Up to 16 characters can be entered. Character data containing blanks must be enclosed in single quotation marks. The quotation marks cannot be part of the comparison value.

Hexadecimal data
This value or constant represents a hexadecimal value, such as 0001D0F2. Up to 8 characters can be specified. Do not enclose the value in quotation marks.

Fullword binary
This data is converted into a fullword binary value. It is limited to the maximum value allowed in a fullword field.

Halfword binary
This data is converted into a halfword binary value. It is limited to the maximum value allowed in a halfword field.

Example using the FIELD command
This example requests the following:
• The name attributed to this field comparison is QXSELECT.
• The IFCID of the input record where this comparison is made is 003.
• The data section containing the data to be compared is defined by the second self-defining section.
• The data to be compared is at decimal offset 008 in the data section.
• The comparison is to be made in all occurrences of that data section (0).
• The data to be compared is a fullword binary value (F).
• The comparison is made as to whether the data in the data section is greater than the comparison value.
• The comparison value is 100 in fullword binary format.

```plaintext
FIELD (QXSELECT, 003, 02, 008, 0, F, GT, 100)
```

GLOBAL command
This section provides an overview of the Auxiliary command GLOBAL.

Usage
Use the GLOBAL command to filter input data and set default values for subcommand options. It is also used to define global processing options (such as DD statements for various data sets), the number of lines printed per page, whether the OMEGAMON for DB2 PE main internal sort occurs, and time zone adjustments for different locations.

Usage notes
The GLOBAL command affects the processing of each report set. It enables you to:
• Specify values for the FROM, TO, INCLUDE, and EXCLUDE subcommand options, which provide primary filtering of input records. Only those records that satisfy these options are available for further processing.

• Define global processing options:
  – Change the ddname for input data
  – Change the ddname for the System Parameters report
  – Change the ddname for the frequency distribution data set
  – Define the number of lines printed on each report or trace page
  – Specify a time adjustment for DB2 locations
  – Control whether the OMEGAMON for DB2 PE internal sort is performed
  – Control how the OMEGAMON for DB2 PE internal sort responds to possible incomplete spanned records in variable spanned input data sets (RECFM=VS or VBS)

• Define default values for the following REDUCE, REPORT, TRACE, and FILE subcommand options:
  – FROM and TO subcommand options: If you do not include either FROM or TO in a REDUCE, REPORT, TRACE, or FILE subcommand, the default dates and times specified in GLOBAL are applied.
  – INCLUDE and EXCLUDE subcommand options: If you do not provide either INCLUDE or EXCLUDE in a REDUCE, REPORT, TRACE, or FILE subcommand, the appropriate GLOBAL INCLUDE or EXCLUDE filters are applied as defaults.
  – INTERVAL subcommand option: If INTERVAL is not specified in a REDUCE subcommand, the default specified in GLOBAL is applied.
  – BOUNDARY subcommand option: If BOUNDARY is not specified in a REDUCE subcommand, the default specified in GLOBAL is applied.

There can be only one GLOBAL command in an OMEGAMON for DB2 PE execution.

The OUTCCSID (ccsid) option provides support for DB2 Unicode data conversion to MBCS EBCDIC. If specified, OUTCCSID must be the first positional parameter for the GLOBAL command.

The OMEGAMON DB2 batch reporter employs the CUNLCNV z/OS Unicode service to perform Unicode conversion to the requested OUTCCSID(). Please see the z/OS Unicode Services User’s Guide and Reference for the appropriate level of z/OS for CCSIDs supported by CUNLCNV.
Syntax

The syntax diagram shows the options that are available with this subcommand. See "OMEGAMON for DB2 PE subcommand options" on page 4806 for comprehensive descriptions of these options. The following list gives additional or specific descriptions of selected options, where appropriate.

FROM/T0

The range of record timestamps processed by the primary filtering function of GLOBAL.

For details, see "FROM/T0 subcommand options" on page 4812.

INTERVAL

Defines the time interval that data is summarized for.

For more information, see "INTERVAL subcommand option" on page 4818.

PRESORTED

Controls the internal sort. It has the following values:

NO  Does not disable the sort. This is the default.

ACCEPT  Disables the sort and accepts out-of-sequence records. By using this option, you can create complete and accurate Accounting reports (including records from several locations) from data sets that have not been sorted, for example SMF or GTF. The following limitations apply with this option:

• Duplicate input data is not checked. Therefore, do not concatenate two data sets that contain the same trace records, such as when trace data has been collected in two data sets during the same period.
Only one location is reported per trace. To report more, specify several
TRACE subcommands with INCLUDE on LOCATION.

• Trace entries might not be printed in time sequence. If a trace contains
entries that are out of sequence, a message appears at the end showing
the number.

• When INTERVAL(0) is in effect (the default), the interval times
appearing in a report heading might not be accurate. Avoid ordering
reports by interval when the interval is zero.

**ENFORCE**
Disables the sort but terminates processing if out-of-sequence records are
present. Use this option only when the input data set has been sorted, for
example when reprocessing data from the DPMOUT data set.

**Note:** Do not specify PRESORTED for Parallel I/O or Sysplex query
parallelism, the results are unpredictable. Use the default (PRESORTED(NO) if
you see message FPEA4534I.

**SPANINC**
Controls how underlying sort facility of OMEGAMON for DB2 PE responds to
incomplete, spanned records in variable-length, unblocked, spanned
(RECFM=VS) or variable-length, blocked, spanned (RECFM=VBS) records.

Sort facilities like DFSORT provide options to control the action to be taken if
incomplete spanned records are detected. For DFSORT, the option
SPANINC=\textit{value}, where \textit{value} is RC0, RC4, or RC16, controls the return code to
be set, the message to be issued, and whether to terminate if necessary. For
more details, see the \textit{z/OS information in the IBM Knowledge Center}.

By default, OMEGAMON for DB2 PE passes option SPANINC=RC4 to the
underlying sort facility. For DFSORT, this option sets a return code of 4, issues
message ICE1971 once, eliminates all incomplete spanned records, and
continues with valid records being recovered. Usually, if no errors are detected,
this process is transparent.

The following GLOBAL SPANINC subcommand options can be used to control
the underlying sort facility if the default is not sufficient. The described
behavior only applies to DFSORT and functionally equivalent sort facilities.

**NOMESSAGE**
Corresponds to SPANINC=RC0. Sets a return code of 0, issues message
ICE1971 (once), and eliminates all incomplete spanned records it detects.

**WARNING**
Corresponds to SPANINC=RC4. Sets a return code of 4, issues message
ICE1971 (once), and eliminates all incomplete spanned records it detects.

**ERROR**
Corresponds to SPANINC=RC16. Sets a return code of 16, issues message
ICE204A, and terminates if an incomplete spanned record is detected.

**NO**
No SPANINC option is passed to the underlying sort facility. Use this
subcommand option if you run a sort facility that does not support the
SPANINC option or the listed option values.

**BOUNDARY**
Controls the alignment of the intervals used to summarize records in the
reduction process.

For more information, see “BOUNDARY subcommand option” on page 4807.
**INPUTDD**

The ddname of the input data set. The default is INPUTDD.

**SYSPRMD**

The ddname for the System Parameters report. The default is SYSPRMDD.

**PAGESIZE**

The number of lines printed per page. Specify an integer in the range 50 to 999. The default for PAGESIZE is 60.

Some reports have a fixed number of lines per page. PAGESIZE is ignored for I/O Activity summary reports, multi-page records in long Record Trace reports, and Explain reports.

**TIMEZONE**

The time adjustment applied to record timestamps during OMEGAMON for DB2 PE processing. By using TIMEZONE, you can process data from locations in different time zones based on the local time of a single location. All further processing is based on the adjusted time. The timestamp used in FROM and TO, printed on reports and traces, and recorded in the file and save data sets is the adjusted value. The DPMOUT data set contains both the original and the adjusted value.

**Note:**

When combining newly reduced data with restored data, make sure that the TIMEZONE specifications for the new data match those for the restored data. Misleading results can occur if the time adjustments are different.

If you change the reference location for data, the time adjustments in old save or file data might be incompatible with newly processed data.

This does not apply to the DPMOUT data, as time adjustments are recalculated when the data is read from INPUTDD.

You can specify time adjustments as follows:

**location**

The location of the reference time zone. The time is adjusted relative to the specified location. The adjustment is the difference between the time zone of the reference location and the CPU clock of the reported location. The LOCDATA member of the DPMPARMS data set must contain an entry for this location.

This is the recommended method.

**+hh:mm**

**-hh:mm**

The time difference between the reference time zone and Greenwich Mean Time (GMT). The time difference is specified as \(\pm hh:mm\), where \(hh\) is hours in the range 00 to 23, and \(mm\) is minutes in the range 00 to 59. You can specify any value in the range -12:00 to +12:00. Use + for local times west of Greenwich, and - for local times east of Greenwich. The time is adjusted relative to the specified time zone difference.

The data for calculating the required adjustments is stored in the LOCDATA member of the DPMPARMS data set. It is stored and edited by using the IRF.

**Note:**
1. If TIMEZONE is not specified, no timestamps are adjusted. If the location supplied in the TIMEZONE option does not have a corresponding entry in the LOCDATA member, a message is generated and execution is terminated.

2. During OMEGAMON for DB2 PE processing, if data is encountered for a location whose time zone adjustment values have not been supplied in the LOCDATA member, the time adjustment default is applied to all records for that location. The default adjustment is stored in LOCDATA under a location name of *. If LOCDATA does not contain a default entry, no adjustment is applied.

3. If several systems that should have the same CPU clock time have synchronization errors, you can use TIMEZONE to correct the times for OMEGAMON for DB2 PE processing. Change the CPU clock time for the nonsynchronized locations in LOCDATA to reflect the errors. For example, if SAN_JOSE_LAB is one minute late in synchronizing with SANTA_TERESA_LAB, edit LOCDATA and add a minute to the CPU clock value for SAN_JOSE_LAB.

4. Synchronization can only be adjusted to the nearest minute. Any adjustments made to LOCDATA might become invalid if the CPU clock time at any of the locations is reset.

For more information about TIMEZONE, see [Monitoring Performance from ISPF](#).

**EXPLAIN**

Defaults for EXPLAIN options can be specified with the GLOBAL command. These defaults are overridden by specifying different values in the EXPLAIN command, see "GLOBAL command with EXPLAIN option."

**INCLUDE/EXCLUDE**

Includes or excludes data associated with specific OMEGAMON for DB2 PE identifiers.

[Table 306 on page 4791](#) shows which OMEGAMON for DB2 PE identifiers can be used with the different INCLUDE and EXCLUDE subcommand options for GLOBAL.

**GLOBAL command with EXPLAIN option:**

This section describes the GLOBAL command with the EXPLAIN option.

**Usage**

Some OMEGAMON for DB2 PE Explain options can be made globally valid, if specified in the GLOBAL command. An option value specified in a specific EXPLAIN command takes precedence over the corresponding GLOBAL option value.

**Syntax of the GLOBAL EXPLAIN options**

**EXPLAIN Block:**
Notes:
1. SSID is required unless specified in a preceding GLOBAL command.

Subcommand options

The syntax diagram shows the options that are available with this subcommand. See “Subcommands and options” on page 4719 for comprehensive descriptions of these options.

GLOBAL command with INCLUDE and EXCLUDE subcommand options:

This section provides an overview of the OMEGAMON for DB2 PE identifiers that can be used with the different INCLUDE and EXCLUDE subcommand options for GLOBAL.

Usage notes
- For more information, see “OMEGAMON for Db2 PE identifiers” on page 4665.
- Some care is needed when using PLANNNAME as a filter in a DDF environment, see Special considerations for DDF trace data.

OMEGAMON for DB2 PE identifiers

The following table shows which OMEGAMON for DB2 PE identifiers can be used with the different INCLUDE and EXCLUDE subcommand options for GLOBAL.

**GROUP command**

This section provides an overview of the Auxiliary command GROUP.

**Usage**

Use the GROUP command to collect several OMEGAMON for DB2 PE identifier values under one name. When you request a report and specify this name by using the INCLUDE or EXCLUDE subcommand option, the events for all individual items are consolidated into one.
Usage notes

- With the GROUP command you can define a named set of OMEGAMON for DB2 PE identifier values. A set name can contain values or lists of values for a particular identifier.
- When you request a report and specify this name in INCLUDE or EXCLUDE, the events for all individual items are consolidated into one. For example, you might request that all PRIMAUTHs used by the accounting department be reported under the set name ACCTS. Thus, the entire department is reported in one entry rather than in individual entries for each PRIMAUTH.
- The GROUP command is only used to collect OMEGAMON for DB2 PE identifier values. It is not related to DB2 data sharing groups, and should not be confused with the GROUP keyword of the SCOPE subcommand option, or the GROUP OMEGAMON for DB2 PE identifier.
- Sets can be used in the REDUCE and REPORT subcommands of the following report sets:
  - Accounting
  - I/O Activity
  - Locking
  - SQL Activity
  - Utility Activity
- Sets can also be used in the following report sets and commands, however, OMEGAMON for DB2 PE treats them as lists:
  - Statistics
  - Audit
  - Record Traces
  - GLOBAL in all report sets
  - FILE and TRACE in all report sets

General rules regarding the use of GROUP

- Each GROUP command defines one set.
- You can use as many GROUP commands as you want.
- All values associated with a set must be for the same OMEGAMON for DB2 PE identifier.
- You can use more than one GROUP command for the same OMEGAMON for DB2 PE identifier.
- The combination of set name and OMEGAMON for DB2 PE identifier must be unique in the job step.

Rules applying to the use of GROUP with INCLUDE and EXCLUDE

- All set names that are referenced with INCLUDE or EXCLUDE must be defined by a GROUP command in the same job step.
- Set definitions are searched in the order that they are specified in.
- If more than one set name is used in INCLUDE or EXCLUDE, and the sets contain common values, the data is assigned to the first set that the value is found in. When OMEGAMON for DB2 PE has found a value in a set, it does not attempt to find other occurrences of the same value.

Syntax

```
GROUP
```
Subcommand options

The syntax diagram shows the options that are available with this subcommand. See "OMEGAMON for DB2 PE subcommand options" on page 4806 for comprehensive descriptions of these options. The following list gives additional or specific descriptions of selected options, where appropriate.

**PE_identifier**

The OMEGAMON for DB2 PE identifier that the set contains. Identifiers valid for the different report sets are shown in the following table.

<table>
<thead>
<tr>
<th>OMEGAMON for DB2 PE Identifier</th>
<th>Accounting</th>
<th>I/O Activity</th>

</tr>
</tbody>
</table>

*set name*

The name of the set. It must be unique within the job step. Set names can consist of up to eight alphanumeric characters (A — Z, _, #, $, @, 0 — 9) with no embedded spaces. Set names must begin with a character in the range A to Z.

*value*

A value for the specified OMEGAMON for DB2 PE identifier.

Identifier values must consist of the following characters: A — Z, #, $, @, >, <, or 0 — 9. If the value you want to include contains a character that is not in this list, use an asterisk in its place or place the string in quotes.
Except for the CONNTYPE identifier, a value can be specified in generic form. Place an asterisk (*) in the value to indicate that any value is valid. For example:

- * processes any value.
- ABCD* processes any value starting with ABCD.
- *BCDE processes any value in the first character position where the second, third, fourth, and fifth character positions contain BCDE.
- **CDE processes any value in the first and second character positions where the third, fourth, and fifth character positions contain CDE.
- A*BCDE processes any value in the second character position where the first character position contains A, and the third, fourth, and fifth character positions contain CDE.

** Indicates that the following value is a list name. You cannot use the generic form for list names. For example, L(ABC*E) cannot be used.

** Denotes a range of values beginning with from_value and ending with to_value. The from_value must be less than to_value. The generic form can be used only in the last character position in range values. For example, R(AUTH1*, AUTH2*) is acceptable, but R(AUTH*1, AUTH*2) is not.

Note:

1. Quoted values can also be specified. Any quoted string is accepted, provided that it passes length and format checking.
2. Range cannot be specified for CONNTYPE.

**Grouping records:**

This section describes how to group records.

**Usage**

The record key for reduced data contains a number of OMEGAMON for DB2 PE identifiers. The identifiers contained in the key vary according to the report set.

When records are grouped, the set name of the records relating to grouped items is substituted for the original value of the specified identifier in the record key. When the substitution has been made, the records are not available for processing by using the original key values.

The following examples illustrate how sets are processed.

**Example 1:**

The following records are processed:

<table>
<thead>
<tr>
<th>Location</th>
<th>Connection ID</th>
<th>Correlation Name</th>
<th>Correlation Number</th>
<th>Plan Name</th>
<th>Primary Authorization ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_1</td>
<td>ACCOUNTS</td>
</tr>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_1</td>
<td>ACCOUNTS</td>
</tr>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_2</td>
<td>ACCOUNTS</td>
</tr>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_3</td>
<td>ACCOUNTS</td>
</tr>
</tbody>
</table>
Table 308. Record set processing (continued)

<table>
<thead>
<tr>
<th>Location</th>
<th>Connection ID</th>
<th>Correlation Name</th>
<th>Correlation Number</th>
<th>Plan Name</th>
<th>Primary Authorization ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_4</td>
<td>ACCOUNTS</td>
</tr>
</tbody>
</table>

The following OMEGAMON for DB2 PE command stream example groups three of the four plans:

```plaintext
;  
//SYSIN DD *  
GROUP (  
  PLANNAME {  
    PLANGRP (  
      PLAN_1  
      PLAN_2  
      PLAN_3  
    )  
  }  
)  
;  
EXEC
```

This establishes a set named PLANGRP that you can use with INCLUDE or EXCLUDE on REDUCE and REPORT.

The stage of processing when the key value substitution takes place depends on where you include the set:

- You can use sets on GLOBAL(INCLUDE) to include records for grouped items. No substitution takes place during preprocessing, but the input records for the grouped items are included as if you entered each item.

**Note:** When using sets on GLOBAL, remember that the GLOBAL INCLUDE or EXCLUDE specification becomes the default for all other commands in the job step. GLOBAL INCLUDE is illustrated in the following example:

```plaintext
;  
//SYSIN DD *  
GROUP (  
  PLANNAME {  
    PLANGRP (  
      PLAN_1  
      PLAN_2  
      PLAN_3  
    )  
  }  
)  
GLOBAL INCLUDE (  
  PLANNAME (G(PLANGRP))  
)  
;  
EXEC
```

The following records are available for further processing:

Table 309. Records grouped using GLOBAL(INCLUDE)

<table>
<thead>
<tr>
<th>Location</th>
<th>Connection ID</th>
<th>Correlation Name</th>
<th>Correlation Number</th>
<th>Plan Name</th>
<th>Primary Authorization ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_1</td>
<td>ACCOUNTS</td>
</tr>
</tbody>
</table>
• When you use the set name on REDUCE(INCLUDE), the set name is substituted for the original value of the identifier in the key during REDUCE processing. The reduced data contains only the grouped records. You cannot process data by using the original key values in REPORT, and only the records for the set are stored in the save data set.

```c
//SYSIN DD *
GROUP (
  PLANNAME (
    PLANGRP {
      PLAN_1
      PLAN_2
      PLAN_3
    }
  )
)
GLOBAL
  INCLUDE (PLANNAME (G(PLANGRP)))
ACCOUNTING
  REDUCE
    INCLUDE (PLANNAME (G(PLANGRP)))
  SAVE
; EXEC
```

• When you use the set name on GLOBAL(INCLUDE), it acts as the default for subcommands without an INCLUDE specification. The result for the following example is the same as the result for the preceding example. The records are grouped during REDUCE processing by using the GLOBAL(INCLUDE) default.

```c
//SYSIN DD *
GROUP (
  PLANNAME (
    PLANGRP {
      PLAN_1
      PLAN_2
      PLAN_3
    }
  )
)
GLOBAL
  INCLUDE (PLANNAME (G(PLANGRP)))
ACCOUNTING
  REDUCE
    INCLUDE (PLANNAME (G(PLANGRP)))
  SAVE
; EXEC
```

The reduced data and the save data set contain the following record:

<table>
<thead>
<tr>
<th>Location</th>
<th>Connection ID</th>
<th>Correlation Name</th>
<th>Correlation Number</th>
<th>Plan Name</th>
<th>Primary Authorization ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_1</td>
<td>ACCOUNTS</td>
</tr>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_2</td>
<td>ACCOUNTS</td>
</tr>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_3</td>
<td>ACCOUNTS</td>
</tr>
</tbody>
</table>
Table 310. Records grouped during REDUCE processing using the GLOBAL(INCLUDE)

<table>
<thead>
<tr>
<th>Location</th>
<th>Connection ID</th>
<th>Correlation Name</th>
<th>Correlation Number</th>
<th>Plan Name</th>
<th>Primary Authorization ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLANGRP</td>
<td>ACCOUNTS</td>
</tr>
</tbody>
</table>

- When you use the set name on REPORT(INCLUDE), the records for grouped items are consolidated during report processing. In the following examples, the REDUCE subcommand specification overrides the GLOBAL default. All records that pass data filtering are included in the save data set because they are not grouped during REDUCE processing.

```plaintext
//SYSIN DD *
GROUP (   
  PLANNAME (   
    PLANGRP (   
      PLAN_1 
      PLAN_2 
      PLAN_3 
    )   
  ) )
GLOBAL INCLUDE (   
  PLANNAME (G(PLANGRP))   
) ACCOUNTING REDUCE INCLUDE (PLANNAME(*)) REPORT INCLUDE (PLANNAME(G(PLANGRP))) SAVE EXEC
```

In the following example, the set name on GLOBAL(INCLUDE) acts as the default for the REPORT subcommand. The result is the same as for the previous example.

```plaintext
//SYSIN DD *
GROUP (   
  PLANNAME (   
    PLANGRP (   
      PLAN_1 
      PLAN_2 
      PLAN_3 
    )   
  ) )
GLOBAL INCLUDE (   
  PLANNAME (G(PLANGRP))   
) ACCOUNTING REDUCE INCLUDE (PLANNAME(*)) REPORT INCLUDE (PLANNAME(G(PLANGRP))) SAVE EXEC
```

The Accounting report contains the following entry:

4798 IBM Db2 Performance Expert on z/OS
Table 311. Accounting report set

<table>
<thead>
<tr>
<th>Location</th>
<th>Connection ID</th>
<th>Correlation Name</th>
<th>Correlation Number</th>
<th>Plan Name</th>
<th>Primary Authorization ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLANGRP</td>
<td>ACCOUNTS</td>
</tr>
</tbody>
</table>

The save data set contains the following records:

Table 312. Save data for the accounting report set

<table>
<thead>
<tr>
<th>Location</th>
<th>Connection ID</th>
<th>Correlation Name</th>
<th>Correlation Number</th>
<th>Plan Name</th>
<th>Primary Authorization ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_1</td>
<td>ACCOUNTS</td>
</tr>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_1</td>
<td>ACCOUNTS</td>
</tr>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_2</td>
<td>ACCOUNTS</td>
</tr>
<tr>
<td>LOCATION_1</td>
<td>TSO</td>
<td>USER_1</td>
<td>0</td>
<td>PLAN_3</td>
<td>ACCOUNTS</td>
</tr>
</tbody>
</table>

Example 2

In this example, two reports are generated. The first presents set items individually. In the second report, records are grouped. The REDUCE subcommand specification again overrides the GLOBAL default, so all records that pass preprocessing are included in the save data set.

```plaintext
//SYSIN DD *
GROUP (  
   PLANNAME ( 
      PLANGRP (  
         PLAN_1  
         PLAN_2  
         PLAN_3  
      )  
   )  
)  
GLOBAL  
   INCLUDE ( 
      PLANNAME (G(PLANGRP))  
   )  
ACCOUNTING  
   REDUCE  
      INCLUDE (PLANNAME(*))  
   REPORT  
      INCLUDE (PLANNAME(*))  
   REPORT  
      INCLUDE (PLANNAME(G(PLANGRP)))  
   SAVE  
:  
EXEC  
```

In the following example, the set name on GLOBAL(INCLUDE) acts as the default for the second REPORT subcommand. The result is the same as for the previous example.

```plaintext
:  
//SYSIN DD *
GROUP (  
   PLANNAME ( 
      PLANGRP (  
         PLAN_1  
         PLAN_2  
```

Chapter 7. Commands 4799
LIST command

This section provides an overview of the Auxiliary command LIST.

Usage

Use the LIST command to define a named list of values for a OMEGAMON for DB2 PE identifier, and to use the list name in INCLUDE or EXCLUDE instead of entering each list item.

Usage notes

- The LIST command is available in all report sets.
- A list can contain values or lists of values for a particular identifier. Items in a list are treated independently, as if they were entered individually in INCLUDE or EXCLUDE.
- You can assign a name to the list and specify this name by using the INCLUDE or EXCLUDE subcommand option. In this way, you do not need to enter each list item individually.
- Each LIST command defines one list.
- You can use as many LIST commands as you want.
- All values itemized in a list must be for the same OMEGAMON for DB2 PE identifier.
- You can use more than one LIST command for the same OMEGAMON for DB2 PE identifier.
- The combination of list name and OMEGAMON for DB2 PE identifier must be unique in the job step.

Rules applying to the use of LIST with INCLUDE and EXCLUDE

- List definitions are searched in the order that they were specified for INCLUDE or EXCLUDE.
- All list names that are referenced in INCLUDE or EXCLUDE must be defined by a LIST command in the same job step. Those list names that are not defined by a LIST command are ignored during INCLUDE and EXCLUDE processing.

Syntax

```
LIST
```
Subcommand options

The syntax diagram shows the options that are available with this subcommand. See “OMEGAMON for DB2 PE subcommand options” on page 4806 for comprehensive descriptions of these options. The following list gives additional or specific descriptions of selected options, where appropriate.

**PE_identifier**

The OMEGAMON for DB2 PE identifier that the list contains. Any identifier can be used with the LIST command except FIELD.

**list name**

The name of the list. The combination of list name and OMEGAMON for DB2 PE identifier must be unique in the job step. List names can consist of up to eight alphanumeric characters (A—Z, _, #, $, @, 0—9) with no embedded spaces. List names must begin with a character in the range A to Z.

**set name**

The name of the set. It must be unique within the job step. Set names can consist of up to eight alphanumeric characters (A—Z, _, #, $, @, 0—9) with no embedded spaces. Set names must begin with a character in the range A to Z.

**value**

A value for the specified OMEGAMON for DB2 PE identifier.

Identifier values must consist of the following characters: A—Z, _, #, $, @, >, <, or 0—9. If the value you want to include contains a character that is not in this list, use an asterisk in its place.

Except for the INSTANCE identifier, a value can be specified in generic form. Place an asterisk (*) in the value to indicate that any value is valid. For example:

- * processes any value.
- ABCD* processes any value starting with ABCD.
- *BCDE processes any value in the first character position where the second, third, fourth, and fifth character positions contain BCDE.
- **CDE processes any value in the first and second character positions where the third, fourth, and fifth character positions contain CDE.
- A*CDE processes any value in the second character position where the first character position contains A, and the third, fourth, and fifth character positions contain CDE.

**L**

Denotes that the following value is a list name. You cannot use the generic form for list names. For example, L(ABCD*) cannot be used.

The L(list name) option cannot specify the list name for this LIST command.

**G**

Denotes that the following value is a set name. You cannot use the generic form for set names. For example, G(ABCD*) cannot be used.

**R**

Denotes a range of values beginning with from_value and ending with to_value. The from_value must be less than to_value. The generic form can be used only
in the last character position in range values. For example, \( R(AUTH1*,AUTH2*) \) is acceptable, but \( R(AUTH1,AUTH2*) \) is not.

**Example using the LIST command**

This example requests the following:
- The name of the list is AUTHLST5.
- The primary authorization IDs (PRIMAUTH) associated with this list definition are:
  - USER01 through USER05
  - USER11.

```
//SYSIN DD *
LIST
  (PRIMAUTH(AUTHLST5(R(USER01,USER05),USER11)))
ACCOUNTING
  TRACE
  INCLUDE (PRIMAUTH(L(AUTHLST5)))
EXEC
```

**Troubleshooting commands**

This section provides an overview of the Troubleshooting commands.

**Usage**

This section describes the DUMP command used to dump records from an input data set, and the TAPECOPY command used to copy records from an input data set to an output data set. The options for these commands are almost identical. DUMP and TAPECOPY can each occur once in a job step. The description of the subcommand options is intentionally brief, to avoid recurrences. See "OMEGAMON for DB2 PE subcommand options” on page 4806 for comprehensive descriptions.

The following topics provide additional information:
- "DUMP command”
- "TAPECOPY command” on page 4804

**DUMP command**

This section provides an overview of the Troubleshooting command DUMP.

**Usage**

The DUMP command is a tool used for diagnosis. It provides, in dump format, a printout of an input data set. All records in the input data set, a selected range of records, or specific record types can be dumped.

**Usage notes**
- The DUMP command defines options for the record dump module.
- Dumps are written to SYSPRINT in a hexadecimal dump format.
- "Sample JCL for DUMP and TAPECOPY commands” on page 4805 shows sample JCL for DUMP and TAPECOPY commands.

**Syntax**
Subcommand options

*dump name*

A user-defined name printed on the dump. If this field is omitted, the records are identified with the name DUMP0001.

Ensure that the specified name is not the same as a OMEGAMON for DB2 PE command keyword or abbreviation.

*EXEC*

Specifies INPUTDD as the ddname of the input data set. INPUTDD is the only valid ddname for this option and must be specified.

*OFFSET*

The offset of the record code into the record. The record code is a 1-byte field at position offset-plus-1. For example, OFFSET(4) defines a record code in the fifth byte of the record. The offset must be a numeric value less than the actual length of the record. The maximum value is 999 999 999. The default is 4.

*CODES*

The code values for records to be processed. Each code is a 2-digit hexadecimal number. You can specify either of the following:

- A list of values, for example '01,02,03'
- A range of values, for example '01-03,05-07'

Each entry must be separated by a comma. Enclose the code list in quotes if more than one value is specified.

If this option is omitted, all record codes (00-FF) are processed.

*SKIP*

The number of records to be skipped before processing begins. The maximum value is 999 999 999. The default is 0, which means that processing begins with the first record.

*STOPAFT*

The number of records to be processed, starting after the number of records to be skipped (SKIP option). The maximum value is 999 999 999. The default is 0, which causes all records (after skipping, if specified) to be processed.

*MAXDUMP*

The length of the dump in bytes, starting from the beginning of the record. The default is the full length of the record. You can enter any integer in the range of 1 to 99 999. For example, if you specify MAXDUMP(128), only the first 128 bytes of input records are dumped.

**Note:** Some IFCID records can be up to 32 KB in length. If you use the default for MAXDUMP (the entire record), very large reports can be produced.
Example using DUMP

In this example:
- The DUMP is named DUMPSTAT.
- The ddname of the input data set is INPUTDD (the GLOBAL default).
- The offset of 4 defines a record code in the fifth byte of the record.
- Only records with a value of 01 or 02 in the fifth byte are dumped.
- The first 125 records of the input data set are skipped.
- The next 10 records that meet the specifications are dumped.
- Only the first 1,000 bytes of each record are dumped.

DUMPSTAT DUMP {
  EXEC (INPUTDD)
  OFFSET (4)
  CODES ('01,02')
  SKIP (125)
  STOPAFT (10)
  MAXDUMP (1000))

Note: See also "Sample JCL for DUMP and TAECOPY commands" on page 4805.

TAECOPY command

This section provides an overview of the Troubleshooting command TAECOPY.

Usage

The TAECOPY command is a utility tool that you can use to select a specified subset or all records from an input data set, and copy them to an output data set. The selection logic is identical to that used for the DUMP command.

Usage notes
- The TAECOPY command defines options for the data set copy module.
- Copies of selected portions of the input data set are produced on a user-specified output data set.

Syntax

```
TAECOPY (EXEC (INPUTDD))
  OFFSET (integer)
  CODES (codelist)
  SKIP (integer)
  STOPAFT (integer)
  NEWCOPY (ddname)
```

Subcommand options

tape copy name
- A user-defined name identifying the records copied. If this field is omitted, the records are identified by the name COPY0001.

Ensure that the specified name is not the same as a OMEGAMON for DB2 PE command keyword or abbreviation.
**EXEC**

Specifies INPUTDD as the ddname of the input data set. INPUTDD is the only valid ddname for this option and must be specified.

**OFFSET**

The offset of the record code into the record. The record code is a 1-byte field at position offset-plus-1. For example, OFFSET(4) defines a record code in the fifth byte of the record. The offset must be a numeric value less than the actual length of the record. The maximum value is 999 999 999. The default is 4.

**CODES**

The code values for records to be processed. Each code is a 2-digit hexadecimal number. You can specify either of the following:

- A list of values, for example '01,02,03'
- A range of values, for example '01-03,05-07'

Each entry must be separated by a comma. Enclose the code list in quotes if more than one value is specified.

If this option is omitted, all record codes (00-FF) are processed.

**SKIP**

The number of records that are skipped before processing begins. The maximum value is 999 999 999.

The default is 0. If 0 is specified, processing begins with the first record.

**STOPAFT**

The number of records to be processed, starting after the number of records to be skipped (SKIP option). The maximum value is 999 999 999.

The default is 0. This causes all records (after skipping, if specified) to be processed.

**NEWCOPY**

The ddname of the output data set. The default is TAPECOPY.

**Example using TAPECOPY**

In this example:

- The TAPECOPY is named COPYSTAT.
- The ddname of the input data set is INPUTDD (the GLOBAL default).
- The offset of 4 defines a record code in the fifth byte of the record.
- Only records with a value of 01 or 02 in the fifth byte are copied.
- The first 50 records of the input data set are skipped.
- The next 10 records that meet the specifications are copied.
- The ddname of the output data set is OUTDATA.

COPYSTAT TAPECOPY(
  EXEC (INPUTDD)
  OFFSET (4)
  CODES ('01,02')
  SKIP (50)
  STOPAFT (10)
  NEWCOPY (OUTDATA))

**Sample JCL for DUMP and TAPECOPY commands**

The following figure shows a sample JCL for the DUMP and TAPECOPY commands.
Note: The command syntax shown below is not appropriate in all circumstances. You must modify it to meet your requirements and system setup.

```plaintext
//TPCDUMP1 JOB   (INSTALLATION DEPENDENCIES)
//*
//*******************************************************
//*
//COPY INPUT DATA FILE TO SYSPRINT OR AN OUTPUT DATA FILE
//*
//*******************************************************
//*

DUMP0001 DUMP (EXEC(INPUTDD),SKIP(125),STOPAFT(10),MAXDUMP(1000))
EXEC *
* 
```

Figure 310. Sample JCL for the DUMP and TAPECOPY commands

**OMEGAMON for DB2 PE subcommand options**

This section introduces you to subcommand options.

**Usage**

The following sections provide a comprehensive description of all subcommand options to avoid lengthy recurrences.

**Usage notes**

The general structure of commands is:

```
command
  subcommand
    option(keyword)
```
• A single command can be followed by one or more subcommands.
• A subcommand can be followed by one or more options.
• An option might have further keywords.

The commands are described in “OMEGAMON for DB2 PE commands” on page 4686 and “Auxiliary commands” on page 4780, together with the associated subcommands and subcommand options.

The following subcommand options can be used to specify how times are reported, and the intervals and time frames of your reports (time functions):
• “DATEFORMAT subcommand option” on page 4809
• “FROM/TO subcommand options” on page 4812
• “INTERVAL subcommand option” on page 4818
• “BOUNDARY subcommand option”

Supplemental information concerning these subcommand options is provided in “Notes on calculating intervals” on page 4808.

The following subcommand options can be used to control the amount of data that is reported and to control the way data is consolidated in reports (filter functions):
• “ORDER subcommand option” on page 4827
• “INCLUDE and EXCLUDE subcommand options” on page 4814
• “EXCEPTION and NOEXCEPTION subcommand options” on page 4811
• “DDNAME subcommand option” on page 4811
• “TOP subcommand option” on page 4831
• “LAYOUT subcommand option” on page 4819
• “SCOPE subcommand option” on page 4830
• “TYPE subcommand option” on page 4832
• “LEVEL subcommand option” on page 4827
• “SUMMARIZEBY subcommand option” on page 4830
• “WORKLOAD subcommand option” on page 4832
• “SORTBY subcommand option” on page 4830
• “LIMIT subcommand option” on page 4827

BOUNDARY subcommand option
The BOUNDARY subcommand option controls the alignment of the intervals.

Usage
The BOUNDARY subcommand option is used to control the alignment of the intervals used to summarize records in the reduction process.

Usage notes
• Boundary is ignored for INTERVAL (0). The interval starts at the timestamp of the first record that satisfies FROM.
• If you use the RESTORE and REDUCE subcommands in the same job stream, the INTERVAL and BOUNDARY options specified in REDUCE should match the INTERVAL and BOUNDARY options that were used to reduce the data being restored. If these values are different, the interval and boundary from the restored data is used.
Rules

- The range is from 0 to 60, and indicates minutes past the hour.
- A boundary of 0 specifies that intervals are aligned with the number of minutes in the FROM time.
- A boundary of 60 specifies that intervals are aligned with hour boundaries.
- If no boundary is specified, the default is the boundary specified in the GLOBAL command.
- If no boundary is specified in global, the default is 60.

Notes on calculating intervals

The start time of the first interval processed by REDUCE is influenced by BOUNDARY, INTERVAL, and FROM.

OMEGAMON for DB2 PE attempts to reduce all data that falls between FROM and TO dates and times. The first interval processed starts at a time aligned with BOUNDARY, at or before the FROM time. If an interval cannot be aligned with the FROM time, the first properly aligned interval starting before the FROM time is used.

Although there is no restriction on the INTERVAL and BOUNDARY combination, your specification should comply with the following recommendations:

- For intervals of less than 60 (excluding 0), there should be a whole number of intervals in an hour. Choose one of the following values:
  - 1, 2, 3, 4, 5, 6, 10, 12, 15, 20, or 30.
- For intervals of 60 or greater, there should be a whole number of intervals in a day. Choose one of the following values:
  - 60, 120, 180, 240, 360, 480, 720, or 1440.
- For intervals of one day (1440) or greater, INTERVAL should be a multiple of 1440.
- Select your interval and boundary so that the first interval starts at the FROM time.

Example of interval calculation, aligning to the start of the hour

BOUNDARY (60) aligns the start time of intervals at the start of an hour, so the first interval starts at the FROM time (08:00). Subsequent intervals start every 30 minutes (08:30, 09:00, and 09:30 each day).

REDUCE
FROM (,08:00)
TO (,10:00)
INTERVAL (30)
BOUNDARY (60)

Example of interval calculation, covering a day

The following defaults are applied:

- For FROM, all dates and a time of 00:00:00.00.
- For TO, all dates and a time of 23:59:59.99.
BOUNDARY(60) aligns the start time of intervals at the start of an hour, so the first interval starts at the FROM time (00:00). Subsequent intervals cover 1 440 minutes or one day; an interval starts at 00:00 each day.

: 
REDUCE
INTERVAL (1440)
BOUNDARY (60)
:

Example of interval calculation, starting every hour

BOUNDARY(60) aligns the start time of intervals at the start of an hour, so the first interval starts at the hour of the FROM time (08:00). Subsequent intervals start every hour (09:00, 10:00, and 11:00).

: 
REDUCE
FROM (,08:30)
TO (,12:00)
INTERVAL (60)
BOUNDARY (60)
REPORT
FROM (,08:30)
TO (,12:00)
:

DATEFORMAT subcommand option
The DATEFORMAT subcommand option changes the format of dates.

Usage
The DATEFORMAT subcommand option is used to change the format of dates specified in the FROM and TO subcommand options, and displayed on OMEGAMON for DB2 PE reports, traces, and logs.

Format
The DATEFORMAT parameter must be 8 characters long and contain:

\[ \begin{align*}
dd & \quad \text{Day} \\
mm & \quad \text{Month} \\
yy & \quad \text{Year}
\end{align*} \]

Format rules
\begin{itemize}
\item You can specify the day, month, and year in any order.
\item A single character delimiter is also required in the third and fifth positions.
\item You can delimit the day, month, and year with either a slash (/), dash (-), period (.), or any combination of these delimiters.
\item The DATEFORMAT parameter can be abbreviated to DF.
\item If you use FROM or TO, you must specify the dates in exactly the same format you have defined in the DATEFORMAT parameter. For example, the following formats are all valid DATEFORMAT definitions:
\begin{itemize}
\item \text{yy-mm-dd}
\item \text{mm/dd/yy}
\item \text{dd.mm/yy}
\end{itemize}
\end{itemize}
If you do not specify the DATEFORMAT parameter in your JCL, dates are displayed in the OMEGAMON for DB2 PE default format, mm/dd/yy.

Sample Accounting JCL with DATEFORMAT subcommand option specified

For example, you might want to display the year before the month and day, separated by a delimiter, on a report. In this case, you would specify yy/mm/dd in the DATEFORMAT parameter.

In the JCL example shown below, DATEFORMAT is used to specify the date format as yy-mm-dd. The relevant information is highlighted.

//PERFORMANCE EXPERT JOB (INSTALLATION DEPENDENCIES)
/*
** ============== DB2 PERFORMANCE EXPERT JCL ==============
*/
/*
** PEMAIN EXEC PGM=FPECMAIN,PARM='DATEFORMAT=YY-MM-DD'
//STEPLIB DD DSN=FPE.FPELIB.RKANMOD,DISP=SHR
//INPUTDD DD DSN=FPE.FPELIB.DPMIN,DISP=SHR
//SYSPRINT DD SYSOUT=*    //SYSPRINT DD SYSOUT=*    //JOBSUMDD DD SYSOUT=*    //ACRPTDD DD SYSOUT=*    //SYSIN DD *
ACCOUNTING REPORT FROM (15-05-30,09:45) TO (15-05-30,09:55).
EXEC Accounting Report - Short

The JCL example shown above produces a report similar to the one shown here. The relevant information is highlighted.

DDNAME subcommand option
The DDNAME subcommand option specifies the data set where the report is written.

Usage
Use DDNAME to specify the data set where the report is written. You can specify any valid ddname including the default, provided that your JCL contains a DD statement for it. If a DD statement is omitted, it will be dynamically allocated to the SYSOUT message class of the job.

Default ddnames
The default ddnames are shown in the following table. x represents a number equal to or greater than one and equal to or less than the maximum number of subcommand invocations allowed.

</tbody>
</table>

EXCEPTION and NOEXCEPTION subcommand options
The EXCEPTION subcommand option reports only the exception status. The NOEXCEPTION subcommand option produces a standard report.

Usage
Specify EXCEPTION if you want to report only those entries on reports with at least one field in exception status. Specify NOEXCEPTION to produce a standard report. NOEXCEPTION is the default.
The thresholds for exception fields are defined in the exception threshold data set. For more information about the exception threshold data set, see the Report Reference.

Usage notes

If you use this subcommand option, your JCL must contain a valid DD definition for the ddname EXCPTDD. For more information about required ddnames, see “DD statements” on page 4676.

FROM/TO subcommand options

The FROM/TO subcommand options specify the range of record timestamps.

Usage

These subcommand options are used to specify the range of record timestamps that OMEGAMON for DB2 PE processes.

These options are used with the GLOBAL command and the FILE, REDUCE, REPORT, and TRACE subcommands.

Usage notes

- If used with GLOBAL, all records outside those dates and times are discarded by OMEGAMON for DB2 PE before the remaining records are processed by other commands in the same JCL command stream. For more information about the GLOBAL command, see The GLOBAL command.
- You can specify a time adjustment for a DB2 location by using the TIMEZONE option of the GLOBAL command. The time adjustment is applied to record timestamps before other time-related processing is applied.
- You have several choices to specify a time frame. However, you can specify only one time frame with a subcommand.
  - FROM specifies the starting date and time. Records are processed beginning with the first record having a timestamp greater than, or equal to, the FROM date and time. FROM accepts date and time specifications, in any combination, as absolute values. Without delimiting TO option, all further records in the input data set are processed.
  - TO specifies the finishing date and time. Records are processed ending with the last record having a timestamp less than the TO date and time. TO accepts date and time specifications, in any combination, as absolute values. Without delimiting FROM option, processing begins with the first record in the input data set.
  - FROM and TO specify the starting date and time and the finishing date and time.

Syntax

FROM/TO block:

```
| FROM Date & Time | TO Date & Time |
```
Date & Time:

\[(date, time)\]

Parameters

date

The date in the form \(mm/dd/yy\), where \(mm\) is the month, \(dd\) is the day, and \(yy\) is the year. For example, 25 February 2008 is entered as 02/25/08.

OMEGAMON for DB2 PE assumes that the year value (\(yy\)) lies between the system-defined date minus 95 years and the system-defined date plus four years.

You can change the way dates are specified by using DATEFORMAT. For more information, see "DATEFORMAT subcommand option" on page 4809.

time

The time in the form \(hh:mm:ss.th\), where \(hh\) is the hour in 24-hour format, \(mm\) is the minute, \(ss\) is the second, and \(th\) is tenths and hundredths of a second. Trailing zeros can be omitted.

Rules

The \(date\) and \(time\) variables can be used in various combinations and can also inherit values specified with the GLOBAL command. The table below describes the assumed defaults if either of the options or values is not explicitly specified.

<table>
<thead>
<tr>
<th>Subcommand option</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>FROM(date, time) TO(, time)</td>
<td>If the TO date is not specified, the FROM date is assumed.</td>
</tr>
<tr>
<td>FROM(, time) TO(date, time)</td>
<td>If the FROM date is not specified, the TO date is assumed.</td>
</tr>
<tr>
<td>FROM(date) TO(date)</td>
<td>If the FROM time is not specified, 00:00:00.00 is assumed.</td>
</tr>
<tr>
<td></td>
<td>If the TO time is not specified, 23:59:59.99 is assumed.</td>
</tr>
<tr>
<td>FROM(, time) TO(, time)</td>
<td>If dates are not specified, all records that comply with the times are processed; the date of records are ignored. REQUESTED ALL DATES is printed on reports and traces in place of REQUESTED FROM.</td>
</tr>
<tr>
<td>FROM(, time)</td>
<td>If only the FROM time is specified, 23:59:59.99 is used for the TO time. All records with a timestamp between the FROM time and 23:59:59.99 are processed; the dates of records are ignored. REQUESTED ALL DATES is printed on reports and traces in place of REQUESTED FROM.</td>
</tr>
<tr>
<td>TO(, time)</td>
<td>If only the TO time is specified, 00:00:00.00 is used for the FROM time. All records with a timestamp between 00:00:00.00 and the TO time are processed; the dates of records are ignored. REQUESTED ALL DATES is printed on reports and traces in place of REQUESTED FROM.</td>
</tr>
</tbody>
</table>
### Table 314. Option defaults for date and time variables (continued)

<table>
<thead>
<tr>
<th>Subcommand option</th>
<th>Default</th>
</tr>
</thead>
</table>
| `FROM(date,time)` or `FROM(date)` | If the TO date and time is not specified:  
  - For all subcommands, the TO values specified in GLOBAL are applied.  
  - If no TO values are specified in GLOBAL, processing begins with the first record with a timestamp after the FROM time (if specified) or 00:00:00.00 (if not specified), and ends with the last available record.  
  
  NOT SPECIFIED is printed on reports and traces in place of REQUESTED TO. |
| `TO(date,time)` or `TO(date)` | If the FROM date and time is not specified:  
  - For all subcommands, the FROM values specified in GLOBAL are applied.  
  - If no FROM values are specified in GLOBAL, processing begins with the first available record, and ends with the last record with a timestamp before the TO time (if specified) or 23:59:59.99 (if not specified) on the TO date.  
  
  NOT SPECIFIED is printed on reports and traces in place of REQUESTED FROM. |

---

**Example using FROM/TO: Specifying a fixed time frame**

Processing starts with the first record with a timestamp after 10:00 on 25 February 2008, and ends with the last record with a timestamp before 10:10 on the same day.

```
FROM('02/25/08,10:00'),TO('10:10')
```

**Example using FROM/TO: Specifying a fixed time interval per day**

All records with a timestamp at or after 10:00 and before 10:10 are processed, regardless of the date.

```
FROM('10:00')
TO ('10:10')
```

**Example using FROM/TO: Specifying a particular start time**

Processing starts with the first record with a timestamp after 13:00 on 25 February 2008, and ends with the last record in the input data set.

```
FROM('02/25/08,13:00')
```

**INCLUDE and EXCLUDE subcommand options**

The INCLUDE and EXCLUDE subcommand options define a list of identifier values that are included or excluded.
Usage

The INCLUDE and EXCLUDE subcommand options are used to include or exclude data associated with specific OMEGAMON for DB2 PE identifiers. If you omit this subcommand option, all records are included.

Use INCLUDE to define a list of identifier values that are included in processing. Use EXCLUDE to define a list of identifier values that are excluded from processing.

Usage notes

- You can specify list names, set names, values, or range values for each identifier. If you include some identifier values and omit EXCLUDE, only those records described in INCLUDE are processed. If you exclude some identifier values and omit INCLUDE, all records are processed except those described in EXCLUDE.
- Use GLOBAL INCLUDE, or EXCLUDE carefully with IFCID. Because many IFCID records are paired events, BEGIN and END records are necessary to get a valid report or trace. All IFCIDs that share a common END record must be used together with INCLUDE or EXCLUDE.

Syntax

INCLUDE/EXCLUDE block:

```
INCLUDE/EXCLUDE (PE_identifier(value))
```

Options

The following options are available with INCLUDE and EXCLUDE:

- **PE_identifier**
  Specifies the OMEGAMON for DB2 PE identifiers that you want to include in, or exclude from, your output. Identifiers valid for each report are listed in this section. Definitions of identifiers are described in "OMEGAMON for Db2 PE identifiers" on page 4665.

  If you do not specify an identifier when using the REDUCE, REPORT, TRACE, or FILE subcommand, OMEGAMON for DB2 PE uses the identifiers specified for GLOBAL INCLUDE or EXCLUDE.

  You can use an OMEGAMON for DB2 PE identifier in either INCLUDE or EXCLUDE, but not with both in the same command or subcommand.

- **value**
  A value for the specified OMEGAMON for DB2 PE identifier, or an asterisk (*) indicating all values.

  Identifier values must consist of the following characters: A — Z, #, $, @, >, <, or 0 — 9. If the value you want to include contains a character that is not in this list, use an asterisk in its place.
L The name of a list containing values for the specified OMEGAMON for DB2 PE identifier. The list name must be defined by a LIST command in the same job step.

G The name of a set of values for the selected OMEGAMON for DB2 PE identifier. The set name must be defined by a GROUP command in the same job step.

If a set name is specified in a value block, only that set is processed. If you want all identifier values that are not contained in any set specification to be reduced and reported individually, enter an asterisk (*) in the INCLUDE or EXCLUDE options following the last set name. For example:

```
 INCLUDE
   PRIMAUTH (G(AUTHGRP1)
              G(AUTHGRP2)
              *)
```

This indicates that the authorization IDs contained in the sets AUTHGRP1 and AUTHGRP2 are processed as sets, and all other authorization IDs are processed individually.

R Denotes a range of values beginning with from_value and ending with to_value. The from_value must be less than to_value. The generic form can be used only in the last character position in range values. For example, R(AUTH1*,AUTH2*) is acceptable, but R(AUTH1*,AUTH2) is not.

GT Denotes values greater than the given value.

This is only valid for SQLCODE.

LT Denotes values less than the given value.

This is only valid for SQLCODE.

GE Denotes values equal to, or greater than the given value.

This is only valid for SQLCODE.

LE Denotes values equal to, or less than the given value.

This is only valid for SQLCODE.

Rules

The following table shows which OMEGAMON for DB2 PE identifiers can be used with the different commands and subcommands.

<table>
<thead>

</tbody>
</table>

**Note:**

1. The use of PLANNANE as a filter for Accounting reports in a DDF environment can cause unexpected results. See Special considerations for DDF trace data.

2. The commands are abbreviated as follows: ACCT (ACCOUNTING), AUD (AUDIT), I/O (IOACTIVITY), LOCK (LOCKING), RT (RECTRACE), SQL (SQLACTIVITY), STAT (STATISTICS), and UTIL (UTILITY).

3. Subcommands are abbreviated as r (REDUCE), t (TRACE), p (REPORT), and f (FILE), whereas “all” applies to all subcommands.
Considerations when using the DATABASE, PACKAGE, PROGRAM, PAGESET, or RESOURCETYPE identifier

If you use the INCLUDE or EXCLUDE subcommand option with one of these OMEGAMON for DB2 PE identifiers, note that the scope of these identifiers affects only the relevant parts of trace records, but not the entire trace records. This means that all records are processed, but only the parts of the records specified by one of the identifiers are included in or excluded from processing. Consequently, remaining record information (specifically included or not excluded) from all trace records is shown in the resulting reports.

Example: INCLUDE/EXCLUDE with PACKAGE

As an example, take Accounting trace records that might contain information about packages P1, P2, and P3:

- If you specify INCLUDE PACKAGE(P1), information about packages other than P1 is filtered from each trace record. All trace records (possibly containing information about package P1) are considered for report processing. If you specify INCLUDE PACKAGE(Px), where Px is an identifier that is not included in any trace record, the resulting report shows no package information, but all remaining information.
- If you specify EXCLUDE PACKAGE(P1), information about package P1 is filtered from each trace record. All trace records (possibly containing information about packages other than P1) are considered for report processing. If you specify EXCLUDE PACKAGE(Px), where Px is an identifier that is not included in any trace record, the resulting report shows package information, if they exist in the trace records.

With these identifiers, specified parts of the trace records are included, respectively excluded. The trace records themselves, with the remaining parts, pass the filter. Consequently, this information is shown in the resulting reports.

Example: INCLUDE and EXCLUDE: Specifying plan and primary authorization ID

The following example produces an Accounting long report. The only plan reported is QMF311. All primary authorization IDs are reported except those on the list called PRODUSER.

```
LIST (PRIMAUTH(PRODUSER(USER1,USER2)))
ACCOUNTING REDUCE REPORT
  LAYOUT (LONG)
  INCLUDE (PLAN(QMF311))
  EXCLUDE (PRIMAUTH(L(PRODUSER)))
```

INTERVAL subcommand option

The INTERVAL subcommand option defines the interval of time when data is summarized.

Usage

The INTERVAL subcommand option is used to define the interval of time when data is summarized.
INTERVAL is used with the GLOBAL command and the REDUCE subcommand.

**Usage notes**

- If INTERVAL is not specified, the interval specified in the GLOBAL command is used. If no interval is specified in GLOBAL, the default is 0 and all records are summarized and treated as one record.
- INTERVAL processing uses a lot of system resource. Always use the largest interval that meets your reporting requirements. If interval processing is not required, the default INTERVAL (0) is recommended for optimum processing.

**Rules**

- The interval range is from 0 to 99 999 and is specified in minutes.
- An interval of 15 specifies that entries are calculated within each 15-minute period.
- An interval of 0 specifies that data is summarized over the entire reduction period.

**Example: Specifying an interval of two hours**

The following example specifies an interval of two hours:

```
  ...
  REDUCE INTERVAL (120)
  ...
```

**LAYOUT subcommand option**

The LAYOUT subcommand option specifies the name of a report layout.

**Usage**

You can select the layout of Accounting and Statistics model reports and traces.

**Usage notes**

- If none of them suit the requirements at your site, you can tailor your own layouts using the User-Tailored Reporting feature (UTR). For details refer to the [Reporting User’s Guide](#).
- Migration layouts help you identify OMEGAMON for DB2 PE data that was previously shown in the reports of the OMEGAMON Historical Reporter.

**Options**

You can specify one of the supplied layouts or one that you have previously tailored:

**SHORT**

Provides a short layout. SHORT is used by default.

**Note:** If a report does not contain the details that you are looking for (such as thread-related data), run the job again using the LAYOUT subcommand option LONG. You can also use other functions such as Record Trace and SQL Activity to find detailed DB2 trace data.

**LONG**

Provides detailed thread-related data.

**ACCEL**

**Accounting:** Provides detailed thread-related Accelerator activity data.
Statistics: Provides detailed system-related Accelerator activity data.

migration layouts
Supplied migration layouts to help you identify OMEGAMON for DB2 PE data that was previously shown in the reports of the OMEGAMON Historical Reporter. The migration layouts include:

- “Options for OMEGAMON Historical Reporter Accounting reports”
- “Options for OMEGAMON Historical Reporter Statistics reports” on page 4824

user-defined layouts
You can customize your own report layouts by specifying which blocks of data and which fields within the blocks are included, and their relative order. To adapt the reports according to your requirements, you use user-tailored reporting (UTR). With UTR, you can control the volume, contents, and layout of Statistics traces and reports.

For information about tailoring report layouts, see the [Reporting User’s Guide](#).

**Options for OMEGAMON Historical Reporter Accounting reports**

To find information that was previously contained in the Accounting reports of the OMEGAMON Historical Reporter use the LAYOUT subcommand options shown in the following table.

**LEVEL subcommand option**

The LEVEL subcommand option is described in command and subcommand options.

**Usage**

The meaning and usage of LEVEL varies and is described in context with the commands and subcommands using this option.

**LIMIT subcommand option**

The LIMIT subcommand option sets the number of threads processed by SQL Activity Trace.

**Usage**

The LIMIT subcommand option sets the number of threads processed by SQL Activity Trace.

**ORDER subcommand option**

The ORDER subcommand option defines which OMEGAMON for DB2 PE identifiers are used to aggregate records.
Usage

The ORDER subcommand option specifies which OMEGAMON for DB2 PE identifiers are used to aggregate records and, unless the TOP(ONLY) subcommand option is specified for Accounting, identifies the presentation sequence of the report entries.

Usage notes

- You can specify one entry of ORDER for each REPORT subcommand.
- You can order by one, two, or three identifiers separated by a dash, and you can specify up to five sets of the identifiers separated by at least one blank, a comma, or a new line.
- For group-scope Locking reports, the default order is DATABASE-PAGESET. For all other reports, the default for ORDER is PRIMAUTH-PLANNAME.
- MEMBER is automatically added as the second, third, or fourth identifier in group-scope reports.
- In a distributed environment you should order your reports by REQLOC or CONNTYPE. If REQLOC or CONNTYPE are not used in the ORDER subcommand option of REPORT, the accounting portion of all threads, including DBATs, where the combination of OMEGAMON for DB2 PE identifiers is the same are reported as one entry.

Syntax

ORDER Block:

ORDER Block:

<table>
<thead>
<tr>
<th>OMEGAMON for DB2 PE Identifier</th>
<th>Accounting</th>
<th>Audit</th>
<th>I/O Activity</th>
<th>Locking</th>
<th>SQL Activity</th>
<th>Statistics</th>
<th>Utility Activity</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>WSNAME (End user workstation name)</td>
<td>●</td>
<td>●</td>
<td>●</td>
<td>●</td>
<td>●</td>
<td>●</td>
<td>●</td>
</tr>
</tbody>
</table>

Note:
1. For Utility Activity, the ORDER option can be used for both reports and traces.
2. Instance number is applicable to Utility trace only.
3. For Accounting, the ORDER by THREADTYPE can result in reports for thread types as follows:
   - ALLIED - Indicates accumulated data of allied threads only. These are threads that were not involved in any distributed activity. This type belongs to thread type category ALLIED.
   - ALLDDIST - Indicates accumulated data of threads initiated by DB2 and requested data from one or more server locations. This type belongs to thread type category ALLIED_DIST.
   - DBAT - Indicates accumulated data of threads that are initiated, created, and performing work on behalf of a remote (requester) location. This type belongs to thread type category DBAT.
   - DBATD - Indicates accumulated data of DBAT distributed threads. This type belongs to thread type category DBAT.
   - DBATDIPS - Indicates accumulated data of DBAT distributed and copy threads. This type belongs to thread type category DBAT.
   - DBATDIPS - Indicates accumulated data of DBAT distributed and duplicate threads. This type belongs to thread type category DBAT.

Example of the ORDER subcommand option

The following example specifies that two reports are produced:
- Both reports use the SHORT layout by default.
- The first report is ordered by primary authorization ID within plan name within connection ID.
- The second report is ordered by plan name within primary authorization ID.
- Both reports are written to the data set with the default ddname ACRPTDD.

ACCOUNTING
SCOPE subcommand option
The SCOPE subcommand option specifies the scope of the report in a data-sharing environment.

Usage
Use SCOPE to specifies the scope of the report in a data-sharing environment.

Options
MEMBER
In member-scope reports, a data-sharing group’s instrumentation data is presented member by member. The events are reported in the specified ORDER sequence within the DB2 subsystem (member) where they occurred. Member-scope reports are used for DB2 subsystems that are not involved in data sharing.

GROUP
In group-scope reports, instrumentation data belonging to individual members is merged and presented for the entire group. The events are reported in the specified ORDER sequence within the DB2 data-sharing group, regardless of which member of the group actually generated the events.

SORTBY subcommand option
The SORTBY subcommand option is described in command and subcommand options.

Usage
The meaning and usage of SORTBY varies and is described in context with the commands and subcommands using this option.

SPREADSHEETDD subcommand option
The SPREADSHEETDD subcommand is used to write locking related DB2 data to a specified data set.

Usage
The SPREADSHEETDD subcommand option can be used to write locking related DB2 data to a specified data set in a format that can be imported by common spreadsheet programs. This subcommand option is only applicable to the REPORT subcommand of the LOCKING command.

Instead of this subcommand and for statistics and accounting only, you can use the Spreadsheet Input Data Generator utility to create CSV (comma-separated value) data for spreadsheet programs as described in Reporting User’s Guide.

SUMMARIZEBY subcommand option
The SUMMARIZEBY subcommand option is applicable to the SQL Activity report set only.
Usage

Use SUMMARIZEBY to specify the SQL events to be summarized by the REPORT subcommand.

TOP subcommand option

The TOP subcommand option lists all applications or users that have required most use of specific DB2 resources.

Usage

To identify report entries with a high value in certain fields, you can produce an Accounting report or trace with TOP lists. TOP lists are index-like reports at the end of a report or trace pointing out the most interesting entries in the report or trace. You generate such lists using the TOP subcommand option.

Usage notes

- TOP is only used in the Accounting report or trace set.
- Entries with 0 or undetermined values are not shown. Moreover, if your input data contains only 0 or undetermined values for the TOP fields requested, a TOP list is not generated.

Keywords

**ONLY**

Filters a report or trace such that only the main resource consumers are shown, ordered by descending resource value.

**Note:** The TOP(ONLY) subcommand option changes the presentation sequence of Accounting reports and traces. Report and trace entries are ordered according to the TOP resource instead of the timestamp or ORDER subcommand options. The summarization in reports is not affected by the changed sequence caused by TOP filtering.

**n ONLY**

Filters a report or trace such that only the top n entries for the default TOP field are shown, where n is a number.

**TOTAL**

The resource values shown are average values. To get total values, that is, the main resource consumers calculated by taking into account how often they consumed resources, you specify the TOP subcommand option with the TOTAL keyword.

**Note:** TOTAL only applies to reports. If you specify it with a trace, it is ignored.

**n request type**

Produces a trace with a TOP list for the defined number n of the specified request types, such as Getpage requests.

Examples

For more information and examples refer to the Reporting User’s Guide.
TYPE subcommand option
The TYPE subcommand option specifies the activity types reported.

Usage

TYPE is used in the Audit report set to control the type of data reported and in the Utility Activity report set to specify the activity types reported.

WORKLOAD subcommand option
The WORKLOAD subcommand option is described in command and subcommand options.

The meaning and usage of WORKLOAD varies and is described in context with the commands and subcommands using this option.
Chapter 8. Reference information

This section provides reference information.

What's new in previous editions

This topic summarizes significant enhancements and changes to previous editions of Db2 Performance Expert documentation.

Previous updates

February 2017

Updates to data collection options for ACCTG
Valid values for the ACCTG keyword now include 11. The updated list of values accepted by this keyword are now 1,2,3,7,8,10,11. For more information, see:

• “ACCTG - Near-term history data collection options keyword” on page 328

Updates to PARMGEN workflow and panel navigation
The workflow and panel navigation have changed for PARMGEN. For more information, see:

• “Installing OMEGAMON for DB2 PE from scratch with the most basic configuration” on page 314
• “Configuring Near-Term History with system variable support” on page 322
• “Configuring InfoSphere Optim Performance Manager and Performance Expert Client” on page 322
• “Completing the configuration for z/OS components” on page 405

Updates to migration topics
For more information, see:

• Chapter 4, “Migrating,” on page 863

Upgrading existing PARMGEN runtime environment
Information has been added about how to upgrade in an existing PARMGEN runtime environment to enable support for Db2 12. For more information, see:

• Basic Upgrade Requirements
• SMP/E maintenance and upgrade scenarios
Product delivery changes
Buffer Pool Analyzer is now delivered only with IBM OMEGAMON for Db2 Performance Expert on z/OS.

Updates System Statistics (KDPDBSM) to include DSQL
System Statistics (KDPDBSM) has been updated to include DSQL (Db2 Dynamic SQL Cache Filter Options KDPDSQLF). For more information, see:

- “System Statistics (KDPDBSM)” on page 1749

Updates panels for new wait times in IFCID 316 and 401
For more information, see:

- “EDM Snapshot Dynamic SQL Cache Statement Statistics Detail” on page 1170 (ZEDD3)
- “EDM Snapshot Static SQL Cache Statement Detail” on page 1165 (ZESS3)

Improved in-memory buffer pool
For more information, see:

- “Buffer Pool Detail” on page 1114 (ZBP)
- “Buffer Pool Statistics Detail” on page 1531 (ZHBPD)

Fast insert algorithm
For more information, see:

- “Thread Detail” on page 923 (ZTDTL)
- “Package Detail” on page 1003 (ZPDK)
- “Thread History Detail” on page 1634 (ZHTACT)
- “Thread History Package Detail” on page 1684 (ZHTPKD)

Stabilize and reuse runtime structures for dynamic SQL
For more information, see:

- “Current SQL Counts” on page 951 (ZTSCNT)
- “Thread History SQL Counts” on page 1660 (ZHTSQLS)
- “EDM Pool Information” on page 1136 (ZEDMP)
- “EDM Pool Statistics Detail” on page 1551 (ZHEDD)
- “EDM Snapshot Dynamic SQL Cache Statement Statistics Detail” on page 1170 (ZEDD3)
- “DB2 Command Statistics” on page 1305 (ZCMDS)
- “DB2 Command Statistics Detail” on page 1599 (ZHCMD)
- “SQL/RID Pool/Parallelism/Stored Procedure Information” on page 1283 (ZSQLC)
- “SQL/RID Pool/I/O Parallelism Statistics Detail” on page 1569 (ZHSQD)

Updates to DSNZPARM panels
DSNZPARM panels have been updated to reflect Db2 12 support. For more information, see:

- “DSNZPARM Thread Parameters” on page 1188 (ZPSYS)
- “DSNZPARM Logging Parameters” on page 1194 (ZPLOG)
- “DSNZPARM Authorization, RLF and DDF Parameters” on page 1204 (ZPCTL)
- “DSNZPARM Storage Parameters” on page 1217 (ZPSTL)
Added class 3 wait thread status
For more information, see:
- “DB2 Thread Status Values” on page 1724
- “Filter Options For Thread Activity Displays” on page 1069

Updates to thread analysis
For more information, see:
- “Thread Detail” on page 923
- “Thread History Detail” on page 1634
- “Threads Summary Including Idle Threads” on page 1085

Updates to DSQL/SSQL summary panels
DSQL/SSQL summary panels now display accelerator eligibility and DPS flags. For more information, see:
- “Dynamic SQL Cache Statistics” on page 1158 (ZEDDT)
- “Static SQL Cache Statistics with Package Information” on page 1163 (ZESSK)
- “Dynamic SQL Cache Statement Summary by Key Field” on page 1157 (ZEDD2)

Updates to SQL Activity Report and Trace Blocks
For more information, see:
- “Report and Trace Details” on page 4230
- “Field Descriptions of SQL Activity Detail Report and Trace Details” on page 4231
- “Scan Activity” on page 4256
- “Example of a Member-Scope Audit Detail Report and Trace (Type AUTHCNTL)” on page 3386
- “SQL Activity Trace Summarized by Occurrence, sorted by ELAPSEDTIME” on page 4224

Updates to IFCID descriptions
For more information, see:
- “IFCID 001 - DB2 Command Data” on page 3536
- “IFCID 001 - DDF Data by Location” on page 3542
- “IFCID 001 - QVLS Data” on page 3562

OPTIMIZE subcommand option no longer supported
The ACCOUNTING REDUCE command no longer supports the OPTIMIZE subcommand. For more information, see:
- “ACCOUNTING command with REDUCE subcommand” on page 4698
- “Creating a System Parameters report” on page 2843
- “INPUTDD statement” on page 4680
- “RECTRACE command with FILE subcommand” on page 4744
TOP subcommand now supports new keyword MAXWRKF

The TOP subcommand now supports new keyword MAXWRKF. For more information, see:
- “ACCOUNTING command with TRACE subcommand” on page 4703
- “ACCOUNTING command with REPORT subcommand” on page 4692

Updates to migration topics

For more information, see:
- “ACCOUNTING command with SAVE subcommand” on page 4700
- “STATISTICS command with SAVE subcommand” on page 4764

Updates to Online Monitor field table

For more information, see:
- “Online Monitor field table” on page 342

Db2 9 no longer supported

Db2 Performance Expert no longer supports Db2 9.

Main menu functions no longer supported

The following Db2 Performance Expert main menu functions are not supported for Db2 11 or later:
- Display Thread Activity (option 3.1)
- Display Statistics (option 3.2)
- Display System Parameters (option 3.3)

Updates to messages

The following table shows the messages that have been added or updated for the various components.

Support for Db2 12
Db2 Performance Expert now supports Db2 for z/OS 12, including LOB compression, dynamic plan stability, lifted partition limits.

Delivery of service stream updates and enhancements
Updates and enhancements include:
• Additional support for Db2 Analytics Accelerator monitoring
• Removal of the CUA interface to reduce complexity and cost of ownership in the monitoring environment
• Updates to the buffer pool analysis feature

Upgrading the PARMGEN runtime environment
Provides instructions for upgrading the PARMGEN runtime environment to enable support for Db2 12. For more information, see:
• Basic Upgrade Requirements
• SMP/E maintenance and upgrade scenarios

Buffer Pool Analyzer for z/OS now delivered as part of Db2 Performance Expert
Buffer Pool Analyzer for z/OS is no longer available as a standalone product. It is now delivered as part of Db2 Performance Expert. Additionally, the CUA interface is not delivered with Db2 Performance Expert.

System statistics now shows DSQL information
System statistics have been updated to include DSQL (Db2 Dynamic SQL Cache Filter Options KDPDSQLF). For more information, see:
• “System Statistics (KDPSUBSM)” on page 1749

October 2013

New ZPARM fields
ZPARM fields introduced in Db2 11 are added to the VTAM display panels and enable you to verify the configuration of the Db2 subsystem.

Display of correlation ID for thread activity
For thread activity on remote Db2 subsystems, the correlation ID is displayed instead of the job name.

Integrated Db2 Analytics Accelerator support
Support is provided for the Integrated Db2 Analytics Accelerator.

Scheduling and tracking of ATF sessions
You can now track and schedule ATF sessions.

Using GROUP to improve Save data set performance
If you never require separate report entries for one or more OMEGAMON XE for DB2 PE identifiers, you can use GROUP to reduce the uniqueness of the key in the Save data. This can result in fewer reduced records in the Save data set, a smaller Save data set, and improved performance.

The standard key for Save data sets contains a combination of the applicable OMEGAMON XE for DB2 PE identifiers from DB2 instrumentation records. For example, the key for an Accounting save record contains a number of
OMEGAMON XE for DB2 PE identifiers. Because of the uniqueness of the standard key, there can be a very large number of reduced records in a Save data set.

If you never require separate report entries for one or more OMEGAMON XE for DB2 PE identifiers, for example, if you only produce Accounting reports by using ORDER(CONNECT-PRIMAUTH-PLANNAME), you can use groups in INCLUDE REDUCE to obtain the minimum number of records in the Save data set.

The following command stream does not use groups. The resulting Save data set contains reduced records for each unique combination of all of the OMEGAMON XE for DB2 PE identifiers in the key.

```
ACCOUNTING
  REDUCE
  SAVE
```

The following command stream uses groups and minimizes the number of records in the Save data set:

```
GROUP (CORRNAME (ALLCNM(*)))
GROUP (CORRNMBR (ALLCNU(*)))
GROUP (ORIGAUTH (ALLORI(*)))
GROUP (REQLOC (ALLREQ(*)))
ACCOUNTING
  REDUCE
    INCLUDE (CORRNAME (G(ALLCNM)),
              CORRNMBR (G(ALLCNU)),
              ORIGAUTH (G(ALLORI)),
              REQLOC (G(ALLREQ)));
  SAVE
```

The Save data set produced by this command stream contains reduced records for each unique value of the OMEGAMON XE for DB2 PE identifiers that are not grouped, for example, PRIMAUTH and PLANNAME.

During REDUCE processing, the group name is substituted for the original value of the key entry. For example, all records in the reduced data have a correlation name of ALLCNM.

Because the key now contains the group name (not the original value), you cannot use the original values of any of the grouped OMEGAMON XE for DB2 PE identifiers in REPORT or INCLUDE/EXCLUDE in the same command stream or when you restore the data.

---

**Comparing original authorization IDs with primary authorization IDs**

This information explains the difference between original authorization ID and primary authorization ID.

**Original authorization ID**

During connection to DB2 (either by IDENTIFY or SIGNON), an initial authorization value is passed to the connection exit. This value becomes the original authorization ID.
For IDENTIFY:
- If RACF is active, this value is the verified user ID.
- If RACF is not active, this value is blank.

For IMS SIGNON:
- If RACF is active, this value is the terminal user ID.
- If RACF is not active, this value is either the LTERM name or the PSB name.

For CICS SIGNON:
- This value is determined by the user-defined CICS resource control table (RCT).
  The connection (authorization) exit can be either the IBM supplied default or user-written, depending upon whether secondary authorization IDs are used.

**Primary authorization ID**

The primary authorization ID is the value set by the exit. This value is determined according to the following criteria:
- Whether it is an IDENTIFY or a SIGNON
- Whether RACF is active or inactive
- Whether the exit is IBM supplied or user-written
- Whether secondary IDs are being used

Default values can be any of the following:
- The TSO logon ID
- The value of the USER field on the JOB statement
- A default value specified when you install DB2
- The original (unaltered) value

**Note:**
- The original authorization ID should be used when you attempt to establish accountability of DB2 activity, because the primary authorization ID can be an ID other than the user (group name, for example).
- If your subsystem uses authorization ID translation for distributed activity, the AUTHID reported for DBATs is the translated value.

**Comparing secondary IDs with SQL ID**

DB2 uses two other types of authorization IDs:
- Secondary authorization IDs
- SQL ID

If secondary IDs are used, a user-written authorization exit is also required. A secondary list can contain from 1 to 245 secondary IDs. This list is accessed when you establish the primary authorization ID or the SQL authorization ID.

The primary ID and the SQL ID are set during either IDENTIFY or SIGNON. However, only the SQL ID can be changed after connection by the SET CURRENT SQLID statement.

The SQL ID must be either the primary ID or one of the secondary IDs. It is used for implicit name qualifiers, implicit ownership assignment, and GRANT/REVOKE authorization checking.

For more detailed information about authorization IDs, see the IBM Knowledge Center.

Chapter 8. Reference information 4843
Fields affected by roll-up during distributed and parallel tasks

The following table lists fields that are not reported by Accounting reports and traces if roll-up during distributed activity and parallel query tasks is active.

See “Distributed activity” on page 2870 and “Query parallelism considerations” on page 2871 for background information.

Using ACCOUNTING REDUCE subcommand options to balance performance and data set space

OMEGAMON for Db2 PE provides several commands for which the REDUCE subcommand and its options can be used to reduce the volume of data before the data is passed to subsequent other subcommands like REPORT and SAVE.

When OMEGAMON for Db2 PE processes a REDUCE subcommand, it holds its temporary data in a REDUCE data set to relieve virtual storage. This temporary data set is either automatically allocated or, if its placement and size needs to be controlled, explicitly specified as a ccWORK DD statement in your JCL. (cc stands for the report set, respectively the command to which the temporary REDUCE data set is associated, for example, AC for the ACCOUNTING command).

When using REDUCE, it is difficult to determine in advance an appropriate size of the temporary data set. The required size depends mostly on the amount and
complexity of input data to be reduced and on REDUCE subcommand options like FROM/TO, INCLUDE/EXCLUDE, INTERVAL, and BOUNDARY, which influence the reduction factor.

The REDUCE subcommand option CALCULATE helps to reduce a high volume of Accounting data results in unacceptable performance, difficulties to determine adequate ACWORK space, or even abnormally terminated jobs (abend B37).

It provides information about the ACWORK space actually used during a REDUCE step. It can determine an adequate size for the ACWORK data set with regard to the amount and complexity of the data to be reduced. If insufficient ACWORK space is specified, and the job consequently terminates. In this case the CALCULATE option provides information about the size required to successfully complete the job in a second run.

This option is purely performance- and processing-related and does not manipulate data in any way. For the latter purpose use REDUCE subcommand options like FROM/TO, INCLUDE/EXCLUDE, INTERVAL, and BOUNDARY.

For the complete command syntax of ACCOUNTING REDUCE and for more information about the ACWORK DD statement, see the Report Command Reference.

For example, OMEGAMON for Db2 PE, by default, automatically allocates a temporary ACWORK data set to hold output data from the REDUCE subcommand. To control the placement and size of this data set, you can also specify a ddname of ACWORK. However, if the allocated size is too small for the temporary data, REDUCE processing terminates because of insufficient space (abend B37). You have to increase the size of the data set and run the job again, still without knowing an appropriate size.

In this case, you can use the CALCULATE subcommand option to calculate the appropriate size of ACWORK.

```
ACCOUNTING
  REDUCE
    Other REDUCE subcommand options
    CALCULATE
    REPORT
    SAVE

```

With CALCULATE in the command stream, OMEGAMON for Db2 PE counts the number and lengths of records written to ACWORK during ACCOUNTING REDUCE processing.

- If ACWORK is sufficiently sized, REDUCE processing finishes normally and the information message FPEA0800I is shown in DPMLOG, which provides details about the calculations.
  Subsequent subcommands of ACCOUNTING (here, REPORT and SAVE) will be executed.
  You can compare the specified size of ACWORK to the value shown in the message. You might want to adjust your specification to the same dimension, considering a bonus for variations of the input data.
- If the specified size of ACWORK is too small, REDUCE processing stops writing to the data set. However, OMEGAMON for Db2 PE continues counting and calculating until all input data to REDUCE is processed. The error message
FPEA0801S in DPMLOG provides details about the minimum required size of ACWORK. Finally, the job terminates with abend B37.

Subsequent subcommands of ACCOUNTING (here, REPORT and SAVE) will not be executed.

It is recommended that you specify the size of ACWORK to at least the value shown in the message plus 20% . Then, you must rerun the job again.

In both messages the other values describe the amount and quality of processed records. The error message FPEA0801S is accompanied by other error messages indicating a failure to write to ACWORK. For more information, see [Messages](#).

---

**Accessibility**

Accessibility features help users who have a physical disability, such as restricted mobility or limited vision, to use software products successfully.

This index describes the major accessibility features in OMEGAMON XE for DB2 PE, OMEGAMON XE for DB2 PM, and Buffer Pool Analyzer:

- You can operate all features using the keyboard instead of the mouse.
- You can change the system settings for high contrast for all user interface controls and client area contents.

The following sections explain how to use these accessibility features.

**Operating all features by using the keyboard**

You can use keys or key combinations to perform operations that can also be done through mouse actions. All menu items can be accessed from the keyboard. In those cases, the keyboard equivalent appears to the right of the menu item, or the shortcut letter is underlined. Some keyboard items also have shortcuts.

To navigate through a window or dialog by using the keyboard instead of the mouse, use the following keyboard shortcuts:

**Table 321. Navigating through a window or dialog**

<table>
<thead>
<tr>
<th>Navigating through a window or dialog</th>
<th>Shortcut</th>
</tr>
</thead>
<tbody>
<tr>
<td>Access the menu bar in a window</td>

### Changing the system settings for high contrast and font size

You can change the system settings for high contrast and font size.

To use specific settings that are designed for easy reading, take these steps:

1. In the OMEGAMON XE for DB2 PE - System Overview window, click Monitor → Configuration.
2. In the Configuration window, click Accessibility.
3. To specify the appearance scheme for high contrast and font size, select one of the following options:
   - To use the default settings, select None.
   - To specify a white background containing black text in normal font size, select Black on white.
   - To specify a white background containing black text in large font size, select Black on white (large font).
   - To specify a black background containing white text in normal font size, select White on black.
   - To specify a black background containing white text in large font size, select White on black (large font).

You have to restart the application before the new settings come into effect.
Chapter 9. Messages

Introduction to OMEGAMON XE for DB2 PE messages

This information lists all messages and provides additional explanations and possible user actions for each message. The messages are listed in alphanumeric sequence. This section introduces the message layout and describes the structure of message numbers.

