOT NULL	<p>Indicates the preferred target accelerator or accelerators to be used for queries accelerated from this Db2 package:</p> <p><i>accelerator-name</i></p> <p>An unqualified name that identifies an accelerator. An accelerator name can consist of 1–8 uppercase characters or numbers. The name must be unique within the Db2 subsystem or data sharing group. This name can be a physical accelerator name or a logical name (alias) that maps to a physical accelerator name or a group of physical accelerator names.</p> <p>blank</p> <p>If the ACCELERATOR bind option not specified, this is the default value, which indicates that no preferred target accelerator will be used and Db2 will determine the target accelerator.</p>	G

Column name	Data type	Description	Use
ACCELERATION_WAITFOR RDATA	DECIMAL(5,1) NOT NULL	<p>Indicates the maximum amount of time, if any, that the accelerator will delay a query while the accelerator waits for the replication of committed Db2 data changes that occurred prior to Db2 running the query.</p> <p>nnnn.m If the ACCELERATIONWAITFORDATA bind option is specified, this value indicates the maximum decimal number of seconds that the accelerator will delay the query when needed.</p> <p>-1.0 If the ACCELERATIONWAITFORDATA bind option is not specified, this is the default value of this catalog column. Db2 considers this as the default value of 0.0. No accelerator delay is requested, and static queries accelerated from this Db2 package will not be delayed.</p>	G

Appendix N. Tables that are used for program authorization

For program authorization, a table is provided to record the authorization for a program to execute a plan.

Table spaces and indexes for program authorization

Tables that are used for program authorization are contained in certain table spaces and have indexes.

The following table lists the table space and index for the table that is used for program authorization, and lists the index fields for the index. The index is in ascending order.

Table 459. Table spaces and indexes for the tables that are used for program authorization

TABLE SPACE DSNMDCDB. ...	TABLE SYSIBM. ...	INDEX SYSIBM. ...	INDEX FIELDS
DSNMDCTS	DSNPROGAUTH	DSNPROGAUTH_IDX 1	PROGNAME.PLANNAME

SYSIBM.DSNPROGAUTH table

The SYSIBM.DSNPROGAUTH table enables program authorization with or without program data integrity checking.

Column name	Data type	Description	Use
PROGNAME	VARCHAR(24) NOT NULL	Name of the application program that can run the plan.	G
PLANNAME	VARCHAR(24) NOT NULL	Name of the application plan for the application program.	G
PROGMDCVAL	CHAR(16) NOT NULL FOR BIT DATA WITH DEFAULT X'0000000000000000 0- 0000000000000000 0'	Reserved.	G
PROGMDCPAD	CHAR(1) NOT NULL WITH DEFAULT	Reserved.	G
CREATOR	VARCHAR(128) NOT NULL WITH DEFAULT CURRENT SQLID	The authorization ID under which the row was inserted or most recently updated.	G

Column name	Data type	Description	Use
ENABLED	CHAR(1) NOT NULL WITH DEFAULT 'N'	Whether program authorization is enabled: Y Program authorization is enabled. N Program authorization is disabled.	
CREATETS	TIMESTAMP NOT NULL WITH DEFAULT	The time at which the row was inserted or most recently updated.	G
REMARKS	VARCHAR(762)	A user-specified character string.	G

Appendix O. Sample user-defined functions

Some sample user-defined functions are provided with Db2. You can use the functions in your applications just as you would use other user-defined functions, or as examples to help you define your own user-defined functions.

All REST functions are created by installation job DSNTIJRF or the `createUDFzOS.sql` script and can be used to allow applications to access REST-based services through SQL. For all other sample functions, the following points apply:

- To use these functions in your applications: Use the functions only if installation job DSNTEJ2U, which prepares the functions for use, has been run. Because the external programs that implement the logic of the sample functions are written in C and C++, the installation job requires that your site has IBM C/C++ for z/OS. For information, see [Job DSNTEJ2U \(Db2 Installation and Migration\)](#).
- If you want to use these functions as examples to help you define and implement your own user-defined functions: Data set `prefix.SDSNSAMP` contains the code for the sample functions.
- The detailed descriptions of the functions include their external program names and specific names. The functions are in schema DSN8. The functions are defined to treat character or graphic string parameters, both input and output, as EBCDIC-encoded data.

ALTDATE

The ALTDATE function returns the current date in the specified format or converts a user-specified date from one format to another.

```
▶▶ ALTDATE( input-date, input-format, output-format ) ▶▶
```

The schema is DSN8.

The ALTDATE function returns the current date in one of the following formats or converts a user-specified date from one format to another:

D MONTH YY	D MONTH YYYY	DD MONTH YY	DD MONTH YYYY
D.M.YY	D.M.YYYY	DD.MM.YY	DD.MM.YYYY
D-M-YY	D-M-YYYY	DD-MM-YY	DD-MM-YYYY
D/M/YY	D/M/YYYY	DD/MM/YY	DD/MM/YYYY
M/D/YY	M/D/YYYY	MM/DD/YY	MM/DD/YYYY
YY/M/D	YYYY/M/D	YY/MM/DD	YYYY/MM/DD
YY.M.D	YYYY.M.D	YY.MM.DD	YYYY.MM.DD
	YYYY-M-D		YYYY-MM-DD
	YYYY-D-XX		YYYY-DD-XX
	YYYY-XX-D		YYYY-XX-DD

where:

D: Suppress leading zero if the day is less than 10
DD: Retain leading zero if the day is less than 10
M: Suppress leading zero if the month is less than 10
MM: Retain leading zero if the month is less than 10
MONTH: Use English-language name of month
XX: Use a capital Roman numeral for month

YY: Use a year format without century
 YYYY: Use a year format with century

The ALTDATE function demonstrates how you can create an overloaded function—a function name for which there are multiple function instances. Each instance supports a different parameter list enabling you to group related but distinct functions in a single user-defined function. The ALTDATE function has two forms.

Form 1: ALTDATE(output-format)

This form of the function converts the current date into the specified format.

output-format

A character string that matches one of the 34 date formats that are shown above. The character string must have a data type of VARCHAR and an actual length that is not greater than 13 bytes.

The result of the function is VARCHAR(17).

Form 2: ALTDATE(input-date, input-format, output-format)

This form of the function converts a date (*input-date*) in one user-specified format (*input-format*) into another format (*output-format*).

input-date

The argument must be a date or a character string representation of a date in the format specified by *input-format*. The character string must have a data type of VARCHAR and an actual length that is not greater than 17 bytes.

input-format

A character string that matches one of the 34 date formats that are shown above. The character string must have a data type of VARCHAR and an actual length that is not greater than 13 bytes.

output-format

A character string that matches one of the 34 date formats that are shown above. The character string must have a data type of VARCHAR and an actual length that is not greater than 13 bytes.

The result of the function is VARCHAR(17).

The following table shows the external and specific names for the two forms of the function, which are based on the input to the function.