The layout of message descriptions

Messages are described according to the following layout:

- **Message number and message text, as provided by the system**
  The message number is described in “The structure of message numbers.”

  The message text provides a short description of the event or problem. Many actual messages contain one or more variable text parts. These parts are shown as numbered message variables in message texts (for example, <V1>). The texts for the variables are given in the explanation of the messages. Variable text for workstation client messages is shown as numbered message variables within curly braces, for example {1}.

- **Explanation**
  A more detailed explanation of the message, or additional information about the message.

- **System Action**
  A description of how the system responds to the event that caused this message. This part might be intentionally missing, if obvious.

- **User Response**
  A description of possible user actions to solve the problem. This part might be intentionally missing, if obvious.

The structure of message numbers

Message numbers have fourfold structure that consists of prefix, subcomponent identifier, number, and severity code.

- **Prefix** A three-character prefix that identifies the product or major component that issues a message.
  - BPO The Buffer Pool Analyzer program prefix.
  - DGO Prefix that identifies workstation client messages.
  - FPE The OMEGAMON XE for DB2 PE program prefix (components from former IBM DB2 Performance Expert product).
  - KDP The Tivoli Enterprise Monitoring Agent (TEMA) for DB2 program prefix
  - KO2 The OMEGAMON XE for DB2 PE program prefix (components from the former OMEGAMON II product).

- **Subcomponent identifier**
  A one-character subcomponent identifier that identifies the subcomponent within a product or major component. For example, in message FPEA1242I, the A identifies the Accounting subcomponent in OMEGAMON XE for DB2 PE.

  - BPO messages use a single subcomponent identifier K, which means that all Buffer Pool Analyzer messages start with BPOK.
  - DGO messages use a single subcomponent identifier K, which means that all workstation client messages start with DGOK.
  - FPE messages use the following subcomponent identifiers:
A  Accounting
B  User-Tailored Reporting (part of Batch feature)
C  Background control
E  Exception processing
F  Interactive Report Facility (part of Batch feature)
I  I/O activity
J  Installation and customization
L  Locking
M  Online Monitor
R  SQL activity
S  Statistics
T  Utility activity
U  Utility services
V  Data Server
W  System Parameters report set
X  Audit
Y  Explain
Z  Migrate/Convert function

KDP messages do not have explicit subcomponent identifiers.

KO2 messages use the following subcomponent identifiers:
A  Reserved for Application Trace Facility (ATF)
C  Reserved for Interface, Cross-Memory, Display Module
D  Reserved for Data Analysis Module
E  Object Analysis
H  Near-Term History Data Collector
I  Reserved for D5API Framework
M  ISPF
O  VTAM Display Logic
P  Reserved for D5API Collectors
R  Capture Server
S  Storage Manager
T  Reserved
U  Reserved for Utility I/O and Data Conversion Routines
X  Cross-Memory Module
Z  OMPE Subsystem

Message number
A unique number within the range of messages from a subcomponent.

Severity
An appending single-letter code that indicates the severity of the message.
I  Informational message that does not require any user action.
W  Warning message that should be analyzed to determine whether the condition can effect the results. Usually, a warning message does not prevent the system from execution.
E  Error message that can be corrected by an appropriate user action (for example, by correcting a command syntax error).
S  Severe error message that results from an abnormal condition and in the abandonment of processing for a command. Other commands in a job stream may still be executed.
U  Unrecoverable error message that results from an abnormal condition and in the abandonment of processing for the entire job. Most internal errors fall into this category.
When you contact IBM support

If you discover an error or receive a message where the user response is “Contact IBM support”, collect the following data before contacting IBM support to assist in determining the cause of the errors:

- The complete list of PTFs and maintenance PUT tapes installed, for DB2 and OMEGAMON XE for DB2 PE.
- The complete dump listing from SYSABEND or SYSUDUMP.
- All error messages, some of which might contain DB2 return codes and reason codes. To interpret the DB2 codes, read *DB2 Messages and Codes*.
- The listing of the SYSLOG data set for the period of time spanning the failure.

If the problem originated in the background (Batch) execution of a report, also collect:

- The complete run listing (including all steps), JCL command stream, SYSPRINT log, job summary log, trace record distribution report, and system parameters report, if available.
- The complete report or trace listing in question.

If the problem originated in the Host Online Monitor, the IRF, or the foreground execution of a report, also collect the following data:

- The complete list of PTFs and maintenance PUT tapes installed for ISPF, in addition to OMEGAMON XE for DB2 PE and DB2.
- The listing of the ISPF log for the session involved in the problem.
- The panel ID, the message number and text of any error messages, and a description of the sequence of events immediately preceding the error.

If the problem originated in OMEGAMON Collector, also collect the following data:

- The SYSPRINT log
- The History data set
- The Exception Events data set
- An SVCDUMP of both the OMEGAMON Collector and the user experiencing the problem when the problem occurred, or as soon after as possible.

With any reported problem, the input data might be needed to perform further problem determination. Save the following data sets:

- The files that were input to the foreground or background execution of OMEGAMON XE for DB2 PE reporting. Save the SMF, GTF, DPMOUT, or Host Online Monitor data sets that were used as input to the report.

**Note:** If a report problem was experienced when executing in foreground, it might be easier to document the problem by executing the same report with the same input data in background to gather the necessary information.

- The Exception Threshold data set. If the problem involves exception processing, save the contents of this data set from the time of the problem onwards.

---

**BPOK - Buffer Pool Analyzer messages**
<table>
<thead>
<tr>

<td>The file is a Buffer Pool Analysis bpd file, which cannot be used for simulation.</td>
<td>Simulation requires a trace file created with the Buffer Pool Analysis Collect Report Data function in SHORT format.</td>
</tr>
<tr>
<td>BPOK5103</td>
<td>Invalid file type and incorrect file transfer mode ASCII was used.</td>
<td>The file is a damaged Buffer Pool Analysis bpd file, which has been damaged by downloading it in the wrong mode.</td>
<td>Simulation requires a trace file created with the Buffer Pool Analysis Collect Report Data function in SHORT format. It must be downloaded in BINARY mode.</td>
</tr>
</tbody>
</table>
BPOK5104  Invalid file format.
Explanation:  The file is not a valid Buffer Pool Analysis trace file. It may have been created using the Performance Monitor Collect Report Data function.
User response:  Simulation requires a trace file created with the Buffer Pool Analysis Collect Report Data function in SHORT format.

BPOK5199  Unknown file format.
Explanation:  The file is not a known file format.
User response:  Simulation requires a trace file created with the Buffer Pool Analysis Collect Report Data function in SHORT format.

BPOK5800  Wrong date format.
Explanation:  The date you have typed has the wrong format.
User response:  Use this date format: \{0\} or press the Reset button.

BPOK5801  The start date is later than the begin date.
Explanation:  Change a date or press the Reset button.

BPOK5802  One Date lies out of the recorded time frame.
Explanation:  Change the dates or press the Reset button.

BPOK5803  One of the selected files is not a bpd file.
Explanation:  Remove this file.

BPOK5804  Parsing Process failed.
Explanation:  File \{0\} cannot be parsed. It is corrupted or not a bpd file.

BPOK5805  File exists. New file name has been generated for the result.
Explanation:  The intended file name \{0\} could not be used for the output. The reason for that is that a file with that name already exists. To ensure uniqueness the name \{1\} has been generated for the target.

BPOK5806  Invalid buffer pool name(s) \{0\} entered.
Explanation:  The name(s) \{0\} are not valid DB2 buffer pool name(s).
User response:  Change the buffer pool name(s) in the rule(s) and retry the last action.

BPOK5807  BPD file used for object placement does not match the selected trace file.
Explanation:  Object placement recommendations cannot be used.
User response:  Select a matching trace file.

BPOK5902  The connection to CIMOM failed.
Explanation:  CIM stored procedures returns error code: 2

BPOK5903  The connection to the database failed.
Explanation:  CIM stored procedures returns error code: 3

BPOK5905  The access to CIMOM was disabled.
Explanation:  CIM stored procedures returns error code: 5

BPOK5906  The monitored DB2 instance is not active.
Explanation:  CIM stored procedures returns error code: 6

BPOK5907  The monitored DB2 instance is not started.
Explanation:  CIM stored procedures returns error code: 7

BPOK5908  An SQL error occurred.
Explanation:  CIM stored procedures failed with error code 8. The remote instance is not active or cannot be reached.

BPOK6000  Internal buffer pool analysis error.
Explanation:  You tried to open a buffer pool data (bpd) file with one of the Buffer Pool Analyzer client-based functions, but the bpd file cannot be opened or properly preprocessed. The file might be damaged, does not contain data in the required format (Short or Standard) or data type (Summary or Detail), or was not created by means of the BPACTIVITY FILE command.
User response:  Create a new bpd file, or use another bpd file. If the problem persists, contact IBM support.

If this error occurs when you use the File Transfer Protocol (FTP), also check whether your file transfer program provides the RDW and NORDW command options. If the default is RDW, it might cause a four-byte record descriptor record to be included in the data set being downloaded from the host to the client (which might then cause message BPOK6000). Specify
the NORDW command option to avoid the creation of the descriptor record.

---

The selected DB2 Connect gateway is currently not active. Switch to history mode and select a date and time at which the DB2 Connect gateway was active.

</table>
DGOK234 Specify a trace command.
DGOK235 Specify a member name of the DSG.
DGOK600 An authority problem occurred when the DB2 command was executed.
Explanation: You have insufficient authority to perform the commands.
User response: Verify your authorization scheme. If required, contact your DB2 administrator to extend your authority.
DGOK601 Syntax error.
Explanation: The syntax of the command is incorrect.
User response: Correct the error and try again. See the DB2 Command Reference.
DGOK650 DB2 Performance Expert is already started.
Explanation: Only one DB2 Performance Expert session can run at a time.
User response: Use the DB2 Performance Expert session that is running.
DGOK651 DB2 Performance Expert is already started.
Explanation: Only one DB2 Performance Expert session can run at a time.
User response: Use the DB2 Performance Expert session that is running.
DGOK700 Statement is not explainable.
DGOK702 Your request cannot be performed because you did not specify the local database alias.
Explanation: Optim Query Workload Tuner or Data Studio needs the local database alias of the monitored DB2 subsystem to perform your request.
User response: Specify the local database alias on the DB2 Subsystem page of the DB2 System Properties window.
DGOK704 Optim Query Workload Tuner or Data Studio is not installed.
Explanation: Optim Query Workload Tuner or Data Studio needs to be installed to use the Explain functionality.
User response: Install one of these products and restart DB2 Performance Expert Client.
DGOK710 The statement cannot be explained.
Explanation: The access path can only be shown for Select, Update, Insert, Delete, or Values statements.
DGOK713 Data Studio or Optim Query Workload Client not started.
Explanation: The Data Studio or Optim Query Workload Client is installed but not started. You need to start the client in order to being able to explain the SQL Statement.
User response: Start the Data Studio or Optim Query Workload Client.
DGOK714 Exception encountered during Data Studio or Optim Query Workload Client usage.
Explanation: An internal exception occurred.
User response: Contact IBM support.
DGOK720 Tuning request complete: Job Name [JOB ID] Tuning Jobs URL: [URL]
Explanation: Data Server Manager single query tuning request processed successfully.
User response: Open the link in browser to inspect tuning output for the given Job Name.
DGOK721 Failed to connect Data Server Manager (DSM)
Explanation: Data Server Manager connection service returned an error messsage.
User response: Check the error message and the data entered when configuring the subsystem for DSM integration (DSM information tab in DB2 System Properties window).
DGOK722 Exception encountered during Data Server Manager processing
Explanation: An internal Exception occurred.
User response: Contact IBM support (check diagnostics trace).
DGOK723 Data Server Manager tuning request call failed
Explanation: Tuning WebService call could not complete successfully.
User response: Contact IBM support.
<table>

<tr>
<td>DGOK1405</td>
<td>A dynamic statement cache error occurred.</td>
<td>You have qualified a statement that was not found in the statement cache.</td>
<td></td>
</tr>
<tr>
<td>DGOK1406</td>
<td>No data returned.</td>
<td>For IFCID 316, data was not returned because the statements did not match the qualification criteria, or because the cache was empty.</td>
<td></td>
</tr>
<tr>
<td>DGOK1407</td>
<td>Data sharing group only: at least one DB2 member did not respond.</td>
<td>The specified member is not a member of the group, or the member is currently not running.</td>
<td>Ensure that all members of the group are running.</td>
</tr>
<tr>
<td>DGOK1408</td>
<td>No buffer pool information available.</td>
<td>The request contained IFCID 254, but a group buffer pool is not connected. The member or subsystem did not return data.</td>
<td>Configure the group buffer pool and try again.</td>
</tr>
</tbody>
</table>
DGOK1409  The authorization verification failed.

Explanation: Possible reasons are:
- Your user ID or password is not correct.
- The performance database of the PE Server subtask does not exist.
- Your user ID does not have monitor 1 or monitor 2 authority.
- You are not authorized to use the KO2PLAN plan.

User response: Verify and correct the possible reasons. Note that user ID and password are case-sensitive.

DGOK1410  DB2 BIND is missing. DB2 Performance Expert Server needs a BIND against DB2.

Explanation: OMEGAMON Collector was changed or updated without the necessary bind against DB2.

User response: Issue the BIND command, then restart OMEGAMON Collector.

DGOK1411  DB2 error.

Explanation: The DB2 request failed, data is not returned.

User response: See the console log for detailed information.

DGOK1412  The maximum number of 500 users is reached or exceeded.

User response: Try again later.

DGOK1413  The returned data is too large. The request was canceled.

DGOK1414  The request was rejected.

Explanation: History data has not yet been collected.

User response: Ensure that the collection of history data is enabled and configured correctly.

DGOK1415  The request was rejected.

Explanation: The history data you requested no longer exists.

User response: Select a more recent history snapshot.

DGOK1416  DB2 Performance Expert Server authorization exit error.

Explanation: The authorization exit did not finish correctly.

User response: Check your authorization exit code, then try again.

DGOK1417  This function must be licensed.

Explanation: This feature is only available if you have a full license.

User response: Purchase a full license to use this feature.

DGOK1418  The DB2 subsystem is not started or cannot communicate.

Explanation: OMEGAMON Collector is running, but the monitored DB2 system is not responding.

User response: Start the DB2 system and ensure that it is responding.

DGOK1419  Logon failed due to CAF connect error.

Explanation: Your logon request was not processed because the connection to Call Attach Facility (CAF) failed.

User response: Verify your DB2 authorization and check the system log for more information.

DGOK1420  Logon failed due to CAF open error.

Explanation: Your logon request was not be processed because the Call Attach Facility (CAF) reported an open error.

User response: Verify your DB2 authorization and check the system log for more information.

DGOK1421  The maximum number of TCP/IP sessions is exceeded.

Explanation: The maximum number of TCP/IP sessions specified in OMEGAMON Collector startup parameter was exceeded.

User response: Close one or more sessions or increase the startup parameter value.

DGOK1422  DB2 is out of memory.

Explanation: The memory or subsystem did not return data.

User response: Restart the DB2 system and ensure that enough memory is available.

DGOK1423  Monitor trace class 1 is not active.

Explanation: The member or subsystem did not return data.

User response: Enable the Monitor trace class 1 in the startup parameter, then try again.
DGOK1424  You are not authorized to receive monitor trace class 2 information.
User response:  Ask your administrator for the necessary privileges.

DGOK1425  The CAF connect failed. The request was rejected.
Explanation:  OMEGAMON Collector cannot verify your authorization because the connection to the Call Attach Facility (CAF) failed.
User response:  Check the z/OS system log for more information.

DGOK1426  The CAF open failed. The request was rejected.
Explanation:  OMEGAMON Collector cannot verify your authorization because a Call Attach Facility (CAF) session cannot be opened.
User response:  Check the system log for more information.

DGOK1427  CRDSTCM does not contain the required DEST(OPX) section.
Explanation:  The START TRACE command sent to OMEGAMON Collector did not contain a DEST(OPX) section, which is necessary to perform this operation.
User response:  Add this section to your command or have it generated.

DGOK1428  Incorrect DSORG. See log.
Explanation:  The data set disposition mode is incorrect. For example, 'Append' was specified for a data set that does not exist.
User response:  Use the correct mode when writing to a data set. The mode depends on whether a data set exists.

DGOK1429  Incorrect RECFM. See log.

DGOK1430  Incorrect LRECL. See log.

DGOK1431  SMS dynamic allocation error. See log.
Explanation:  An SMS data set cannot be opened to receive data.
User response:  See the console log for details.

DGOK1432  The data set is not cataloged. See log. Catalog the data set, then try again.

DGOK1433  The data set already exists. See log. Try another disposition mode such as 'Append' or 'Overwrite'.

DGOK1434  A catalog error occurred. See log.

DGOK1435  A dynamic allocation error occurred. See log.

DGOK1436  An open error occurred. See log.

DGOK1437  Buffer shortage.
Explanation:  OMEGAMON Collector has reached the maximum number of API function calls that can be handled simultaneously.
User response:  Try again later.

DGOK1438  Internal DB2 Performance Expert Server error.
Explanation:  The storage allocation for buffers failed.

DGOK1439  The history request was denied.
Explanation:  The snapshot did not exist in history or was overwritten.
User response:  Specify a different time frame.

DGOK1440  No more information is available.
Explanation:  OMEGAMON Collector has been restarted. The data for this application is lost and cannot be recovered.
User response:  Log off from this subsystem, then log on again.

DGOK1441  Not logged on to DB2 Performance Expert Server
Explanation:  The client application has called an API function without being logged on to OMEGAMON Collector.

DGOK1442  Snapshot data was not received from the host.
Explanation:  OMEGAMON Collector did not return any data.
User response:  Check that OMEGAMON Collector is started.
DGOK1443  The instance is not connected to a DB2 Performance Expert Server. The connection failed.
Explanation: OMEGAMON Collector did not return any data.
User response: Check that OMEGAMON Collector is started.

DGOK1444  DB2 is out of memory.
Explanation: During a DB2 IFI request, DB2 reported a failure obtaining memory.
User response: If you are monitoring a DB2 V7, ensure that APAR PQ58341, PTF UQ66442 is applied. If you are connected to a Data Server of DB2 PM V7, ensure that APAR PQ60353, PTF UQ65800 is applied. If the problem persists, contact IBM support.

DGOK1445  The DB2 connection was lost.
Explanation: OMEGAMON Collector lost its connection to DB2. Possible reason: The thread was canceled or has stopped.
User response: Log off, then log on again. If the problem persists, contact IBM support.

DGOK1446  Server timeout.
Explanation: Server did not respond in the expected time.
User response: Try again later.

DGOK1447  DB2 returned incorrect READS data, the request was canceled.
User response: Contact DB2 support.

DGOK1448  DB2 Performance Expert Server is currently not available, or the wrong port number was specified.
Explanation: This error can occur when you configured a new DB2 and entered a wrong port number in the "Retrieve DB2PM Databases" step.
User response: Verify the port number of your OMEGAMON Collector, and correct it if necessary. Otherwise, restart OMEGAMON Collector.

DGOK1450  Internal DB2 Performance Expert Server error. DB2 Performance Expert Server ran out of memory.
Explanation: The OMEGAMON Collector could not obtain memory.
User response: This can be a temporary problem. Retry the operation. If the problem persists, ask the MVS operator to enlarge the region size of the Data Server and restart the Data Server. If the problem still persists, contact IBM support.

DGOK1451  DB2 Performance Expert Server is not correctly configured or is not started.

DGOK1452  The system name cannot be resolved. (UnknownHostException)
Explanation: The current system is not available or is wrong.
User response: Correct the system name for the current DB2 system, then try again.

DGOK1453  No data retrieved by the server.
Explanation: The Data Server has stopped or was not started. Snapshot related stored procedure does not work.
User response: Restart the Data Server. If the problem persists, stop the Data Server and DB2, then restart DB2 and the Data Server. Wait about one minute before repeating the request from the client.

DGOK1454  To perform this function a JDBC driver is needed.
Explanation: The JDBC DB2 driver cannot be found in the Java classpath. This problem can occur if DB2 Performance Expert was installed before DB2, or if DB2 was reinstalled into a new directory after Performance Expert was installed.

DGOK1455  You are not authorized to access the DB2 PM database tables.
User response: Ask your administrator to add your user ID to the DB2 group authorized to work with the Data Server. Check that the Data Server is correctly configured or is started.

DGOK1456  DB2 or DB2 Performance Expert Server is not started, the monitored instance is not enabled, or DB2 is not started locally.
Explanation:
- The DB2 instance (local or on a server) is not started.
- The Data Server (on which your DB2PM database is located) is not started.
- A monitored instance was disabled.
- The network connection might be lost.
User response: Start the correct service, or enable the instance to be monitored in the Data Server configuration.

</tbody>
</table>
DGOK3301  [0] cannot be canceled.
Explanation:  The table data is incorrect.
User response:  Close the application and try again. If the problem persists, contact IBM support.

DGOK3302  DB2 Performance Expert Server information is not available.
Explanation:  The Data Server information cannot be received.
User response:  Close the application, then try again. If the problem persists, contact IBM support.

DGOK3303  The selected [0] stopped or was terminated.

DGOK3304  DB2 Performance Expert Server supports single qualifiers only.
Explanation:  The version of the Data Server that is installed on the host does not support more than one qualifier.
User response:  Install the latest Data Server.

DGOK3305  This filter already exists.

DGOK3306  Check at least one item in Thread Type.

DGOK3308  DB2 Performance Expert Server does not support SQL activity tracing.
User response:  Install the latest Data Server.

DGOK3309  SQL activity tracing cannot be started in GLOBAL view.
Explanation:  In GLOBAL view, the list of applications and their performance counter values are aggregated for all database partitions. However, an SQL activity trace can only be created for a single partition.
User response:  Select a single partition or the entire instance (GROUP) from the "Show Data for" list and then start SQL activity tracing for an application.

DGOK3500  Data Sharing Group information is not available.
Explanation:  The subsystem is not a member of a data sharing group.

DGOK3501  History data for the specified date and time is not available.
Explanation:  Data for the date and time specified was probably overwritten by more recent data.

User response:  Wait until the new timestamp list is loaded to see the oldest snapshot.

DGOK3502  History data is not available.
Explanation:  The request was rejected. History data is not available.
User response:  Try again later or restart the Data Server by using the history option.

DGOK3503  Data is not available.
Explanation:  The request cannot be processed because data is not available. Possible reasons:
- Snapshot did not exist or was overwritten.
- History data does not exist.
- The thread was stopped or terminated.
- The filter has no data.
User response:  Respecify the filters and qualification criteria, or specify a different snapshot.

DGOK3504  Function is not supported in demo mode.
User response:  Disable the demo mode, log on to a subsystem, and try again.

DGOK3505  Details window is not visible in Group View.
Explanation:  The selected data is not visible in Group View mode.
User response:  Select a member and try again, or close the Details Window.

DGOK3506  The group scope request might take longer because the server has more than 10 members. Should your request be performed?

DGOK3507  Global or group view is not valid in this context.

DGOK3600  The specified file name is not valid.
User response:  The file is empty or read-only.

DGOK3601  Logon is not possible, the selected DB2 Performance Expert Server [0] is not running.
DGOK3602  The specified subsystem is not configured.
User response: Add this subsystem to the System Overview window, then try again.

DGOK3603  The specified configuration file is not valid.
User response: The file does not exist, is empty, cannot be read, or is not a correct configuration file.

DGOK3604  A DB2 system with the same name is already defined.
User response: If this is the system that you are currently configuring, no further action is required. Otherwise, edit the system or instance name and provide a unique name.

DGOK3605  Type numbers in this field.

DGOK3606  You cannot log on to the selected DB2 system (0) because there is currently no information available about its status.
User response: Wait until the Server Status column in the DB2 system status table shows an up arrow next to the selected DB2 subsystem. Then try to log on again.

DGOK3607  The multiplier must be greater than zero.
Explanation: A multiplier has been set to zero or one of the history types does not exist in the DB2PM.HISTORYDATA table.
User response: Set another multiplier value.

DGOK3608  The DB2 Connection alias (0) is not correct.
Explanation: The DB2 Connection alias name was not specified, is longer than eight characters, or contains a character that is not valid.
User response: Specify a valid DB2 Connection alias.

DGOK3609  The snapshot trace or history parameter cannot be set.
Explanation: The parameter does not exist in the DB2PM.PARAMETER table.

DGOK3610  The selected DB2PM database is not receiving DB2 Connect/gateway information.
Explanation: A DB2PM database can only receive data about a DB2 Connect gateway if Performance Expert Agent for DB2 Connect Monitoring (PE Agent) is installed, configured, and activated at DB2 Connect/gateway. For more details, see Installation and Configuration.
User response: Select a DB2PM database receiving DB2 Connect/gateway information or, if you want to use the selected DB2PM database, install, configure, and activate Performance Expert Agent for DB2 Connect Monitoring (PE Agent) at the appropriate DB2 Connect/gateway.

DGOK3611  This function is not available on multi-partition instances.

DGOK3612  The Performance Warehouse Server is currently not available.
User response: Start the Performance Warehouse server using the Performance Warehouse page of the Modify Properties window.

DGOK3613  Your password or group is too long. Specify a password up to 100 characters or a group of up to eight characters.

DGOK3614  The DB2 system you want to add already exists in this folder.

DGOK3615  A folder with this name already exists. Specify a different name.

DGOK3616  A copy of this DB2 system already exists in this folder.

DGOK3617  To import a DB2 system, you must be logged off from all DB2 systems that are defined to DB2 Performance Expert Client.
User response: Log off from the DB2 systems to which you are logged on, then try again.

DGOK3618  To perform this function, you must first log on to a DB2 system.

DGOK3620  No DB2PM database is selected or all DB2 instances are defined to DB2 Performance Expert Client.

DGOK3621  One or more database aliases already exist in the DB2 Catalog (ie 0).
DGOK3622  The specified DB2 Performance Expert Server does not monitor any DB2 instances.

User response: To enable the Data Server to monitor a DB2 instance, you must first configure this instance. For information about how to configure an instance, see Installation and Configuration.

DGOK3623  The trace is activated but the trace level is 0.

Explanation: Trace data can only be collected with a trace level greater 0.

User response: Specify a trace level from 1 to 5 when you activate a trace.

DGOK3629  You cannot specify any history data storage settings because this parameter does not exist in the DB2PM.PARAMETER or DB2PM.PWHDATA table.

DGOK3630  You specified one or more wrong values for the history data storage settings.

User response: For the storage interval, specify a number from 1 through 24. For the interval for summarizing the history data, specify a number from 1 through 96.

For the start date for history storage, specify a valid date in the form mm.dd.yyyy.

DGOK3631  For the {0} field, specify a value greater than zero.

DGOK3632  You specified a wrong value for the history data storage settings.

User response: For the interval for summarizing the history data, specify a number from 1 through 96.

The interval must be equal to, or greater than, the recording interval you specified on the History page.

DGOK3634  Specify {0}.

DGOK3635  Verify that the e-mail is received in the destination In-Box. If not, verify the specified e-mail (SMTP) server address.

DGOK3636  The database alias ({0}) is not supported by DB2.

Explanation: You cannot specify the host name of your workstation as database alias. This is a DB2 restriction.

User response: Specify another database alias.

DGOK3637  The shortcut ([0]) references a DB2 system that is already deleted. Therefore, this shortcut will be deleted.

DGOK3638  Some monitor switches are not set on "[0]". Therefore, part of the information is not available.

Explanation: One or more of the following monitor switches are not set: [1]
• BUFFERPOOL (DFT_MON_BUFPOOL): Number of reads and writes, time taken.
• LOCK (DFT_MON_LOCK): Lock wait times, deadlocks.
• SORT (DFT_MON_SORT): Number of heaps used, sort performance.
• STATEMENT (DFT_MON_STMT): Start and stop time, statement identification.
• TABLE (DFT_MON_TABLE): Measure of activity (rows read and written).
• UOW (DFT_MON_UOW): Start and end times, completion status.
• TIMESTAMP (DFT_MON_TIMESTAMP): Timestamps.

User response: Set the monitor switches for which you want to see data.

DGOK3639  The library for cataloging databases could not be loaded successfully. Some multiplatform tasks such as defining a DB2 instance are disabled.

User response: This message also pops up if the client is started in a 64-bit instance, but with a 32-bit JRE. Then, you cannot even log on to a monitored system. Install a 64-bit enabled JRE and restart the client.

DGOK3640  The server task is not valid; a logoff has been performed.

Explanation: The client received a return code 8 with reason code X'64' from the data collector task. The data collector returns this error if the user's started task is in an invalid and unrecoverable state. The most common reason is that the data collector ran out of memory. The client cannot recover from this situation because all subsequent requests against the server lead to the same error.

Logging off and on usually frees some resources and allows the user to continue for a while. However, over time, the error recurs.

User response: Stop and restart the data collector.
DGOK3641  A recording interval of less than 30 seconds can cause performance problems at Performance Expert Server. In addition, it can happen that Performance Expert Server does not collect each snapshot. It is recommended that you specify a recording interval of at least 30 seconds. Do you want to leave the recording interval at less than 30 and continue?

User response: Specify the path to the User Exit Program/Script.

DGOK3643  The PE Server subtask tries to call your User Exit Program/Script

User response: Verify that your User Exit Program/Script is called.

DGOK3644  DB2 Visual Explain V8 does not support DB2 9.

DGOK3663  Cannot use an active Performance Warehouse connection to schedule SQL Activity trace processing.

Explanation: The Performance Expert Client was unable to connect to the Performance Warehouse.

User response: Before you start an SQL activity trace, log in to the Performance Warehouse for the Db2 subsystem.

DGOK4000  Wrong values for WARNING or PROBLEM thresholds.

Explanation: The values for WARNING and PROBLEM thresholds are not valid. Possible reasons:

- The WARNING value is greater than or equal to the PROBLEM value.
- The WARNING or PROBLEM values are not specified.
- The PROBLEM value is less than or equal to the WARNING value.

User response: Specify valid threshold values.

DGOK4001  The name for the current threshold is missing.

DGOK4002  The author for current threshold is missing.

DGOK4003  The threshold cannot be copied.

Explanation: A threshold with the same specification already exists.

User response: For an exception field, only two threshold configurations with identical filter criteria are allowed. The criteria can be active and inactive.

DGOK4004  The status cannot be changed.

Explanation: The status cannot be changed to the active state of the current threshold.

User response: The status cannot be changed to active because another active threshold already exists. For an exception field, only one active threshold configuration is allowed.

DGOK4005  The XML file is corrupted.

Explanation: The menu item cannot be found because the XML file is corrupted.

User response: File gui_exceptionmain.xml is corrupted or not accessible. Reinstall the program or contact your IBM representative.

DGOK4006  The XML file is corrupted.

Explanation: The toolbar item cannot be found because the XML file is corrupted.

User response: File gui_exceptionmain.xml is corrupted or not accessible. Reinstall the program or contact your IBM representative.

DGOK4007  Exception Event was started successfully.

DGOK4008  Exception Event was stopped successfully.

DGOK4009  To start exception processing, you must first log on to a DB2 system.

DGOK4010  This Thread does not exist anymore.

DGOK4011  The connection to this subsystem is missing.

Explanation: You must be logged on to the subsystem to receive the event details information.

User response: Log on to the subsystem.
DGOK4012  No Threshold set selected.
Explanation: Periodic Exception Processing requires a Threshold set.
User response: Select a Threshold set with the Threshold set combo box. Create one, if no one exists.

DGOK4013  Exception Event(s) occurred.

DGOK4014  Periodic Exception(s) start(s).

DGOK4015  Periodic Exception(s) stop(s).

DGOK4016  Periodic Exception(s) refreshed.

DGOK4017  Periodic Exceptions refreshed and stopped.

DGOK4018  The selected Threshold set is empty.
Explanation: For starting Periodic Exception Processing, a Threshold set with at least one active Threshold is necessary.
User response: Add an active Threshold to the Threshold set.

DGOK4019  To start periodic exception processing on db2_system, select a threshold set that contains at least one active threshold that is supported by Performance Expert Server.

DGOK4020  To view more information on this exception, you must be logged on to the DB2 system that produced the exception.

DGOK4021  No exception field selected
Explanation: No exception field selected.
User response: Select an exception field.

DGOK4022  Interval is missing.

DGOK4023  [0] is missing.

DGOK4024  E-mail address is not valid.

DGOK4025  Contact with name [0] already exists. Overwrite it?

DGOK4026  Do you want to delete the selected contact?

DGOK4027  No contact selected.

DGOK4028  The value in the [0] field is not valid.
Explanation: The value in the [0] field is not valid, whereby [0] is the label of a numeric entry field.
User response: Specify a number from [1] through [2], whereby [1] is the minimal and [2] is the maximum value.

DGOK4029  The name for the sound file is missing or is not correct.
Explanation: The name for the sound file is missing or is not correct.
User response: Specify an existing sound file.

DGOK4030  Your e-mail specifications are not correct or are not complete.
Explanation: Your e-mail specifications are not correct or are not complete.
User response: To send exception notifications by e-mail, do the following:
1. Specify your e-mail address.
2. Select the destination e-mail address.
3. If the e-mail (SMTP) server requires authentication, select the appropriate check box and specify your server user ID and your password.

DGOK4032  For periodic exception processing on db2_system, the thresholds for the following exception fields are disregarded: exception_field_list
Explanation: The thresholds for the listed exception fields are defined in the selected threshold set but are not active or are not supported by the PE Server subtask.

DGOK4033  Exception event processing cannot be started for '0'.
Explanation: Exception event processing is disabled on the Data Server.
User response: Enable exception event processing on the Exception page of the Data Server Properties window for '0'.

Chapter 9. Messages  4867
DGOK4034 Exception event processing cannot be started for '{0}'.
Explanation: Event monitoring is disabled for all monitored databases.
User response: Enable event monitoring for at least one monitored database by configuring the Data Server.

DGOK4035 Periodic exception processing cannot be started for '{0}'.
Explanation: Periodic exception processing is disabled on the Data Server.
User response: Enable periodic exception processing on the Exception page of the Data Server Properties window for '{0}'.

DGOK4036 The threshold set contains thresholds for operating system counters. These thresholds become active only if the CIM server was enabled during the configuration of Performance Expert Server and the collection of history data is enabled (on the History page of the Performance Expert Server Properties window).

DGOK4037 Exception event processing has been deactivated for "{0}" because it was disabled on Performance Expert Server.

DGOK4038 Periodic exception processing has been deactivated for "{0}" because it was disabled on Performance Expert Server.

DGOK4039 Detailed information for this exception event is no longer available.
Explanation: Detailed information about exception events is stored in a log on the Data Server. If the number of exception events in this log exceeds [0], the oldest exception event entries are removed from the log. The exception event for which you requested detailed information is among those that are already removed from the log.

DGOK4103 The diagnostic information is recorded. Do you want to stop the recording and send the diagnostic information?

DGOK4104 The diagnostic information is recorded. Do you want to stop the recording and save the diagnostic information?

DGOK4105 The diagnostic information was recorded. Do you want to send it?

DGOK4106 The diagnostic information was recorded. Do you want to save it?

DGOK4107 The diagnostic information was not sent. Do you want to delete it?

DGOK4108 The diagnostic information was not saved. Do you want to delete it?

DGOK4109 The selected file already exists. Do you want to overwrite it?

DGOK4110 The diagnostic information cannot be sent. Do you want to save it?

DGOK4111 The diagnostic information cannot be sent. Do you want to save it again?

DGOK4112 The recording of the diagnostic information cannot be started.

DGOK4113 The recording of the diagnostic information cannot be stopped.

DGOK5026 Incorrect timestamp value {0}.
Explanation: Entry does not correspond to format mask [1].
User response: Correct the value.

DGOK5027 Partition field entry {0} not valid.
Explanation: The entry for partition filtering is not a valid regular expression.
User response: Enter an asterisk or a correct regular expression, for example: [1]

DGOP - Performance Warehouse messages

**DGOP1** Insufficient information to establish a database connection to Performance Warehouse.

**Explanation:** One or more of the following data is missing:
- Database user ID
- Password
- Database alias
- JDBC driver name

**User response:** Before you can connect to Performance Warehouse, you must specify a database user ID, password, database alias, and JDBC driver.

**DGOP2** Delete the selected object from Performance Warehouse?

**DGOP3** Exit the application?

**DGOP7** There is currently no help available.

**DGOP8** Specify a database alias for the DB2PM database.

**DGOP9** The database schema DB2PM not found.

**Explanation:** A database was connected that does not contain the database schema DB2PM.

**User response:** Check the database alias configuration on Performance Expert Client and the Data Server.

**DGOP10** The Performance Warehouse tables are not found.

**Explanation:** Possible reasons are:
1. Database schema DB2PM does not contain the Performance Warehouse tables.
2. A SCHEMALIST parameter is used to limit data retrieval.
3. The specified database alias refers to a performance database of Performance Expert Version 3.1 or later.

**User response:**
2. Check the file db2cli.ini for any SCHEMALIST parameter specifications to limit the list of schemas that are used for data retrieval.

**DGOP11** Performance Expert Client and Performance Expert Server are not compatible.

**Explanation:** The following list of properties helps to determine the Client and Server versions: [0]

**User response:** Install the compatible versions of Performance Expert Client and Performance Expert Server.

**DGOP12** Performance Warehouse only supports partitioned database systems with one partition.

**Explanation:** Performance Warehouse tried to connect to a partitioned database system with multiple database partitions.

**DGOP13** The partition number of the single-partition database must be 0.

**Explanation:** Performance Warehouse only supports partitioned database systems with one partition. This partition must have partition number 0.

**DGOP14** Performance Warehouse cannot check whether it is compatible with Performance Expert Server.

**Explanation:** To check whether Performance Warehouse is compatible with the Data Server installed, specific version information is required. N/P is shown for the information that is missing: [0]

**User response:** Check whether the Data Server is installed correctly. Install the compatible versions of Performance Expert Client and the Data Server.

**DGOP15** Performance Warehouse could not be connected automatically.

**Explanation:** No database alias is defined for Performance Warehouse.

**User response:** Use the Performance Warehouse page of the Modify Properties window to define a database alias for Performance Warehouse.

**DGOP16** The specified database alias belongs to a DB2PM database on [0].

**Explanation:** None.

**User response:** Delete the created node. Then open the New Performance Warehouse window and create a Performance Warehouse on [0] using the specified database alias.
Performance Warehouse is not available.

Explanation: Possible reasons are:
- The PE Server subtask installation is still in progress or incomplete.
- The database alias that you specified in the New Performance Warehouse window does not reference a Performance Warehouse.
- The specified database alias refers to a performance database of a Performance Expert version 3.1 or later.

User response:
1. Check the status of the PE Server subtask installation.
2. If the installation completed successfully, use the Client Configuration Assistant of DB2 to check the database alias that you specified.

Are you sure you want to remove this Performance Warehouse from the tree view?

The process has been scheduled and activated. [0] Click Process Executions in the folders pane of the Performance Warehouse window to view the progress of the process.

The Performance Warehouse Client cannot be initialized because of temporary inconsistencies of [0] templates.

Explanation: Message parameter [0] is either process, query, or rule-of-thumb.

This error occurs in rare cases when the set of templates is edited by another user while the Performance Warehouse Client initializes. To avoid inconsistencies, the connection is terminated.

User response: Retry to connect.

Specify a name for the process.

Specify a unique name for the process group.

The process group cannot be deleted because one or more of its processes have the status 'active'.

User response: Check the status of all processes and change it to 'in definition', if necessary. Then delete the process group.

Specify a name for the process group.

Process name already exists.

You attempted to create a process with a name that already exists in this group.

User response: Choose a different process name.

Note that the currently selected view might not show all processes in this group.

The process cannot be deleted because it has the status 'active'.

User response: Change the process status to 'in definition', then delete the process.

The process cannot be renamed because it has the status 'active'.

User response: Change the process status to 'in definition', then rename the process.

You cannot add more steps to the selected process.

You tried to add a step to this process but this step does not fit the step sequence of the process. For example, on the Trace on z/OS page, a process can consist of only one step of type CRD. Additional steps are not allowed.

User response: See Monitoring Performance from the Workstation for more information about processes and allowed steps and step sequences.

You cannot add any steps to the selected process because the process has the status 'active'.

User response: Change the process status to 'in definition'. Then add the step.

The process cannot be activated because it does not contain any steps.

User response: Add one or more steps to the process. Then activate the process.
This process is a template and cannot be edited.

**Explanation:** You can use templates only as a basis for your own processes.

**User response:** Copy this process to another process group, then edit it.

The process cannot be copied because a private process group does not exist yet.

**Explanation:** A process cannot be copied to a public process group. It can only be copied to a private process group.

**User response:** Create a private process group and then copy the process to it.

The specified process schedule cannot be stored because the schedule string exceeds the maximum length of [0] characters.

**User response:** Reduce the length of the schedule string by reducing the complexity of the schedule. For example, specify fewer intervals or fewer individual values.

The status of the process cannot be changed because the process is running.

**User response:** Wait until the process has finished or cancel the process. Then try to change the process status.

Specify an input data set for the step.

This step belongs to a process that has the status 'active' and therefore cannot be edited.

**User response:** Change the process status to 'in definition'.

The step cannot be copied because an appropriate private process does not exist yet.

**Explanation:** A step can only be copied to a private process if it fits the step sequence of that process. The position of the copied step has to be the same in the source and target step sequences. You can only copy steps to the end of the target step sequence.

The data set name is not valid.

**Explanation:** A data set name must comply with the following syntax: dsname, dsname(member) or dsname(generation). When you specify a member, the member name must have one through eight alphanumeric characters, with the first character being a letter. When you specify a generation, the generation must be a one-, two-, or three-digit number that is less than, or equal to, 255 and is preceded by a dash (-), for example -111, -23, or -3. If it is 0, you can omit the dash. Each digit can be a number from 0 through 9.

**User response:** Specify a valid data set name.

Alias not found.

**Explanation:** The database alias is wrong or does not exist.

A new alias definition might not be recognized by the client.

You have multiple DB2 instances installed on your workstation, and the DB2 catalog entries are defined in a DB2 instance other than the currently used instance.

**User response:** Correct the database alias for the currently used DB2 system, then try again.

Close and restart the workstation client, then try again.

If you have multiple DB2 instances installed on your workstation, you can force the DB2 instance to be used by specifying the command "set DB2INSTANCE=<your_instance>" in file db2pe.bat, respectively .db2pe under UNIX.

The process has been scheduled. To run the process: Change the process status from "in definition" to "active" in the Process Properties window.

**Explanation:** The Data Server only checks the schedule of activated processes.

</tbody>
</table>
If a check box is selected under Filter options, you must select at least one top field.

Specify a name for the group or list.

The name you specified for the group or list is not correct.

Explanation: A group or list name can consist of up to eight characters without embedded spaces and must begin with a character from A to Z. The second to eight characters can be one of the following: A-Z, _, #, $, 0-9, @

User response: Specify a correct group or list name.

Specify a group or list name that is unique within the report.

Add at least one subcommand to the GROUP or LIST command.

Specify at least one value for the selected group or list.

The values shown in the Group values or List values field exceed 50 characters.

User response: Specify shorter values for the group or list or delete one or more values.

Rule-of-thumb group name is missing.

Explanation: Every rule-of-thumb group needs a name.

User response: Specify a rule-of-thumb group name.

The rule-of-thumb group name is not unique.

Explanation: A rule-of-thumb group with this name already exists.

User response: Specify a unique rule-of-thumb group name.

Rule of thumb cluster name is missing.

Explanation: Every rule of thumb cluster needs a name.

User response: Specify a rule of thumb cluster name.

The rule of thumb cluster name is not unique.

Explanation: A rule of thumb cluster with this name exists already in the specified rule-of-thumb group.

User response: Specify a unique rule of thumb cluster name.

This rule of thumb cluster is a template and cannot be edited.

Explanation: You can use templates as a basis for your own rule-of-thumb clusters.

User response: Copy this rule of thumb cluster to another rule of thumb group and edit it.

The rule of thumb cluster cannot be copied because a private rule of thumb group does not exist yet.

Explanation: A rule of thumb cluster cannot be copied to a public rule of thumb group. It can only be copied to a private rule of thumb group.

User response: Create a private rule of thumb group and then copy the rule of thumb cluster to it.

The additional column expression of the rule of thumb cluster is too long.

Explanation: An additional column expression of the rule of thumb cluster can contain a maximum of 400 characters.

User response: Specify a shorter additional column expression of the rule of thumb cluster.

The filter expression of the rule of thumb cluster is too long.

Explanation: A filter expression of the rule of thumb cluster can contain a maximum of 3 000 characters.

User response: Specify a shorter filter expression of the rule of thumb cluster.

The additional column expression of the rule of thumb cluster is syntactically wrong.

Explanation: An additional column expression of the rule of thumb cluster must be a comma-separated list of table columns.

User response: Specify a correct comma-separated list of table columns.
DGOP310  The additional column expression of the rule-of-thumb cluster is syntactically wrong.
Explanation: Each column of the additional column expression must belong to a table of a value expression of a contained rule of thumb.
User response: Specify a correct comma-separated list of table columns.

DGOP311  The additional column expression of the rule of thumb contains redundant columns.
Explanation: All columns of the additional column expression must not occur in a value expression of a contained rule of thumb.
User response: Specify a correct comma-separated list of table columns.

DGOP3204  The rule-of-thumb cannot be copied because an appropriate private rule-of-thumb cluster does not exist yet.
Explanation: A rule-of-thumb cannot be copied to a public rule-of-thumb cluster. It can only be copied to a rule-of-thumb cluster that has the same type as the rule-of-thumb to be copied. The rule-of-thumb that you want to copy must be the first rule-of-thumb in the target private rule-of-thumb cluster or be of the same type as the rule-of-thumbs that already exist in that cluster.
User response: Create a private rule-of-thumb cluster and then copy the rule-of-thumb to it.

DGOP3205  The value expression of the rule of thumb is missing.
Explanation: Every rule of thumb needs a value expression.
User response: Specify a value expression for the rule of thumb.

DGOP3206  The warning threshold of the rule of thumb is missing.
Explanation: Every rule of thumb needs a warning threshold.
User response: Specify a warning threshold for the rule of thumb.

DGOP3207  The problem threshold of the rule of thumb is missing.
Explanation: Every rule of thumb needs a problem threshold.
User response: Specify a problem threshold for the rule of thumb.

DGOP3209  The value expression of the rule of thumb is too long.
Explanation: A rule of thumb value expression can contain a maximum of 800 characters.
User response: Specify a shorter rule of thumb value expression.

DGOP3210  The warning threshold of the rule of thumb is too long.
Explanation: A rule of thumb warning threshold can contain a maximum of 18 characters.
User response: Specify a shorter rule of thumb warning threshold.

DGOP3211  The problem threshold of the rule of thumb is too long.
Explanation: A rule of thumb problem threshold can contain a maximum of 18 characters.
User response: Specify a shorter rule of thumb problem threshold.

DGOP3212  The additional column expression of the rule of thumb is too long.
Explanation: An additional column expression of the rule of thumb can contain a maximum of 400 characters.
User response: Specify a shorter additional column expression of the rule of thumb.

DGOP3213  The warning recommendation of the rule of thumb is too long.
Explanation: A rule of thumb warning recommendation can contain a maximum of 128 characters.
User response: Specify a shorter rule of thumb warning recommendation.

DGOP3214  The problem recommendation of the rule of thumb is too long.
Explanation: A rule of thumb problem recommendation can contain a maximum of 128 characters.
User response: Specify a shorter rule of thumb problem recommendation.

DGOP4103  Row details not available for the current view.

Explanation:  There are no attention values for the selected ROT that qualify for current view.

User response:  Extend the view to Warning or All, respectively.

DGOP4104  No entries qualify for the selected view.

DGOP4105  Column details are only available for columns referring to a timestamp or to rules of thumb.

Explanation:  The selected column has no column details. For example: the column refers to an additional matrix column that is specified in the cluster definition.

User response:  Select the timestamp column to get row details or a column with the name of a rule of thumb to get column details.

DGOP4200  There is currently no help available.

DGOP5003  Delete the selected output data set from Performance Warehouse?

DGOP5004  Type of selected log entry does not match with rule of thumb or query.

DGOP6001  The query group name is missing.

Explanation:  A query group name is not specified, or a name that contains only white-space characters is specified.

User response:  Specify a correct query group name.

DGOP6002  The query group name is not unique.

Explanation:  A query group with this name already exists.

User response:  Specify a unique query group name.

DGOP6101  The query name is missing.

Explanation:  A query name is not specified, or a name that contains only white-space characters is specified.

User response:  Specify a correct query name.

DGOP6102  The query name is not unique.

Explanation:  A query with this name already exists.

User response:  Specify a unique query name.

DGOP6105  This query is a template and cannot be edited.

Explanation:  You can use templates as a basis for your own queries.

User response:  Copy this query to another query group and edit it.

DGOP6106  The query cannot be copied because a private query group does not exist yet.

Explanation:  A query cannot be copied to a public query group. It can only be copied to a private query group.

User response:  Create a private query group and then copy the query to it.

DGOP6107  The query expression (SELECT statement) is missing.

Explanation:  A query expression (SELECT statement) must be specified.

User response:  Specify a query expression (SELECT statement).

DGOP6109  The query expression must start with SELECT.

Explanation:  A query expression must start with SELECT.

User response:  Specify a SELECT statement as query expression.

DGOP6502  The file cannot be opened.

Explanation:  Reasons why the file cannot be opened include:

• The file exists, but in another directory.

• The file or directory is write-protected.

• The file does not exist and cannot be created.

User response:  Select another file name and try again.

DGOP6503  The file cannot be opened.

Explanation:  An I/O exception occurred while opening the file.

User response:  Select another file name and try again.

DGOP6504  Cannot create temporary file in default temporary-file directory (0).

Explanation:  A temporary file cannot be created in the default temporary-file directory.

User response:  Check the file write permissions in the directory security properties.
A file with the name [0] already exists. Do you want to overwrite it?

Explanation: The file chosen already exists and will be overwritten if confirmed.

User response: Click the Yes button if you want the file to be overwritten, otherwise click the No button.

Sorting using the column header only

FPEA - Accounting report set messages

FPEA0600S EXCEPTIONAL CONDITION OCCURRED WHILE PROCESSING ACCOUNTING. MAIN STORAGE ALLOCATION FAILED. RETURN CODE <V1>

Explanation: There was insufficient storage available to continue processing.

• <V1> is the GETMAIN return code.

User response: Increase the region size, and rerun the job.

FPEA0610S EXCEPTIONAL CONDITION OCCURRED WHILE PROCESSING ACCOUNTING. MAIN STORAGE RELEASE FAILED

Explanation: An attempt to release storage failed.

User response: Rerun the job. If the problem recurs, contact IBM support.

FPEA0700S VSAM <V1> FUNCTION FAILED ON DDNAME <V2>. VSAM RETURN CODE <V3>. REASON CODE <V4>

Explanation: A VSAM function failed.

• <V1> is the name of the VSAM function that failed.
• <V2> is the ddname for which the function failed.
• <V3> is the VSAM return code.
• <V4> is the VSAM reason code.

User response: See the VSAM documentation.

FPEA0750S PUT FUNCTION FAILED ON DDNAME <V1> WHILE EXTERNALIZING REDUCED RECORDS

Explanation: An error occurred when writing records to the accounting REDUCE work data set.

• <V1> is the ddname.

User response: Check for system messages detailing the problem.

THE ALLOCATED SPACE FOR ACWORK WAS SUFFICIENT. <V1> BYTES HAVE BEEN WRITTEN TO THE ACWORK DATA SET, CONSUMED BY <V2> RECORDS WITH AN AVERAGE LENGTH OF <V3> AND A MAXIMUM RECORD LENGTH OF <V4>.

Explanation: Input trace data is successfully reduced. The space for the temporary work data set with ddname ACWORK was sufficient to hold all reduced data records.

• <V1> is number of bytes written to ACWORK.
• <V2> is the number of reduced data records (of variable lengths) written to ACWORK.
• <V3> is the average record length of the reduced data records.
• <V4> is the maximum record length of the reduced data records.

User response: The values provided by this message might help to adjust the allocated ACWORK space for ACCOUNTING REDUCE processing. For more information, see the description of REDUCE CALCULATE in the Reporting User’s Guide.

FPEA0801S INSUFFICIENT SPACE WAS ALLOCATED FOR ACWORK. COMPLETELY REDUCED DATA WOULD REQUIRE AN ACWORK OF <V1> BYTES, CONSUMED BY <V2> RECORDS WITH AN AVERAGE LENGTH OF <V3> AND A MAXIMUM RECORD LENGTH OF <V4>.

Explanation: Failure to reduce all input trace data because of insufficient space for the temporary work data set with ddname ACWORK. No output data is written. However, the job continues to determine the necessary ACWORK space.

• <V1> is the number of bytes ACWORK would require to hold all reduced records (provided it is of sufficient size).
• <V2> is the number of reduced data records (of variable lengths) that would be written to ACWORK (provided it is of sufficient size).
• <V3> is the average record length of the reduced data records that has to be expected.
• <V4> is the maximum record length of the reduced data records that has to be expected.

User response: Allocate more space to ACWORK and rerun the job. Allocate about 20% more space than indicated by <V1>. You might specify sufficient primary and secondary work space as options in the SPACE parameter of the ACWORK DD statement. If necessary, specify a multi-volume data set for ACWORK. For more information refer to the Reporting User’s Guide.

FPEA0803I THE INPUT TRACE INCLUDES IFCID 233, 380, OR 381 WHICH IS USED TO IDENTIFY A STORED PROCEDURE OR USER-DEFINED FUNCTION MAIN ROUTINE. A REPORT BY ACTNAME TAKES ACCOUNT OF NESTED CALLS BY ACCUMULATING DATA FOR EACH MAIN ROUTINE INCLUDING ITS SUBROUTINES.

Explanation: IFCID 233, 380, or 381 was found in the input trace and is used for the calculation that is requested by the command ORDER(ACTNAME).

Note:
• IFCID 380 or 381 is preferred, if available, because it uses less system resources when collecting trace data.
• Stored Procedures (SP) and User-Defined Functions (UDF) can be identified.
• Data of subprograms that were called by Stored Procedures or User-Defined Functions are reflected in the output of the main program.
• The report has a view on data by activity type and name, but not by each package. That is why the following package counters of subprograms are not taken into account:
  1. The occurrence of subprograms
  2. The number of package allocations (switches)
  3. The number of rollup threads

This approach also affects some package averages.

FPEA0804I IFCID 233, 380, OR 381 WAS NOT FOUND IN THE INPUT TRACE. THE CALCULATION BY ACTIVITY NAME TREATS SUBPROGRAMS OF A STORED PROCEDURE OR USER-DEFINED FUNCTION AS SEPARATE ACTIVITIES.

Explanation: The calculation that is requested by the command ORDER(ACTNAME) is limited to the usage of IFCID 3 and IFCID 239. These are the standard Accounting IFCIDs for reporting a thread and a package. The main program of a Stored Procedure or User-Defined Function treats their subprograms as separate activities.
FPEA1248I  ACCOUNTING <V1> NUMBER <V2>. THE REQUESTED TOP LIST FOR THIS DB2 SUBSYSTEM WAS NOT PRODUCED BECAUSE THE <V1> DOES NOT CONTAIN ANY NONZERO VALUES IN THE SPECIFIED FIELDS

Explanation: The input data set contained all null or zero values for the top fields for the location specified.

• <V1> is REPORT or TRACE.
• <V2> identifies the report or trace to which the message refers, by the order of the corresponding REPORT or TRACE subcommand.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: None.

FPEA2252I  ACCOUNTING FIELD <V1> WAS NOT CALCULATED. A BEGIN TIME WAS ZERO OR THE RESULT WOULD HAVE BEEN NEGATIVE

Explanation: A DB2 application time cannot be calculated because the begin time was either zero or greater than the end time.

• <V1> is the field name.

This message may also occur for fields that are not part of the IBM-provided default report layouts, that is, for fields that are provided via the User-Tailored Reporting feature (UTR).

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: None.

FPEA2253I  ACCOUNTING FIELD <V1> WAS NOT CALCULATED A TOTAL OF <V2> TIMES. A BEGIN TIME WAS ZERO OR THE RESULT WOULD HAVE BEEN NEGATIVE

Explanation: A DB2 application time cannot be calculated because the begin time was either zero or greater than the end time.

• <V1> is the field name.
• <V2> is the number of times this event occurred.

User response: None.

FPEA4500S  INITIALIZATION FAILED FOR ACCOUNTING LIST. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was insufficient storage available to continue processing.

User response: Increase the region size, and rerun the job.

FPEA4530I  NUMBER OF ORPHANED DBATs FOR LOCATION <V1> IS <V2>

Explanation: The message is printed either at the end of the job for every location if there are any orphaned DBATs, or when the maximum number of orphaned DBATs for all LUWIDs has been exceeded.

• <V1> is the location.
• <V2> is the number of orphaned DBATs.

User response: If the message is printed at end-of-file, no response is required. If the maximum number has been exceeded, do one of the following:

• Provide the missing data.
• Exclude DBATs performed on behalf of non-DB2 requesters.
• Check the job summary log whether the Accounting traces started and ended at approximately the same time. If they did not, run the job again using the beginning and end times of the shortest Accounting trace.

FPEA4531I  GENERAL ACCOUNTING DATA FOR LUWID INSTANCE <V1> IS MISSING. IFCID 3 IS MISSING

Explanation: The package overflow data from an IFCID 239 record cannot be matched with the corresponding IFCID 3. Multiple occurrences of this message indicate incomplete input.

• <V1> is the LUWID instance number.

User response: Check the input and filters.

FPEA4532I  ACCOUNTING DATA FOR A NUMBER OF PACKAGES FOR LUWID <V1> IS MISSING. ONE OR MORE IFCID 239 IS MISSING

Explanation: Some package overflow data on IFCID 239 record(s) was missing. Multiple occurrences of this message indicate incomplete input.

• <V1> is the LUWID number.

User response: Check the input and filters.

FPEA4533S  AN ERROR OCCURRED WHILE ACCESSING A VIRTUAL STORAGE DATA STORE. THE REFERENCE IS <V1>, THE TEXT RETURNED FROM THE DATA STORE IS <V2>
Explanation: An unexpected event occurs while manipulating records in virtual storage. The most likely cause is that insufficient virtual storage is available. Either the program has requested excessive virtual storage, or the region requested was too small or was not satisfied because of the installation limit.

- \(<V1>\) is the reference of the virtual storage data store.
- \(<V2>\) is the text returned from the data store.

User response: Excessive use of virtual storage may be caused by incomplete data being passed to the Accounting subcomponent. One such case arises when related IFCID 3 and 239 records cannot be matched, another when records belonging to the same distributed logical unit of work cannot be matched in a merged trace or report. Ensure that both IFCID 3 and 239 are being included and, if MERGE has been specified, that data for all locations is present. If the data is complete and the problem cannot be resolved by specifying a larger region size, contact IBM support.

FPEA4534I  COORDINATING PARALLEL TASK FOR LUW INSTANCE \(<V1>\) IS NOT REPORTED AS NOT ALL INFORMATION FOR ASSISTING PARALLEL TASKS FROM MEMBER \(<V2>\) IS AVAILABLE

Explanation: The number of assisting parallel tasks belonging to the coordinating parallel task does not match the received number of assisting parallel tasks. A thread is only reported if the coordinating parallel task and all corresponding assisting parallel tasks are available in the job input.

- \(<V1>\) is the LUW instance of the incomplete task.
- \(<V2>\) is the member name of the missing assisting task.

User response: If you wish that the thread is reported, ensure that all IFCID 3 records are available for the coordinating parallel tasks and the assisting parallel tasks.

FPEA4535I  DATA SECTION \(<V1>\), SECTION NUMBER \(<V2>\), \(<V3>\) HAS LENGTH \(<V4>\) INSTEAD OF EXPECTED LENGTH \(<V5>\). FIELD VALUES MIGHT BE INVALID.

Explanation: An incompatibility exists between DB2 and OMEGAMON XE for DB2 PE IFC records.

- \(<V1>\) is the data section name
- \(<V2>\) is the data section number within the IFC
- \(<V3>\) is the IFC number
- \(<V4>\) is the found length of the data section
- \(<V5>\) is the expected length of the data section as defined in the current DB2 macro.

User response: Upgrade DB2 and OMEGAMON XE for DB2 PE to the latest PTFs. Collect new trace data after upgrading and rerun OMEGAMON XE for DB2 PE.

FPEA4536I  INCONSISTENT DATA FOUND FOR LUW: NETWORK ID \(<V1>\), LOGICAL UNIT \(<V2>\), INSTANCE \(<V3>\) WITH ACCOUNTING TIMESTAMP \(<V4>\). IFCID 239 INCLUDES QXPK, QBUF, AND QTXA SECTIONS ALTHOUGH THE QWACPPAR Flag OF IFCID 3 IS ON. THE FLAG DENOTES ROLLUP, BUT ROLLUP DATA SHOULD NOT CONTAIN THESE SECTIONS.

Explanation: The job input includes inconsistent data. General package data is normally accompanied by the additional package level accounting sections QXPK, QBUF, and QTXA. In case of rollup, only a single package section is expected without the additional sections, and the QWACPPAR flag is being set on. At least one record has been found for which these conditions do not match. Use the following parameters to identify the missing task in an Accounting trace:

- \(<V1>\) is the LUW network ID of the missing task.
- \(<V2>\) is the LUW logical unit of the missing task.
- \(<V3>\) is the LUW instance of the missing task.
- \(<V4>\) is the Accounting timestamp of the missing task.

User response: Save the job input and output and contact IBM support.

FPEA4537I  INCONSISTENT DATA FOUND FOR LUW: NETWORK ID \(<V1>\), LOGICAL UNIT \(<V2>\), INSTANCE \(<V3>\) WITH ACCOUNTING TIMESTAMP \(<V4>\). IFCID 239 DOES NOT INCLUDE ALL QXPK, QBUF, AND QTXA SECTIONS ALTHOUGH QWACPPAR Flag OF IFCID 3 IS OFF. THE FLAG DENOTES NO ACTIVE ROLLUP, THEREFORE SECTIONS ARE MISSING.

Explanation: The job input includes inconsistent data. General package data is normally accompanied by the additional package level accounting sections QXPK, QBUF, and QTXA. In case of rollup, only a single package section is expected without the additional sections, and the QWACPPAR flag is being set on. At least one record has been found for which these conditions do not match. Use the following parameters to identify the missing task in an Accounting trace:

- \(<V1>\) is the LUW network ID of the missing task.
- \(<V2>\) is the LUW logical unit of the missing task.
- \(<V3>\) is the LUW instance of the missing task.
- \(<V4>\) is the Accounting timestamp of the missing task.

User response: Save the job input and output and contact IBM support.
A RECORD HAS BEEN DROPPED FROM FURTHER PROCESSING BECAUSE IT CANNOT BE ASSIGNED TO A KNOWN IFCID 3 TYPE.
NETWORK ID <V1>, LOGICAL UNIT <V2>, INSTANCE <V3> WITH ACCOUNTING TIMESTAMP <V4>.

Explanation: An IFCID 3 trace record does not satisfy one of several well defined conditions of DB2. The following characters: <V1>

User response: None.

FPEB - User-Tailored Reporting messages

FPEB000 This command is not recognized
Explanation: The command entered could not be recognized.
User response: Enter a valid command.

FPEB003 <V1> command not valid in this panel
Explanation: The specified command is not valid in this panel.
• <V1> is the command that is not valid.
User response: Enter a valid command for this panel.

FPEB010 An error occurred during an ISPF <V1> service in module <V2>
Explanation: An ISPF error has occurred.
• <V1> is the ISPF service name.
• <V2> is the internal module.
User response: Exit, then restart the application. If the problem recurs, contact IBM support.

FPEB020 Select a number between 1 and 4
Explanation: None.
User response: Enter 1, 2, 3, or 4.

FPEB021 Valid DPMPARMS data set name must be entered
Explanation: Either the specified DPMPARMS data set does not exist, or the specified name is not valid.
User response: Enter the name of a valid DPMPARMS data set.

FPEB022 No layouts exist to modify
Explanation: There were no layouts available to be modified.
User response: This message only occurs if you have not installed the user-tailored reporting feature correctly.

FPEB023 Select a layout using one of the following characters: <V1>

User response: Select the layout you require from the list by entering / or a country-designated character.

FPEB024 Select one or more items to be modified using one of the following characters: <V1>

Explanation: Either no selection was made from the list, more than one item was selected from the list, or a character other than / or a country-designated character was used to select a list item.
• <V1> is / and the country-designated character.
User response: Select the item or items you require from the list by entering / or a country-designated character.

FPEB025 Duplicate order column numbers entered, so no renumbering has occurred
Explanation: The same number was entered in more than one order column.
User response: Change the numbers in the order column.

FPEB026 Block configuration selection must be 1 (yes) or 2 (no)
Explanation: You have selected an block configuration that is not valid.
User response: Enter 1 or 2.

FPEB027 FILLER length must be between 1 and 132
Explanation: The specified FILLER length is not valid.
User response: Enter a FILLER length between 1 and 132.
FPEB028  Internal storage error. Not enough elements of SELECTED_BLK have been allowed for

Explanation: Too many blocks have been selected for processing.
User response: Select fewer blocks.

FPEB029  Internal storage error. Not enough elements of SELECTED_CAT have been allowed for

Explanation: Too many categories have been selected for processing.
User response: Select fewer categories.

FPEB030  The cursor must be positioned on a selected list entry when using the FILLER command

Explanation: The FILLER was added after the row containing the cursor. This row must be a selected row.
User response: Position the cursor on a selected row before issuing the FILLER command.

FPEB031  No blocks can be modified

Explanation: An internal error occurred.
User response: Select a different block.

FPEB032  No fields for the nominated block and category can be modified

Explanation: You cannot modify the fields of the nominated block and category.
User response: Select a different block or category.

FPEB033  No table rows for the nominated block and category can be modified

Explanation: You cannot modify the table rows of the nominated block and category.
User response: Select a different block or category.

FPEB034  No table columns for the nominated block and category can be modified

Explanation: You cannot modify the table columns of the nominated block and category.
User response: Select a different block or category.

FPEB035  No field qualifiers for the nominated block can be modified

Explanation: You cannot modify the field qualifiers of the nominated block and category.
User response: Select a different block.

FPEB036  Changes have been accepted. Press Enter again to continue

Explanation: If you have made any changes, the panel is redisplayed showing the changes.
User response: Press Enter again to continue.

FPEB037  Changes have been accepted. EXIT again to continue

Explanation: If you have made any changes, the panel is redisplayed showing the changes.
User response: Press F3 (Exit) again to continue.

FPEB038  Order must be a number from 1 to 99998. Blank or 99999 to exclude item

Explanation: None.
User response: Enter a number from 1 to 99998 to select an item. Blank out or enter 99999 to exclude an item.

FPEB039  Changes for items with a nonnumeric order number have been ignored

Explanation: You have entered a nonnumeric value in the ORDER column of the IRF/UTR panel. The value has been ignored.
User response: Change the value in the ORDER column or press the same key to continue processing.

FPEB040  Layout name must be entered

Explanation: None.
User response: Enter a layout name (1 to 6 characters).

FPEB041  Layout description must be entered

Explanation: None.
User response: Enter a layout description (1 to 32 characters).

FPEB042  Specify if each new record is to start on a new page

Explanation: None.
User response: Enter 1 if each record is to start on a new page, or 2 if not.
FPEB043 • FPEB087

FPEB043  The layout has been saved
Explanation: The layout has been saved into the DPMPARMS data set.
User response: None.

FPEB044  The layout has not been saved
Explanation: You have canceled layout changes.
User response: None.

FPEB049  Error stowing the DPMPARMS layout member
Explanation: An error occurred during stowing the DPMPARMS directory entry.
User response: Add more directory blocks to the DPMPARMS data set, and try again.

FPEB070  Tailored layout has been migrated to the current version
Explanation: You have selected a user-tailored layout contained in the DPMPARMS data set that belongs to an earlier release. It was automatically migrated to the installed release.
User response: None.

FPEB071  While migrating a tailored layout, an ISPF &lt;V1&gt; service call failed with a return code of &lt;V2&gt;
Explanation: An ISPF error has occurred.
• &lt;V1&gt; is the ISPF service name.
• &lt;V2&gt; is the return code from this service.
User response: Exit, then restart the application. If the problem recurs, contact IBM support.

FPEB080  Browse data set dynamic allocation has reason code x'&lt;V1&gt;'
Explanation: An attempt to dynamically allocate a temporary browse data set failed.
• &lt;V1&gt; is the reason code in hexadecimal notation returned by the dynamic allocation service.
User response: See MVS Messages and Codes (or the corresponding manual of the MVS version you have installed) for assistance. If the problem recurs, see your system programmer or contact IBM support.

FPEB081  Browse data set could not be opened
Explanation: An attempt to open the temporary browse data set has failed.
User response: Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

FPEB082  DPMPARMS data set received LMINIT error - &lt;V1&gt;
Explanation: A problem occurred during allocation of the DPMPARMS data set.
• &lt;V1&gt; is the ISPF long message returned by the LMINIT service.
User response: Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

FPEB083  DPMPARMS data set received LMOPEN error - &lt;V1&gt;
Explanation: A problem occurred while opening the DPMPARMS data set for write access.
• &lt;V1&gt; is the ISPF long message returned by the LMOPEN service.
User response: Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

FPEB084  Error reading the DPMPARMS layout member
Explanation: An attempt to read the DPMPARMS layout member has failed.
User response: Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

FPEB085  Error writing the DPMPARMS layout member
Explanation: An attempt to write the layout member to the DPMPARMS data set has failed.
User response: Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

FPEB086  DPMPARMS data set dynamic allocation has reason code x'&lt;V1&gt;'
Explanation: An attempt to dynamically allocate the DPMPARMS data set failed.
• &lt;V1&gt; is the reason code in hexadecimal notation returned by the dynamic allocation service.
User response: See MVS Messages and Codes (or the corresponding manual of the MVS version you have installed) for assistance. If the problem recurs, see your system programmer or contact IBM support.

FPEB087  Storage for the user layout could not be allocated
Explanation: An attempt to allocate virtual storage for the user layout to be stored has failed.
**User response:** Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

**FPEB088**  
Storage for the modified layout could not be allocated

**Explanation:** An attempt to allocate virtual storage for the modified layout to be stored has failed.

**User response:** Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

**FPEB089**  
DPMPARMS data set could not be opened

**Explanation:** An attempt to open the DPMPARMS data set has failed.

**User response:** Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

**FPEB091**  
ISPF browse failed

**Explanation:** An ISPF error has occurred attempting to BROWSE the generated layout.

**User response:** Exit, then restart the application. If the problem recurs, contact IBM support.

**FPEB092**  
UTR layout print service failed

**Explanation:** An attempt to write to the browse data set has failed.

**User response:** Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

**FPEB093**  
The requested layout could not be loaded

**Explanation:** An attempt to load a default layout into virtual storage has failed.

**User response:** Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

**FPEB094**  
Browse data set received LMINIT error - <V1>

**Explanation:** A problem occurred during allocation of the temporary browse data set.

**User response:** Check for system messages detailing the problem. Try again, and if the problem recurs, see your system programmer or contact IBM support.

**FPEC0002U**  
SYSPRINT COULD NOT BE OPENED

**Explanation:** An error occurred when opening SYSPRINT.

**User response:** See your system programmer for assistance.

**FPEC - Background Control messages**

**FPEC0002U**  
SYSPRINT COULD NOT BE OPENED

**Explanation:** An error occurred when opening SYSPRINT.

<td>FPEC0612W</td>
<td>CORRELATION TRANSLATION RECORD &lt;V1&gt;: LENGTH VALUE REQUIRED</td>
<td>&lt;V1&gt; indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred. The value for the fields Name Length or Number Length is missing. The length of the correlation name</td>
<td></td>
</tr>
</tbody>
</table>
or the correlation number must not exceed 8 bytes including the offset.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Specify a numeric value in the range of 1 - 8 to indicate the length of the correlation name or the correlation number including the offset value.

---

**FPEC0613W** CORRELATION TRANSLATION RECORD <V1>: OFFSET VALUE REQUIRED

**Explanation:** <V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

The value for the fields Name Offset or Number Offset is missing.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Specify a numeric value in the range of 1 - 11 to indicate the location where the correlation name or the correlation number begins.

---

**FPEC0614W** CORRELATION TRANSLATION RECORD <V1>: SUM OF OFFSET AND LENGTH CANNOT EXCEED 12 BYTES

**Explanation:** <V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

The length of the correlation name or the correlation number must not exceed 12 bytes including the offset value.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Correct the input record. This error would never occur if the correlation translation data set editor had been used.

---

**FPEC0615W** CORRELATION TRANSLATION RECORD <V1>: CONNECTION TYPE REQUIRED

**Explanation:** The specification of the connection type is missing.

<V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** In the Connection Identifier field, specify the 8-byte connection name that is used by DB2 to identify your environment, for example, CICS, TSO, or IMS.

---

**FPEC0616W** CORRELATION TRANSLATION RECORD <V1>: CONNECTION NAME ERROR

**Explanation:** <V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

The value for the field Name Of Correlation Data Set is missing.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Specify a numeric value in the range of 1 - 8 to indicate the location where the correlation name or the correlation number begins.

---

**FPEC0617W** CORRELATION TRANSLATION RECORD <V1>: LOCATION NUMBER ERROR

**Explanation:** <V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

The location number must not exceed 8 bytes including the offset value.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Specify a numeric value in the range of 1 - 8 to indicate the location where the correlation name or the correlation number begins.

---

**FPEC0618W** CORRELATION TRANSLATION RECORD <V1>: NUMBER OF RELATIONS ERROR

**Explanation:** <V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

The number of relations must not exceed 8 bytes including the offset value.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Specify a numeric value in the range of 1 - 8 to indicate the location where the correlation name or the correlation number begins.

---

**FPEC0619W** CORRELATION TRANSLATION RECORD <V1>: RELATION NUMBER ERROR

**Explanation:** <V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

The relation number must not exceed 8 bytes including the offset value.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Specify a numeric value in the range of 1 - 8 to indicate the location where the correlation name or the correlation number begins.

---

**FPEC0620W** CORRELATION TRANSLATION RECORD <V1>: REASON CODE ERROR

**Explanation:** <V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

The reason code must not exceed 8 bytes including the offset value.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Specify a numeric value in the range of 1 - 8 to indicate the location where the correlation name or the correlation number begins.

---

**FPEC0621W** CORRELATION TRANSLATION RECORD <V1>: TRANSLATION NAME ERROR

**Explanation:** <V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

The value for the field Translation Name is missing.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Specify a numeric value in the range of 1 - 8 to indicate the location where the correlation name or the correlation number begins.

---

**FPEC0622W** CORRELATION TRANSLATION RECORD <V1>: TRANSACTION NAME ERROR

**Explanation:** <V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

The value for the field Transaction Name is missing.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Specify a numeric value in the range of 1 - 8 to indicate the location where the correlation name or the correlation number begins.

---

**FPEC0623W** CORRELATION TRANSLATION RECORD <V1>: VERSION ERROR

**Explanation:** <V1> indicates the row number in the CORRDATA member of the DPMPARMS data set where the error occurred.

The value for the field Version is missing.

To ensure the correct specification of the parameters, you can use the Correlation Translation Data Set editor.

**User response:** Specify a numeric value in the range of 1 - 8 to indicate the location where the correlation name or the correlation number begins.

---

**FPEC0901S** SORT HAS ENCOUNTERED AN ERROR DURING EXECUTION THAT DID NOT ALLOW IT TO COMPLETE SUCCESSFULLY

**Explanation:** None.

**User response:** Check the SYOUT file for SORT error messages. See the appropriate Sort documentation for further information. Correct the input and rerun the job.

---

**FPEC0902I** SORT HAS ISSUED AT LEAST ONE INFORMATIONAL MESSAGE DURING PROCESSING. CHECK SYOUT FOR DETAILS

**Explanation:** Sort issued one or more informational or warning messages during processing because one or more single input records were incomplete or not valid. The affected records were discarded by the sort and processing continued. All other records were processed successfully.

**User response:** Look at the SYOUT to see any messages issued by Sort.

One or two incomplete records in several thousand should not make a noticeable difference to any report produced. If too many records were discarded, input data could be incomplete.

---

**FPEC0903I** INPUT DATA SET APPEARS TO BE TERSED

**Explanation:** The data read from the input data set shows characteristics of being compressed with TERSE.

**User response:** If you are sure that the data set specified in the INPUTDD statement is not compressed, ignore this message. Otherwise, decompress the data set and try again.

---

**FPEC0904W** STORAGE ALLOCATION FAILED. NO SMF DECOMPRESSION POSSIBLE.

**Explanation:** The batch reporting utility identified a DB2 SMF trace record that is compressed. The allocation of storage to prepare the decompression fails because of insufficient storage.

**User response:** DB2 allows compression of SMF trace records, which are decompressed by the batch reporting utility. In this case a corrupted SMF record caused a failure in the storage allocation. If the problem persists, contact your DB2 administrator.

---

**FPEC0905W** COMPRESSED RECORD HAS AN INVALID LENGTH. NO SMF DECOMPRESSION POSSIBLE.

**Explanation:** An SMF record has a maximum length of 32 KB. The batch reporter identified a record that
FPEC0906W  •  FPEC1008S

exceeds this length. The record is invalid.

User response: Contact your DB2 administrator.

FPEC0906W  •  FPEC1008S

FPEC0906W  •  FPEC1008S

User response: Correct the JCL and rerun the job.

FPEC1003S  •  OPEN FAILED FOR DDNAME <V1>, DDNAME IN USE

Explanation: A ddname is specified twice (or more) with conflicting purposes.
• <V1> is the ddname for which the error occurred.

User response: Correct the JCL and rerun the job.

FPEC1004E  •  REQUIRED DDNAME <V1> MISSING

Explanation: A required ddname was not in the JCL for the job.
• <V1> is the missing ddname.

User response: Correct the input and rerun the job.

FPEC1005S  •  OPEN FAILED FOR DDNAME <V1>

Explanation: An error occurred while opening a data set. The data set exists, but cannot be opened.
• <V1> is the ddname.

User response: Check for system messages detailing the problem.

FPEC1006E  •  UNABLE TO DYNAMICALLY ALLOCATE DDNAME <V1>, RETURN CODE <V2>, REASON CODE <V3>

Explanation: The listed ddname cannot be allocated dynamically.
• <V1> is the ddname to be allocated.
• <V2> is the return code from DYNALLOC.
• <V3> is the reason code returned from DYNALLOC.

User response: See MVS Messages and Codes (or the corresponding manual of the MVS version you have installed) for an explanation of the return code and reason code.

FPEC1007S  •  UNABLE TO READ FROM SYSIN DATA SET

Explanation: An error occurred while attempting to read from the SYSIN data set.

User response: Check for accompanying messages to correct the error.

FPEC1008S  •  UNABLE TO REALLOCATE SYSIN FOR DB2 LOAD

Explanation: An attempt was made to reallocate SYSIN DD. While the first step (free SYSIN) was successful, the second step (dynamically allocate SYSIN) returned an error.

User response: See your system programmer for assistance.
FPEC1009S UNABLE TO ALLOCATE SYSPRINT FOR DB2 LOAD
Explanation: An error occurred when allocating SYSPRINT.
User response: See your system programmer for assistance.

FPEC1400E ERROR LOADING LOCDATA MEMBER DETAILS
Explanation: An internal error occurred while loading the timezone details from the LOCDATA member of the DPMPARMS data set.
User response: Rerun the job. If the problem recurs, contact IBM support.

FPEC1401E ERROR LOADING MAINPACK MEMBER DETAILS
Explanation: An internal error occurred while loading the mainpack details from the MAINPACK member of the DPMPARMS data set.
User response: Rerun the job. If the problem recurs, contact IBM support.

FPEC1700S VSAM FUNCTION FAILED ON DDNAME <V2>, VSAM RETURN CODE <V3>, REASON CODE <V4>
Explanation: A VSAM function failed.
• <V1> is the name of the VSAM function that failed.
• <V2> is the ddname for which the function failed.
• <V3> is the VSAM return code.
• <V4> is the VSAM reason code.
User response: See the appropriate VSAM documentation.

FPEC1990I APPLICATION CANCELED DUE TO ERRORS LISTED ABOVE
Explanation: Errors occurred during processing.
User response: Examine other messages to determine the cause of the error.

FPEC1997I SYNTAX CHECK OF COMMAND STREAM COMPLETE. ASSOCIATED PROCESSING HAS NOT BEEN SCHEDULED AS NO EXEC COMMAND HAD BEEN SPECIFIED
Explanation: The syntax of the command stream was checked, but no additional processing was performed, because there was no EXEC command.
User response: None.

FPEC1998I SYNTAX CHECK OF COMMAND STREAM COMPLETE. ASSOCIATED PROCESSING HAS NOT BEEN SCHEDULED DUE TO ERRORS DETAILED ABOVE
Explanation: The syntax of the command stream was checked, but no additional processing was performed because of errors in system initialization.
User response: See the error messages listed.