Table 460. External program and specific names for ALTDATE

Conversion type	Input arguments	External name	Specific name
Current date	<i>output-format</i> (VARCHAR)	DSN8DUAD	DSN8.DSN8DUADV
User-specified date	<i>input-date</i> (VARCHAR) <i>input-format</i> (VARCHAR) <i>output-format</i> (VARCHAR)	DSN8DUCD	DSN8.DSN8DUCDVVV
	<i>input-date</i> (DATE) <i>input-format</i> (VARCHAR) <i>output-format</i> (VARCHAR)	DSN8DUCD	DSN8.DSN8DUCDDVV

Example 1: Convert the current date into format 'DD MONTH YY', a format that will include any leading zero for the month, the name of the month in English, and the year without the two digits for the century.

```
VALUES DSN8.ALTDATE( 'DD MONTH YY' );
```

Example 2: Convert the current date into format 'D.M.YYYY', a format that will suppress any leading zero for the day or month and include the year with the century.

```
VALUES DSN8.ALTDATE( 'D.M.YYYY' );
```

Example 3: Convert the current date into format 'YYYY-XX-DD', a format that will include the century, the month of the year as a roman numeral, and the day of the month with any leading zero.

```
VALUES DSN8.ALTDATE( 'YYYY-XX-DD' );
```

Example 4: Convert a date in the format of 'DD MONTH YYYY' to a date in the format of 'YYYY/MM/DD'.

```
VALUES DSN8.ALTDATE( '11 November 1918',
                    'DD MONTH YYYY',
                    'YYYY/MM/DD' );
```

The result of the above example is '1918/11/18'.

Example 5: Convert the date that employee 000130 was hired, a date in ISO format, into the format of 'D.M.YY'.

```
SELECT FIRSTNAME || ' '
       || LASTNAME || ' was hired on '
       || DSN8.ALTDATE( HIREDATE,
                       'YYYY-MM-DD',
                       'D.M.YY' )
FROM   EMP
WHERE  EMPNO = '000130';
```

Assuming that the HIREDATE is '1971-07-28', the above example returns: 'DELORES QUINTANA was hired on 28.7.71'.

ALTTIME

The ALTTIME function returns the current time in the specified format or converts a user-specified time from one format to another.

The schema is DSN8.

The ALTTIME function returns the current time in one of the following formats or converts a user-specified time from one of the formats to another:

H:MM AM/PM	HH:MM AM/PM
HH:MM:SS AM/PM	HH:MM:SS
H.MM	HH.MM
H.MM.SS	HH.MM.SS

where:

- H: Suppress leading zero if the hour is less than 10
- HH: Retain leading zero if the hour is less than 10
- M: Suppress leading zero if the minute is less than 10
- MM: Retain leading zero if the minute is less than 10
- AM/PM: Return time in 12-hour clock format, else 24-hour

The ALTTIME function demonstrates how you can create an overloaded function—a function name for which there are multiple function instances. Each instance supports a different parameter list enabling you to group related but distinct functions in a single user-defined function. The ALTTIME function has two forms.

Form 1: ALTTIME(output-format)

This form of the function converts the current time into the specified format.

output-format

A character string that matches one of the 8 time formats that are shown above. The character string must have a data type of VARCHAR and an actual length that is not greater than 14 bytes.

The result of the function is VARCHAR(11).

Form 2: ALTTIME(input-time, input-format, output-format)

This form of the function converts a time (*input-date*) in one user-specified format (*input-format*) into another format (*output-format*).

input-time

The argument must be a time or a character string representation of a time in the format specified by *input-format*. A character string argument must have a data type of VARCHAR and an actual length that is not greater than 11 bytes.

input-format

A character string that matches one of the 8 time formats that are shown above. The character string must have a data type of VARCHAR and an actual length that is not greater than 14 bytes.

output-format

A character string that matches one of the 8 time formats that are shown above. The character string must have a data type of VARCHAR and an actual length that is not greater than 14 bytes.

The result of the function is VARCHAR(11).

The following table shows the external program and specific names for the two forms of the function, which are based on the input to the function.

Table 461. External and specific names for ALTTIME

Conversion type	Input arguments	External name	Specific name
Current time	<i>output-format</i> (VARCHAR)	DSN8DUAT	DSN8.DSN8DUATV
User-specified time	<i>input-time</i> (VARCHAR) <i>input-format</i> (VARCHAR) <i>output-format</i> (VARCHAR)	DSN8DUCT	DSN8.DSN8DUCTVVV
	<i>input-time</i> (TIME) <i>input-format</i> (VARCHAR) <i>output-format</i> (VARCHAR)	DSN8DUCT	DSN8.DSN8DUCTTVV

Example 1: Convert the current time into a 12-hour clock format without seconds, 'H.MM AM/PM'.

```
VALUES DSN8.ALTTIME( 'H:MM AM/PM' );
```

Example 2: Convert the current time into a 24-hour clock format without seconds, 'HH.MM'.

```
VALUES DSN8.ALTTIME( 'HH.MM' );
```

Example 3: Convert the current time into a 24-hour clock format with seconds, 'HH.MM.SS'.

```
VALUES DSN8.ALTTIME( 'HH.MM.SS' );
```

Example 4: Convert '00:00:00', a time in 24-hour clock format with seconds, to a time in 12-hour clock format without seconds.

```
VALUES DSN8.ALTTIME( '00:00:00', 'HH:MM:SS', 'HH:MM AM/PM' );
```

The function returns '12:00 AM'.

Example 5: Convert '00:00:00', a time in 24-hour clock format with seconds, to a time in 12-hour clock format without seconds and without any leading zero on the hour.

```
VALUES DSN8.ALTTIME( '06.42.37', 'HH.MM.SS', 'H:MM AM/PM' );
```

The function returns '6:42 AM'.

BASE64ENCODE and BASE64DECODE

The BASE64ENCODE and BASE64DECODE helper REST functions complete Base64 encoding or decoding of the provided text.

Tip: The sample HTTP user-defined functions are intended to be used within Db2 SQL applications to access remote non-Db2 REST-based services through SQL statements. Do not confuse them with Db2 native REST services, which supports using a REST-based interface to interact with Db2 data from web, mobile, and cloud applications.

```
BASE64ENCODE (text) ->
BASE64DECODE (text) ->
```

The schema is DB2XML.

text

Specifies the text to encode or decode. For BASE64ENCODE, this argument is provided as a VARCHAR(2732) value and the function returns a Base64-encoded string. For BASE64DECODE, this argument is provided as a Base64-encoded VARCHAR(4096) value and the function returns the data as binary.

Related tasks

[Creating REST user-defined functions \(Db2 Installation and Migration\)](#)

CURRENCY

The CURRENCY function returns a value that is formatted as an amount with a user-specified currency symbol and, if specified, one of three symbols that indicate debit or credit.

```
CURRENCY( input-amount, currency-symbol , credit/debit-indicator ) ->
```

The schema is DSN8.

input-amount

An expression that specifies the value to be formatted. The expression must be a floating-point value.

currency-symbol

A character string that specifies the currency symbol. The string must have a data type of VARCHAR and an actual length that is not greater than 2 bytes.

credit/debit-indicator

A character string that specifies the symbol that is included with the result to indicate whether the value is negative or positive. The string must have a data type of VARCHAR and an actual length that is not greater than 5 bytes. If *credit/debit-indicator* is not specified or is the value null, the result is formatted without an indicator symbol. You can specify the following symbols:

CR/DB

Bank style. Negative input values are appended with 'DB'; positive input values are appended with 'CR'.