FPEC1999I SYSTEM INITIALIZATION COMPLETE. RETURN CODE <V1>
Explanation: System initialization is completed.
• <V1> is the return code from the system initialization component.
User response: If the return code is zero, no action is required. If the return code is not zero, check other messages to determine the cause of the error.

FPEC2000I COMMAND INPUT FROM DDNAME <V1>
Explanation: The application is reading command input from the specified ddname.
• <V1> is the ddname.
User response: None.

FPEC2004E <V1> VALUE INVALID, VALID RANGE IS <V2> TO <V3>
Explanation: The input value is outside the permissible range.
• <V1> is the input value.
• <V2> is the lower limit of the valid range.
• <V3> is the upper limit of the valid range.
User response: Correct the input and rerun the job.

FPEC2005E <V1> IS AN UNRECOGNIZABLE REPORTING IDENTIFIER KEYWORD. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD
Explanation: An identifier keyword cannot be recognized. Input was ignored between the error and the next valid command, subcommand, or option.
• <V1> is the unrecognized keyword.
User response: Correct the input and rerun the job.

FPEC2006E INSTALLATION IS INCOMPLETE
Explanation: The licence FMID for OMEGAMON XE for DB2 PE or OMEGAMON XE for DB2 PM is not correctly installed.
User response: If errors occurred during installation,
correct them and try to use the product again.

If OMEGAMON XE for DB2 PE or OMEGAMON XE for DB2 PM installed without errors, and you followed the recommended installation and customization procedures, and the problem persists, contact IBM support.

FPEC2009E  **<V1> PARAMETER MUST BE ALPHANUMERIC**

**Explanation:** The parameter can only contain the characters in the range A to Z, and 0 to 9.
- `<V1>` is the keyword in error.

**User response:** Correct the input and rerun the job.

FPEC2010E  **<V1> HAS ALREADY BEEN SPECIFIED**

**Explanation:** A command was specified more than once in the same command stream.
- `<V1>` is the command that was specified more than once.

**User response:** Remove the occurrences of `<V1>` except for one.

FPEC2011E  **<V1> IS AN UNRECOGNIZABLE TOP PARAMETER KEYWORD. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD**

**Explanation:** A TOP parameter keyword cannot be recognized. Input was ignored between the error and the next valid command, subcommand, or option.
- `<V1>` is the unrecognized keyword.

**User response:** Correct the input and rerun the job.

FPEC2012E  **<V1> VALUE <V2> INVALID. VALID RANGE <V3> TO <V4>**

**Explanation:** The supplied value of the OMEGAMON XE for DB2 PE identifier is not valid.
- `<V1>` is the OMEGAMON XE for DB2 PE identifier.
- `<V2>` is the value supplied.
- `<V3>` is the lower limit of the valid range.
- `<V4>` is the upper limit of the valid range.

**User response:** Correct the input and rerun the job.

FPEC2013E  **<V1> VALUE <V2> IS NOT NUMERIC**

**Explanation:** The value supplied in the INCLUDE/EXCLUDE or GROUP/LIST specification for the OMEGAMON XE for DB2 PE identifier shown must be numeric.
- `<V1>` is the identifier.
- `<V2>` is the value supplied.

**User response:** Correct the INCLUDE/EXCLUDE or GROUP/LIST specification and rerun the job.

FPEC2014E  **<V1> PARAMETER <V2> IS AN INVALID DDNAME**

**Explanation:** The parameter supplied is not a valid ddname.
- `<V1>` is the option.
- `<V2>` is the value supplied.

**User response:** Correct the input and rerun the job.

FPEC2101E  **RIGHT PARENTHESIS INSERTED TO COMPLETE <V1> COMMAND**

**Explanation:** A closing parenthesis is missing from the end of a command.
- `<V1>` is the command with the missing parenthesis.

**User response:** Correct the input and rerun the job.

FPEC2102E  **GROUP/LIST NAME MUST BE ALPHANUMERIC**

**Explanation:** The GROUP/LIST supplied contains characters other than A-Z or 0-9.

**User response:** Correct the specification and rerun the job.

FPEC2104E  **UNEXPECTED END OF FILE ENCOUNTERED IN <V1> COMMAND**

**Explanation:** The end of the command data set was encountered before the end of the command stream. This error is most commonly caused by a missing closing parenthesis at the end of the command stream.
- `<V1>` is the command where end of file was encountered.

**User response:** Correct the input and rerun the job.

FPEC2105E  **INVALID INPUT ENCOUNTERED IN <V1> COMMAND. INPUT IGNORED FROM <V2> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD**

**Explanation:** A not valid command was encountered. The input between the error and the next valid command was ignored.
- `<V1>` is the command where the incorrect input was encountered.
- `<V2>` is the incorrect input.

**User response:** Correct the input and rerun the job.

FPEC2106E  **<V1> IS AN UNRECOGNIZABLE COMMAND KEYWORD. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD**

**Explanation:** A command was specified more than once in the same command stream.
- `<V1>` is the command that was specified more than once.

**User response:** Remove the occurrences of `<V1>` except for one.
Explanation: An unrecognizable command was encountered. Input was ignored between the error and the next recognizable command.
• <V1> is the text of the unrecognizable command.

User response: Correct the input and rerun the job.

FPEC2107E <V1> MUST PRECEDE ALL OTHER COMMANDS

Explanation: <V1> is the CASE command, which must be specified before any other command.

User response: Specify the CASE command first.

FPEC2114E SPREADSHEETDD OPTION KEYWORD IS NO LONGER SUPPORTED. INPUT IGNORED FROM SPREADSHEETDD TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD.

Explanation: The SPREADSHEETDD subcommand option keyword is no longer used for STATISTICS.

User response: Use the Spreadsheet input data generator functionality instead.

FPEC2115E RIGHT PARENTHESIS EXPECTED TO CLOSE <V1> SPECIFICATION. <V2> ENCOUNTERED

Explanation: A closing parenthesis is missing from the end of an INCLUDE/EXCLUDE or GROUP/LIST specification.
• <V1> is INCLUDE, EXCLUDE, GROUP, or LIST.
• <V2> is the string encountered where the right parenthesis was expected.

User response: Correct the specification.

FPEC2152E <V1> INVALID FOR GROUP

Explanation: A GROUP specification cannot be made for the identifier shown.
• <V1> is the identifier supplied.

User response: Remove the GROUP specification.

FPEC2153E <V1> IS INVALID FOR AN <V2> SPECIFICATION FOR THIS COMMAND/FUNCTION COMBINATION

Explanation: The identifier shown is not valid for an INCLUDE/EXCLUDE specification for the command and function associated.
• <V1> is the identifier supplied.
• <V2> is INCLUDE or EXCLUDE.

User response: Remove the specification.

FPEC2154E <V1> IS AN INVALID VALUE FOR THREADTYPE

Explanation: The value supplied for THREADTYPE in an INCLUDE/EXCLUDE or GROUP/LIST specification is incorrect.
• <V1> is the incorrect value that was supplied.

User response: See the Report Command Reference for a list of valid values for THREADTYPE. Correct the specification and rerun the job.

FPEC2155E INCLUDE/EXCLUDE ALREADY SPECIFIED FOR <V1>

Explanation: An INCLUDE or EXCLUDE specification has already been made for the identifier shown within the same command and function.
• <V1> is the identifier supplied.

User response: Remove the duplicate INCLUDE or EXCLUDE specification.

FPEC2156E <V1> IS AN INVALID VALUE FOR REQUESTTYPE

Explanation: The value supplied for REQUESTTYPE in an INCLUDE/EXCLUDE or GROUP/LIST specification is not valid.
• <V1> is the incorrect value that was supplied.

User response: See the Report Command Reference for a list of valid values for REQUESTTYPE. Correct the specification and rerun the job.

FPEC2157E VALUE <V1> SUPPLIED FOR <V2> IS TOO LONG

Explanation: The value supplied for the identifier shown in an INCLUDE/EXCLUDE or GROUP/LIST specification is too long.
• <V1> is the value the length of which is too long.
• <V2> is the identifier supplied.

User response: See the Report Command Reference for the maximum permitted length for a value of this identifier.
FPEC2158E  GENERIC VALUES FOR <V1> ARE NOT PERMITTED

Explanation:  Generic values are not permitted for the identifier shown, because they have no meaning.
•  <V1> is the identifier supplied.

User response:  Remove the generic value.

FPEC2159E  <V1> IS AN INVALID VALUE FOR RESOURCETYPE

Explanation:  The value supplied for RESOURCETYPE in an INCLUDE/EXCLUDE or GROUP/LIST specification is not valid.
•  <V1> is the incorrect value that was supplied.

User response:  See the Report Command Reference for a list of valid values for RESOURCETYPE. Correct the specification and rerun the job.

FPEC2160E  <V1> IS AN INVALID VALUE FOR TYPE

Explanation:  An INCLUDE/EXCLUDE or GROUP/LIST specification was made with an unknown type.
•  <V1> is the unknown type.

User response:  See the Report Command Reference for a list of valid types. Correct the specification and rerun the job.

FPEC2163E  THE USE OF > OR < IN <V1> VALUES IS INVALID

Explanation:  The use of > or < for the indicated identifier is not valid.
•  <V1> is the identifier that was supplied.

User response:  Correct the specification and rerun the job.

FPEC2164E  THE * IN A RANGE SPECIFICATION MUST BE THE LAST CHARACTER SPECIFIED

Explanation:  A generic value has been supplied for a range in an INCLUDE/EXCLUDE or GROUP/LIST specification. This generic value specifies multiple ranges, not a single range.

User response:  Ensure that any generic value supplied for either a range from or a range to only has an asterisk (*) as the last character in the ‘range from’ or ‘range to’ value. This ensures that the range specification only defines a single range.

FPEC2165E  VALUE <V1> SUPPLIED FOR A HEX VALUE IS THE WRONG LENGTH OR CONTAINS CHARACTERS OTHER THAN 0-9 OR A-F

Explanation:  An identifier, the values of which should be supplied in an INCLUDE/EXCLUDE or GROUP/LIST specification as hexadecimal, has been supplied a value that is either too long or has characters other than 0-9 or A-F.
•  <V1> is the invalid hexadecimal value supplied.

User response:  Correct the input and rerun the job.

FPEC2166E  RANGE IS NOT PERMITTED FOR IDENTIFIER <V1>

Explanation:  A range specification for the shown identifier is not possible. <V1> is the supplied include/exclude identifier.

User response:  Change the range specification to an enumeration of values or use the asterisk to match multiple values.

FPEC2167E  RANGE OPERATOR <V1> IS NOT VALID FOR IDENTIFIER <V2>

Explanation:  The numeric range operators ‘GT’, ‘GE’, ‘LT’, and ‘LE’ are not valid for the specified OMEGAMON XE for DB2 PE identifier. <V1> is the specified include/exclude identifier.

User response:  Change the specification. Use operator ‘R’ instead to specify a range of values.

FPEC2201E  RIGHT PARENTHESIS INSERTED TO COMPLETE <V1> SUBCOMMAND

Explanation:  A closing parenthesis was missing in a subcommand.
•  <V1> is the subcommand where the parenthesis was missing.

User response:  Correct the input.

FPEC2202E  THE <V1> SUBCOMMAND HAS ALREADY BEEN SPECIFIED <V2> TIMES FOR THIS COMMAND, THE SPECIFICATION IS IGNORED

Explanation:  There are more than the maximum number of occurrences of a subcommand.
•  <V1> is the subcommand in error.
•  <V2> is the maximum number of occurrences.

User response:  Correct the input and rerun the job.
FPEC2203E <V1> SUBCOMMAND IS INVALID FOR <V2>. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: The subcommand is not available with the command. For example, the REDUCE subcommand is not available with the RECTRACE command. Input was ignored between the error and the next valid command or subcommand.

• <V1> is the subcommand.
• <V2> is the command.

User response: Correct the input and rerun the job.

FPEC2204E UNEXPECTED END OF FILE ENCOUNTERED IN <V1> SUBCOMMAND

Explanation: The end of the input file was encountered before the end of the command stream. This error is most commonly caused by a missing closing parenthesis at the end of the command stream.

• <V1> is the subcommand where end of file was encountered.

User response: Correct the input and rerun the job.

FPEC2205E INVALID INPUT ENCOUNTERED IN <V1> SUBCOMMAND, INPUT IGNORED FROM <V2> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: A subcommand contains invalid input.

• <V1> is the subcommand that contains the error.
• <V2> is the invalid input.

User response: Correct the input and rerun the job.

FPEC2206E <V1> IS AN UNRECOGNIZABLE SUBCOMMAND KEYWORD. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: An unrecognized keyword was encountered. Input was ignored between the error and the next valid command or subcommand.

• <V1> is the text of the unrecognized subcommand keyword.

User response: Correct the input and rerun the job.

FPEC2301I RIGHT PARENTHESIS INSERTED TO COMPLETE <V1> OPTION

Explanation: A closing parenthesis is missing.

• <V1> is the option where the parenthesis is missing.

User response: Correct the input.

FPEC2302E <V1> OPTION ALREADY SPECIFIED FOR THIS SUBCOMMAND

Explanation: A subcommand option occurred more than once.

• <V1> is the repeated option.

User response: Correct the input and rerun the job.

FPEC2303E <V1> OPTION IS INVALID FOR <V2> <V3>. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: You cannot use the subcommand option in its current context. For example, you cannot use ORDER subcommand option with the STATISTICS command and its REPORT subcommand.

• <V1> is the subcommand option.
• <V2> is the command.
• <V3> is the subcommand.

User response: Correct the input and rerun the job.

FPEC2304E UNEXPECTED END OF FILE ENCOUNTERED IN <V1> OPTION

Explanation: The end of the input file was encountered before the end of the command stream. This error is most commonly caused by a missing closing parenthesis at the end of the command stream.

• <V1> is the option where end of file was encountered.

User response: Correct the input and rerun the job.

FPEC2305E INVALID INPUT ENCOUNTERED IN <V1> OPTION, INPUT IGNORED FROM <V2> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: The syntax of an option is incorrect.

• <V1> is the name of the option.
• <V2> is the invalid input.

User response: Correct the input and rerun the job.

FPEC2306E <V1> IS AN UNRECOGNIZABLE OPTION KEYWORD. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: An unrecognized option keyword was encountered. Input was ignored between the unrecognized input and the next valid command, subcommand, or option.

• <V1> is the unrecognized keyword.

User response: Correct the input and rerun the job.
FPEC2307E • FPEC2316I

FPEC2307E  <V1> IS AN INVALID <V2> PARAMETER

Explanation: A keyword cannot be used in its current context. For example, DETAIL is not valid with RECTRACE(TRACE(LEVEL)).
• <V1> is the invalid keyword.
• <V2> is the option that contains the invalid keyword.

User response: Correct the input and rerun the job.

FPEC2308E  <V1> MAXIMUM SPECIFICATION EXCEEDED, EXTRA PARAMETERS IGNORED

Explanation: There are more values for an option than allowed. For example, you can only specify three values for REPORT(ORDER). The first three values are accepted, and any subsequent values are ignored.
• <V1> is the option containing a not valid number of values.

User response: Correct the input and rerun the job.

FPEC2309E  <V1> IS AN UNRECOGNIZABLE LEVEL KEYWORD. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: An unrecognizable keyword was encountered in the LEVEL option of a REPORT or TRACE subcommand. Input between the error and the next valid command, subcommand, or option was ignored.
• <V1> is the unrecognized keyword.

User response: Correct the input and rerun the job.

FPEC2310E  DUPLICATE INPUT ENCOUNTERED IN <V1> OPTION. INPUT IGNORED FROM <V2> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: A duplicate option was specified, which is not allowed. Input is ignored between the error and the next command, subcommand, or option. Note that AUTHID and PRIMAUTH are treated as the same option. So are PACKAGE and PROGRAM. If both options are specified, they are duplicate.
• <V1> is the name of the option.
• <V2> is the duplicate input.

User response: Correct the input and rerun the job.

FPEC2311E  INVALID DATE SPECIFIED IN <V1> OPTION

Explanation: The specified date is not valid. The date can be in the format mm/dd/yy where mm is an integer in the range 1 to 12, dd is an integer in the range 1 to 31 and valid for the month and year, and yy is an integer in the range 01 to 99. However, depending on the DATEFORMAT parameter, the date can also be specified in a different format.
• <V1> is the option that contains the invalid date.

User response: Correct the input and rerun the job.

FPEC2312E  INVALID TIME SPECIFIED IN <V1> OPTION

Explanation: The specified time is not valid. The time must be in the format hh:mm:ss.th where hh is an integer in the range 0 to 23, mm and ss are integers in the range 0 to 59, and lh is an integer in the range 0 to 99. Trailing zeros can be omitted.
• <V1> is the option that contains the invalid time.

User response: Correct the input and rerun the job.

FPEC2313E  <V1> IS AN UNRECOGNIZABLE TYPE KEYWORD. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: The keyword specified for TYPE cannot be recognized.
• <V1> is the unrecognized keyword.

User response: Correct the input and rerun the job.

FPEC2314I  REQUESTTYPE IS TRANSLATED INTO THE APPROPRIATE TYPE

Explanation: The OMEGAMON XE for DB2 PE identifier REQUESTTYPE is no longer used and is therefore replaced by its equivalent TYPE.

User response: You might want to change the keyword REQUESTTYPE to TYPE and the type to its equivalent, for example, CLAIM to CLAIMREQ.

FPEC2315E  INCLUDE/EXCLUDE(TYPE) ON TRACE LEVELS OTHER THAN DETAIL IS NOT VALID

Explanation: The INCLUDE/EXCLUDE(TYPE) parameter in a command specification is not valid for a TRACE LEVEL other than DETAIL.

User response: Change the TRACE LEVEL to DETAIL or remove the INCLUDE/EXCLUDE(TYPE) parameter.

FPEC2316I  DUE TO THE EXCLUDE SPECIFICATION ON TYPE THE INCLUDEREQUESTTYPE) CANNOT BE TRANSLATED, THE EXCLUDEREQUESTTYPE) IS IGNORED

Explanation: Both EXCLUDE(TYPE) and INCLUDEREQUESTTYPE) were specified in a LOCKING TRACE command. The EXCLUDE(TYPE) is
executed and INCLUDE(REQUESTTYPE) is ignored.

User response: Correct the specification.

FPEC2317I NOT ALL TYPES ARE APPLICABLE TO THE <V1> SUBCOMMAND

Explanation: The LOCKING command with subcommand <V1> and subcommand option INCLUDE or EXCLUDE is used, however, for the OMEGAMON XE for DB2 PE identifier TYPE (used with INCLUDE or EXCLUDE) an event type is specified that is not applicable with the <V1> subcommand.

• <V1> is the subcommand used with the LOCKING command.

User response: See the Report Command Reference for an explanation of OMEGAMON XE for DB2 PE identifiers and identifiers used with the INCLUDE or EXCLUDE subcommand option.

FPEC2318E TYPE IS NOT VALID FOR INCLUDE OR EXCLUDE WITHIN A LOCKING REPORT

Explanation: INCLUDE/EXCLUDE(TYPE) was specified within a LOCKING REPORT command. This is not valid.

User response: Remove the INCLUDE/EXCLUDE specification for this command.

FPEC2319I REQUESTTYPE IS NO LONGER SUPPORTED FOR INCLUDE OR EXCLUDE WITHIN A LOCKING REPORT. REQUESTTYPE OPTION FOR INCLUDE/EXCLUDE IS IGNORED

Explanation: INCLUDE/EXCLUDE(REQUESTTYPE) was specified within a LOCKING REPORT command. This is no longer supported. The specification is ignored.

User response: None. However, you may wish to remove the INCLUDE/EXCLUDE specification for this command.

FPEC2321I INCLUDE/EXCLUDE(REQUESTTYPE) ON TRACE LEVELS OTHER THAN DETAIL IS IGNORED

Explanation: INCLUDE/EXCLUDE(REQUESTTYPE) was specified within a LOCKING TRACE command. This is no longer supported. The specification is ignored.

User response: None. However, you may wish to remove the INCLUDE/EXCLUDE specification for this command or change LEVEL to DETAIL.

FPEC2323I <V1> IS AN AMBIGUOUS ABBREVIATION IN THIS CONTEXT. <V2> IS ASSUMED

Explanation: The abbreviated option or parameter <V1> is specified in SYSIN. However, <V1> is too short to be unambiguous and can match more than one possible option or parameter. <V2> is assumed for further processing.

User response: If the assumed option or parameter is not correct, specify a longer abbreviation or the full name.

FPEC2341E DDNAME <V1> EXCEEDS 8 CHARACTERS

Explanation: The value specified for a ddname option contains more than eight characters.

• <V1> is the ddname.

User response: Correct the input and rerun the job.

FPEC2342E LAYOUT <V1> EXCEEDS 8 CHARACTERS

Explanation: The value specified for the LAYOUT option contains more than eight characters.

• <V1> is the LAYOUT.

User response: Correct the input and rerun the job.

FPEC2343E GROUP/LIST NAME <V1> EXCEEDS 8 CHARACTERS

Explanation: The value specified for the GROUP/LIST name contains more than eight characters.

• <V1> is the LAYOUT.

User response: Correct the input and rerun the job.

FPEC2361E INVALID LEVEL PARMS FOR REQUESTED FUNCTION

Explanation: The value specified for LEVEL cannot be used in the current context. For example, RECTRACE(LEVEL(DETAIL)) is not valid.

User response: Correct the input and rerun the job.

FPEC2371E INVALID TYPE PARMS FOR REQUESTED FUNCTION

Explanation: The value specified for TYPE cannot be used in the current context. For example, TRANSIT(REPORT(TYPE(AUTHFAIL))) is not valid.

User response: Correct the input and rerun the job.
FPEC2401E • FPEC2508E

FPEC2401E  INCLUDE/EXCLUDE FOR <V1>
INVALID. INPUT IGNORED FROM
<V1> TO NEXT COMMAND,
SUBCOMMAND, OR OPTION
KEYWORD

Explanation: A keyword or value specified in
INCLUDE/EXCLUDE cannot be used in the specified
context. For example, you cannot use
INCLUDE/EXCLUDE(IFCID) with the ACCOUNTING
command. Input is ignored between the invalid
keyword and the next valid command, subcommand,
or option.

• <V1> is the keyword that cannot be used with
INCLUDE/EXCLUDE.

User response: Correct the input and rerun the job.

FPEC2402E  LOCATION IS NOT PERMITTED FOR
GROUP. INPUT IGNORED FROM
LOCATION TO NEXT COMMAND,
SUBCOMMAND, OR OPTION
KEYWORD

Explanation: You cannot use the LOCATION identifier
with the GROUP command.

User response: Correct the input and rerun the job.

FPEC2403E  GROUP COMMANDS CANNOT
CONTAIN REFERENCES TO OTHER
GROUP DEFINITIONS. INPUT
IGNORED FROM G TO NEXT
COMMAND, SUBCOMMAND, OR
OPTION KEYWORD

Explanation: A group cannot contain a group.

User response: Correct the input and rerun the job.

FPEC2404E  REQLOC IS NOT PERMITTED FOR
GROUP. INPUT IGNORED FROM
REQLOC TO NEXT COMMAND,
SUBCOMMAND, OR OPTION
KEYWORD

Explanation: You cannot use the REQLOC identifier
with the GROUP command.

User response: Correct the input and rerun the job.

FPEC2405E  <V1> SPECIFICATION HAS NO
ASSOCIATED VALUES.
SPECIFICATION REJECTED

Explanation: No values were supplied for the GROUP
or LIST specification.

• <V1> is GROUP or LIST.

User response: Correct the input and rerun the job.

FPEC2401E  INVALID TIMEZONE PARAMETER

Explanation: The value specified for TIMEZONE is
not valid. Specify the time adjustment in the form
+hh:mm or -hh:mm, where hh is an integer in the range 0
to 23, and mm is an integer in the range 0 to 59.
Trailing zeros can be omitted.

User response: Correct the input and rerun the job.

FPEC2502E  INVALID PAGESIZE PARAMETER

Explanation: The value specified for PAGESIZE is not
valid. Specify an integer in the range 50 to 999.

User response: Correct the input and rerun the job.

FPEC2503E  <V1> OPTION ALREADY SPECIFIED
FOR GLOBAL

Explanation: An option keyword was specified twice
in the GLOBAL command.

• <V1> is the keyword that was specified twice.

Note that GLOBAL(DB2ID(XXXX)) is interpreted as
GLOBAL(INCLUDE(DB2ID(XXXX))).

User response: Correct the input and rerun the job.

FPEC2504I  RECHOLD OPTION IS OBSOLETE
AND IS IGNORED

Explanation: None.

User response: None.

FPEC2505E  <V1> IS AN INVALID DB2ID

Explanation: The value specified for DB2ID is not valid.

• <V1> is the invalid value.

User response: Correct the input and rerun the job.

FPEC2506E  <V1> IS AN INVALID LOCATION

Explanation: The value specified for LOCATION is
not valid.

• <V1> is the invalid value.

User response: Correct the input and rerun the job.

FPEC2508E  NO TIMEZONE PARAMETERS
AVAILABLE FOR <V1>

Explanation: A location has been specified with the
TIMEZONE option that is not listed in the LOCDATA
member of DPMPARMS.

• <V1> is the invalid location.

User response: Specify a valid location with
TIMEZONE, or add the specified location to
LOCDATA.
FPEC2509E <V1> IS AN UNRECOGNIZED PRESORTED KEYWORD. INPUT IGNORED FROM <V1> TO NEXT COMMAND KEYWORD

Explanation: An invalid parameter was supplied with PRESORTED option.
• <V1> is the invalid keyword.

User response: Specify a valid keyword with PRESORTED option.

FPEC2510I GLOBAL LOCATION/DB2ID OPTION NO LONGER SUPPORTED. MAKE AN APPROPRIATE GLOBAL INCLUDE SPECIFICATION. SPECIFICATION IGNORED

Explanation: The GLOBAL LOCATION and GLOBAL DB2ID options are not supported in this version.

User response: Correct the input.

FPEC2511E <V1> IS AN UNRECOGNIZED SPANINC KEYWORD. INPUT IGNORED FROM <V1> TO NEXT COMMAND KEYWORD

Explanation: An invalid keyword was supplied with the SPANINC subcommand. <V1> is the invalid keyword.

User response: Specify a valid keyword with SPANINC subcommand.

FPEC2513I OPTION DSETSTAT IS NO LONGER SUPPORTED FOR STATISTICS <V1> SUBCOMMAND IN CONJUNCTION WITH OPTION INTERVAL(X), X > 0. OPTION DSETSTAT IS IGNORED.

Explanation: Statistics interval processing with intervals > 0 can only be applied to IFCIDs 1, 2, 225 and 369 that are externalized by DB2 every minute. IFCID 199 externalization is controlled by system parameter STATIME and may range from 1 to 60 minutes. <V1> is the REPORT or SAVE command.

User response: Remove the DSETSTAT option from the subcommand.

FPEC2555E LEVEL OPTION HAS BEEN SPECIFIED WITH LAYOUT, SORTBY, SUMMARIZEBY, OR WORKLOAD. POTENTIALLY AMBIGUOUS SPECIFICATION REJECTED

Explanation: The old LEVEL option is internally translated into LAYOUT, SORTBY, SUMMARIZEBY, or WORKLOAD specifications as appropriate. If LEVEL is supplied with any of these options, the specification is rejected.

User response: Correct the specification and rerun the job.

FPEC2602E RANGE TO VALUE IS GREATER THAN RANGE FROM VALUE

Explanation: A range specified in INCLUDE or EXCLUDE is not valid.

User response: Correct the input and rerun the job.

FPEC2603E GROUP/LIST BY <V1> INVALID, INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: The identifiers shown are not valid with GROUP or LIST.
• <V1> is the identifier.
• <V2> is the next identifier.

User response: Correct the input and rerun the job.

FPEC2604E <V1> PREVIOUSLY SPECIFIED FOR INCLUDE/EXCLUDE. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD

Explanation: The same identifier keyword was used more than once with INCLUDE or EXCLUDE. A keyword can be used once in either INCLUDE or EXCLUDE.
• <V1> is the identifier.

User response: Correct the input and rerun the job.

FPEC2701E <V1> OPTION ALREADY SPECIFIED FOR <V2> COMMAND

Explanation: An option keyword cannot be used in its current context. It has already been used with this command.
• <V1> is the duplicated option keyword.
• <V2> is the command that contains the duplicated keyword.

User response: Correct the input and rerun the job.

FPEC2702E OPTION <V1> MISSING IN <V2> COMMAND

Explanation: A required option has not been specified with this command.
• <V1> is the required option.
• <V2> is the command in which the option is missing.

User response: Correct the input and rerun the job.
FPEC2703E • FPEC2867I

FPEC2703E <V1> OPTION INVALID FOR <V2> COMMAND
Explanation: An option keyword cannot be used with this command. For example, RECTRACE(TRACE(TYPE)).
• <V1> is the invalid option keyword.
• <V2> is the command that contains the invalid keyword.
User response: Correct the input and rerun the job.

FPEC2704I <V1> IS NOT AVAILABLE TO <V2>. INPUTDD IS ASSUMED
Explanation: A not valid ddname was specified on the EXEC option of the DUMP or TAPECOPY command. INPUTDD is the only valid ddname for the EXEC option. The command is processed using INPUTDD.
• <V1> is the invalid ddname.
• <V2> is DUMP or TAPECOPY.
User response: Specify INPUTDD on the EXEC option, or do not specify the EXEC option.

FPEC2750I ORDER OPTION NO LONGER AVAILABLE FOR SQL ACTIVITY
Explanation: The SQLTRACE ORDER is no longer supported and has been ignored.
User response: Correct the input.

FPEC2851I OBSOLETE TYPE FOUND, TYPE IGNORED
Explanation: COMMAND, SQL, and UNASSIGNED are obsolete types, but one of these was entered.
User response: Enter a valid type.

FPEC2860E <V1> IS AN UNRECOGNIZABLE SORTBY PARAMETER. INPUT IGNORED FROM <V1> TO NEXT COMMAND KEYWORD
Explanation: An unrecognized SORTBY parameter has been supplied.
• <V1> is the unrecognized SORTBY parameter.
User response: Correct the input and rerun the job.

FPEC2861E <V1> IS AN INVALID SORTBY PARAMETER FOR THIS COMMAND. INPUT IGNORED FROM <V1> TO NEXT COMMAND, SUBCOMMAND, OR OPTION KEYWORD
Explanation: The SORTBY parameter supplied is not valid for this command.
• <V1> is the unrecognized SORTBY parameter.
User response: Correct the input and rerun the job.

FPEC2862E <V1> IS AN UNRECOGNIZABLE SUMMARIZEBY PARAMETER. INPUT IGNORED FROM <V1> TO NEXT COMMAND KEYWORD
Explanation: An unrecognized SUMMARIZEBY parameter has been supplied.
• <V1> is the unrecognized SUMMARIZEBY parameter.
User response: Correct the input and rerun the job.

FPEC2864I LAYOUT <V1> SUPPLIED IS LONGER THAN SIX CHARACTERS. OPTION IGNORED
Explanation: The LAYOUT parameter supplied is too long.
• <V1> is the LAYOUT parameter supplied.
User response: Correct the input.

FPEC2865E <V1> IS AN UNRECOGNIZABLE WORKLOAD PARAMETER. INPUT IGNORED FROM <V1> TO NEXT COMMAND KEYWORD
Explanation: An unrecognized WORKLOAD parameter has been supplied.
• <V1> is the unrecognized WORKLOAD parameter.
User response: Correct the input and rerun the job.

FPEC2866E NONE SPECIFICATION FOR WORKLOAD CONFLICTS WITH OTHER WORKLOAD PARAMETERS. WORKLOAD SPECIFICATION REJECTED
Explanation: WORKLOAD (NONE) has been supplied with another WORKLOAD parameter. This ambiguous specification is rejected.
User response: Correct the WORKLOAD option and rerun the job.

FPEC2867I LEVEL SPECIFICATION FOR ACCOUNTING SUPERSEDED IN THIS RELEASE BY THE LAYOUT, EXCEPTION/NOEXCEPTION, AND MERGE/NOMERGE OPTIONS
Explanation: The LEVEL option of the ACCOUNTING command has been replaced by the other options shown.
User response: Correct the input as required.
FPEC2868I  LEVEL SPECIFICATION FOR STATISTICS SUPERSEDED IN THIS RELEASE BY THE LAYOUT AND EXCEPTION/NOEXCEPTION OPTIONS

Explanation: The LEVEL option of the STATISTICS command has been replaced by the other options shown.

User response: Correct the input as required.

FPEC2869I  LEVEL SPECIFICATION FOR SQLACTIVITY SUPERSEDED IN THIS RELEASE BY THE SUMMARIZEBY AND WORKLOAD OPTIONS

Explanation: The LEVEL option of the SQLACTIVITY command has been replaced by the other options shown.

User response: Correct the input as required.

FPEC2870I  SUMMARIZEBY(OCCURRENCE) IN REPORT WOULD PROVIDE EXCESSIVE DETAIL. SPECIFICATION IGNORED

Explanation: The use of SUMMARIZEBY by OCCURRENCE in REPORT is considered excessive.

User response: Correct the input and rerun the job.

FPEC2871E  SCOPE PARAMETER <V1> SUPPLIED IS INVALID. SPECIFICATION REJECTED

Explanation: An invalid parameter was passed for the SCOPE option.

User response: Correct the input and rerun the job. For further information, see the Report Command Reference.

FPEC2872E  SORT FIELD <V1> IS INVALID BECAUSE A SORT FIELD IDENTIFIER HAS ALREADY BEEN SPECIFIED

Explanation: A sort field has already been specified with the SORTBY option of the ORDER parameter. Only one sort field is allowed. <V1> is the redundant sort field.

User response: Remove redundant sort field specifications from the BPACTIVITY command.

FPEC2873E  IDENTIFIER <V1> IS NOT ALLOWED. A SORT FIELD IDENTIFIER HAS ALREADY BEEN SPECIFIED. THE SORT FIELD HAS TO BE THE LAST PARAMETER IN THE SORTBY OPTION.

Explanation: The specified identifier is not valid because a sort field has already been specified. The sort field is always the last value specified with the SORTBY option.

User response: Correct the SORTBY option of the BPACTIVITY command so that the order identifiers are listed first and the sort field is the last value.

FPEC2874E  SORTBY IDENTIFIER <V1> EXCEEDS MAXIMUM COUNT OF IDENTIFIERS. COUNT OF IDENTIFIERS IN SORTBY OPTION MUST BE LESS THAN THE COUNT OF IDENTIFIERS IN ORDER OPTION.

Explanation: You cannot specify more SORTBY identifiers than the number of identifiers specified for the ORDER option.

User response: Correct the SORTBY option so that it contains fewer identifiers than the ORDER option.

FPEC2875E  SORTBY IDENTIFIER <V1> DOES NOT MATCH IDENTIFIER <V2> AT THE MATCHING POSITION OF THE ORDER OPTION.

Explanation: Specified SORTBY identifiers must match the specified identifiers for the ORDER option. <V1> is the specified SORTBY identifier, <V2> is the specified ORDER identifier at the same position.

User response: Correct the identifiers for the SORTBY option to match the identifiers for the ORDER option.

FPEC2876E  SORT FIELD IDENTIFIER <V1> IS NOT ALLOWED FOR LEVEL (<V2>).

Explanation: Sort fields cannot be specified for all levels of reporting. The specified identifier is not valid for this report level. <V1> is the sort field specified with the SORTBY option, <V2> is the report level specified with the LEVEL option.

User response: Correct the SORTBY option and use a supported sort field for the selected LEVEL.

FPEC2877E  ORDER PARAMETER MUST BE BPID-QPAGESET FOR LEVEL(SUMMARY)

Explanation: For summary reports only ORDER parameter BPID-PAGESET is allowed.

User response: Correct the ORDER parameter.
FPEC2878E  NO SORT FIELD PARAMETER SPECIFIED WITH THE SORTBY OPTION. THE LAST PARAMETER IN THE SORTBY OPTION MUST BE A SORT FIELD.

Explanation: No sort field was specified with the SORTBY option.
User response: Correct the SORTBY option.

FPEC2879E  The REPORT subcommand must be used with the LEVEL(SUMMARY) option if FILE LEVEL(SUMMARY) is also specified

Explanation: FILE LEVEL(SUMMARY) results in detailed data being removed from the input stream. Detail data is required by the REPORT subcommand if LEVEL(DETAIL) is specified or if the LEVEL option is not specified, because DETAIL is the default value. Therefore these combinations are not supported.
User response: Correct the input and rerun the job.

FPEC2902E  INVALID DELIMITER FOUND IN FIELD COMMAND

Explanation: The delimiter used in the FIELD command is not valid.
User response: Correct the input and rerun the job.

FPEC2908E  END OF FILE ENCOUNTERED READING SQL STATEMENT. ENSURE THAT STATEMENT IS TERMINATED BY ";"

Explanation: An SQL statement was not terminated with a semicolon (;).
User response: Correct the input and rerun the job.

FPEC2909E  SQL STATEMENT SUPPLIED EXCEEDS 32700 BYTES. STATEMENT TRUNCATED

Explanation: SQL statements that exceed 32700 bytes are truncated. Truncated SQL statements most likely cause processing errors.
User response: Use an SQL statement that does not exceed 32700 bytes and rerun the job.

FPEC2910E  INVALID INPUT <V1> IN EXPLAIN <V2> COMMAND

Explanation: The value supplied in the EXPLAIN command is not valid.
• <V1> is the invalid input.
• <V2> is one of the EXPLAIN keywords:
  – PLAN
  – PACKAGE
User response: Correct the input.

FPEC2911E  UNEXPECTED END OF FILE ENCOUNTERED IN EXPLAIN COMMAND

Explanation: The specified EXPLAIN command is not complete.
User response: Complete the EXPLAIN command specification. See the Report Command Reference for EXPLAIN syntax diagrams.

FPEC2912E  UNEXPECTED KEYWORD FOLLOWS EXPLAIN. PLAN, PACKAGE, QMFQUERY, QUERYNO, OR SQLSTATEMENT EXPECTED

Explanation: The supplied EXPLAIN keyword is not valid.
User response: Correct the input. Valid keywords are:
• PLAN
• PACKAGE
• QMFQUERY
• QUERYNO
• SQLSTATEMENT.

FPEC2913E  PLAN NAME EXPECTED BUT <V1> ENCOUNTERED

Explanation: An invalid plan name was supplied.
• <V1> is the invalid plan name.
User response: Enter a valid plan name.

FPEC2914E  PLANNAME PARAMETER <V1> SUPPLIED IS TOO LONG

Explanation: <V1> is the invalid plan name parameter.
The length of this value must not exceed 8 characters.
User response: Specify a value with a maximum length of 8 characters.

FPEC2915E  PACKAGE EXPECTED BUT <V1> ENCOUNTERED

Explanation: An invalid package was supplied.
• <V1> is the invalid package.
User response: Enter a valid package.
FPEC2916E  QUERY NUMBER EXPECTED BUT <V1> ENCOUNTERED

Explanation:  A not valid query number was supplied.
• <V1> is the invalid query number.
User response:  Enter a valid query number.

FPEC2917E  SQL STATEMENT EXPECTED BUT <V1> ENCOUNTERED

Explanation:  A not valid SQL statement was supplied.
• <V1> is the invalid string supplied.
User response:  Enter a valid SQL statement.

FPEC2918E  EXPLAIN <V1> OPTION <V2> ALREADY SPECIFIED

Explanation:  In the list of options, <V2> is detected two or more
times, however, this option can be specified only once.
User response:  Remove all specifications of option <V2> except for one.

FPEC2919E  OPTION <V1> NOT VALID FOR EXPLAIN <V2>

Explanation:  A not valid option was supplied with the EXPLAIN keyword.
• <V1> is the invalid option.
• <V2> is the EXPLAIN keyword.
User response:  Correct the input.

FPEC2920E  BOTH COLLECTION AND PACKAGE ID MUST BE SUPPLIED FOR AN EXPLAIN PACKAGE REQUEST

Explanation:  None.
User response:  Specify a collection ID and a package ID for the EXPLAIN PACKAGE specification.

FPEC2921E  ONE OR MORE OF THE COMPONENTS OF THE PACKAGE SPECIFICATION EXCEED THE PERMITTED MAXIMUM

Explanation:  For the parameters Location, Collection, and Package_ID, the maximum length is 18 characters. For the parameter Package_Version_ID, the maximum length is 39 characters.
User response:  Specify values within the limit for the maximum length.

FPEC2922E  QUERY NUMBER <V1> SUPPLIED IS TOO BIG

Explanation:  The query number supplied is longer than 10 characters. Such a number cannot identify a PLAN_TABLE row.
• <V1> is the query number supplied.
User response:  Correct the input and rerun the job.

FPEC2940E  ACCTYPE PARAMETER <V1> SUPPLIED IS INVALID. VALID ACCTYPE VALUES ARE: ALL, MATCHING, NONMATCH, OR TABSCAN

Explanation:  None.
• <V1> is the invalid ACCTYPE parameter supplied.
User response:  Enter a valid ACCTYPE parameter.

FPEC2941E  THE SPECIFIED VALUE <V1> FOR THE DBRM PARAMETER IS TOO LONG.

Explanation:  None.
• <V1> is the invalid value for the DBRM parameter. This value must not exceed 8 characters.
User response:  Specify a value with a maximum length of 8 characters.

FPEC2942E  THE SPECIFIED VALUE <V1> FOR THE DBRM PARAMETER IS INVALID.

Explanation:  None.
• <V1> is the invalid value for the DBRM parameter. This value must be alphabetic.
User response:  Specify an alphabetic value for the DBRM parameter.

FPEC2943E  FORCE PARAMETER <V1> SUPPLIED IS INVALID. VALID FORCE VALUES ARE: YES OR NO

Explanation:  None.
• <V1> is the invalid FORCE parameter.
User response:  Enter YES or NO.

FPEC2944E  FIRST PARAMETER <V1> SUPPLIED IS INVALID. FIRST PARAMETER MUST BE NUMERIC IN THE RANGE 0 - 9999999

Explanation:  None.
• <V1> is the invalid FIRST parameter.
User response:  Enter a value in the range 0 to 9999999.

</table>
FPEC2958E  PLANNAME PARAMETER <V1> SUPPLIED IS TOO LONG
Explanation: None.
• <V1> is the invalid PLANNAME parameter.
User response: Correct the input.

FPEC2959E  AUTHID PARAMETER <V1> SUPPLIED IS TOO LONG
Explanation: None.
• <V1> is the invalid AUTHID parameter.
User response: Correct the input.

FPEC2960E  TABLE PARAMETER <V1> SUPPLIED IS TOO LONG
Explanation: None.
• <V1> is the invalid TABLE parameter.
User response: Correct the input.

FPEC2961E  OWNER PARAMETER <V1> SUPPLIED IS INVALID. OWNER VALUE MUST BE ALPHABETIC
Explanation: A not valid OWNER parameter was specified.
• <V1> is the OWNER parameter supplied.
User response: Correct the input and rerun the job.

FPEC2962E  OWNER PARAMETER <V1> SUPPLIED IS TOO LONG
Explanation: None.
• <V1> is the OWNER parameter supplied.
User response: Correct the input and rerun the job.

FPEC2963E  PACKLIMIT PARAMETER <V1> SUPPLIED IS INVALID. PACKLIMIT VALUE MUST BE NUMERIC IN THE RANGE 0 TO 99999
Explanation: An invalid PACKLIMIT parameter was specified.
• <V1> is the PACKLIMIT parameter supplied.
User response: Specify a value from 0 through 99 999 for the PACKLIMIT parameter.

FPEC2964E  DEGREE PARAMETER <V1> SUPPLIED IS INVALID. VALID DEGREE VALUES ARE: ANY, DSJ, ESJ, OR 1
Explanation: A not valid DEGREE parameter was supplied.
• <V1> is the DEGREE parameter supplied.
User response: Correct the input by supplying one of the listed values and rerun the job.

FPEC2965E  INDATABASE PARAMETER <V1> SUPPLIED IS INVALID. INDATABASE VALUE MUST BE ALPHABETIC
Explanation: A not valid INDATABASE parameter was supplied.
• <V1> is the invalid INDATABASE parameter supplied.
User response: Correct the input and rerun the job.

FPEC2966E  INDATABASE PARAMETER <V1> SUPPLIED IS TOO LONG
Explanation: The INDATABASE parameter supplied exceeds the maximum allowable length of 18 characters.
• <V1> is the invalid INDATABASE parameter supplied.
User response: Correct the input and rerun the job.

FPEC2967E  KEYDICTIONARY PARAMETER <V1> SUPPLIED IS INVALID. VALID KEYDICTIONARY VALUES ARE: YES OR NO
Explanation: None.
• <V1> is the invalid KEYDICTIONARY parameter supplied.
User response: Enter YES or NO, respectively Y or N.

FPEC2968E  REPLACE PARAMETER <V1> SUPPLIED IS INVALID. VALID REPLACE VALUES ARE: YES OR NO
Explanation: None.
• <V1> is the invalid REPLACE parameter supplied.
User response: Enter YES or NO, respectively Y or N.

FPEC2969E  DATABASE PARAMETER <V1> SUPPLIED IS TOO LONG
Explanation: The DATABASE parameter supplied exceeds the maximum allowable length of 18 characters.
• <V1> is the invalid DATABASE parameter supplied.
User response: Correct the input and rerun the job.

FPEC2990I  PARM SPECIFICATION OBSOLETE IN THIS RELEASE. SPECIFICATION IGNORED
Explanation: The PARM command is no longer used.
User response: None.

</table>
FPEC3022E  DATA FROM DDNAME <V1> IS NOT RECOGNIZED
Explanation: The data in the restore data set is unrecognizable.
• <V1> is the ddname for the restore data.
User response: Supply the correct file or an empty file for the specified ddname, and rerun the job.

FPEC3026I  <V1> REPORT COMMAND REQUIRES MERGE DATA. MERGE OPTION SET ON FOR REDUCE
Explanation: REDUCE(MERGE) was automatically set on.
• <V1> is the report set command.
User response: None.

FPEC3027I  <V1> SAVE REQUESTED AND RESTORE FILE CONTAINS MERGE DATA. MERGE OPTION SET ON FOR REDUCE
Explanation: The Save data set contains merged data. The MERGE option was automatically set on for REDUCE to maintain a complete set of merged data in the Save data set.
• <V1> is the report set command.
User response: None.

FPEC3028E  <V1> RESTORE FILE DOES NOT ContAIN MERGE DATA REQUIRED FOR REPORT COMMAND
Explanation: The report cannot be generated from the restored file.
• <V1> is the report set command.
User response: Specify MERGE in the REDUCE subcommand and reduce the data again.

FPEC3029I  SYSPRMDD REPLACEMENT SPECIFIED IN GLOBAL BUT NO DD STATEMENT FOR <V1> SUPPLIED
Explanation: The GLOBAL SYSPRMDD option has been supplied to override the System Parameters report ddname, but the ddname supplied has not been specified in the JCL.
• <V1> is the overriding ddname supplied.
User response: Correct the JCL as required.

FPEC3030E  SYSPRMDD OPTION IN GLOBAL COMMAND IS INVALID WHEN SYSPARMS COMMAND IS USED
Explanation: When the new SYSPARMS command is used to request a system parameters trace or execute a file operation, the GLOBAL option SYSPRMDD is no longer allowed to redefine the ddname for the system parameters trace.
User response: Remove the SYSPRMDD option from the GLOBAL command if you use the SYSPARMS command. To request a system parameters trace, use the SYSPARMS TRACE command with the appropriate ddname.

FPEC3031E  SYSTEM PARAMETERS DDNAME <V1> IS INVALID WHEN SYSPARMS COMMAND IS USED
Explanation: In the past, the system parameters ddname statement (or its equivalent specified via GLOBAL SYSPRMDD(newdd)) was used to request a system parameters trace in batch reports. Now you can achieve the same by using the new SYSPARMS command with its TRACE option. If you use this new command, you can no longer use the old system parameters ddname statement in the same JCL step. You must decide for either the SYSPARMS command or the system parameters ddname statement.
• <V1> is the system parameters ddname you have specified in your JCL.
User response: Remove the SYSPRMDD line and, if specified, the GLOBAL option SYSPRMDD from your JCL and use the SYSPARMS TRACE command instead.

FPEC3032I  <V1> SHOULD NO LONGER BE USED. USE THE SYSPARMS TRACE COMMAND INSTEAD
Explanation: This message is displayed when your JCL contains a system parameters ddname statement (or an equivalent command renamed by the GLOBAL option SYSPRMDD) to start a system parameters trace. Use the SYSPARMS with the trace TRACE option.
• <V1> is the system parameters ddname you have specified in your JCL.
User response: None, but you should remove the SYSPRMDD line and, if specified, the GLOBAL option SYSPRMDD from your JCL and use the SYSPARMS TRACE command instead.

FPEC3033W  DISTDD OPTION IN GLOBAL COMMAND IS NO LONGER SUPPORTED. OPTION WILL BE IGNORED DURING GLOBAL COMMAND PROCESSING.
Explanation: The option DISTDD is no longer used in the GLOBAL command.
User response: None.
FPEC3034E  USAGE OF SYTRCDD1 NOT ALLOWED IN SYSPRMDD GLOBAL OPTION

Explanation: SYTRCDD1 is a reserved name for the SYSPARMS command. It cannot be used in the SYSPRMDD GLOBAL option.

User response: Correct your input JCL. Either use another ddname in GLOBAL SYSPRMDD or use the SYSPARMS command (preferably).

FPEC3151E  <V1> REFERENCE <V2> FOR <V3> CANNOT BE FOUND

Explanation: The GROUP or LIST reference indicated for the identifier shown has not been supplied.
• <V1> is GROUP or LIST.
• <V2> is the GROUP or LIST name.
• <V3> is the identifier.

User response: Correct the input and rerun the job.

FPEC3152E  NESTING LEVEL OF GROUPS/LISTS WITHIN AN INCLUDE/EXCLUDE HAS EXCEEDED <V1>

Explanation: There are too many GROUP or LIST specifications within an INCLUDE or EXCLUDE specification.

User response: Correct the specification and rerun the job.

FPEC3153E  CIRCULAR REFERENCE OR MULTIPLE REFERENCE TO <V1> <V2> <V3> WITHIN GLOBAL INCLUDE/EXCLUDE SPECIFICATION

Explanation: A GROUP or LIST reference within a GLOBAL INCLUDE/EXCLUDE specification contains a reference to itself.
• <V1> is the identifier.
• <V2> is GROUP or LIST.
• <V3> is the GROUP or LIST name.

User response: Correct the input and rerun the job.

FPEC3154E  FIELD REFERENCE <V1> CANNOT BE FOUND

Explanation: The field reference indicated cannot be found.
• <V1> is the field reference.

User response: Correct the input and rerun the job.

FPEC3155E  CIRCULAR REFERENCE OR MULTIPLE REFERENCE TO <V1> <V2> <V3> WITHIN GLOBAL INCLUDE/EXCLUDE SPECIFICATION

Explanation: A GROUP or LIST reference within a GLOBAL INCLUDE/EXCLUDE specification contains a reference to itself.
• <V1> is the identifier.
• <V2> is GROUP or LIST.
• <V3> is the GROUP or LIST name.

User response: Correct the input and rerun the job.

FPEC4000E  RECORD PROCESSING PHASE HAS BEEN UNSUCCESSFUL

Explanation: The record processing phase did not complete its function successfully.

User response: Check for messages detailing the problem.

FPEC4001E  RECORD PROCESSING INITIALIZATION FAILED FOR <V1>

Explanation: The initialization of record processing failed for the specified report set.
• <V1> is the name of the report set.

User response: Check for messages detailing the problem.

FPEC4002E  <V1> FAILED DURING THE RECORD PROCESSING PHASE

Explanation: The record processing phase of the specified report set failed. Processing terminates at the end of the record processing phase or after the record processing phases of other report set specifications, if present in the job.
• <V1> is the name of the report set.

User response: Check for messages detailing the problem. If the problem recurs, contact IBM support.

FPEC4004E  INVALID RDW FOUND IN RECORD <F1>, PROCESSING TERMINATED

Explanation: The record processing terminated because invalid input record with RDW=0 was encountered.
• <F1> is the number of the invalid input record.

User response: Try to copy input data set with invalid RDW encountered to another data set. It should fix the problem.
FPEC4003I  RECORD PROCESSING TERMINATION FAILED FOR <VI>

• <VI> is the name of the report set.

User response: Check for system messages detailing the problem.

FPEC4005I  NUMBER OF RECORDS PROCESSED WITHOUT A CPU HEADER WAS <VI>

Explanation: The DB2 CPU header was not present in some (or all) input records. TCB times cannot be calculated without the CPU header.
• <VI> is the number of records where the CPU header was expected but not present.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: The CPU header is written by DB2 when it generates the instrumentation data. Ensure that the CPU header is requested in the START TRACE command. See the description of the DB2 START TRACE command in the Reporting User’s Guide for more information about when the CPU header is required.

FPEC4010I  NUMBER OF RECORDS PROCESSED WITHOUT A CORRELATION HEADER WAS <VI>

Explanation: The DB2 correlation header was not present in some (or all) input records. DB2 cannot obtain the correlation ID and other information when the correlation header is not present.
• <VI> is the number of records that did not have a correlation header.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: The correlation header is written by DB2 when it generates the instrumentation data. Ensure that the correlation header is requested in the DB2 START TRACE command. See the Report Reference for more information about when the correlation header is required.

FPEC4015I  NUMBER OF RECORDS FROM UNSUPPORTED RELEASES OF DB2 WAS <VI>

Explanation: The input data contained instrumentation data from a DB2 version that is not supported by this product.
• <VI> is the number of instrumentation records that were discarded.

User response: None.

FPEC4020I  NUMBER OF RECORDS FROM UNSUPPORTED PRODUCT RELEASES WAS <VI>

Explanation: The input data contained data from other OMEGAMON XE for DB2 PE or OMEGAMON XE for DB2 PM versions that could not be processed.
• <VI> is the number of records discarded.

User response: None.

FPEC4025I  NUMBER OF INCOMPLETE GTF SPANNED RECORDS DISCARDED WAS <VI>

Explanation: The record length used by GTF cannot accommodate the longer DB2 instrumentation records, so GTF splits the data over a number of records. The program did not find all the record segments necessary to reconstruct the DB2 instrumentation record and discarded the incomplete data.
• <VI> is the number of records discarded.

User response: None.

FPEC4030W  IFCID <VI>, DATA SECTION <V2>, REPEATING GROUP <V3>, FIELD <V4> HAS A LENGTH OF <V5>, EXCEEDING THE ALLOWED LENGTH OR EXCEEDING THE DATA SECTION LENGTH <V6>. FIELD <V4> IS IGNORED FROM FURTHER PROCESSING.

Explanation: For some IFCIDs, DB2 provides long names with variable length.

For a particular data section field, the internal integrity validation for a long string failed. Processing continues assuming that a long name is not provided.
• <VI> is the DB2 IFCID number.
• <V2> is the name of the data section.
• <V3> is the repeating group number of the DB2 data section.
• <V4> is the name of the field within the DB2 data section.
• <V5> is the value for the length of the long name that is found in the DB2 data section.
• <V6> is the value of the length of the DB2 data section.

User response: Contact IBM Support to validate the data that is supplied by DB2.
FPEC4035W • FPEC4060I

FPEC4035W MORE THAN <V1> LONG STRINGS QUALIFYING FOR UNIQUE NAME PROCESSING FOUND IN THE INPUT DATA. THIS CAN INDICATE AN INPUT DATA PROBLEM. UNIQUE NAME PROCESSING HAS BEEN SUSPENDED TO PREVENT PERFORMANCE DEGRADATION.

Explanation: This message might be displayed in conjunction with message FPEC4030W.

The Batch Reporter program complements long names with the unique short names to be presented correctly in the reports and traces. However, if too many pairs of long names and short names are accumulated, the Batch Reporter performance might degrade considerably.

A reasonable number of internally stored unique long names is exceeded. Processing continues, however, instead of adding unique short names, the long names are truncated and added as short names.

<V1> is the number of internally stored unique long names.

User response: Contact IBM Support to validate the data that is supplied by DB2.

FPEC4040W DATABASE/PAGESET <V1> HAS TRANSLATION DATA MISSING BETWEEN <V2> AND <V3>, TRANSLATIONS TO <V4> MAY HAVE BEEN MADE WHERE THE ACTUAL NAMES WERE <V5>

Explanation: Some DBID/OBID translation data is missing. The DBID or OBID changed, but the exact time of the change is unknown. DBIDs and OBIDs may have been translated based on the old data rather than the new.

• <V1> is the name of the database or page set.
• <V2> is the timestamp of the last record before the missing data.
• <V3> is the timestamp of the first record after the missing data.
• <V4> is the old name.
• <V5> is the new name.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: None.

FPEC4045W DATABASE/PAGESET TRANSLATION ROUTINE DETECTED <V1> MISSING IFCID=107 OPEN RECORDS

Explanation: Some translations may not have been made correctly.

This message is printed if open and close records for a DBID or OBID are out of sequence. For example, this message is printed if there are two successive close records for the same DBID or OBID. There could be a gap in the input data, or records may have been lost during collection.

• <V1> is the number of missing IFCID 107 records.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: None.

FPEC4050W DATABASE/PAGESET TRANSLATION ROUTINE DETECTED <V1> MISSING IFCID=107 CLOSE RECORDS

Explanation: DBID/OBID translation data is missing. Some translations may not have been made correctly.

This message is printed if open and close records for a DBID or OBID are out of sequence. For example, this message is printed if there are two successive open records for the same DBID or OBID. There could be a gap in the input data, or records may have been lost by SMF or GTF.

• <V1> is the number of missing IFCID 107 records.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: None.

FPEC4055W DATABASE/PAGESET TRANSLATION ROUTINE WAS UNABLE TO PERFORM <V1> TRANSLATIONS

Explanation: Some (or all) DBIDs and OBIDs could not be translated to their eight-character name. This is most commonly caused by missing IFCID 105 or IFCID 107 data. DB2 Trace may not have been started correctly, or the records could have been lost.

• <V1> is the number of translations that could not be performed.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: None.

FPEC4060I DB2 START TRACE NUMBER <V1>
DB2 SUBSYSTEM ID = <V2> TEXT = <V3>

Explanation: A DB2 START TRACE command was detected.
• <V1> is the trace number.
• <V2> is the DB2 subsystem ID.
• <V3> is the text of the command.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: None.

FPEC4065I  DB2 STOP TRACE NUMBER <V1> DB2 SUBSYSTEM ID = <V2> TEXT = <V3>

Explanation: A DB2 STOP TRACE command was detected.
• <V1> is the trace number.
• <V2> is the DB2 subsystem ID.
• <V3> is the text of the command.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: None.

FPEC4070I  LOCATION <V1> HAS RECORDS FOR MORE THAN ONE DB2 SUBSYSTEM. RECORDS FROM SUBSYSTEM <V2> PROCESSED, OTHER SUBSYSTEMS REJECTED

Explanation: Two (or more) different DB2IDs were detected with the same DB2 location name. Records for the second (or subsequent) DB2 subsystem were not processed.
• <V1> is the location name.
• <V2> is the first DB2ID for the DB2 location.

User response: None.

FPEC4075U  LOCATION LIST HAS NOT BEEN INITIALIZED BY RECORD PROCESSING

Explanation: An internal processing error occurred.
User response: Rerun the job. If the problem recurs, contact IBM support.

FPEC4080U  INITIALIZATION FAILED FOR RECORD PROCESSING LIST 1. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was not sufficient storage available to continue processing.
User response: Increase the region size and rerun the job.

FPEC4085U  EXCEPTIONAL CONDITION OCCURRED WHILE RECORDING A SUMMARY. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was not sufficient storage available to continue processing.
User response: Increase the region size and rerun the job.

FPEC4090U  EXCEPTIONAL CONDITION OCCURRED WHILE RECORDING AN OPEN. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was not sufficient storage available to continue processing.
User response: Increase the region size and rerun the job.

FPEC4095U  EXCEPTIONAL CONDITION OCCURRED WHILE RECORDING A CLOSE. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was not sufficient storage available to continue processing.
User response: Increase the region size and rerun the job.

FPEC4100U  INSUFFICIENT STORAGE AVAILABLE FOR GTF RECORD WORKAREA

Explanation: There was not sufficient storage available to continue processing.
User response: Increase the region size and rerun the job.

FPEC4105U  EXCEPTIONAL PROCESSING CONDITION WHILE GENERATING RECORD PROCESSING LIST 2. VLIST RETURN CODE <V1>

Explanation: There was not sufficient storage available to continue processing.
• <V1> is the VLIST return code.
User response: Increase the region size and rerun the job.

FPEC4115U  INITIALIZATION FAILED FOR RECORD PROCESSING LIST 3. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was not sufficient storage available to continue processing.
User response: Increase the region size and rerun the job.
FPEC4120U • FPEC4210W

FPEC4120U  EXCEPTIONAL PROCESSING CONDITION WHILE GENERATING RECORD PROCESSING LIST 3. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was not sufficient storage available to continue processing.

User response: Increase the region size and rerun the job.

FPEC4135U  INITIALIZATION FAILED FOR RECORD PROCESSING LIST 4. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was not sufficient storage available to continue processing.

User response: Increase the region size and rerun the job.

FPEC4140U  EXCEPTIONAL PROCESSING CONDITION WHILE GENERATING RECORD PROCESSING LIST 4. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was not sufficient storage available to continue processing.

User response: Increase the region size and rerun the job.

FPEC4150E  TRACE RECORD COULD NOT BE CONVERTED FROM UNICODE TO EBCDIC. CONVERSION SERVICES MAY NOT BE INSTALLED CORRECTLY.

Explanation: A trace record from DB2 using Unicode strings was encountered and could not be converted to EBCDIC for further processing and presentation.

User response: Check that the z/OS Support for Unicode is installed correctly and provides conversions from CCSID 1208 to the destination EBCDIC CCSID.

FPEC4200E  OUT-OF-SEQUENCE RECORD FOUND. ACE ADDRESS: <V1> IFCID: <V2>

Explanation: PRESORTED has been specified in the GLOBAL command, but the input data set has not previously been sorted, and an out-of-sequence record has been detected.

• <V1> is the ACE address of the out-of-sequence record.
• <V2> is the IFCID of the out-of-sequence record.

User response: If this record is required, rerun the job without the PRESORTED option.

FPEC4205E  AN OUT-OF-SEQUENCE RECORD HAS BEEN FOUND

Explanation: PRESORTED (ENFORCE) has been specified on the GLOBAL command, but the input data set has not previously been sorted, and an out-of-sequence record has been detected. The processing is terminated.

User response: Do one of the following:
• Specify PRESORTED (ACCEPT) to ignore out-of-sequence records and rerun the job.
• Omit the keyword PRESORTED from the GLOBAL command and rerun the job.
• Sort the input data set before invoking DB2 PM and use the sorted data as input.

FPEC4210W  NUMBER OF OUT-OF-SEQUENCE RECORDS WAS <V1> <V2>

Explanation: GLOBAL PRESORTED (ACCEPT) has been specified, but out-of-sequence records were encountered in the input data.

• <V1> is the number of records discarded.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: Check the message log for details of the records discarded. If necessary, rerun the job without the PRESORTED option.

FPEC4215W  NUMBER OF OUT-OF-SEQUENCE RECORDS FOR IFCID <V1> WAS <V2>

Explanation: The program was executed specifying the GLOBAL PRESORTED(ACCEPT) option and out-of-sequence records were encountered. This message shows the number of out-of-sequence records of each IFCID which were encountered. It is recommended that the PRESORTED(ACCEPT) option is only used with the Accounting report set. Out-of-sequence records of other report sets are ignored, and the integrity of the output may be in doubt.

A record is out of sequence if its key (location, timestamp) is less than that of the record with the highest key already processed.

• <V1> is the IFCID.
• <V2> is the number of out-of-sequence records.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.
User response: When running accounting, no response is necessary. If the ignored out-of-sequence records were required by the report set you requested, rerun the job specifying PRESORTED(NO).

FPEC5000E  MERGE PROCESSING PHASE HAS BEEN UNSUCCESSFUL
Explanation: The merge processing phase did not complete successfully.
User response: Check for messages detailing the problem.

FPEC5001E  MERGE PROCESSING INITIALIZATION FAILED FOR <V1>
Explanation: The initialization of merge processing failed for the specified report set.
  • <V1> is the name of the report set.
User response: Check for messages detailing the problem.

FPEC5002E  <V1> FAILED DURING THE MERGE PROCESSING PHASE
Explanation: The merge processing phase of the specified report set failed. Processing terminates at the end of the merge processing phase or after the merge processing phases of other report set specifications, if present in the job.
  • <V1> is the name of the report set.
User response: Check for messages detailing the problem. If the problem recurs, contact IBM support.

FPEC5003I  MERGE PROCESSING TERMINATION FAILED FOR <V1>
Explanation: The termination of merge processing failed for the specified report set. Processing continues.
  • <V1> is the name of the report set.
User response: Check for messages detailing the problem.

FPEC6000E  REPORT PROCESSING PHASE HAS BEEN UNSUCCESSFUL
Explanation: The report processing phase did not complete its function successfully.
User response: Check for messages detailing the problem.

FPEC6001E  REPORT PROCESSING INITIALIZATION FAILED FOR <V1>
Explanation: The initialization of report processing failed for the specified report set.
  • <V1> is the name of the report set.

User response: Check for messages detailing the problem.

FPEC6002E  <V1> FAILED DURING THE REPORT PROCESSING PHASE
Explanation: The report processing phase of the specified report set failed. Processing terminates at the end of the report processing phase or after the report processing phases of other report set specifications, if present in the job.
  • <V1> is the name of the report set.
User response: Check for messages detailing the problem.

FPEC6003I  REPORT PROCESSING TERMINATION FAILED FOR <V1>
  • <V1> is the name of the report set.
User response: Check for messages detailing the problem.

FPEC6005S  AN ERROR OCCURRED WHILE READING THE RESTORE FILE <V1>, VSAM RETURN CODE <V2>, REASON CODE <V3>
Explanation: None.
  • <V1> is the name of the RESTORE file.
  • <V2> is the VSAM return code.
  • <V3> is the reason code.
User response: See the appropriate VSAM documentation.

FPEC6010S  OPEN FAILED FOR SAVE FILE <V1>, DDNAME IN USE
Explanation: A ddname is specified twice (or more) with conflicting purposes.
  • <V1> is the name of the Save File data set.
User response: Correct the JCL and rerun the job.

FPEC6011S  OPEN FAILED FOR SAVE FILE <V1>
Explanation: An error occurred when opening a data set. The data set exists, but could not be opened.
  • <V1> is the name of the Save File data set.
User response: See the previous messages detailing the problem.

FPEC6012S  THE INITIAL WRITE TO THE SAVE FILE <V1> FAILED. VSAM RETURN CODE <V2>, REASON CODE <V3>
Explanation: An internal processing error occurred during execution.
• `<V1>` is the ddname for the Save data set.
• `<V2>` is the VSAM return code.
• `<V3>` is the VSAM reason code.

User response: See the appropriate VSAM documentation.

**FPEC9101S** `<V1>` `<V2>` USER-TAILORED LAYOUT `<V3>` COULD NOT BE FOUND, AND IS NOT A RECOGNIZED DEFAULT LAYOUT

Explanation: The user-tailored layout specified does not exist in your DPMPARMS data set.
• `<V1>` is the name of the report set.
• `<V2>` is the function.
• `<V3>` is the layout name.

User response: Ensure the layout is copied to the DPMPARMS data set.

**FPEC9102S** `<V1>` `<V2>` DEFAULT LAYOUT `<V3>` COULD NOT BE FOUND WITH THE EXPECTED LOAD MODULE NAME OF `<V4>`

Explanation: None.
• `<V1>` is the name of the report set.
• `<V2>` is the function.
• `<V3>` is the layout name.
• `<V4>` is the load module name.

User response: See your system programmer.

**FPEC9103S** `<V1>` `<V2>` LAYOUT `<V3>` REQUIRES A MINIMUM PAGE SIZE OF `<V4>`, THE GLOBAL PAGESIZE IS `<V5>`

Explanation: None.
• `<V1>` is the name of the report set.
• `<V2>` is the function.
• `<V3>` is the layout name.
• `<V4>` is the global page size required.
• `<V5>` is the current global page size.

User response: Either tailor the layout to use less space, or increase the global page size.

**FPEC9104S** MEMBER `<V1>` APPEARS IN DPMPARMS, BUT IS NOT A VALID USER-TAILORED LAYOUT

Explanation: The member `<V1>` was not generated using the UTR feature, and cannot be used.

User response: Generate the layout using UTR.

**FPEC9105S** MEMBER `<V1>` IS A CORRUPT USER-TAILORED LAYOUT

Explanation: The member `<V1>` has been edited outside the UTR feature.

User response: Re-create the layout using UTR.

**FPEC9106S** UNABLE TO ALLOCATE STORAGE TO PERFORM USER-TAILORED REPORTING

Explanation: There was insufficient storage available to continue processing.

User response: Increase the region size and rerun the job.

**FPEC9107S** UNABLE TO ACCESS THE DPMPARMS PDS DIRECTORY WHEN SEARCHING FOR A USER-TAILORED LAYOUT

Explanation: This is an I/O problem.

User response: See the previous messages detailing the problem.

**FPEC9108S** MEMBER `<V1>` COULD NOT BE READ FROM THE DPMPARMS PDS

Explanation: This is an I/O problem.
• `<V1>` is the DPMPARMS member name.

User response: See the previous messages detailing the problem.

**FPEC9109S** MEMBER `<V1>` COULD NOT BE READ FROM THE DPMPARMS PDS

Explanation: This is an I/O problem.
• `<V1>` is the DPMPARMS member name.

User response: See the previous messages detailing the problem.

**FPEC9110S** `<V1>` `<V2>` DEFAULT LAYOUT `<V3>` CANNOT BE LOADED BECAUSE LOAD MODULE NAME `<V4>` DOES NOT BELONG TO THE CURRENT PRODUCT VERSION

Explanation: A default layout from an earlier version was detected.
• `<V1>` is the name of the report set.
• `<V2>` is the function.
• `<V3>` is the layout name.
• `<V4>` is the load module name.

User response: Use one of the default layouts supplied with this product.

**FPEC9200I** `<V1>` REDUCE COMPLETED.

Explanation: None.
• `<V1>` is the name of the report set.
FPEC9201I • FPEE0918W

User response: None.

FPEC9201I  <V1> REDUCE COMPLETED. NO DATA WAS REDUCED

Explanation: None.
• <V1> is the name of the report set.

User response: None.

FPEC9203E  DPM0 CONVERSION FAILED. IFCID CONTAINS INVALID DATA. CORRUPTED RECORD IS DISCARDED FROM FURTHER PROCESSING. REASON CODE: <V1>

Explanation: An input record contains incorrect data. This input record is discarded from further processing. The corresponding subsystem ID and the record timestamp are included in your JOBSUMDD.
• <V1> is the reason code

User response: Check whether your input data is damaged. For example, transmission errors might be the reason for damaged input data. If possible, recollect the data.
If the error remains, specify ERRDMPDD in your Job to collect the corrupted input data in a service dataset. For further details, see Reporting Command Reference.
If the problem persists, contact IBM support.

FPEE - Exception Processing messages

FPEE0001E  EXCEPTION PROCESSING TERMINATED ABNORMALLY. INTERNAL ERROR IN MODULE <V1>, ERROR CODE <V2>

Explanation: An internal processing condition occurred during execution.
• <V1> is the name of the module.
• <V2> is the error code.

User response: Rerun the job. If the problem recurs, contact IBM support and quote the error code.

FPEE0012E  FILE RECORD WAS NOT WRITTEN, DDNAME = <V1>, RETURN CODE = <V2>

Explanation: An attempt to write an exception file record failed.
• <V1> is the ddname for which the failure occurred.
• <V2> is the return code.

User response: Check that the DD statement for the ddname is valid, and that there is sufficient space available.

FPEE0014I  EXCEPTIONS LOG FILE COMPLETE. <V1> RECORDS WRITTEN TO DDNAME <V2>

Explanation: Exception log file processing is completed.
• <V1> is the number of records written.
• <V2> is the ddname to which the records were written.

User response: None.

FPEE0600S  EXCEPTIONAL CONDITION OCCURRED WHILE PROCESSING EXCEPTIONS. LIST STORAGE ALLOCATION FAILED

Explanation: Not enough storage was available to continue exception processing.

User response: Increase the region size.

FPEE0610S  EXCEPTIONAL CONDITION OCCURRED WHILE PROCESSING EXCEPTIONS. LIST STORAGE RELEASE FAILED

Explanation: An error occurred when attempting to release storage.

User response: Rerun the job. If the problem recurs, contact IBM support.

FPEE0915W  ERROR ATTEMPTING TO ALLOCATE OR OPEN THE <V1> DATA SET.

Explanation: The indicated data set could not be allocated or opened for exception processing. Possible reasons are:
• The data set does not exist.
• The OMEGAMON Collector is not authorized to access the data set.
• The data set has wrong LRECL or RECFM definitions.

User response: Verify the indicated reasons, correct them, and rerun the job. If the problem recurs, contact IBM support.

FPEE0918W  THRESHOLD FIELD <V1> IS IN ERROR. EVENT <V2> IS INVALID

Explanation: The field name entered in the exception threshold data set is not valid.
• <V1> is the threshold field.
• <V2> is the event.

User response: Correct the field in the exception threshold data set and rerun the job.
FPEE0919W • FPEE0928W

FPEE0919W  THRESHOLD FIELD <V1> IS IN ERROR. THE FIELD IS NOT VALID FOR ENVIRONMENT <V2>

Explanation: The field name entered in the exception threshold data set is not valid for this environment.
•  <V1> is the threshold field.
•  <V2> is the environment.

User response: Edit the field in the exception threshold data set and rerun the job.

FPEE0920W  THRESHOLD FIELD <V1> IS IN ERROR. THE FIELD NAME IS INVALID

Explanation: The field name entered in the exception threshold data set has invalid syntax.
•  <V1> is the threshold field.

User response: Correct the field in the exception threshold data set and rerun the job.

FPEE0921W  THRESHOLD FIELD <V1> IS IN ERROR. FIELD <V2> IS INVALID FOR THIS RELEASE OF DB2

Explanation: The field name entered is not valid for any release of DB2.
•  <V1> is the threshold field.
•  <V2> is the threshold field.

User response: Remove the field from the exception threshold data set.

FPEE0922W  THRESHOLD FIELD <V1> IS IN ERROR. FIELD IS INVALID FOR EVENT <V2>

Explanation: The field name entered in the exception threshold data set is not valid for the event specified.
•  <V1> is the threshold field.
•  <V2> is the event.

User response: Change the field name or the event in the exception threshold data set.

FPEE0923W  THRESHOLD FIELD <V1> IS IN ERROR. NUMERIC VALUE <V2> NOT VALID

Explanation: A not valid numeric value has been specified for this field in the exception threshold data set.
•  <V1> is the threshold field.
•  <V2> is the numeric value.

User response: Change the value or remove the field from the exception threshold data set.

FPEE0924W  THRESHOLD FIELD <V1> IS IN ERROR. OPERATOR <V2> IS INVALID

Explanation: A not valid operator has been specified for this field in the exception threshold data set.
•  <V1> is the threshold field.
•  <V2> is the invalid operator.

User response: Change the specified operator or remove the field from the exception threshold data set.

FPEE0925W  THRESHOLD FIELD <V1> IS IN ERROR. FIELD CANNOT BE QUALIFIED

Explanation: The field can be qualified, but the buffer, DDF, or package qualifier has an incorrect format.
•  <V1> is the threshold field.

User response: Change the qualifier or remove the field from the exception threshold.

FPEE0926W  THRESHOLD FIELD <V1> IS IN ERROR. QUALIFIER <V2> IS NOT VALID

FPEE0927W  THRESHOLD FIELD <V1> IS IN ERROR. TIME VALUE <V2> IS INVALID

Explanation: A not valid time value has been specified for this field in the exception threshold data set.
•  <V1> is the threshold field.
•  <V2> is the invalid time value.

User response: Change the value or remove the field from the exception threshold data set.

FPEE0928W  THRESHOLD FIELD <V1> IS IN ERROR. TIME VALUE IS NOT VALID FOR THIS FIELD

Explanation: A time value was entered, but the field does not have a time format.
•  <V1> is the threshold field.

User response: Correct the format or remove the field from the exception threshold data set.

Chapter 9. Messages 4915
FPEF - Interactive Report Facility messages

FPEF000  This command is not recognized
Explanation: A not valid command was entered on the command line or via a function key.
User response: Enter a valid command.

FPEF001  This command does not accept parameters
Explanation: The command entered on the command line or via a function key does not accept parameters, but parameters were supplied.
User response: Correct the input.

FPEF002  This command accepts only a single parameter
Explanation: The command entered on the command line or via a function key only accepts one parameter, but more than one was supplied.
User response: Correct the input.

FPEF003  This command requires parameters
Explanation: The command entered on the command line or via a function key required parameters, but none were supplied.
User response: Correct the input.

FPEF004  <V1> command not valid in this panel
Explanation: The command entered on the command line is not valid in this panel.
• <V1> is the command.
User response: Enter a valid command.

FPEF005  Enter a value for Location or Group
Explanation: Both LOCATION and GROUP fields are blank.
User response: Enter a value in either or both fields.

FPEF009  Command generation already in progress in this ISPF logical screen
Explanation: An attempt was made to perform IRF selections, but the function was already active on this ISPF logical screen. You can have only one IRF selection function active on a logical screen at a time.
User response: Close the application. If the problem recurs, terminate the ISPF logical screen.

FPEF010  Enter a / or <V1> to select
Explanation: A value other than a / or a country-designated character was used in the field at the cursor position.
• <V1> is the country-designated character.
User response: Enter a / or the country-designated character to select.

FPEF011  Enter one of the listed values
Explanation: A not valid value was entered in the field at the cursor position, and adjacent to the message.
User response: Enter a value from the list displayed in the panel.

FPEF012  Field must be completed
Explanation: The field at the cursor position must be completed.
User response: Enter a value for the field.

FPEF013  Prompt is not available for this field
Explanation: The PROMPT command is not valid for the field at the cursor position.
User response: Valid options can be determined using the HELP command.

FPEF014  This is not a valid data set name
Explanation: A data set name qualifier must begin with an alphabetic character, @, #, or $. The remaining characters must be either alphanumeric or a hyphen (-).
User response: Enter a valid data set name.

FPEF015  This is not a valid value for this field
Explanation: The value entered in the field at the cursor position is not valid.
User response: Enter a valid value.

FPEF016  This value must be numeric
Explanation: The value entered in the field at the cursor position is not numeric.
User response: Enter a numeric value.

FPEF017  This value must be numeric in the range <V1> to <V2>
Explanation: The field at the cursor position contains a numeric value outside the valid range.
• <V1> is the lower limit.
• <V2> is the upper limit.

User response: Enter a numeric value in the valid range.

FPEF018 This is not a valid name
Explanation: A name must begin with an alphabetic character, @, #, or $. The remaining characters must be alphanumeric.

User response: Enter a valid name.

FPEF019 Enter 1 for yes or 2 for no
Explanation: A value other than 1 or 2 was used in the field at the cursor position.

User response: Enter 1 or 2.

FPEF020 Enter a / or <V1> to select one or more items from the list
Explanation: A value other than / or a country-designated character was used in the field at the cursor position.

User response: Enter a / or a country-designated character to select.

FPEF021 Enter a / or <V1> to select, or overtype with space to delete
Explanation: A value other than / or a country-designated character was used in the field at the cursor position.

User response: Enter a / or a country-designated character to select.

FPEF022 No Type matches this value. Valid types are IRLMREQ, CLAIMREQ, DRAINREQ, PLOCKREQ, IRLMSUSP, DRAINSUSP, LATCHSUSP, IRLMRFS, DRAINRES, LATCHRES, TIMEOUT, DEADLOCK, LOCKSUMMARY, and LOCKA VOID
Explanation: A value other than those listed in the message was used in the field at the cursor position.

User response: Enter a correct value.

FPEF023 Enter a / or <V1> to browse or edit extension information
Explanation: A value other than / or a country-designated character was used in the field at the cursor position.

User response: Enter a / or a country-designated character to select.
FPEF031 • FPEF046

FPEF031 No Thread Type matches this field value. Valid Thread Types are ALLIED, ALLIED_DIST, and DBA
Explanation: The thread type entered does not match any valid thread type.
User response: Enter a correct value.

FPEF032 Both value 1 and value 2 are specified - either set type to 3 or remove value 2
Explanation: Because range values have been entered, type should not be entered.
User response: Either set type to 3 or remove the range value 2.

FPEF033 This value must be hexadecimal representation (0-9, a-f)
Explanation: The field at the cursor position must contain a character representation of a hexadecimal value. Valid characters are 0 to 9 and A to F.
User response: Correct the input.