+/-

Arithmetic style. Negative input values are prefixed with a minus sign '-'; positive values are formatted without symbols.

()

Accounting style. Negative input values are enclosed in parentheses '()'; positive values are formatted without symbols.

The result of the function is VARCHAR(19).

The CURRENCY function uses the C language functions `strfmon` to facilitate formatting of money amounts and `setlocale` to initialize `strfmon` for local conventions. If `setlocale` fails, the CURRENCY function returns an error.

The following table shows the external program and specific names for CURRENCY. The specific names differ depending on the input to the function.

Table 462. External program and specific names for CURRENCY

Input arguments	External name	Specific name
<i>input-amount</i> <i>currency-symbol</i>	DSN8DUCY	DSN8.DSN8DUCYFV
<i>input-amount</i> <i>currency-symbol</i> <i>credit/debit-indicator</i>	DSN8DUCY	DSN8.DSN8DUCYFVV

Example 1: Express '-1234.56' as an amount in US dollars, using the bank style debit/credit indicator to indicate whether the value is negative or positive.

```
VALUES DSN8.CURRENCY( -1234.56, '$', 'CR/DB' );
```

The result of the function is '\$1,234.56 DB'.

Example 2: Express '-1234.56' as an amount in Deutsche marks, using the accounting style debit/credit indicator to indicate whether the value is negative or positive.

```
VALUES DSN8.CURRENCY( -1234.56, 'DM', '( / )' );
```

The result of the function is '(DM 1,234.56)'.

Example 3: Express '-1234.56' as an amount in Canadian dollars, using the accounting style debit/credit indicator to indicate whether the value is negative or positive.

```
VALUES DSN8.CURRENCY( -1234.56, 'CD', '+ / - ' );
```

The result of the function is '-CD 1,234.56'.

DAYNAME

The DAYNAME function returns the name of the weekday on which a given date falls. The name is returned in English.

►► DAYNAME(*input-date*) ◄◄

The schema is DSN8.

input-date

A valid date or valid character string representation of a date. A character string representation The string must have a data type of VARCHAR and an actual length that is not greater than 10 bytes. The date must be in ISO format.

The result of the function is VARCHAR(9).

The DAYNAME function uses the IBM C++ class `IDate`.

The following table shows the external and specific names for DAYNAME. The specific names differ depending on the data type of the input argument.

Table 463. External and specific names for DAYNAME

Input arguments	External name	Specific name
<i>input-date</i> (VARCHAR)	DSN8EUDN	DSN8.DSN8EUDNV
<i>input-date</i> (DATE)	DSN8EUDN	DSN8.DSN8EUDND

Example 1: For the current date, find the day of the week.

```
VALUES DSN8.DAYNAME( CURRENT DATE );
```

Example 2: Find the day of the week on which leap year falls in the year 2008.

```
VALUES DSN8.DAYNAME( '2008-02-29' );
```

The result of the function is 'Friday'.

Example 3: Find the day of the week on which Delores Quintana, employee number 000130, was hired.

```
SELECT FIRSTNAME || ' '
      || LASTNAME || ' was hired on '
      || DSN8.DAYNAME( HIREDATE ) || ', '
      || CHAR( HIREDATE )
FROM EMP
WHERE EMPNO = '000130';
```

The result of the function is 'DELORES QUINTANA was hired on Wednesday, 1971-07-28'.

HDFS_READ

The HDFS_READ function reads data from a delimiter-separated file in the Hadoop Distributed File System (HDFS).

► HDFS_READ(*file-url*, *options*) ◄

The schema is SYSFUN.

file-url

An expression that specifies the server address and path of the input file in HDFS. *file-url* is a VARCHAR(512) value.

options

An expression that specifies a list of *name=value* pairs. Each pair must be separated from the following pair by a space character. *options* is a VARCHAR(256) value. *options* can contain any of the following name and value pairs:

delimiter=delimiter-value

Identifies the character that is used as the delimiter in the input file that is specified by *file-url*.

user=user-value

Specifies an IBM InfoSphere® BigInsights® user name that has access to the input file that is specified by *file-url*.

password=password-value

Specifies the password for the IBM InfoSphere BigInsights user that is identified by *user=user-value*.

authport=authport-value

Specifies the port for form-based authentication of the input. The default is 8080.

The HDFS_READ function returns a table with one row for each record in the input file. HDFS_READ is a generic table function, which means that the columns in the returned table are defined when the table is referenced, instead of when the table is defined.

Example 1: Read an HDFS file whose URL is `http://hdfssrv.svl.ibm.com:8080`. The input file delimiter is a comma. Use the default authorization port. The records in the input file have two fields: a DECIMAL(8,3) field, and an INTEGER field.

```
SELECT * FROM TABLE(  
  HDFS_READ(  
    'http://hdfssrv.svl.ibm.com:8080',  
    'delimiter=', user=biadmin password=passwd')  
  AS T1(C1 DECIMAL(8,3), C2 INTEGER);
```

Example 2: Read an HDFS file whose URL is the location to which the output of a successful Jaql query is written. That location is specified by the *return-string* parameter of the JAQL_SUBMIT invocation that submits the Jaql query.

```
SELECT * FROM TABLE(  
  HDFS_READ(  
    JAQL_SUBMIT(  
      '[[15.3, 16],[170.99,180]]->  
      write(del(location='/tmp/test1.csv')));',  
      'http://hdfssrv.svl.ibm.com:14000/webhdfs/v1/tmp/test1.csv',  
      'http://jaqlsrv.svl.ibm.com:8080',  
      'timeout=60 user=biadmin', password=passwd'),  
      'user=biadmin password=passwd')  
  AS T1(C1 DECIMAL(8,3), C2 INTEGER);
```

Related reference

JAQL_SUBMIT

The JAQL_SUBMIT function invokes an IBM InfoSphere BigInsights Jaql query from a Db2 application.

HTTPBLOB

The HTTPBLOB REST function completes an HTTP request with the specified HTTP verb. Response messages from the server are returned as BLOB data.

Tip: The sample HTTP user-defined functions are intended to be used within Db2 SQL applications to access remote non-Db2 REST-based services through SQL statements. Do not confuse them with Db2 native REST services, which supports using a REST-based interface to interact with Db2 data from web, mobile, and cloud applications.

►► HTTPBLOB (url,method, , ) ◄◄

The schema is DB2XML.

url

Specifies the URL at which to complete the request. This argument is defined as a VARCHAR(2048) value.

method

Specifies the HTTP verb to use. Valid values are GET, POST, PUT, and DELETE.

httpHeader

Specifies an optional header XML document. This argument is defined as a CLOB(10K) value.