FPEF034 This value must have a length of <V1> exactly
Explanation: The field at the cursor position must contain a set number of characters.
• <V1> is the required number of characters.
User response: Correct the input.

FPEF035 The maximum length for this value is <V1>
Explanation: The field at the cursor position contains an entry that is too long.
• <V1> is the maximum number of characters.
User response: Correct the input.

FPEF036 Generic * is not allowed with Group and List names
Explanation: You cannot use the generic form (*) in GROUP or LIST names.
User response: Correct the input.

FPEF037 Group and List values must start with a character (A-Z)
Explanation: None.
User response: Correct the input.

FPEF038 Generic * can only suffix a range value
Explanation: For ranges, the generic character * can only be the last character. For example, ABC* is valid; AB*D is not.
User response: Correct the input.

FPEF039 The TO range must be greater than the FROM range
Explanation: None.
User response: Correct the input.

FPEF040 Year must be numeric in the range 0 to 99
Explanation: None.
User response: Enter a correct value.

FPEF041 Month must be numeric in the range 1 to 12
Explanation: None.
User response: Enter a correct value.

FPEF042 Day must be numeric in the range 1 to 31
Explanation: None.
User response: Enter a correct value.

FPEF043 Hours must be numeric in the range 0 to 23
Explanation: None.
User response: Enter a correct value.

FPEF044 Minutes must be numeric in the range 0 to 59
Explanation: None.
User response: Enter a correct value.

FPEF045 Seconds must be numeric in the range 0 to 59
Explanation: None.
User response: Enter a correct value.

FPEF046 Fractions must be numeric in the range 0 to 99
Explanation: None.
User response: Correct the input.
FPEF047  Timezone adjustment sign must be + or -.
Explanation:  None.
User response:  Correct the input.

Explanation:

FPEF048  Minutes must be numeric in the range 00 to 59
Explanation:  None.
User response:  Enter a correct value.

FPEF049  Specify the FROM range
Explanation:  None.
User response:  Enter the FROM range.

FPEF051  The day value is invalid for this month and year combination
Explanation:  None.
User response:  Enter a valid day, month, and year combination.

FPEF052  The end date must be later than or equal to the start date
Explanation:  None.
User response:  Change the start date or end date to comply.

FPEF053  The end time must be later than or equal to the start time
Explanation:  None.
User response:  Change the start time or end time to comply.

FPEF054  The end date and time must be later than or equal to the start date and time
Explanation:  None.
User response:  Change the start date and time or end date and time to comply.

FPEF055  When NONE is selected, other selections are not valid. Either delete NONE or delete all remaining selections
Explanation:  None.
User response:  Delete NONE or delete all remaining selections.

FPEF056  The maximum length for the location id part of package name is 16. Package name comprises location.collection.package
Explanation:  The maximum length of the location ID exceeds 16 characters.
User response:  Enter a location ID up to 16 characters in length.

FPEF057  The maximum length for the collection id part of package name is 18. Package name comprises location.collection.package
Explanation:  The maximum length of the collection ID exceeds 18 characters.
User response:  Enter a collection ID up to 18 characters in length.

FPEF058  The maximum length for the package id part of package name is 18. Package name comprises location.collection.package
Explanation:  The maximum length of the package ID exceeds 18 characters.
User response:  Enter a package ID up to 18 characters in length.

FPEF059  Package name can only be comprised of 3 parts: location id, collection id, and package id
Explanation:  None.
User response:  Correct the input.

FPEF060  <V1>
Explanation:  This message is returned by the LMINIT service of ISPF/PDF Library Access Services or the LISTDSI function of TSO/E. The message can be accompanied by other messages.
•  <V1> is the text of the message.
User response:  Correct the problem indicated by the message.

FPEF061  Data set organization must be partitioned
Explanation:  A not valid data set was specified when saving or recalling IRF selections. The data set was not partitioned.
User response:  Correct the data set specifications.
FPEF062  Data set must contain 80 byte fixed length records
Explanation: A not valid data set was specified when saving or recalling IRF selections. The specified data set does not contain 80-byte fixed length records.
User response: Correct the data set specification.

FPEF063  Data set is empty
Explanation: The data set specified when recalling IRF selections contains no data.
User response: Specify another data set.

FPEF064  Member not found
Explanation: The member specified in the recall request for IRF selections was not found.
User response: Correct the data set and member specifications.

FPEF065  The specified pattern produced no matching members
Explanation: A pattern with no matching members was specified when recalling IRF selections.
User response: Specify another pattern or member name.

FPEF066  Member does not contain a valid IRF selection table
Explanation: When recalling IRF selections, the selected member did not contain an IRF selection table.
User response: Correct the data set and member specifications.

FPEF067  Replacement canceled
Explanation: When saving IRF selections, a member name was specified that already existed, and the user requested that the member not be replaced.
User response: None.

FPEF068  Member name must be blank for a sequential data set
Explanation: When trying to save a job stream, a member name was specified for a sequential data set.
User response: Blank the member name.

FPEF069  Member name must be specified for partitioned data set
Explanation: When trying to save a job stream, a member name was not specified for a partitioned data set.
User response: Enter the member name.

FPEF070  Job stream replaced in <V1>
Explanation: The job stream was successfully saved to an existing data set. The previous contents were replaced.
• <V1> is the name of the data set where the job stream was replaced.
User response: None.

FPEF071  Job stream saved into <V1> has failed
Explanation: Job stream save or replace function failed. This is typically accompanied by other messages indicating the problem.
• <V1> is the name of the data set where the job stream was being saved.
User response: Correct the problems indicated by the accompanying messages.

FPEF072  Job stream saved into <V1>
Explanation: The job stream was successfully saved.
• <V1> is the name of the partitioned data set.
User response: None.

FPEF073  IRF selection <V1> recalled from <V2>
Explanation: IRF selections were successfully recalled.
• <V1> is the name of the member that contained the selections.
• <V2> is the name of the data set that contained the selections.
User response: None.

FPEF074  IRF selection <V1> saved into <V2>
Explanation: IRF selections were successfully saved into a PDS member.
• <V1> is the name of the member.
• <V2> is the name of the partitioned data set.
User response: None.

FPEF075  IRF selection <V1> replaced in <V2>
Explanation: IRF selection was successfully saved to an existing data set. The previous member contents were replaced.
• <V1> is the name of the member where the selections were replaced.
• <V2> is the name of the data set where the selections were replaced.
User response: None.

FPEF091  <V1>
Explanation: An error occurred while trying to view the command stream.
User response: Correct the problem indicated by the ISPF message.

FPEF092  There is nothing to BROWSE for the selection
Explanation: There is no data available for the BROWSE command to process.
User response: Ensure that selections or entries have been made before using the BROWSE command.

FPEF093  Job submission has been successful
Explanation: The job has been successfully submitted in background execution mode.
User response: None.

FPEF094  Job submission has failed
Explanation: The job submission in background execution mode has not been successful. This message is preceded by one or more TSO/E messages.
User response: See z/OS TSO/E Messages for an explanation of the TSO/E messages. Correct the problem indicated by the TSO/E messages.

FPEF095  '*' is not permitted for this function
Explanation: None.
User response: Correct the input.

FPEF100  Groups are not allowed for this identifier
Explanation: The identifier supplied cannot be used in a GROUP specification.
User response: Use a valid identifier in the GROUP specification.

FPEF101  Lists are not allowed for this identifier
Explanation: The identifier supplied cannot be used in a LIST specification.
User response: Use a valid identifier in the LIST specification.

FPEF102  Groups are not allowed within Groups
Explanation: None.
User response: Correct the input.

FPEF103  You cannot add and select or delete entries at the same time
Explanation: None.
User response: Correct the input.

FPEF104  Identifiers have been repeated
Explanation: More than one specification of the same identifier has been used.
User response: Correct the input.

FPEF105  Location must be alphanumeric beginning with an alphabetic character
Explanation: A not valid location was specified.
User response: Correct the input.

FPEF106  Select numbers from the code list
Explanation: None.
User response: Select a code from the list shown.

FPEF107  Utility allows only one group of up to three order selections. Use Order 1 only
Explanation: The Utility Activity report set only allows the first group of identifiers to be selected.
User response: Specify up to three identifiers in the Order 1 row only.

FPEF110  This file cannot be directed to the terminal
Explanation: VSAM or partitioned data sets cannot be directed to the terminal.
User response: Correct the data set information.

FPEF111  This file cannot be directed to SYOUT
Explanation: Input, VSAM, or partitioned data sets cannot be directed to SYSOUT.
User response: Correct the data set information.

FPEF112  This file cannot be set to DUMMY
Explanation: DUMMY cannot be specified for VSAM or partitioned data sets.
User response: Correct the data set information.

FPEF113  DUMMY cannot be part of concatenated data sets
Explanation: DUMMY cannot be concatenated with other data sets.
User response: Do not include DUMMY as a specified data set for concatenation.

FPEF114 This DDNAME cannot have concatenated data sets
Explanation: You cannot concatenate output or VSAM data sets.
User response: Specify only one data set for this ddname.

FPEF115 This is not in valid JCL format
Explanation: A JCL syntax error has been detected.
User response: Correct the input.

FPEF116 Extension information exists. You cannot remove the first line
Explanation: Multiple data set information lines exist. Data set information must be present on the first line.
User response: Either erase all lines or add information on the first line.

FPEF117 Extension information exists. Not all lines are in the same format
Explanation: Multiple data set information lines exist. The first data set information line has been changed into a different format. However, the subsequent lines are still in the original format.
User response: Either change the first line back into the original format, or change the subsequent lines into the same format as the first line.

FPEF119 Enter data set information before requesting extension data
Explanation: Extension information can only be requested in foreground if the data set information contains a data set name.
User response: Remove the select action code from the field or change the data set information to a data set name.

FPEF120 DDNAME could not be allocated
Explanation: The file could not be allocated. This message is preceded by TSO/E messages.
User response: See z/OS TSO/E Messages for an explanation of TSO/E messages.

FPEF121 DDNAME SYSIN could not be allocated
Explanation: The SYSIN file containing the command stream could not be allocated. This message is preceded by TSO/E messages. See z/OS TSO/E Messages for an explanation of TSO/E messages.
User response: Correct the error indicated by the TSO/E messages.

FPEF122 DDNAMEs could not be freed
Explanation: Files could not be freed.
User response: Correct the error indicated by the TSO/E messages and free the files.

FPEF123 DB2 PM has been executed. Return code was <V1>
Explanation: A foreground execution has completed its function.
• <V1> is the return code.
User response: None.

FPEF124 <V1>
Explanation: An error was detected when attempting to run the application in foreground execution mode. This message is preceded by TSO/E messages.
• <V1> is the text of the message.
User response: See z/OS TSO/E Messages for an explanation of TSO/E messages.

FPEF125 Data set <V1> is empty
Explanation: An attempt has been made to browse an output data set specified during foreground execution, which contains no data.
• <V1> is the name of the output data set.
User response: None.

FPEF126 Unable to browse data set. ISPF message is: <V1>
Explanation: An error occurred while attempting to browse the data set.
• <V1> is the text of the ISPF message.
User response: Correct the error indicated by the ISPF message.

FPEF127 Performance Expert has been invoked - please stand by
Explanation: The application is started in foreground execution mode.
User response: None.
FPEF128 • FPEF150

FPEF128  This information format cannot have extension information.
Explanation: An attempt has been made to specify extension information for an output data set in foreground mode. Only input data sets can have extension information.
User response: Correct the input.

FPEF130  <V1> is not a valid action code. Valid codes are: I, <V2>, I, R, D, C, M, A, and B.
Explanation: An action code other than those listed was used.
• <V1> is the invalid action code.
• <V2> is the country-designated character.
User response: Use a valid action code.

FPEF131  <V1> is not a valid action code. Valid codes are: I, R, D, C, M, A, and B.
Explanation: An action code other than those listed was used.
• <V1> is the invalid action code.
User response: Use a valid action code.

FPEF132  Use I action code to insert rows. Use Insert only when no rows exist.
Explanation: None.
User response: Use I to insert rows.

FPEF133  Invalid SORT column specified.
Explanation: None.
User response: Specify a valid sort column.

FPEF134  Invalid FIND command. Syntax: 'Find column argument (operator)'.
Explanation: None.
User response: Correct the syntax.

FPEF135  Invalid FIND column specified.
Explanation: None.
User response: Specify a valid find column.

FPEF136  Invalid FIND operator. Valid operators are: EQ, NE, LT, GE, GT, and LE.
Explanation: None.
User response: Specify a valid operator.

FPEF137  Move/Copy is pending. Complete MOVE or COPY command, or 'RESET' command.
Explanation: None.
User response: Complete the MOVE or COPY command or use RESET.

FPEF138  <V1> is not a valid line command. Either correct it or blank it out.
Explanation: None.
• <V1> is the invalid line command.
User response: Correct the input or blank it out.

FPEF140  Command conflict. Complete BLOCK command before entering other commands.
Explanation: None.
User response: Complete the BLOCK command.

FPEF141  BLOCK command has an invalid amount.
Explanation: None.
User response: Correct the input.

FPEF142  BLOCK command incomplete. Enter a matching command to complete the BLOCK command pair.
Explanation: None.
User response: Correct the input.

FPEF143  BLOCK command has an invalid numeric amount.
Explanation: None.
User response: Correct the input.

FPEF144  An RR command has an invalid amount.
Explanation: None.
User response: Correct the input.

FPEF150  REPLACE should not be specified without the TABLE command.
Explanation: REPLACE is a subcommand of TABLE. Therefore, REPLACE is meaningless unless you have specified TABLE as well.
User response: Specify REPLACE together with the TABLE command.
FPEF151 User ID should be 8 characters or less
Explanation: None.
User response: Specify USERID with a length of 8 characters or less.

FPEF152 Table name should be 10 characters or less
Explanation: None.
User response: Specify TABLE NAME with a length of 10 characters or less.

FPEF153 KEEPDICTIONARY should not be specified without the TABLE command
Explanation: KEEPDICTIONARY is a subcommand of TABLE. Therefore, KEEPDICTIONARY is meaningless unless you have specified TABLE as well.
User response: Specify KEEPDICTIONARY together with the TABLE command.

FPEF501 This character is invalid. Valid characters are A-Z, @, #, $, and *
Explanation: A not valid character has been entered at the cursor position. Valid characters are identified in the message text.
User response: Correct the input.

FPEF502 This character is invalid. Valid characters are A-Z, @, #, and $
Explanation: A not valid character has been entered at the cursor position. Valid characters are identified in the message text.
User response: Correct the input.

FPEF503 This character is invalid. Valid characters are A-Z, 0-9, @, #, $, _, –, and *
Explanation: A not valid character has been entered at the cursor position. Valid characters are identified in the message text.
User response: Correct the input.

FPEF504 No connection type matches this field value. Valid connection types are TSO, DB2CALL, CICS, DLI-BTCH, IMS-MFP, IMS-BMP, IMS-TBMP, IMS-CNTL, SYST-DIR, and APPL-DIR
Explanation: A not valid connection type has been entered. The valid connection types are identified in the message text.
User response: Correct the input.

FPEF505 Location name begins with a < and must end with a > or *
Explanation: Location names can be enclosed in ‘less than’ (<) and ‘greater than’ (>) symbols. The name at the cursor position did not end with a > or a *
User response: Correct the input.

FPEF506 This character is invalid. Valid characters are A-Z, @, #, $, <, and *
Explanation: A not valid character has been entered at the cursor position. Valid characters are identified in the message text.
User response: Correct the input.

FPEF507 This character is invalid. Valid characters are A-Z, 0-9, @, #, $, _, and –
Explanation: A not valid character has been entered at the cursor position. Valid characters are identified in the message text.
User response: Correct the input.

FPEF508 Location name begins with a < and must end with a >
Explanation: Location names can be enclosed in ‘less than’ (<) and ‘greater than’ (>) symbols. The name at the cursor position did not end with a >.
User response: Correct the input.

FPEF509 An * may not be followed by other characters
Explanation: An * can only appear on its own without any following characters.
User response: Correct the input.

FPEF510 This character is invalid. Valid characters are A-Z, 0-9, @, #, $, _, –, *, and .
Explanation: A not valid character has been entered at the cursor position. Valid characters are identified in the message text.
User response: Correct the input.

FPEF511 This character is invalid. Valid characters are A-Z, 0-9, @, #, $, <, and *
Explanation: A not valid character has been entered at the cursor position. Valid characters are identified in the message text.
User response: Correct the input.
This character is invalid. Valid characters are A-Z, 0-9, @, #, $, and *

Explanation: A not valid character has been entered at the cursor position. Valid characters are identified in the message text.

User response: Correct the input.

Editing already in progress in this ISPF logical screen

Explanation: An attempt was made to perform Data Set Maintenance, but the function was already active on this ISPF logical screen. You can have only one Data Set Maintenance selection function active on a logical screen at a time.

User response: Close, then restart the application. If the problem recurs, terminate the ISPF logical screen.

Member name should not be specified

Explanation: The correlation data set that is being used by Data Set Maintenance is sequential and does not require a member name.

User response: Correct the input.

Member name required when data set is partitioned

Explanation: The correlation data set which is being used by Data Set Maintenance is partitioned and requires a member name to be specified.

User response: Correct the input.

Data set must be partitioned

Explanation: The DPMPARMS data set must be partitioned.

User response: Correct the data set specification.

Data set record format must be fixed

Explanation: The correlation and DPMPARMS data sets must have fixed-length records.

User response: Correct the data set specification.

Data set record format must be variable

Explanation: The exception threshold data set must have variable-length records.

User response: Correct the data set specification.

An error occurred while updating the data set. ISPF message is: <V1>

Explanation: An unexpected error occurred when updating the data set. This can be accompanied by other messages.

User response: Correct the condition indicated by the other messages and try again.

Member is being updated by you or another user

Explanation: None.

User response: Wait until the member is available.

Offset field must be numeric in the range of 0 to 11

Explanation: None.

User response: Correct the input.

Length field must be numeric in the range of 1 to 8

Explanation: None.

User response: Correct the input.

Length value required when offset is specified

Explanation: None.

User response: Correct the input.

Offset value required when length is specified

Explanation: None.

User response: Correct the input.

Sum of offset and length cannot exceed 12 bytes

Explanation: None.

User response: Correct the input.

</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>FPEF993</th>
<th>The RKO2EXEC library is not available</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explanation:</strong></td>
<td>The RKO2EXEC library has not been allocated to either the SYSEXEC or SYSPROC files. This problem should only occur in an MVS/XA environment.</td>
</tr>
</tbody>
</table>
User response: If your environment is MVS/XA, ensure that the RKO2EXEC library (or its contents) is available in either the SYSEXEC or SYSPROC files. If your environment is not MVS/XA, then the FPEJINIT EXEC has been incorrectly modified or the installation of OMEGAMON XE for DB2 PE is incomplete. See your system programmer for assistance.

FPEF994 The application profile pool is unusable
Explanation: The FPEFPROF member in your ISPF profile data set does not contain the name of the OMEGAMON XE for DB2 PE profile extension pool. This situation should only occur when the FPEFPROF member was created by an application other than OMEGAMON XE for DB2 PE, or the product version of the FPEFPROF has been corrupted.
User response: Delete the FPEFPROF member from your ISPF profile data set and then restart OMEGAMON XE for DB2 PE. If the problem recurs, contact IBM support.

FPEF995 Incompatible application profile pool detected
Explanation: The currently active OMEGAMON XE for DB2 PE profile extension pool is incompatible with the OMEGAMON XE for DB2 PE application being started. This can happen when ISPF opens profile extension pools in shared mode, so the first opened pool is used by all subsequent executions of OMEGAMON XE for DB2 PE. OMEGAMON XE for DB2 PE releases are only backward compatible, not forward compatible.
User response: Start the latest release level OMEGAMON XE for DB2 PE application first, then start other OMEGAMON XE for DB2 PE applications.

FPEI0006W   I/O ACTIVITY IS MISSING THE END RECORD FOR IFCID <V1>. EVENT IS ACTIVE LOG WRITE I/O

Explanation: The beginning of the active log Write I/O event was detected during I/O activity reduction, and no matching end event was found. The record is ignored.

User response: None.

FPEI0007W   I/O ACTIVITY IS MISSING THE END RECORD FOR IFCID <V1>. EVENT IS ARCHIVE LOG WRITE I/O

Explanation: The beginning of the archive log Write I/O event was detected during I/O activity reduction, and no matching end event was found. The record is ignored.

User response: None.

FPEI0008W   I/O ACTIVITY IS MISSING THE END RECORD FOR IFCID <V1>. EVENT IS ARCHIVE LOG READ I/O

Explanation: The beginning of the archive log Read I/O event was detected during I/O activity reduction, and no matching end event was found. The record is ignored.

User response: None.

FPEI0009W   I/O ACTIVITY IS MISSING THE END RECORD FOR IFCID <V1>. EVENT IS BSDS WRITE I/O

Explanation: The beginning of the BSDS Write I/O event was detected during I/O activity reduction, and no matching end event was found. The record is ignored.

User response: None.

FPEI0100S   THE SPECIFIED ORDERING SEQUENCE IS NOT SUPPORTED.

Explanation: If the ordering sequence contains PARTNBR together with other criteria the buffer pool report will only be ordered and created if PARTNBR is preceded by PAGESET.

User response: If PARTNBR is your favourite criteria then specify an order sequence that contains PAGESET before PARTNBR. Then rerun the job.

FPEI0600S   EXCEPTIONAL CONDITION OCCURRED WHILE PROCESSING I/O ACTIVITY. MAIN STORAGE ALLOCATION FAILED

Explanation: There was insufficient storage available to continue processing.

User response: Increase the region size and rerun the job.

FPEI0610S   EXCEPTIONAL CONDITION OCCURRED WHILE PROCESSING I/O ACTIVITY. MAIN STORAGE RELEASE FAILED

Explanation: An attempt to release main storage failed.

User response: Rerun the job. If the problem recurs, contact IBM support.

FPEI0750S   PUT FUNCTION FAILED ON DDNAME <V1> WHILE EXTERNALIZING REDUCED RECORDS

Explanation: An error occurred when writing records to the I/O activity REDUCE work data set.

User response: Check for system messages detailing the problem.

FPEI1241I   I/O ACTIVITY REDUCE COMPLETE

Explanation: I/O activity REDUCE processing is completed.

User response: None.

FPEI4000I   NO DATA TO REDUCE FOR I/O ACTIVITY

Explanation: There was no data available for the IOACTIVITY(REDUCE) subcommand.

User response: Check the INCLUDE/EXCLUDE and FROM/TO specifications in REDUCE and GLOBAL.

FPEI4500S   INITIALIZATION FAILED FOR I/O ACTIVITY LIST. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was insufficient storage available to continue processing.

User response: Increase the region size and rerun the job.
EXCEPTIONAL PROCESSING CONDITION WHILE GENERATING I/O ACTIVITY LIST. INSUFFICIENT STORAGE AVAILABLE

Explanation: There was insufficient storage available to continue processing.

  User response: Enter a valid value.

- **FPEJ001**  Invalid name - type up to 8 alphanumeric characters, the first of which must be alphabetic
  
  Explanation: The value entered into this field is not valid.
  
  User response: Enter an alphanumeric value with a length of up to 8 characters where the first character is alphabetic.

- **FPEJ002**  Invalid name - type up to 4 alphanumeric characters, the first of which must be alphabetic
  
  Explanation: The subsystem name is not valid.
  
  User response: Enter an alphanumeric value with a length of up to 4 characters where the first character is alphabetic.

- **FPEJ003**  Invalid data set name - type one or more qualifiers separated by periods. Each qualifier must be up to 8 alphanumeric characters, the first of which must be alphabetic
  
  Explanation: The load library data set name is not valid.
  
  User response: Enter a valid data set name into the field.

- **FPEJ004**  Use '/' to select this option
  
  Explanation: The option was selected using a character other than a slash (/).
  
  User response: Enter a slash (/) to select the option or leave the selection field blank.

- **FPEJ007**  User requested CANCEL - no customization values have been saved
  
  Explanation: The customization dialog was canceled by the user. The customization values remain unchanged.
  
  User response: None.

- **FPEJ008**  Customization values have been saved
  
  Explanation: The previous customization values have been replaced.
  
  User response: None.

- **FPEJ009**  ISPF encountered an error performing a <V1> on the profile pool extension table <V2> in the data set <V3>. The return code was <V4>. The ISPF message was <V5>
  
  Explanation: An unexpected ISPF error occurred.
  
  - <V1> is the name of the ISPF function.
  - <V2> is the name of the table.
  - <V3> is the name of the data set where the table resides.
  - <V4> is the return code.
  - <V5> is the associated ISPF error message.
  
  User response: Ensure that you are authorized to update the data set and try again. If the problem recurs, contact IBM support.

- **FPEJ010**  The command that was entered is not recognized
  
  Explanation: The customization dialog could not recognize the command entered.
  
  User response: Enter a valid command.

- **FPEJ011**  The indicated value has an incorrect number of decimal digits
  
  Explanation: The value typed into the field is not valid.
  
  User response: Enter a valid value.

- **FPEJ012**  The indicated value is not acceptable because it is higher than the maximum permitted or negative
  
  Explanation: The value typed into the field is not valid.
User response: Enter a valid value.

FPEJ013 The indicated value is not acceptable because it is not numeric
Explanation: The value typed into the field is not valid.
User response: Enter a valid numeric value.

FPEJ014 The Diagnosis Rules of Thumb have not been saved
Explanation: The user canceled the diagnosis rules of thumb dialog but not the whole customization dialog. All customization values except for the diagnosis rules of thumb have been replaced.
User response: None.

FPEJ015 ISPF encountered an error performing a <V1> on the profile pool extension table (<V2>) in the data set <V3>. The return code was <V4>. The ISPF message was <V5>. The parameters have not been saved
Explanation: An unexpected ISPF error has occurred.
  • <V1> is the name of the ISPF function.
  • <V2> is the name of the table.
  • <V3> is the name of the data set where the table resides.
  • <V4> is the return code.
  • <V5> is the ISPF message.
User response: Ensure that you are authorized to update the data set and try again.

FPEJ016 The Diagnosis Rules of Thumb have been saved
Explanation: The previous rules-of-thumb values have been replaced.
User response: None.

FPEJ017 The customization values have not been changed
Explanation: You have not changed the customization values.
User response: None.

FPEJ019 The <V1> module call was with the wrong key <V2>
Explanation: You have invoked the OMEGAMON XE for DB2 PE activation module using a not valid key.
  • <V1> is the name of the module invoked.
  • <V2> is the key passed to the module.
User response: Invoke the OMEGAMON XE for DB2 PE activation module using the same key as provided in the exec procedure on the SMPE tape.

FPEJ020 Dynamic allocation of SYSIN work data set failed. RC <V1>. The Performance Expert Try mode is not activated
Explanation: The OMEGAMON XE for DB2 PE activation module tries to dynamically allocate a temporary data set to ddname SYSIN with disposition NEW. The MVS service returns with a bad return code. The activation module terminates. No action is performed.
  • <V1> is the return code.
User response: Ensure that standard dynamic allocation within a program works and that SYSIN can be used as ddname.

FPEJ021 Dynamic allocation of DB2 PE load library <V1> failed. RC <V2>. The Performance Expert Try mode is not activated
Explanation: The OMEGAMON XE for DB2 PE activation module tries to dynamically allocate the OMEGAMON XE for DB2 PE load library to ddname SYSLIB with disposition SHR. The MVS service returns with a bad return code. The activation module terminates. No action is performed.
  • <V1> is the name of the load library.
  • <V2> is the return code.
User response: Ensure that you enter the invocation exec fully qualified and that the OMEGAMON XE for DB2 PE load library has the same high-level qualifiers as the invocation exec.

FPEJ022 The module containing the Try program authorization has been corrupted. The Performance Expert Try mode of is not activated
Explanation: The data on the activation module controlling the try mode is different from the data on the delivery tape. No action is performed.
User response: Reinstall the product.

FPEJ023 The update of DB2 Performance Expert load library <V1> failed. The Performance Expert Try mode is not activated
Explanation: A fatal error has occurred. The reason of the failure is reported by one or more preceding MVS system messages.
  • <V1> is the name of the load library.
User response: Ensure that OMEGAMON XE for DB2 PE is installed properly as described in the program directory. Resolve the reason of the failure following the advise of the MVS system messages.
| FPEJ024 | The Performance Expert Try mode has already been activated |
| Explanation: The mask for the try mode has already been set by an earlier execution of this exec. No action is performed. |
| User response: If OMEGAMON XE for DB2 PE functions can no longer be processed because the try time has ended, contact the person responsible for ordering OMEGAMON XE for DB2 PE. |

| FPEJ025 | Open, Write, or Close to SYSIN work data set failed. RC <V1>. The Performance Expert Try mode is not activated |
| Explanation: When trying to write to the temporary data set allocated to ddname SYSIN, the MVS data access services reported an error, which is indicated by the return code. No action is performed. |
| User response: Correct the error that caused the MVS access services failure. |

| FPEJ029 | The Performance Expert Try mode has been successfully activated |
| Explanation: You have set the try mode of OMEGAMON XE for DB2 PE. All functions are available until the end of the try time. |
| User response: None. |

| FPEJ030 | The unit group name has been successfully changed to <V1> |
| Explanation: None. |
| User response: None. |

| FPE0750S | PUT FUNCTION FAILED ON DDNAME <V1> WHILE EXTERNALIZING REDUCED RECORDS |
| Explanation: An error occurred when writing records to the locking REDUCE work data set. |
| User response: Check for system messages detailing the problem. |

| FPE1241I | LOCKING REDUCE COMPLETE |
| Explanation: Locking REDUCE processing is completed. |
| User response: None. |

| FPE1245I | LOCKING <V1> COMPLETE. <V2> RECORDS WRITTEN TO DDNAME <V3> |
| Explanation: Locking function is completed. |
FPEL1246S • FPEL1247S

- <V1> is the function type.
- <V2> is the number of records written.
- <V3> is the ddname to which the records are written.

User response: None.

FPEL1246S UNSUCCESSFUL ATTEMPT WRITING TO FILE DATA SET FOR LOCKING

Explanation: An error occurred when writing to the File data set.
User response: Check for system messages detailing the problem.

FPEL1247S UNSUCCESSFUL ATTEMPT WRITING TO THE SPREADSHEET DATA SET OF LOCKING

Explanation: An error occurred when writing to the SPREADSHEET data set.
User response: Check for system messages in DPMLOG detailing the problem.

FPEL4000I NO DATA TO PROCESS FOR LOCKING

FPEM - Online Monitor messages

FPEM0005W Data not available. Monitor trace may not be active

Explanation: The DB2 monitor trace might not be active for the DB2 subsystem to which you are currently connected. Monitor trace class 1 must be active for the Online Monitor to operate successfully.
User response: If the monitor trace is not active, start the monitor trace. Class 1 is required; classes 2 and 3 are optional.

FPEM001 <V1> command not valid in this panel. Valid commands are DB2, COLLECT, LOOK, REINIT, OPTIONS, and HISTORY

Explanation: The command you entered is not available in the current panel.
- <V1> is the command you entered.
User response: Enter one of the following commands:
  DB2 To enter a DB2 command
  COLLECT To display the Report Data menu
  LOOK To display the Look Selections menu
  REINIT To restart the exception processor
  OPTIONS To set default options
  HISTORY To display HISTORY status or invoke HISTORY mode.

FPEM002 Unrecognized command. Valid commands for this panel are DB2, COLLECT, LOOK, REINIT, OPTIONS, and HISTORY

Explanation: The command you entered could not be recognized.
User response: Enter one of the following commands:
  DB2 To enter a DB2 command
  COLLECT To display the Report Data menu
  LOOK To display the Look Selections menu
  REINIT To restart the exception processor
  OPTIONS To set default options
  HISTORY To display HISTORY status or invoke HISTORY mode.

FPEM003 Jump selection <V1> is not valid. Enter a valid selection

Explanation: The menu selection you entered was not valid.
- <V1> is the jump selection you entered.
User response: Correct the input.

FPEM004 Enter a valid selection

FPEM005W FPEM - Online Monitor messages
Explanation: The menu selection you entered was not valid.
User response: Correct the input.

FPEM005 Data not available. Monitor trace may not be active
Explanation: The DB2 monitor trace might not be active for the DB2 subsystem to which you are currently connected. Monitor trace class 1 must be active for the Online Monitor to operate successfully.
User response: If the monitor trace is not active, start the monitor trace. Class 1 is required; classes 2 and 3 are optional.

FPEM0060W No history data found
Explanation: No history data was found for the function being monitored. In the case of thread details, this message is issued if the thread has terminated.
User response: None.

FPEM0061W Partial history data returned
Explanation: None.
User response: None.

FPEM0062E Unable to allocate return area
Explanation: An error occurred in the allocation of storage for the return area.
User response: See your system programmer.

FPEM0063W Near-term history data is no longer available. Current data now being obtained
Explanation: None.
User response: None.

FPEM006 Enter 1 or 2
Explanation: None.
User response: Enter 1 or 2.

FPEM0070E The server is not active
Explanation: None.
User response: Start the server.

FPEM0071E You have been disconnected from the server
Explanation: None.
User response: If you require the history function, go to OPTIONS and select a server if available, otherwise, no action is required.

FPEM0073E You have not been connected to DB2 yet
Explanation: None.
User response: None.

FPEM007 The Online Monitor is not active
Explanation: The DB2, LOOK, or REINIT command has been entered, but the Online Monitor is not currently active.
User response: Activate the Online Monitor.

FPEM008 Enter 1 (Mod) or 2 (Old)
Explanation: The data set disposition must be 1 or 2.
User response: Enter 1 or 2.

FPEM009 Select only one item from the list
Explanation: Multiple item selections are not allowed.
User response: Select one item from the list.

FPEM011 An unusual condition has occurred in one of the Collect facility subtasks. Check Collect Messages for subtask <V1>
Explanation: A problem has been detected in a collect facility subtask.
• <V1> is the name of the collect facility subtask.
User response: Review the collect facility message log and take the appropriate action.

FPEM012 An unusual condition has occurred in the Periodic Exception subtask. Check the Periodic Exception Message Log
Explanation: A problem has been detected in the periodic exception subtask.
User response: Review the periodic message log and take the appropriate action.

FPEM013 The Collect facility subtask <V1> has had an OP buffer overrun
Explanation: An OP buffer overrun has occurred during the execution of the collect facility subtask.
• <V1> is the name of the collect facility subtask.
User response: None. However, if OP buffer overflows occur frequently, then the following ISPF profile pool variables should be modified during installation of the Online Monitor:
MAIFIBUF
This variable defaults to 512 KB and represents the OP buffer size for DB2 to use.

MAREADAT
This variable defaults to 410 KB and represents the OP buffer threshold value. When the OP buffer reaches this threshold value, DB2 notifies the subtask which, in turn, will issue a READA command to copy the trace records.

FPEM014  An unusual condition has occurred in the exception notification subtask of the Collect facility
Explanation: The exception notification subtask of the Collect facility that checks for periodic exceptions and exception events has failed. Insufficient region size of your TSO/E session may be the primary cause of this problem.
User response: Increase the region size of the TSO/E session or terminate concurrently running ISPF applications before trying to restart the Collect facility. If the problem recurs, contact IBM support and quote any messages that appear in the panel.

FPEM015  An error has occurred initializing the Collect facility subtask <V1>
Explanation: A problem has been detected during initialization of the Collect facility subtask, because there was insufficient storage available.
User response: Increase the region size and try again. If the problem recurs, contact IBM support.

FPEM016 <V1> command not valid in this panel. Valid commands are COLLECT, LOOK, REINIT, OPTIONS, and HISTORY
Explanation: The command you entered is not available in the current panel.
User response: Enter one of the following commands:
- COLLECT To display the Report Data menu
- LOOK To display the Look Selections menu
- REINIT To restart the exception processor
- OPTIONS To set default options
- HISTORY To display HISTORY status or invoke HISTORY mode.

FPEM017 Unrecognized command. Valid commands for this panel are COLLECT, LOOK, REINIT, OPTIONS, AND HISTORY
Explanation: The command you entered could not be recognized.
User response: Enter one of the following commands:
- COLLECT To display the Report Data menu
- LOOK To display the Look Selections menu
- REINIT To restart the exception processor
- OPTIONS To set default options
- HISTORY To display HISTORY status or invoke HISTORY mode.

FPEM018 DB2 command not allowed because it is already active
Explanation: You must not invoke this DB2 command from a panel displayed by the DB2 command.
User response: Exit the DB2 output panel, then reissue the DB2 command.

FPEM019 Subtask <V1> was not attached (RC <V2>). The application cannot continue.
Explanation: OMEGAMON XE for DB2 PE stopped because an error occurred during the ATTACH of a subtask.
User response: See the z/OS MVS Programming: Authorized Assembler Services Reference for an explanation of the return code from the ATTACH macro.

FPEM020 This command is not available from this function
Explanation: The function you are in does not recognize the command entered.
User response: Try another command or exit the function.

FPEM021 Maximum DB2 command functions exceeded
Explanation: The maximum number of nested DB2 functions has been exceeded.
User response: Return to the Main Menu and resume the DB2 function.

FPEM022 Internal error - DB2 command output table not created
Explanation: An internal error has been detected in the DB2 command function.
User response: Try to issue the command again. If the problem recurs, contact IBM support.

FPEM024 Subsystem <V1> not available. RC <V2>, REASON <V3>
Explanation: A DB2 command has been issued, but the Online Monitor is not connected to DB2.
• <V1> is the DB2 subsystem ID.
• <V2> is the Call Attach Facility (CAF) return code.
• <V3> is the CAF reason code.
User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes to determine why connection to DB2 failed, and respond accordingly.

FPEM030 <V1> command not valid in this panel. Valid commands are DB2, REINIT, OPTIONS, HISTORY, and COLLECT
Explanation: The command you entered is not available in the current panel.
• <V1> is the command you entered.
User response: Enter one of the following commands:
DB2 To enter a DB2 command
REINIT To restart the exception processor
OPTIONS To set default options
HISTORY To display history status
COLLECT To display the Report Data menu.

FPEM031 Unrecognized command. Valid commands for this panel are DB2, REINIT, OPTIONS, HISTORY, and COLLECT
Explanation: An unrecognized command was entered.
User response: Enter one of the following commands:
DB2 To enter a DB2 command
REINIT To restart the exception processor
OPTIONS To set default options
HISTORY To display history status
COLLECT To display the Report Data menu.

FPEM032 LOOK command not allowed because it is already active
Explanation: The LOOK command cannot be invoked within the LOOK function.
User response: Return to the LOOK selection menu to select the LOOK function required.

FPEM033 Invalid selection <V1>. Valid selections are 1 through 3
Explanation: A not valid selection code was entered.
• <V1> is the selection you entered.
User response: Correct the input.

FPEM035 No periodic exception messages have been written
Explanation: None.
User response: None.

FPEM036 No periodic exceptions have occurred
Explanation: None.
User response: None.

FPEM037 Selected exception does not match current SSID <V1>
Explanation: The exception you wish to select does not occur in this subsystem.
• <V1> is the DB2 subsystem ID.
User response: Change your subsystem to the SSID where the exception occurred by selecting Options on the Online Monitor Main Menu, and then DB2 Subsystem.

FPEM038 No display exceptions have occurred
Explanation: None.
User response: None.

FPEM039 Invalid selection <V1>. Valid selections are 1 through 6
Explanation: The selection made was not valid.
• <V1> is the invalid selection.
User response: Enter a valid selection.

FPEM040 Autodisplay activated. Refresh every <V1>. Press ATTN to terminate
Explanation: Autodisplay has just been activated.
• <V1> is the interval duration.
• <V2> is the interval unit in seconds or minutes.
User response: None.
FPEM041  Autodisplay. Refresh every <V1> <V2>. Press ATTN to terminate

Explanation: Autodisplay is active.
• <V1> is the AUTODISPLAY interval duration.
• <V2> is the AUTODISPLAY interval unit in seconds or minutes.

User response: To cancel autodisplay, press the ATTN key.

FPEM042  Autodisplay terminated

Explanation: None.

User response: None.

FPEM043  Autodisplay interval must be numeric in the range 1 to 7200 seconds or 1 to 120 minutes

Explanation: A not valid interval has been entered for the AUTO command.

User response: Specify one of the following:
• 1 to 7200 when seconds is the unit.
• 1 to 120 when minutes is the unit.

FPEM044  Autodisplay units must be SECONDS or MINUTES or any valid abbreviation

Explanation: Autodisplay units must be expressed in terms of seconds or minutes.

User response: Enter SECONDS or MINUTES or any valid abbreviation.

FPEM045  Extra parameters following AUTO command

Explanation: The autodisplay command accepts only two parameters.

User response: See Monitoring Performance from ISPF for AUTO command usage.

FPEM046  Autodisplay interval must be numeric in the range 1 to 7200 seconds

Explanation: The autodisplay interval is not within allowable boundaries.

User response: Specify an autodisplay interval in the correct range.

FPEM047  Autodisplay interval must be numeric in the range 1 to 120 minutes

Explanation: The autodisplay interval is not within allowable boundaries.

User response: Specify an autodisplay interval in the correct range.

FPEM048  Autodisplay activated. Refresh every <V1> <V2>. History interval is <V3> seconds. Press ATTN to terminate

Explanation: Autodisplay has just been activated.
• <V1> is the interval duration.
• <V2> is the interval unit in seconds or minutes.
• <V3> is the HISTORY interval in seconds.

User response: None.

FPEM049  Autodisplay. Refresh every <V1> <V2>. History interval is <V3> seconds. Press ATTN to terminate

Explanation: Autodisplay is active.
• <V1> is the AUTODISPLAY interval duration.
• <V2> is the AUTODISPLAY interval unit in seconds or minutes.
• <V3> is the HISTORY interval in seconds.

User response: To cancel autodisplay, press the ATTN key.

FPEM0500E  Subsystem <V1> is invalid. CAF RC <V2>, REASON <V3>

Explanation: An attempt was made to connect to a DB2 subsystem that does not exist.
• <V1> is the invalid subsystem name.
• <V2> is the Call Attach Facility (CAF) return code.
• <V3> is the DB2 reason code.

User response: Specify a valid DB2 subsystem ID for the MVS system that you are currently working on, using the global parameters function.

FPEM0501E  DB2 release is <V1>, DB2 loadlib (dsnload) release is <V2>

Explanation: The release level of the DB2 subsystem is not compatible with the DB2 load library currently allocated to your TSO/E session.
• <V1> is the DB2 release.
• <V2> is the DSNLOAD release.

User response: Be sure that the DB2 load library allocated to your TSO/E session is the same release level as the DB2 subsystem that you are connected to. The DB2 load library must not be allocated using LIBDEF.

FPEM0502E  DB2 subsystem <V1> is not available. CAF RC <V2>, REASON <V3>

Explanation: An attempt was made to connect to a DB2 subsystem that is valid, but is not currently running.
• <V1> is the name of the DB2 subsystem.
• <V2> is the Call Attach Facility (CAF) return code.
• <V3> is the CAF reason code.

User response: Start the DB2 subsystem or connect to
a subsystem that is already active.

**FPEM0503E**  You are not authorized to access DB2 subsystem `<V1>`

**Explanation:** You do not have the access authority needed to connect to the requested DB2 subsystem. The most common cause is that you are not defined by RACF as having access to the subsystem.

- `<V1>` is the subsystem ID of the DB2 subsystem in question.

**User response:** Notify your security administrator.

**FPEM0505E**  You are not authorized to execute plan `<V1>`

**Explanation:** You do not have the DB2 authority needed to execute the requested DB2 plan.

- `<V1>` is the DB2 plan name.

**User response:** Notify your security administrator.

**FPEM0506E**  Currently allocated DB2 version not supported by Performance Expert

**Explanation:** An attempt was made to connect to a DB2 version allocated to the user session that is not supported by your OMEGAMON XE for DB2 PE. In general, a higher DB2 version is not supported by a lower version of OMEGAMON XE for DB2 PE. Lower DB2 versions can be supported. For further information on which DB2 versions are supported by your OMEGAMON XE for DB2 PE, see the manuals of the OMEGAMON XE for DB2 PE version you are using.

**User response:** Leave the Host Online Monitor and allocate the libraries of a supported DB2 version.

**FPEM0507E**  Only one task in this ISPF logical session can be connected to DB2

**Explanation:** An attempt has been made to start a second DSN or Call Attach Facility (CAF) connection to DB2 from one ISPF logical screen. This error may occur if you attempt to start a second Online Monitor session or start, for example, SPUFI and a second Online Monitor session in one ISPF logical screen.

**User response:** Exit the second Online Monitor session.

**FPEM051**  `<V1>` command not valid in this panel.

Valid commands are DB2, LOOK, COLLECT, OPTIONS, and HISTORY

**Explanation:** The command you entered is not available in the current panel.

- `<V1>` is the command you entered.

**User response:** Enter one of the following commands:

- `DB2`  To enter a DB2 command
- `LOOK`  To display the Look Selections menu

*User response:* Enter one of the following commands:
- **DB2** To enter a DB2 command
- **LOOK** To display the Look Selections menu
- **COLLECT** To display the Report Data menu
- **OPTIONS** To set default options
- **HISTORY** To display history status.
Unrecognized command. Valid command for this panel is DB2.

Explanation: The text you entered is not a recognized DB2 or OMEGAMON XE for DB2 PE command. The only command you can use here is DB2.

User response: Use DB2 to enter a DB2 command.

The Collect Report Data facility is not active

Explanation: The OMEGAMON XE for DB2 PE Collect Report Data function is not active.

No history data found

Explanation: No history data was found for the function being monitored. In the case of thread details, this message is issued if the thread has terminated.

User response: None.

Partial history data returned

Explanation: None.

User response: None.

Offset field must be numeric in the range of 0 to 11

Explanation: Correlation name and correlation number offset field must be numeric in the range of 0 to 11.

User response: Correct the input record.

To avoid this error, use the maintain parameter data sets facility on the ISPF monitor to specify correlation name translation.

Length field must be numeric in the range of 1 to 8

Explanation: Correlation name and correlation number length field must be numeric in the range of 1 to 8.

User response: Correct the input record. This error would never occur if the correlation translation data set editor had been used.

Length value required

Explanation: Correlation name and correlation number length value is required.

User response: Correct the input record. This error would never occur if the correlation translation data set editor had been used.

Offset value required

Explanation: Correlation name and correlation number offset value is required.

User response: Correct the input record. This error would never occur if the correlation translation data set editor had been used.

Sum of offset and length cannot exceed 12 bytes

Explanation: Sum of offset and length cannot exceed 12 bytes for correlation name and correlation number.

User response: Correct the input record. This error would never occur if the correlation translation data set editor had been used.

Connection type required

Explanation: None.

User response: Correct the input record. This error would never occur if the correlation translation data set editor had been used.

Unable to allocate return area

Explanation: An error occurred in the allocation of storage for the return area. The reason is that there is not enough storage assigned to the task to acquire storage for the DB2 interface return area for your Online Monitor requests.

User response: Ask your system programmer to increase the region size of the Performance Expert Server task.

Near-term history data is no longer available. Current data now being obtained

Explanation: None.

User response: None.

The server is not active

Explanation: None.

User response: Start the server.

You have been disconnected from the server

Explanation: None.

User response: If you require the history function, go to OPTIONS and select a server if available, otherwise, no action is required.
**FPEM072**  DYNALLOC returned return code \(<V1>\), reason code \(x'\<V2>\)', SMS reason code \(<V3>\)

**Explanation:** An unusual condition occurred during data set allocation in a system that has SMS installed. The most likely reason for this error is the attempt to create a data set that already exists or the attempt to use a data set that does not exist.

- \(<V1>\) is the return code.
- \(<V2>\) is the reason code.
- \(<V3>\) is the SMS reason code.

**User response:** See *MVS Messages and Codes* (or the corresponding manual of the MVS version you have installed) for an explanation of the return code and reason code.

---

**FPEM073**  You have not been connected to DB2 yet

**Explanation:** None.

**User response:** None.

---

**FPEM074**  No data to display

**Explanation:** No qualifications have been specified in the DCPARMS (Data Collector Parameter) data set for the History function.

**User response:** None.

---

**FPEM075**  Data set not cataloged

**Explanation:** The dynamic allocation routine was called to allocate a data set that was expected to already exist in the catalog.

**User response:** Correct the data set name to one that exists, or change the disposition to 3 to allocate a new data set.

---

**FPEM076**  Specified volume or acceptable volume not mounted

**Explanation:** The specified volume or an acceptable volume is not mounted, and the user does not have volume mounting authorization. This message can be issued if the allocation exceeds the maximum allocation that is allowed by SMS. OMEGAMON XE for DB2 PE tries to allocate 100 blocks of primary space and 500 blocks of secondary space on SYSDA. The problem can be circumvented by pre-allocating the data set. This message should be accompanied by a system message indicating the volume that was requested.

**User response:** See your system programmer for assistance.

---

**FPEM077**  DYNALLOC returned Return code \(<V1>\), Reason code \(x'\<V2>\)'

**Explanation:** An unusual condition occurred during data set allocation.

- \(<V1>\) is the return code.
- \(<V2>\) is the reason code.

**User response:** See *MVS Messages and Codes* (or the corresponding manual of the MVS version you have installed) for an explanation of the return code and reason code.

---

**FPEM078**  Data set already exists

**Explanation:** You cannot create a data set with this name.

**User response:** Specify the name of a data set that does not exist.

---

**FPEM079**  Catalog Error: Data set name conflicts with existing data set name or user is not authorized to perform the operation

**Explanation:** A catalog attempt was not successful.

**User response:** Use another data set name or see your system programmer for assistance.

---

**FPEM080**  System abend occurred for \(<V1>\). Abend code \(<V2>\), reason code \(<V3>\)

**Explanation:** When performing I/O on the data set, a system abend occurred. The data set is closed. Its data might be lost.

- \(<V1>\) is the data set name.
- \(<V2>\) is the abend code.
- \(<V3>\) is the reason code.

**User response:** See *MVS Messages and Codes* for an explanation of the abend code and reason code.

---

**FPEM0800I**  Task started at \(<V1>\) for DB2 subsystem \(<V2>\)

**Explanation:** The asynchronous Collect task has been started and is waiting for the start trigger condition to be met.

- \(<V1>\) is the date and time when the task started.
- \(<V2>\) is the DB2 subsystem.

**User response:** None.

---

**FPEM0801I**  Task stopped at \(<V1>\)

**Explanation:** The asynchronous Collect task has stopped and is waiting for the user to start the task again.

**User response:** None.
FPEM0802E  SQL return code –<V1> reading catalog info, trace stopped

FPEM0803E  Destination <V1> has become inactive
Explanation: The OPx destination used for the trace facility has become inactive, and data is no longer being written to the trace data set. One possible cause is that all traces that had <V1> as their destination have been stopped.
• <V1> is the OPx destination.
User response: None.

FPEM0804I  FPEM0804I Task stop trigger is: <V1>
Explanation: <V1> includes the following stop trigger criteria:
• By timestamp
• By user request
• By termination
• By number of records
• By IFCID
• By number of IFCIDs
• After START TRACE error
• After READA error
• After WRITE RECORD error
This message is often accompanied by another message that describes the problem in detail and the appropriate course of action.

FPEM0806W  FPEM0806W <V1> records are not written to <V2>. The maximum record length of one of these records is <V3>.
Explanation: This message shows the number of records that is not written to the output data set.
• <V1> is the number of records that is not written to the output data set.
• <V2> is the name of the output data set that is used to collect the trace data.
• <V3> is the maximum length of the trace data record that is not written to the output data set.
This message is often accompanied by another message that describes the problem in detail and the appropriate course of action.
User response: To write the complete trace data to the output data set, follow these steps:
1. Allocate a new output data set to collect the trace data.
2. Increase the record length of the output data set to at least the maximum length of the trace data record that could not be written to the output data set.

3. Restart the trace.

FPEM0807I  The OP buffer high water mark is <V1>.
Explanation: DB2 fills the OP buffer that is assigned to the Collect task. The Collect task issues a READA command to read the OP buffer. <V1> is the maximum number of bytes used.
User response: None.

FPEM081 I/O error occurred for <V1>. System information: <V2>
Explanation: When performing I/O on the data set, a system error occurred. The SYNAD exit was invoked. The data set is closed and data might be lost.
• <V1> is the data set name.
• <V2> is the system message produced by the SYNADAF data administration macro.
User response: See the message buffer format produced by the SYNADAF macro for a description of the error.

FPEM0811I  Task start trigger is: <V1>
Explanation: This message is accompanied by messages FPEM0800I and FPEM0819I. Depending on one of the following start triggers, DB2 data is collected accordingly:
Time  When the user-specified time is met.
Periodic Exception  When the Periodic Exception task finds a field that is in exception status, and if this field matches the user-specified field.
Exception Event  When the Data Server finds an exception event that matches the user-specified exception event.
Immediate Start  Immediately.

FPEM0813I  DB2 traces to <V1> started at <V2>
Explanation: The Collect task start trigger criteria have been met, and the DB2 traces have been started. This message is accompanied by one or both of the DB2 messages DSNW130I and DSN9022I.
• <V1> is the OPx buffer that was allocated to this Collect task by DB2, where n = 1 to 8. DB2 can allocate 1 to 8 buffers.
• <V2> is the date and time when the DB2 traces started.
User response: None.
**FPEM0814I • FPEM0821I**

**FPEM0814I  DB2 traces to <V1> stopped at <V2>**

**Explanation:** The DB2 traces have been stopped because one or more Collect task stop trigger criteria have been met.
- <V1> is the OPn buffer that was allocated to this Collect task by DB2, where n = 1 to 8. DB2 can allocate 1 to 8 buffers.
- <V2> is the date and time when the DB2 traces were stopped.

**User response:** None.

**FPEM0815I  <V1> records written to ' <V2> '**

**Explanation:** This message indicates the number of records written by the Collect subtask between the most recent DB2 trace start and stop messages.
- <V1> is the number of records written to the output data set.
- <V2> is the name of the data set where the DB2 trace data is to be written.

**User response:** None.

**FPEM0816E  Collect data set is full**

**Explanation:** The Collect subtask cannot write any more records to the output data set because it is full.

**User response:** If you wish to collect more records, allocate a larger data set and restart the Collect subtask. If required, reconfigure the task, for example, the start criteria.

**FPEM0817E  No free OP buffers available at <V1>**

**Explanation:** All OP buffers are in use, so the Collect subtask could not start any DB2 traces.

**User response:** Restart the Collect subtask when an OP buffer becomes available.

**FPEM0818E  An error occurred starting the DB2 traces above**

**Explanation:** An error occurred when the Collect subtask attempted to start one or more DB2 traces.

**User response:** This message is accompanied by a DB2 message which explains the problem and determines the user response.

**FPEM0819I  Task description is: <V1>**

**Explanation:** <V1> is the name of the Collect subtask.

A default name is initially assigned to this subtask. You can change the default name on the main Collect facility menu.

This message is always accompanied by message FPEM0800I.

**FPEM082  Error occurred during DYNALLOC de-allocation of <V1>. Return code <V2>, reason code <V3>**

**Explanation:** When performing a dynamic data set de-allocation, an error occurred.
- <V1> is the data set name.
- <V2> is the return code.
- <V3> is the reason code.

**User response:** See MVS Messages and Codes (or the corresponding manual of the MVS version you have installed) for an explanation of the return code and reason code.

**FPEM0820I  <V1> buffer overflows occurred**

**Explanation:** DB2 has filled up the OP buffer that is assigned to this Collect subtask. This message is accompanied by message FPEM0821I, which indicates how many records were lost because of the OP buffer being full.
- <V1> is the number of times DB2 has filled up the OP buffer since this Collect subtask was most recently started.

**User response:** If OP buffer overflows occur frequently, then the following ISPF profile pool variables should be modified during installation of the Online Monitor:

**MAIFIBUF**

This variable defaults to 512 KB and represents the OP buffer size for DB2 to use.

**MAREADAT**

This variable defaults to 410 KB and represents the OP buffer threshold value. When the OP buffer reaches this threshold value, DB2 notifies the subtask which, in turn, will issue a READA command to copy the trace records.

**FPEM0821I  <V1> records lost**

**Explanation:** Records got lost due to the OP buffer being full. No more records can be written until the OP buffer is cleared out by a DB2 READA command. This message should be accompanied by message FPEM0820I.
- <V1> is the number of records lost since this Collect subtask was most recently started.

**User response:** If OP buffer overflows occur frequently, then the following ISPF profile pool variables should be modified during installation of the Online Monitor:

**MAIFIBUF**

This variable defaults to 512 KB and represents the OP buffer size for DB2 to use.

**MAREADAT**

This variable defaults to 410 KB and represents the OP buffer threshold value. When the OP buffer reaches this threshold value, DB2 notifies the subtask which, in turn, will issue a READA command to copy the trace records.
<table>
<thead>
<tr>
<th>Error Code</th>
<th>Description</th>
<th>User Response</th>
<th>System Messages</th>
</tr>
</thead>
</table>
| FPEM0822E          | Error allocating Collect data set. Reason code **<V1>**                                            | **Explanation:** The output data set used by the Collect facility subtask could not be allocated.  
• **<V1>** is the reason code which identifies why the allocation failed.  
**User response:** See MVS Messages and Codes (or the corresponding manual of the MVS version you have installed) to determine the course of action to be taken. |
| FPEM0823E          | Error opening Collect data set with return code **<V1>**                                           | **Explanation:** The output data set used by the Collect facility subtask could not be opened.  
• **<V1>** is the return code which identifies why the open failed:  
  4 The data set was opened successfully, but warning messages were issued.  
  8 The data set could not be opened.  
  12 The data set was already opened.  
**User response:** This message is often accompanied by a system message which details the problem and the course of action. If the data set was already opened, ensure that the same data set is not used by another Collect subtask you have started. If this is the case, then a different data set should be allocated to the Collect subtask that failed. |
| FPEM0824E          | Error writing a record to the output data set with return code **<V1>**                            | **Explanation:** The output data set used by the Collect facility subtask could not be written to.  
• **<V1>** is the return code which identifies why the PUT function failed (8 indicates an error while writing to the data set).  
**User response:** This error should be accompanied by a system message detailing the problem and the course of action. Check the appropriate log information. If the log indicates that the data set is full, define a larger data set, use the OVERWRITE disposition on the Trigger Immediately panel (FPEMAP41), and select the START action again on the Collect Report Data panel (FPEMAP00). |
| FPEM0825E          | Error allocating Collect data set. Record length **<V1>** of **<V2>** is inappropriate. Length should be at least 4092 |
| FPEM083            | **<V1>** is full. The data set has been closed. Some data may be lost. Abend code **<V2>**, reason code **<V3>** |
| FPEM0832W          | GETMAIN FAILURE OF **<V1>** KB FOR READA BUFFER. RC **<V2>**                                       |
| FPEM0834E          | NO READA BUFFER FREED FOR REUSE. COLLECT REPORT DATA IS STOPPED                                    |
| FPEM084            | Space abend occurred while closing **<V2>**. Some data may be lost. Abend code **<V2>**, reason code **<V3>** |

**Explanation:** While closing a data set, a system abend
occurred due to insufficient space. The data set is left in a closed state.

- `<V1>` is the data set name.
- `<V2>` is the abend code.
- `<V3>` is the reason code.

**User response:** See MVS Messages and Codes for an explanation of the abend code and reason code.

---

**FPEM085**  
A record was not added to `<V1>` because it was too long. The data set is still open. Abend code `<V2>`, reason code `<V3>`

**Explanation:** A record with a length that is larger than the data set record length cannot be added to the data set.

- `<V1>` is the data set name.
- `<V2>` is the abend code.
- `<V3>` is the reason code.

**User response:** If all records are needed, allocate a data set with a larger record length.

---

**FPEM086**  
Error attempting to open data set

**Explanation:** An error occurred while opening a data set.

**User response:** None.

---

**FPEM0860I**  
Compressing started at `<V1>`

**Explanation:**
- `<V1>` is the start date and time.

---

**FPEM0861I**  
Compressing stopped at `<V1>`

**Explanation:**
- `<V1>` is the stop date and time.

---

**FPEM0862E**  
Error allocating data set for compressed data. Reason code `<V1>`

**Explanation:** The output data set used by the Collect facility subtask could not be allocated. Typical causes are: The data set already exists, not enough space, or access is denied.

- `<V1>` is the reason code which identifies why the allocation failed.

**User response:** See MVS Messages and Codes (or the corresponding manual of the MVS version you have installed) to determine the course of action to be taken.

---

**FPEM0865E**  
Error during data set compression. Reason code `<V1>`

**User response:** See the TERSEMV messages, which are usually following message FPEM0866I, for possible reasons.

---

**FPEM0866I**  
STARTING TERSE `<V1>` `<V2>`

**Explanation:** Multiple messages from the TRSMAIN utility might follow, showing the exec parameters used.

If this message does not show a return code of 0, which indicates an error from the TRSMAIN utility, several TERSEMV messages are followed.

**User response:** See MVS Messages and Codes (or the corresponding manual of the MVS version you have installed) to determine the course of action to be taken.

---

**FPEM0867E**  
Compression will be not started. Reason code `<V1>`

**User response:** See message FPEM0866I for possible reasons and actions.

---

**FPEM087**  
Data set is already open

**Explanation:** None.

**User response:** None.

---

**FPEM088**  
Space abend occurred while closing the Exception Log data set. Some data may be lost

**Explanation:** None.

**User response:** None.

---

**FPEM089**  
Space abend occurred while closing the Exception File data set. Some data may be lost

**Explanation:** None.

**User response:** None.

---

**FPEM090**  
Error occurred loading I/O module. Abend code `<V1>`, reason code `<V2>`

**Explanation:** When loading the I/O module, a system abend occurred.

- `<V1>` is the abend code.
- `<V2>` is the reason code.

**User response:** See MVS Messages and Codes for a detailed explanation of the abend code and reason code.

---

**FPEM091**  
Insufficient storage available for I/O initialization

**Explanation:** When attempting to initialize I/O processing, there was not enough virtual storage available.

**User response:** Increase the region size of the user's TSO/E address space.
FPEM0914W  Error attempting to write to the exception log

Explanation: An error occurred when writing to the exception log. The log record was not written.

User response: See the accompanied system message in the asynchronous message log for action.

FPEM0918W  Threshold field <V1> is in error. Event <V2> is invalid

Explanation: The Online Monitor detected a not valid event in the Exception Threshold data set.
  • <V1> is the threshold field.
  • <V2> is the invalid event name you specified.

User response: Specify one of the following event types:
  STAT For statistics events
  THRD For thread activity events
  ACCT For accounting events.

FPEM0919W  Threshold field <V1> is in error. The field is not valid for environment <V2>

Explanation: A batch-only field cannot be used in an online environment, and an online-only field cannot be used in a batch environment.
  • <V1> is the threshold field.
  • <V2> is the environment.

User response: If the threshold data set is used in either batch or online environment, delete references to fields that are not applicable.

FPEM0920W  Threshold field <V1> is in error. The field name is invalid

Explanation: The Online Monitor detected a not valid field name in the Exception Threshold data set.
  • <V1> is the invalid field name.

User response: Correct the error.

FPEM0921W  Threshold field <V1> is in error. Field is invalid for DB2 <V2>

Explanation: The field name is not valid for the release of the DB2 subsystem to which you are connected.
  • <V1> is the threshold field name.
  • <V2> is the release of the DB2 subsystem.

User response: Enter a valid field name.

FPEM0922W  Threshold field <V1> is in error. Field is invalid for event <V2>

Explanation: The field name specified in the Exception Threshold data set does not correspond with the event (for example, a statistics field was specified for a THRD event).
  • <V1> is the field name.
  • <V2> is the event.

User response: Correct the error.

FPEM0923W  DUMMY is not acceptable for this data set

Explanation: The Exception Threshold data set must be specified.

User response: Enter the name of the valid data set.

FPEM0938W  Error attempting to write to the exception file

Explanation: An error occurred when writing to the Exception Log file. The log file record was not written.

User response: See the accompanied system message in the asynchronous message log for action.

FPEM0939E  The Periodic Exception Processor has terminated and cannot be restarted. Exit from the Online Monitor before retrying

Explanation: An earlier error caused the periodic exception processor to terminate.

User response: Exit from the Online Monitor before trying to start the periodic exception processor again. If the problem recurs, contact IBM support.

FPEM093E  The Periodic Exception Processor has terminated and cannot be restarted. Exit from the Online Monitor before retrying

Explanation: An earlier error caused the periodic exception processor to terminate.

User response: Exit from the Online Monitor before trying to start the periodic exception processor again. If the problem recurs, contact IBM support.

FPEM094  Data set organization (<V1>) of <V2> is inappropriate. Valid values: <V3>

Explanation: The specified data set has a not valid data set organization. The required DSORG is physical sequential (PS).
  • <V1> is the specified data set organization (DSORG).
  • <V2> is the data set name.
  • <V3> is a list of valid data set organizations (DSORG).

User response: Allocate a data set with a PS organization.
FPEM0944I  Periodic Exception Processor started at <V1>

Explanation: The periodic exception processor is started.
* <V1> is the date and time at which the periodic exception processor started.

User response: None.

FPEM0945I  PERIODIC EXCEPTION PROCESSOR STOPPED AT <V1>

Explanation: The periodic exception processor is stopped.
* <V1> is the date and time at which the periodic exception processor stopped.

User response: None.

FPEM095  Record format (<V1>) of <V2> is inappropriate. Record format should be variable.

Explanation: The specified data set has a not valid record format. The required format is variable (V) or variable blocked (VB).
* <V1> is the specified record format.
* <V2> is the data set name.

User response: Allocate a data set with a V or VB record format.

FPEM096  Record length (<V1>) of <V2> is inappropriate. Length should be at least <V3>

Explanation: The specified data set has a record length (LRECL) that is too small.
* <V1> is the specified LRECL.
* <V2> is the data set name.
* <V3> is the minimum LRECL for this file.

User response: Correct the LRECL.

FPEM097  Member name should not be specified when the data set is sequential

Explanation: The data set has been defined as sequential. No member name should be specified.

User response: Specify the correct data set.

FPEM098  Member name should be specified when the data set is partitioned

Explanation: The data set has been defined as partitioned. A member name should be specified.

User response: Specify the correct data set.

FPEM099  Internal error occurred - code is <V1>

Explanation: An unexpected program error has occurred.
* <V1> is the internal error code.

User response: If the problem recurs, contact IBM support and quote the internal error code.

FPEM100  Unrecognized command. Valid commands for this panel are AUTO, REINIT, DB2, LOOK, COLLECT, HISTORY, OPTIONS, and PURGE

Explanation: The command you entered is not recognized.

User response: Enter one of the following commands:
  AUTO  To activate the autodisplay function
  REINIT To restart the exception processor
  DB2   To enter a DB2 command
  LOOK  To display the Look Selections menu
  COLLECT To display the Report Data menu
  HISTORY To display HISTORY status or invoke HISTORY mode
  OPTIONS To set default options
  PURGE To purge a thread currently processing in the DB2 subsystem.

FPEM101  <V1> command not valid in this panel. Valid commands for this panel are AUTO, REINIT, DB2, LOOK, COLLECT, HISTORY, OPTIONS, and PURGE

Explanation: The command you entered is not available in the current panel.
* <V1> is the command you entered.

User response: Enter one of the following commands:
  AUTO  To activate the autodisplay function
  REINIT To restart the exception processor
  DB2   To enter a DB2 command
  LOOK  To display the Look Selections menu
  COLLECT To display the Report Data menu
  HISTORY To display HISTORY status or invoke HISTORY mode
  OPTIONS To set default options
### PURGE

To purge a thread currently processing in the DB2 subsystem.

---

### FPEM102

**The selected thread has terminated.**<br>Details are no longer available

**Explanation:** None.

**User response:** None.

---

### FPEM103

**Insufficient storage available for thread processing**

**Explanation:** When attempting to initialize the Thread Activity display, there was not enough virtual storage available.

**User response:** Increase the region size of the user’s TSO/E address space.

As a principle solution you can increase the size of the internal storage area that the Online Monitor uses to hold data for the selected purpose. For more information see Monitoring Performance from ISPF, Online Monitor options, Online Monitor Memory Usage window.

---

### FPEM104

**No locks are currently held or suspended for this resource. If the thread you selected is no longer active, values for that thread remain available and will not be affected by refreshing this panel**

**Explanation:** The resource that the selected thread was holding, or was in a suspended state against, is no longer held by any thread. It is possible that the selected thread has terminated. However, because this panel displays information about a resource, you can continue to monitor the resource without losing the information gathered when the thread details were last refreshed. If you exit from this panel, the other panels relating to the thread will be unchanged.

**User response:** None.

---

### FPEM105

**The thread you selected no longer holds this resource. If the thread you selected is no longer active, values for that thread remain available and will not be affected by refreshing this panel**

**Explanation:** The resource that the selected thread was holding, or was in a suspended state against, is no longer held by that thread (another thread holds a lock which keeps yours out). It is possible that the selected thread has terminated. However, because this panel displays information about a resource, you can continue to monitor the resource without losing the information gathered when the thread details were last refreshed. If you exit from this panel, the other panels relating to the thread will be unchanged.

---

### FPEM106

**No threads were found matching the current qualify values**

**Explanation:** There are no threads available that match your selection.

**User response:** Change the qualify values and try again, or keep trying with the selected qualify values.

---

### FPEM107

**Insufficient storage to return locking data. IFI RC <V1>, REASON <V2>**

**Explanation:** This warning message indicates that DB2 has insufficient storage to process more than 32 KB of locking data. Up to 32 KB of locking data is returned.

- <V1> is the IFI return code.
- <V2> is the reason code.

**User response:** None. For further information, see DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed).

---

### FPEM108

**Unrecognized command. Valid commands for this panel are SORT, QUALIFY, RESET, AUTO, REINIT, DB2, LOOK, COLLECT, HISTORY, OPTIONS, and PURGE**

**Explanation:** The command you entered is not recognized in the current panel.

**User response:** Enter one of the following commands:

- **SORT** To specify the order in which threads are displayed in this panel
- **QUALIFY** To limit the number of threads shown in this panel
- **RESET** To disable qualify and sort functions
- **AUTO** To activate the autodisplay function
- **REINIT** To restart the exception processor
- **DB2** To enter a DB2 command
- **LOOK** To display the Look Selections menu
- **COLLECT** To display the Report Data menu
- **HISTORY** To display HISTORY status or invoke HISTORY mode
- **OPTIONS** To set default options
- **PURGE** To purge a thread currently processing in the DB2 subsystem.
FPEM109 <V1> command not valid in this panel.
Valid commands are SORT, QUALIFY, RESET, AUTO, REINIT, DB2, LOOK, COLLECT, HISTORY, OPTIONS, and PURGE.

Explanation: The command you entered is not valid in the current panel.
• <V1> is the command you entered.
User response: Enter one of the following commands:
Sort To specify the order in which threads are displayed in this panel
Qualify To limit the number of threads shown in this panel
Reset To disable qualify and sort functions
Auto To activate the autodisplay function
Reinit To restart the exception processor
Db2 To enter a DB2 command
Look To display the Look Selections menu
Collect To display the Report Data menu
History To display HISTORY status or invoke HISTORY mode
Options To set default options
Purge To purge a thread currently processing in the DB2 subsystem.

FPEM110 Field order must be numeric in the range 1 to 15
Explanation: The value entered is not within the valid range.
User response: Correct the input.

FPEM111 The same order has been specified for more than one field
Explanation: An attempt has been made to specify a sort with two fields at the same level.
User response: Check the sort panel for the duplicate sort order.

FPEM112 Sort sequence must be specified as 1 (Ascending) or 2 (Descending)
Explanation: A not valid sort sequence has been entered.
User response: Specify the sort sequence as 1 or 2.

FPEM113 Sort sequence must be specified as ASCENDING or DESCENDING or any valid abbreviation
Explanation: The sort sequence has not been specified correctly.
User response: Specify the sort sequence as ASCENDING or DESCENDING or any valid abbreviation.

FPEM114 Command contains an unrecognized field identifier. Valid values are PRIMAUTH, PLANNAME, COLLECTION, PROGRAM, CORRELATION, CONNECT, CONNTYPE, REQLOC, STATUS, REQUESTS, C1ELAPSED, C1CPU, C2ELAPSED, C2CPU, and C3ELAPSED. Valid abbreviations can be used
Explanation: The command entered cannot be recognized.
User response: Enter one of the stated values or one of the applicable abbreviations.

FPEM115 Command contains an invalid field identifier abbreviation. The shortest permitted truncations are PRI, PL, COL, PRO, COR, CONNE, CONNT, REQL, S, REQU, C1E, C1C, C2E, C2C, and C3
Explanation: The command entered cannot be recognized.
User response: Enter one of the stated values.

FPEM116 At least one order field must be specified. To use the default parameters, cancel this panel and deactivate the sort command if it is active
Explanation: No order has been entered for the sort.
User response: Specify a sort order or use the cancel function to exit the panel.

FPEM117 More than 32 KB of locking data exists. Only up to 32 KB of locking data can be returned. IFI RC <V1> REASON <V2>. See DB2 MSGS/CODES
Explanation: A DB2 limitation has been reached, and a maximum of 32 KB of locking information is returned.
• <V1> is the DB2 IFI return code.
• <V2> is the DB2 IFI reason code.
User response: None. For further information, see DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed).

| FPEM118 | The selected entry does not represent a thread.  
**Explanation:** You have requested a thread display for an entry that does not represent a thread.  
**User response:** Select only entries that represent threads. |
| FPEM120 | The QUALIFY command accepts one optional parameter, which can be on or off or any valid abbreviation.  
**Explanation:** None.  
**User response:** If using a parameter with the Qualify command, ensure it is ON or OFF or any valid abbreviation. |
| FPEM121 | Invalid character. Must be alphabetic.  
**Explanation:** A not valid character has been entered.  
**User response:** Enter an alphabetic character. |
| FPEM122 | At least one Thread Status must be specified.  
**Explanation:** None.  
**User response:** Enter a thread status. |
| FPEM123 | At least one Thread Type must be specified.  
**Explanation:** None.  
**User response:** Enter a thread type. |
| FPEM130 | An SQL error has occurred. SQL CODE <V1>. As a result, some DBID/OBID translations may not have been performed.  
**Explanation:** While trying to perform SQL functions, a failure occurred.  
* <V1> is the SQL code.  
**User response:** See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for information about the SQL code. |
| FPEM131 | Unrecognized command. Valid commands for this panel are AUTO, REINIT, DB2, LOOK, COLLECT, HISTORY, OPTIONS, EXPLAIN, and PURGE.  
**Explanation:** The command you entered is not recognized.  
**User response:** Enter one of the following commands:  
**AUTO** To activate the autodisplay function  
**REINIT** To restart the exception processor  
**DB2** To enter a DB2 command  
**LOOK** To display the Look Selections menu  
**COLLECT** To display the Report Data menu  
**HISTORY** To display HISTORY status or invoke HISTORY mode  
**OPTIONS** To set default options  
**EXPLAIN** To explain the current SQL statement  
**PURGE** To purge a thread currently processing in the DB2 subsystem. |
| FPEM132 | <V1> command not valid in this panel. Valid commands are AUTO, REINIT, DB2, LOOK, COLLECT, HISTORY, OPTIONS, EXPLAIN, and PURGE.  
**Explanation:** The command you entered is not recognized in the current panel.  
* <V1> is the SQL code.  
**User response:** Enter one of the following commands:  
**AUTO** To activate the autodisplay function  
**REINIT** To restart the exception processor  
**DB2** To enter a DB2 command  
**LOOK** To display the Look Selections menu  
**COLLECT** To display the Report Data menu  
**HISTORY** To display HISTORY status or invoke HISTORY mode  
**OPTIONS** To set default options  
**EXPLAIN** To explain the current SQL statement  
**PURGE** To purge a thread currently processing in the DB2 subsystem. |
| FPEM133 | <V1> command not valid for this release of DB2.  
**Explanation:** The specified command is not supported by the DB2 subsystem you are connected to. The only valid command is PURGE.  
* <V1> is the unsupported command.  
**User response:** None. |

---

**Chapter 9. Messages**
### FPEM134
No return area from DB2 to indicate the outcome of the command entered. IFI RC \(<V1>\), REASON \(<V2>\). See DB2 MSGS/CODES.

**Explanation:** The PURGE command has failed, and DB2 has not supplied an explanation why, except for the return code and reason code provided by the DB2 IFI facility.
- \(<V1>\) is the DB2 IFI return code.
- \(<V2>\) is the DB2 IFI reason code.

**User response:** See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes.

### FPEM135
A thread has to be selected for the \(<V1>\) command.

**Explanation:** The PURGE command must know which thread is to be canceled.
- \(<V1>\) is the PURGE command.

**User response:** Select a thread from the list displayed when the PURGE command is entered.

### FPEM136
No thread has been created for this agent, so cannot be purged.

**Explanation:** Only threads performing work in DB2 can be canceled by the PURGE command.

**User response:** Select a thread that is not in I/S status.

### FPEM138
An SQL error has occurred. SQL CODE -805. The packages FPEVDB2S, DGOVDB2S, DGOVSDBO, and DGOVSDOB must be rebound.

**Explanation:** While trying to perform SQL functions, a failure occurred.

**User response:** See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for information about the SQL code.

### FPEM140
Reset successful. Sort and qualify are now off.

**Explanation:** None.

**User response:** None.

### FPEM141
Reset successful. Sort and qualify are now off. Extra parameters have been ignored.

**Explanation:** The commands typed in after reset have been ignored.

**User response:** Reenter the commands typed in after RESET.

### FPEM142
No history data found. Selected thread has terminated.

**Explanation:** None.

**User response:** None.

### FPEM200
Invalid command. Valid commands are AUTO, DB2, DELTA, HISTORY, INTERVAL, LOOK, COLLECT, OPTIONS, REINIT, and RESET.

**Explanation:** The command you entered is not available in the current panel.

**User response:** Enter one of the following commands:
- **AUTO** To activate the autodisplay function
- **DB2** To enter a DB2 command
- **DELTA** To view system-wide DB2 activity in time slices
- **HISTORY** To display HISTORY status or invoke HISTORY mode
- **INTERVAL** To view an accumulation of statistics data from a specified point in time
- **LOOK** To display the Look Selections menu
- **COLLECT** To display the Report Data menu
- **OPTIONS** To set default options
- **REINIT** To restart the exception processor
- **RESET** To revert to regular mode.

### FPEM2006E
The product installation is incomplete.

**Explanation:** The licence FMID is not correctly installed.

**User response:** If errors occurred during installation, correct them and try to use the product again. If OMEGAMON XE for DB2 PE, or OMEGAMON XE for DB2 PM, installed without errors, and you followed the recommended installation and customization procedures, and the problem persists, contact IBM support.

### FPEM202
One or more fields have not been formatted for display due to an internal error. Fields marked with ? are the fields not formatted - other fields have been formatted correctly.

**Explanation:** An internal error occurred when formatting data for display. The fields that could not be formatted contain a question mark.
User response:  If the problem recurs, contact IBM support.

FPEM203  Statistics interval processing started
Explanation:  Statistics interval processing has been activated by the INTERVAL command.
User response:  None.

FPEM204  Statistics interval processing stopped by RESET command
Explanation:  Statistics interval processing has been stopped by the RESET command. The data displayed on the Statistics panel are the accumulated values since DB2 startup.
User response:  None.

FPEM205  Statistics delta processing started
Explanation:  Statistics delta processing has been activated by the DELTA command.
User response:  None.

FPEM206  Statistics delta processing stopped by RESET command
Explanation:  Statistics delta processing has been stopped by the RESET command. The data displayed on the Statistics panel are the accumulated values since DB2 startup.
User response:  None.

FPEM207  Insufficient storage available for Statistics processing
Explanation:  When attempting to initialize statistics, there was not enough storage available.
User response:  Increase the region size of the user’s TSO/E address space.

FPEM208  RESET command ignored - interval or delta not active
Explanation:  The RESET function is valid only after starting Statistics Interval or Delta processing.
User response:  None.

FPEM209  Statistics Internal Error while formatting buffer pools
Explanation:  An error occurred while formatting the buffer pool data.
User response:  This is an internal error. If the condition recurs, contact IBM support and quote the internal error number.

FPEM210  Insufficient storage available for delta processing
Explanation:  There was not enough storage available when Delta processing was initialized.
User response:  Increase the region size of the user’s TSO/E address space.

FPEM211  Insufficient storage available for interval processing
Explanation:  There was not enough storage available when Interval processing was initialized.
User response:  Increase the virtual storage of the user’s TSO/E address space.

FPEM212  Unrecognized command. Commands valid for statistics are AUTO, DB2, DELTA, HISTORY, INTERVAL, LOOK, COLLECT, OPTIONS, REINIT, and RESET
Explanation:  The command you entered is not available in the current panel.
User response:  Enter one of the following commands:
AUTO  To activate the autodisplay function
DB2   To enter a DB2 command
DELTA To view system-wide DB2 activity in time slices
HISTORY To display HISTORY status or invoke HISTORY mode
INTERVAL  To view an accumulation of statistics data from a specified point in time
LOOK   To display the Look Selections menu
COLLECT To display the Report Data menu
OPTIONS  To set default options
REINIT To restart the exception processor
RESET  To revert to regular mode.