The XML header document can provide additional HTTP header values in the following format:

```
<httpHeader headerAttribute="headerAttributeValue">
  <header name="name" value="value" />
</httpHeader>
```

headerAttribute

Specify any of the following optional attributes:

connectTimeout

Specifies an integer value for the connection timeout threshold in milliseconds.

readTimeout

Specifies an integer value for the read timeout threshold in milliseconds.

followRedirects

Specifies whether redirects should be followed. This is a boolean value.

useCaches

Specifies whether caches should be used. This is a boolean value.

responseMsgFormat

Specifies the header attribute value `errorTagged`, to indicate that when the server returns an error message to the user-defined function, the user-defined function returns the following values to the caller:

- SQLCODE 0
- The error message from the server, in the following format:

```
<error httprc="{HTTP-status-code}">
  {error-message-returned-from-server}
</error>
```

headerAttributeValue

Specifies a value for the `headerAttribute`. Separate `headerAttribute` and `headerAttributeValue` combinations with single spaces.

name

The header name.

value

The header value.

<input>

Specifies the data to update at the specified URL. This argument is defined as BLOB(5M).

Related tasks

[Creating REST user-defined functions \(Db2 Installation and Migration\)](#)

HTTPCLOB

The HTTPCLOB REST function completes an HTTP request with the specified HTTP verb. Response messages from the server are returned as CLOB data. The character set is converted into the database code page if necessary.

Tip: The sample HTTP user-defined functions are intended to be used within Db2 SQL applications to access remote non-Db2 REST-based services through SQL statements. Do not confuse them with Db2 native REST services, which supports using a REST-based interface to interact with Db2 data from web, mobile, and cloud applications.

```
►► HTTPCLOB (url,method, httpHeader, <input>) ►►
```

The schema is DB2XML.

url

Specifies the URL at which to complete the request. This argument is defined as a VARCHAR(2048) value.

method

Specifies the HTTP verb to use. Valid values are GET, POST, PUT, and DELETE.

httpHeader

Specifies an optional header XML document. This argument is defined as a CLOB(10K) value.

The XML header document can provide additional HTTP header values in the following format:

```
<httpHeader headerAttribute="headerAttributeValue">
  <header name="name" value="value" />
</httpHeader>
```

headerAttribute

Specify any of the following optional attributes:

connectTimeout

Specifies an integer value for the connection timeout threshold in milliseconds.

readTimeout

Specifies an integer value for the read timeout threshold in milliseconds.

followRedirects

Specifies whether redirects should be followed. This is a boolean value.

useCaches

Specifies whether caches should be used. This is a boolean value.

responseMsgFormat

Specifies the header attribute value `errorTagged`, to indicate that when the server returns an error message to the user-defined function, the user-defined function returns the following values to the caller:

- SQLCODE 0
- The error message from the server, in the following format:

```
<error httprc="{HTTP-status-code}">
  {error-message-returned-from-server}
</error>
```

headerAttributeValue

Specifies a value for the `headerAttribute`. Separate `headerAttribute` and `headerAttributeValue` combinations with single spaces.

name

The header name.

value

The header value.

<input>

Specifies the data to update at the specified URL. This argument is defined as CLOB(5M).

HTTPDELETEBLOB and HTTPDELETECLOB

The HTTPDELETEBLOB and HTTPDELETECLOB REST functions delete a binary or text-based resource from the specified URL through an HTTP DELETE request. HTTPDELETEBLOB returns messages as BLOB

data. HTTPDELETECLOB returns messages as CLOB data. The character set is converted into the database code page if necessary.

Tip: The sample HTTP user-defined functions are intended to be used within Db2 SQL applications to access remote non-Db2 REST-based services through SQL statements. Do not confuse them with Db2 native REST services, which supports using a REST-based interface to interact with Db2 data from web, mobile, and cloud applications.

The schema is DB2XML.

url

Specifies the URL of the resource being accessed. This parameter is defined as a VARCHAR(2048) value.

httpHeader

Specifies an optional header XML document. This argument is defined as a CLOB(10K) value.

The XML header document can provide additional HTTP header values in the following format:

```
<httpHeader headerAttribute="headerAttributeValue">
  <header name="name" value="value" />
</httpHeader>
```

headerAttribute

Specify any of the following optional attributes:

connectTimeout

Specifies an integer value for the connection timeout threshold in milliseconds.

readTimeout

Specifies an integer value for the read timeout threshold in milliseconds.

followRedirects

Specifies whether redirects should be followed. This is a boolean value.

useCaches

Specifies whether caches should be used. This is a boolean value.

responseMsgFormat

Specifies the header attribute value `errorTagged`, to indicate that when the server returns an error message to the user-defined function, the user-defined function returns the following values to the caller:

- SQLCODE 0
- The error message from the server, in the following format:

```
<error httprc="{HTTP-status-code}">
  {error-message-returned-from-server}
</error>
```

HTTPGETBLOB and HTTPGETCLOB

The HTTPGETBLOB and HTTPGETCLOB REST functions retrieve a binary or text-based resource from the specified URL through an HTTP GET request. HTTPGETBLOB returns the resource as BLOB(5M) data. HTTPGETCLOB returns the resource as CLOB(5M) data. The character set is converted into the database code page if necessary.

Tip: The sample HTTP user-defined functions are intended to be used within Db2 SQL applications to access remote non-Db2 REST-based services through SQL statements. Do not confuse them with Db2 native REST services, which supports using a REST-based interface to interact with Db2 data from web, mobile, and cloud applications.

The schema is DB2XML.

url

Specifies the URL of the resource being accessed. This argument is defined as a VARCHAR(2048) value.

httpHeader

Specifies an optional header XML document. This argument is defined as a CLOB(10K) value.

The XML header document can provide additional HTTP header values in the following format:

```
<httpHeader headerAttribute="headerAttributeValue">
  <header name="name" value="value" />
</httpHeader>
```

headerAttribute

Specify any of the following optional attributes:

connectTimeout

Specifies an integer value for the connection timeout threshold in milliseconds.

readTimeout

Specifies an integer value for the read timeout threshold in milliseconds.

followRedirects

Specifies whether redirects should be followed. This is a boolean value.

useCaches

Specifies whether caches should be used. This is a boolean value.

responseMsgFormat

Specifies the header attribute value `errorTagged`, to indicate that when the server returns an error message to the user-defined function, the user-defined function returns the following values to the caller:

- SQLCODE 0
- The error message from the server, in the following format:

```
<error httprc="{HTTP-status-code}">
  {error-message-returned-from-server}
</error>
```

headerAttributeValue

Specifies a value for the `headerAttribute`. Separate `headerAttribute` and `headerAttributeValue` combinations with single spaces.

name

The header name.

value

The header value.

Examples

The examples in this section assume that the following requirements have been met:

- db2restudf.jar is defined in your CLASSPATH.
- The REST user-defined function (UDF) has been created.
- The server that is specified in the SQL statement is running.