FPEM213  Autodisplay activated. Refresh every <V1> <V2>. Press ATTN to terminate
Explanation:  AUTODISPLAY is active.
• <V1> is the interval duration.
• <V2> is the interval unit in seconds or minutes.
User response:  To cancel AUTODISPLAY, press the ATTN key.
FPEM214 • FPEM229

FPEM214  Autodisplay. Refresh every <V1> <V2>. Press ATTN to terminate
Explanation: AUTODISPLAY is active.
• <V1> is the interval duration.
• <V2> is the interval unit in seconds or minutes.
User response: To cancel AUTODISPLAY, press the ATTN key.

FPEM215  Statistics interval processing started. Extra parameters ignored
Explanation: Parameters typed in the command line following the INTERVAL command have been ignored.
User response: None.

FPEM216  Statistics interval processing stopped by RESET command. Extra parameters ignored
Explanation: Parameters typed in the command line following the RESET command have been ignored.
User response: None.

FPEM217  Statistics delta processing started. Extra parameters ignored
Explanation: Parameters typed in the command line following the DELTA command have been ignored.
User response: None.

FPEM218  Statistics delta processing stopped by RESET command. Extra parameters ignored
Explanation: Parameters typed in the command line following the RESET command have been ignored.
User response: None.

FPEM219  DB2 restart detected. Autodisplay terminated
Explanation: A DB2 restart has resulted in a new base time for calculation of statistics by DB2.
User response: Restart Autodisplay if required.

FPEM220  DB2 restart detected. Autodisplay and delta processing terminated
Explanation: Statistics deltas cannot be calculated across a DB2 restart.
User response: Restart Delta processing and Autodisplay if required.

FPEM221  DB2 restart detected. Delta processing terminated
Explanation: Statistics deltas cannot be calculated across a DB2 restart.
User response: Restart Delta processing if required.

FPEM222  DB2 restart detected. Autodisplay and interval processing terminated
Explanation: Statistics deltas cannot be calculated for an interval spanning a DB2 restart.
User response: Restart Autodisplay and interval processing if required.

FPEM223  DB2 restart detected. Interval processing terminated
Explanation: Statistics deltas cannot be calculated for an interval spanning a DB2 restart.
User response: Restart interval processing if required.

FPEM229  Not all data displayed. Limited support for: <V1>.
Explanation: Not all data returned by DB2 within IFCIDs are displayed on the Online Monitor panels.
• <V1> is the reason for the limitation
The following list shows the keywords for the reasons:

Multiple IFCID 2
For buffer pool information DB2 10 returns one or more IFCIDs 2. Only information from the first IFCID 2 is displayed on the panels. Further IFCIDs 2 are ignored.

User response: None.

FPEM250  Invalid date. Required format is: <V1>
Explanation: The date entered is not valid.
• <V1> is the valid date format.
User response: Enter a valid date.

FPEM251  Invalid time. Required format is: HH:MM:SS
Explanation: The time entered is not valid.
User response: Enter a valid time.

FPEM252  History Date/Time is in the future
Explanation: History date and time must be in the past.
User response: Reenter the date and time.
FPEM253  History is not active
Explanation: A history function could not be used because you are not connected to an active Data Server. To use history, a server must be installed for the DB2 subsystem you are using.
User response: Select the Options panel from the Online Monitor main menu. Select the DB2 Subsystem panel and check that the Data Server for your DB2 subsystem has been started. If necessary, start the appropriate server and then reenter the panel. Connect to the server by selecting it from the subsystem list.

FPEM254  History time is invalid. Required format is: HH:MM:SS
Explanation: The history time entered is not valid.
User response: Enter a valid history time.

FPEM255  History date is invalid. Required format is: <V1>
Explanation: The history date entered is not valid.
User response: Enter a valid history date.

FPEM256  Syntax error in HISTORY command. Valid formats are: HISTORY, HISTORY BACK, HISTORY FORWARD, HISTORY OFF, HISTORY <V1>, HH:MM:SS, HISTORY <V2>, and HISTORY HH:MM:SS
Explanation: None.
User response: Enter a valid HISTORY command.

FPEM257  Error in HISTORY command. Date/Time entered is in the future
Explanation: History date and time must be in the past.
User response: Reenter the date and time.

FPEM301  Group buffer pool <V1> has been deleted
Explanation: Group buffer pool information could not be refreshed.
User response: None.

FPEM302  DPMOUT record has not formatted successfully
Explanation: A severe error has occurred during formatting of the DPMOUT record.
User response: This is an internal error. If the condition recurs, contact IBM support.

FPEM303  ISPF variables have not formatted successfully
Explanation: A severe error has occurred during formatting of ISPF variables.
User response: This is an internal error. If the condition recurs, contact IBM support and quote the internal error number.

FPEM304  Insufficient storage available for DPMOUT record formatting
Explanation: When attempting to allocate storage for record formatting, the TSO/E region size was too small.
User response: Increase the region size of the user’s TSO/E address space.

FPEM307  System Parameters internal error <V1>
Explanation: None.
User response: If the problem recurs, contact IBM support and quote the internal error code.

FPEM308  Insufficient storage during System Parameters initialization
Explanation: There is insufficient storage for system parameters use.
User response: Increase the region size of the user’s TSO/E address space.

FPEM309  Buffer pool <V1> has been deleted
Explanation: Buffer pool information could not be refreshed.
User response: None.

FPEM404  Monitor write function disabled
Explanation: The monitor write function was deactivated by the global parameters function.
User response: None.
FPEM405  Monitor write function enabled
Explanation: The monitor write function was activated by the global parameters function.
User response: None.

FPEM411  Enter valid subsystem ID
Explanation: The DB2 subsystem ID contains invalid characters.
User response: Enter a valid DB2 subsystem ID.

FPEM412  Enter valid data set name
Explanation: The field does not contain a valid data set name.
User response: Enter a valid data set name.

FPEM413  Enter 1 or 2
Explanation: None.
User response: Enter 1 or 2.

FPEM414  Enter a valid Plan Name
Explanation: None.
User response: Enter a valid plan name.

FPEM415  Select only one server from the list
Explanation: None.
User response: Select one from the list.

FPEM416  Enter 1, 2, or 3
Explanation: A not valid number was entered into the disposition field.
User response: Enter 1, 2, or 3.
1 The current data is appended to previous data.
2 The current data replaces any previous data.
3 The data set is allocated for the user.

FPEM420  Memory size must be numeric in the range 1 to 4 (in MB)
Explanation: You specified a value that is not allowed.
User response: Specify either 1, 2, 3, or 4.

FPEM500  Subsystem <V1> is invalid. CAF RC <V2>, REASON <V3>
Explanation: An attempt was made to connect to a DB2 subsystem that does not exist.
• <V1> is the invalid subsystem name.

• <V2> is the Call Attach Facility (CAF) return code.
• <V3> is the DB2 reason code.
User response: Specify a valid DB2 subsystem ID for the MVS system that you are currently working on, using the global parameters function.

FPEM501  DB2 release is <V1>, DB2 loadlib (dsnload) release is <V2>
Explanation: The release level of the DB2 subsystem is not compatible with the DB2 load library currently allocated to your TSO/E session.
• <V1> is the DB2 release.
• <V2> is the DSNLOAD release.
User response: Be sure that the DB2 load library allocated to your TSO/E session is the same release level as the DB2 subsystem that you are connected to. The DB2 load library must not be allocated using LIBDEF.

FPEM502  DB2 subsystem <V1> is not available.
CAF RC <V2>, REASON <V3>
Explanation: An attempt was made to connect to a DB2 subsystem that is valid, but is not currently running.
• <V1> is the name of the DB2 subsystem.
• <V2> is the Call Attach Facility (CAF) return code.
• <V3> is the CAF reason code.
User response: Start the DB2 subsystem or connect to a subsystem that is already active.

FPEM503  You are not authorized to access DB2 subsystem <V1>
Explanation: You do not have the access authority needed to connect to the requested DB2 subsystem. The most common cause is that you are not defined by RACF as having access to the subsystem.
• <V1> is the subsystem ID of the DB2 subsystem in question.
User response: Notify your security administrator.

FPEM504  The server subsystem <V1> is not present. Performance Expert may not be installed correctly
Explanation: The Performance Expert subsystem has not been installed correctly.
• <V1> is the server subsystem ID.
User response: Check the subsystem ID or reinstall correctly.
You are not authorized to execute plan <V1>

Explanation: You do not have the DB2 authority needed to execute the requested DB2 plan.
• <V1> is the DB2 plan name.
User response: Notify your security administrator.

Currently allocated DB2 version not supported by DB2 PE

Explanation: An attempt was made to connect to a DB2 version allocated to the user session that is not supported by your OMEGAMON XE for DB2 PE. In general, a higher DB2 version is not supported by a lower version of OMEGAMON XE for DB2 PE. Lower DB2 versions can be supported. For further information on which DB2 versions are supported by your OMEGAMON XE for DB2 PE, see the manuals of the OMEGAMON XE for DB2 PE version you are using.
User response: Leave the Online Monitor and allocate the libraries of a supported DB2 version.

Only one task in this ISPF logical session can be connected to DB2

Explanation: An attempt has been made to start a second DSN or Call Attach Facility (CAF) connection to DB2 from one ISPF logical screen. This error may occur if you attempt to start a second Online Monitor session or start, for example, SPUFI and a second Online Monitor session in one ISPF logical screen.
User response: Exit the second Online Monitor session.

DB2 subsystem <V1> is stopping, please end your session

Explanation: The DB2 subsystem is terminating.
• <V1> is the name of the DB2 subsystem.
User response: End your session.

DB2 subsystem <V1> is abnormally terminating, please end your session

Explanation: The DB2 subsystem is abnormally terminating.
• <V1> is the name of the DB2 subsystem.
User response: End your session.

No DB2 subsystem ID (SSID) has been specified. Select the Options function to specify a subsystem

Explanation: You have not previously specified a DB2 subsystem ID on the Online Monitor panels.
User response: Select Options, then DB2 Subsystem to supply a DB2 subsystem ID.

Nonzero CAF return code. RC <V1>, REASON <V2>

Explanation: A DB2 call attach error has been detected.
• <V1> is the return code.
• <V2> is the reason code.
User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes.

SQL error <V1> received

Explanation: None.
• <V1> is the SQL error code.
User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed).

Internal error <V1> while adding a message to the DB2I queue

Explanation: None.
• <V1> is the SQL error code.
User response: Contact IBM support.

You cannot change the DB2 subsystem while trace is active

Explanation: None.
User response: Either wait until the trace has completed, or stop the trace. Then change to the new DB2 subsystem.

Abends have stopped the monitor trace. Restart the trace

Explanation: Abends in DB2 have caused the DB2 monitor trace to stop.
User response: Check the cause of the abend in DB2 and restart the monitor trace.

MONITOR1, MONITOR2, or SYSADM authority is needed to use DB2 IFI

Explanation: You do not have the authority needed to execute the DB2 IFI functions used by the Online Monitor. You require MONITOR1, MONITOR2, or SYSADM privilege.
User response: Notify your security administrator.
FPEM517  IFCID <V1> is not valid/available on this DB2 subsystem

Explanation: The Online Monitor issued a request for an IFCID from DB2 IFI, but the IFCID was not recognized by DB2. This should not happen on a normal DB2 subsystem.

User response: Apply necessary DB2 maintenance.

FPEM518  Nonzero IFI return code. RC <V1>, REASON <V2>

Explanation: A severe DB2 IFI error has been detected.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes. If the problem recurs, contact IBM support.

FPEM519  The connection to DB2 was lost prior to CAF call. RC <V1>, REASON <V2>

Explanation: OMENAMON XE for DB2 PE lost the connection to DB2.

User response: Examine the DB2 activity to determine the cause of the disconnection. For further information, see also DB2 Messages and Codes (or the corresponding DB2 version you have installed).

FPEM520  UDA allocation failed. Connection to server failed. Connection will be made to DB2

Explanation: None.

User response: Check the Data Server log for preceding messages or abends. If the problem recurs, contact IBM support.

FPEM521  SRB allocation failed. Connection to server failed. Connection will be made to DB2

Explanation: None.

User response: Check the Data Server log for error messages. If the problem recurs, contact IBM support.

FPEM522  Invalid request passed to the Data Movement PC routine

Explanation: None.

User response: Contact IBM support.

FPEM523  No connect or disconnect routine available

Explanation: None.

User response: Contact IBM support.

FPEM524  Server User Manager task has terminated due to errors. Connection and Exception functions are not available

Explanation: An internal error occurred.

User response: Check the Data Server log for error messages. If the problem recurs, contact IBM support.

FPEM525  Server internal error. CODE <V1>, REASON <V2>

Explanation: An internal error occurred.

User response: Check the Data Server log for error messages. If the problem recurs, contact IBM support.

FPEM526  Server DIV internal error. CODE <V1>

Explanation: An internal error occurred.

User response: Check the Data Server log for error messages. If the problem recurs, contact IBM support.

FPEM527  Server HISTORY internal error. CODE <V1>

Explanation: An internal error occurred.

User response: Check the Data Server log for error messages. If the problem recurs, contact IBM support.

FPEM528  TCB token storage could not be allocated. Connection to server failed. Connection will be made to DB2

Explanation: An internal error occurred.

User response: Check the Data Server log for preceding messages or abends. If the problem cannot be corrected and recurs, contact IBM support.

FPEM529  UDA allocation failed

Explanation: An internal error occurred.

User response: Check the Data Server log for preceding messages or abends. If the problem cannot be corrected and recurs, contact IBM support.
FPEM531  SRB allocation failed
Explanation: An internal error occurred.
User response: Check the Data Server log for preceding messages or abends. If the problem cannot be corrected and recurs, contact IBM support.

FPEM532  You are not authorized to connect to the server
Explanation: You do not have MONITOR1, MONITOR2, or SYSADM authority.
User response: Obtain these authorities.

FPEM533  SQL reason code of <V1> was received
Explanation: A negative SQL code was entered while the server was checking user authorities.
User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the SQL reason code.

FPEM534  Invalid request passed to the Data Movement PC routine
Explanation: An internal error occurred.
User response: Check the Data Server log for preceding messages or abends. If the problem cannot be corrected and recurs, contact IBM support.

FPEM535  You are not authorized to connect to the selected maintenance server
Explanation: You are not in the AdminUser list for this server.
User response: Add your user ID to the AdminUser list.

FPEM536  You are not authorized to connect to the server, possibly because the Monitor Trace is not active
Explanation: You were not granted authorization to connect to DB2. If you are a SYSADM, the system could not determine this due to a missing 106 IFCID.
User response: If you are a SYSADM, start the monitor trace, then you can connect as normal. Otherwise you do not have the required authorization to connect.

FPEM538  TCB token storage could not be allocated
Explanation: An internal error occurred.
User response: Check the Data Server log for preceding messages or abends. If the problem cannot be corrected and recurs, contact IBM support.

FPEM539  Unknown return code set by the server
Explanation: An internal error occurred.
User response: Check the console messages. If the problem cannot be corrected and recurs, contact IBM support.

FPEM540  Subsystem internal error. SSI return code <V1>
Explanation: An internal error occurred.
User response: Ensure that the subsystem is installed correctly.

FPEM541  Subsystem internal error. SSI was able to pass the request to the subsystem but received SSOB return code <V1>
Explanation: An internal error occurred.
User response: Ensure that the subsystem is installed correctly.

FPEM542  Subsystem internal error due to server not of matching type to swap subsystems
Explanation: An internal error occurred.
User response: Ensure that the subsystem is installed correctly.

FPEM543  Subsystem internal error due to <V1> not attached to any server
Explanation: An internal error occurred.
User response: Ensure that the subsystem is installed correctly.

FPEM544  Subsystem internal error. Unknown return code <V1>
Explanation: An internal error occurred.
User response: Ensure that the subsystem is installed correctly.

FPEM545  Error during Disconnect from server PC routine. Return code <V1>
Explanation: An internal error occurred.
User response: Check the Data Server log for preceding messages or abends. If the problem cannot be corrected and recurs, contact IBM support.
be corrected and recurs, contact IBM support.

**FPEM546** The area for handling all IFCID records is not large enough. \(<V1>\) IFCID records are SUPPRESSED

**Explanation:** Some IFCID records are ignored by the thread display function. In case of thread summary display, not all threads are shown. In thread detail, the missing information adheres to locked resources. The information SUPPRESSED is in ascending importance of locked resources: single held locks, multiple held locks, locks with suspensions.

\* \(<V1>\) is the number of records ignored.

**User response:** In case of thread summary, select the appropriate qualification, which shows the threads of interest but reduces the amount of IFCID data.

As a principle solution you can increase the size of the internal storage area that the Online Monitor uses to hold data for the selected purpose. For more information see *Monitoring Performance from ISPF*, Online Monitor options, Online Monitor Memory Usage window.

**FPEM547** Nonzero IFI return code. RC 4, REASON 00E60802. The IFCID return area is not large enough to accommodate all records from READS

**Explanation:** Some IFCID records are ignored by the thread display function. In case of thread summary display, not all threads are shown. In thread detail, the missing information adheres to locked resources. RC 4 and REASON 00E60802 are the return code and reason code from the DB2 READS call.

**User response:** In case of thread summary, select the appropriate qualification, which shows the threads of interest but reduces the amount of IFCID data.

**FPEM550** Function \(<V1>\) is not supported for subsystem \(<V2>\) DB2 \(<V3>\).

**Explanation:** The release level of the DB2 subsystem is not supported by this version of OMEGAMON for Db2 PE.

\(<V1>\) denotes the unsupported function.

\(<V2>\) denotes the ID of the subsystem.

\(<V3>\) denotes the DB2 version.

The following list shows the keywords for the affected functions:

**THREAD**
- Display Thread Activity

**STATISTIC**
- Display Statistics

**SYSPARM**
- Display System Parameters

**FPEM600** The collect subtask "\(<V1>\)" has terminated

**Explanation:** The collect subtask has terminated.

\* \(<V1>\) is the collect subtask.

**User response:** Exit from the Online Monitor before trying to start the collect subtask again. If the problem recurs, contact IBM support.

**FPEM601** The exception processor subtask has terminated

**Explanation:** The exception processor has terminated.

**User response:** Exit from the Online Monitor before trying the function again. If the problem recurs, contact IBM support.

**FPEM602** The collect exception notification subtask has terminated

**Explanation:** The collect exception notification subtask has terminated. Insufficient region size of your TSO/E session may be the primary cause of this problem.

**User response:** Increase the region size of the TSO/E session or terminate concurrently running ISPF applications before trying to restart the collect exception notification subtask again. If the problem recurs, contact IBM support.

**FPEM650** Insufficient storage

**Explanation:** There is not sufficient virtual storage available to perform a diagnosis.

**User response:** Increase the amount of storage.

**FPEM651** Diagnosis requires elapsed times for DB2 suspensions. These are not present or zero. Accounting or Monitor classes 2 and 3 may not be active or the thread may not have experienced suspensions

**Explanation:** There are minimum data requirements to perform a diagnosis. This message occurs if accounting or monitor classes 2 and 3 are not started or if they are started but no suspensions exist.

**User response:** Start the DB2 monitor or Accounting trace for the required classes.
The thread must have performed some buffer activity before it can be diagnosed.

**Explanation:** There are minimum data requirements to perform a diagnosis. In this case, some areas of the trace data provided by DB2 are empty due to insufficient buffer activity by the thread.

**User response:** The thread is not diagnosable. This applies, for example, if data regarding the use of buffer pools does not yet exist.

---

Unrecognized command. Valid commands for this panel are REINIT, DB2, LOOK, EXPLAIN, COLLECT, and OPTIONS.

**Explanation:** The command you entered is not available in the current panel.

- `<V1>` is the command you entered.

**User response:** Enter one of the following commands:

- **REINIT** To restart the exception processor
- **DB2** To enter a DB2 command
- **LOOK** To display the Look Selections menu
- **EXPLAIN** To explain the current SQL statement
- **COLLECT** To display the Report Data menu
- **OPTIONS** To set default options.

---

No command allowed for this panel.

**Explanation:** You have entered a command, that is not allowed for this panel.

**User response:** Select a thread or press a valid function key, but do not enter a command.

---

Please wait. Invoking Explain ...

**Explanation:** Online Monitor Explain is being invoked.

**User response:** None.

---

Valid selection characters are: `<V1>`

**Explanation:** An SQL statement can only be selected by using a `/` or a country-designated character.

**User response:** Use either `/` or `S` to select the statement to be explained.

---

Valid choices are: 1 for yes, 2 for no

**Explanation:** Only 1 or 2 can be used in this field. 1 indicates that the Options panel is to be displayed every time. 2 indicates that the Options panel is only displayed if you enter `explain options`.

**User response:** None.

---

Only valid optional parameter for Explain is 'OPTIONS'

**Explanation:** The only valid parameter for the EXPLAIN command is OPTIONS.

**User response:** Enter either `explain` or `explain options`.

---

Only 1 SQL statement can be selected for Explain

**Explanation:** More than one SQL statement has been selected for Explain from the summary panel.

**User response:** Select only one SQL statement to be explained.

---

Range commands incomplete or conflicting

**Explanation:** The range commands E, En, or EE have been entered incorrectly.

**User response:** See Monitoring Performance from ISPF for a description of proper usage of the range commands.

---

No explainable SQL statements found in source code

**Explanation:** No SQL statements eligible for Explain were found in the source module.

**User response:** See Monitoring Performance from ISPF for a description of the SQL statements that are eligible for Explain.

---

No SQL statements eligible for Explain found in source

**Explanation:** No SQL statements eligible for Explain were found in the range of the specified source lines.

**User response:** See Monitoring Performance from ISPF for a description of the SQL statements that are eligible for Explain, and alter the range of the Explain to include eligible SQL statements.
| FPEM688 | SQL statement found that is greater than the maximum size  
Explanation: An SQL statement greater than the defined maximum has been detected.  
User response: Reduce the size of the statement at cursor position. |
| FPEM691 | Only valid command is 'OPTIONS'  
Explanation: A command other than 'OPTIONS' has been entered on the SQL statement summary panel.  
User response: Use the OPTIONS command for altering the Source Explain options. |
| FPEM692 | Error <V1> during ISPF table initialization  
Explanation: An error occurred during processing of an ISPF table command.  
• <V1> is the error code.  
User response: Ensure that the ISPF table libraries are allocated and that the allocated libraries are not full. |
| FPEM693 | Error <V1> during ISPF panel processing  
Explanation: An error occurred during processing of an ISPF panel.  
• <V1> is the error code.  
User response: Ensure that the ISPF panel libraries are allocated. |
| FPEM694 | SQL text not loaded. Problem reading text from ISPF table  
Explanation: An error has occurred while loading an SQL statement from an ISPF table in Online Monitor Explain.  
• <V1> is the return code.  
User response: Ensure that the ISPF table libraries are correctly allocated. |
| FPEM700 | Command <V1> is not valid here. Valid commands are DB2, LOOK, COLLECT, REINIT, OPTIONS, and HISTORY  
Explanation: The command you entered is not available in the current panel.  
• <V1> is the command you entered.  
User response: Enter one of the following commands: DB2 To enter a DB2 command  
LOOK To display the Look Selections menu  
COLLECT To display the Report Data menu  
REINIT To restart the exception processor. |
| FPEM701 | Command <V1> is not recognized. Valid commands are DB2, LOOK, COLLECT, REINIT, OPTIONS, and HISTORY  
Explanation: The command you entered could not be recognized.  
• <V1> is the unrecognized command.  
User response: Enter one of the following commands: DB2 To enter a DB2 command  
LOOK To display the Look Selections menu  
COLLECT To display the Report Data menu  
REINIT To restart the exception processor  
OPTIONS To set default options  
HISTORY To display HISTORY status. |
| FPEM702 | Error connecting to <V1>. SQL CODE <V2>  
Explanation: An attempt to connect to a remote server failed.  
• <V1> is the remote server.  
• <V2> is the SQL code.  
User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the stated SQL code and contact your system programmer. |
| FPEM703 | Error resetting connection to <V1>. SQL CODE <V2>  
Explanation: An attempt to reset connection to a remote server failed. Online Monitor Explain is still connected to the current server.  
• <V1> is the remote server.  
• <V2> is the SQL code.  
User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the stated SQL code. |
| FPEM704 | Error setting current SQLID. SQL CODE <V1>  
Explanation: An attempt to set the current SQLID failed.  
• <V1> is the SQL code.  
User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the stated SQL code. |
FPEM705  Error setting current degree. SQL CODE <V1>

**Explanation:** An attempt to set the current degree failed.
- <V1> is the SQL code.

**User response:** See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the stated SQL code.

FPEM706  Unexpected SQL error. SQL CODE <V1>

**Explanation:** An unexpected SQL error occurred.
- <V1> is the SQL code.

**User response:** See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the stated SQL code.

FPEM707  Error locating current degree value for DBRM/package. SQL CODE <V1>. Current degree setting will default to 1

**Explanation:** An attempt to extract the degree from the system catalogs for the DBRM/package returned an error. The current degree setting defaults to 1.
- <V1> is the SQL code.

**User response:** See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the stated SQL code.

FPEM708  Error setting Current Degree. SQL CODE <V1>. Processing to continue

**Explanation:** An attempt to set the current degree for Explain of a DBRM package returned an error. Processing continues without the current degree being set to the value extracted from the system catalogs for the DBRM package.
- <V1> is the SQL code.

**User response:** See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the stated SQL code.

FPEM710  Enter a selection from 1 to 4

**Explanation:** None.

**User response:** Enter a valid number.

FPEM711  There are no matching rows in table <V1>

**Explanation:** No rows were found that match your selection criteria.
- <V1> is the table name.

**User response:** Change the selection criteria.

FPEM712  The table <V1> could not be accessed

**Explanation:** None.
- <V1> is the table name.

**User response:** None.

FPEM713  Select just one row from the list of plan table entries

**Explanation:** None.

**User response:** Select only one row.

FPEM714  The query number must be numeric or blank

**Explanation:** None.

**User response:** Enter a valid query number, or blank to use the default query number.

FPEM715  Select just one package from the list

**Explanation:** None.

**User response:** Select only one package from the list.

FPEM716  Select just one statement from the list

**Explanation:** None.

**User response:** Select only one statement from the list.

FPEM717  There are no matching packages

**Explanation:** No packages were found that match your selection criteria.

**User response:** Change the selection criteria.

FPEM718  No SQL statements were found for this package

**Explanation:** The package has been bound but does not contain any SQL statements.

**User response:** Select a different package.

FPEM719  The plan table owner must be a valid name. Wildcard characters are not accepted

**Explanation:** None.

**User response:** Enter the correct OWNER of the plan table, or leave blank to use your own plan table.

FPEM720  Select just one DBRM from the list

**Explanation:** None.

**User response:** Select only one DBRM from the list.
The SQL statement text has not changed. The statement will not be explained.

Explanation: You canceled from the editor.

User response: To explain dynamically, use END from the edit session.

The temporary data set V1 is in use.

Explanation: None.

User response: Try again, and if the problem recurs, see your system programmer or contact IBM support.

A severe error occurred while editing data set V1.

Explanation: An error occurred while editing the specified data set.

User response: Try again, and if the problem recurs, see your system programmer or contact IBM support.

The SQL statement text is too long. The text has been truncated.

Explanation: None.

User response: Shorten the SQL statement.

There are remote packages in this plan. The count of SQL statements does not include the statements from the remote packages.

Explanation: None.

User response: None.

There are no matching DBRMs.

Explanation: No DBRMs were found that match your selection criteria.

User response: Reenter the DBRM and plan name.

No SQL statements were found for this DBRM.

Explanation: The DBRM was bound but does not contain SQL statements.

User response: Select a different DBRM.

No partition information was found for this table space.

Explanation: None.

User response: None.

Select just one index from the list.

Explanation: None.

User response: None.

No index information was found for this table.

Explanation: The table has no indexes.

User response: None.

Select just one index partition from the list.

Explanation: None.

User response: None.

No key column information was found for this column.

Explanation: A FETCH from the OMEGAMON XE for DB2 PE copy or view of the DB2 system catalog SYSKEYS table (DGO_SYSKEYS) returned no rows. The DGO_SYSKEYS table can be created using the installation member FPEYCV71, or it can be a shadow catalog table copied from SYSIBM.SYSKEYS. If it is a shadow catalog table, it must be refreshed regularly.

User response: Run a query against the DGO_SYSKEYS table, such as:
```sql
SELECT COLNAME, ORDERING, COLSEQ
FROM hlq.DGO_SYSKEYS
WHERE IXCREATOR = 'PEABPV'
  AND IXNAME = 'XPE2VMAN'
ORDER BY COLSEQ;
```

and compare the result with a similar query against the SYSIBM.SYSKEYS table. If there are differences, use the sample job FPEYRSQL to refresh the DGO_SYSKEYS table.

---

**FPEM750** There is no key column distribution information available  
**Explanation:** None.  
**User response:** None.

---

**FPEM751** The table <V1> could not be accessed  
**Explanation:** None.  
• <V1> is the table name.  
**User response:** See your DB2 system administrator.

---

**FPEM752** This statement has no host variables  
**Explanation:** The explained statement has no host variables or was dynamically explained.  
**User response:** None.

---

**FPEM753** Output truncated  
**Explanation:** The output work area is restricted to 800 lines (64 KB). The output is therefore truncated after 800 lines.  
**User response:** Use Batch SQL statement Explain to get the full Explain output for the SQL statement.

---

**FPEM754** There is no column group distribution information available  
**Explanation:** Either the column group distribution information is not available or the DB2 version is less than 5.  
**User response:** None.

---

**FPEM756** An existing PLAN_TABLE entry for this statement was not found. The statement has been dynamically explained  
**Explanation:** None. However, this message may also appear when explaining an SQL statement from thread activity and an existing entry was found in the PLAN_TABLE.  
**User response:** In the latter case, to find the access path information determined at bind time, use option 2 or option 3 from the Explain menu, depending on whether a package or DBRM, respectively, is being used.

---

**FPEM757** This statement was explained at bind time  
**Explanation:** None.  
**User response:** None.

---

**FPEM758** This statement was dynamically explained  
**Explanation:** None.  
**User response:** None.

---

**FPEM759** Your plan table is no longer valid. Exit and reenter Explain to re-create the PLAN_TABLE  
**Explanation:** None.  
**User response:** Exit and reenter Explain to re-create the plan table. If this is not successful, delete the plan table and reenter Explain.

---

**FPEM760** The SQL statement is not recognized or cannot be explained. Only SELECT, INSERT, UPDATE, and DELETE statements can be explained  
**Explanation:** If the SQL statement contains the correct SELECT, INSERT, UPDATE, and DELETE statements, it is possible that a comment is embedded within the SQL statement. In this case, remove the embedded comments and rerun the job.  
**User response:** See DB2 SQL Reference.

---

**FPEM761** Your PLAN_TABLE has been successfully altered to DB2 <V1> format  
**Explanation:** None.  
• <V1> is the DB2 release.  
**User response:** None.

---

**FPEM762** A DB2 <V1> PLAN_TABLE has been created  
**Explanation:** None.  
• <V1> is the DB2 release.  
**User response:** None.

---

**FPEM763** Your PLAN_TABLE is invalid. Dynamic explains will not be performed  
**Explanation:** None.  
**User response:** Exit Explain and delete your plan table. Reenter Explain to re-create a new plan table.

FPEM787  Nonzero CAF return code. RC <V1>, REASON <V2>

Explanation:  None.
  • <V1> is the Call Attach Facility (CAF) return code.
  • <V2> is the CAF reason code.

User response:  See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes.

FPEM790  An unexpected error has occurred in module <V1>. The error code is <V2>

Explanation:  None.
  • <V1> is the module detecting the error.
  • <V2> is the internal error code.

User response:  See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the error code.

FPEM791  An ISPF <V1> service in module <V2> has returned code <V3>

Explanation:  None.
  • <V1> is the ISPF service name.
  • <V2> is the module detecting the error.
  • <V3> is the ISPF return code.

User response:  See the OS/390 ISPF Services Guide for an explanation of the ISPF return code. If the problem recurs, contact IBM support.

FPEM792  Storage allocation failed for the Explain module

Explanation:  An error occurred while allocating storage for the Explain module.

User response:  Exit DB2 PE, and try again. If the problem recurs, contact IBM support.

FPEM793  The explain connection to DB2 subsystem <V1> failed. CAF return code <V2>, reason code <V3>

Explanation:  None.
  • <V1> is the DB2 subsystem.
  • <V2> is the Call Attach Facility (CAF) return code.
  • <V3> is the reason code.

User response:  See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes.

FPEM794  No entry found for <V1>,<V2> in SYSIBM.SYSTABLES catalog

Explanation:  This message is displayed if a table was not found in the SYSIBM.SYSTABLES catalog.
  • <V1> is the table creator.
  • <V2> is the table name.

User response:  None.

FPEM800  Please wait. Invoking Collect Report Data ...

Explanation:  The Online Monitor Collect Report Data function is being invoked.

User response:  None.

FPEM802  The DB2T storage area has not yet been allocated by the Collect subtask "<V1>"

Explanation:  The Collect facility sets up the DB2 START TRACE commands in this DB2T storage area. However, the Collect subtask was not able to create the storage area.
  • <V1> is the Collect subtask.

User response:  Run the Online Monitor in a larger region space.

FPEM803  Destination <V1> has become inactive

Explanation:  The OPx destination used for the trace facility has become inactive, and data is no longer being written to the trace data set. One possible cause is that all traces that had <V1> as their destination have been stopped.
  • <V1> is the OPx destination.

User response:  None.

FPEM804  Enter 1 (select), 2 (repeat), 3 (delete), or 4 (insert)

Explanation:  None.

User response:  Correct the error.

FPEM806  Collect Facility failed to save the user selections ISPF profile table. ISPF service <V1> returned code <V2> with message <V3>

Explanation:  When a user exits from the collect facility, any changes made to the table of user selections (as a result of configuring collect tasks) are saved in their ISPF profile. This message is issued when an error occurs in trying to save these details in the user’s ISPF profile.
  • <V1> is the name of the ISPF service.
  • <V2> is the return code from the ISPF service.
  • <V3> is the message that is issued by ISPF to explain the problem.
**User response:** Take note of the message issued by ISPF and respond accordingly. The following are possible reasons for this message:
- The ISPF profile data set is full.
- The ISPF profile data set does not have enough directory entries.

<td>FPEM827</td>
<td>The cursor must be on the 'For ifcid ...' field to use the PROMPT command</td>
</tr>
</tbody>
</table>

**Explanation:** The PROMPT command was issued, and the cursor was not on a field to which the PROMPT command applies.

**User response:** Place the cursor on the field marked with + and reissue the PROMPT command.
FPEM828 Enter a valid data set name
Explanation: The data set name entered has a not valid format.
User response: Enter a valid data set name following the IBM naming conventions.

FPEM829 Enter the time in 24-hour clock notation
Explanation: The trace task start trigger time is not valid.
User response: Enter a time in 24-hour clock notation where hours are in the range of 0-23, minutes 0-59, and seconds 0-59.

FPEM831 The cursor must be on either the 'Field...' or 'For ifcid...' field to use the PROMPT command
Explanation: The PROMPT command was issued, and the cursor was not on a field to which the PROMPT command applies.
User response: Place the cursor on the field marked with + and reissue the PROMPT command.

FPEM832 Enter a field name
Explanation: The exception field name is required but it is blank.
User response: Enter the name of a valid exception field. Use the PROMPT command to display a list of valid fields. * is a valid value to represent any field.

FPEM833 Select at least one starting exception event
Explanation: No starting trigger fields have been selected on the Trigger By Exception Event panel.
User response: Select at least one start trigger value.

FPEM834 Select at least one of the stop conditions 'Elapsed time' or 'Number of records collected' to ensure the Collect task will stop
Explanation: One or both of the conditions ‘elapsed time’ and ‘record collected’ must be specified to ensure that the trace task will stop.
User response: Select one or both of these stop conditions.

FPEM835 A valid IFCID is required when 'Number of IFCIDs collected' is selected
Explanation: The stop condition ‘number of IFCIDs’ was selected, but no IFCID value was entered or the value entered is not numeric.
User response: Enter a valid IFCID number. Use the PROMPT command to display a list of valid IFCIDs.

FPEM836 Command <V1> is not recognized. Valid commands are END and CANCEL
Explanation: The text you entered is not recognized as a valid DB2 or OMEGAMON XE for DB2 PE command.
User response: Correct the input.

FPEM837 Valid selections are 1 and 2
Explanation: You specified an incorrect value.
User response: Select 1 or 2.

FPEM840 Collect Report Data is already active on this screen
Explanation: The Collect facility is already active on this ISPF screen.
User response: Exit the current screen until control is returned to the Collect facility.

FPEM841 Collect task '<V1>' must be configured before the status and messages can be displayed
Explanation: Status and messages for a trace task are not available until the task is configured.
• <V1> is the Collect task.
User response: Configure the task.

FPEM842 Collect task '<V1>' has terminated, so cannot be restarted
Explanation: The asynchronous trace task has terminated and therefore cannot be restarted.
• <V1> is the Collect task.
User response: To restart the task, exit and reenter the Online Monitor.

FPEM843 Collect task '<V1>' is in error, so cannot be restarted
Explanation: An unusual error has occurred that prevents the asynchronous task from running.
• <V1> is the Collect task.
User response: See the trace messages. Exit and reenter the Online Monitor to restart the task.

FPEM844 Collect task '<V1>' must be configured before it can be started
Explanation: The trace task cannot be started without a configuration.
• <V1> is the Collect task.
User response: Configure the task before you start it.

FPEM845  Collect task '<V1>' has already been started
Explanation: The trace task has already been started and is either collecting data or waiting for a start trigger.
• <V1> is the Collect task.
User response: Correct the selection.

FPEM846  Collect task '<V1>' has not yet been configured
Explanation: The trace task cannot be stopped because it has not yet been configured.
• <V1> is the Collect task.
User response: Correct the selection.

FPEM847  Collect task '<V1>' must be started before it can be stopped
Explanation: The trace task cannot be stopped because it has not yet been started.
• <V1> is the Collect task.
User response: Correct the selection.

FPEM848  Collect task '<V1>' must be stopped before it can be reconfigured
Explanation: The trace task cannot be reconfigured while it is running.
• <V1> is the Collect task.
User response: Stop the task before you reconfigure it.

FPEM850  Select at least one Report Class
Explanation: No selections were made on the Report Selection panel.
User response: Select one or more reports.

FPEM851  Select at least one IFCID
Explanation: No selections were made on the IFCID Selection panel.
User response: Select one or more IFCIDs.

FPEM852  Enter at least one identifier in this panel
Explanation: No identifiers have been entered on the Trace Qualification panel.
User response: Enter at least one identifier on the Trace Qualification panel.

FPEM853  Only one set of DB2 qualifiers may have more than one qualifying value entered
Explanation: Two or more identifiers have been entered in more than one group on the Trace Qualification panel.
User response: Only one group of identifiers may have two or more entries.

FPEM854  Elapsed time is invalid
Explanation: The user has chosen to stop the trace task after an elapsed time, but the time entered is zero or blank.
User response: Enter a time in seconds in the range of 1 to 99 999.

FPEM855  Number of records is invalid
Explanation: The user has chosen to stop the trace task after a number of records have been collected, but the number entered is zero or blank.
User response: Enter a number in the range of 1 to 99 999.

FPEM856  Number of IFCIDs collected is invalid
Explanation: The user has chosen to stop the trace task after a number of IFCIDs have been collected, but the number entered is zero or blank.
User response: Enter a number in the range of 1 to 9 999.

FPEM857  IFCID number is invalid
Explanation: The user has chosen to stop the trace task after a particular IFCID has been collected, but the IFCID specified is zero or blank.
User response: Enter a valid IFCID.

FPEM858  '<V1>' command not valid in this panel.
Valid commands are DB2, LOOK, REINIT, OPTIONS, and HISTORY
Explanation: The command you entered is not available in the current panel.
• <V1> is the command you entered.
User response: Enter one of the following commands:
DB2  To enter a DB2 command
LOOK To display the Look Selections menu
REINIT To restart the exception processor
OPTIONS To set default options
To display HISTORY status or invoke HISTORY mode.

**FPEM859**  You will not receive information about asynchronous I/Os

**Explanation:** Qualifying the plan or the authorization ID in the DB2 START TRACE command for performance trace class 4 restricts the data that DB2 produces to your task TCB and omits all asynchronous tasks including Sequential Prefetch.

**User response:** To ensure that all Sequential Prefetch related I/O is traced by DB2 and subsequently reported by DB2 PE, do not qualify by plan or by authorization ID.

**FPEM860**  Select one item only

**Explanation:** When using the Prompt facility for IFCIDs from the Trigger panels, more than one item was selected from the list displayed.

**User response:** Select only one item from the list.

**FPEM861**  The IFCID value '<V1>' is invalid - use the PROMPT command for a list

**Explanation:** The IFCID entered does not exist.

- '<V1>' is the invalid IFCID value.

**User response:** Enter a valid IFCID number or use the PROMPT command to display a list of valid IFCIDs.

**FPEM862**  The IFCID value '<V1>' is not available. It has been excluded in Collect Configuration

**Explanation:** The IFCID entered is not available. The IFCID has been excluded by selections made in Trace Configuration.

- '<V1>' is the invalid IFCID value.

**User response:** Enter a valid IFCID number or use the PROMPT command to display a list of valid IFCIDs. If the IFCID you wish to enter does not appear on this list, then the configuration must be changed.

**FPEM863**  Select one report set

**Explanation:** No selections were made on the Report Set Selection panel.

**User response:** Select one report set.

**FPEM864**  Select one report class

**Explanation:** No selections were made on the Report Set Selection panel.

**User response:** Select one report.

**FPEM865**  Select one IFCID

**Explanation:** No selections were made on the IFCID Selection panel.

**User response:** Select one IFCID.

**FPEM866**  This is the only IFCID available. Others were excluded in Collect Configuration

**Explanation:** When the PROMPT command was issued on the IFCID field, the system found only one IFCID that qualified for selection. The selection panels are bypassed, and this IFCID is displayed.

**User response:** None.

**FPEM867**  The field identifier '<V1>' is invalid - use the PROMPT command for a list

**Explanation:** The exception field entered does not exist.

- '<V1>' is the invalid field identifier.

**User response:** Enter a valid exception field name or use the PROMPT command to display a list of valid exception fields.

**FPEM868**  No messages have been written for the Collect subtask '<V1>'

**Explanation:** There are no trace task messages to view.

- '<V1>' is the Collect subtask.

**User response:** None.

**FPEM869**  The message list has not been created for the Collect subtask '<V1>'

**Explanation:** There is no message area into which the trace task can write its messages.

**User response:** Exit and reenter 'Status and Messages'. The trace task then allocates the message area as part of its startup routine.

**FPEM870**  Interval time must be in range of 1 through 1440 minutes

**Explanation:** The time interval selected is outside the valid range.

**User response:** Specify a time interval between 1 and 1440 minutes.

**FPEM871**  Active time must be in range of 1 through 3600 seconds

**Explanation:** The active time selected is outside the valid range.

**User response:** Specify an active time between 1 and 3600 seconds.

COLLECT
To display the Report Data menu

OPTIONS
To set default options

HISTORY
To display HISTORY status.

FPEM903 Exception log data set names must be different

Explanation: The periodic and display Exception Log data set names must be different when connected to a Data Server.
User response: Use unique data set names.

FPEM904 Exception file data set names must be different

Explanation: The periodic and display Exception File data set names must be different when connected to a Data Server.
User response: Use unique data set names.

FPEM905 Display exceptions found. <V1> total <V2> problem

Explanation: The Display Exception Processor has found exception conditions on the current panel.
• <V1> is the total number of exceptions.
• <V2> is the number of exceptions classified as problems.
User response: Use the LOOK command to look at a list of display exceptions.

FPEM907 Periodic interval must be numeric in the range 1 to 7200 seconds

Explanation: The periodic interval is not within allowable boundaries.
User response: Specify a periodic interval in the correct range.

FPEM908 Periodic interval must be numeric in the range 1 to 120 minutes

Explanation: The periodic interval is not within allowable boundaries.
User response: Specify a periodic interval in the correct range.

FPEM909 The Exception Processor has terminated normally

Explanation: The Online Monitor Exception Processor has been terminated from the Exception Processor panel (FPEMXP00).
User response: None.

FPEM910 <V1> periodic warning exceptions found

Explanation: The Periodic Exception Processor has detected warning exceptions.
• <V1> is the number of periodic exceptions.
User response: Use the LOOK command to look at the periodic exceptions.

FPEM911 Display exceptions found. <V1> total, <V2> problem

Explanation: The Display Exception Processor has found exception conditions on the current panel.
• <V1> is the total number of exceptions.
• <V2> is the number of exceptions classified as problems.
User response: Use the LOOK command to look at a list of display exceptions.

FPEM912 Error attempting to close the Exception log

Explanation: An error occurred when closing the exception log.
User response: None.

FPEM913 Error attempting to close the Exception File

Explanation: An error occurred when closing the Exception Log file.
User response: None.

FPEM914 Error attempting to write to the Exception log

Explanation: An error occurred when writing to the exception log. The log record was not written.
User response: See the accompanied system message in the asynchronous message log for action.

FPEM915 Invalid data set name

Explanation: The data set name specified does not conform to MVS standards.
User response: Enter a valid data set name.

FPEM917 Unable to open vlist <V1>. RC <V2>

Explanation: The Online Monitor detected an internal error.
• <V1> is the VLIST name.
• <V2> is the return code.
User response: If the problem recurs, contact IBM support.
FPEM918 | Event name <V1> is invalid
---|---
**Explanation:** The Online Monitor detected a not valid event in the exception threshold data set.
- <V1> is the invalid event name you specified.

**User response:** Specify one of the following event types:
- **STAT** For statistics events
- **THRD** For thread activity events
- **ACCT** For accounting events.

FPEM919 | Field name <V1> is supported only by DB2 PE batch
---|---
**Explanation:** The field name specified in the exception threshold data set is valid only in the batch component.
- <V1> is the invalid field name.

**User response:** None.

FPEM924 | Comparison operator <V1> is invalid
---|---
**Explanation:** The comparison operator is not valid.
- <V1> is the specified comparison operator.

**User response:** Specify one of the following:
- > (greater than)
- < (less than).

FPEM925 | Field name <V1> cannot be qualified
---|---
**Explanation:** An attempt was made to qualify a field, but the field is not eligible for qualification.
- <V1> is the name of the field.

**User response:** Correct the error.

FPEM926 | Field qualifier <V1> is invalid
---|---
**Explanation:** The field qualification specified in the exception threshold data set is not valid.
- <V1> is the specified field qualifier.

**User response:** Specify one of the following field qualification values:
- **BPn** 4 KB buffer pool number (0 ≤ n ≤ 49)
- **BP32K** 32 KB buffer pool
- **BP32Kn** 32 KB buffer pool number (0 ≤ n ≤ 9)
- **ANY** Any buffer pool
- **TOT** The total of all buffer pools
- **TOT4K** The total of all 4 KB buffer pools
- **TOT32K** The total of all 32 KB buffer pools.

FPEM927 | <V1> is an invalid time value
---|---
**Explanation:** The time value specified for a field in the exception threshold data set is not valid.
- <V1> is the specified time value.

**User response:** Correct the error.

FPEM928 | A time value is not valid for field <V1>
---|---
**Explanation:** A time value was specified for a field in the exception threshold data set that is not a time field.
- <V1> is the name of the field.

**User response:** Correct the error.

FPEM929 | Exception Processor initialized with errors
---|---
**Explanation:** The Online Monitor exception processor was initialized, but errors were detected during initialization. These errors were not severe enough to keep the exception processor from being initialized, but
the threshold entries in error were discarded. The errors are listed in the panel.

**User response:** Correct the errors.

---

### FPEM930 Exception Processor has been initialized

**Explanation:** The Online Monitor exception processor was initialized successfully.

**User response:** None.

### FPEM931 Comparison basis <V1> is invalid

**Explanation:** The comparison basis specified in the exception threshold data set is not valid.

- <V1> is the specified comparison basis.

**User response:** Specify one of the following:

- V: Check field value against an absolute value
- M: Check field value on a per-minute basis
- S: Check field value on a per-second basis
- C: Check field value on a per-commit basis.

### FPEM932 Both problem value and warning value are blank

**Explanation:** Both the problem threshold value and the warning threshold value are blank.

**User response:** Specify a problem threshold value or a warning threshold value or both.

### FPEM933 Invalid compare basis for a package field

**Explanation:** Valid compare bases are OCCUR and VALUE.

**User response:** Correct the input.

### FPEM934 Per occur compare basis is valid for batch only

**Explanation:** None.

**User response:** Correct the input.

### FPEM935 No valid threshold records

**Explanation:** All the records in the threshold data set specified on the Exception Processor panel (FPEMEP00 or FPEMEP02) are in error. The exception processor is not initialized when this occurs. The records in error and the reasons for the error are listed.

**User response:** Correct the errors.
FPEM943  The exception threshold data set is empty
Explanation:  The threshold data set does not contain any records.
User response:  Add records to the threshold data set or specify another threshold data set name.

FPEM944  Periodic Exception Processor started at <V1>
Explanation:  The periodic exception processor is started.
  • <V1> is the date and time at which the periodic exception processor started.
User response:  None.

FPEM945  Periodic Exception Processor stopped at <V1>
Explanation:  The periodic exception processor is stopped.
  • <V1> is the date and time at which the periodic exception processor stopped.
User response:  None.

FPEM946  Threshold data set from previous release is used
Explanation:  The threshold data set from a previous release is being used. New identifiers have defaulted to accept all values.
User response:  Convert the threshold data set using the threshold data editor to take full advantage of the new identifiers.

FPEM947  REINIT command not executed, Exception Processor not active
Explanation:  The REINIT command can only be used if the exception processor is active.
User response:  Use the Exception processor panel (FPEMXP00) to start the exception processor.

FPEM948  <V1> display problems. <V2> periodic problems
Explanation:  Display or periodic exceptions have been found. This message is displayed if the Disable Auto option is set to N and problem exceptions have been found.
  • <V1> is the number of display problems.
  • <V2> is the number of periodic problems.
User response:  None.

FPEM949  The Threshold data set contains records only valid for Batch
Explanation:  There are no records in the exception threshold data set with an environment field that is either O or Z, or there are such records, but they are commented out.
User response:  Initialize the exception processor with an exception threshold data set that contains threshold records valid for the Online Monitor.

FPEM950  <V1> periodic warning exceptions found
Explanation:  Periodic warning exceptions have been found.
  • <V1> is the total number of periodic warning exceptions.
User response:  Press F4 to look at the exceptions.

FPEM951  Exception event details are not supported
Explanation:  No details about a selected IFCID, respectively exception event, can be reported because the ISPF Online Monitor runs in DB2 10 toleration mode only.
User response:  None.

FPEM952  REINIT command not allowed until previous command is completed
Explanation:  The REINIT command cannot be entered until the previous command has completed its function.
User response:  Press F3 and then enter the REINIT command.

FPEM953  Exception Event processor started at <V1>
Explanation:  None.
  • <V1> is the start time of the exception event processor.
User response:  None.

FPEM954  Exception Event processor stopped at <V1>
Explanation:  None.
  • <V1> is the end time of the exception event processor.
User response:  None.

FPEN - Record Trace messages

**FPEN1246S**  
**UNSUCCESSFUL ATTEMPT WRITING TO THE FILE DATA SET OF RECORD TRACE**

**Explanation:** An error occurred while writing data to the Record trace File data set.

**User response:** Check for system messages detailing the problem.

FPEP - Spreadsheet Input Data Generator

**FPEP1000E**  
**THE INPUT PARAMETERS ‘<V1>’ SPECIFY AN INVALID REQUEST.**  
**REASON <V2>**

**Explanation:** The Spreadsheet Input Data Generator is invoked with invalid input parameters.
- `<V1>` is the string of input parameters.
- `<V2>` is the reason code.

The following reason codes might occur:

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>Invalid length. You can use only one blank between parameters.</td>

</tr>
<tr>
<td>52</td>
<td>Invalid values for DELIM and DECSEP. You must use different values for these parameters.</td>
</tr>
</tbody>
</table>

**User response:** Correct the invalid input parameters and rerun the Spreadsheet Input Data Generator.

**FPEP1001I**  
**TYPE <V1> HAS BEEN REQUESTED.**

**Explanation:** The Spreadsheet Input Data Generator is invoked for type `<V1>`.

`<V1>` is the type of data for which a spreadsheet is requested. The type is related to the Performance Database tables and parts that are delivered in the RKO2SAMP / TKO2SAMP library.

**User response:** None.

**FPEP1002I**  
**CSV CREATION FOR TYPE <V1> STARTED.**

**Explanation:** The Spreadsheet Input Data Generator started to create spreadsheet data for type `<V1>`. `<V1>` is the type of data. It is related to the Performance Database tables and parts that are delivered in the RKO2SAMP / TKO2SAMP library.

**User response:** None.

**FPEP1003E**  
**FILE <V1>: ALLOCATION OF INTERNAL STRUCTURES FAILED AT START OF PROCESSING.**

**Explanation:** The Spreadsheet Input Data Generator failed to allocate internal structures for the file at the start of processing.

`<V1>` is the name of the file.

**User response:** Check that the file records have the correct format.

**FPEP1004E**  
**DEALLOCATION OF INTERNAL STRUCTURES FAILED AT END OF PROCESSING.**

**Explanation:** The Spreadsheet Input Data Generator
failed to deallocate internal structures at the end of processing.

User response: Check the system output. Contact IBM Support to report this problem.

FPEP1005E  UNABLE TO OPEN FILE <V1>.
Explanation: An error occurred when opening the file.
<V1> is the name of the file.
User response: Check that the file exists and that it is in the correct format.

FPEP1006E  UNABLE TO WRITE OUTPUT FILE.
Explanation: An error occurred when writing to the output file.
User response: Check that the INPUT file contains valid records, for example:
• If a statistics type Sxxx is selected: statistics FILE records or converted statistics SAVE-FILE records
• If an accounting type AFxx is selected: accounting FILE records
• If an accounting type ASxx is selected: converted accounting SAVE-FILE records.

FPEP1007I  FILE <V1>: ALLOCATION OF INTERNAL STRUCTURES FINISHED.
Explanation: The allocation of internal structures for the file finished.
<V1> is the name of the file.
User response: None.

FPEP1008I  RECORDS IN: <V1>: RECORDS OUT: <V2> (INCL. HEADER ROW).
Explanation: <V1> is the number of input records processed.
<V2> is the number of records that are written to the output file.
User response: None.

FPEP1010I  CSV CREATION FOR TYPE <V1> HAS FINISHED.
Explanation: The Spreadsheet Input Data Generator finished the creation of spreadsheet data for type <V1>.
<V1> is the type of data. It is related to the Performance Database tables and parts that are delivered in the RKO2SAMP / TKO2SAMP library.
User response: None.

FPEP1011E  CSV CREATION FOR TYPE <V1> FAILED.
Explanation: The Spreadsheet Input Data Generator cannot create spreadsheet data for type <V1>.
<V1> is the type of data. It is related to the Performance Database tables and parts that are delivered in the RKO2SAMP / TKO2SAMP library.

User response: Check the system output and correct the problem.

FPEP1012E  INVALID INPUT RECORD IN LINE <V1> FOR TYPE <V2>.
Explanation: The Spreadsheet Input Data Generator detected an invalid record. Therefore it cannot create spreadsheet data for type <V2>.
• <V1> is the line of the invalid record in the INPUT file.
• <V2> is the type of data. It is related to the Performance Database tables and parts that are delivered in the RKO2SAMP / TKO2SAMP library.
User response: Check that the INPUT file contains valid records, for example:
• If a statistics type Sxxx is selected: statistics FILE records or converted statistics SAVE-FILE records
• If an accounting type AFxx is selected: accounting FILE records
• If an accounting type ASxx is selected: converted accounting SAVE-FILE records.

FPEP1015E  FILE <V1>: INVALID TOKEN <V2> ENDING AT POSITION <V3> IN LINE <V4>. TOKEN <V5> EXPECTED.
Explanation: The Spreadsheet Input Data Generator detected a syntactical error when processing input data.
• <V1> is the input file.
• <V2> is the invalid token.
• <V3> is the ending position of the invalid token.
• <V4> is the line in the input file of the invalid token.
• <V5> is the expected token.
User response: Check the input file and correct the problem.

FPEP1016E  FILE <V1>: INVALID COLUMN <V2> USED IN WHEN CLAUSE.
Explanation: The Spreadsheet Input Data Generator detected an invalid column in the WHEN clause of a DB2 load statement.
• <V1> is the input file.
• <V2> is the invalid column.
User response: Check the input file and correct the problem.

FPEP1017E  FILE <V1>: INVALID COLUMN <V2> USED IN DEFAULTIF CLAUSE.
Explanation: The Spreadsheet Input Data Generator detected an invalid column in a DEFAULTIF clause of a DB2 load statement.
• <V1> is the input file.
• <V2> is the invalid column.
User response: Check the input file and correct the problem.

FPEP1018E  FILE <V1>: INVALID COLUMN <V2> 
USED IN A NULLIF CLAUSE.

Explanation: The Spreadsheet Input Data Generator detected an invalid column in a NULLIF clause of a DB2 load statement.
• <V1> is the input file.
• <V2> is the invalid column.
User response: Check the input file and correct the problem.

FPEP1020E  FILE <V1>: INVALID COLUMN <V2> 
USED IN FIELD SELECTION LIST.
COLUMN NOT FOUND IN BPART.

Explanation: The Spreadsheet Input Data Generator detected an invalid column in the field selection list. This column is not specified in the metadata B-part.
• <V1> is the input file.
• <V2> is the invalid column.
User response: Check the input file. For example, make sure that the correct metadata part is used or that the correct column is specified in the field selection list.

FPEP1021E  FILE <V1>: INVALID FIELD <V2> 
USED IN FIELD SELECTION LIST.
FIELD NOT FOUND IN BPART.

Explanation: The Spreadsheet Input Data Generator detected an invalid field in the field selection list. This field is not specified in the metadata B-part.
• <V1> is the input file.
• <V2> is the invalid field.
User response: Check the input file. For example, make sure that the correct metadata part is used or that the correct field is specified in the field selection list.

FPEP1022E  FILE <V1>: INVALID COLUMN <V2> 
USED IN FIELD SELECTION LIST.
COLUMN NOT FOUND IN LPART.

Explanation: The Spreadsheet Input Data Generator detected an invalid column in the field selection list. This column is not specified in the load statement (L-part).
• <V1> is the input file.
• <V2> is the invalid field.
User response: Check the input file and correct the problem.

FPEP1023E  FILE <V1>: INVALID FORMAT <V2> 
USED IN FIELD SELECTION LIST.

Explanation: The Spreadsheet Input Data Generator detected an invalid format function in the field selection list.
• <V1> is the input file.
• <V2> is the invalid format.
User response: Check the input file and use a valid format function. Valid format functions are MB, P2MB, HEX, or S2T.

FPEP1024E  FILE <V1>: INVALID FORMAT <V2> 
USED IN FIELD SELECTION LIST FOR 
FIELD <V3>. ENTRY MUST BE BLANK 
FOR TYPE <AGGR>.

Explanation: The Spreadsheet Input Data Generator detected an invalid format function in the field selection list. Fields with type AGGR must not have a format function.
• <V1> is the name of the input file.
• <V2> is the name of the invalid format.
• <V3> is the name of the field.
User response: Check the input file and remove the format function.
FPEQ - Buffer Pool Analyzer messages

FPEQ7035E  FILE RECORD WAS NOT WRITTEN.
DDNAME = <V1>, RETURN CODE = <V2>

Explanation: An error occurred when attempting to write a record to the buffer pool File data set.
- <V1> is the ddname for the data set.
- <V2> is the return code from the write operation.
User response: Check the data set allocation.

FPEQ7502S  EXCEPTION OCCURRED DURING WRITING TO WORK FILE. <V1> OF <V2> RECORDS ALREADY WRITTEN.

Explanation: Not enough data set space allocated for the amount of data to be written.
User response: Allocate more data set space. Use the actual allocation size and the values shown in the message to determine the minimum space required. Retry the operation.

FPEQ7600S  EXCEPTIONAL CONDITION OCCURRED DURING BUFFER POOL ACTIVITY PROCESSING. MAIN STORAGE ALLOCATION FAILED

Explanation: There was not enough storage available to continue buffer pool activity processing.
User response: See the DB2 system catalog. From the catalog tables SYSIBM.SYSTABLESPACE and SYIBM.SYSINDEXES determine the numbers of objects/rows to be read. Compare the sum of these numbers with the number of records read and increase the region size accordingly. Run the job again.

Chapter 9. Messages  4981
**FPEQ7610S** • **FPES0010W**

User response: Increase the region size, and rerun the job.

---

**FPER - SQL Activity report set messages**

**FPER0600S** EXCEPTIONAL CONDITION OCCURRED DURING SQL ACTIVITY PROCESSING. MAIN STORAGE ALLOCATION FAILED

Explanation: There was not enough storage available to continue SQL activity processing.

User response: Increase the region size and rerun the job.

---

**FPER3270S** EXCEPTIONAL CONDITION OCCURRED DURING SQL ACTIVITY PROCESSING. INTERNAL ERROR CODE <V1>

Explanation: An internal error occurred.

- <V1> is the internal error code.

User response: If the internal error code is OVERFLOW, rerun the job and try one or more of the following actions to reduce the amount of data for an SQL Activity trace:
  - Use the FROM/TO options for the GLOBAL command to specify a limited time interval.
  - Rather than specifying WORKLOAD(ALL) in the TRACE subcommand, make an appropriate selection, for example, WORKLOAD(IO).
  - Rather than collecting a large amount of data in one trace, specify the TRACE subcommand repeatedly (you can repeat it up to five times) to spread the information over several traces.

For all other internal error codes, rerun the job. If the problem recurs, contact IBM support and quote the internal error code.

---

**FPES - Statistics report set messages**

**FPES0005W** STATISTICS RECORD WITH IFCID 0002, SEQNO = <V1> MISSING. IFCID 0001, SEQNO = <V2> IGNORED. AFFECTING FUNCTIONS: <V3>

Explanation: An IFCID 0001 record was found without a matching IFCID 0002 record, and was ignored.

- <V1> is the sequence number of the missing record.
- <V2> is the sequence number of the unmatched record.
- <V3> is REDUCE or TRACE/FILE.

User response: None.

---

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.
without a matching IFCID 0001 record, and was ignored.
• <V1> is the sequence number of the missing record.
• <V2> is the sequence number of the unmatched record.
• <V3> is REDUCE or TRACE/FILE.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: None.

FPES0015I A DB2 RESTART HAS BEEN DETECTED. STATISTICS COUNTERS RESET. AFFECTING FUNCTIONS: <V1>, NEW BEGIN RECORD IFCID <V2>, SEQNO = <V3>

Explanation: A DB2 restart has been detected (the sequence number of the end record pair was lower than the begin record pair). Because a statistics delta calculation would result in negative values, the current begin record pair is discarded, and processing continues.
• <V1> is REDUCE or TRACE/FILE.
• <V2> is the IFCID number of the record where the restart was detected.
• <V3> is the sequence number of the record pair that is used as the new begin records.

Note that, depending on the operational situation, an additional line indicating the location, group, subsystem ID, member, date, and time may be displayed immediately following the message number.

User response: None.

FPES0020I STATISTICS REDUCE COMPLETE

Explanation: Statistics REDUCE processing is completed.

User response: None.

FPES0025I STATISTICS FILE COMPLETE. <V1> RECORDS WRITTEN TO DDNAME <V2>

Explanation: A STATISTICS FILE subcommand has completed its function.
• <V1> is the number of records written.
• <V2> is the destination ddname.

User response: None.
FPES0060W • FPET1040W

**User response:** Check for system messages detailing the problem.

---

**FPES0060W** A STATISTICS <V1> DELTA CALCULATION RESULTED IN NEGATIVE VALUES. BEGIN RECORD IFC SEQNO = <V2>

**Explanation:** The calculation for a statistics delta record resulted in negative values. The results are ignored and processing continues.

- `<V1>` is REDUCE or TRACE/FILE.
- `<V2>` is the sequence number of the begin records.

**User response:** None.

---

**FPES0065U** EXCEPTIONAL PROCESSING CONDITION WHILE GENERATING STATISTICS LIST 1. INSUFFICIENT STORAGE AVAILABLE

**Explanation:** There was not enough storage available for statistics processing to continue.

**User response:** Increase the region size and rerun the job.

---

**FPES0070U** INITIALIZATION FAILED FOR STATISTICS LIST 1. INSUFFICIENT STORAGE AVAILABLE

**Explanation:** There was not enough storage available for statistics processing to continue.

**User response:** Increase the region size and rerun the job.

---

**FPET - Utility Activity report set messages**

**FPET0600S** EXCEPTIONAL CONDITION OCCURRED DURING UTILITY ACTIVITY PROCESSING. MAIN STORAGE ALLOCATION FAILED

**Explanation:** There was not enough storage available for utility activity processing to continue.

**User response:** Increase the region size and rerun the job.

---

**FPET0610S** EXCEPTIONAL CONDITION OCCURRED DURING UTILITY ACTIVITY PROCESSING. MAIN STORAGE RELEASE FAILED

**Explanation:** An attempt to free storage failed.

**User response:** Rerun the job. If the problem recurs, contact IBM support.

---

**FPET1020I** UNABLE TO CORRECTLY PRINT HEADER FOR UTILITY ACTIVITY REPORT

**Explanation:** An error occurred while attempting to print the header on a Utility Activity report.

**User response:** Rerun the job. If the problem recurs, contact IBM support.

---

**FPET1030W** THE INTERNAL LIMIT OF PHASES THAT CAN BE PROCESSED HAS BEEN EXCEEDED. PROCESSING CONTINUES WITH <V1> REGISTERED PHASES WITHOUT ADDITIONAL ONES.

**Explanation:** Processing is limited to `<V1>` phases. New phases found after reaching this limit cannot be processed.

**User response:** Ensure that the input trace data does not include more than the maximum number of phases.

---

**FPET1040W** THE INTERNAL LIMIT OF SUBTASKS THAT CAN BE PROCESSED HAS BEEN EXCEEDED. PROCESSING CONTINUES WITH <V1> REGISTERED SUBTASKS WITHOUT ADDITIONAL ONES.

**Explanation:** Processing is limited to `<V1>` subtasks. New subtasks found after reaching this limit cannot be processed.

**User response:** Ensure that the input trace data does not include more than the maximum number of subtasks. For example, check and adapt the PARALLEL option of the COPY or RECOVER utility when collecting DB2 trace data.
**FPET3270E**  EXCEPTIONAL CONDITION OCCURRED DURING UTILITY ACTIVITY PROCESSING. INTERNAL ERROR CODE `<V1>`  

**Explanation:**  An internal error occurred.  
• `<V1>` is the internal error code.  

**User response:**  Rerun the job. If the problem recurs, contact IBM support and quote the internal error code.

---

**FPET4500E**  INITIALIZATION FAILED FOR UTILITY ACTIVITY LIST. INSUFFICIENT STORAGE AVAILABLE  

**Explanation:**  There was insufficient storage available to continue processing.  

**User response:**  Increase the region size and rerun the job.

---

## FPEU - Utility Services messages

</table>

---

Chapter 9. Messages 4985
Explanation: A second session of the OMEGAMON for DB2 PE ISPF Online Monitor is started in an ISPF split screen. This second session is not supported.

User response: None.

FPEU0020E UNABLE TO ALLOCATE VIRTUAL STORAGE. GETMAIN RETURN CODE: <V1>, STORAGE REQUESTED: <V2>, SUBPOOL: <V3>, LOCATION: <V4>

Explanation: An error occurred attempting to allocate virtual storage.
• <V1> is the GETMAIN return code.
• <V2> is the STORAGE length.
• <V3> is the SUBPOOL.
• <V4> is the location.

User response: Rerun the job. If the problem recurs, contact IBM support.

FPEU0021W UNABLE TO FREE VIRTUAL STORAGE. FREEMAIN RETURN CODE: <V1>, STORAGE ADDRESS: <V2>, STORAGE LENGTH: <V3>, SUBPOOL: <V4>

Explanation: An error occurred attempting to free virtual storage.
• <V1> is the FREEMAIN return code.
• <V2> is the STORAGE address.
• <V3> is the STORAGE length.
• <V4> is the SUBPOOL.

User response: Rerun the job. If the problem recurs, contact IBM support.

FPEU0022W UNABLE TO RELEASE VIRTUAL STORAGE FROM SUBPOOL <V2>. FREEMAIN RETURN CODE: <V1>

Explanation: An error occurred attempting to release virtual storage.
• <V1> is the FREEMAIN return code.
• <V2> is the SUBPOOL.

User response: Rerun the job. If the problem recurs, contact IBM support.

FPEU0025E AN ERROR OCCURRED DURING DYNALLOC. DYNALLOC RETURN CODE: <V1>, ERROR REASON CODE: <V2>, INFORMATION REASON CODE: <V3>

Explanation: An error occurred during dynamic allocation.
• <V1> is the DYNALLOC return code.
• <V2> is the error reason code.
• <V3> is the information reason code.

User response: See MVS Messages and Codes (or the corresponding manual of the MVS version you have installed) for an explanation of the return code and reason codes. If the problem recurs, contact IBM support.

FPEU0027E UNABLE TO LINK TO MODULE <V1>. ABEND CODE <V2>

Explanation: A link could not be made to the load module required for OMEGAMON XE for DB2 PE.
• <V1> is the name of the module.
• <V2> is the abend code returned from the system.

User response: See MVS Messages and Codes.

FPEU0028E UNABLE TO LOAD MODULE <V1>. ABEND CODE <V2>

Explanation: A load module required to run OMEGAMON XE for DB2 PE could not be loaded into virtual storage.
• <V1> is the name of the load module.
• <V2> is the abend code returned from the system.

User response: See MVS Messages and Codes for an explanation of the system abend code.

FPEU0029W UNABLE TO DELETE MODULE <V1>. RETURN CODE <V2>

Explanation: A load module previously loaded by OMEGAMON XE for DB2 PE could not be deleted from virtual storage.
• <V1> is the load module not dropped.
• <V2> is the return code from SVC 9.

User response: Contact IBM support.

FPEU0040W VSAM FILE <V1> WAS OPENED SUCCESSFULLY BUT A WARNING WAS ISSUED. VSAM RETURN CODE: <V2>, VSAM REASON CODE: <V3>

Explanation: None.
• <V1> is the name of the VSAM file.
• <V2> is the VSAM return code.
• <V3> is the VSAM reason code.

User response: See the appropriate VSAM documentation.

FPEU0041E VSAM FILE <V1> COULD NOT BE OPENED. VSAM RETURN CODE: <V2>, VSAM REASON CODE: <V3>

Explanation: None.
• <V1> is the name of the VSAM file.
• <V2> is the VSAM return code.
• <V3> is the VSAM reason code.

User response: See the appropriate VSAM documentation.
FPEU0042E FILE <V1> COULD NOT BE OPENED. SYSTEM ABEND CODE: <V2>

Explanation: None. 
• <V1> is the file name 
• <V2> is the system abend code 

User response: See the operating system documentation for an explanation of the system abend. If the problem recurs, contact IBM support.

FPEU0043E FILE <V1> WAS NOT OPENED. IT HAS AN INCORRECT RECORD FORMAT

Explanation: None. 
• <V1> is the file name. 

User response: Allocate the file with the correct record format. See the Report Command Reference for more information. The record formats are described in “The Performance Expert command Stream”, section “DD Statements”.

FPEU0044E FILE <V1> WAS NOT OPENED. IT HAS AN INCORRECT RECORD LENGTH

Explanation: None. 
• <V1> is the file name. 

User response: Allocate the file with the correct record length. See the Report Command Reference for more information.

FPEU0045E UNABLE TO READ FROM FILE <V1>. SYSTEM ABEND CODE: <V2>

Explanation: An error occurred while reading from a file. 
• <V1> is the file name. 
• <V2> is the system abend code. 

User response: See MVS Messages and Codes for an explanation of the system abend code. If the problem recurs, contact IBM support.

FPEU0046E UNABLE TO READ FROM FILE <V1>. SYSTEM MESSAGE BUFFER: <V2>

Explanation: An error occurred while reading from a file. 
• <V1> is the file name. 
• <V2> is the system message buffer. 

User response: See the SYNADAF macro in DSFSMS/MVS Macro Instruction for Data Set for the system message buffer code.

FPEU0047E UNABLE TO WRITE TO FILE <V1>. SYSTEM ABEND CODE: <V2>

Explanation: An error occurred while writing to a file. 
• <V1> is the file name. 
• <V2> is the system abend code. 

User response: See MVS Messages and Codes for an explanation of the system abend code. If the problem recurs, contact IBM support.

FPEU0048E UNABLE TO WRITE TO FILE <V1>. SYSTEM MESSAGE BUFFER: <V2>

Explanation: An error occurred while writing to a file. 
• <V1> is the file name. 
• <V2> is the system message buffer. 

User response: See the SYNADAF macro in DSFSMS/MVS Macro Instruction for Data Set for the system message buffer code.

FPEU0049E VSAM FILE <V1> COULD NOT BE CLOSED. VSAM REASON CODE: <V2>

Explanation: An error occurred closing the VSAM file. 
• <V1> is the VSAM file. 
• <V2> is the VSAM reason code. 

User response: See the appropriate VSAM documentation.

FPEU0050E FILE <V1> COULD NOT BE CLOSED. SYSTEM ABEND CODE: <V2>

Explanation: An error occurred closing a file. 
• <V1> is the file name. 
• <V2> is the system abend code. 

User response: See MVS Messages and Codes for an explanation of the system abend code. If the problem recurs, contact IBM support.

FPEU0051E FILE <V1> COULD NOT BE CLOSED. SYSTEM MESSAGE BUFFER: <V2>

Explanation: An error occurred closing a file. 
• <V1> is the file name. 
• <V2> is the system message buffer. 

User response: See the SYNADAF macro in DSFSMS/MVS Macro Instruction for Data Set for the system message buffer code.

FPEU0052E UNABLE TO EXTRACT DIRECTORY INFORMATION FOR MEMBER <V1> IN FILE <V2>. RETURN CODE <V3>, REASON CODE <V4>

Explanation: None. 
• <V1> is the member name. 
• <V2> is the file name.
**FPEU0053E • FPEU0202S**

- `<V3>` is the return code.
- `<V4>` is the reason code.

**User response:** See the BLDL macro in DSFSMS/MVS Macro Instruction for Data Set for the system message buffer code.

---

**FPEU0053E UNABLE TO FIND MEMBER <V1> IN FILE <V2>, RETURN CODE <V3>, REASON CODE <V4>**

**Explanation:** None.

- `<V1>` is the module name.
- `<V2>` is the file name.
- `<V3>` is the return code.
- `<V4>` is the reason code.

**User response:** See the FIND macro in DSFSMS/MVS Macro Instruction for Data Set for the system message buffer code.

---

**FPEU0060E CODEPAGE TRANSLATION FAILED WITH RETURN CODE <V1>, REASON CODE <V2>.**

**Explanation:** The codepage translation failed. The z/OS Support for Unicode has returned the specified values. `<V1>` is the return code from z/OS Support for Unicode, `<V2>` is the reason code from z/OS Support for Unicode.

DB2 trace records might contain strings in Unicode (UTF-8) format. OMEGAMON XE for DB2 PE uses the z/OS Support for Unicode to convert these strings to other CCSIDs for output to reports. This requires that the z/OS Support is set up correctly on the system where OMEGAMON XE for DB2 PE is executed. On a system where DB2 is installed this will be the case automatically because DB2 also requires this support.

User response: Check that the z/OS Support for Unicode is installed correctly and provides conversions from CCSID 1208 to the destination EBCDIC CCSID 500. Check the system log for additional messages.

---

**FPEU0100S INFORMATION FOR PROBLEM ANALYSIS BY SUPPORT: REFERENCE IS MODULE <V1>, CODE=<V2>**

**Explanation:** This message does not necessarily indicate an error condition. It is used to assist internal analysis of problems if reported to IBM.

**User response:** Look at the messages immediately preceding and following this message. Contact IBM support if one of these messages indicates a problem that cannot be solved.

---

**FPEU0101S INTERNAL ERROR IN MODULE <V1>, CODE=<V2>, DIAGNOSTIC DATA=<V3>**

**Explanation:** An internal error occurred because a task that is normally started by the data collector for the OMEGAMON XE for DB2 PE Client was started manually. Data collector started tasks are started by OMEGAMON XE for DB2 PE when needed, and must not be started manually.

- `<V1>` is the module name.
- `<V2>` is the error code.
- `<V3>` is the diagnostic data.

**User response:** If the problem recurs, contact IBM support.

---

**FPEU0200S DB2 CAF SUPPORT CANNOT BE LOADED. DB2 LOAD LIBRARY MAY NOT BE SPECIFIED IN STEPLIB**

**Explanation:** OMEGAMON XE for DB2 PE could not load the Call Attach Facility (CAF) support modules. One possible reason is that the DB2 load library is missing in the STEPLIB DD statement.

**User response:** Determine why OMEGAMON XE for DB2 PE cannot load the required modules. Resubmit the job.

---

**FPEU0201S CALL ATTACH FUNCTION <V1> FAILED, RETURN CODE <V2>, REASON CODE <V3>**

**Explanation:** A problem was encountered while establishing a connection to DB2.

- `<V1>` is the Call Attach Facility (CAF) function.
- `<V2>` is the return code.
- `<V3>` is the reason code.

**User response:** See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes.

---

**FPEU0202S UNICODE CONVERSION SUPPORT CANNOT BE LOADED. Z/OS SUPPORT FOR UNICODE MAY NOT BE INSTALLED CORRECTLY.**

**Explanation:** The z/OS Support for Unicode could not be loaded to perform a required codepage translation. Program execution is terminated.

DB2 trace records might contain strings in Unicode (UTF-8) format. OMEGAMON XE for DB2 PE uses the z/OS Support for Unicode to convert these strings to other CCSIDs for output to reports. This requires that the z/OS Support is set up correctly on the system where OMEGAMON XE for DB2 PE is executed. On a system where DB2 is installed this will be the case automatically because DB2 also requires this support.
User response: Check that the z/OS Support for Unicode is installed correctly and provides conversions from CCSID 1208 to the destination EBCDIC CCSID. Check the system log for additional messages.

**Explanation:** This version of OMEGAMON for Db2 PE does not support DB2 accelerator trace data version 4. Therefore the accelerator information in batch reports, statistics, and record trace does not include all performance-related fields.

User response: To receive complete information about accelerator monitoring, install the latest version of OMEGAMON for Db2 PE.

---

FPEV0014E • FPEV0025E

FPEV0014E <V1> HISTORY TASK COULD NOT BE REINITIALIZED RC <V2>

Explanation: History reinitialization failed.
• <V1> is the DB2 subsystem ID.
• <V2> is the return code.

User response: Check the log for preceding messages or abend codes. If the problem cannot be corrected and recurs, contact IBM support.

FPEV0015W <V1> SERVER INSTANCE ALREADY STARTED FOR THIS DB2 SUBSYSTEM

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0016E <V1> TOKEN <V2> IS NOT RECOGNIZED

Explanation: The token or keyword is not valid for the Data Server parameter.
• <V1> is the DB2 subsystem ID.
• <V2> is the token.

User response: Correct the input.

FPEV0017E <V1> VALUE <V2> LESS THAN MINIMUM OF <V3> FOR KEYWORD <V4>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the value entered.
• <V3> is the minimum value.
• <V4> is the keyword.

User response: Correct the input.

FPEV0018E <V1> VALUE <V2> EXCEEDS MAXIMUM OF <V3> FOR KEYWORD <V4>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the value entered.
• <V3> is the maximum value.
• <V4> is the keyword.

User response: Correct the input.

FPEV0019E <V1> <V2> FOUND, BUT <V3> EXPECTED FOR KEYWORD <V4>

Explanation: An invalid parameter was entered for the specified keyword.
• <V1> is the DB2 subsystem ID.
• <V2> is the parameter entered by the user.
• <V3> is the expected parameter.
• <V4> is the keyword.

User response: Correct the input.

FPEV0020E <V1> <V2> IS INVALID FOR KEYWORD <V3>

Explanation: An invalid parameter was entered for the specified keyword.
• <V1> is the DB2 subsystem ID.
• <V2> is the parameter entered by the user.
• <V3> is the keyword.

User response: Correct the input.

FPEV0021S END OF LINE FOUND BEFORE END OF <V2> PARAMETER

Explanation: The command in one of the RKD2PAR data set members is incomplete.
• <V1> is the DB2 subsystem ID.
• <V2> is the parameter or keyword.

User response: Correct the input.

FPEV0022E <V1> NUMERIC VALUE EXPECTED. <V2> FOUND FOR KEYWORD <V3>

Explanation: An invalid parameter was entered for the specified keyword.
• <V1> is the DB2 subsystem ID.
• <V2> is the parameter that was entered by the user.
• <V3> is the keyword.

User response: Correct the input.

FPEV0024E <V1> TASK <V2> IS NOT BEING REATTACHED DUE TO REPEATED ERRORS

Explanation: Repeated abends occurred.
• <V1> is the DB2 subsystem ID.
• <V2> is the task.

User response: It may be necessary to stop and restart the Data Server using the MODIFY command. Check the log for preceding messages or abend codes. If the problem cannot be corrected and recurs, contact IBM support.

FPEV0025E <V1> <V2> IS TOO LONG FOR KEYWORD <V3>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the parameter entered by the user.
• <V3> is the keyword.

User response: Correct the input.
installation process and restart the Data Server.

FPEV0043I  <V1> HISTORY=NV2>
Explanation: This message is issued in response to a DISPLAY command.
• <V1> is the Db2 subsystem ID.
• <V2> is:
  YES History data is being collected.
  NO History data is not being collected. If HISTORY=NO you can disregard message FPEV00505W for the same Db2 subsystem if it appears in the job log.
User response: None.

FPEV0045I  <V1> - STATISTICS IS BEING COLLECTED, INTERVAL=SV2> SECONDS
Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.
• <V1> is the DB2 subsystem ID.
• <V2> is the interval in which this data is gathered by the Data Server.
User response: None.

FPEV0047I  <V1> - SYSTEM PARAMETERS ARE BEING COLLECTED, INTERVAL=SV2> SECONDS
Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.
• <V1> is the DB2 subsystem ID.
• <V2> is the interval in which this data is gathered by the Data Server.
User response: None.

FPEV0049I  <V1> - THREAD SQL TEXT IS BEING COLLECTED, INTERVAL=SV2> SECONDS
Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.
• <V1> is the DB2 subsystem ID.
• <V2> is the interval in which this data is gathered by the Data Server.
User response: None.

FPEV0051I  <V1> - THREAD DETAIL IS BEING COLLECTED, INTERVAL=SV2> SECONDS
Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.
• <V1> is the DB2 subsystem ID.
• <V2> is the interval in which this data is gathered by the Data Server.
User response: None.

FPEV0052I  <V1> - THREAD LOCKING IS BEING COLLECTED, INTERVAL=SV2> SECONDS
Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.
• <V1> is the DB2 subsystem ID.
• <V2> is the interval in which this data is gathered by the Data Server.
User response: None.

FPEV0053I  <V1> - THERE ARE <V2> HISTORY QUALIFICATIONS ACTIVE. PRIMAUTH PLANNAME CONNECTION ID CORRELATION NAME
Explanation: This message is issued in response to a DISPLAY command.
• <V1> is the DB2 subsystem ID.
• <V2> is the number of active history qualifications.
User response: None.

FPEV0054I  <V1> <V2> <V3> <V4> <V5>
Explanation: This message is issued in response to a DISPLAY command.
• <V1> is the DB2 subsystem ID.
• <V2> is the plan name.
• <V3> is the primary authorization ID.
• <V4> is the connection ID.
• <V5> is the correlation ID.
User response: None.

FPEV0056I  <V1> - SHDATASETSIZE=SV2> MEGABYTES
Explanation: This message is issued in response to a DISPLAY command.
• <V1> is the DB2 subsystem ID.
• <V2> is the number of pages.
User response: None.

FPEV0057I  <V1> DISPLAY COMMAND OUTPUT ENDS
Explanation: This message is issued in response to a DISPLAY command.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV0058I  <V1> NO CURRENT USERS
Explanation: This message is issued in response to a DISPLAY command.
• <V1> is the DB2 subsystem ID.
User response: None.
FPEV0059E  <V1>  DB2 INTERFACE TASK DID NOT RESPOND TO TERMINATION REQUEST

Explanation:  When the Data Server is stopped, the connection between DB2 and the Data Server does not terminate correctly.
   •  <V1>  is the DB2 subsystem ID.

User response:  None.

FPEV0060E  <V1>  USER MANAGER TASK DID NOT RESPOND TO TERMINATION REQUEST

Explanation:  When the Data Server is stopped, the connection between the user manager and the Data Server does not terminate correctly.
   •  <V1>  is the DB2 subsystem ID.

User response:  None.

FPEV0062E  <V1>  HISTORY MANAGER TASK DID NOT RESPOND TO TERMINATION REQUEST

Explanation:  When the Data Server is stopped, the connection between the history manager and the Data Server does not terminate correctly.
   •  <V1>  is the DB2 subsystem ID.

User response:  None.

FPEV0063S  <V1>  DB2 INTERFACE INITIALIZATION DID NOT COMPLETE WITHIN <V2> SECONDS OF SERVER INSTANCE STARTUP

Explanation:  None.
   •  <V1>  is the DB2 subsystem ID.
   •  <V2>  is the number of seconds.

User response:  The Data Server thread may be queued at thread creation. Restart the Data Server. Check the log for preceding messages or abend codes. If the problem cannot be corrected and recurs, contact IBM support.

FPEV0064I  <V1>  CAF ERROR WHEN DB2 INTERFACE ATTEMPTED TO CONNECT TO DB2 CAF. RC <V2>, REASON <V3>

Explanation:  None.
   •  <V1>  is the DB2 subsystem ID.
   •  <V2>  is the Call Attach Facility (CAF) return code.
   •  <V3>  is the CAF reason code.

User response:  See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes.

FPEV0065S  <V1>  LX RESERVE FAILED. RC <V2>

Explanation:  An error occurred when attempting to reserve a linking index. The Data Server terminates.
   •  <V1>  is the DB2 subsystem ID.
   •  <V2>  is the return code.

User response:  Check the log for preceding messages or abend codes and restart the Data Server. If the problem cannot be corrected and recurs, contact IBM support.

FPEV0066I  <V1> - <V2> EXCEPTION EVENTS

Explanation:  Issued in response to a DISPLAY command.
   •  <V1>  is the DB2 subsystem ID.
   •  <V2>  is the exception event type, as follows:

- AUTHFAIL  Collecting events with:
  START TRACE(STAT) CLASS(4) DEST(OPx)

- CF REBUILD  Collecting coupling facility events with:
  START TRACE(STAT) CLASS(4) DEST(OPx)

- DDF  Collecting events with:
  START TRACE(PERM) CLASS(1) DEST(OPx)

- DEADLOCK  Collecting deadlocks events with:
  START TRACE(PERM) CLASS(6) DEST(OPx) IFCID(196)

- DSEXTENT  Collecting dataset extent events with:
  START TRACE(STAT) CLASS(3) DEST(OPx)

- EDMPOOL  Collecting events with:
  START TRACE(AUDIT) CLASS(1) DEST(OPx)

- GBLTRACE  Collecting global trace events with:
  START TRACE(PERFM) CLASS(30) DEST(OPx) IFCID(90)

- LOGSPACE  Collecting log space shortage events with:
  START TRACE(STAT) CLASS(3) DEST(OPx)

- TIMEOUT  Collecting events with:
  START TRACE(PERM) CLASS(6) DEST(OPx) IFCID(172)

- URPROBLEM  Collecting unit of recovery problem events with:
  START TRACE(STAT) CLASS(3) DEST(OPx)

User response:  None.
FPEV0067I  <V1> DB2COMMAND='<V2>'

Explanation: The DB2 command issued on a locally connected subsystem has failed.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the DB2 command.
  • <V3> is the IFI return code.
  • <V4> is the IFI reason code.

User response: For a more detailed description of the problem, see the DB2 9 Administration Guide.

FPEV0068I  <V1> <V2>

Explanation: Informational message.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the resulting output upon issuing a DB2 command.

User response: None.

FPEV0069I  <V1> IFI ERROR WHEN ISSUING DB2COMMAND ' <V2>', IFI RC <V3>, REASON <V4>

Explanation: None.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the IFI return code.
  • <V3> is the IFI reason code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes.

FPEV0070S  <V1> DB2 SUBSYSTEM ID NOT SPECIFIED

Explanation: None.
  • <V1> is the DB2 subsystem ID.

User response: Specify a DB2 subsystem and restart the Data Server.

FPEV0071I  <V1> COMMAND: <V2>

Explanation: This is the command text processed by the Data Server.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the command entered.

User response: None.

FPEV0072W  <V1> THIS PARAMETER CANNOT BE CHANGED FROM THE CONSOLE

Explanation: None.
  • <V1> is the DB2 subsystem ID.

User response: None.

FPEV0076W  <V1> DB2 INTERFACE IFI READS DID NOT COMPLETE WITHIN <V2> SECONDS

Explanation: None. The Data Server will attempt the READS operation again.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the number of seconds.

User response: None.

FPEV0080I  <V1> DB2 SUBSYSTEM <V2> STOPPED <V3>

Explanation: None.
  • <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
  • <V2> is the DB2 subsystem ID.
  • <V3> is the reason for the DB2 subsystem to stop:
    QUIESCE
      Normal stop of the DB2 subsystem. Current threads can run to completion, and new threads can be allocated to an application that is running.
    FORCE
      Normal stop of the DB2 subsystem. No new threads are allocated, and work on existing threads is rolled back.
    ABTERM
      Abnormal stop of the DB2 subsystem.

User response: None.

FPEV0081I  <V1> DB2 SUBSYSTEM <V2> STARTED

Explanation: None.
  • <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
  • <V2> is the DB2 subsystem ID.

User response: None.

FPEV0093I  <V1> DATA SERVER INTERNAL TRACE STATUS:

Explanation: This message is displayed in response to a DISPLAY command.
  • <V1> is the DB2 subsystem ID.

User response: None.

FPEV0098I  <V1> DATA SERVER TRACE=<V2>

Explanation: This message is displayed in response to a DISPLAY command.
  • <V1> is the DB2 subsystem ID.
  • <V2> is:
    ON The Data Server trace is active.
    OFF The Data Server trace is not active.

User response: None.
If the IBM-supplied user exit routine FPEMUPXT was modified in your installation, this message may be different or missing.

User response: None.

FPEV0102W <V1> PURGE COMMAND ALLOWS SPECIFICATION OF ONE "USER-ID/GROUP-ID" ONLY. ANY ADDITIONAL SPECIFICATION OF "USER-ID/GROUP-ID" IS IGNORED

Explanation: This message is displayed in response to a PURGE command that has failed. The operator has tried to specify more than one USER-ID/GROUP-ID to be purged, but only one is allowed.

User response: Specify only one USER-ID/GROUP-ID.

FPEV0103E <V1> GLOBAL SERVICES MAIN TASK DID NOT RESPOND TO TERMINATION REQUEST

Explanation: When the Data Server was stopped, the global services main task did not end correctly.

User response: None.

FPEV0104E <V1> UAS0 MAIN TASK DID NOT RESPOND TO TERMINATION REQUEST

Explanation: When the Data Server was stopped, the UAS0 main task did not end correctly.

User response: None.

FPEV0105E <V1> UAS0 MAIN TASK DID NOT RESPOND TO TERMINATION REQUEST

Explanation: When the Data Server was stopped, the UAS0 main task did not end correctly.

User response: None.

FPEV0106I <V1> CCP=<V2>

Explanation: This message is displayed in response to a DISPLAY command.

User response: None.
FPEV0107I  

Explanation: This message is displayed in response to a DISPLAY command.

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the CCP (collect CPU parallelism) data space size in page units.

User response: None.

FPEV0108E  

Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup if `<V1>` is not a data sharing group member. Therefore, the command cannot be executed on DB2 member `<V3>`.  

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the DB2 command specified when the Data Server was started.
- `<V3>` is the DB2 member in the data sharing group for which the command was executed.

User response: Remove the command from the Data Server startup file, or remove the DB2 member `<V3>` if the command should be executed on a local DB2 subsystem.

FPEV0109I  

Explanation: The DB2 command issued on member `<V3>` has failed.  

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the DB2 command.
- `<V3>` is the DB2 member in the data sharing group for which the command was executed.
- `<V4>` is the IFI return code.
- `<V5>` is the IFI reason code.

User response: For a more detailed description of the problem, see the DB2 9 Administration Guide.

FPEV0110I  

Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.  

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is:
  
  **YES** The data sharing group is monitored if the subsystem referenced by `<V1>` is connected to a data sharing group.
  
  **NO** Only the DB2 subsystem `<V1>` is monitored, even if connected to a data sharing group.

User response: None.

FPEV0111I  

Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.  

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the DB2 command specified when the Data Server was started.
- `<V3>` is the DB2 member in the data sharing group for which the command was executed (optional).

User response: None.

FPEV0112I  

Explanation:  

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is:
  
  **YES** A user-provided exit is used to restrict the user’s authority to specific areas, for example, statistics data only or thread data only.
  
  **NO** The DB2 security scheme is used to restrict the user’s authority.

User response: None.

FPEV0113S  

Explanation: This message is issued during the Data Server startup if the data collector cannot access the required DB2 plan. It is the result of the following DB2 reason codes:

**00F30034**

DB2 plan authorization failure or plan is not available

**00F30040**

Resource is not available or unknown  

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the plan name as it was specified in the startup parameter PLANNAME.

User response: Ensure that the Data Server plans are installed and that access is granted to the Data Server user ID.

FPEV0114I  

Explanation: This message is issued during the startup of the PE Server subtask.  

- `<V1>` is the date and the time when the PE Server subtask is compiled.
- `<V2>` is the APAR number of the installed PE Server subtask service level.

User response: None.
FPEV0115I  <V1> - SQLCACHE IS BEING COLLECTED, INTERVAL=<V2> SECONDS

Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.
• <V1> is the DB2 subsystem ID.
• <V2> is the interval in which this data is gathered by the Data Server.

User response: None.

FPEV0116I  <V1> - DATA SET STATISTICS IS BEING COLLECTED, INTERVAL=<V2> SECONDS

Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.
• <V1> is the DB2 subsystem ID.
• <V2> is the interval in which this data is gathered by the Data Server.

User response: None.

FPEV0118S  <V1> DB2 <V2> IS NOT SUPPORTED BY THIS VERSION OF OMEGAMON XE DB2 PE.

Explanation: You have tried to monitor a DB2 subsystem version that is not supported by this version of OMEGAMON XE DB2 PE. This can happen if your DB2 version is much older than your OMEGAMON XE DB2 PE version or if your OMEGAMON XE DB2 PE version is older than the DB2 version you want to monitor.
• <V1> is the DB2 subsystem ID.
• <V2> is the DB2 version and release.

User response: Depending on the reason for this message, install a higher OMEGAMON XE DB2 PE version or upgrade your DB2 subsystem.

FPEV0119I  <V1> USER NOT ALLOWED TO EXECUTE OMEGAMON XE DB2 PE OPERATOR COMMANDS. COMMAND CANCELED

Explanation: This is an internal message which is not displayed on the system.

User response: None.

FPEV0121I  <V1> KEYWORD <V2> IS OBSOLETE AND IGNORED, USE <V3> INSTEAD

Explanation: The obsolete keyword <V2> was found in the Data Server parmlib RKD2PAR. The keyword <V3> is used instead.
• <V1> is the DB2 subsystem ID.
• <V2> is the obsolete keyword.
• <V3> is the keyword that is used instead of the one that has become obsolete.

User response: To avoid this message in future, remove the obsolete keyword from the Data Server parmlib. Refer to DB2 Installation Guide manual for further information about keyword <V3>.

FPEV0122I  <V1> - MAXIMUM NUMBER OF PARALLEL SESSIONS=<V2>

Explanation: This message is shown during the Data Server startup or in response to a DISPLAY command. It is ignored.
• <V1> is the DB2 subsystem ID.
• <V2> is the maximum allowed number of simultaneous sessions (APPC and TCP/IP).

User response: None.

FPEV0123I  <V1> SESSION INFORMATION - BEGIN

Explanation: This message is displayed in response to a DISPLAY command.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0124I  <V1> SESSION STATUS UID DETAILS

Explanation: This message is displayed in response to a DISPLAY command. The Data Server was started without support for workstation clients (for example, TCP/IP or APPC).
• <V1> is the DB2 subsystem ID.
• <V2> is the number of the session manager.
• <V3> is the status of the session manager. It can be:
  INACT The session manager is not active.
  TCP/IP-M The client is connected to the session manager via TCP/IP and is using the multi-user mode.
  TCP/IP-S The client is connected to the session manager via TCP/IP and is using the single-user mode.
  APPC-S The client is connected to the session manager via APPC and is using the single-user mode.
  PEND-M The session manager is inactive and waiting for outstanding DB2 responses. The client previously connected was using the multi-user mode.

User response: None.
PEND-S
The session manager is inactive and waiting for outstanding DB2 responses. The client previously connected was using the single-user mode.

• <V4> is the user ID of the connected client.
• <V5> is detailed information about the client connection. It can be:
  IP: xxx.xxx.xxx.xxx:YYYYY
  The client session was established via TCP/IP. xxx.xxx.xxx.xxx is the TCP/IP address of the client and yyyyy the port number of the client.
  LU: xxx
  The client session was established via APPC. xxx is the LU name of the connected client.

User response: None.

FPEV0126I <V1> SESSION INFORMATION - END
Explanation: This message is displayed in response to a DISPLAY command.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV0127I <V1> NO ACTIVE SESSIONS BECAUSE NO COMMUNICATION INTERFACE IS ACTIVE

FPEV0128S <V1> CONNECT TO DB2 FAILED. MONITOR TRACE IS NOT STARTED
Explanation: This message is issued during the Data Server startup because the Monitor trace is not active.
• <V1> is the DB2 subsystem ID.
User response: Issue a DB2 START TRACE command for monitor class 1.

FPEV0129I <V1> PERFORMANCEWAREHOUSE=<V2>
Explanation: This message is issued in response to a DISPLAY command.
• <V1> is the DB2 subsystem ID.
• <V2> is: YES Performance Warehouse is active. NO Performance Warehouse is inactive.
User response: None.

FPEV0130E <V1> DATASERVERHLQ NOT SPECIFIED
Explanation: This message is shown during the Data Collector startup.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
User response: Specify the high-level qualifier for work data sets for the OMEGAMON Collector and the Performance Warehouse function. For further information on how to set up the OMEGAMON Collector, see Installation and Configuration and the Configuration Tool (formerly ICAT) online help.

FPEV0131E PERFORMANCEWAREHOUSE ADDRESSSPACENAME NOT SPECIFIED FOR SERVER INSTANCE <V2>
Explanation: This message is shown during the Data Server startup, if startup parameter PERFORMANCEWAREHOUSE is set, but required startup parameter PERFORMANCEWAREHOUSEADDRESSSPACENAME is missing.
User response: Specify the name for the Performance Warehouse JCL. For further information on how to set up the Data Server for the Performance Warehouse, see Installation and Configuration or the Configuration Tool (formerly ICAT) online help.

FPEV0133I <V1> - PERFORMANCEWAREHOUSE ADDRESSSPACENAME=<V2>

FPEV0134W <V1> PARAMETER <V2> CANNOT BE SPECIFIED AS STARTUP PARAMETER, IT IS IGNORED
Explanation: This message is issued during the Data Server startup, if a parameter was specified that is only accepted as MODIFY command via the system console.
• <V1> is the DB2 subsystem ID.
• <V2> is the parameter you tried to set.
User response: Remove the parameter from the Data Server parmlib RKD2PAR.

FPEV0135W <V1> PERFORMANCEWAREHOUSE IS NOT REQUESTED. THE COMMAND IS IGNORED
Explanation: This message is issued in response to a MODIFY command. You tried to stop the Performance Warehouse function, but this function is already stopped.
• <V1> is the DB2 subsystem ID.
User response: None.
FPEV0136W <V1> PERFORMANCE WAREHOUSE IS ACTIVE. THE COMMAND IS IGNORED

Explanation: This message is issued in response to a MODIFY command. You tried to start the Performance Warehouse function while this function is already active.
  • <V1> is the DB2 subsystem ID.

User response: If you tried to start the Performance Warehouse function in forced mode, stop it first and then restart it in forced mode.

FPEV0137E LICENSE NOT FOUND

Explanation: The license FMID for OMEGAMON XE for DB2 PE is not correctly installed.

User response: If errors occurred during installation, correct them and try to use OMEGAMON XE for DB2 PE again.
If OMEGAMON XE for DB2 PE installed without errors, and you followed the recommended installation and customization procedures, and the problem persists, contact IBM support.

FPEV0140E <V1> <V2> IS TOO SHORT FOR KEYWORD <V3>

Explanation:
  • <V1> is the DB2 subsystem ID.
  • <V2> is the parameter you tried to set.
  • <V3> is the keyword.

User response: Correct the input.

FPEV0141I <V1> - FILE I/O TRACE=<V2>

Explanation: This message is issued in response to a DISPLAY command.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the option (Yes or NO) specified with the command.

User response: None.

FPEV0143I <V1> - DB2C SYSTEM IS BEING COLLECTED, INTERVAL=<V2> SECONDS

Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the interval in which this data is gathered by the Data Server.

User response: None.

FPEV0145I <V1> - DB2C APPLICATION IS BEING COLLECTED, INTERVAL=<V2> SECONDS

Explanation: This message is issued in response to a DISPLAY command or during the Data Server startup.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the interval in which this data is gathered by the Data Server.

User response: None.

FPEV0146I <V1> AUTOMATICAGENTUPDATE =<V2>

Explanation: This message is issued in response to an AUTOMATICAGENTUPDATE command or during the Data Server startup.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the option (Yes or NO) specified with the command.

User response: None.

FPEV0147I <V1> BIND FOR MODULE FPEVWRPA IS MISSING. NO DB2 CONNECT DATA IS COLLECTED

Explanation: This message is issued when access to a Performance Expert DB2 table is intended without proper bind of the corresponding DBRM.
  • <V1> is the DB2 subsystem ID.

User response: Issue the corresponding BIND command or run the corresponding bind job, then restart the Data Server.

FPEV0148E <V1> VALUE EXCEEDS MAXIMUM OF <V2> FOR KEYWORD <V3>

Explanation: None.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the maximum value.
  • <V3> is the keyword.

User response: Correct the input.

FPEV0149I <V1> NO AUTHORITY FOR REQUESTED OPERATION IN DGOVWRPA FOR TABLE DB2PM, PARAMETER NO DB2 CONNECT DATA IS COLLECTED

Explanation: This message is issued when access to a Performance Expert DB2 table is intended and the user does not have sufficient DB2 authority.
  • <V1> is the DB2 subsystem ID.

User response: Grant the required authority to the user.
FPEV0150I  <V1> NO AUTHORITY FOR REQUESTED OPERATION IN DGOVWRPA FOR TABLE DB2PM. HISTORYDATA. NO DB2 CONNECT DATA IS COLLECTED

Explanation:  This message is issued when access to a Performance Expert DB2 table is intended and the user does not have sufficient DB2 authority.
  • <V1> is the DB2 subsystem ID.

User response:  Grant the required authority to the user.

FPEV0151I  <V1> COLLECTING ALSO SYSTEM PARAMETERS DATA FOR HISTORY BECAUSE IT IS REQUIRED FOR ISPF ONLINE MONITOR

Explanation:  None.
  • <V1> is the DB2 subsystem ID.

FPEV0152I  <V1> BIND FOR MODULE FPEVWR2C MISSING. NO DB2 CONNECT DATA IS COLLECTED

Explanation:  This message is issued when access to a Performance Expert DB2 table is intended without proper bind of the corresponding DBRM.
  • <V1> is the DB2 subsystem ID.

User response:  Issue the corresponding BIND command or run the corresponding bind job, then restart the Data Server.

FPEV0153I  <V1> BIND FOR MODULE <V2> MISSING.

Explanation:  This message is issued when access to a Performance Expert DB2 table is intended without proper bind of the corresponding DBRM.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the DBRM name.

User response:  Issue the corresponding BIND command or run the corresponding bind job, then restart the Data Server.

FPEV0154I  <V1> NO AUTHORITY FOR REQUESTED OPERATION IN <V2> FOR TABLE <V3>.

Explanation:  This message is issued when access to a Performance Expert DB2 table is intended and the user does not have sufficient DB2 authority.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the name of the executing module performing the DB2 operation.
  • <V3> is the DB2 table name.

User response:  Grant the required authority to the user.

FPEV0155I  <V1> REQUESTED OPERATION IN <V2> FOR TABLE <V3> FAILED. SQLCODE <V4>.

Explanation:  This message is issued when access to a Performance Expert DB2 table fails and no further specific information can be provided.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the name of the executing module performing the DB2 operation.
  • <V3> is the DB2 table name.
  • <V4> is the SQL code.

User response:  See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the SQL code.

FPEV0157E  <V1> SERVER INSTANCE IS STOPPING BECAUSE OF AN ERROR IN THE DB2 INTERFACE.

Explanation:  The DB2 interface returned errors in response to an essential Data Server request and the Data Server cannot recover automatically. The message is preceded by message FPEV0064I, which displays the corresponding return and reason codes provided by the DB2 interface.

User response:  Take corrective action based on the displayed return and reason codes. Verify that the Data Server is installed and customized correctly. Restart the Data Server. Refer to Installation and Configuration and IBM DB2 9 for z/OS - Messages and Codes for more information.

FPEV0158W  <V1> <V2> DATA SERVER DETECTED HIGH CYCLE TASK USAGE (<F3> %) IN TASK <V4>.

Explanation:  Performance Expert detects high cycle task usage for one of its components.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the local time.
  • <F3> is the detected cycle usage.
  • <V4> is the name of the task.

The OMEGAMON Collector subtask PESERVER periodically monitors the CPU cycle consumption of its subtasks in intervals of one minute. If the CPU cycle consumption of a subtask exceeds an internal threshold value, the server issues message FPEV0158W. The threshold value may vary with situation and subtask. Cycle usage is not percentage usage of total system CPU, but is the percentage usage of the maximum CPU available to that task - typically percentage usage of a single CPU. Additionally, the internal server traces are started and message FPEV0162W is issued. If the cycle consumption of the subtask falls below the threshold within the next sample interval, the internal traces are switched off and normal processing continues. If the CPU consumption of the subtask remains above the threshold within the next sample interval, a dump is
FPEV0159W <V1> <V2> DUMP IS WRITTEN FOR FURTHER ANALYSIS OF HIGH CPU USAGE

Explanation: Performance Expert detects high CPU usage for one of its components and starts to dump data for further analysis. The dump is taken for the second occurrence of high CPU usage. The message is preceded by message FPEV0159W.
• <V1> is the DB2 subsystem ID.
• <V2> is the local time.

User response: Save the dump for further analysis by IBM.

FPEV0160I <V1> <V2> GPR <F3><F4>: 'X, '<V6>'X, '<V7>'X, '<V8>'X

Explanation: Performance Expert detects high CPU usage for one of its components and starts to write the contents of the general purpose registers to the log for further analysis. The message is issued for the second occurrence of high CPU usage. The message is preceded by message FPEV0159W.
• <V1> is the DB2 subsystem ID.
• <V2> is the local time.
• <F3> to <F4> is the range of registers.
• <V5> to <V8> are the register contents.

User response: Save the Performance Expert log (SYSPRINT) for further analysis by IBM.

FPEV0161W <V1> <V2> TASK <V3> WAS RESTARTED DUE TO CONTINUOUS HIGH CPU USAGE.

Explanation: Performance Expert detected high CPU usage for one of its components and the task was stopped and restarted because of continuous high CPU usage. The message is preceded by message FPEV0158W.
• <V1> is the DB2 subsystem ID.
• <V2> is the local time.
• <V3> is the name of the task.

User response: None.

FPEV0162W <V1> <V2> TRACES ARE STARTED FOR FURTHER ANALYSIS OF HIGH SUBTASK USAGE.

Explanation: Performance Expert detects high cycle usage for one of its components and is starting internal traces for further analysis. The message is preceded by message FPEV0158W.
• <V1> is the DB2 subsystem ID.
• <V2> is the local time.
• <V3> is the name of the task.

User response: If this situation occurs regularly with no obvious cause then save the Performance Expert log (SYSPRINT) for further analysis by IBM.

FPEV0163E DATA SERVER IS STOPPING BECAUSE AS COULD NOT BE MADE NONSWAPPABLE

Explanation: During startup of the OMEGAMON Collector, the address space could not be changed to nonswappable.

User response: Contact the system operator. If z/OS should allow to make address space nonswappable, contact IBM support.

FPEV0164I <V1> INSTANCE FOR DB2 SUBSYSTEM <V2> IS STARTING

Explanation: This message is issued during the start of the OMEGAMON Collector, or if a monitored DB2 subsystem is brought online again. The corresponding OMEGAMON Collector parts, monitoring this DB2 subsystem, are being started.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
• <V2> is the DB2 subsystem ID.

User response: None.

FPEV0165I <V1> INSTANCE FOR DB2 SUBSYSTEM <V2> IS STOPPING

Explanation: This message is issued during shutdown of the OMEGAMON Collector, or if a monitored DB2 subsystem is being stopped. The corresponding OMEGAMON Collector parts, monitoring this DB2 subsystem, are being stopped.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
• <V2> is the DB2 subsystem ID.

User response: None.

FPEV0166E <V1> SERVER INSTANCE FOR DB2 SUBSYSTEM <V2> ABENDED. CODE <V3>

Explanation: The server instance for the specified DB2 subsystem failed with the indicated abend code.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
• <V2> is the DB2 subsystem ID.
• <V3> is the MVS abend code.

User response: Contact the system operator and check
the abend code. If it is not a system problem, contact IBM support.

**FPEV0167I** <V1> SERVER INSTANCE FOR DB2 SUBSYSTEM <V2> IS RESTARTED

**Explanation:** The server instance for the specified DB2 subsystem was previously stopped because of an error or abend and is now being restarted.
- <V1> is the DB2 subsystem ID.
- <V2> is the name of the master controller inside the OMEGAMON Collector (MSTR).

**User response:** None.

**FPEV0168E** <V1> SERVER INSTANCE FOR DB2 SUBSYSTEM <V2> IS NOT BEING REATTACHED DUE TO REPEATED ERRORS

**Explanation:** The server instance for the specified DB2 subsystem was previously stopped because of an error or abend and not being restarted because of repeated errors.
- <V1> is the DB2 subsystem ID.
- <V2> is the name of the master controller inside the OMEGAMON Collector (MSTR).

**User response:** Check SYSPRINT of the OMEGAMON Collector for details. Correct the error if possible. Restart the OMEGAMON Collector.

**FPEV0169E** <V1> SERVER INSTANCE FOR DB2 SUBSYSTEM <V2> STOPPED WITH ERROR CODE <V3>

**Explanation:** The server instance for the specified DB2 subsystem has stopped because of errors.
- <V1> is the DB2 subsystem ID.
- <V2> is the name of the master controller inside the OMEGAMON Collector (MSTR).
- <V3> is the reason code.

**User response:** Check SYSPRINT of the job for stop reasons in preceding messages. If possible, correct the error. If the error persists, contact IBM support.

**FPEV0170E** <V1> SERVER INSTANCE FOR DB2 SUBSYSTEM <V2> DID NOT REACT ON TERMINATION REQUEST

**Explanation:** During shutdown of the OMEGAMON Collector, a subtask did not respond to a termination request.
- <V1> is the DB2 subsystem ID.

**User response:** This might be a temporary problem. If the problem recurs at the next server shutdown, contact IBM support.

**FPEV0171E** <V1> DATA SERVER IS OUT OF MEMORY

**Explanation:** The OMEGAMON Collector failed while requesting additional memory. Depending on severity of failed operation, the server might stop.
- <V1> is the unknown DB2 subsystem ID.

**User response:** None.

**FPEV0174E** SPECIFIED DB2 SUBSYSTEM <V1> IS UNKNOWN

**Explanation:** The list of DB2 subsystems to be monitored in the OMEGAMON Collector startup configuration (parameter DB2SSID) contains an unknown DB2 subsystem ID.
- <V1> is the unknown DB2 subsystem ID.

**User response:** Use the Configuration Tool (formerly ICAT) and correct the list of DB2 subsystems to be monitored, then restart the OMEGAMON Collector.

**FPEV0175E** SYSTEM CONSOLE ATTACH FAILED (QEDIT INSTRUCTION)

**Explanation:** During startup of the OMEGAMON Collector, the server could not attach to the z/OS system log.

**User response:** This might be a temporary problem. Restart the server. If the problem persists, contact IBM support.

**FPEV0176E** ISPF OLM RESOURCE MANAGER COULD NOT BE LOADED

**Explanation:** During startup of the OMEGAMON Collector, a module required for controlling access of the ISPF Online Monitor to the server could not be loaded.
- <V1> is the DB2 subsystem ID.

**User response:** This might be a temporary problem. Restart the server. If the problem persists, contact IBM support.

**FPEV0177E** ISPF OLM RESOURCE MANAGER COULD NOT BE UNLOADED

**Explanation:** During shutdown of the OMEGAMON Collector, a module required for controlling access of the ISPF Online Monitor to the server could not be unloaded.
- <V1> is the DB2 subsystem ID.
**User response:** This might be a temporary problem. If the problem recurs at the next server shutdown, contact IBM support.

**FPEV0178E** `<V1>` AUTHORIZATION EXIT DEACTIVATED DUE TO ERROR (CODE `<V2>`)

**Explanation:** During startup of the OMEGAMON Collector, the DB2 user authorization exit (DSN3@ATH) was tested and returned an error. The usage of the authorization exit in OMEGAMON for DB2 PE is deactivated.

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the return code from the DB2 authorization exit.

**User response:** Verify that the user authorization exit is available to the OMEGAMON Collector (part of the STEPLIB search order of the OMEGAMON Collector JCL) and works properly. Then restart the server.

**FPEV0179E** `<V1>` DATA SERVER IS NOT ALLOWED TO ACCESS DATASET `<V2>`

**Explanation:** The OMEGAMON Collector is not allowed to access the indicated data set. The data set is either the Snapshot History archive or the Exception Log data set.

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the name of the data set.

**User response:** Grant RACF ALTER privileges to the started task user ID or group ID of the OMEGAMON Collector. Then restart the server.

**FPEV0180E** `<V1>` DATA SERVER IS NOT ALLOWED TO CREATE DATASET, SEE JOB LOG FOR DETAILS

**Explanation:** The OMEGAMON Collector is not allowed to create a data set. The data set is either the Snapshot History archive or the exception event log data set.

- `<V1>` is the DB2 subsystem ID.

**User response:** Check the SYSPRINT output of the OMEGAMON Collector for details about the data set and the problem. Grant RACF ALTER privileges to the started task user ID or group ID of the OMEGAMON Collector and restart the server. Note that, for a nonexistent data set, the privileges must be granted with wildcards.

**FPEV0181E** `<V1>` FOUND HISTORY DATA SET `<V2>` IS NO LINEAR DATA SET (LDS)

**Explanation:** During startup of the OMEGAMON Collector, the existing Snapshot History data set was found as a non-LDS.

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the name of the Snapshot History data set.

**User response:** Delete or rename the existing data set and restart the OMEGAMON Collector, or, if the data set cannot be deleted or renamed, choose a different high-level qualifier in the Configuration Tool (formerly ICAT) for temporary server data sets.

**FPEV0182E** `<V1>` ERROR IN ACCESSING HISTORY DATA SET `<V2>` (RC/RS 'V3' '<V4>'X)

**Explanation:** Access to the Snapshot History data set failed.

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the name of the Snapshot History data set.
- `<V3>` is the hexadecimal return code.
- `<V4>` is the hexadecimal reason code.

**User response:** Contact the system operator and check the return and reason codes. The return and reason codes are either returned by Data-in-Virtual (DIV) operations or by SMS. See the appropriate documentation for description of these codes. If the problem is not a system problem, contact IBM support.

**FPEV0183E** `<V1>` FOUND EVENT DATA SET `<V2>` IS NO LINEAR DATA SET (LDS)

**Explanation:** During startup of the OMEGAMON Collector, the existing exception event data set was found as a non-LDS.

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the name of the exception event data set.

**User response:** Delete or rename the existing data set and restart the OMEGAMON Collector, or, if the data set cannot be deleted or renamed, choose a different high-level qualifier in the Configuration Tool (formerly ICAT) for temporary server data sets.

**FPEV0184E** `<V1>` ERROR IN ACCESSING EVENT DATA SET `<V2>` (RC/RS 'V3' '<V4>'X)

**Explanation:** Access to the exception event data set failed.

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the name of the exception event data set.
- `<V3>` is the hexadecimal return code.
- `<V4>` is the hexadecimal reason code.

**User response:** Contact the system operator and check the return and reason codes. The return and reason codes are either returned by Data-in-Virtual (DIV) operations or by SMS. See the appropriate documentation for description of these codes. If the problem is not a system problem, contact IBM support.
FPEV0185I  LIST OF MONITORED DB2 SUBSYSTEMS

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup.

- <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).

User response: None.

FPEV0187I  <V1> - <Name> <Status> <Detect> <Level> <Location> <Type> <Dsg> <Lpar>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup. It indicates that the indicated DB2 subsystem was auto-detected at the LPAR and is monitored with limited functionality.

- <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
- <Name> is the DB2 subsystem ID.
- <Status> is the monitoring status of the DB2 subsystem, which can be one of the following:
  - DENIED
    The OMEGAMON Collector started task user ID does not have the required privileges to connect (IDENTIFY) to this DB2 subsystem.
  - DOWN
    The DB2 subsystem is not running.
  - EXCLUDED
    The DB2 subsystem is not running. For other possible reasons check the SYSPRINT for messages that explain why the DB2 subsystem is not monitored.
  - IGNORED
    The version of this DB2 subsystem is not supported. Therefore, this DB2 subsystem cannot be monitored.
  - INITIAL
    The DB2 subsystem is known to the OMEGAMON Collector, but there is neither a connection established nor a monitoring subtask started yet.
  - MONITORED
    The DB2 subsystem is monitored.
  - MONDSG
    The indicated DB2 subsystem is monitored implicitly. The DB2 subsystem is a local member of a data sharing group that is excluded from monitoring (configuration) or it is not configured while AUTODETECT is disabled. The DB2 subsystem is monitored implicitly by another local data sharing group member without starting any additional subtasks for monitoring this DB2 subsystem.

RESTRICT
The DB2 subsystem is known to the OMEGAMON Collector, but the OMEGAMON Collector is not authorized to connect to the DB2 subsystem because the DB2 subsystem is started in restricted access mode (maintenance).

UNKNOWN
The status of the DB2 subsystem cannot be determined for one of the following reasons:

- The DB2 subsystem is a remote member of a data sharing group and no local member of the data sharing group is currently monitored. Therefore, no information about the DB2 subsystem can be obtained.
- The DB2 subsystem is a local member of a data sharing group that is excluded from monitoring (configuration) or it is not configured while AUTODETECT is disabled. This DB2 subsystem can be monitored implicitly by another local data sharing group member without starting additional subtasks for monitoring this DB2 subsystem. If explicit monitoring of all local data sharing group members is stopped, no implicit monitoring is possible, and therefore, no information can be obtained for local and remote members of the data sharing group.

UP
The DB2 subsystem is running, but the subtask that monitors this DB2 subsystem is not yet started.

- <Detect> indicates whether the DB2 subsystem was found by means of auto-detection.
  - Y This DB2 subsystem was auto-detected.
  - N This DB2 subsystem was configured explicitly or is a remote or implicitly monitored data sharing group member.
- <Level> indicates the DB2 version, release, and modification level as a six-digit character string.
- <Location> indicates where the DB2 subsystem is running.

LOCAL
The DB2 subsystem runs in the same LPAR as the OMEGAMON Collector.

REMOTE
The DB2 subsystem is a data sharing group member that does not run on the same LPAR as the OMEGAMON Collector.

- <Type> indicates the type of the DB2 subsystem.
The DB2 subsystem does not run in a data sharing group environment.

The DB2 subsystem is a member of a data sharing group.

- `<Dsg>`: The name of the data sharing group to which this DB2 subsystem belongs.
- `<Lpar>`: Indicates the name of the z/OS system where the member is running or was last running before monitoring stopped.

If the status is DENIED, contact your security administrator and request authority for the OMEGAMON Collector to access this DB2 subsystem.

This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup. It indicates that the specified DB2 subsystem was specified in the list of DB2 subsystems (parameter `DB2SSID`) to be monitored.

- `<V1>`: The name of the master controller inside the OMEGAMON Collector (MSTR).
- `<DB2_ID>`: The DB2 subsystem ID.
- `<Status>`: The monitoring status of the DB2 subsystem.
- `<Detected>`: Indicates whether the DB2 subsystem was found by means of auto-detection.
- `<Location>`: Indicates where the DB2 subsystem is running.
- `<Type>`: Indicates whether the DB2 subsystem is a member of a data sharing group.
- `<Dsg>`: The name of the data sharing group to which this DB2 subsystem belongs.
- `<Lpar>`: The name of the z/OS system where the member is running.

See message FPEV0187I for details.

None.

During startup of the OMEGAMON Collector, the indicated DB2 subsystem dependent parameter was found in the DB2 independent startup member `OMPEMSTR`.

- `<V1>`: The DB2 subsystem ID.
- `<V2>`: The startup parameter.

This can happen if the OMEGAMON Collector startup parameter members were changed manually. Use the Configuration Tool (formerly ICAT) for changing server configuration parameters. If the members have not been changed manually, or the problem occurs even if the Configuration Tool (formerly ICAT) is used, contact IBM support.

Check SYSPRINT for wrong startup parameters. Correct them and restart the server.

The startup parameter data set member for DB2 subsystem independent configuration settings was not found. Either the specified data set `RKD2PAR` does not contain the member `OMPEMSTR`, or the OMEGAMON Collector JCL points to the wrong `RKD2PAR` data set.

- `<V1>`: The DB2 subsystem ID.
- `<V2>`: The startup parameter.

Ensure that the OMEGAMON Collector JCL points to the right `RKD2PAR` data set. If the right data set is used and the problem persists, run the Configuration Tool (formerly ICAT) to generate the configuration member again.
FPEV0193W  <V1> PARAMETER DATA SET COULD NOT BE READ.  SEE JOB LOG FOR DETAILS

Explanation: During startup of the OMEGAMON Collector, the startup data set member RKD2PAR(OMPEMSTR) was found, but could not be read.
•  <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).

User response: Check SYSPRINT of the OMEGAMON Collector started task and correct the error. Restart the OMEGAMON Collector.

FPEV0194S  <V1> PARAMETER DATA SET DDNAME 'RKANPAR' NOT SPECIFIED IN JCL

Explanation: The required DD statement "RKANPAR" for the configuration settings is not specified in the OMEGAMON Collector JCL.
•  <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).

User response: Correct the OMEGAMON Collector JCL and restart the server.

FPEV0195I  <V1> EVENTOBSERVATION=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup and indicates the state of DB2 event observation.
•  <V1> is the DB2 subsystem ID.
•  <V2> is either YES or NO.

User response: None.

FPEV0196I  <V1> EVENTDSEXTENTQUAL=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup. If auto-detection of DB2 subsystems by the OMEGAMON Collector PESERVER subtask is switched off, <V2> is N0, otherwise YES.
•  <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
•  <V2> is either YES or N0.

User response: None.

FPEV0197I  <V1> - DEBUG TRACE=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup.
•  <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
•  <V2> is the DB2 subsystem ID.

User response: None.

FPEV0198I  <V1> AUTO_DETECT=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup. If auto-detection of DB2 subsystems by the OMEGAMON Collector PESERVER subtask is switched off, <V2> is N0, otherwise YES.
•  <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).

User response: None.

FPEV0199I  <V1> - DB2 SUBSYSTEM <V2> ( <V3> ) HAS UNSUPPORTED VERSION

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if the detected DB2 subsystem has an unsupported DB2 version and is therefore not monitored.
•  <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
•  <V2> is the name of the monitored DB2 subsystem.
•  <V3> is the version of the monitored DB2 subsystem.

User response: None.

FPEV0200I  <V1> - DB2 SUBSYSTEM <V2> IS NOT FOUND

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup. The indicated DB2 subsystem is not found in the list of DB2 subsystems (parameter DB2SSID).
•  <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
•  <V2> is the name of the DB2 subsystem that is not found.

User response: None.

FPEV0201I  <V1> CURRENT PARAMETERS FOR INSTANCE <V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup.
•  <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
•  <V2> is the DB2 subsystem ID.

User response: None.

FPEV0202I  <V1> - MEMORY TRACE=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup.
•  <V1> is the DB2 subsystem ID.
•  <V2> is the name of the master controller inside the OMEGAMON Collector (MSTR).

User response: None.
FPEV0203W <V1> NO DATA SERVER INSTANCE COULD BE OBTAINED TO MONITOR THE SPECIFIED DB2 SUBSYSTEM <V2>. ALL <V3> AVAILABLE DATA SERVER INSTANCES ARE ALREADY IN USE.

Explanation: More DB2 subsystems are requested to be monitored than supported by the Data Server. The indicated DB2 subsystem will not be monitored.
- <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
- <V2> is the DB2 subsystem ID of the subsystem that is not being monitored.
- <V3> is the number of maximum available Data Server instances.

User response: Reduce the number of DB2 subsystems specified in the master startup data set member RKD2PAR(OMPEMSTR). Stop and restart the Data Server using the MODIFY command.

FPEV0204I <V1> AUTOEXCPTRANAME=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if auto-exception processing is specified.
- <V1> is the DB2 subsystem ID.
- <V2> is the name of the threshold definition data set that is used for auto-exception processing.

User response: None.

FPEV0205I <V1> - AUTOEXCPUSER=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if auto-exception processing is specified.
- <V1> is the DB2 subsystem ID.
- <V2> is the user ID for which auto-exception processing is started.

User response: None.

FPEV0206I <V1> - AUTOEXCPPERIOD=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if auto-exception processing is specified.
- <V1> is the DB2 subsystem ID.
- <V2> is the interval (in seconds) at which the server is checking for threshold violations.

User response: None.

FPEV0207I <V1> - AUTOEXCPEXIT=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if auto-exception processing is specified.
- <V1> is the DB2 subsystem ID.
- <V2>
  - NO: Exception exit for auto-exception processing is disabled.
  - YES: Exception exit for auto-exception processing is enabled.

User response: None.

FPEV0208I <V1> - AUTOEXCPFILE=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if auto-exception processing is specified.
- <V1> is the DB2 subsystem ID.
- <V2>– NO: Exception are not written to a file data set.
  - YES: Exceptions are written in raw DB2 format to the specified file data set.

User response: None.

FPEV0209I <V1> - AUTOEXCPFILENAME=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if auto-exception processing is specified.
- <V1> is the DB2 subsystem ID.
- <V2>– NO: Exception are not written to a LOG data set.
  - YES: Exceptions are written in log format to the specified LOG data set.

User response: None.

FPEV0210I <V1> - AUTOEXCPFILEDISP=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if auto-exception processing is specified.
- <V1> is the DB2 subsystem ID.
- <V2> is the disposition of the file data set for auto-exception processing (MOD or OLD).

User response: None.

FPEV0211I <V1> - AUTOEXCPLOG=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if auto-exception processing is specified.
- <V1> is the DB2 subsystem ID.
- <V2>– NO: Exception are not written to a LOG data set.
  - YES: Exceptions are written in log format to the specified LOG data set.

User response: None.
FPEV0212I  •  FPEV0222E

FPEV0212I  <V1> - AUTOEXCPLOGNAME=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if auto-exception processing is specified.
• <V1> is the DB2 subsystem ID.
• <V2> is the name of the LOG data set to which detected exceptions for auto-exception processing are written in log format.

User response: None.

FPEV0213I  <V1> - AUTOEXCPLOGDISP=<V2>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup, if auto-exception processing is specified.
• <V1> is the DB2 subsystem ID.
• <V2> is the disposition of the LOG data set for auto-exception processing (MOD or OLD).

User response: None.

FPEV0214W  USER AUTHORIZATION CHECK FOR USER <V2> FAILED (RC <V3>, RS '<V4>'). LOGON REJECTED.

Explanation: Necessary operations during verification of a user logon from the PE Client failed.
• <V1> is the DB2 subsystem ID.
• <V2> is the user ID of the user that tried to log on.
• <V3> is the return code of the failing operation.
• <V4> is the reason code of the failing operation.

User response: This might be a temporary problem. Retry the operation. If problem persists, please contact IBM support.

FPEV0215W  DATA SERVER MASTER ALREADY STARTED.

Explanation: A command was issued to start a Data Server that is already up and running. The command is ignored.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).

User response: Contact IBM support.

FPEV0217I  <V1> BIND FOR MODULE FPEVWRP2 MISSING. NO DB2 CONNECT DATA COLLECTING.

FPEV0218I  <V1> NO AUTHORITY FOR REQ OP IN DGOWWRP2 FOR TABLE DB2PM.HISTORYDATA. NO DB2 CONNECT DATA COLLECTING.

FPEV0219I  <V1> NO AUTHORITY FOR REQ OP IN DGOWWRP2 FOR TABLE DB2PM.PARAMETER. NO DB2 CONNECT DATA COLLECTING.

FPEV0220W  <V1> COMMAND FAILED. THE SPECIFIED DB2 SUBSYSTEM <V2> IS NOT RECOGNIZED BY THE DATA SERVER.

Explanation: The subtask command issued to the Performance Expert Server subtask (PESERVER) failed because the specified identifier of the DB2 subsystem is not recognized by the PE Server subtask.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
• <V2> is the DB2 subsystem identifier.

User response: Verify that the specified DB2 subsystem exists and that the DB2 subsystem identifier is spelled correctly in the command string. Correct and reissue the command.

FPEV0221W  <V1> COMMAND FAILED. THE DATA SERVER INSTANCE FOR THE SPECIFIED DB2 SUBSYSTEM <V2> IS NOT RUNNING.

Explanation: The subtask command issued to the PE Server subtask (PESERVER) failed because the server instance for the specified DB2 subsystem is not running.

Possible reasons that the server instance failed include the following:
• the PE Server subtask was not started because the Data Server is not configured to start monitoring for the specified DB2 subsystem.
• the PE Server subtask terminated because the DB2 subsystem terminated.
• the PE Server subtask ended abnormally.

<V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
• <V2> is the DB2 subsystem identifier.

User response: Verify that the PE Server subtask is configured to monitor the specified DB2 subsystem and that the DB2 subsystem is running. Restart the PE Server subtask and reissue the command.

FPEV0222E  <V1> RRSAF LOAD FAILED. RC=<V2> RS=<V3>

Explanation: Loading of the Resource Recovery Services Attachment Facility (RRSAF) modules failed.
• <V1> is the DB2 subsystem ID.
• <V2> is the return code.
• <V3> is the reason code.
User response: Ensure that the RRSAF modules are present and running or that they can be located in the normal search sequence.

FPEV0223E <V1> RRSAF-IDENTIFY REQUEST FAILED FOR DB2 SUBSYSTEM <V2>. RC= <V3> RS= <V4>

Explanation: The PE server issued an RRSAF - 'IDENTIFY' request. This request failed because RR/MVS was not active or the DB2 subsystem was not attached to RR/MVS.
• <V1> is the originator of the message.
• <V2> is the DB2 subsystem ID.
• <V3> is the DB2 return code.
• <V4> is the DB2 reason code.

User response:
• If RR/MVS is not started, start RR/MVS and restart the OMEGAMON Collector started task.
• If RR/MVS is started, restart the OMEGAMON Collector started task or use the MODIFY command to manually start the PE Server subtask for the DB2 subsystem reported in this error message.

FPEV0224I <V1> INSTANCE FOR DB2 SUBSYSTEM <V2> STOPPED

Explanation: The OMEGAMON Collector components that monitor the indicated DB2 subsystem have been stopped.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
• <V2> is the DB2 subsystem ID.

User response: None.

FPEV0240I <V1> CURRENT PARAMETERS FOR NON-VSAM WORK DATASETS

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).

User response: None.

FPEV0241I <V1> CURRENT PARAMETERS FOR VSAM WORK DATASETS

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).

User response: None.

FPEV0242I <V1> • <V2>=<V3>

Explanation: This message is issued in response to a DISPLAY command or during OMEGAMON Collector startup.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
• <V2> is a parameter keyword.
• <V3> is the parameter value.

User response: None.

FPEV0243I <V1> COMMAND IGNORED. THE PE SERVER SUBTASK FOR DB2 SUBSYSTEM <V2> HAS ALREADY BEEN STARTED.

Explanation: A PE Server subtask has already been started and is monitoring this DB2 subsystem, The subsequent command issued to start the PE Server subtask for this DB2 subsystem again is ignored.
• <V1> is the name of the master controller inside the OMEGAMON Collector (MSTR).
• <V2> is the DB2 subsystem ID.

User response: None.

FPEV0250I <V1> EXCEPTION EVENT IFI ERROR. IFI RC <V2>, REASON <V3>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the IFI return code.
• <V3> is the IFI reason code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes.

FPEV0252I <V1> EXCEPTION EVENT TRACES NOT STARTED

Explanation: No traces have been requested using the EXCEPTIONEVENT command.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0254W <V1> EXCEPTION EVENT DIV <V2> ERROR. RC <V3>-<V4>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the DIV service.
• <V3> is the return code.
• <V4> is the reason code.

User response: See z/OS MVS Programming: Authorized Assembler Services Reference for an explanation of the return and reason codes.
FPEV0255I  <V1> EXCEPTION EVENT RECOVERY
DATA SET WRAPPED

Explanation: This message is issued whenever the Exception Event begins to write the data set from the beginning of the physical data set.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0256I  <V1> EXCEPTION EVENT WAITING
FOR DB2 INITIALIZATION

Explanation: DB2 has not completed initialization.
• <V1> is the DB2 subsystem ID.

User response: Start DB2 if it has not already been started.

FPEV0258I  <V1> RRSAF ERROR WHEN
EXCEPTION EVENT ATTEMPTED TO
CONNECT TO DB2. RC <V2>,
REASON <V3>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the IFI return code.
• <V3> is the IFI reason code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes.

FPEV0259I  <V1> RRSAF ERROR WHEN
EXCEPTION EVENT ATTEMPTED TO
DISCONNECT FROM DB2. RC <V2>,
REASON <V3>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the IFI return code.
• <V3> is the IFI reason code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes.

FPEV0261I  <V1> AUTOMATIC EXCP STARTED

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0262W  <V1> AUTOMATIC EXCP STARTED
WITH ERRORS

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: See the job log or SYSPRINT for accompanying messages and respective user actions.

FPEV0263E  <V1> AUTOMATIC EXCP NOT
STARTED - NO VALID THRESHOLD
RECORDS

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: See the job log or SYSPRINT for accompanying messages and respective user actions.

FPEV0264E  <V1> MISSING FILE DATA SET NAME
FOR AUTOMATIC EXCP ON SERVER
INSTANCE <V2>

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: Specify a data set associated with the AUTOEXCPFILENAME parameter in the subsystem startup data set member (RKD2PAR).

FPEV0266I  <V1> EXCEPTION PROCESSING
DIAGNOSTIC DATA: RA
PRESERVED FOR LATER USE

Explanation: The return area (RA) will be reused for the next DB2 IFI request.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0267E  <V1> PERIODIC EXCEPTION LOG
DATA SET <V2> HAS WRONG
SETTINGS. SETTINGS FOUND:
RECFM = <V3>, LRECL = <V4>

Explanation: The Periodic Exception Log data set was allocated incorrectly.
• <V1> is the DB2 subsystem ID.
• <V2> is the data set name.
• <V3> is the record format.
• <V4> is the record length.
FPEV0269E <V1> PERIODIC EXCEPTION FILE DATA SET <V2> HAS WRONG SETTINGS. SETTINGS FOUND: RECFM = <V3>, LRECL = <V4>. PERIODIC EXCEPTION LOG data set using the correct attributes.

Explanation: The Periodic Exception File data set was allocated incorrectly.

User response: Reallocate the Periodic Exception File data set using the correct attributes.

RECFM
VB
LRECL ≥512

FPEV0270E <V1> PERIODIC EXCEPTION THRESHOLD DATA SET <V2> HAS WRONG SETTINGS. SETTINGS FOUND: RECFM = <V3>, LRECL = <V4>. PERIODIC EXCEPTION PROCESSING NOT STARTED.

Explanation: The Periodic Exception Threshold data set was allocated incorrectly.

User response: Reallocate the Periodic Exception File data set using the correct attributes.

RECFM
VB
LRECL ≥32756

FPEV0271W <V1> THE FOLLOWING MODIFY COMMAND IS NOT ALLOWED:<V2>

Explanation: The private member configuration is not present for the indicated DB2 subsystem. No Modify commands are allowed. Only Display commands are allowed.

User response: Configure the DB2 subsystem with the Configuration Tool (formerly ICAT).

FPEV0273E <V1> PARAMETER DATASET MEMBER <V2> NOT FOUND. MONITORING FOR DB2 SUBSYSTEM <V3> IS ENABLED WITH LIMITED FUNCTIONALITY

Explanation: During OMEGAMON Collector startup a DB2 subsystem was automatically detected and a PE Server subtask was started to monitor the DB2 subsystem. The corresponding parameter dataset member could not be found. Monitoring for the DB2 subsystem is enabled with limited functionality. Only real-time monitoring without DB2 Connect monitoring is supported.

User response: None, if real-time monitoring with limited functionality is acceptable. Otherwise, configure the indicated DB2 subsystem with the Configuration Tool (formerly ICAT), complete the configuration and restart the OMEGAMON Collector.

FPEV0274E <V1> PARAMETER DATASET MEMBER <V2> NOT FOUND. MONITORING FOR DB2 SUBSYSTEM <V3> IS DISABLED

Explanation: During OMEGAMON Collector startup a PE Server subtask was started to monitor a configured DB2 subsystem, or a Modify command was issued to explicitly start a PE Server subtask. The corresponding parameter dataset member could not be found for a configured DB2 subsystem. The configuration of the OMEGAMON Collector is not complete. Monitoring for the DB2 subsystem is disabled.

User response: Configure the indicated DB2 subsystem with the Configuration Tool (formerly ICAT), complete the configuration and restart the OMEGAMON Collector.

FPEV0275E <V1> ERROR WHEN PREPARING PE SERVER SUBTASK. MONITORING FOR DB2 SUBSYSTEM <V2> IS DISABLED

Explanation: During OMEGAMON Collector startup the preparation for the attach of a PE Server subtask failed. Monitoring for the DB2 subsystem is disabled.

User response: None, if real-time monitoring with limited functionality is acceptable. Otherwise, configure the indicated DB2 subsystem with the Configuration Tool (formerly ICAT), complete the configuration and restart the OMEGAMON Collector.
FPEV0303S • FPEV0409I

User response: Check the job log for preceding error messages, correct the reported errors and restart the OMEGAMON Collector.

FPEV0303S <V1> DATA MANAGER DIV <V2> ERROR. RC <V3> <V4>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the DIV service.
• <V3> is the return code.
• <V4> is the reason code.

User response: See MVS Messages and Codes for an explanation of the return and reason codes. Check the log for preceding messages or abend codes. If the problem cannot be corrected and recurs, contact IBM support.

FPEV0400I <V1> USER MANAGER TASK STARTED

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0401I <V1> USER MANAGER TASK ENDED

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0402E <V1> EXCEPTION EVENT TASK TERMINATED. RC <V2>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the return code.

User response: Check the log for preceding messages or abend codes. If the problem cannot be corrected and recurs, contact IBM support.

FPEV0403E <V1> EXCEPTION EVENT TASK ERROR. RC <V2>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the return code.

User response: Check the log for preceding messages or abend codes. If the problem cannot be corrected and recurs, contact IBM support.

FPEV0404E <V1> EXCEPTION EVENT TASK DID NOT RESPOND TO TERMINATION REQUEST

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0405E <V1> CONNECTION BY USER <V2> FAILED, NO AUTHORITIES FOUND

Explanation: The user must have MONITOR1 or MONITOR2 privileges to use the online monitor.

If external security (RACF) is used to secure DB2 resources, the user or assigned group does not have read access for the corresponding profiles. If DB2 internal security is used to secure DB2 resources, no corresponding entry for the user or assigned group exists in SYSIBM.SYSUSERAUTH.
• <V1> is the DB2 subsystem ID.
• <V2> is the user ID.

System action: The PE Server subtask does not support monitoring for the unauthorized user ID.

User response: Grant the required authority to the user or a group the user is assigned to. Refer to Installation and Configuration.

FPEV0406E <V1> CONNECTION BY USER <V2> FAILED DUE TO SQL ERROR <V3> <V4>

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the user ID.
• <V3> is either - or blank.
• <V4> is the SQL error code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the SQL code.

FPEV0408E <V1> PERIODIC EXCEPTION TASK FOR USER <V2> DID NOT RESPOND TO TERMINATION REQUEST

Explanation: The user requested termination of periodic exception, but the task did not respond to the termination request. The periodic exception task can be forced to be terminated by stopping the Data Server subtask.
• <V1> is the DB2 subsystem ID.
• <V2> is the user ID.

User response: Stop and restart the Data Server subtask using the MODIFY command.

FPEV0409I <V1> PERIODIC EXCEPTION PROCESSING TASK STARTED FOR USER <V2>

Explanation: The periodic exception task started for the user who requested periodic exception processing.
• <V1> is the DB2 subsystem ID.
• <V2> is the user ID.

User response: None.
FPEV0410I <V1> PERIODIC EXCEPTION PROCESSING TASK STOPPING FOR USER <V2>.

Explanation: The periodic exception task stopped for the user who requested the termination of periodic exception processing.
• <V1> is the DB2 subsystem ID.
• <V2> is the user ID.
User response: None.

FPEV0411W <V1> PERIODIC EXCEPTION TASK DID NOT RESPOND TO DEACTIVATION REQUEST.

Explanation: A periodic exception task continues monitoring threshold exceptions although a user requested to stop periodic exception processing.
• <V1> is the DB2 subsystem ID.
User response: Retry to deactivate periodic exception processing. If the problem persists, terminate periodic exception processing.

FPEV0412I <V1> PERIODIC EXCEPTION PROCESSING DEACTIVATED FOR USER <V2>.

Explanation: A periodic exception task discontinued to monitor threshold exceptions for the user who requested to stop periodic exception processing.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV0413I <V1> PERIODIC EXCEPTION PROCESSING ACTIVATED FOR USER <V2>.

Explanation: A periodic exception task started to monitor threshold exceptions for the user who requested to start periodic exception processing.
• <V1> is the DB2 subsystem ID.
• <V2> is the user ID.
User response: None.

FPEV0414I <V1> THRESHOLD DATA SET FOR USER <V2> CAUSED PARSE WARNINGS. WARNING: <V3>, COUNTER: '<V4>'X

Explanation: A periodic exception task was requested to monitor a given set of thresholds and the specified threshold set contains counters that are not supported by periodic exception processing.
• <V1> is the DB2 subsystem ID.
• <V2> is the user ID.
• <V3> is the reason for the error.
• <V4> is the identifier for the counter.
User response: Correct the provided threshold set and retry.

FPEV0415I <V1> DUMP FOR THRESHOLD SET IS WRITTEN FOR FURTHER ANALYSIS. DIAGNOSTICS: TABLE ADDR <F2>, TABLE COUNT <F3>.

Explanation: The periodic exception task detected an error in the provided threshold set and starts to dump data for further analysis. The message is preceded by message FPEV0414I.
• <V1> is the DB2 subsystem ID.
• <F2> is the user ID.
• <F3> is the reason for the error.
User response: Save the Performance Expert log (SYSPRINT) and dump for further analysis by IBM. Correct the provided threshold set and retry.

FPEV0416E <V1> EXCEPTION PROCESSING USER EXIT MODULE <V2> NOT FOUND. EXIT DISABLED

Explanation: The indicated module was not found when the exception processing user exit was called.
• <V1> is the DB2 subsystem ID (DB2SSID).
• <V2> is the name of the module.
User response: Try to retrieve and replace the indicated module from a backup version, or contact IBM support.

FPEV0417E <V1> SPECIFIED EXCEPTION LOG DATA SET '<V2>' COULD NOT BE ACCESSED. SEE JOB LOG FOR DETAILS

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the name of the Exception Log data set.
User response: Specify a data set that exists and is accessible.

FPEV0418E <V1> SPECIFIED EXCEPTION FILE DATA SET '<V2>' COULD NOT BE ACCESSED. SEE JOB LOG FOR DETAILS

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the name of the Exception File data set.
User response: Specify a data set that exists and is accessible.

FPEV0419E <V1> SPECIFIED EXCEPTION THRESHOLD DATA SET '<V2>' COULD NOT BE ACCESSED. SEE JOB LOG FOR DETAILS

Chapter 9. Messages 5013
Explanation: None.

- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the name of the exception threshold data set.

User response: Specify a data set that exists and is accessible.

FPEV0450I  INITIALIZING COMMON SERVICES
Explanation: An informational message.

FPEV0451I  SUBSCRIBING COMMON SERVICES
Explanation: An informational message.

FPEV0452I  TERMINATING COMMON SERVICES
Explanation: An informational message.

FPEV0453I  UNSUBSCRIBING COMMON SERVICES
Explanation: An informational message.

FPEV0454I  COMMON SERVICES PARTIALLY TERMINATED
Explanation: An informational message.

FPEV0455S  COMMON SERVICES INITIALIZATION FAILED
Explanation: A fatal error has occurred.
User response: Contact IBM support.

FPEV0503W  `<V1>` SIZE OF HISTORY DATA SET IS CHANGED TO `<V2>` BECAUSE SPACE ALLOCATION REQUEST COULD NOT BE FULLY ACCOMPLISHED.
Explanation: DADSM EXTEND processing tried to allocate the next extent for the history data set but this request could not be accomplished.
- `<V1>` is the DB2 subsystem ID.
- `<V2>` is the new maximum number of 4 KB-pages of the history data set. The new value is less than the value that is specified in the SHDATASETSIZE startup parameter for the Data Server.

Check the SYSLOG data set and locate the FPEV0503W message. It should be accompanied by the system message FPEV0501W rc-ccc, ..., where rc is the reason code and ccc is the Problem Determination Function (PDF) code. These codes will help to identify the cause of the problem. Examples for rc-ccc are:
- 204-211 means the maximum number of extents has been reached because of a lack of space or space fragmentation problem
- 194-204 means no more volumes are available on which to allocate space.

User response: It is recommended that you reallocate the history data set to permit allocation of as many pages as are specified in the SHDATASETSIZE startup parameter. You might have to perform space defragmentation or use a separate storage class before the reallocation. To reallocate the history data set, perform the following:
1. Stop the OMEGAMON Collector started task.
2. Delete the VSAM cluster of the history data set by using the DELETE command of the IDCAMS utility.
3. Define the cluster by using the DEFINE CLUSTER command of the IDCAMS utility. Use the parameters VOLUMES, STORAGECLASS if an enormous quantity of space is supposed to be allocated.

FPEV0504W  `<V1>` HISTORY DATA SET IS NOT PRESENT
Explanation: None.
- `<V1>` is the DB2 subsystem ID.

User response: Either create a history data set or remove the SHDATASETSIZE parameter using the Configuration Tool (formerly ICAT).

FPEV0505W  `<V1>` HISTORY MANAGER NOT COLLECTING DATA
Explanation: History Manager is not collecting data for the Db2 subsystem `<V1>` shown in the message.
User response: Check the log for preceding messages.

Note: If history data is not being collected for the Db2 subsystem indicated in the message, you can disregard message FPEV0505W.

FPEV0507I  `<V1>` HISTORY MANAGER TASK STARTED
Explanation: The snapshot history for the identified DB2 subsystem is successfully initialized.
- `<V1>` is the DB2 subsystem ID.

User response: None.

FPEV0508I  `<V1>` HISTORY MANAGER TASK ENDED
Explanation: None.
- `<V1>` is the DB2 subsystem ID.

User response: None.

FPEV0509I  `<V1>` INITIALIZING HISTORY INDEX FROM HISTORY DATA SET
Explanation: None.
- `<V1>` is the DB2 subsystem ID.

User response: None.
FPEV0511I  

<V1> HISTORY DATA SET WRAPPED,  
<V2> INTERVALS STORED

Explanation: The history data exceeded the size of the history data set. The history data set was therefore wrapped. New history data will overwrite the earliest history data stored in the data set.  
• <V1> is the DB2 subsystem ID.  
• <V2> is the number of intervals (logical snapshots) stored when the history data set gets wrapped.  

User response: None.

FPEV0513W  

<V1> RETURN AREA LARGER THAN DATA SET, SOME HISTORY DATA LOST

Explanation: The amount of data returned from DB2 for a particular history interval was larger than the allocated size of the history data set, and was lost.  
• <V1> is the DB2 subsystem ID.  

User response: If the problem occurs frequently, use the Configuration Tool (formerly ICAT) and set the SHDATASETSIZE startup parameter to a larger value to allocate a larger history data set.

FPEV0515W  

<V1> HISTORY DATA SET SIZE CHANGED TO <V2> PAGES

Explanation: The history data set cannot be made smaller than the space already used.  
• <V1> is the DB2 subsystem ID.  
• <V2> is the new maximum size of the history data set.  

User response: None.

FPEV0518S  

<V1> HISTORY MANAGER TASK TERMINATED

Explanation: None.  
• <V1> is the DB2 subsystem ID.  

User response: If history manager restart fails, restart the Data Server. If the problem recurs, contact IBM support.

FPEV0519S  

<V1> ERROR OCCURRED DURING HISTORY INDEX INITIALIZATION

Explanation: Some or all of the history data set has been corrupted.  
• <V1> is the DB2 subsystem ID.  

User response: Reallocate the history data set using the Configuration Tool (formerly ICAT)-generated job, changing its size to correspond with the value specified in the SHDATASETSIZE startup parameter. If the problem recurs, contact IBM support.

FPEV0520W  

<V1> HISTORY MANAGER WAITING FOR DB2 INTERFACE INITIALIZATION

Explanation: Either DB2 has not started or the Monitor trace is not active.  
• <V1> is the DB2 subsystem ID.  

User response: Start DB2 and the Monitor trace.

FPEV0521I  

<V1> HISTORY MANAGER COLLECTING DATA

Explanation: None.  
• <V1> is the DB2 subsystem ID.  

User response: None.

FPEV0522I  

<V1> HISTORY DATA SET SIZE IS TOO SMALL

Explanation: The OMEGAMON Collector detected that the size of the history data set, specified in the SHDATASETSIZE startup parameter, is too small to store even two logical snapshots (intervals). The message continues to be repeatedly issued, and an entry is written to the OMEGAMON Collector SYSPRINT log, each time after one current interval is stored. When further storing is not possible because of the size limitation, the History Manager task stops to avoid a corruption of the data and indexes in the history data set.  
• <V1> is the DB2 subsystem ID.  

User response: Use the Configuration Tool (formerly ICAT) and increase the SHDATASETSIZE startup parameter value to a reasonable size, based on the recommendations given in Installation and Configuration and the statistics provided by message FPEV0511I. Reallocate the history data set, changing its size so that it corresponds with the value specified in SHDATASETSIZE.

FPEV0523W  

<V1> INTERNAL BUFFER OVERFLOW OCCURRED DURING PROCESSING OF DB2 CONNECT DATA. RC <V2>, REASON <V3>

Explanation: The History Manager detected that one of its internal buffers was too small to hold current DB2 Connect data. As a result, part of the DB2 Connect data was not processed.  
• <V1> is the DB2 subsystem ID.  
• <V2> is the return code.  
• <V3> is the reason code.  

User response: If this error occurs, it is recommended that you contact IBM support. Proceed as follows:  
1. Stop the OMEGAMON Collector.  
2. Collect the data outlined in “When you contact IBM support” on page 4852. Ensure that you save the history data, using the IDCAMS REPRO function. If
you need assistance with the IDCAMS REPRO function, contact IBM support.

3. Restart the OMEGAMON Collector.

FPEV0552S <V1> HISTORY MANAGER DIV <V2> ERROR. RC <V3><V4>

Explanation: There is a problem with the history data set.
• <V1> is the DB2 subsystem ID.
• <V2> is the DIV function requested.
• <V3> is the return code.
• <V4> is the reason code.

User response: See z/OS MVS Programming: Authorized Assembler Services Reference for an explanation of the return and reason codes. Check the log for preceding messages or abend codes. If the problem persists, contact IBM support.

FPEV0553W <V1> DB2 REPORTED IFI ERROR (RC <V2>, RS <V3>). CURRENT HISTORY SNAPSHOT DOES NOT CONTAIN ALL DATA FOR THIS DB2

Explanation: The History Manager requested data from DB2 and detected an IFI error. If data has been returned by DB2, it is saved to the History data set or History data space, but it does not contain all requested data.
• <V1> is the DB2 subsystem ID.
• <V2> is the IFI return code.
• <V3> is the IFI reason code.

User response: Check the status of DB2 and correct the DB2 problem. See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes. If the problem persists, contact IBM support.

FPEV0555W <V1> DB2 REPORTED INACTIVE MONITOR TRACE. CURRENT HISTORY SNAPSHOT NOT SAVED. ISSUE "START TRACE(MON)" COMMAND

Explanation: The History Manager requested data from DB2 and detected that Monitor trace is not active. An active Monitor trace is necessary to receive performance data for History. No data was saved to the History data set or History data space.
• <V1> is the DB2 subsystem ID.

User response: Issue the DB2 command START TRACE(MON) manually. If the problem persists, stop the traces on the member and restart Monitor trace. If the problem persists, contact IBM support.

FPEV0559I <V1> HISTORY MANAGER RETURN AREA TOO SMALL. DATA TRUNCATED

Explanation: The Performance Expert DB2 IFI return area is not large enough to store all the returned DB2 data for a history manager IFI READS request. Some data got lost. This can happen if you are requesting a data sharing group wide snapshot of the whole data sharing group for history saving.
• <V1> is the DB2 subsystem ID.

User response: None required. However, you can limit the amount of data requested from DB2 by using the Configuration Tool (formerly ICAT) and specifying one or more history qualifiers (HQx) as Data Server startup parameters. For example, the specification of HQ1=(PL=CICS*,PL=MANUFACT,PL=HR*) invokes multiple IFI READS requests. However, depending on the number of history qualifiers (HQx) and how you specify them, a thread can match more than one qualification, multiple thread data can be collected, and problems can occur when past data is viewed.

FPEV0560E <V1> DB2 RETURNED INCORRECT DATA, REQUEST CANCELED

Explanation: Incorrect READS data was found, so the request to retrieve data was canceled.
• <V1> is the DB2 subsystem ID.

User response: If the error recurs, trace the problem using the Data Server trace (tracelevel=36) and contact IBM support. Keep the archived SVC dump titled INCORRECT RA - DB2I and all JES outputs of OMEGAMON Collector Started Task for further analysis by IBM support.

FPEV0561E <V1> DB2 MEMBER <V2> IS TEMPORARILY OUT OF MEMORY (RS <V3>). CURRENT HISTORY SNAPSHOT DOES NOT CONTAIN ALL DATA FOR THIS MEMBER

Explanation: The History Manager requested group scope data from DB2 and detected that member <V2> is temporarily out of memory (DB2 IFI code <V3>). The data is saved to the History data set or History data space, but it does not contain data for all group members.
• <V1> is the DB2 subsystem ID.
• <V2> is the DB2 member in this group reporting the problem.
• <V3> is the DB2 IFI reason code.

User response: Check the status of DB2 group member <V2> in this group and correct the DB2 problem. See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes. If the problem persists, contact IBM support.
FPEV0562E  <V1>  DB2 IS TEMPORARILY OUT OF MEMORY (RS <V2>). CURRENT HISTORY SNAPSHOT DOES NOT CONTAIN ALL DATA FOR THIS DB2

Explanation:  The History Manager requested data from DB2 and detected that this DB2 subsystem is temporarily out of memory. If data has been returned by DB2, it is saved to the History data set or History data space, but it does not contain all requested data.
- <V1> is the DB2 subsystem ID.
- <V2> is the DB2 IFI reason code.

User response:  Check the status of DB2 subsystem and correct the DB2 problem. See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the reason code. If the problem persists, contact IBM support.

FPEV0563E  <V1>  DB2 MEMBER <V2> REPORTED AN INTERNAL ABEND (RS <V3>). CURRENT HISTORY SNAPSHOT DOES NOT CONTAIN ALL DATA FOR THIS MEMBER

Explanation:  The History Manager requested group scope data from DB2 and detected an internal abend in member <V2>. The data is saved to the History data set or History data space, but it does not contain data for all group members.
- <V1> is the DB2 subsystem ID.
- <V2> is the DB2 member in this group reporting the problem.
- <V3> is the DB2 IFI reason code.

User response:  Contact IBM support. See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the reason code.

FPEV0564E  <V1>  DB2 REPORTED AN INTERNAL ABEND (RS <V2>). CURRENT HISTORY SNAPSHOT DOES NOT CONTAIN ALL DATA FOR THIS DB2

Explanation:  The History Manager requested data from DB2 and detected an internal abend in DB2. If data has been returned by DB2, it is saved to the History data set or History data space, but it does not contain all requested data.
- <V1> is the DB2 subsystem ID.
- <V2> is the DB2 IFI reason code.

User response:  Contact IBM support. See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the reason code.

FPEV0565E  <V1>  DB2 MEMBER <V2> REPORTED AN UNEXPECTED CONDITION (RS <V3>). CURRENT HISTORY SNAPSHOT DOES NOT CONTAIN ALL DATA FOR THIS MEMBER

Explanation:  The History Manager requested group scope data from DB2, and DB2 itself detected an unexpected condition within DB2. The data is saved to the History data set or History data space, but it does not contain data for all group members.
- <V1> is the DB2 subsystem ID.
- <V2> is the DB2 member in this group reporting the problem.
- <V3> is the DB2 IFI reason code.

User response:  Check the status of DB2 group member <V2> in this group and correct the DB2 problem. See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the reason code. If the problem persists, contact IBM support.

FPEV0566E  <V1>  DB2 REPORTED AN UNEXPECTED CONDITION (RS <V2>). CURRENT HISTORY SNAPSHOT DOES NOT CONTAIN ALL DATA FOR THIS DB2

Explanation:  The History Manager requested data from DB2, and DB2 itself detected an unexpected condition within DB2. If data has been returned by DB2, it is saved to the History data set or History data space, but it does not contain all requested data.
- <V1> is the DB2 subsystem ID.
- <V2> is the DB2 IFI reason code.

User response:  Check the status of the DB2 subsystem and correct the DB2 problem. Refer to DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the reason code. If the problem persists, contact IBM support.

FPEV0567W  <V1>  DB2 MEMBER <V2> REPORTED IFI ERROR (RC <V3>, RS <V4>). CURRENT HISTORY SNAPSHOT DOES NOT CONTAIN ALL DATA FOR THIS MEMBER

Explanation:  The History Manager requested group scope data from DB2 and detected an IFI return code. The data is saved to the History data set or History data space, but it does not contain data for all group members.
- <V1> is the DB2 subsystem ID.
- <V2> is the DB2 member in this group reporting the problem.
- <V3> is the DB2 IFI return code.
- <V4> is the DB2 IFI reason code.

User response:  Check the status of the DB2 group
member <V2> in this group and correct the DB2 problem. See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for an explanation of the return and reason codes. If the problem persists, contact IBM support.

FPEV0568W  <V1> DB2 MEMBER <V2> REPORTED INACTIVE MONITOR TRACE.
CURRENT HISTORY SNAPSHOT DOES NOT CONTAIN DATA FOR THIS MEMBER. ISSUE "START TRACE(MON)" COMMAND

Explanation: The History Manager requested group scope data from DB2 and detected that Monitor trace is not active at group member <V2>. An active Monitor trace is necessary to receive performance data for history. No data for this member was saved to the History data set or History data space.

• <V1> is the DB2 subsystem ID.
• <V2> is the DB2 member in this group reporting the problem.

User response: Issue the DB2 Command START TRACE(MON) manually on member <V2>. If the problem persists stop the traces on the member and restart the Monitor trace. If the problem persists, contact IBM support.

FPEV0570I  <V1> SIZE OF HISTORY DATA SET HAS BEEN CHANGED. OLD DATA SET IS ARCHIVED. PLEASE WAIT

Explanation: The server detected that the specified size for the history data set does not match the size of the allocated data set. The size might have been changed in the server parameters, using the Configuration Tool (formerly ICA). The history data set is archived and a new data set with the new size allocated.

• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0571I  <V1> OLD HISTORY DATA SET <V2> SUCCESSFULLY ARCHIVED

Explanation: The old history data set was successfully archived and a new one was created.

• <V1> is the DB2 subsystem ID.
• <V2> is the name of the archived data set.

User response: If you are asked by IBM support to keep the archived data set for further problem analysis, use the REPRO command of the IDCAMS utility to save the data set.

FPEV0572E  <V1> ARCHIVING OF OLD HISTORY DATASET FAILED. SEE JOB LOG FOR DETAILS

Explanation: The old history data set could not be archived.

• <V1> is the DB2 subsystem ID.

User response: Refer to SYSPRINT of the OMEGamon Collector started task for more details and try to solve the problem. Restart the OMEGamon Collector.