In most cases, the results that are shown are truncated to include only the relevant parts of the output.

Example 1. The following SQL statement retrieves data from the www.ibm.com web page.

```
SELECT DB2XML.HTTPGETCLOB(
  CAST ('https://www.ibm.com' AS VARCHAR(2048)),
  CAST(NULL AS CLOB(1K)))
FROM SYSIBM.SYSDUMMY1
```

The output is similar to the following:

```
<!doctype html>
<html lang="en-US">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width"/>
  <meta charset="utf-8"/><title>IBM - United States</title>
  <link rel="canonical" href="https://www.ibm.com/us-en"/>
  <meta name="robots" content="index, follow"/>
  <meta name="description" content="For more than a century IBM has been dedicated ..."/>
  <meta name="keywords" content="IBM"/>
  ...
</html>
```

Example 2. The following SQL statement retrieves information that is in JSON format, about a book based on its ISBN identifier:

```
SELECT DB2XML.HTTPGETCLOB(
  CAST ('https://www.googleapis.com/books/v1/volumes?q=isbn:9781583478608' AS VARCHAR(255)),
  CAST(NULL AS CLOB(1K)))
FROM SYSIBM.SYSDUMMY1
```

The output is similar to the following:

```
{
  "kind": "books#volumes",
  "totalItems": 1,
  "items": [
    {
      "kind": "books#volume",
      "id": "7qGQvgAACAAJ",
      "etag": "qov9fok2EyI",
      "selfLink": "https://www.googleapis.com/books/v1/volumes/7qGQvgAACAAJ",
      "volumeInfo": {
        "title": "DB2 12 for Z/OS--The #1 Enterprise Database",
        "subtitle": "SECURE, SEAMLESS INTEGRATION for an Analytics, Mobile and Cloud World",
        "authors": [
          "Surekha Parekh"
        ],
        "publisher": "MC Press",
        "publishedDate": "2016-11-01",
        ...
      }
    }
  ]
}
```

Example 3. The following SQL statement retrieves information from the www.geonames.org web site. The results are in XML format.

```
SELECT DB2XML.HTTPGETCLOB(
  CAST('http://www.geonames.org/countryInfo?lang=' ||
```

```

DB2XML.URLENCODE('en','') ||
'&country=' ||
DB2XML.URLENCODE('us','') ||
'&type=XML' AS VARCHAR(255)),
CAST(NULL AS CLOB(1K))
FROM SYSIBM.SYSDUMMY1

```

This statement returns output that is similar to the following:

```

<?xml version="1.0" encoding="UTF-8" standalone="no"?>
<geonames>
  <country>
    <countryCode>US</countryCode>
    <countryName>United States</countryName>
    <isoNumeric>840</isoNumeric>
    <isoAlpha3>USA</isoAlpha3>
    <fipsCode>US</fipsCode>
    <continentName>North America</continentName>
    <capital>Washington</capital>
    <areaInSqKm>9629091.0</areaInSqKm>
    <population>327167434</population>
    <currencyCode>USD</currencyCode>
    <languages>en-US,es-US,haw,fr</languages>
    <geonameId>6252001</geonameId>
    <west>-124.733692</west>
    <north>49.384358</north>
    <east>-66.949607</east>
    <south>24.544093</south>
    <postalCodeFormat>#####-####</postalCodeFormat>
  </country>
</geonames>

```

HTTPGETBLOBFILE and HTTPGETCLOBFILE

The HTTPGETBLOBFILE and HTTPGETCLOBFILE REST functions retrieve a binary or text-based resource from the specified URL through an HTTP GET request. The resource is stored in a temporary file, and the path of the temporary file is returned as VARCHAR data. The character set is converted into the database code page if necessary.

Tip: The sample HTTP user-defined functions are intended to be used within Db2 SQL applications to access remote non-Db2 REST-based services through SQL statements. Do not confuse them with Db2 native REST services, which supports using a REST-based interface to interact with Db2 data from web, mobile, and cloud applications.

The schema is DB2XML.

url

Specifies the URL of the resource that is being accessed. This argument is defined as a VARCHAR(2048) value.

httpHeader

Specifies an optional header XML document. This argument is defined as a CLOB(10K) value.

The XML header document can provide additional HTTP header values in the following format:

```

<httpHeader headerAttribute="headerAttributeValue">
  <header name="name" value="value" />
</httpHeader>

```

headerAttribute

Specify any of the following optional attributes:

connectTimeout

Specifies an integer value for the connection timeout threshold in milliseconds.

readTimeout

Specifies an integer value for the read timeout threshold in milliseconds.

followRedirects

Specifies whether redirects should be followed. This is a boolean value.

useCaches

Specifies whether caches should be used. This is a boolean value.

responseMsgFormat

Specifies the header attribute value `errorTagged`, to indicate that when the server returns an error message to the user-defined function, the user-defined function returns the following values to the caller:

- SQLCODE 0
- The error message from the server, in the following format:

```
<error httprc="{HTTP-status-code}">
  {error-message-returned-from-server}
</error>
```

headerAttributeValue

Specifies a value for the *headerAttribute*. Separate *headerAttribute* and *headerAttributeValue* combinations with single spaces.

name

The header name.

value

The header value.

Related tasks

HTTPHEAD

The HTTPHEAD REST function verifies the HTTP header for the specified resource through an HTTP HEAD request. The HTTP header is returned as CLOB or XML data.

Tip: The sample HTTP user-defined functions are intended to be used within Db2 SQL applications to access remote non-Db2 REST-based services through SQL statements. Do not confuse them with Db2 native REST services, which supports using a REST-based interface to interact with Db2 data from web, mobile, and cloud applications.

```
► HTTPHEAD (url,  httpHeader) ►
```

The schema is DB2XML.

url

Specifies the URL of the resource. This argument is defined as a VARCHAR(2048) value.

httpHeader

Specifies an optional header XML document. This argument is defined as a CLOB(10K) value.

The XML header document can provide additional HTTP header values in the following format:

```
<httpHeader headerAttribute="headerAttributeValue">
  <header name="name" value="value" />
</httpHeader>
```

headerAttribute

Specify any of the following optional attributes:

connectTimeout

Specifies an integer value for the connection timeout threshold in milliseconds.

readTimeout

Specifies an integer value for the read timeout threshold in milliseconds.

followRedirects

Specifies whether redirects should be followed. This is a boolean value.

useCaches

Specifies whether caches should be used. This is a boolean value.

headerAttributeValue

Specifies a value for the *headerAttribute*. Separate *headerAttribute* and *headerAttributeValue* combinations with single spaces.

name

The header name.

value

The header value.

Related tasks

HTTPPOSTBLOB and HTTPPOSTCLOB

The HTTPPOSTBLOB and HTTPPOSTCLOB REST functions update a binary or text-based resource under the specified URL through an HTTP POST request. Response messages from the server are returned as BLOB for HTTPPOSTBLOB or as CLOB for HTTPPOSTCLOB. The character set is converted into the database code page if necessary.