FPEV0573I  <V1> INCONSISTENCY FOUND IN SNAPSHOT HISTORY DATASET.
REASON <V2>

Explanation: When an existing Snapshot History data set is loaded during initialization of the snapshot history monitoring function, the snapshots are checked for consistency and integrity. The check failed with reason code <V2>. Possible reason codes are:

| 20 | Maximum record length exceeded. |
| 24 | Invalid product section offset. |
| 28 | Product section not contained in record. |
| 32 | Product section exceeds end of record. |
| 36 | Invalid product section length. |
| 40 | Invalid type. |
| 44 | Invalid data. |
| 48 | Unsupported Db2 release. |

• <V1> is the Db2 subsystem ID.
• <V2> is the reason code.

User response: None.

FPEV0574I  <V1> SNAPSHOT HISTORY DATASET CANNOT BE USED. IT IS ARCHIVED. PLEASE WAIT.

Explanation: Loading of an existing Snapshot History data set failed during initialization of the snapshot history manager. The data set cannot be used as current Snapshot History data set. The data set is being archived.

• <V1> is the DB2 subsystem ID.

User response: If the error recurs, trace the problem using the Data Server trace (tracelevel=128) and contact IBM support. Keep the archived Snapshot History data set for further analysis by IBM support.

FPEV0600I  <V1> CPU PARALLELISM DATA COLLECTION STARTED

Explanation: None.

User response: None.
FPEV0601I <V1> CPU PARALLELISM DATA COLLECTION STOPPED

Explanation:
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0608E <V1> CPU PARALLELISM DATA COLLECTION - NO STORAGE AVAILABLE

Explanation: The storage size that is allocated to store monitoring data of the child thread exceeded.
Default value: 20 MB
Minimum value: 5 MB
Maximum value: 50 MB

New incoming monitoring data is discarded. The processing of existing monitoring data continues.
• <V1> is the DB2 subsystem ID.

User response: Specify a value between 5 and 50 for the configuration parameter CPDASIZE and restart the CPU parallelism data collection.

FPEV0610I <V1> USER AUTHORIZATION TASK STARTED

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0611I <V1> USER AUTHORIZATION TASK ENDED

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0612E <V1> USER AUTHORIZATION TASK DID NOT RESPOND TO TERMINATION REQUEST

Explanation: When the Data Server was stopped, the user authorization task did not end correctly.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0613I <V1> USER AUTHORIZATION EXIT INITIALIZATION PHASE TERMINATED WITH RC <V2>

Explanation: The user authorization exit was terminated during its initialization phase because it returned a nonzero return code.
• <V1> is the DB2 subsystem ID.
• <V2> is the return code passed by the authorization exit.

User response: Restart the CPU parallelism data collection.

User response: Check the user authorization exit and restart the Data Server.

FPEV0614I <V1> CPU PARALLELISM DATA COLLECTION DID NOT START YET. THE COMMAND IS IGNORED.

Explanation: The user authorization exit was terminated during its decide phase because it returned a return code other than 0 or 4. Standard Performance Expert authorization is used for further requests.
• <V1> is the DB2 subsystem ID.

User response: Check the user authorization exit and restart the Data Server.

FPEV0619I <V1> CPU PARALLELISM DATA COLLECTION DID NOT START YET. THE COMMAND IS IGNORED.

Explanation: A MODIFY command is used to stop the CPU parallelism data collection, however, the CPU parallelism data collection already stopped.

<V1> is the DB2 subsystem ID.

System action: None.

User response: None.

FPEV0630I <V1> CPU PARALLELISM DATA COLLECTION IS ACTIVE. THE COMMAND IS IGNORED.

Explanation: A MODIFY command is used to start the CPU parallelism data collection, however, the CPU parallelism data collection is already active.

<V1> is the DB2 subsystem ID.

System action: None.

User response: None.

FPEV0631I <V1> RESTART CPU PARALLELISM DATA COLLECTION FOR NEW DATA SPACE SIZE TO TAKE EFFECT.

Explanation: A MODIFY command is used to change the size of the data space that is used to store monitoring data of child threads.

<V1> is the DB2 subsystem ID.

System action: The size of the data space is not changed immediately. The next time the CPU parallelism data collection is started or restarted, the new size is used.

User response: Restart the CPU parallelism data collection.
FPEV0632E • FPEV0852S

FPEV0632E  <V1> CPU PARALELLISM DATA COLLECTION ERROR. RC=<V2>, REASON=<V3>

Explanation: An error occurred when collecting CPU parallelism data.
• <V1> is the DB2 subsystem ID.
• <V2> is the return code of the component where the error occurred.
• <V3> is the reason code that is associated with the error situation.

System action: None.

User response: If the error recurs, trace the problem by using the data server trace (tracelevel=1) and contact IBM support.

FPEV0633I  <V1> CPMON = <V2>

Explanation: <V1> is the DB2 subsystem ID. <V2> is the current setting of the CPMON configuration parameter.

System action: None.

User response: None.

FPEV0634I  <V1> CPDATASIZE = <V2>

Explanation: <V1> is the DB2 subsystem ID. <V2> is the current setting of the CPDATASIZE configuration parameter.

System action: None.

User response: None.

FPEV0701S  GETMAIN FAILURE FOR <V1>. RC <V2>

Explanation: There was insufficient storage available.
• <V1> is the area being obtained.
• <V2> is the return code.

User response: Increase the region size and restart the OMEGAMON Collector.

FPEV0818S  <V1> INVALID REQUEST TYPE <V2> IN RQE RECEIVED. COMPONENT <V3>

Explanation: The Data Server DB2 interface component has received an invalid request.
• <V1> is the DB2 subsystem ID.
• <V2> is the request type that was found not valid.
• <V3> is an internal identifier that is used by IBM for maintenance purposes.

User response: Restart the client. If the error recurs, contact IBM support.

FPEV0819S  <V1> <V2> NO RH PASSED TO COMPONENT <V3>

Explanation: The Data Server DB2 interface component has received a invalid request header.
• <V1> is the DB2 subsystem ID.
• <V2> is the number of the session manager.
• <V3> is an internal identifier that is used by IBM for maintenance purposes.

User response: Restart the client. If the error recurs, contact IBM support.

FPEV0820I  (<V1>) <V2> <V3> CONTROL FLOW <V4> <V5> <V6>

Explanation: This is an internal trace message from the Data Server APPC host server.
• <V1> is the time when this message was written.
• <V2> is the DB2 subsystem ID.
• <V3> is the number of the session manager.
• <V4> is the trace text.
• <V5> is an internal variable of the Data Server.
• <V6> is an internal variable of the Data Server.

User response: None.

FPEV0821I  <V1> <V2> BUFFER CONTENT <V3> <V4> <V5> <V6>

Explanation: This is an internal trace message from the Data Server APPC host server.
• <V1> is the DB2 subsystem ID.
• <V2> is the number of the session manager.
• <V3> is an excerpt of main storage that was traced.
• <V4> is an excerpt of main storage that was traced.
• <V5> is an excerpt of main storage that was traced.
• <V6> is an excerpt of main storage that was traced.

User response: None.

FPEV0850I  <V1> DATA SERVER MAIN TASK STARTED

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0851I  <V1> DATA SERVER MAIN TASK ENDED

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV0852S  <V1> DATA SERVER MAIN TASK ENDED DUE TO ERROR

Explanation: None.
• <V1> is the DB2 subsystem ID.
User response: Check the log for preceding messages or abend codes. If the problem cannot be corrected and recurs, contact IBM support.

---

**Explanation: FPEV0853I**

This is an internal trace message from the Data Server parmlib RKD2P.

- (V1) is the time when this message was written.
- (V2) is the DB2 subsystem ID.
- (V3) shows the last four characters of the module name.
- (V4) is the trace text.
- (V5) is an internal variable of the Data Server.
- (V6) is an internal variable of the Data Server.

User response: None.

---

**Explanation: FPEV0854I**

This is an internal trace message from the Data Server.

- (V1) is the DB2 subsystem ID.
- (V2) is an excerpt of main storage that was traced.
- (V3) is an excerpt of main storage that was traced.
- (V4) is an excerpt of main storage that was traced.
- (V5) is an excerpt of main storage that was traced.
- (V6) is an excerpt of main storage that was traced.

User response: None.

---

**Explanation: FPEV0881E**

The Data Server startup parameter (V2) was specified more than once, but is allowed only once.

- (V1) is the DB2 subsystem ID.
- (V2) is the startup parameter, that was specified more than once.

User response: Ensure that keyword (V2) is specified only once in the Data Server parmlib RKD2PAR.

---

**Explanation: FPEV1104S**

An internal error has occurred.

- (V1) is the DB2 subsystem ID.
- (V2) is an internal error number that identifies the error.
- (V3) is an internal error code that identifies the error.

User response: Stop and restart the Data Server using the MODIFY command. If the problem recurs, contact IBM support.

---

**Explanation: FPEV1130I**

This is an internal trace message from the authorized address space.

- (V1) is the time when this message was written.
- (V2) is the DB2 subsystem ID.
- (V3) is an excerpt of main storage that was traced.
- (V4) is an excerpt of main storage that was traced.
- (V5) is an excerpt of main storage that was traced.
- (V6) is an excerpt of main storage that was traced.

User response: None.

---

**Explanation: FPEV1131I**

This is an internal trace message from the authorized address space.

- (V1) is the DB2 subsystem ID.
- (V2) is an excerpt of main storage that was traced.
- (V3) is an excerpt of main storage that was traced.
- (V4) is an excerpt of main storage that was traced.
- (V5) is an excerpt of main storage that was traced.
- (V6) is an excerpt of main storage that was traced.

User response: None.

---

**Explanation: FPEV1132I**

This is an internal trace message from the authorized address space.

- (V1) is the DB2 subsystem ID.

User response: None.

---

**Explanation: FPEV1133I**

This is an internal trace message from the authorized address space.

- (V1) is the DB2 subsystem ID.

User response: None.

---

**Explanation: FPEV1134S**

This message is displayed in response to a DISPLAY command.

- (V1) is the DB2 subsystem ID.
- (V2) is:
  - OFF: The authorized address space trace is inactive.
  - ON: The authorized address space trace is active.
FPEV1139E • FPEV1155I

User response: None.

FPEV1139E  <V1> AUTHORIZATION MAIN TASK
DID NOT RESPOND TO
TERMINATION REQUEST

Explanation: When the Data Server was stopped, the
authorization main task did not end correctly.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV1141I  <V1> AUTHORIZATION ADDRESS
SPACE INFORMATION - BEGIN

Explanation: This message is displayed in response to
a DISPLAY command.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV1142I  <V1> AUTHORIZATION ADDRESS
SPACE INFORMATION - END

Explanation: This message is displayed in response to
a DISPLAY command.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV1144I  <V1> <V2> <V3>

Explanation: This message is displayed in response to
a DISPLAY command.
• <V1> is the DB2 subsystem ID.
• <V2> is the DB2 subsystem ID.
• <V3> is the user ID of an active user.
User response: None.

FPEV1145I  <V1> USER-ID GROUP-ID

Explanation: This message is displayed in response to
a DISPLAY command.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV1146I  (<V1>) <V2> <V3> CONTROL FLOW
<V4> <V5> <V6>

Explanation: This is an internal trace message from
the application services.
• <V1> is the time when this message was written.
• <V2> is the DB2 subsystem ID.
• <V3> is the user ID.
• <V4> is a variable trace text.
• <V5> is an internal variable of the Data Server.
• <V6> is an internal variable of the Data Server.
User response: None.
FPEV1156I  <V1>  <V2>  <V3>  <V4>  <V5>
Explanation:  This message is displayed in response to the DISPLAY=(STORAGEMAP) command. It follows the table header description of message FPEV1155I.
•  <V1>  is  the  DB2  subsystem  ID.
•  <V2>  is  the  snapshot  store  ID.
•  <V3>  is  the  virtual  storage  size  of  BUFFER1.
•  <V4>  is  the  virtual  storage  size  of  BUFFER2.
•  <V5>  is  the  total  virtual  storage  size  of  BUFFER1  and  BUFFER2.
User response:  None.

FPEV1158I  <V1>  TOTAL FOR AUTHORIZED ADDRESS SPACE = <V2> BYTES
Explanation:  This message is displayed in response to the DISPLAY=(STORAGEMAP) command.
•  <V1>  is  the  DB2  subsystem  ID.
•  <V2>  is  the  total  virtual  storage  size  of  the  user  data  and  the  snapshot  stores  for  all  users.
User response:  None.

FPEV1162S  <V1> ENQUEUEING REQUEST TO INTERNAL THREAD FAILED.
Explanation:  The internal inter-process communication inside the OMEGAMON Collector failed.
•  <V1>  is  the  DB2  subsystem  ID.
User response:  Contact IBM support.

FPEV1163I  DB2 USER CROSBBR DOES NOT HAVE REQUIRED MONITOR 1/2 PRIVILEGE (RC 8, REASON 15075364).
Explanation:  Authorization  is  missing  for  the  indicated  user  ID:
User response:  None.  For further information about return and reason codes, see DB2 Messages and Codes.

FPEV1200I  <V1> APPLICATION SERVICES MAIN TASK STARTED
Explanation:  None.
•  <V1>  is  the  DB2  subsystem  ID.
User response:  None.

FPEV1201I  <V1> APPLICATION SERVICES MAIN TASK ENDED
Explanation:  None.
•  <V1>  is  the  DB2  subsystem  ID.
User response:  None.

FPEV1202S  <V1> APPLICATION SERVICES MAIN TASK ENDED DUE TO ERROR
Explanation:  None.
•  <V1>  is  the  DB2  subsystem  ID.
User response:  Check the log for preceding messages or abend codes. If the problem cannot be corrected and recurs, contact IBM support.

FPEV1203S  <V1> APPLICATION SERVICES MAIN TASK ENDED DUE TO BIND ERROR
Explanation:  The Data Server could not start because the bind job OMBD<V1> did not run successfully.
•  <V1>  is  the  DB2  subsystem  ID.
User response:  Resubmit the bind job in member RKD2SAM(OMBD<V1>), then restart the Data Server. For more information, refer to Installation and Configuration.

FPEV1204S  <V1> APPLICATION SERVICES MAIN TASK ENDED DUE TO RESOURCE ERROR
Explanation:  The indicated DB2 subsystem is not or is incorrectly defined in the Configuration Tool (formerly ICAT). All DB2 subsystems that you want to monitor must be defined in the Configuration Tool.
•  <V1>  is  the  DB2  subsystem  ID.
User response:
•  Verify whether the indicated DB2 subsystem is defined in startup data set member RKD2PAR(OMPEMSTR).
•  Check the PE Server subtask log for FPEV1339I messages. Each DB2 subsystem should report a unique TCP/IP port number in the messages. If required, use the Configuration Tool to redefine the port numbers.
•  Ensure that Grants and Binds in RKD2PAR are run for all DB2 subsystems. Ensure that the DB2PM database has the appropriate authority.

FPEV1205S  <V1> APPLICATION SERVICES MAIN TASK ENDED DUE TO DB2 RETURN CODE <V2>

FPEV1206W  <V1> APPLICATION SERVICES - WAITING FOR DB2 INITIALIZATION
Explanation:  None.
•  <V1>  is  the  DB2  subsystem  ID.
User response:  None.
FPEV1210E <V1> APPLICATION SERVICES - RRSAF ERROR WHEN ATTEMPTED TO CONNECT TO DB2. RC <V2>, REASON <V3>

Explanation: None.
- <V1> is the DB2 subsystem ID.
- <V2> is the Resource Recovery Services Attachment Facility (RRSAF) return code.
- <V3> is the RRSAF reason code.

User response: None.

FPEV1211I <V1> APPLICATION SERVICES - RRSAF ERROR WHEN ATTEMPTED TO DISCONNECT FROM DB2. RC <V2>, REASON <V3>

Explanation: None.
- <V1> is the DB2 subsystem ID.
- <V2> is the Resource Recovery Services Attachment Facility (RRSAF) return code.
- <V3> is the RRSAF reason code.

User response: None.

FPEV1300I <V1> - TCP/IP TRACE=<V2>

Explanation: This message is displayed in response to a DISPLAY command.
- <V1> is the DB2 subsystem ID.
- <V2> is:
  - OFF The TCP/IP trace is inactive.
  - ON The TCP/IP trace is active.

User response: None.

FPEV1301I <V1> TCP/IP=<V2>

Explanation: This message is displayed in response to a DISPLAY command.
- <V1> is the DB2 subsystem ID.
- <V2> is:
  - YES TCP/IP is active.
  - NO TCP/IP is inactive.

User response: None.

FPEV1304I <V1> - IP ADDRESS OF SERVER INSTANCE=<V2>,<V3>,<V4>,<V5>

Explanation: This message is displayed in response to a DISPLAY command.
- <V1> is the DB2 subsystem ID.
- <V2> is the IP address of the host TCP/IP server as specified in the startup parameter data set by the IPADDRESS keyword.

User response: None.
FPEV1312E V1 V2 TCP/IP FUNCTION CALL V3 FAILED. ERRNO=V4

Explanation: The TCP/IP function call failed. See the z/OS Communications Server IP Application Programming Interface Guide for a detailed description of the ERRNO.

- V1 is the DB2 subsystem ID.
- V2 is the TCP/IP session manager ID.
- V3 is the TCP/IP function call as described in the z/OS Communications Server IP Application Programming Interface Guide.
- V4 is the error number of the TCP/IP function call in error.

User response: Analyze ERRNO and take appropriate action.

FPEV1313I (V1) V2 V3 V4 CONTROL FLOW V5 V6 V7

Explanation: This is an internal trace message from the TCP/IP server.

- V1 is the time when this message was written.
- V2 is the DB2 subsystem ID.
- V3 is the TCP/IP session manager ID.
- V4 is the user ID.
- V5 is a variable trace text.
- V6 is an internal variable of the Data Server.
- V7 is an internal variable of the Data Server.

User response: None.

FPEV1314I V1 V2 V3 V4 V5 V6 V7

Explanation: This is an internal trace message from the TCP/IP server.

- V1 is the DB2 subsystem ID.
- V2 is a TCP/IP session manager ID.
- V3 is an excerpt of main storage that was traced.
- V4 is an excerpt of main storage that was traced.
- V5 is an excerpt of main storage that was traced.
- V6 is an excerpt of main storage that was traced.
- V7 is an excerpt of main storage that was traced.

User response: None.

FPEV1315I V1 NUMBER OF PARALLEL SESSIONS EXCEEDS SPECIFIED MAXIMUM

Explanation: A CONNECT request was rejected because the maximum number of TCP/IP connections was exceeded.

- V1 is the DB2 subsystem ID.

User response: Try again later, or increase the size of the MAXSESSION parameter using the Configuration Tool (formerly ICAT), and restart the Data Server. See the Installation and Configuration

FPEV1316I V1 TCP/IP SESSION MANAGER TASK DID NOT RESPOND TO TERMINATION REQUEST

Explanation: When the Data Server was stopped, the session manager task did not end correctly.

- V1 is the DB2 subsystem ID.

User response: None.

FPEV1317I V1 TCP/IP SESSION MANAGER TASK V2 STARTED

Explanation: None.

- V1 is the DB2 subsystem ID.
- V2 is the number of the TCP/IP session manager.

User response: None.

FPEV1318I V1 TCP/IP SESSION MANAGER TASK V2 ENDED

Explanation: None.

- V1 is the DB2 subsystem ID.
- V2 is the number of the TCP/IP session manager.

User response: None.

FPEV1319S V1 TCP/IP SESSION MANAGER TASK ENDED DUE TO ERROR

Explanation: None.

- V1 is the DB2 subsystem ID.

User response: Check the log for preceding messages or abend codes. If the problem cannot be corrected and recurs, contact IBM support.

FPEV1320S V1 V2 TCP/IP SESSION MANAGER RECEIVED INVALID REQUEST FROM IP ADDRESS V3 PORT V4

Explanation: An invalid request was received by the Data Server TCP/IP session manager. The session is deallocated.

- V1 is the DB2 subsystem ID.
- V2 is the number of the TCP/IP session manager.
- V3 is the IP address of the originator sending the invalid request.
- V4 is the port number of the originator sending the invalid request.

User response: If the IP address originates from a PE client, restart the client. If the IP address does not originate from a PE client, identify the application in the network which is erroneously trying to connect to the Data Server port and correct the configuration of this application. If the error recurs, trace the problem using the TCP/IP trace function and contact IBM support.
FPEV1321S • FPEV1340W

FPEV1321S <V1> <V2> TCP/IP PROTOCOL VIOLATION. CHANNEL ALREADY IN USE

Explanation: A duplicate request was received by the Data Server TCP/IP host server. The request is rejected.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the number of the TCP/IP session manager.

User response: Restart the client. If the error recurs, trace the problem using the TCP/IP trace and contact IBM support.

FPEV1322S <V1> <V2> INVALID CHANNEL <V3> RECEIVED

Explanation: A not valid channel number was passed to the TCP/IP server. The request is rejected.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the number of the TCP/IP session manager.
  • <V3> is the invalid channel number.

User response: Restart the client. If the error recurs, trace the problem using the TCP/IP trace and contact IBM support.

FPEV1329I <V1> TCP/IP NOT STARTED. SERVER INSTANCE ATTEMPTS TO ESTABLISH A TCP/IP CONNECTION EVERY MINUTE

Explanation: The Data Server TCP/IP server tries to connect to the TCP/IP interface once every minute until TCP/IP is started. This message is displayed each time an attempt to establish a TCP/IP connection has failed.
  • <V1> is the DB2 subsystem ID.

User response: Start TCP/IP.

FPEV1330I <V1> SERVER TCP/IP SERVER HAS SUCCESSFULLY STARTED

Explanation: This message is displayed when the Data Server TCP/IP server was able to successfully establish a TCP/IP connection.
  • <V1> is the DB2 subsystem ID.

User response: None.

FPEV1331E <V1> <V2> TCP/IP REPORTS THE UNSOLICITED EVENT <V3>. TCP/IP SESSION MANAGER WILL BE TERMINATED

Explanation: The unsolicited event exit routine of the TCP/IP server was invoked by TCP/IP.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the TCP/IP session manager ID.
  • <V3> is the invocation reason code of the unsolicited event exit routine.

Examples of reason codes:
1  TCP/IP address space has terminated.
2  TCP/IP has terminated the connection to the user.

User response: See the z/OS Communications Server IP Application Programming Interface Guide for a detailed description of the invocation reason codes, verify the invocation reason code, and take appropriate action.

FPEV1337W <V1> OMEGAMON XE DB2 PE TCP/IP TASK FAILED. PORT IN USE

Explanation: You have specified a port number for a Performance Expert TCP/IP server that is already in use by a different program. The startup parameter PORT for the used TCP/IP port.
  • <V1> is the DB2 subsystem ID.

User response: Set the TCP/IP port number to a different value or stop the program using this port. Then restart the Data Server using the MODIFY command.

FPEV1339I <V1> TCPIP PORT <V2>

Explanation: This message is displayed in response to a DISPLAY command.
  • <V1> is the DB2 subsystem ID.
  • <V2> is the port number as specified in the startup parameter data set by the PORT keyword.

User response: None.

FPEV1339W PROTOCOL VIOLATION DETECTED. PLEASE INSTALL LATEST LEVEL OF PE WORKSTATION CLIENT.

Explanation: Communication between the Data Server and Performance Expert Clients via TCP/IP is becoming increasingly inefficient and is likely to discontinue.

User response: The Performance Expert Client users must update their Clients to the latest maintenance level.

FPEV1340W TCP/IP PROTOCOL VIOLATION DETECTED.

Explanation: An error occurred in the TCP/IP communication either between the OMEGAMON Collector and the OMEGAMON XE for DB2 PE Client or the OMEGAMON Collector and the Extended Insight feature. This error might have occurred because another application is using the TCP/IP port number that is used by the OMEGAMON Collector PE Server subtask.

User response: Check whether the TCP/IP port is used by another application. Make sure that your PE
Client is at least at level 1317. If the problem persists, contact IBM support.

FPEV1342I  MSTR EXCLUDEDDB2SSID=(<V1>)

**Explanation:** This message is displayed during the startup of the PE Server subtask controller (MSTR) and in response to a DISPLAY command.

<V1> is the list of comma separated DB2 subsystem IDs. A listed DB2 subsystem can be excluded from being monitored because of the following reasons:

- During the configuration step, it is specified that the subsystem does not start monitoring.
- The PE Server subtask controller access to the DB2 subsystem is denied.
- The configured DB2 subsystem does not exist.
- A required parameter data set member for the DB2 subsystem does not exist.
- An error occurred during the preparation or the startup of the monitoring PE Server subtask.

**User response:** If the DB2 subsystem is expected to be excluded from being monitored: none.

Otherwise, see the PE Server subtask logs SYSPRINT or JESMSGLG for related error messages, correct the error, and restart the OMEGAMON Collector started task.

FPEV1456I  (<V1>) <V2> <V3> CONTROL FLOW <V4> <V5> <V6> <V7>

**Explanation:** This is an internal trace message from the Collect Report Data address space.

- <V1> is the time when this message was written.
- <V2> is the DB2 subsystem ID.
- <V3> is the user ID.
- <V4> is a variable trace text.
- <V5> is an internal variable of the Data Server.
- <V6> is an internal variable of the Data Server.
- <V7> is an internal variable of the Data Server.

**User response:** None.

FPEV1457I  <V1> <V2> <V3><V4><V5><V6> 1<V7>1

**Explanation:** This is an internal trace message from the Collect Report Data address space.

- <V1> is the DB2 subsystem ID.
- <V2> is an excerpt of main storage that was traced.
- <V3> is an excerpt of main storage that was traced.
- <V4> is an excerpt of main storage that was traced.
- <V5> is an excerpt of main storage that was traced.
- <V6> is an excerpt of main storage that was traced.
- <V7> is an excerpt of main storage that was traced.

**User response:** None.

FPEV2006E  INSTALLATION IS INCOMPLETE

**Explanation:** The licence FMID is not correctly installed.

**User response:** If errors occurred during installation, correct them and try to use the product again.

If Performance Expert, or DB2 PM, installed without errors, and you followed the recommended installation and customization procedures, and the problem persists, contact IBM support.

FPEV2100I  <V1> <V2>ELAPSED PROCESSING TIME <V3> SEC FOR DB2 INTERFACE TASK EXCEEDS THRESHOLD \varn<V4> SEC

**Explanation:** The following list shows the current settings for the processing time threshold:

- <V1> is the DB2 subsystem ID.
- <V2> is the current time stamp.
- <V3> is the actual elapsed processing time.
- <V4> is the threshold value for the elapsed processing time.

**User response:** The current time stamp and the actual elapsed processing time can be used to further analyze the slowdown.

FPEV2101I  <V1> EPTT=<F2> (ELAPSED PROCESSING TIME THRESHOLD)

**Explanation:** This message is preceded by message FPEV2100I or FPEV2103I. An SVC dump is initiated for the OMEGAMON Collector and the DB2 address spaces of the DB2 subsystem that is currently handling a call to the DB2 instrumentation facility interface issued by the PE Server subtask.

- <V1> is the DB2 subsystem ID.
- <V2> is the list of address space IDs.

The address space identifiers are listed in the sequence OMEGAMON Collector, DB2 MSTR, DB2 IRLM, DB2 DBM1, and DB2 DIST.

**User response:** Provide the OMEGAMON Collector started task job output and dump to IBM for further analysis.

FPEV2104I  <V1> EPTT=<F2> (ELAPSED PROCESSING TIME THRESHOLD)

**Explanation:** The following list shows the current settings for the processing time threshold:

- <V1> is the DB2 subsystem ID.
- <F2> is the elapsed processing time threshold in seconds.
FPEV2105I • FPEV2706S

FPEV2105I  <V1>  TONRT=<F2>  (TIMEOUT NOTIFY THRESHOLD)
Explanation: The following list shows the current settings for the timeout notification threshold:

- <V1> is the DB2 subsystem ID.
- <F2> is the timeout notification threshold in seconds.

FPEV2106I  <V1>  DB2 MONITOR PRIVILEGE CHECK PASSED FOR USER <V2>
Explanation: If a user interface connects to a PE Server subtask, the PE Server subtask checks whether the user has DB2 MONITOR privilege. This check passed.

- <V1> is the DB2 subsystem ID.
- <V2> is the user ID.

User response: None.

FPEV2107E  <V1>  DB2 MONITOR PRIVILEGE CHECK FAILED FOR USER <V2>
Explanation: If a user interface connects to a PE Server subtask, the PE Server subtask checks whether the user has DB2 MONITOR privilege. This check failed.

- <V1> is the DB2 subsystem ID.
- <V2> is the user ID.

User response: Grant MONITOR1 or MONITOR2 privilege to the user ID.

FPEV2108E  <V1>  DB2 MONITOR PRIVILEGE CHECK USING RACF FAILED FOR USER <V2>
Explanation: If a user interface connects to a PE Server subtask, the PE Server subtask checks whether the user has DB2 MONITOR privilege. This check failed.

- <V1> is the DB2 subsystem ID.
- <V2> is the user ID.

System action: The PE Server subtask does not support monitoring for the unauthorized user ID.

User response: Grant the user ID or assigned group read access to profile MONITOR1 or MONITOR2.

FPEV2109E  <V1>  DB2 MONITOR PRIVILEGE CHECK USING RACF FAILED FOR USER <V2>  (RACROUTE RC=<V3>, RACF RC=<V4>  RS=<V5>)
Explanation: If a user interface connects to a PE Server subtask, the PE Server subtask checks whether the user has DB2 MONITOR privilege. This check failed.

The displayed return and reason codes in decimal are obtained from macro RACROUTE, which is called to process the privilege check.

- <V1> is the DB2 subsystem ID.
- <V2> is the user ID.
- <V3> is the RACROUTE return code.
- <V4> is the RACF return code.
- <V5> is the RACF reason code.

System action: The PE Server subtask does not support monitoring for the specified user ID.

User response: For return and reason codes refer to z/OS Security Server RACF Macros and Interfaces.

FPEV2702I  <V1>  DB2 MESSAGES COLLECTOR STARTED.
Explanation:

- <V1> is the DB2 subsystem ID.

User response: None.

FPEV2703I  <V1>  DB2 MESSAGES COLLECTOR STOPPED.
Explanation:

- <V1> is the DB2 subsystem ID.

User response: None.

FPEV2704S  <V1>  READA COLLECTOR SUPPORT TASK ENDED DUE TO ERROR.
Explanation:

- <V1> is the DB2 subsystem ID.

User response: Check the log for preceding messages or abend codes. If the problem persists, contact IBM support.

FPEV2705E  <V1>  READA COLLECTOR SUPPORT TASK DID NOT RESPOND TO TERMINATION REQUEST
Explanation: When the PE Server subtask is stopped, it requests the READA collector to terminate. However, the READA collector does not respond to the termination request.

- <V1> is the DB2 subsystem ID.

User response: None.

FPEV2706S  <V1>  READA COLLECTOR SUPPORT TASK RECEIVED INVALID REQUEST TYPE <V2> IN RQE
Explanation: The request that is sent to the PE Server subtask interface component is incorrect.

- <V1> is the DB2 subsystem ID.
- <V2> is the incorrect request type.

User response: If the error recurs, trace the problem by using the Data Server trace (tracelevel=128) and contact IBM support.
FPEV2708I  <V1> READA COLLECTOR SUPPORT TASK - WAITING FOR DB2 INITIALIZATION.

Explanation: The initialization of DB2 is not yet completed.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV2709I  <V1> READA COLLECTOR SUPPORT TASK - DB2 COMMAND OUTPUT BEGINS.

Explanation: The READA collector support task issues DB2 commands to start, stop, or restart the necessary DB2 traces. If DB2 returns information messages, they are displayed between the messages FPEV2709I and FPEV2710I.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV2710I  <V1> READA COLLECTOR SUPPORT TASK - DB2 COMMAND OUTPUT ENDS.

Explanation: The READA collector support task issues DB2 commands to start, stop, or restart the necessary DB2 traces. If DB2 returns information messages, they are displayed between the messages FPEV2709I and FPEV2710I.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV2712I  <V1> READA COLLECTOR SUPPORT TASK - READA COMMAND OUTPUT BEGINS.

Explanation: The READA collector support task issues READA commands to retrieve performance data from DB2. If DB2 returns information messages, they are displayed between the messages FPEV2712I and FPEV2713I.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV2713I  <V1> READA COLLECTOR SUPPORT TASK - READA COMMAND OUTPUT ENDS.

Explanation: The READA collector support task issues READA commands to retrieve performance data from DB2. If DB2 returns information messages, they are displayed between the messages FPEV2712I and FPEV2713I.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV2714E  <V1> READA COLLECTOR SUPPORT TASK - IFI ERROR ON READA CALL. RC <V2>, REASON <V3>

Explanation:
• <V1> is the DB2 subsystem ID.
• <V2> is the IFI return code.
• <V3> is the IFI reason code.
User response: For an explanation of the return codes and the reason codes, see DB2 Messages and Codes or the corresponding manual of the DB2 version that you are using.

FPEV2715I  <V1> READA COLLECTOR SUPPORT TASK - DB2 TRACE LOST

Explanation: The OP buffer that is assigned to the READA collector is lost. The trace that is started by the READA collector might be stopped manually by using an operator command. The READA collector support task stopped.
• <V1> is the DB2 subsystem ID.
User response: If the READA collector support task is not stopped intentionally, restart it by using MVS operator commands.

FPEV2716W  <V1> DB2 MESSAGES COLLECTOR IS NOT STARTED. THE COMMAND IGNORED

Explanation: A MODIFY command is used to stop the DB2 messages collector, however, this collector is already stopped.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV2717W  <V1> DB2 MESSAGES COLLECTOR IS ACTIVE. THE COMMAND IS IGNORED.

Explanation: A MODIFY command is used to start the DB2 messages collector, however, this collector is already active.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV2718E  <V1> DB2 MESSAGES COLLECTOR IS NOT SUPPORTED FOR THIS DB2 VERSION.

Explanation: A MODIFY command is used to start or stop the DB2 messages collector for a DB2 subsystem version that is not supported. The DB2 messages collector is supported for DB2 Version 9 or later.
• <V1> is the DB2 subsystem ID.
User response: None.
FPEV2719E • FPEV2730I

FPEV2719E  <V1> READA COLLECTOR SUPPORT TASK - RRSASF ERROR WHEN ATTEMPTED TO CONNECT TO DB2.
RC <V2>, REASON <V3>

Explanation:
• <V1> is the DB2 subsystem ID.
• <V2> is the IFI return code.
• <V3> is the IFI reason code.
User response: For an explanation of the return codes and the reason codes, see DB2 Messages and Codes or the corresponding manual of the DB2 version that you are using.

FPEV2720I  <V1> STORED PROCEDURE COLLECTOR STARTED.

Explanation:  <V1> is the DB2 subsystem ID.
User response: None.

FPEV2721I  <V1> STORED PROCEDURE COLLECTOR STOPPED.

Explanation:  <V1> is the DB2 subsystem ID.
User response: None.

FPEV2722E  <V1> STORED PROCEDURE COLLECTOR IS NOT SUPPORTED FOR THIS DB2 VERSION.

Explanation:  <V1> is the DB2 subsystem ID.
A MODIFY command is used to start or to stop the stored procedure collector for a DB2 subsystem version that is not supported. The stored procedure collector is only supported for DB2 10 or later.
User response: None.

FPEV2723W  <V1> STORED PROCEDURE COLLECTOR NOT STARTED. THE COMMAND IS IGNORED.

Explanation:  A MODIFY command is used to stop the stored procedure collector, however, the stored procedure collector is already stopped.
<V1> is the DB2 subsystem ID.
User response: None.

FPEV2724W  <V1> STORED PROCEDURE COLLECTOR IS ACTIVE. THE COMMAND IS IGNORED.

Explanation:  A MODIFY command is used to start the stored procedure collector, however, the stored procedure collector is already active.
<V1> is the DB2 subsystem ID.
User response: None.

FPEV2725E  <V1> READA COLLECTOR SUPPORT TASK - OP BUFFER RELATED ERROR.
RC <V2>, REASON <V3>

Explanation:
• <V1> is the DB2 subsystem ID.
• <V2> is the return code of the component where the error occurs.
• <V3> is the reason code that is associated with the error situation.
User response: For an explanation of return codes and reason codes, see DB2 Messages and Codes or the corresponding manual of the DB2 version that you are using.

If the reported reason code is not a DB2 reason code and if the error recurs, trace the problem by using the Data Server trace (tracelevel=1) and contact IBM support.

FPEV2726I  <V1> READA COLLECTOR SUPPORT TASK STARTED.

Explanation:  <V1> is the DB2 subsystem ID.
User response: None.

FPEV2727I  <V1> READA COLLECTOR SUPPORT TASK IS STOPPING.

Explanation:  <V1> is the DB2 subsystem ID.
User response: None.

FPEV2728I  <V1> READA COLLECTOR SUPPORT TASK ENDED.

Explanation:  <V1> is the DB2 subsystem ID.
User response: None.

FPEV2729I  <V1> DB2 MESSAGES COLLECTOR IS STOPPING.

Explanation:  <V1> is the DB2 subsystem ID.
User response: None.

FPEV2730I  <V1> STORED PROCEDURE COLLECTOR IS STOPPING.

Explanation:  <V1> is the DB2 subsystem ID.
User response: None.
FPEV2731E  <V1> DB2 MESSAGES COLLECTOR ERROR. RC <V2>, REASON <V3>

Explanation:
• <V1> is the DB2 subsystem ID.
• <V2> is the return code of the component where the error occurs.
• <V3> is the reason code that is associated with the error situation.

User response: If the error recurs, trace the problem by using the Data Server trace (tracelevel=1) and contact IBM support.

FPEV2732E  <V1> STORED PROCEDURE COLLECTOR ERROR. RC <V2>, REASON <V3>

Explanation: An error occurs in the stored procedure collector.
• <V1> is the DB2 subsystem ID.
• <V2> is the return code of the component where the error occurs.
• <V3> is the reason code that is associated with the error situation.

User response: If the error recurs, trace the problem by using the Data Server trace (tracelevel=1) and contact IBM support.

FPEV2733I  <V1> READA COLLECTOR SUPPORT TASK NOT STARTED. OP BUFFER CHANGES TAKE EFFECT AT NEXT STARTUP.

Explanations: A MODIFY command is used to change the characteristics of the OP BUFFER that is used by the READA collector support task, however, the READA collector support task is not active.

User response: None.

FPEV2734I  <V1> READA COLLECTOR SUPPORT TASK STORAGE THRESHOLD REACHED. STORED PROCEDURE COLLECTOR DATA IS IGNORED.

Explanation: An internal data structure that is used by the stored procedure collector exceeds its maximum size. The monitoring data of the stored procedure is discarded. The processing continues.

User response: Modify the characteristics of the OP buffer that is used by the READA collector support task to ensure that READA data is processed as soon as possible. For example, you might want to reduce the OP buffer threshold by using a MODIFY command. If the problem persists, contact IBM support.

FPEV2735I  <V1> READA COLLECTOR SUPPORT TASK STORAGE THRESHOLD REACHED. STATEMENT HIERARCHY IS INVALIDATED.

Explanation: An internal data structure that is used by the stored procedure collector exceeds its maximum size. The monitoring data of the stored procedure is discarded. The processing continues.

User response: If the problem persists, contact IBM support.

FPEV2736I  <V1> READA COLLECTOR SUPPORT TASK STORAGE THRESHOLD REACHED. STORED PROCEDURE COLLECTOR CACHE IS RECYCLED.

Explanation: An internal data structure that is used by the stored procedure collector has exceeded its expected maximum size. The stored procedure monitoring data is discarded and processing continues. This can happen if stored procedure monitoring data is not requested by IBM InfoSphere Optim Performance Manager for a long time.

User response: Ensure that IBM InfoSphere Optim Performance Manager setup is correct, i.e. connection to OMEGAMON collector is established and stored procedure metric data collector is started and returns monitoring data. If the problem persists, contact IBM support.

FPEV2737I  <V1> DB2 MESSAGES COLLECTOR TIMEOUT OCCURRED.

Explanation: A request from a user interface cannot be handled by the Data Server instance because a timeout occurred. The request could not be completed in time.

User response: Resubmit the request. If the problem persists, contact IBM support.

FPEV3001E  <V1> THE DATA SERVER INSTANCE RECEIVED AN INVALID REQUEST.

Explanation: A request from a user interface cannot be handled by the Data Server instance because the request was not provided or the provided request is not valid.
• <V1> is the DB2 subsystem ID.

User response: Resubmit the request. If the problem persists, contact IBM support.
FPEV3002E  <V1> NO DATA SERVER INSTANCE IS AVAILABLE TO HANDLE THE REQUEST.

Explanation: A request from a user interface cannot be handled by the Data Server because the Data Server or the Data Server instance dedicated to the specified DB2 subsystem has not been started.
• <V1> is the DB2 subsystem ID.

User response: Verify that the DB2 subsystem is contained in the list of DB2 subsystems in the master startup data set member RKD2PAR(OMPEMSTR). If it is not, then add the DB2 subsystem to the list. Stop and restart the Data Server using the MODIFY command. Verify that the Data Server is started before requests are submitted.

FPEV3003E  <V1> THE DB2 SUBSYSTEM IS UNKNOWN TO THE DATA SERVER.

Explanation: A request from a user interface cannot be handled by the Data Server because the specified DB2 subsystem is unknown to the Data Server.
• <V1> is the DB2 subsystem ID.

User response: Verify that the DB2 subsystem is contained in the list of DB2 subsystems in the master startup data set member RKD2PAR(OMPEMSTR). If it is not, then add the DB2 subsystem to the list. Stop and restart the Data Server using the MODIFY command. Verify that the Data Server is started before requests are submitted.

FPEV3004E  <V1> THE DB2 SUBSYSTEM OR DEDICATED DATA SERVER INSTANCE IS NOT ACTIVE.

Explanation: A request from a user interface cannot be handled by the Data Server because the specified DB2 subsystem or the dedicated Data Server instance is not active.
• <V1> is the DB2 subsystem ID.

User response: Verify that the DB2 subsystem and Data Server instance is running.

FPEV3005E  <V1> THE DATA SERVER INSTANCE INPUT QUEUE FOR REQUESTS IS NOT AVAILABLE.

Explanation: A request from a user interface cannot be handled by the Data Server because there is no input queue available to handle the request.
• <V1> is the DB2 subsystem ID.

User response: Stop and restart the Data Server using the MODIFY command. If the problem persists, contact IBM support.

FPEV3006E  <V1> THE INTER-SERVER INTERFACE COULD NOT OBTAIN A FREE RESPONSE QUEUE FROM THE RESPONSE QUEUE POOL OF THE DATA SERVER INSTANCE.

Explanation: A request from a user interface cannot be handled by the Data Server instance because there is no free response queue available to handle the request. This situation occurs if more parallel requests are submitted to a Data Server instance than supported.
• <V1> is the DB2 subsystem ID.

User response: Resubmit the request.

FPEV3007E  <V1> THE INTER-SERVER INTERFACE CANNOT ACCESS THE RESPONSE QUEUE.

Explanation: A request from a user interface cannot be handled by the Data Server instance because the response queue cannot be accessed.
• <V1> is the DB2 subsystem ID.

User response: Resubmit the request. If the problem persists, contact IBM support.

FPEV3008E  <V1> THE INTER-SERVER INTERFACE CANNOT COPY THE SUBMITTED REQUEST TO THE INTERNAL WORK AREA.

Explanation: A request from a user interface cannot be handled by the Data Server instance because the provided request cannot be copied to the internal work area. Either the request is not valid or no storage could be obtained.
• <V1> is the DB2 subsystem ID.

User response: Resubmit the request. If the problem persists, contact IBM support.

FPEV3009E  <V1> THE INTER-SERVER INTERFACE CANNOT QUEUE THE SUBMITTED REQUEST TO THE INPUT QUEUE OF THE DATA SERVER INSTANCE.

Explanation: A request from a user interface cannot be handled by the Data Server instance because the provided request cannot be queued into the input queue of the Data Server instance.
• <V1> is the DB2 subsystem ID.

User response: Resubmit the request. If the problem persists, contact IBM support.

FPEV3010E  <V1> THE INTER-SERVER INTERFACE CANNOT RETURN THE COMPLETED REQUEST.

Explanation: A request from a user interface cannot be
handled by the Data Server instance because the completed request cannot be returned. Either the provided request or the internal work area became obsolete.

- <V1> is the DB2 subsystem ID.

User response: Resubmit the request. If the problem persists, contact IBM support.

---

FPEV3011E  

**Explanation:** A request from a user interface cannot be handled by the Data Server instance because a timeout occurred. Either the inter server interface is not available or has terminated unexpectedly.

- <V1> is the DB2 subsystem ID.

User response: Resubmit the request. If the problem persists, contact IBM support.

---

FPEV3012E  

**Explanation:** A request from a user interface cannot be handled by the Data Server instance because a timeout occurred. The Data Server instance became unavailable because of a restart.

- <V1> is the DB2 subsystem ID.

User response: Resubmit the request. If the problem persists, contact IBM support.

---

FPEV3013E  

**Explanation:** A request from a user interface cannot be handled by the Data Server instance because a timeout occurred. The request could not be completed in time.

- <V1> is the DB2 subsystem ID.

User response: Resubmit the request. If the problem persists, contact IBM support.

---

FPEV3014E  

**Explanation:** A request from a user interface cannot be handled by the Data Server instance because the response does not match the request.

- <V1> is the DB2 subsystem ID.

User response: Resubmit the request. If the problem persists, contact IBM support.

---

FPEV3016W  

**Explanation:** A user interface requests performance data for a specified DB2 subsystem. The PE Server receives the request and tries to route the request to a monitoring PE Server subtask. In a data sharing group, a PE Server subtask must be started for at least one member that resides on the same LPAR as the OMEGAMON Collector (called local member) to be able to monitor members of the data sharing group. The data retrieval request fails if no PE Server subtask is started for the specified DB2 subsystem or a local member of the data sharing group.

- <V1> is the DB2 subsystem ID.

User response: Configure the indicated DB2 subsystem or a local member of the data sharing group with the Configuration Tool (formerly ICAT), complete the configuration and restart the OMEGAMON Collector. When the indicated DB2 subsystem or local member of the data sharing group has already been configured or the DB2 subsystems shall be auto-detected, check the OMEGAMON started task job log for preceding error messages during PE Server subtask start up, PE Server subtask termination or the occurrence of an abend. Restart the PE Server subtask. If the problem persists, contact IBM support.

---

FPEV3200I  

**Explanation:** The Data Server instance has started a subtask named Pseudo IFCID Generator. The subtask compiles data structures similar to IFCIDs provided by DB2. These data structures are called pseudo IFCIDs because they do not originate from DB2. The pseudo IFCIDs are performance data which are derived from DB2 IFCID data or originate from other data sources. The pseudo IFCIDs are used internally to communicate performance data among the Data Server components.

- <V1> is the DB2 subsystem ID.

User response: None.

---

FPEV3201I  

**Explanation:** The Pseudo IFCID Generator subtask of the Data Server instance has ended during normal termination of the Data Server.

- <V1> is the DB2 subsystem ID.

User response: None.
### FPEV3202S - PSEUDO IFCID GENERATOR ENDED DUE TO ERROR

**Explanation:** An abend occurred within the subtask.
- `<V1>` is the DB2 subsystem ID.

**User response:** Check the log for preceding messages or abends. If the problem cannot be corrected and recurs, contact IBM support.

### FPEV3203S - PSEUDO IFCID GENERATOR TASK DID NOT RESPOND TO TERMINATION REQUEST

**Explanation:** During normal termination of the Data Server the Data Server instance requests the subtask named Pseudo IFCID Generator to end. The subtask does not react within the given time and is immediately being terminated by the Data Server instance.
- `<V1>` is the DB2 subsystem ID.

**User response:** None.

### FPEV5001I - PWH SERVER IS STARTING

**Explanation:** None.
- `<V1>` is the DB2 subsystem ID.

**User response:** None.

### FPEV5002I - PWH SERVER IS STOPPING

**Explanation:** None.
- `<V1>` is the DB2 subsystem ID.

**User response:** None.

### FPEV5003I - CHECKING DATABASE FOR NECESSARY CHANGES. PLEASE WAIT

**Explanation:** Performance Warehouse is checking if the database model for database DB2PM is up to date. The Data Server may, for example, be forced to update the database if the database model was changed.
- `<V1>` is the DB2 subsystem ID.

**User response:** None.

### FPEV5004S - DATABASE UPDATE FAILED. SEE JOB LOG FOR DETAILS

**Explanation:** None.
- `<V1>` is the DB2 subsystem ID.

**User response:** Check the SYSPRINT output of the Data Server for detailed information about the error. Then solve the problem and restart the Performance Warehouse function in the Data Server by means of the MODIFY command 'PERFORMANCEWAREHOUSE=YES'.

### FPEV5005I - DATABASE UPDATE COMPLETE

**Explanation:** None.
- `<V1>` is the DB2 subsystem ID.

**User response:** None.

### FPEV5009I - CREATION OF PLAN DB2PM WAS SUCCESSFUL

**Explanation:** None.
- `<V1>` is the DB2 subsystem ID.

**User response:** None.

### FPEV5012S - CREATION OF PLAN DB2PM FAILED. SEE BIND JOB OUTPUT

**Explanation:** None.
- `<V1>` is the DB2 subsystem ID.

**User response:** Check the SYSPRINT output of the Data Server for detailed information about the error. Then solve the problem and restart the Performance Warehouse function in the Data Server by means of the MODIFY command 'PERFORMANCEWAREHOUSE=YES'.

---

5034 IBM Db2 Performance Expert on z/OS
FPEV5013I  <V1> REQUIRED PLAN DB2PM NOT FOUND. CREATING IT

Explanation: The Performance Warehouse function of the Data Server requires a DB2 PLAN DB2PM. This plan was not found and is now created.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV5014W  <V1> SERVER IS STOPPING. DB2 V6 OR LATER IS REQUIRED.

Explanation: The Performance Warehouse function in the Data Server was requested. DB2 version 6 or later is necessary for this function.
• <V1> is the DB2 subsystem ID.
User response: Use the Configuration Tool (formerly ICAT) and set the Data Server startup parameter PERFORMANCEWAREHOUSE to NO.

FPEV5015I  <V1> UPDATING DATABASE IN FORCED MODE. PLEASE WAIT

Explanation: The Performance Warehouse function in the Data Server was started in forced mode to check the database model for consistency.
• <V1> is the DB2 subsystem ID.
User response: None.

FPEV5016I  <V1> REQUIRED DBRM <V2> NOT BOUND. BINDING IT

Explanation: A DBRM module of the Performance Warehouse function misses a DB2 BIND and is now being bound.
• <V1> is the DB2 subsystem ID.
• <V2> is the database request module (DBRM).
User response: None.

FPEV5017I  <V1> BINDING DBRM <V2>

Explanation: The Performance Warehouse function of the data collector is started in forced mode. Therefore the DBRM is being bound.
• <V1> is the DB2 subsystem ID.
• <V2> is the database request module (DBRM).
User response: None.

FPEV5018S  <V1> DB2 DISCONNECT FAILED. SEE FOR DETAILS

Explanation: None.
• <V1> is the DB2 subsystem ID.
User response: Check the SYSPRINT output of the Data Server for detailed information about the error.

FPEV5019E  <V1> DATASET SERVICE TERMINATED. LIBRARY SEARCH MAY HAVE FAILED.

Explanation: None.
• <V1> is the DB2 subsystem ID.
User response: Check the system log for details about the abend. To restart the MVS system catalog and restart the Data Server. If the problem persists, contact IBM support.

FPEV5020I  <V1> PERFORMANCE EXPERT REQUIRES A NEW TABLE SPACE <V2>, PLEASE ENTER STORAGE GROUP TO USE, OR BLANK FOR DEFAULT STORAGE GROUP.

Explanation: This message is shown during the Data Server start, if the Performance Warehouse function is requested and requires a new table space.
• <V1> is the DB2 subsystem ID.
• <V2> is the new required table space.
User response: Enter the name of the storage group to use for the new table space through operator reply. To do this, search for the corresponding ‘write to operator’ output and locate the number of this output. Then enter a ‘write to operator’ reply: ‘/r NO#,REPLY’ where NO# is the located number and REPLY is the chosen storage group (enter a blank as REPLY if you want to use the assigned default storage group). For further information on how to set up the Data Server for the Performance Warehouse, see Installation and Configuration.

FPEV5021I  <V1> PLEASE ENTER THE NAME OF BUFFER POOL TO USE FOR TABLE SPACE <V2>, ENTER BLANK FOR DEFAULT BUFFER POOL.

Explanation: This message is shown during the Data Server start, if the Performance Warehouse function is requested and requires a new table space.
• <V1> is the DB2 subsystem ID.
• <V2> is the new required table space.
User response: Enter the name of the buffer pool to use for the new table space through operator reply. To do this, search for the corresponding ‘write to operator’ output and locate the number of this output. Then enter a ‘write to operator’ reply: ‘/r NO#,REPLY’ where NO# is the located number and REPLY is the chosen buffer pool (enter a blank as REPLY if you want to use the assigned default buffer pool). For further information on how to set up the Data Server for the Performance Warehouse, see Installation and Configuration.
FPEV5022S <V1> ENTERED STORAGEGROUP <V2> IS UNKNOWN

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the storage group requested in message FPEV5020I.

User response: Create a new storage group in DB2 or choose a different existing one. Then restart the Performance Warehouse function in the Data Server by means of the MODIFY command 'PERFORMANCEWAREHOUSE=YES' and specify the chosen storage group name.

FPEV5023S <V1> ENTERED BUFFER POOL <V2> IS UNKNOWN

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the buffer pool requested in message FPEV5021I.

User response: Restart the Performance Warehouse function in the Data Server by means of the MODIFY command 'PERFORMANCEWAREHOUSE=YES' and specify the correct buffer pool name.

FPEV5024S <V1> ENTERED STORAGE GROUP <V2> OR BUFFER POOL <V3> IS UNKNOWN

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the storage group requested in message FPEV5020I.
• <V3> is the buffer pool requested in message FPEV5021I.

User response: Verify the specified storage group and buffer pool name. Both names must be known to DB2 and the Data Server userID/groupID must have usage privileges of both DB2 objects. Then restart the Performance Warehouse function in the Data Server using the MODIFY command 'PERFORMANCEWAREHOUSE=YES'. You can then enter the correct names again.

FPEV5025S <V1> SERVER IS NOT ALLOWED TO USE STORAGEGROUP <V2> OR TO ACCESS DATABASE DB2PM

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the storage group requested in message FPEV5020I.

User response: Ensure that the Data Server userID/groupID DB2PM has USAGE privilege for the specified storage group and has DBADM privilege on database DB2PM. Then restart the Performance Warehouse function in the Data Server using the MODIFY command with 'PERFORMANCEWAREHOUSE=YES'.

FPEV5026S <V1> SERVER IS NOT ALLOWED TO USE BUFFER POOL <V2> OR TO ACCESS DATABASE DB2PM

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the buffer pool requested in message FPEV5021I.

User response: Ensure that the Data Server userID/groupID DB2PM has USAGE privilege for the specified buffer pool and has DBADM privilege on database DB2PM. Then restart the Performance Warehouse function in the Data Server using the MODIFY command with 'PERFORMANCEWAREHOUSE=YES'.

FPEV5027S <V1> SERVER IS NOT ALLOWED TO USE STORAGE GROUP <V2>, BUFFER POOL <V3> OR TO ACCESS DATABASE DB2PM

Explanation: None.
• <V1> is the DB2 subsystem ID.
• <V2> is the storage group requested in message FPEV5020I.
• <V3> is the buffer pool requested in message FPEV5021I.

User response: Ensure that the Data Server userID/groupID DB2PM has USAGE privilege for the specified buffer pool and storage group and has DBADM privilege on database DB2PM. Then restart the Performance Warehouse function in the Data Server using the MODIFY command with 'PERFORMANCEWAREHOUSE=YES'.

FPEV5028I <V1> REQUIRED DATABASE DB2PM NOT FOUND. CREATING IT

Explanation: The Performance Warehouse function of the Data Server requires a DB2 database DB2PM. This database was not found and is now created.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV5029I <V1> CREATION OF DATABASE DB2PM WAS SUCCESSFUL

Explanation: None.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV5030S <V1> SERVER IS NOT ALLOWED TO CREATE DATABASE DB2PM

Explanation: None.
• <V1> is the DB2 subsystem ID.
**User response:** You can either grant CREATEDBA privileges to the userID or group DB2PM, or create the DB2PM database manually and grant DBADM privileges to the DB2PM userid or group. Then restart the Performance Warehouse function in the Data Server using the MODIFY 'PERFORMANCEWAREHOUSE=YES' command. For further information on how to set up the Data Server for the Performance Warehouse, see Installation and Configuration.

**Explanation:** Performance Warehouse functions started from the Data Server must be started using the MVS task user ID DB2PM, or a member of the DB2PM RACF group.

- \(<\text{V1}\) is the DB2 subsystem ID.

This message is written if a SET CURRENT SQLID = \('DB2PM'\) fails with SQLCODE = -553, which is specified as: "auth-id SPECIFIED IS NOT ONE OF THE VALID AUTHORIZATION IDS" and further explained as: "The authorization ID specified as the value of the 'authorization-id' or host variable in the SQL SET CURRENT SQLID statement is neither the user's primary authorization ID nor one of the associated secondary authorization IDs."

**User response:** Change the MVS task user ID to DB2PM or to the DB2PM RACF group, then restart the Data Server. For further information on how to set up the Data Server for the Performance Warehouse, see Installation and Configuration.

One way to analyze this error is to run an Audit trace when authorization changes happen. The trace shows the IFCIDs 55 (Set Current SQLID), 83 (End Of Identify request), and 87 (End Of Signon request). These IFCIDs report the primary and secondary, respectively the old and the new SQLID. You can start the Audit trace data collection with AUDIT CLASS(7) or with USER CLASS(30) IFCID(55,83,87). To collect the trace data into your private sequential data set, you can use the ISPF Collect Report Data function (option 3, then option 6a). After the Audit trace data was collected, you can run an AUDIT TRACE TYPE(ALL) batch report or provide IBM with the sequential files containing the collected Audit trace data. The data should show the result from the inaction between DB2 and RACF, especially whether the DB2PM group name was returned to DB2 as one of the secondary authorization IDs.

**Explanation:** None.

- \(<\text{V1}\) is the DB2 subsystem ID.

**User response:** Check the system log for details about the abend. Try to restart the MVS system catalog and restart the Data Server. If the problem persists, contact IBM support.

---

**User response:** None.

---

**Explanation:** The Data Server could not obtain sufficient memory to contain data.

- \(<\text{V1}\) is the DB2 subsystem ID.

**User response:** This could be a temporary problem. If the problem persists, increase the region size for the OMEGAMON Collector and restart the Data Server, or contact IBM support.

---

**Explanation:** None.

---

**User response:** None.

---

**Explanation:** None.
**FPEV5037E** <V1> BUFFER POOL <V2> FOR TABLESPACE <V3> IN RESPONSE FILE IS NO 32K BUFFER POOL

**Explanation:** During the creation of the Performance Warehouse for the indicated subsystem a response data set was found and used. However, the buffer pool specified in this response data set is not a 32 KB buffer pool.

- <V1> is the DB2 subsystem ID.
- <V2> is the specified buffer pool that is not a 32 KB buffer pool.
- <V3> is the table space for which the buffer pool was specified.

**User response:** Edit the response data set and correct the specified buffer pool. The response data set can be found in <HLQ>.<DB2SSID>.SRVRESP, where <HLQ> is the high-level qualifier specified in the Configuration Tool (formerly ICAT) for temporary data sets of the OMEGAMON Collector, and <DB2SSID> is the DB2 subsystem ID indicated in <V1>.

---

**FPEV5040E** <V1> PWH FOUND AN INCOMPATIBLE DATABASE DB2PM

**Explanation:** During Performance Warehouse (PWH) startup an incompatible database DB2PM was detected.

- <V1> is the DB2 subsystem ID.

**User response:** Stop the OMEGAMON Collector, drop or migrate the existing Performance Warehouse database as described in the product documentation and restart the OMEGAMON Collector.

---

**FPEV504** HISTORY DATA SET OR HISTORY DATA SPACE MUST BE SPECIFIED

**Explanation:** Both, history data set size and data space size were reset to 0 in the Data Server Parameters window.

**User response:** Specify a size value for either history data set or history data space.

---

**FPEV613** USER AUTHORIZATION EXIT DENIED YOUR REQUEST

**Explanation:** You tried to perform a Performance Expert function. The authorization specified for your user ID in the user authorization exit rejected your access to this function.

**User response:** See your database administrator to clarify if you can get the proper authorization to use this function.

---

**FPEV614** USER AUTHORIZATION EXIT RETURNS NO DATA

**Explanation:** According to the authorization specified for your user ID in the user authorization exit, no data is to be returned to you.

---

**User response:** None.

---

**FPEV615** SEVERE ERROR OCCURRED IN USER AUTHORIZATION EXIT

**Explanation:** The user authorization exit failed with a severe error.

**User response:** Contact your system programmer.

---

**FPEV6801E** <V1> READING SERVER PARAMETER FAILED, SEE JOB LOG FOR DETAILS

**Explanation:** During the start of the Collect Report Data job the output data set could not be created.

- <V1> is the DB2 subsystem ID.

**User response:** Check SYSPRINT of the job for more details and correct the error. Restart the PWH process.

---

**FPEV6802E** <V1> INCORRECT SERVER CRD START PARAMETER

**Explanation:** During the start of the Collect Report Data job the required job parameters were not found.

- <V1> is the DB2 subsystem ID.

**User response:** Check the JCL of the Performance Warehouse job.

---

**FPEV6803E** <V1> UPDATING SERVER CRD STATUS FAILED, SEE JOB LOG FOR DETAILS

**Explanation:** During the start of the Collect Report Data job the output data set could not be created.

- <V1> is the DB2 subsystem ID.

**User response:** Check SYSPRINT of the job for more details and correct the error. Restart the PWH process using the previously used GUI (XE, VTAM, PE Client, Performance Warehouse).

---

**FPEV6804I** <V1> <V2> IS STARTING

**Explanation:** A Collect Report Data job or an internal CRD subtask is starting.

- <V1> is the DB2 subsystem ID.
- <V2> is the name of the Performance Warehouse function (Collect Report Data).

**User response:** None.

---

**FPEV6805I** <V1> <V2> IS STOPPING

**Explanation:** A Collect Report Data job or an internal CRD subtask is stopping.

- <V1> is the DB2 subsystem ID.
- <V2> is the name of the Performance Warehouse function (Collect Report Data).

**User response:** None.
FPEV6806I  <V1> <V2> IS RESTARTING DB2 TRACE

Explanation: During the collection of DB2 trace data the started trace was lost. The trace is restarted. This might happen, for example, if the trace was stopped manually using a DB2 STOP TRACE command.
• <V1> is the DB2 subsystem ID.
• <V1> is the name of the Performance Warehouse function (Collect Report Data).

User response: If the message is not caused by STOP TRACE commands, and if the message shows up several times during the collection of DB2 trace data, contact IBM support.

FPEV6807I  <V1> <V2> TRACES LOST

Explanation: During the collection of DB2 trace data the started trace was lost. The trace is restarted. This might happen, for example, if the trace was stopped manually using a DB2 STOP TRACE command.
• <V1> is the DB2 subsystem ID.
• <V1> is the name of the Performance Warehouse function (Collect Report Data).

User response: If the message is not caused by STOP TRACE commands, and if the message shows up several times during the collection of DB2 trace data, contact IBM support.

FPEV6808E  <V1> <V2> TRACES FAILED, SEE JOB LOG FOR DETAILS

Explanation: During the collection of DB2 trace data the necessary DB2 operation failed.
• <V1> is the DB2 subsystem ID.
• <V1> is the name of the Performance Warehouse function (Collect Report Data).

User response: This might be a temporary DB2 problem. Check SYSPRINT of the job for more details. Restart the PWH process using the previously used GUI (XE, VTAM, PE Client, Performance Warehouse).

FPEV6809W  <V1> <V2> RETRIEVING ASYNCHRONOUS DB2 DATA FAILED, SEE JOB LOG FOR DETAILS

Explanation: During the collection of DB2 trace data the necessary DB2 operation failed.
• <V1> is the DB2 subsystem ID.
• <V1> is the name of the Performance Warehouse function (Collect Report Data).

User response: This might be a temporary DB2 problem. Check SYSPRINT of the job for more details. Restart the PWH process using the previously used GUI (XE, VTAM, PE Client, Performance Warehouse).

FPEV6810W  <V1> TASK <V2> DID NOT RESPOND TO TERMINATION REQUEST

Explanation: During the termination of a Collect Report Data job a subtask did not respond to the termination request.
• <V1> is the DB2 subsystem ID.
• <V1> is the name of the Collect Report Data subtask.

User response: This might be a temporary system problem. If the problem occurs at the end of each Collect Report Data job, contact IBM support.

FPEV6811W  <V1> SYSTEM EXCEPTION CAUGHT, COLLECT REPORT DATA TASK ENDING ABNORMALLY

Explanation: During the execution of a Collect Report Data job the job received an MVS system exception.
• <V1> is the DB2 subsystem ID.

User response: Check the system log for details about the abend.

FPEV6812I  <V1> COLLECTION STOPPED DUE TO : <V2>

Explanation: The collection of DB2 trace data was stopped.
• <V1> is the DB2 subsystem ID.
• <V1> is the reason why the collection was stopped.

User response: Check the indicated reason. Usually, the collection stops according to specified stop conditions. If preceding of following messages indicate an error, check SYSPRINT for additional details.

FPEV6813I  <V1> SPECIFIED OP BUFFER SIZE TO HIGH FOR THIS DB2, REDUCED IT TO 1 MB

Explanation: The configuration of the Collect Report Data step in the Performance Warehouse contains a OP buffer size that is not supported with this DB2 version. The OP buffer size is adjusted to 1 MB.
• <V1> is the DB2 subsystem ID.

User response: None.

FPEV6814I  <V1> USER <V2> DOES NOT HAVE REQUIRED MONITOR1/2 PRIVILEGE TO COLLECT REPORT DATA

Explanation: The Collect Report Data did not start because the user does not have sufficient DB2 authority.
• <V1> is the DB2 subsystem ID.
• <V2> is the user ID of the Performance Warehouse job.

User response: The system administrator should grant the necessary MONITOR1 or MONITOR2 privileges for the user ID or group ID of the Performance Warehouse job.

| Explanation: | An invalid command was found.  
• `<V1>` is the invalid command name. |
| User response: | Correct the command and retry. |
| FPEV6831W    | `<V1>` UNSUPPORTED COMMAND `<V2>` AT LINE `<F3>`, POSITION `<F4>` IGNORED |
| Explanation: | The OMEGAMON Collector startup configuration contains an invalid parameter.  
• `<V1>` is the DB2 subsystem ID.  
• `<V2>` is the command name.  
• `<F3>` is the line number.  
• `<F4>` is the position number. |
| User response: | Use the Configuration Tool (formerly ICAT) and correct the parameter. |
| FPEV6834W    | `<V1>` DB2 SUBSYSTEM `<V2>` - THIS DB2 VERSION IS NOT SUPPORTED |
| Explanation: | This message is issued when trying to collect data for an unsupported DB2 version.  
• `<V1>` is the name of the monitored DB2 subsystem.  
• `<V2>` is the version of the monitored DB2 subsystem. |
| User response: | None. |
| FPEV701      | SERVER `<V1>` NO LONGER AVAILABLE |
| Explanation: | None.  
• `<V1>` is the DB2 subsystem ID. |
| User response: | Restart the Data Server if necessary and reconnect to it. |
| FPEV702      | UNABLE TO CONNECT TO SERVER `<V1>` |
| Explanation: | Unexpected error.  
• `<V1>` is the DB2 subsystem ID. |
| User response: | Check the log for any Data Server errors. Log on to TSO/E again. If the problem recurs, contact IBM support. |
| FPEV703      | ANOTHER USER IS UPDATING THE PARAMETERS FOR SERVER `<V1>` |
| Explanation: | None.  
• `<V1>` is the DB2 subsystem ID. |
| User response: | Try again later. |
| FPEV704      | `<V1>` IS NOT AUTHORIZED TO UPDATE THE PARAMETERS FOR SERVER `<V2>` |
| Explanation: | None.  
• `<V1>` is the user ID.  
• `<V2>` is the DB2 subsystem ID. |
| User response: | Use the ADMINUSER command to add this user. |
| FPEV705      | THE PARAMETERS FOR SERVER `<V1>` ARE CURRENTLY UNAVAILABLE |
| Explanation: | Unexpected error.  
• `<V1>` is the DB2 subsystem ID. |
| User response: | Check the log for any Data Server errors. Log on to TSO/E again. If the problem recurs, contact IBM support. |
| FPEV706      | LOADING THE QUALIFICATIONS FOR SERVER `<V1>` FAILED |
| Explanation: | Unexpected error.  
• `<V1>` is the DB2 subsystem ID. |
| User response: | Check the log for any Data Server errors. Log on to TSO/E again. If the problem recurs, contact IBM support. |
| FPEV710      | `<V1>` IS AN INVALID COMMAND |
| Explanation: | You are not allowed to issue this command here.  
• `<V1>` is the invalid command you issued. |
| User response: | Do not issue this command. |
| FPEV711      | COLLECTION INTERVAL MUST BE NUMERIC IN THE RANGE 1 TO 86400 SECONDS |
| Explanation: | None. |
| User response: | Correct the field. |
| FPEV712      | MAXIMUM SIZE OF HISTORY DATA SET MUST BE NUMERIC IN THE RANGE 0 TO 9999999 KILOBYTES |
| Explanation: | None. |
| User response: | Use the Configuration Tool (formerly ICAT) and specify a larger size. |
| FPEV713      | DATASPACE SIZE MUST BE NUMERIC IN THE RANGE 0 TO 2097148 KILOBYTES |
| Explanation: | None. |
| User response: | Correct the field. |
FPEV714  NUMBER OF EXTENTS MUST BE NUMERIC
Explanation: None.
User response: Enter a positive integer.

FPEV801  ERROR SAVING PARAMETERS FOR SERVER <V1>
Explanation: An unexpected error has occurred.
• <V1> is the DB2 subsystem ID.
User response: Reconnect. If the problem recurs, contact IBM support.

FPEV911  ERROR PROCESSING GETMAIN. RC <V1>
Explanation: An error occurred attempting to allocate virtual storage.
• <V1> is the return code.
User response: Increase the region size and retry the OMEGAMON Collector administrator’s dialog.

FPEV921  TBCREATE FAILURE. RC <V1>
Explanation: An unexpected error has occurred.
• <V1> is the return code.
User response: Reconnect. If the problem recurs, contact IBM support.

FPEV922  TBDISPL FAILURE. RC <V1>
Explanation: An unexpected error has occurred.
• <V1> is the return code.
User response: Reconnect. If the problem recurs, contact IBM support.

FPEV923  TBADD FAILURE. RC <V1>
Explanation: An unexpected error has occurred.
• <V1> is the return code.
User response: Reconnect. If the problem recurs, contact IBM support.

FPEW - System Parameters report set messages

FPEW0110U  INSUFFICIENT STORAGE AVAILABLE TO STORE SYSTEM PARAMETERS DATA
Explanation: There was not sufficient storage available to continue processing the System Parameters report.
User response: Increase the region size and rerun the job.

FPEW0120I  IFCID 106 NOT SUPPORTED
Explanation: None.
User response: None.

FPEW1246S  UNSUCCESSFUL ATTEMPT WRITING TO THE FILE DATA SET OF SYSTEM PARAMETERS
Explanation: An error occurred while writing data to the system parameters file data set.
User response: Check for system messages detailing the problem.

Chapter 9. Messages
# FPEX - Audit report set messages

**FPEX0600S**  
EXCEPTIONAL CONDITION OCCURRED DURING AUDIT PROCESSING. MAIN STORAGE ALLOCATION FAILED  
**Explanation:** There was not enough storage available to continue Audit processing.  
**User response:** Increase the region size, and rerun the job.

**FPEX0610S**  
EXCEPTIONAL CONDITION OCCURRED DURING AUDIT PROCESSING. MAIN STORAGE RELEASE FAILED  
**Explanation:** An attempt to release storage failed.  
**User response:** Rerun the job. If the problem recurs, contact IBM support.

**FPEY - Explain report set messages**

**FPEY0001W**  
DB2 RELEASE <V1> IS NOT SUPPORTED BY THIS PRODUCT VERSION. AN EXPLAIN REQUEST FOR <V2> HAS BEEN IGNORED  
**Explanation:** The DB2 subsystem is at a release level that is not supported by this version of OMEGAMON XE for DB2 PE.  
- <V1> is the DB2 release.  
- <V2> is the subsystem ID.

**FPEY0002W**  
CALL ATTACH FUNCTION <V1> FAILED. RETURN CODE <V2>, REASON CODE <V3>  
**Explanation:** A problem was encountered establishing the required connection between OMEGAMON XE for DB2 PE and DB2.  
- <V1> is the Call Attach Facility (CAF) function.  
- <V2> is the return code.  
- <V3> is the reason code.  
**User response:** Ensure that the OMEGAMON XE for DB2 PE Explain plan name (DB2PMX32) exists. If the Explain plan was bound with a name other than the default plan name, this must be specified in the GLOBAL PLANEXPLAIN parameter of a OMEGAMON XE for DB2 PE batch Explain request job.

**FPEY0003W**  
DB2 CAF SUPPORT CANNOT BE LOADED. DB2 LOAD LIBRARY MAY NOT BE SPECIFIED IN STEPLIB  
**Explanation:** OMEGAMON XE for DB2 PE could not load the Call Attach Facility (CAF) support modules. The DB2 load library may be missing in the STEPLIB DD statement.  
**User response:** Determine why OMEGAMON XE for DB2 PE cannot load the required modules. Resubmit the job.

**FPEY0004I**  
COLUMN <V1> HAS BEEN ADDED TO <V2>,PLAN_TABLE  
**Explanation:** The PLAN_TABLE for the current authorization ID has been altered with columns compatible to the DB2 release being run.  
- <V1> is the column name.  
- <V2> is the authorization ID.  
**User response:** None.

**FPEY0005I**  
LAST COLUMN <V1> HAS BEEN ADDED TO <V2>,PLAN_TABLE  
**Explanation:** The PLAN_TABLE for the current authorization ID has been altered with columns compatible to the DB2 release being run.  
- <V1> is the column name.  
- <V2> is the authorization ID.  
**User response:** None.
• <V1> is the column name
• <V2> is the authorization ID

User response: No action required.

FPEY0106I  LAST COLUMN <V1> HAS BEEN ALTERED FOR <V2>.PLAN_TABLE
Explanation: The PLAN_TABLE for the current authorization ID has been altered with columns compatible to the DB2 release being run.
• <V1> is the column name
• <V2> is the authorization ID
User response: No action required.

FPEY0110I  NO STATISTICS AVAILABLE - EXECUTE RUNSTATS
Explanation: No DB2 catalog statistics are available for the current table space.
User response: Perform RUNSTATS against the table space before you use OMEGAMON XE for DB2 PE Explain.

FPEY0120I  INDEX INFORMATION SUPPRESSED BY USER REQUEST
Explanation: The user has specified INDEX=N for the EXPLAIN PLAN, EXPLAIN QMFQUERY, or EXPLAIN QUERYNO request. No column information for the chosen index will be shown.
User response: None.

FPEY0140I  NOTE: <V1>,<V2> CONTAINS <V3> ACTIVE PAGES - CONSIDER A USABLE INDEX
Explanation: This message is produced if DB2 has chosen a table space scan for a table located in a table space larger than 10 active pages.
• <V1> is the database name.
• <V2> is the table space name.
• <V3> is the number of active pages.
User response: If the access path should be index-based, create a usable index, otherwise no action is required.

FPEY0162I  PACKAGE REPORTS NOT REQUESTED
Explanation: You have specified that packages should not be explained for a specific plan. All DBRMs are explained, but no packages.
User response: None.

FPEY0164I  PLAN <V1> HAS MORE THAN <V2> PACKAGES
Explanation: The number of packages contained in the plan to be explained is greater than PACKLIMIT. The packages listed after the message include all versions if PACKAGES(ALL) has been specified. Otherwise only the latest versions are displayed.
• <V1> is the plan name.
• <V2> is the PACKLIMIT.
User response: Increase the number of packages from a plan that can be explained by specifying a PACKLIMIT greater than the number of packages to be explained. If PACKAGES(ALL) has been specified, then the number of packages to be explained can be reduced by changing the PACKAGES(ALL) specification to PACKAGES(YES).

FPEY0166I  PACKAGE <V1> IN COLLECTION <V2> HAS THE FOLLOWING VERSIONS
Explanation: The package specified exists in several versions. All version identifications are listed. The number of packages explained by OMEGAMON XE for DB2 PE is controlled by the PACKAGES, GEN, and FORCE options. Processing continues.
• <V1> is the package name.
• <V2> is the collection name.
User response: None.

FPEY0180I  QUERY NO. <V1> DOES NOT EXIST FOR USER <V2> - REQUEST IGNORED
Explanation: The query number specified in an EXPLAIN QUERYNO request could not be located in the accessed PLAN_TABLE. If necessary, specify the correct authorization ID in the OWNER parameter. The statement is ignored, and processing continues with the next Explain request.
• <V1> is the query number.
• <V2> is the user.
User response: Verify that the query number does...
exist in the table. Also verify that the correct PLAN_TABLE is being accessed.

**FPEY0314I** QNO <V1> IN DBRM <V2> PLAN <V3> IS NOT IN <V4>.PLAN_TABLE

*Explanation:* The specified query number could not be located for the plan and DBRM listed in the PLAN_TABLE of the plan binder. OMEGAMON XE for DB2 PE Explain continues looking for the next query number for the same plan.
- <V1> is the query number.
- <V2> is the DBRM.
- <V3> is the plan.
- <V4> is the authorization ID.

*User response:* None.

**FPEY0316I** QNO <V1> IN PACKAGE <V2>,<V3> NOT IN <V4>.PLAN_TABLE

*Explanation:* The specified query number could not be located for the collection ID and package name listed in the PLAN_TABLE of the plan binder. OMEGAMON XE for DB2 PE Explain continues looking for the next query number for the same collection ID and package name.
- <V1> is the query number.
- <V2> is the collection ID.
- <V3> is the package name.
- <V4> is the authorization ID.

*User response:* None.

**FPEY0320I** PLAN <V1> NOT BOUND WITH EXPLAIN OPTION - REQUEST IGNORED

*Explanation:* The plan specified in an EXPLAIN PLAN request was not bound with the EXPLAIN(YES) bind option. The statement is ignored, and processing continues with the next Explain request.
- <V1> is the plan.

*User response:* Rebind the plan and rerun the job with the same input record.

**FPEY0321I** DBRM <V1> HAS NO ROWS IN <V2>.PLAN_TABLE - REQUEST IGNORED

*Explanation:* The plan specified in an EXPLAIN PLAN request was bound with the EXPLAIN(YES) bind option, but the rows in the PLAN_TABLE owned by the authorization ID have been deleted for the given DBRM. The statement is ignored, and processing continues with the next Explain request.
- <V1> is the DBRM.
- <V2> is the authorization ID.

*User response:* Rebind the plan and rerun the job with the same input record.

**FPEY0324I** PLAN_TABLE FOR USER <V1> DOES NOT EXIST - REQUEST IGNORED

*Explanation:* The authorization ID given as the OWNER for an EXPLAIN QUERYNO request has no PLAN_TABLE. The statement is ignored, and processing continues with the next Explain request.
- <V1> is the user.

*User response:* None.

**FPEY0325I** UNABLE TO EXPLAIN <V1> - NOT AUTHORIZED TO ACCESS <V2>.PLAN_TABLE

*Explanation:* The authorization ID does not have the privilege to perform the access to the PLAN_TABLE.
- <V1> is the collection ID and package name or the plan name.
- <V2> is the authorization ID.

*User response:* See your system programmer to get authorization.

**FPEY0368I** LOCATION CANNOT BE DETERMINED UNTIL EXECUTION TIME - PACKAGE IGNORED

*Explanation:* The PACKAGES(YES) specification on the EXPLAIN PLAN request has been ignored.

*User response:* None.

**FPEY0370I** PACKAGE <V1>,<V2>,<V3> NOT BOUND WITH EXPLAIN OPTION

*Explanation:* The package specified in an EXPLAIN PACKAGE request was not bound with the EXPLAIN(YES) bind option. The statement is ignored, and processing continues with the next Explain request.
- <V1> is the collection ID.
- <V2> is the package ID.
- <V3> is the version ID.

*User response:* None.

**FPEY0372I** THIS REQUEST WILL RESULT IN <V1> PACKAGES WITH A TOTAL OF <V2> SQL STATEMENTS (INCLUDING NON-EXPLAINABLE)

*Explanation:* The package statement you have specified will result in Explain of more than one package with a total of more than 300 SQL statements (counting both explainable and non-explainable). If this is what you require, the request should be reissued with the FORCE(YES) subparameter specified. The statement is ignored, and processing continues with the next Explain request.
- <V1> is the number of packages.
- <V2> is the number of SQL statements.