Tip: The sample HTTP user-defined functions are intended to be used within Db2 SQL applications to access remote non-Db2 REST-based services through SQL statements. Do not confuse them with Db2 native REST services, which supports using a REST-based interface to interact with Db2 data from web, mobile, and cloud applications.

The schema is DB2XML.

url

Specifies the URL at which to update the data. This argument is defined as a VARCHAR(2048) value.

httpHeader

Specifies an optional header XML document. This argument is defined as a CLOB(10K) value.

The XML header document can provide additional HTTP header values in the following format:

```
<httpHeader headerAttribute="headerAttributeValue">
  <header name="name" value="value" />
</httpHeader>
```

headerAttribute

Specify any of the following optional attributes:

connectTimeout

Specifies an integer value for the connection timeout threshold in milliseconds.

readTimeout

Specifies an integer value for the read timeout threshold in milliseconds.

followRedirects

Specifies whether redirects should be followed. This is a boolean value.

useCaches

Specifies whether caches should be used. This is a boolean value.

responseMsgFormat

Specifies the header attribute value `errorTagged`, to indicate that when the server returns an error message to the user-defined function, the user-defined function returns the following values to the caller:

- SQLCODE 0
- The error message from the server, in the following format:

```
<error httprc="{HTTP-status-code}">
  {error-message-returned-from-server}
</error>
```

headerAttributeValue

Specifies a value for the `headerAttribute`. Separate `headerAttribute` and `headerAttributeValue` combinations with single spaces.

name

The header name.

value

The header value.

<input>

Specifies the data to update at the specified URL. This argument is defined as BLOB(5M) for HTTPPOSTBLOB or CLOB(5M) for HTTPPOSTCLOB.

Related tasks

[Creating REST user-defined functions \(Db2 Installation and Migration\)](#)

HTTPPUTBLOB and HTTPPUTCLOB

The HTTPPUTBLOB and HTTPPUTCLOB REST functions create or update a binary or text-based resource under the specified URL through an HTTP PUT request. Response messages from the server are returned as BLOB for HTTPPUTBLOB or as CLOB for HTTPPUTCLOB. The character set is converted into the database code page if necessary.

Tip: The sample HTTP user-defined functions are intended to be used within Db2 SQL applications to access remote non-Db2 REST-based services through SQL statements. Do not confuse them with Db2 native REST services, which supports using a REST-based interface to interact with Db2 data from web, mobile, and cloud applications.

The schema is DB2XML.

url

Specifies the URL at which to create or update the data. This argument is defined as a VARCHAR(2048) value.

httpHeader

Specifies an optional header XML document. This argument is defined as a CLOB(10K) value.

The XML header document can provide additional HTTP header values in the following format:

```
<httpHeader headerAttribute="headerAttributeValue">
  <header name="name" value="value" />
</httpHeader>
```

headerAttribute

Specify any of the following optional attributes:

connectTimeout

Specifies an integer value for the connection timeout threshold in milliseconds.

readTimeout

Specifies an integer value for the read timeout threshold in milliseconds.

followRedirects

Specifies whether redirects should be followed. This is a boolean value.

useCaches

Specifies whether caches should be used. This is a boolean value.

responseMsgFormat

Specifies the header attribute value `errorTagged`, to indicate that when the server returns an error message to the user-defined function, the user-defined function returns the following values to the caller:

- SQLCODE 0
- The error message from the server, in the following format:

```
<error httprc="{HTTP-status-code}">
  {error-message-returned-from-server}
</error>
```

headerAttributeValue

Specifies a value for the `headerAttribute`. Separate `headerAttribute` and `headerAttributeValue` combinations with single spaces.

name

The header name.

value

The header value.

<input>

Specifies the data to create or update at the specified URL. This argument is defined as BLOB(5M) for HTTPPUTBLOB or CLOB(5M) for HTTPPUTCLOB.

[Creating REST user-defined functions \(Db2 Installation and Migration\)](#)

JAQL_SUBMIT

The JAQL_SUBMIT function invokes an IBM InfoSphere BigInsights Jaql query from a Db2 application.

```
►► JAQL_SUBMIT( jaql-script ,return-string ,url,options ) ◄◄
```

The schema is SYSFUN.

jaql-script

Specifies a script that contains one or more Jaql queries, with or without parameter declarations. `jaql-script` is a VARCHAR(8000) value.

return-string

Specifies a string that is used as the returned value when the Jaql script completes successfully. `return-string` is a VARCHAR(512) value.

url

Specifies the URL of a Jaql server that accepts requests from the Db2 client, runs the queries that are specified in *jaql-script*, and returns results. *url* is a VARCHAR(512) value.

options

An expression that specifies a list of *name=value* pairs. Each pair must be separated from the following pair by a space character. *options* is a VARCHAR(256) value. *options* can contain any of the following name and value pairs:

timeout=timeout-value

Specifies the maximum time in seconds to wait for results to be returned from the Jaql server that is specified in the *url* parameter.

user=user-value

Specifies an IBM InfoSphere BigInsights user name that has access to the Jaql server.

password=password-value

Specifies the password for the IBM InfoSphere BigInsights user that is identified by *user=user-value*.

The JAQL_SUBMIT function returns a VARCHAR(512) string that contains the results of executing the Jaql script.

Example 1: Submit a Jaql script to a Jaql server. The Jaql script writes an array to a file, in delimited format. The URL of the Jaql server is `http://jaqlsrv.svl.ibm.com:8080`. Do not specify the string that is to be returned if the script completes successfully. Wait for a maximum of 60 seconds for output to be returned.

```
SELECT SYSFUN.JAQL_SUBMIT(
  '[[15.3, 16],[170.99,180]]->
  write(del(location='/tmp/test1.csv'));',
  'http://jaqlsrv.svl.ibm.com:8080',
  'timeout=60 user=biadmin password=passwd')
FROM SYSIBM.SYSDUMMY1;
```

Related information

[Db2 11 for z/OS Technical Overview \(IBM Redbooks\)](#)

MONTHNAME

The MONTHNAME function returns the calendar name of the month in which a given date falls. The name is returned in English.

►► MONTHNAME(*input-date*) ◄◄

The schema is DSN8.

input-date

A valid date or valid character string representation of a date. A character string representation must have a data type of VARCHAR and an actual length that is no greater than 10 bytes. The date must be in ISO format.

The result of the function is VARCHAR(9).

The MONTHNAME function uses the IBM C++ class `IDate`.

The following table shows the external and specific names for MONTHNAME. The specific names differ depending on the data type of the input argument.

Table 464. External and specific names for MONTHNAME

Input arguments	External name	Specific name
<i>input-date</i> (VARCHAR)	DSN8EUMN	DSN8.DSN8EUMNV
<i>input-date</i> (DATE)	DSN8EUMN	DSN8.DSN8EUMND

Example 1: For the current date, find the name of the month.

```
VALUES DSN8.MONTHNAME( CURRENT DATE );
```

Example 2: Find the month of the year in which Delores Quintana, employee number 000130, was hired.

```
SELECT FIRSTNAME || ' '
      || LASTNAME || ' was hired in the month of '
      || DSN8.MONTHNAME( HIREDATE )
      || CHAR( HIREDATE )
FROM EMP
WHERE EMPNO = '000130';
```

The result of the function is 'DELORES QUINTANA was hired in the month of July'.

TABLE_LOCATION

The TABLE_LOCATION function searches for an object and returns the location name of the object after any alias chains have been resolved.

```
►► TABLE_LOCATION( — object-name — , object-schema — , location-name ) ►►
```

The schema is DSN8.

The starting point of the resolution is the object that is specified by *object-name* and, if specified, *object-schema* and *location-name*. If the starting point does not refer to an alias, the location name of the starting point is returned. The resulting name can be of a table, view, or undefined object. The function returns a blank if there is no location name.

object-name

A character expression that specifies the unqualified name to be resolved. The unqualified name is usually of an existing alias. *object-name* must have a data type of VARCHAR and an actual length that is no greater than 18 bytes.

object-schema

A character expression that represents the schema that is used to qualify the value specified in *object-name* before resolution. *object-schema* must have a data type of VARCHAR and an actual length that is no greater than 8 bytes.

If *object-schema* is not specified or is null, the default schema is used for the qualifier.

location-name

A character expression that represents the location that is used to qualify the value specified in *object-name* before resolution. *location-name* must have a data type of VARCHAR and an actual length that is no greater than 16 bytes.

If *location-name* is not specified or is null, the location name is equivalent to "any".

The result of the function is VARCHAR(16). If *object-name* can be null, the result can be null; if *object-name* is null, the result is the null value.

The following table shows the external and specific names for TABLE_LOCATION. The specific names differ depending on the number of input arguments to the function.

Table 465. External and specific names for TABLE_LOCATION

Input arguments	External name	Specific name
<i>object-name</i> (VARCHAR)	DSN8DUTI	DSN8.DSN8DUTILV
<i>object-name</i> (VARCHAR) <i>object-schema</i> (VARCHAR)	DSN8DUTI	DSN8.DSN8DUTILVV
<i>object-name</i> (VARCHAR) <i>object-schema</i> (VARCHAR) <i>location-name</i> (VARCHAR)	DSN8DUTI	DSN8.DSN8DUTILVVV

Example: Assume that:

- DSN8.ALIAS_RS_SYSTABLES is an alias of SYSIBM.SYSTABLES at location name 'REMOTE_SITE'.
- The CURRENT SQLID is DSN8.

Use TABLE_LOCATION to find the location name where the base object for ALIAS_RS_SYSTABLES resides.

```
VALUES DSN8.TABLE_LOCATION( 'ALIAS_RS_SYSTABLES' );
```

The result of the function is 'REMOTE_SITE'.

TABLE_NAME

The TABLE_NAME function searches for an object and returns the unqualified name of the object after any alias chains have been resolved.

►► TABLE_NAME(— *object-name* — , *object-schema* — , *location-name* —) ◄◄

The schema is DSN8.

The starting point of the resolution is the object that is specified by *object-name* and, if specified, *object-schema* and *location name*. If the starting point does not refer to an alias, the unqualified name of the starting point is returned. The resulting name can be of a table, view, or undefined object.

object-name

A character expression that specifies the unqualified name to be resolved. The unqualified name is usually of an existing alias. *object-name* must have a data type of VARCHAR and an actual length that is no greater than 18 bytes.

object-schema

A character expression that represents the schema that is used to qualify the value specified in *object-name* before resolution. *object-schema* must have a data type of VARCHAR and an actual length that is no greater than 8 bytes.

If *object-schema* is not specified or is null, the default schema is used for the qualifier.

location-name

A character expression that represents the location that is used to qualify the value specified in *object-name* before resolution. *location-name* must have a data type of VARCHAR and an actual length that is no greater than 16 bytes.

If *location-name* is not specified or is null, the location name is equivalent to "any".

The result of the function is VARCHAR(128). If *object-name* can be null, the result can be null; if *object-name* is null, the result is the null value.

The following table shows the external and specific names for TABLE_NAME. The specific names differ depending on the number of input arguments to the function.

Table 466. External and specific names for TABLE_NAME

Input arguments	External name	Specific name
<i>object-name</i> (VARCHAR)	DSN8DUTI	DSN8.DSN8DUTINV
<i>object-name</i> (VARCHAR) <i>object-schema</i> (VARCHAR)	DSN8DUTI	DSN8.DSN8DUTINVV
<i>object-name</i> (VARCHAR) <i>object-schema</i> (VARCHAR) <i>location-name</i> (VARCHAR)	DSN8DUTI	DSN8.DSN8DUTINVVV

Example: Assume that:

- DSN8.VIEW_OF_SYSTABLES is a view of SYSIBM.SYSTABLES.
- DSN8.ALIAS_OF_VIEW is an alias of DSN8.VIEW_OF_SYSTABLES.
- The CURRENT SQLID is DSN8.

Use TABLE_NAME to find the name of the base object for ALIAS_OF_VIEW.

```
VALUES DSN8.TABLE_NAME( 'ALIAS_OF_VIEW' );
```

The result of the function is 'VIEW_OF_SYSTABLES'.

TABLE_SCHEMA

The TABLE_SCHEMA function searches for an object and returns the schema name of the object after any synonyms or alias chains have been resolved.

```

▶▶ TABLE_SCHEMA( — object-name ————— ) ▶▶
                    |
                    | , object-schema
                    |
                    | , location-name
                    |

```

The schema is DSN8.

The starting point of the resolution is the object that is specified by *objectname* and *objectschema*. If the starting point does not refer to an alias or synonym, the schema name of the starting point is returned. The resulting schema name can be of a table, view, or undefined object.

object-name

A character expression that specifies the unqualified name to be resolved. The unqualified name is usually of an existing alias. *object-name* must have a data type of VARCHAR and an actual length that is no greater than 18 bytes.

object-schema

A character expression that represents the schema that is used to qualify the value specified in *object-name* before resolution. *object-schema* must have a data type of VARCHAR and an actual length that is no greater than 8 bytes.

If *object-schema* is not specified or is null, the default schema is used for the qualifier.

location-name

A character expression that represents the location that is used to qualify the value specified in *object-name* before resolution. *location-name* must have a data type of VARCHAR (and an actual length that is no greater than 16 bytes).

If *location-name* is not specified or is null, the location name is equivalent to "any".

The result of the function is VARCHAR(128). If *object-name* can be null, the result can be null; if *object-name* is null, the result is the null value.

The following table shows the external and specific names for TABLE_SCHEMA. The specific names differ depending on the number of input arguments.

Table 467. External and specific names for function TABLE_SCHEMA

Input arguments	External name	Specific name
<i>object-name</i> (VARCHAR)	DSN8DUTI	DSN8.DSN8DUTISV
<i>object-name</i> (VARCHAR) <i>object-schema</i> (VARCHAR)	DSN8DUTI	DSN8.DSN8DUTISVV
<i>object-name</i> (VARCHAR) <i>object-schema</i> (VARCHAR) <i>location-name</i> (VARCHAR)	DSN8DUTI	DSN8.DSN8DUTISVVV

Example: Assume that:

- DSN8.ALIAS_OF_SYSTABLES is an alias of SYSIBM.SYSTABLES.
- The CURRENT SQLID is DSN8.

Find the name of the schema of the base table for ALIAS_OF_SYSTABLES.

```
VALUES DSN8.TABLE_SCHEMA( 'ALIAS_OF_SYSTABLES' );
```

The result of the function is 'SYSIBM'.

URLENCODE and URLDECODE

The URLENCODE and URLDECODE helper REST functions complete URL encoding or decoding of the provided text.

Tip: The sample HTTP user-defined functions are intended to be used within Db2 SQL applications to access remote non-Db2 REST-based services through SQL statements. Do not confuse them with Db2 native REST services, which supports using a REST-based interface to interact with Db2 data from web, mobile, and cloud applications.

The schema is DB2XML.

text

Specifies the text to encode or decode. This argument is defined as a VARCHAR(2048) value.

encoding

Specifies the character set that is to be used. It can be set to NULL where UTF-8 is used as the default.

Related tasks

Creating REST user-defined functions (Db2 Installation and Migration)

WEATHER

The WEATHER function returns information from a TSO data set as a Db2 table. The TSO data set contains sample weather statistics for various cities in the United States. The statistics are returned to the client with a row for each city and a column for each statistic. The WEATHER function is provided primarily to help you design and implement table functions.

The schema is DSN8.

Unlike the other sample user-defined functions, which are scalar functions, WEATHER is a table function. WEATHER shows how to use a table function to make non-relational data available to a client for manipulation by SQL.

input-data-set-name

The name of the TSO data set that contains sample weather statistics. The name is a character string with a data type of VARCHAR and an actual length that is not greater than 44 bytes.

The result of the function is a Db2 table with the following columns. Each column can be null.

name-of-city

VARCHAR(30)

temperature-in-fahrenheit

INTEGER

percent-humidity

INTEGER

wind-direction

VARCHAR(5)

wind-velocity

INTEGER

barometer

FLOAT

forecast

VARCHAR(25)

The external program name for the function is DSN8DUWF, and the specific name is DSN8.DSN8DUWF.

Example: Find the name of and the forecast for the cities that have a temperature less than 25 degrees.

```
SELECT CITY, FORECAST
FROM TABLE(DSN8.WEATHER('prefix.SDSNIVPD(DSN8LWC)')) AS W
WHERE TEMP_IN_F < 25
ORDER BY CITY;
```

This example returns:

Bessemer, MI	Slight chance of snow
Cheyenne, WY	Continued cooling
Helena, MT	Heavy snow
Pierre, SD	Continued cold

Information resources for Db2 for z/OS and related products

You can find the online product documentation for Db2 12 for z/OS and related products in IBM Documentation.

For all online product documentation for Db2 12 for z/OS, see [IBM Documentation \(https://www.ibm.com/docs/en/db2-for-zos/12\)](https://www.ibm.com/docs/en/db2-for-zos/12).

For other PDF manuals, see PDF format manuals for Db2 12 for z/OS (https://www.ibm.com/docs/en/SSEPEK_12.0.0/home/src/tpc/db2z_pdfmanuals.html).

Programming interface information

This information is intended to help you to code SQL statements. This information primarily documents General-use Programming Interface and Associated Guidance Information provided by Db2 12 for z/OS. This information also documents Product-sensitive Programming Interface and Associated Guidance Information provided by Db2 12 for z/OS.

General-use Programming Interface and Associated Guidance Information

General-use Programming Interfaces allow the customer to write programs that obtain the services of Db2 12 for z/OS.

Product-sensitive Programming Interface and Associated Guidance Information

Product-sensitive Programming Interfaces allow the customer installation to perform tasks such as diagnosing, modifying, monitoring, repairing, tailoring, or tuning of this IBM software product. Use of such interfaces creates dependencies on the detailed design or implementation of the IBM software product. Product-sensitive Programming Interfaces should be used only for these specialized purposes. Because of their dependencies on detailed design and implementation, it is to be expected that programs written to such interfaces may need to be changed in order to run with new product releases or versions, or as a result of service.

Product-sensitive Programming Interface and Associated Guidance Information is identified where it occurs by the following markings:

 Product-sensitive Programming Interface and Associated Guidance Information... 

Trademarks

IBM, the IBM logo, and [ibm.com](http://www.ibm.com)® are trademarks or registered marks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the web at "Copyright and trademark information" at: <http://www.ibm.com/legal/copytrade.shtml>.

Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both.

Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.

UNIX is a registered trademark of The Open Group in the United States and other countries.

Java and all Java-based trademarks and logos are trademarks or registered trademarks of Oracle and/or its affiliates.

Terms and conditions for product documentation

Permissions for the use of these publications are granted subject to the following terms and conditions:

Applicability: These terms and conditions are in addition to any terms of use for the IBM website.

Personal use: You may reproduce these publications for your personal, noncommercial use provided that all proprietary notices are preserved. You may not distribute, display or make derivative work of these publications, or any portion thereof, without the express consent of IBM.

Commercial use: You may reproduce, distribute and display these publications solely within your enterprise provided that all proprietary notices are preserved. You may not make derivative works of these publications, or reproduce, distribute or display these publications or any portion thereof outside your enterprise, without the express consent of IBM.

Rights: Except as expressly granted in this permission, no other permissions, licenses or rights are granted, either express or implied, to the publications or any information, data, software or other intellectual property contained therein.

IBM reserves the right to withdraw the permissions granted herein whenever, in its discretion, the use of the publications is detrimental to its interest or, as determined by IBM, the above instructions are not being properly followed.

You may not download, export or re-export this information except in full compliance with all applicable laws and regulations, including all United States export laws and regulations.

IBM MAKES NO GUARANTEE ABOUT THE CONTENT OF THESE PUBLICATIONS. THE PUBLICATIONS ARE PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT, AND FITNESS FOR A PARTICULAR PURPOSE.

Privacy policy considerations

IBM Software products, including software as a service solutions, ("Software Offerings") may use cookies or other technologies to collect product usage information, to help improve the end user experience, to tailor interactions with the end user, or for other purposes. In many cases no personally identifiable information is collected by the Software Offerings. Some of our Software Offerings can help enable you to collect personally identifiable information. If this Software Offering uses cookies to collect personally identifiable information, specific information about this offering's use of cookies is set forth below.

This Software Offering does not use cookies or other technologies to collect personally identifiable information.

If the configurations deployed for this Software Offering provide you as customer the ability to collect personally identifiable information from end users via cookies and other technologies, you should seek

your own legal advice about any laws applicable to such data collection, including any requirements for notice and consent.

For more information about the use of various technologies, including cookies, for these purposes, see IBM's Privacy Statement at <http://www.ibm.com/privacy>.