*User response:* None.
FPEY0374I  NO PACKAGES FOUND FOR: <V1>

Explanation: No packages were found in SYSIBM.SYSPACKAGE that would satisfy the input specification. The statement is ignored, and processing continues with the next Explain request.
• <V1> is the input specification.
User response: None.

FPEY0376I  NO PACKAGES FOUND FOR PLAN <V1>, MATCHING PACKAGE <V3>,<V4>,<V2> SPECIFIED IN SYSPACKLIST

Explanation: No packages were found in SYSIBM.SYSPACKAGE for the specified plan. The statement is ignored, and processing continues with the next Explain request.
• <V1> is the plan.
• <V2> is the location ID.
• <V3> is the collection ID.
• <V4> is the package ID.
User response: None.

FPEY0378I  PACKAGE <V1>,<V2>,<V3> HAS NO ROWS IN SYSIBM.SYSPACKSTMT

Explanation: No rows were found in SYSIBM.SYSPACKSTMT for the specified package in the specified collection. The statement is ignored, and processing continues with the next Explain request.
• <V1> is the collection ID.
• <V2> is the package ID.
• <V3> is the version ID.
User response: None.

FPEY0380I  QMF QUERY <V1>,<V2> DOES NOT EXIST - REQUEST IGNORED

Explanation: A QMF query name specified in an EXPLAIN QMFQUERY request does not exist. If the OMEGAMON XE for DB2 PE Explain submitter is not the owner of the query, the query name must be prefixed with the authorization ID, like "AUTHID.QNAME". The statement is ignored, and processing continues with the next Explain request.
• <V1> is the authorization ID.
• <V2> is the query name.
User response: Verify that the query name is spelled correctly.

FPEY0382I  QMF OBJECT <V1>,<V2> IS A <V3> AND NOT A QUERY - REQUEST IGNORED

Explanation: The QMF object specified as the query name is not a query. The statement is ignored, and processing continues with the next Explain request.
• <V1> is the authorization ID.
User response: None.

FPEY0384I  QUERY <V1>,<V2> IS A <V3> QUERY, MUST BE SQL - REQUEST IGNORED

Explanation: The QMF query specified as the query name is not an SQL query. The statement is ignored, and processing continues with the next Explain request.
• <V1> is the authorization ID.
• <V2> is the query name.
• <V3> is either QBE or PROMPTED.
User response: None.

FPEY0386I  QMF QUERY <V1> IS RESTRICTED TO OWNER - REQUEST IGNORED

Explanation: The QMF query specified as the query name can only be explained by its owner. The statement is ignored, and processing continues with the next Explain request.
• <V1> is the specified QMF query.
User response: To explain a QMF query created by a different authorization ID, the query must be saved with the SHARE=YES parameter.

FPEY0388I  END OF QMF QUERY NOT FOUND - REQUEST IGNORED

Explanation: The QMF statement was found to be larger than 32KB. Either the QMF query is more than 409 lines or the end-of-statement marker was not found. In either case, the request is ignored, and processing continues with the next Explain request.
User response: None.

FPEY0500W  PREPARE OF <V1> FAILED. SQL CODE: <V2>

Explanation: A prepare statement failed during preparing a select statement for <V1>. A formatted print of the SQLCA and an error message are provided.
• <V1> is the object of the select statement.
• <V2> is the SQL code.
User response: Check the SQL code and follow the instructions given in DB2 Messages and Codes (or in the corresponding manual of the DB2 version you have installed).

FPEY0501I  <V1>.PLAN_TABLE DOES NOT EXIST

Explanation: None.
• <V1> is the authorization ID.
User response: None.
FPEY0502I  PLAN <V1> BOUND WITH *
PACKLIST BIND OPTION. PACKAGES
SHOWN MAY NOT BE USED IN PLAN

Explanation: Since the PACKLIST bind option
contained a wildcard specification when the plan was
bound, DB2 will not determine the packages to be used
until runtime. OMEGAMON XE for DB2 PE Explain
may report on all eligible packages, not just those used
by the plan.
• <V1> is the plan.
User response: None.

FPEY0504W  DECLARE OF <V1> FAILED. SQL
CODE: <V2>

Explanation: A declare statement failed during
declaring the program cursor. A formatted print of the
SQLCA and an error message are provided.
• <V1> is the program cursor.
• <V2> is the SQL code.
User response: Check the SQL code and follow the
instructions given in DB2 Messages and Codes (or in the
corresponding manual of the DB2 version you have
installed).

FPEY0508W  OPEN OF <V1> FAILED. SQL CODE: <V2>

Explanation: An open statement failed during opening
the program cursor. A formatted print of the SQLCA
and an error message are provided.
• <V1> is the program cursor.
• <V2> is the SQL code.
User response: Check the SQL code and follow the
instructions given in DB2 Messages and Codes (or in the
corresponding manual of the DB2 version you have
installed).

FPEY0509W  FUNCTION STEP <V1> FOR TABLE
<V2> FAILED. SQL CODE: <V3>

Explanation: An SQL statement failed. A formatted
print of the SQLCA and an error message are provided.
• <V1> is the function step keyword:
  STORAGE
  No storage is available for the table row
  SELECT
  SQL SELECT statement failed
  SELECT COUNT
  SQL SELECT COUNT statement failed
  INSERT
  SQL INSERT statement failed
  PROGERR
  Internal program error.
• <V2> is the table name.
• <V3> is the SQL code.
User response: Check the SQL code and follow the
instructions given in DB2 Messages and Codes (or in the
corresponding manual of the DB2 version you have
installed).

FPEY0510W  FUNCTION STEP <V1> FOR CURSOR
<V2> WITH TABLE <V3> FAILED. SQL
CODE: <V4>

Explanation: An SQL statement failed. A formatted
print of the SQLCA and an error message are provided.
• <V1> is the function step keyword:
  STORAGE
  No storage is available for the table row
  OPEN
  SQL OPEN CURSOR statement failed
  FETCH
  SQL FETCH CURSOR statement failed
  CLOSE
  SQL CLOSE CURSOR statement failed
  PROGERR
  Internal program error.
• <V2> is the cursor name.
• <V3> is the table name.
• <V4> is the SQL code.
User response: Check the SQL code and follow the
instructions given in DB2 Messages and Codes (or in the
corresponding manual of the DB2 version you have
installed).

FPEY0514W  CURRENT SQLID COULD NOT BE
OBTAINED, WILL USE
AUTHORIZATION ID: <V1>

Explanation: The OMEGAMON XE for DB2 PE
Explain function could not select the current SQLID
(secondary authorization ID). The program continues
using the primary authorization ID. A formatted print
of the SQLCA and an error message are provided.
• <V1> is the primary authorization ID.
User response: None.

FPEY0515E  CURRENT DEGREE <V1> COULD
NOT BE OBTAINED

Explanation: The OMEGAMON XE for DB2 PE
Explain function could not set the current degree
specified in the EXPLAIN command. A formatted
printout of the SQLCA is produced.
• <V1> is the degree specified in the command.
User response: See DB2 Messages and Codes for a
description of the SQL code.

FPEY0520W  OPEN OF C_KEYS FAILED. SQL
CODE: <V1>

Explanation: An error was detected during opening a
cursor for SYSIBM.SYSKEYS joined with
SYSIBM.SYSINDEXES. OMEGAMON XE for DB2 PE
Explain continues with the current request, after
printing the formatted SQLCA and the error message.
• <V1> is the SQL code.
User response: See DB2 Messages and Codes (or the
corresponding manual of the DB2 version you have
installed).
FPEY0522W  FETCH OF C.Keys FAILED. SQL CODE: <V1>

Explanation: An error was detected during fetch from SYSIBM.SYSTEY joined with SYSIBM.SYSINDEXES. OMEGAMON XE for DB2 PE Explain continues with the current request, after printing the formatted SQLCA and the error message.
• <V1> is the SQL code.

User response: None.

FPEY0524W  OPEN OF C.IxCol FAILED. SQL CODE: <V1>

Explanation: An error was detected during opening a cursor for SYSIBM.SYSTEY joined with SYSIBM.SYSINDEXES and SYSIBM.SYSTABLES. OMEGAMON XE for DB2 PE Explain continues with the current request, after printing the formatted SQLCA and the error message.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0526W  FETCH OF C.IxCol FAILED. SQL CODE: <V1>

Explanation: An error was detected during fetch from SYSIBM.SYSTEY joined with SYSIBM.SYSINDEXES and SYSIBM.SYSTABLES. OMEGAMON XE for DB2 PE Explain continues with the current request, after printing the formatted SQLCA and the error message.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0528W  OPEN OF C.Stmt FAILED. SQL CODE: <V1>

Explanation: An error was detected during opening a cursor for SYSIBM.SYSTMT. A formatted print of the SQLCA and an error message are provided.
• <V1> is the SQL code.

User response: None.

FPEY0530W  FETCH OF C.Stmt FAILED. SQL CODE: <V1>

Explanation: An error was detected during a fetch from SYSIBM.SYSTMT. A formatted print of the SQLCA and an error message are provided.
• <V1> is the SQL code.

User response: None.

FPEY0536W  EXPLAIN OF A REMOTE OBJECT IS NOT ALLOWED. SQL CODE: <V1>

Explanation: An immediate EXPLAIN statement failed, because the statement being explained contained a table located in another DB2 system. The EXPLAIN statement may only contain local objects. Processing continues with the next Explain request.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0538W  EXPLAIN OF SUPPLIED SQL-STATEMENT FAILED. SQL CODE: <V1>

Explanation: An immediate EXPLAIN statement failed. A formatted print of the SQLCA and an error message are provided together with the statement to be explained. Processing continues with the next Explain request.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0540W  TABLE SPACE <V1>,<V2> NOT FOUND IN SYSIBM.SYSTABLESPACE. SQL CODE: <V3>

Explanation: The listed table space could not be found in SYSIBM.SYSTABLESPACE.
• <V1> is the database name.
• <V2> is the table space name.
• <V3> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0542W  TABLE <V1>,<V2> NOT FOUND IN SYSIBM.SYSTABLES. SQL CODE: <V3>

Explanation: The listed table could not be found in SYSIBM.SYSTABLES.
• <V1> is the authorization ID.
• <V2> is the table name.
• <V3> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.
FPEY0544W COLUMN <V1> NOT FETCHED FROM SYSIBM.SYSCOLUMNS. SQL CODE: <V2>

Explanation: The listed table could not be found in SYSIBM.SYSCOLUMNS. For other SQL codes, OMEGAMON XE for DB2 PE Explain continues with the current request, after printing the formatted SQLCA and the error message.
• <V1> is the column name.
• <V2> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0546W INDEX <V1>,<V2> NOT FOUND FROM SYSIBM.SYSINDEXES. SQL CODE: <V3>

Explanation: The listed index could not be found in SYSIBM.SYSINDEXES. A formatted print of the SQLCA and an error message are provided.
• <V1> is the authorization ID.
• <V2> is the index name.
• <V3> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0548W PLAN <V1> NOT FOUND IN SYSIBM.SYSPLAN. SQL CODE: <V2>

Explanation: The listed plan could not be found in SYSIBM.SYSPLAN.
• <V1> is the plan name.
• <V2> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0554W DATABASE <V1>,<V2> NOT FOUND IN SYSIBM.SYSDATABASE. SQL CODE: <V3>

Explanation: The listed database could not be found in SYSIBM.SYSDATABASE.
• <V1> is the authorization ID.
• <V2> is the database name.
• <V3> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0560W OPEN OF C_TSKEYS FAILED. SQL CODE: <V1>

Explanation: An error was detected during opening a cursor for SYSIBM.SYSKEYS. OMEGAMON XE for DB2 PE Explain continues with the current request, after printing the formatted SQLCA and the error message.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0580W UNAUTHORIZED ACCESS TO THE Q.OBJECT_DIRECTORY TABLE - REQUEST IGNORED

Explanation: The user has specified an input record with an EXPLAIN QMFQUERY request. The plan does not have select authorization to the Q.OBJECT_DIRECTORY table and returns an SQL code of either -551 or -552. Processing continues with the next Explain request.

User response: None.

FPEY0582W UNAUTHORIZED ACCESS TO THE Q.OBJECT_DATA TABLE - REQUEST IGNORED

Explanation: The user has specified an input record with an EXPLAIN QMFQUERY request. The plan does not have select authorization to the Q.OBJECT_DIRECTORY table and returns an SQL code of either -551 or -552. Processing continues with the next Explain request.

User response: None.

FPEY0584W ACCESS TO THE TABLE Q.OBJECT_DIRECTORY FAILED. SQL CODE: <V1>

Explanation: The user has specified an input record with an EXPLAIN QMFQUERY request. The plan does not have proper authorization to the Q.OBJECT_DIRECTORY table. A formatted print of the SQLCA and an error message is provided.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0586W ACCESS TO THE TABLE Q.OBJECT_DATA FAILED. SQL CODE: <V1>

Explanation: The user has specified an input record with an EXPLAIN QMFQUERY request. The plan does not have proper authorization to the Q.OBJECT_DATA table. A formatted print of the SQLCA and an error message are provided. Processing continues with the next Explain request.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.
FPEY0587W  QMF QUERY EXCEEDS LIMIT OF 32 KB LENGTH, QUERY TRUNCATED

Explanation: You wanted to explain a QMF query that exceeds the 32 KB work area.

User response: If the query contains many comments, remove them and try again.

FPEY0600W  THE EXPLAIN TABLE
<V1>.PLAN_TABLE WAS NOT CREATED. SQL CODE: <V2>

Explanation: An attempt to create a PLAN_TABLE failed. The reason is that the CREATETAB authorization is missing. A formatted print of the SQLCA and an error message are provided. Processing is terminated.
• <V1> is the authorization ID.
• <V2> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0602W  ADDITION OF THREE V2R2 COLUMNS TO <V1>.PLAN_TABLE FAILED. SQL CODE: <V2>

Explanation: An attempt was made to ALTER the three columns PREFETCH, COLUMN_FN_EVAL, and MIXOPSEQ to the user's existing PLAN_TABLE. One or more of the three ALTER statements failed.
• <V1> is the authorization ID.
• <V2> is the SQL code.

User response: None.

FPEY0605W  ADDITION OF FOUR V3 COLUMNS TO <V1>.PLAN_TABLE FAILED. SQL CODE: <V2>

Explanation: An attempt was made to ALTER the four columns ACCESS_DEGREE, ACCESS_PGROUP_ID, JOIN_DEGREE, and JOIN_PGROUP_ID to the user's existing PLAN_TABLE. One or more of the four ALTER statements failed.
• <V1> is the authorization ID.
• <V2> is the SQL code.

User response: None.

FPEY0606W  PLAN_TABLE IS NOT COMPATIBLE WITH DB2 REL <V1>. SQL CODE: <V2>

Explanation: The format of the PLAN_TABLE is not compatible with the current release of DB2.
• <V1> is the DB2 version.
• <V2> is the SQL code.

User response: Check the number of columns in your PLAN_TABLE to determine what level of PLAN_TABLE exists, and correct as necessary before executing OMEGAMON XE for DB2 PE Explain.

FPEY0607E  PLAN_TABLE BELONGING TO PLAN OR PACKAGE OWNER IS NOT SUPPORTED BY DB2 PE

Explanation: The PLAN_TABLE to be accessed is checked against the used DB2 version for validity. If the PLAN_TABLE fits a prior DB2 version, it is adapted to the currently used version of DB2. In this case the PLAN_TABLE may not have the right number of columns for the DB2 versions supported by DB2 PE. Thus, OMEGAMON XE for DB2 PE cannot alter the PLAN_TABLE to support the currently active DB2 version.

User response: Ask your system administrator to correct the PLAN_TABLE. If necessary, new columns must be added.

FPEY0608W  ADDITION OF NINE V41 COLUMNS TO <V1>.PLAN_TABLE FAILED. SQL CODE: <V2>

Explanation: An attempt was made to ALTER the nine columns SORC_PGROUP_ID, SORTN_PGROUP_ID, PARALLELISM_MODE, MERGE_JOIN_COLS, CORRELATION_NAME, PAGE_RANGE, JOIN_TYPE, GROUP_MEMBER, IBM_SERVICE_DATA to the user's existing PLAN_TABLE. One or more of the nine ALTER statements failed.
• <V1> is the authorization ID.
• <V2> is the SQL code.

User response: Ask your system administrator to correct the PLAN_TABLE. If necessary, new columns must be added.

FPEY0609W  ADDITION OF ONE V5 COLUMN TO <V1>.PLAN_TABLE FAILED. SQL CODE: <V2>

Explanation: An attempt was made to ALTER the column WHEN_OPTIMIZE to the user's existing PLAN_TABLE. The ALTER statement failed.
• <V1> is the authorization ID.
• <V2> is the SQL code.

User response: Ask your system administrator to correct the PLAN_TABLE. If necessary, new columns must be added.

FPEY0612W  ADDITION OF LAST COLUMN <V1> TO <V2>.PLAN_TABLE IN STEP <V3> FAILED. SQL CODE <V4>

Explanation: An SQL statement failed. A formatted print of the SQLCA and an error message are provided.
• <V1> is the column name.
• <V2> is the authorization ID.
• <V3> is the function step keyword.
ALTER TABLE
SQL ALTER TABLE statement failed
COMMENT ON
SQL COMMENT ON statement failed
COMMIT
SQL COMMIT statement failed
PROGERR
Internal program error.
• <V4> is the SQL code.

User response: Check the SQL code and follow the instructions given in DB2 Messages and Codes (or in the corresponding manual of the DB2 version you have installed).

FPEY0636W OPEN OF C_EEPL FAILED. SQL CODE: <V1>
Explanation: An error was detected during opening a cursor for binder.DGO_DGOPLAN. Printing of plan history information is stopped. Normal processing continues.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0638W OPEN OF C_EEED2 FAILED. SQL CODE: <V1>
Explanation: An error was detected during opening a cursor for binder.DGO_DGOBRM. Printing of DBRM information is stopped. Normal processing continues.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.
FPEY0708W OPEN OF C_PACKAGES FAILED. SQL CODE: <V1>

Explanation: An error was detected during opening a cursor for SYSIBM.SYSPACKAGE. Processing continues with the current request, after printing the formatted SQLCA and the error message.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0709W SELECT AGAINST SYSPACKAGE FAILED FOR PACKAGE <V1> .<V2>,(<V3>). SQLCODE: <V4>

Explanation: OMEGAMON XE for DB2 PE could not access SYSIBM.SYSPACKAGE.
• <V1> is the collection ID.
• <V2> is the package ID.
• <V3> is the version ID.
• <V4> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0710W OPEN OF C_PACK_STMT FAILED. SQL CODE: <V1>

Explanation: An error was detected during opening a cursor for SYSIBM.SYSPACKSTMT. Processing continues with the current request, after printing the formatted SQLCA and the error message.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0712W FETCH FROM C_PACK_STMT FAILED. SQL CODE: <V1>

Explanation: An error was detected during fetching a row from SYSIBM.SYSPACKSTMT. Processing continues with the current request, after printing the formatted SQLCA and the error message.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.

FPEY0714W OPEN OF C_SYSPACK_STMT FAILED. SQL CODE: <V1>

Explanation: An error was detected during opening a cursor for SYSIBM.SYSPACKSTMT. Processing continues with the current request, after printing the formatted SQLCA and the error message.
• <V1> is the SQL code.

User response: See DB2 Messages and Codes (or the corresponding manual of the DB2 version you have installed) for a description of the SQL code.
**FPEY8001W**  •  **FPEZ1010I**

---

**FPEY8001W**  CAN'T ACCESS SYSDBRM FOR  
\(<V1>\) IN \(<V2>\). SQL CODE: \(<V3>\)

**Explanation:** None.

- \(<V1>\) is the DBRM name.
- \(<V2>\) is the plan name.

**FPEZ - Migrate/Convert function messages**

---

**FPEZ1000E**  INPUT PARAMETER IS AN INVALID REQUEST

**Explanation:** A parameter other than MIGRATE or CONVERT was requested.

**User response:** Use either MIGRATE or CONVERT.

---

**FPEZ1001I**  \(<V1>\) HAS BEEN REQUESTED

**Explanation:** MIGRATE or CONVERT has been requested.

- \(<V1>\) can be either MIGRATE or CONVERT.

**User response:** None.

---

**FPEZ1002E**  UNABLE TO OPEN INPUT FILE. PROCESSING TERMINATED

**Explanation:** An error occurred attempting to open the input file.

**User response:** Check that the input file exists or is in the correct format.

---

**FPEZ1003E**  UNABLE TO READ INPUT FILE. RC \(<V1>\), REASON \(<V2>\)

**Explanation:** An error occurred attempting to read the input file.

- \(<V1>\) is the return code.
- \(<V2>\) is the reason code.

**User response:** See the VSAM documentation.

---

**FPEZ1004E**  INPUT FILE IS NOT A RECOGNIZED ACCOUNTING OR STATISTICS SAVE FILE

**Explanation:** None.

**User response:** Use a valid Accounting Save data set or Statistics Save data set.

---

**FPEZ1005E**  MIGRATE WAS REQUESTED BUT THE FORMAT OF THE INPUT SAVE FILE IS NOT SUPPORTED BY THIS PRODUCT RELEASE.

**Explanation:** The input file is a Save data set that cannot be migrated with this release.

**User response:** Use only Save data sets of the last and next-to-last releases as input for the save-file utility MIGRATE function.

---

**FPEZ1006E**  CONVERT WAS REQUESTED BUT THE INPUT FILE IS NOT A CURRENT VERSION SAVE FILE

**Explanation:** The input file is a Save data set that is not compatible with this release. Save data sets from earlier versions must be migrated by the save-file utility MIGRATE function before being converted.

**User response:** Use only Save data sets of the current release or of the last and next-to-last releases that have been migrated as input for the save-file CONVERT function.

---

**FPEZ1007E**  UNABLE TO OPEN OUTPUT FILE. PROCESSING TERMINATED

**Explanation:** An error occurred attempting to open the output file.

**User response:** Check that the output file has been allocated correctly.

---

**FPEZ1008I**  \(<V1>\) \(<V2>\) HAS STARTED

**Explanation:** The accounting or statistics migrate function or convert function has started.

- \(<V1>\) is accounting or statistics.
- \(<V2>\) is the migrate or convert function.

**User response:** None.

---

**FPEZ1009E**  UNABLE TO WRITE TO OUTPUT FILE. RC \(<V1>\), REASON \(<V2>\)

**Explanation:** An error occurred attempting to write to the output file.

- \(<V1>\) is the return code.
- \(<V2>\) is the reason code.

**User response:** See the VSAM documentation.

---

**FPEZ1010I**  \(<V1>\) \(<V2>\) HAS FINISHED

**Explanation:** The accounting or statistics migrate function or convert function has finished.

- \(<V1>\) is accounting or statistics.
- \(<V2>\) is the migrate or convert function.

**User response:** None.
FPEZ101I  RECORDS IN: <V1>. RECORDS OUT: <V2>

Explanation: This message shows the number of input records processed and the number of records written to the output file.
• <V1> is the number of input records.
• <V2> is the number of output records.

User response: None.

FPEZ1015E  INVALID FORMAT OF SAVE INPUT FILE. PROCESSING TERMINATED

Explanation: The SAVE file contains an invalid structure and could not be migrated.

User response: None.

FPEZ1016E  SAVE INPUT FILE COMES FROM VERSION <V1>

Explanation: This informational message indicates the underlying save file product version (520 or 530).

User response: None.

KDP - Tivoli Enterprise Monitoring Agent (TEMA) for DB2 messages

In the following error messages from KDPAnn01E to KDPAnn10I, nn represents one of the plex level agents in the range of p0 through pd. nn identifies the unique error message number.

KDPAnn01E  Node header is not available.

Explanation: The plex level agent cannot find the storage area of the nodes that are registered at the TEMS. The control block address contains a NULL value. Therefore it cannot be used.

System action: The requested data cannot be retrieved.

User response: Contact IBM support to report this problem.

KDPAnn02E  Cannot resolve the global area address.

Explanation: The plex level agent cannot find the storage area of a global control block that contains information that is required by the table code. The address of the control block contains a NULL value. Therefore it cannot be used.

System action: The requested data cannot be retrieved.

User response: Contact IBM support to report this problem.

KDPAnn03E  Error %d from Init_HUB.

Explanation: The connection to the HUB stopped. It cannot be reconnected.

System action: The requested data cannot be retrieved.

User response: Contact IBM support to report this problem.

KDPAnn04E  Cannot obtain SQLInterface storage for %s.

Explanation: The storage area to be used to run SQL requests with the TEMS HUB cannot be allocated.

System action: The requested data cannot be retrieved.

User response: There might be a storage constraint on the started task. You can adjust the limit statements in the KD5SYSIN parameter or in the KDSSYSIN parameter. If the problem persists after a restart, contact IBM Support.

KDPAnn05E  Error %d occurred when creating an access plan.

Explanation: An SQL request failed. An internal error occurred when creating an access plan.

System action: The requested data cannot be retrieved.

User response: Contact IBM support to report this problem.

KDPAnn06E  Error %d occurred when creating a Create Request.

Explanation: An SQL request failed. An internal error occurred when creating a Create request.

System action: The requested data cannot be retrieved.

User response: Contact IBM support to report this problem.

</table>
KDPAT001  DPDC GLOBAL VECTOR TABLE NOT FOUND

Explanation: The global vector table has not been allocated, indicating that the KDPBGV routine failed to properly initialize the environment.

System action: None.

User response: Look for previous messages for an indication as to what failed. Contact IBM support.

KDPAT007  DPDC COLLECTOR WAS NOT ATTACHED FOR DB2 dbid.
          R0(xxxxxxxx)  R1(xxxxxxxx)  R15(xxxxxxxx)

Explanation: The attempt failed to attach a new TCB for the KDPCOL00 module. Register 15 contains the error code from the attach request.

System action: None.

User response: Contact IBM support.

KDPAU001  DB2PLEX AUTODISCOVERY STARTED

Explanation: This is an informational message.

System action: None.

User response: None.

KDPAU01F  AUTODISCOVERY INITIALIZATION FAILED

Explanation: OMEGAMON XE for DB2 could not recognize the DB2 subsystems that are currently online.

System action: None.

User response: Contact IBM support. Until a solution is found, you can use the Configuration Tool (formerly ICAT) to disable auto-discovery and manually identify the DB2 systems.

KDPAU02E  MULTIPLE IPDC AUTODISCOVERY COMMANDS ISSUED

Explanation: The auto-discovery command executed more than once.

System action: None.

User response: Check the RKAN CMD file to ensure that only one AUTODISCOVER command is specified. Remove the extra commands.

KDPAU03F  UNABLE TO CREATE LOGICAL RESOURCE

Explanation: OMEGAMON XE for DB2 could not recognize the DB2 subsystems that are currently online.

System action: None.

User response: Contact IBM support. Until a solution is found, you can use the Configuration Tool (formerly ICAT) to disable auto-discovery and manually identify the DB2 systems.

KDPAU04F  UNABLE TO ACQUIRE LOGICAL RESOURCE

Explanation: OMEGAMON XE for DB2 could not recognize the DB2 subsystems that are currently online.

System action: None.

User response: Contact IBM support. Until a solution is found, you can use the Configuration Tool (formerly ICAT) to disable auto-discovery and manually identify the DB2 systems.

KDPAU05F  RESOURCE LOCK ERROR
          ERRNO=nnnn

Explanation: A logic error is preventing the acquisition of a lock.

System action: None.

User response: Contact IBM support. Until a solution is found, you can use the Configuration Tool (formerly ICAT) to disable auto-discovery and manually identify the DB2 systems.

KDPAU10F  CONTROL BLOCK ALLOCATION FAILED

Explanation: Insufficient storage for this function. Either not enough storage is available for the started task or some type of storage overlay is preventing the allocation.

System action: None.

User response: Contact IBM support. Until a solution is found, you can use the Configuration Tool (formerly ICAT) to disable auto-discovery and manually identify the DB2 systems.

KDPAU11F  CONDITION INITIALIZATION FAILED

Explanation: This is an internal error.

System action: None.

User response: Contact IBM support. Until a solution is found, you can use the Configuration Tool (formerly ICAT) to disable auto-discovery and manually identify the DB2 systems.

KDPAU12F  CONDITION MUTEX INITIALIZATION FAILED

Explanation: This is an internal error.

System action: None.
User response: Contact IBM support. Until a solution is found, you can use the Configuration Tool (formerly ICAT) to disable auto-discovery and manually identify the DB2 systems.

KDPAU13F MUTEX INITIALIZATION FAILED
Explanation: This is an internal error.
System action: None.
User response: Contact IBM support. Until a solution is found, you can use the Configuration Tool (formerly ICAT) to disable auto-discovery and manually identify the DB2 systems.

KDPAU14E COMMAND="command" FAILED.
STATUS=n.nn
Explanation: The indicated command did not complete properly. The command was issued to either start collecting data for a new DB2 subsystem or to stop collecting data for a DB2 system that is no longer active.
System action: None.
User response: Contact IBM support.

KDPCM001 DPDC IS NOT INITIALIZED
Explanation: The global vector table has not been allocated, indicating that the KDPBGV routine failed to properly initialize the environment.
System action: None.
User response: Look for previous messages for an indication as to what failed. Contact IBM support.

KDPBG004 DPDC UNABLE TO ACQUIRE STORAGE FOR GVT
Explanation: The storage request for the global vector table (GVT) failed. Either not enough virtual memory is available or that a storage corruption is preventing space allocation.
System action: None.
User response: Contact IBM support.

KDPBG005 DPDC UNABLE TO ACQUIRE STORAGE FOR GVT
Explanation: The storage request for the global vector table (GVT) failed. Either not enough virtual memory is available or that a storage corruption is preventing space allocation.
System action: None.
User response: Contact IBM support.

KDPBG006 DPDC UNABLE TO ACQUIRE STORAGE FOR GVT
Explanation: The storage request for the global vector table (GVT) failed. Either not enough virtual memory is available or that a storage corruption is preventing space allocation.
System action: None.
User response: Contact IBM support.
KDPCM035  DPDC (dbid) MONITOR IS BEING TERMINATED
Explanation: The collector for the specified DB2 system is scheduled for termination.
System action: None.
User response: None.

KDPCM037  DPDC (dbid) MONITOR IS BEING RESTARTED. AVT ADDRESS=xxxxxxxx
Explanation: The collector for the specified DB2 system is being restarted. The address of the application vector table (AVT) is shown.
System action: None.
User response: None.

KDPCM039  DPDC COMMAND FORMAT ERROR
Explanation: An error was detected on the command displayed just before this message.
System action: None.
User response: Correct the syntax and reissue the command.

KDPCM042  IPDC ERROR LOADING MODULE modname
Explanation: The system could not load the auto-discovery module or the display module from the load library.
System action: None.
User response: Verify that the module exists.

KDPC007  DPDC description (modname) ROUTINE NOT FOUND
Explanation: The program identified by the description and module name could not be loaded from the load library.
System action: None.
User response: None.

KDPB001  DPDC GLOBAL VECTOR TABLE NOT FOUND
Explanation: The global vector table has not been allocated, indicating that the KDPBGV routine failed to properly initialize the environment.
System action: None.
User response: None.

KDPB007  DPDC SCOM SCAN (modname) ROUTINE NOT FOUND
Explanation: The program identified by the module name could not be loaded from the load library.
System action: None.
User response: None.

KDPB020  DB2 MASTER REGION FOR DB2ID dbid IS NOT FOUND OR DB2 ERLY NOT VALID
Explanation: The collector code could not locate the DB2 master started task for the indicated DB2 system. This can be caused by the dbidMSTR started task not running or because the ERLY control block is invalid.
System action: None.
User response: If the master task is not running, restart the DB2 system. Otherwise, contact IBM support.

KDPB025  JES CVT NOT FOUND
Explanation: This is an internal error.
System action: None.
User response: Contact IBM support.

KDPB026  NO SUBSYSTEMS FOUND
Explanation: This is an internal error.
System action: None.
User response: Contact IBM support.
KDPDC005 • KDPDC09E

KDPDC005  DPDC UNABLE TO OPEN RKANPAR
DATASET R0(xxxxxxxx) R1(xxxxxxxx) R15(xxxxxxxx)
Explanation: An error occurred when trying to open the PDS RKANPAR.
System action: None.
User response: Verify that the data set is available and not allocated to some other task in exclusive mode.

KDPDC006  DPDC UNABLE TO ENQUEUE
RKANPAR DATASET R0(xxxxxxxx) R1(xxxxxxxx) R15(xxxxxxxx)
Explanation: An ENQUEUE on the RKANPAR data could not be obtained. The return code from the ENQUEUE request is in R15.
System action: None.
User response: None.

KDPDC007  DPDC UNABLE TO FIND MEMBER
member R0(xxxxxxxx) R1(xxxxxxxx) R15(xxxxxxxx)
Explanation: The indicated member member is not located in the RKANPAR PDS. The Load Runtime Members job might not have been run successfully from the Configuration Tool (formerly ICAT).
System action: None.
User response: None.

KDPDC009  DPDC COMMAND {ENTERED | PROCESSED}: cccccc
Explanation: If PROCESSED is shown, the indicated command has been successfully executed.
If ENTERED is shown, the indicated command has failed. Message KDPDC039 follows this message.
System action: None.
User response: None.

KDPDC01E  NO MATCHING KDPCNFG PARM FOR DB2ID (dbid)
Explanation: The data set member RKANPAR(KDPCFNFG) does not have collection information entries for this DB2 subsystem.
System action: None.
User response: None.

KDPDC039  DPDC COMMAND FORMAT ERROR
Explanation: The previous command has a format error.
System action: None.
User response: Correct the format and reissue the command.

KDPDC03F  UNABLE TO ALLOCATE MEMORY FOR ANCHOR
Explanation: Insufficient storage for this function. Either not enough storage is available for the started task or some type of storage overlay is preventing the allocation.
System action: None.
User response: Contact IBM support.

KDPDC04E  NO DATA COLLECTORS SPECIFIED FOR DB2ID (dbid)
Explanation: A DB2 system was identified to be monitored, but there are no collectors defined for that DB2 subsystem.
System action: None.
User response: Verify that the specifications used in the Configuration Tool (formerly ICAT) for this DB2 system are correct.

KDPDC07E  UNABLE TO ALLOCATE KDPDNFC PARM BLOCK
Explanation: Insufficient storage for this function. Either not enough storage is available for the started task or some type of storage overlay is preventing the allocation.
System action: None.
User response: Contact IBM support.

KDPDC08E  INVALID SUBSYSTEM TYPE=cccccccc
Explanation: The subsystem type is not DB2ID.
System action: None.
User response: Verify the statements in KDPCNFG to ensure the format of the commands is proper. The commands should all start with DB2ID(xxxx).

KDPDC09E  INVALID SUBSYSTEM ID=cccccccccccc
Explanation: The DB2 system name specified on the DB2ID statement is either missing or has more than 4 characters in the name.
System action: None.
User response: Correct this in the KDPCNFG member
or rerun the Configuration Tool (formerly ICAT) using the proper name of the DB2 subsystem.

KDPDC10E INVALID COLLECTOR=cccccccc SPECIFIED

Explanation: The collector name is unknown. The valid collectors are COUPFAC(), THREAD(), OBJECTA(), OBJECTB(), OBJECTV, GBPSTAT(), CONFLICT() and SRM().

System action: None.

User response: None.

KDPDC11E ERROR OPENING RKANPAR(KDPCNFG)

Explanation: The system could not open the KDPCNFG member of the RKANPAR library. The Configuration Tool (formerly ICAT) creates this member when a LOAD operation is performed for this product.

System action: None.

User response: Verify that the member exists and can be accessed, and that the ICAT job succeeded.

KDPDC12E UNEXPECTED EOF IN RKANPAR(KDPCNFG)

Explanation: An EOF condition was raised while processing a command with a continuation indicator.

System action: None.

User response: Check the KDPCNFG member to ensure that no continuation character is on the last line. The KDPCNFG member can be recreated using the Configuration Tool (formerly ICAT) job for loading the RTE.

KDPDC13E INVALID INTERVAL FOR DB2ID (dbid) cccccccc. IGNORED.

Explanation: The interval value specified is not numeric and cannot be processed. The value specified has to represent the number of seconds between samples.

System action: None.

User response: Verify the value in the KDPCNFG member and set it to a number from 30 to 999.

KDPDC14F NO SUBSYSTEMS ENABLED IN RKANPAR(KDPCNFG)

Explanation: No parameters controlling the DB2 systems have been specified in the KDPCNFG member.

System action: None.

User response: Verify that the Configuration Tool (formerly ICAT) job to load the libraries has been run.

KDPDE007 DPDC COLLECTOR SUCCESSFULLY DETACHED FOR DB2 dbid. TCB ADDRESS=cccccccc

Explanation: The collector has successfully stopped and the TCB used by it was released.

System action: None.

User response: None.

KDPDS00I MONITORED SUBSYSTEMS:

Explanation: This message will appear in the RKLVLOG as a result of issuing the DPDC DISPLAY command. This is the first line of output from the DPDC DISPLAY command.

System action: None.

User response: None.

KDPDS01I DB2(dbid) STATE=cccccccc COLLECTORS:

Explanation: This message is shown in RKLVLOG as a result of issuing the DPDC DISPLAY command. For each monitored DB2 system a line is shown with the identifier and its state. Valid states are STopping, STOPped, STOPped (NO AUTODiscovery), RESTARTing, RESTARTed, STARTing, STARTed, or UNKNOWN. The valid collectors are COUPFAC(), THREAD(), OBJECTA(), OBJECTB(), OBJECTV, GBPSTAT(), CONFLICT() and SRM().

System action: None.

User response: None.

KDPDS02I THREAD(nn) OBJECTV(nn) SRM(nn)

Explanation: This message is shown in the RKLVLOG as a result of issuing the DPDC DISPLAY command. Each monitored DB2 system will display a line showing which collectors are active and the sampling interval.

System action: None.

User response: None.

KDPDS99I nnn SUBSYSTEMS DISPLAYED

Explanation: This message is shown in the RKLVLOG as a result of the DPDC DISPLAY command. Each last line of the output contains the number of DB2 subsystems being monitored.

System action: None.

User response: None.
functions such as connecting to the TEMS and establishing server connections for DB2 subsystems that it will monitor.

**User response:** None.

---

**KDPPIR10E** The number of arguments exceeds the limit of 32.

**Explanation:** The number of arguments that is passed to the plex level agent at startup exceeds the predefined limit of 32 arguments.

**System action:** The plex level agent stopped to prevent potential storage overlays.

**User response:** Verify the format of the command in the KD5AGST member of the RKANCMDU library. It should look like this:

```
AT ADD ID=KDPP DELAY=00:00:15
CMD='IRAMAN KDPPLEX START'
```

If there are text strings that do not match the example above, correct the text strings and restart the plex level agent.

---

**KDPPIR11E** The length of the argument string exceeds the limit of 4096 bytes.

**Explanation:** The length of the argument string that is passed to the plex level agent at startup exceeds the predefined limit of 4096 bytes.

**System action:** The plex level agent stopped to prevent potential storage overlays.

**User response:** Verify the format of the command in the KD5AGST member of the RKANCMDU library. It should look like this:

```
AT ADD ID=KDPP DELAY=00:00:15
CMD='IRAMAN KDPPLEX START'
```

If there are text strings that do not match the example above, correct the text strings and restart the plex level agent.

---

**KDPPIR55E** Cannot allocate the DPGLOBAL control block.

**Explanation:** The storage for a common area that is required by the plex level agent cannot be allocated. There might be a storage constraint on the started task.

**System action:** The plex level agent stopped.

**User response:** Verify that the task that is started to run the plex level agent is not constrained by any memory restrictions in the KD5SYSIN member of the RKANPAR library. If the plex level agent runs in the same address space as a TEMS, verify the storage specifications in the KDSSYSIN member of the RKANPAR library.
KDPPIR57E  Cannot allocate the PLEX Status control block.

Explanation: The storage for a common area that is required by the plex level agent cannot be allocated. There might be a storage constraint on the started task.

System action: The plex level agent stopped.

User response: Verify that the task that is started to run the plex level agent is not constrained by any memory restrictions in the KDSSYSIN member of the RKANPAR library. If the plex level agent runs in the same address space as a TEMS, verify the storage specifications in the KDSSYSIN member of the RKANPAR library.

KDPPIR58E  Error %d occurred when trying to find the PLEX status.

Explanation: The plex level agent cannot obtain the status information on the node that represents the plex level DB2 node. The status that is returned for the plex level DB2 node is unexpected. The following error codes for the status request are displayed:

8  Error returned while preparing the SQL statement.
12  Error returned while creating the request for the SQL statement.
16  Error returned while opening the request for the SQL statement.
20  Error returned while obtaining the SQLDA output area.

System action: The plex level agent stopped.

User response: An internal error might have occurred or the communication with the TEMS HUB failed. Verify that the TEMS HUB is running and that it is correctly specified by the HUB_NAME parameter:
- If the HUB is down, restart the HUB.
- If the HUB is not correctly specified, correct the value for the HUB_NAME parameter in the KD5ENV member of the RKANPARU library.
- If the HUB is running and correctly specified, contact IBM Support to report the problem.

KDPPIR59E  The KDPPLEX agent stopped because the global area is not allocated.

Explanation: The storage for a common area that is required by the plex level agent is not allocated.

System action: The plex level agent stopped because of an internal error.

User response: Contact IBM support to report this problem.

KDPPIR65E  Cannot allocate the Connection Object.

Explanation: The storage for a common area that is required by the plex level agent cannot be allocated. There might be a storage constraint on the started task.

System action: The plex level agent stopped.

User response: Verify that the task that is started to run the agent is not constrained by any memory restrictions in the KD5SYSIN member of the RKANPAR library. If the agent is running in the same address space as a TEMS, verify the storage specifications in the KDSSYSIN member of the RKANPAR library.

KDPPIR66E  Error %d occurred when connecting to %s on port %s

Explanation: An error occurred when connecting to the TEMS HUB. The error message contains the error number, the value for the HUB name, and the port number.

One of the following errors might have occurred:

8  Global area not found.
12  HUB_NAME not found.
16  Storage for connection not available.
20  Storage for nodes not available.

System action: The plex level agent stopped.

User response: The error codes indicate communication errors or storage errors.
- If the HUB_NAME is not found, verify that the TEMS HUB is running and that the HUB_NAME variable is set correctly in the KD5ENV member of the RKANPAR library.
- If one of the other storage errors occurred, verify that the specifications in the KDSSYSIN member of the RKANPAR library are correct.

KDPPIR71E  Connection failure message: %s

Explanation: The connection to the TEMS HUB failed as indicated by the message number KDPPIR66E, which is displayed before this message is displayed. This message contains more information to resolve the connection error.

System action: The agent stopped because of one of the error situations that are described in the message number KDPPIR66E.

User response: Contact IBM support to report this problem.
KDPPIR72E • KO2D0004E

KDPPIR72E  Cannot connect to TEMS HUB. Therefore KDPPLEX stopped: rc = %d

Explanation: The agent cannot connect to TEMS HUB. This message is usually preceded by the message number KDPPIR66E and KDPPIR71E.

System action: The plex level agent stopped.

User response: The error codes indicate communication errors or storage errors.

• If the HUB NAME is not found, verify that the TEMS HUB is running and that the HUB_NAME variable is set correctly in the KD5ENV member of the RKANPAR library.

• If one of the other storage errors occurred, verify that the specifications in the KDSSYSIN member of the RKANPAR library are correct.

KDPSC001  DPDC GLOBAL VECTOR TABLE NOT FOUND

Explanation: The global vector table has not been allocated, indicating that the KDPBGV routine failed to properly initialize the environment.

System action: None.

User response: Look for previous messages for an indication as to what failed. Contact IBM support.

KDPRT01E  Wait for OMPE server, <reason>

Explanation: The agent is unable to connect to the OMPE Server. One of these reasons is displayed:

• OMPECT not inited
• OMPECT access error
• OMPECT struct error
• PE STOKEN loc error
• D2_STC not active
• D2_STC not found
• Routbl not inited

System action: Agent waits for the connection to OMPE server.

User response: Contact IBM support after verifying the following:

1. If HLQ.RKANPARU(KD5ENV) has environment variable KDP_D2_STC set, make sure the specified OMPE server task is running. If not, start the OMPE server task.

2. There could be a delay before the agent can communicate with OMPE server task. The delay is configurable using environment variable KDP_STATUS_REFRESH in HLQ.RKANPARU(KD5ENV). While waiting, you may see KD5ASSCT messages.

3. If OMPE server task is running, check the server log to see if there are any error associated with D5API. The expected messages from OMPE server log are:

   K0210100I D5API COLLECTOR INITIALIZATION IN PROGRESS
   K0210149I D5API ASM BUILD IS 04/17/15 11.11
   K0210130I D5API REGISTRY ENTRY SUCCESSFULLY REBUILT
   K0210148I D5API USING REGISTRY XE_D5APIRTB_V530
   K0210141I D5API COLLECTOR STIMER SET TO 00003000
   K0210101I D5API COLLECTOR INITIALIZATION COMPLETE
   K0210154I D5API COLLECTOR CONNECTED TO DB2 ssid ON BEHALF OF AGENT agenttask

   If you do not see above messages, check HLQ.RKD2PAR(ompetask), make sure that you have common collector started.

   * * Starts the Common Collector.

   * EXEC OMPECCPC

KO2D - D5API Collection for TEP and Enhanced 3270UI

KO2D0000I  To display trace debug output, contact IBM Support to activate the traces.

KO2D0000E  ssid <repname> CT_getCounterValueRaw <table><field> not found (KO2ABROW)

Explanation: An internal exception occurred.

User response: Contact IBM support to report the error.

KO2D0004E  ssid FL_addFieldByName <table><field> - Return Code=nnnnnnnn - Reason
KO2D0005E  ssid Incorrect Collection Table Name <table> (<module>)

Explanation: An internal exception occurred in one of the modules KO2AHLR or KO2AFSAM.

User response: Contact IBM support to report the error codes.

KO2D0011E  ssid Moving value to a row would exceed table size mmmmmmm Field Name=<field> Length=mnmnmnm

Explanation: An internal exception occurred.

User response: Contact IBM support to report the error.

KO2D0012E  ssid <routine> - Return Code=mnmnmnm - Reason Code=mnmnmnm (<module>)

Explanation: An internal exception about <routine> has occurred in one of the modules KO2ABROW, KO2AFSAM, KO2AHLR, KO2APHLR or KO2CPUCL.

User response: Contact IBM support to report the error codes

KO2D0013E  ssid mmmmmmm Field Name=<field> Length=mnmnmnm

Explanation: An internal exception has occurred in one of the modules KO2AFSAM, KO2AHLR, KO2APHLR, KO2CPUCL or KO2LACRA.

User response: Contact IBM support to report the error.

KO2D0014I  ssid Cancel thread thread ID

Explanation: This message provides detail about the cancellation action performed:

- Message ID (KO20014I)
- TSO ID of user who canceled thread
- DB2 subsystem ID
- Thread ID of canceled thread
- DSNV message DSNV426I (thread canceled) or DSNV427I (invalid thread ID specified)

User response: None required.
KO2E3002I • KO2E3012W

Explanation: The OMEGAMON XE for DB2 PE Event Collection Manager (EVENTMGR) started successfully.

System action: The Event Collection Manager is now active.

User response: None.

KO2E3002I EVENTMGR MODIFY PROCESSING IN PROGRESS

Explanation: The OMEGAMON XE for DB2 PE Event Collection Manager (EVENTMGR) is currently carrying out an MVS MODIFY request.

System action: Processing continues.

User response: None.

KO2E3003I EVENTMGR STOP PROCESSING IN PROGRESS

Explanation: The OMEGAMON XE for DB2 PE Event Collection Manager (EVENTMGR) is currently carrying out an MVS stop request.

System action: Processing continues.

User response: None.

KO2E3004I EVENTMGR TERMINATION COMPLETE

Explanation: The OMEGAMON XE for DB2 PE Event Collection Manager (EVENTMGR) has now shut down.

System action: None.

User response: None.

KO2E3005W EVENTMGR %%%%%% IS ALREADY ACTIVE IN SERVER %%%%%% - START REQUEST REJECTED

Explanation: The OMEGAMON XE for DB2 PE Event Collection Manager (EVENTMGR) is already active. You cannot start another, because only one Event Collection Manager is allowed for each version of OMEGAMON XE for DB2 PE that is running on any one MVS system.

System action: The start request is ignored.

User response: None.

KO2E3006E EVENTMGR MODIFY REQUEST CONTAINS INVALID SYNTAX

Explanation: A syntax error in the MVS MODIFY request is found. The OMEGAMON XE for DB2 PE Event Collection Manager (EVENTMGR) cannot respond.

System action: The MVS MODIFY request is ignored.

User response: Correct the MVS MODIFY request, then reissue it.

KO2E3007W START REQUEST IGNORED, MONITORING IS ACTIVE

Explanation: The start request has failed because collection is already active.

System action: The request is ignored.

User response: None.

KO2E3008E START DB2 FAILED, DB2 NOT DEFINED

Explanation: The DB2 subsystem ID passed on the start request is not defined on the MVS system in use.

System action: The request is ignored.

User response: Correct the DB2 ID on the start request.

KO2E3009S START DB2 FAILED, DB2 NOT ACTIVE

Explanation: The DB2 subsystem ID passed on the start request is not currently active on the MVS system in use.

System action: The request is ignored.

User response: Correct the DB2 ID on the start request.

KO2E3010S START DB2 FAILED, DB2 VERSION NOT SUPPORTED

Explanation: The start request has failed because the DB2 version is not supported by this release of OMEGAMON XE for DB2 PE.

System action: The request is ignored.

User response: Contact IBM support.

KO2E3011I NO DB2 SUBSYSTEM CURRENTLY MONITORED

Explanation: No collections are active for any DB2 subsystems.

System action: Processing continues.

User response: None.

KO2E3012W STOP REQUEST DENIED, MONITORING NOT ACTIVE

Explanation: The stop request could not be processed because monitoring is not active for the specified DB2 subsystem.

System action: Processing continues.
KO2E3013E  SYNTAX ERROR LOCATED IN PARM= AT STARTUP

Explanation: Usually, a parameter is configured using an automatic process, however the user has bypassed the usual configuration. Three data members might be incorrect in the RKD2PAR parameter data set. There might be a data member in RKDPAR that has the same name as the started task.

System action: Processing terminates.

User response: Rebuild the runtime environment by using the Configuration Tool (formerly ICAT) to restore the data set back to the correct values.

KO2E3014U  INSTALL OF SSCVT HAS FAILED

Explanation: The Event Collection Manager (EVENTMGR) has encountered an error while starting up in the subsystem.

System action: Processing is terminated.

User response: Contact IBM support.

KO2E3040I  VOLUME ANALYSIS INITIALIZATION COMPLETE

Explanation: Volume analysis collection has successfully completed its initialization processing. Volume analysis is started automatically when object analysis collection is started for the first DB2 subsystem being monitored.

System action: Processing continues; volume analysis is active.

User response: None.

KO2E3041I  VOLUME ANALYSIS HAS Terminated

Explanation: Volume analysis collection has successfully shut down. This message is issued when the Event Collection Manager (EVENTMGR) terminates.

System action: None.

User response: None.

KO2E3042I  VOLUME ANALYSIS TERMINATED FOR DB2=subsystem

Explanation: Volume analysis collection for the indicated DB2 subsystem has terminated because object analysis collection has terminated.

System action: Processing continues; but volume analysis for the indicated DB2 subsystem is terminated.

User response: None.

KO2E3043S  VOLUME ANALYSIS ERROR RECOVERY: ID=V270, MOD=cccccccc, OFFSET=nnnnnn, CODE=nnnn/ nnnnnnnnn

Explanation: An error occurred during a Volume Analysis data gathering pass. Volume Analysis successfully recovered from this error. This message describes the type of error that occurred.

System action: Volume Analysis processing continues.

User response: No action is required.

KO2E3050I %%%% OBJECT ANALYSIS PHASE1 INITIALIZATION COMPLETE

Explanation: The startup of object analysis collection for the indicated DB2 subsystem has successfully completed phase 1 initialization processing.

System action: Processing continues.

User response: None.

KO2E3051I %%%% OBJECT ANALYSIS PHASE2 INITIALIZATION COMPLETE

Explanation: The startup of object analysis collection for the indicated DB2 subsystem has successfully completed phase 2 initialization processing.

System action: Processing continues.

User response: None.

KO2E3052E %%%% OBJECT ANALYSIS CANNOT ESTABLISH PREFETCH COLLECTION, RSN=nnnn

Explanation: Object Analysis cannot completely collect information about DB2 prefetch data.

System action: Processing continues.

User response: None.

KO2E3053I %%%% COMMON COLLECTOR INTEGRATION WITH OMPE NOT AVAILABLE

Explanation: The OMEGAMON Collector STEPLIB included the Db2 Data Access Common Collector (CQC) Library, but not at the correct level to support CQC management of OMPE functions.

System action: Processing continues.

User response: Programmer or Operator Response: If CQC management of Object Analysis is required, the PTF for CQC APAR PH01031 must be available to the OMPE Collector.

KO2E3053I %%%% COMMON COLLECTOR INTEGRATION WITH OMPE NOT AVAILABLE

Explanation: The OMEGAMON Collector STEPLIB included the Db2 Data Access Common Collector (CQC) Library, but not at the correct level to support CQC management of OMPE functions.

System action: Processing continues.

User response: Programmer or Operator Response: If CQC management of Object Analysis is required, the PTF for CQC APAR PH01031 must be available to the OMPE Collector.
KO2E3054I  %%%% OBJECT ANALYSIS GETPAGE MANAGEMENT

Explanation: Indicates if Object Analysis will manage the GETPAGE data collection directly (ECTL) or will use the IBM Db2 Data Access Common Collector (CQC) to manage the collection.

System action: Processing continues.

User response: None.

KO2E3055E  %%%% GETPAGE ENABLE ERROR

CDE=xxxxxxxx, RC=xxxxxxxx, RSN=xxxxxxxx

Explanation: An internal error occurred during GETPAGE processing enablement.

System action: None.

User response: This indicates an internal logic error; contact IBM Support.

KO2E3061I  %%%% OBJECT ANALYSIS TERMINATION IN PROGRESS

Explanation: Object analysis is terminating collection for the indicated DB2 subsystem. This message is issued during object analysis termination.

System action: Processing continues.

User response: None.

KO2E3062I  %%%% OBJECT ANALYSIS PHASE1 TERMINATION COMPLETE

Explanation: Object analysis phase 1 termination was successful for the indicated DB2 subsystem. This message is issued during object analysis termination.

System action: Processing continues.

User response: None.

KO2E3063I  %%%% OBJECT ANALYSIS PHASE2 TERMINATION COMPLETE

Explanation: Object analysis phase 2 termination was successful for the indicated DB2 subsystem. This message is issued during object analysis termination.

System action: Processing continues.

User response: None.

KO2E3064I  %%%% OBJECT ANALYSIS TERMINATION SUCCESSFUL

Explanation: Object analysis termination was successful for the indicated DB2 subsystem. This message is issued upon completion of object analysis termination.

System action: Processing continues.

User response: None.

KO2E3065I  %%%% OBJECT ANALYSIS HAS DETECTED THAT DB2 TERMINATED

Explanation: Object analysis collection has detected that the monitored DB2 subsystem has terminated.

System action: Object analysis collection for the indicated DB2 subsystem is terminating.

User response: None.

KO2E3066S  %%%% OBJECT ANALYSIS INITIALIZATION FAILED REASON CODE=%%%%

Explanation: Object analysis for the indicated DB2 subsystem failed during initialization. The indicated reason code consists of four hexadecimal digits of the form pnnn.

p identifies the phase of Object Analysis initialization:

1    Initialization phase 1
2    Initialization phase 2

nnn identifies the error:

000    Internal DB2 control block validation failed.
001    Internal DB2 module validation failed.
002    OMEGAMON interface module load failed.

System action: Object analysis collection for the indicated DB2 subsystem is not started.

User response: Contact IBM support.

KO2E3067S  %%%% OBJECT ANALYSIS TERMINATION CLEANUP PHASE1 FAILED

Explanation: Object analysis for the indicated DB2 subsystem failed during phase 1 termination processing.

System action: Processing continues.

User response: Contact IBM support.

KO2E3068S  %%%% OBJECT ANALYSIS TERMINATION CLEANUP PHASE2 FAILED

Explanation: Object analysis for the indicated DB2 subsystem failed during phase 2 termination processing.

System action: Processing continues.

User response: Contact IBM support.
KO2E3069U %%% OBJECT ANALYSIS ABNORMAL TERMINATION IN PROGRESS

**Explanation:** An abnormal condition was detected in the Object Analysis GETPAGE or I/O intercepts. An MVS SVC dump has occurred and should be retained for problem determination. The DB2 subsystem being monitored is identified in the message text.

**System action:** The Object Analysis function for this DB2 subsystem is terminated.

**User response:** Contact IBM support.

KO2E3070I %%% OBJECT ANALYSIS INITIALIZATION IN PROGRESS

**Explanation:** The object analysis collection for the indicated DB2 subsystem is starting. This message is written to the system log whenever an object analysis start request is being processed.

**System action:** Processing continues.

**User response:** None.

KO2E3071I %%% OBJECT ANALYSIS INITIALIZATION SUCCESSFUL

**Explanation:** The startup of object analysis collection for the indicated DB2 subsystem was successful.

**System action:** Object analysis collection is now active.

**User response:** None.

KO2E3078S %%% OBJECT ANALYSIS PHASE2 TERMINATION HAS FAILED

**Explanation:** Object analysis for the indicated DB2 subsystem failed during termination.

**System action:** Object analysis collection for the indicated DB2 subsystem did not successfully terminate.

**User response:** Contact IBM support.

KO2E3080I %%% OBJECT ANALYSIS FORCED INTERVAL PROCESSING STARTED

**Explanation:** Object Analysis for the indicated DB2 subsystem detected a shortage of available virtual memory in the address space.

**System action:** None.

**User response:** Modify the REGION= parameter on the started proc that runs Object Analysis. Increase the memory allocation for the address space running Object Analysis and restart Object Analysis.

KO2E3081I %%% OBJECT ANALYSIS FORCED INTERVAL PROCESSING ENDED

**Explanation:** This message is issued a short time after the KO2E3080I message and indicates the successful completion of the interval processing.

**System action:** Object Analysis stops temporarily.

**User response:** Modify the REGION= parameter on the started proc that runs Object Analysis. Increase the memory allocation for the address space running Object Analysis and restart Object Analysis.

KO2E3082S %%% OBJECT ANALYSIS MEMORY SHORTAGE SHUTDOWN

**Explanation:** Object Analysis cannot continue with current processing because of virtual storage constraints.

**System action:** None.

**User response:** Modify the REGION= parameter on the started proc that runs Object Analysis. Increase the memory allocation for the address space running Object Analysis and restart Object Analysis.

KO2E3083I %%% OBJECT ANALYSIS RESTART WILL BE DONE ON DB2 RESTART

**Explanation:** Object Analysis detected that the indicated DB2 subsystem has stopped.

**System action:** Object Analysis will remain active and will restart its monitoring when the indicated DB2 subsystem restarts.

**User response:** None.

KO2E3084S %%% OBJECT ANALYSIS RESTART FAILED

**Explanation:** Object Analysis could not restart its monitoring of the indicated DB2 subsystem.

**System action:** Object Analysis for the indicated DB2 subsystem is terminated.

**User response:** Manually restart Object Analysis for the indicated DB2 subsystem. If the attempt fails, contact IBM support.

KO2E3085I %%% OBJECT ANALYSIS RESTART TERMINATED DUE TO B2 STOP COMMAND

**Explanation:** Object Analysis was waiting for the indicated DB2 subsystem to be restarted, but was stopped by the user via a Stop command.

**System action:** Object Analysis for the indicated DB2 subsystem is terminated.

**User response:** None.
KO2E3991E  EVENTMGR INVALID START PARM SUPPLIED

Explanation:  This message is issued by the Event Manager to indicate that an invalid START parameter has been specified in member EMGR<1par> of the RKD2PAR parameter library.

KO2H - Near-Term History Data Collector messages

KO2H0001W  ssid NEAR-TERM HISTORY DATA COLLECTOR - aaaaaaaaaa DB2 subsystem NOT ACTIVE. WAIT, OR REPLY ANOTHER DB2 ID, OR REPLY STOP

Explanation:  The indicated DB2 subsystem is not active at this time.  aaaaaaaaaa = COLLECTION, if this is the DB2 for which near-term history data is to be collected.

System action:  Waits for a reply from the operator and then takes the requested action.

User response:  Perform one of the following actions:

• Wait for the DB2 subsystem to become active and do not give a reply.  This WTOR message is automatically canceled when the DB2 becomes active.
• Reply with the ID of another DB2 subsystem to be used in place of the inactive DB2.
• Reply Stop to terminate the attempted data collection for this DB2 subsystem.

To have near-term history collection wait for DB2 to become active without issuing this WTOR, add the NTHDB2I=WAIT option to the OMPEOPTS member of the RKD2PAR data set.

KO2H0002W  ssid NEAR-TERM HISTORY DATA COLLECTOR - DB2 subsystem IS NOT VALID. REPL Y ANOTHER DB2 ID, OR REPL Y STOP

Explanation:  The indicated DB2 is not valid on this system.  aaaaaaaaaa = COLLECTION, if this is the DB2 subsystem for which near-term history data is to be collected.

System action:  The system waits for a reply from the operator, then takes requested action.

User response:  Perform one of the following actions:

• Wait for the DB2 subsystem to become active and do not give a reply.  This WTOR message is automatically canceled when the DB2 becomes active.
• Reply with the ID of another DB2 subsystem to be used.
• Reply Stop to terminate the attempted data collection for this DB2 subsystem.

KO2H0013E  INVALID PARAMETER: parameter

Explanation:  The indicated parameter is not valid in the current context.

System action:  Processing continues with the next recognizable parameter, if possible.  The report request is rejected, and processing continues with the next report statement (if any).

User response:  Correct the parameter and rerun the report request.  If the parameter seems correct, check the adjacent parameters for correct syntax of the entire statement.

KO2H0450I  NEAR-TERM HISTORY DATA COLLECTOR - INITIALIZING COMMON SERVICES

Explanation:  An informational message.

KO2H0452I  NEAR-TERM HISTORY DATA COLLECTOR - TERMINATING COMMON SERVICES

Explanation:  An informational message.

KO2H0561I  H2 DATA SET dsname STATUS n% FULL

Explanation:  This message supplies information about the status of all VSAM data sets specified in the collection options member.  It shows whether the data set is actively storing data, available to store data, or unavailable.  It also shows what percentage of the data set has been used.
KO2H0605I  <V1> Waiting for initialization of output writer task <V2> minutes

Explanation:  <V1> is the name of the DB2 subsystem.  
<V2> is the number of minutes.

This message might be issued every five minutes. The Near Term History task is waiting for the output writer task to complete the initialization.

System action:  The output writer task might be pre-formatting the VSAM linear data sets or it might be processing the VSAM files.

User response:  None.

KO2H0901U  NEAR-TERM HISTORY DATA COLLECTOR - UNABLE TO LOAD BASE SERVICES

Explanation:  An error occurred during initialization.

User response:  Rerun the job. If the problem recurs, see your system programmer or contact IBM support.

KO2H0902U  NEAR-TERM HISTORY DATA COLLECTOR - CANNOT LOCATE LOAD MODULE module. TERMINATING

Explanation:  OMEGAMON XE for DB2 PE initialization processing could not locate the indicated load module. This message is usually caused by a failure to fully unload the OMEGAMON XE for DB2 PE product tape, or by a failure to migrate all modules to the runtime library.

System action:  Processing terminates.

User response:  Verify that the load module is in the proper library and restart OMEGAMON XE for DB2 PE.

KO2H0903U  NEAR-TERM HISTORY DATA COLLECTOR - LOAD MODULE module IS AT THE WRONG RELEASE LEVEL. TERMINATING

Explanation:  The indicated OMEGAMON XE for DB2 PE load module is not at the correct release level. This message is usually caused by a failure to fully unload the OMEGAMON XE for DB2 PE product tape, or by a failure to migrate all modules to the runtime library.

System action:  Processing terminates.

User response:  Place a version of the load module that is at the correct release level in the proper library and restart OMEGAMON XE for DB2 PE.
KO2H1316I NEAR-TERM HISTORY DATA COLLECTOR HAS TERMINATED
Explanation: This is an informational message.
System action: Processing terminates.
User response: None.

KO2H1350E NEAR-TERM HISTORY DATA COLLECTOR - PARM PROCESSOR FAILED TO OBTAIN PARM WORK AREA
Explanation: An internal program error occurred where one task did not get passed from one area to another.
System action: Processing terminates.
User response: Contact DB2 support.

KO2H1351E NEAR-TERM HISTORY DATA COLLECTOR - CANNOT LOCATE RKD2PAR DATA SET
Explanation: Data set RKD2PAR could not be located. The data set probably does not exist.
System action: Processing terminates.
User response: Check the data set specified for ddbname RKD2PAR and ensure that it is allocated.

KO2H1352E NEAR-TERM HISTORY DATA COLLECTOR - CANNOT OPEN RKD2PAR DATA SET
Explanation: The RKD2PAR data set could not be opened. The data set probably does not exist.
System action: Processing terminates.
User response: Check the data set specified for ddbname RKD2PAR and ensure that it is allocated.

KO2H1353E NEAR-TERM HISTORY DATA COLLECTOR - CANNOT LOCATE RKD2PAR MEMBER SPECIFIED
Explanation: The RKD2PAR member could not be located. The member probably does not exist.
System action: Processing terminates.
User response: Check the data set specified for ddbname RKD2PAR and ensure that the member is allocated.

KO2H1354E NEAR-TERM HISTORY DATA COLLECTOR - CANNOT ACQUIRE ENOUGH STORAGE TO READ RKD2PAR DATA SET
Explanation: Unable to obtain sufficient storage to read the RKD2PAR data set.
System action: Processing terminates.
User response: Contact IBM support.

KO2H1355E NEAR-TERM HISTORY DATA COLLECTOR - CANNOT ACQUIRE BUFFER STORAGE TO READ RKD2PAR DATA SET
Explanation: Unable to acquire buffer storage to read the RKD2PAR data set.
System action: Processing terminates.
User response: Contact IBM support.

KO2H1356E NEAR-TERM HISTORY DATA COLLECTOR - CANNOT ACQUIRE SUFFICIENT STORAGE FOR PARM PROCESSING
Explanation: Unable to acquire sufficient storage for parameter processing.
System action: Processing terminates.
User response: Contact IBM support.

KO2H1357E ssid NEAR-TERM HISTORY DATA COLLECTOR - WORD WITH NON-ALPHANUMERIC CHARACTER IN THE RKD2PAR RECORD: record
Explanation: A not valid word with a non-alphanumeric character was found in the RKD2PAR record.
System action: Processing terminates.
User response: Check the record following the message and correct it in the RKD2PAR member. For more information about record, see Configuration and Customization, chapter “Monitoring Profiles”, section “Exploiting Monitoring Profiles”.

KO2H1358E ssid NEAR-TERM HISTORY DATA COLLECTOR - INSUFFICIENT PARMS IN THIS RKD2PAR RECORD: record
Explanation: Insufficient parameters for the keyword were found in this RKD2PAR record.
System action: Processing terminates.
User response: Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

KO2H1359E ssid NEAR-TERM HISTORY DATA COLLECTOR - UNBALANCED PARENTHESES IN THIS RKD2PAR RECORD: record
Explanation: Unbalanced parentheses for the keyword
were found in this RKD2PAR record.

**System action:** Processing terminates.

**User response:** Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

---

**KO2H1360E**  
*ssid NEAR-TERM HISTORY DATA COLLECTOR - INVALID KEYWORD/PARAMETER IN THIS RKD2PAR RECORD: record*

**Explanation:** A keyword or parameter greater than 27 characters or a wrong keyword was found in this RKD2PAR record.

**System action:** Processing terminates.

**User response:** Check the RKD2PAR record following this message and correct it in data set member RKD2PAR(COPTssid).

---

**KO2H1361E**  
*ssid NEAR-TERM HISTORY DATA COLLECTOR - INVALID NONNUMERIC CHARACTER IN THIS RKD2PAR RECORD: record*

**Explanation:** A not valid nonnumeric character for the keyword was found in this RKD2PAR record.

**System action:** Processing terminates.

**User response:** Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

---

**KO2H1362E**  
*ssid NEAR-TERM HISTORY DATA COLLECTOR - ALPHA CHARS INSTEAD OF NUMBER IN THIS RKD2PAR RECORD: record*

**Explanation:** An alphanumeric character for the keyword was found in this RKD2PAR record. The keyword requires a numeric value.

**System action:** Processing terminates.

**User response:** Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

---

**KO2H1363E**  
*ssid NEAR-TERM HISTORY DATA COLLECTOR - INVALID NUMERIC CHARACTER IN THIS RKD2PAR RECORD: record*

**Explanation:** A not valid numeric character for the keyword was found in this RKD2PAR record.

**System action:** Processing terminates.

**User response:** Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

---

**KO2H1364E**  
*ssid NEAR-TERM HISTORY DATA COLLECTOR - TOO MANY PARMS IN THIS RKD2PAR RECORD: record*

**Explanation:** Too many parameters for the keyword were found in this RKD2PAR record.

**System action:** Processing terminates.

**User response:** Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

---

**KO2H1365E**  
*ssid NEAR-TERM HISTORY DATA COLLECTOR - INVALID PARM FOR KEYWORD IN THIS RKD2PAR RECORD: record*

**Explanation:** A not valid parameter for the keyword was found in this RKD2PAR record.

**System action:** Processing terminates.

**User response:** Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

---

**KO2H1366E**  
*ssid NEAR-TERM HISTORY DATA COLLECTOR - PARM OUT OF NUMERIC RANGE IN THIS RKD2PAR RECORD: record*

**Explanation:** A parameter out of numeric range was found in this RKD2PAR record.

**System action:** Processing terminates.

**User response:** Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

---

**KO2H1367E**  
*ssid NEAR-TERM HISTORY DATA COLLECTOR - DETECTED INSUFFICIENT PARMS IN THIS RKD2PAR RECORD: record*

**Explanation:** Insufficient parameters for the keyword were found in this RKD2PAR record.

**System action:** Processing terminates.

**User response:** Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

---

**KO2H1368E**  
*ssid NEAR-TERM HISTORY DATA COLLECTOR - KEYWORD INVOKED TWICE IN THIS RKD2PAR RECORD: record*

**Explanation:** A keyword was invoked twice in this RKD2PAR record.

**System action:** Processing terminates.

**User response:** Check the RKD2PAR record following this message and correct it in the RKD2PAR member.
KO2H1370E  ssid NEAR-TERM HISTORY DATA COLLECTOR - READ ERROR FROM RKD2PAR DATA SET: SYNTAX MESSAGE FOLLOWS:

Explanation: An error occurred while reading the RKD2PAR data set.

System action: Processing terminates.

User response: Check the RKD2PAR data set. If a partitioned data set is used, ensure that the member name is specified.

KO2H1375E  ssid NEAR-TERM HISTORY DATA COLLECTOR - INVAILD PARAMETER FOR KEYWORD keyword

Explanation: A not valid parameter for the DSNZPARM keyword was found. Valid options are YES and NO.

System action: Processing terminates.

User response: Check the RKD2PAR member and ensure that the DSNZPARM option is specified correctly.

KO2H1376I  ssid NEAR-TERM HISTORY DATA COLLECTOR - ONLY ONE DATASET NAME ALLOWED WITH @DATE@TIME OR GDG(+1)

Explanation: More than one specification of a data set was found in parameter SEQDATASET in RKD2PAR(COPTcccc). If the variables @DATE and @TIME are used in the specification of a data set name, or if a Generation Data Group (GDG) name is specified, only a single data set name is allowed.

System action: Processing continues.

User response: Check and correct the SEQDATASET parameter value.

KO2H1377I  ssid NEAR-TERM HISTORY DATA COLLECTOR - MAX GDG LENGTH IS 35 BYTES

Explanation: A GDG name with invalid length was found.

System action: Processing terminates.

User response: Specify a GDG name with a length of up to 35 bytes.

KO2H1378I  ssid NEAR-TERM HISTORY DATA COLLECTOR - GDG SPEC IS NOT COMPATIBLE WITH @DATE@TIME VARIABLES

Explanation: The use of variables @DATE and @TIME is not allowed in the specification of a Generation Data Group (GDG) data set name.

System action: Processing continues.

User response: Correct the data set name in the SEQDATASET parameter in RKD2PAR(COPTcccc).

KO2H1379I  ssid NEAR-TERM HISTORY DATA COLLECTOR - @DATE REQUIRES @TIME TO ASSURE UNIQUE DATA SET NAMES

Explanation: Either variable @DATE or @TIME was found in the specification of a data set name in parameter SEQDATASET in RKD2PAR(COPTcccc). However, to ensure a unique data set name, both variables must be used in the specification.

System action: Processing continues.

User response: Check and correct the SEQDATASET parameter value.

KO2H1380E  ssid NEAR-TERM HISTORY DATA COLLECTOR - NOT USING ANY NEW PARMS FROM RKD2PAR MEMBER

Explanation: An error was detected. No further parameters from the RKD2PAR member will be processed.

System action: Processing terminates.

User response: Check the RKD2PAR member and correct the error.

KO2H1381I  ssid NEAR-TERM HISTORY DATA COLLECTOR - DETECTED EMPTY RKD2PAR INPUT MEMBER OR DATA SET

Explanation: The parameter data set is empty.

System action: Processing continues.

User response: Rebuild the runtime environment by using the Configuration Tool (formerly ICAT) to restore the data set.

KO2H1382I  ssid NEAR-TERM HISTORY DATA COLLECTOR - USED DEFAULT INTERVAL(15) TO EVALUATE MAXHOURS PARAMETER

Explanation: The default collection interval is used to calculate the maximum number of hours that the Near-Term History Data Collector can collect data.

System action: Processing continues.

User response: None.
KO2H1383I ssid NEAR-TERM HISTORY DATA COLLECTOR - SPACE UNITS MUST BE SPECIFIED AS "CYL" OR "TRK"

Explanation: An invalid keyword for the specification of space units was found.
System action: Processing terminates.
User response: None.

KO2H1384I ssid NEAR-TERM HISTORY DATA COLLECTOR - ALLOCATION SPACE AMOUNT INVALID

Explanation: The SPACE parameter in RKD2PAR(COPTcccc) contains a wrong value for the primary or secondary allocation, or both.
System action: Processing continues.
User response: Check and correct the SPACE parameter value.

KO2H1391E ssid NEAR-TERM HISTORY DATA COLLECTOR - CANNOT LOCATE THE PROCESSING ROUTINE FOR KEYWORD n

Explanation: Unable to locate the processing routine for the indicated keyword.
System action: Processing terminates.
User response: Contact IBM support.

KO2H1392E ssid NEAR-TERM HISTORY DATA COLLECTOR - CANNOT PROCESS FILTERING OPTIONS. WORK AREA TOO SMALL

Explanation: The filtering options cannot be processed because the work area is too small.
System action: Processing terminates.
User response: Contact IBM support.

KO2H1393E ssid NEAR-TERM HISTORY DATA COLLECTOR - INVALID TABLE NAME/SYNONYM SPECIFIED IN THIS RKD2PAR RECORD:

Explanation: A not valid table name or synonym was specified.
System action: Processing terminates.
User response: Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

KO2H1394E ssid NEAR-TERM HISTORY DATA COLLECTOR - INVALID QUALIFIER IN THIS RKD2PAR RECORD:

Explanation: A not valid qualifier was specified.
System action: Processing terminates.
User response: Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

KO2H1395E ssid NEAR-TERM HISTORY DATA COLLECTOR - INVALID FILTERING VALUE IN THIS RKD2PAR RECORD:

Explanation: A not valid filtering value was specified.
System action: Processing terminates.
User response: Check the RKD2PAR record following this message and correct it in the RKD2PAR member.

KO2H1399E ssid NEAR-TERM HISTORY DATA COLLECTOR - REQUIRED KEYWORD DB2SYS IS NOT SPECIFIED

Explanation: The DB2SYS keyword is not specified. This keyword is required for the Near-Term History Data Collector, data summarization, and data extraction if LOAD(NO) is specified.
System action: Processing terminates.
User response: Specify the required keyword DB2SYS. Resubmit the request.

KO2H1400E ssid NEAR-TERM HISTORY DATA COLLECTOR - THE MESSAGE NUMBER message-id IS NOT DEFINED

Explanation: The system attempted to write a message while parsing RKD2PAR(COPTcccc), but could not find the indicated message-id.
System action: Processing continues.
User response: Contact IBM support.

KO2H1401E ssid NEAR-TERM HISTORY DATA COLLECTOR - SORT OR SCAN OPTION IS SPECIFIED, BUT NOT ACCOUNTING CLASS

Explanation: SORT or SCAN data was requested, but accounting data is not being collected.
System action: Processing terminates.
User response: Check the specified keywords and make the necessary changes. Resubmit the request.
KO2H1402E  ssid NEAR-TERM HISTORY DATA COLLECTOR - H2DATASET MUST BE SPECIFIED IF VSAM WRITE OPTION SELECTED

Explanation: VSAM was selected as the output destination, but the keyword H2DATASET was not specified.

System action: Processing terminates.

User response: Check the specified keywords and make the necessary changes. Resubmit the request.

KO2H1403E  ssid NEAR-TERM HISTORY DATA COLLECTOR - version-dependent text

Explanation: Version 3: version-dependent text is WRITEOPTION KEYWORD VALUE MUST BE VSAM: A wrong value for the WRITEOPTION keyword was specified. Version 4: version-dependent text is WRITEOPTION KEYWORD VALUE VSAM MISSING: The indicated keyword value is missing.

System action: Processing terminates.

User response: Check the indicated keyword values and make the necessary changes. Resubmit the request.

KO2H1404E  ssid NEAR-TERM HISTORY DATA COLLECTOR -- WRITEOPTION(NONE) SPECIFIED, BUT NO STATISTICS DATA COLLECTED

Explanation: WRITEOPTION(NONE) was specified, but statistics data was not being collected.

System action: Processing terminates.

User response: Check the specified keywords and make the necessary changes. Resubmit the request.

KO2H1405W  ssid NEAR-TERM HISTORY DATA COLLECTOR - KEYWORDS DYNAMICSQL/LOCKCONT/LOCKSUSP IGNORED. version-dependent text

Explanation: Version 3: version-dependent text is (WRITEOPTION NOT VSAM): The keywords DYNAMICSQL, LOCKCONT, and LOCKSUSP are only valid with WRITEOPTION(VSAM). Version 4: version-dependent text is (WRITEOPTION WITHOUT VSAM): The keywords DYNAMICSQL, LOCKCONT, and LOCKSUSP are only valid with WRITEOPTION(VSAM) or WRITEOPTION(VSAM,SEQ).

System action: The Near-Term History Data Collector terminates.

User response: None.

KO2H1406W  ssid NEAR-TERM HISTORY DATA COLLECTOR - KEYWORD n IS OBSOLETE AND WAS IGNORED

Explanation: None.

System action: Processing continues.

User response: None.

KO2H1407E  ssid NEAR-TERM HISTORY DATA COLLECTOR - THRDDDATASET MUST BE SPECIFIED IF THVSAM WRITE OPTION SELECTED

Explanation: In the COPT member for DB2 subsystem ssid, WRITEOPTION(THVSAM) has been specified but no THRDDDATASET name prefix has been specified.

System action: History collection is not started for the DB2 subsystem ssid.

User response: Either add the THRDDDATASET name prefix if you want to collect Thread History, or remove the THVSAM write option if you do not want to collect Thread History.

KO2H1408W  ssid NEAR-TERM HISTORY DATA COLLECTOR - Function for keyword keyword not yet implemented, option set to NO.

Explanation: In the COPT member for DB2 subsystem ssid, a Thread History collection keyword keyword has been specified which is not yet implemented in the Thread History collector.

System action: The keyword keyword is ignored and processing continues.

User response: The keyword keyword can be removed from rhilev.RKD2IPAR(COPTssid) member to prevent the message from appearing.

KO2H1409E  ssid NEAR-TERM HISTORY DATA COLLECTOR - THRDDDATASET must have * in name.

Explanation: In the COPT member for DB2 subsystem ssid, the THRDDDATASET does not contain an asterisk (*). The THRDDDATASET keyword specifies a prefix for the dataset names used by Thread History. The THRDLLOG(nn) parameter specifies the number of thread history data sets. The asterisk (*) after the prefix is substituted with a four digit number starting with 0001 up to the number specified in THRDLLOG.

System action: History collection is not started for the DB2 subsystem ssid.

User response: Correct the THRDDDATASET parameter to include an asterisk (*) at the end of the prefix.
KO2I - D5API Framework messages

KO2I return codes

KO2I messages might be accompanied by the following return codes:

Return code

00000000
    Operation completed successfully

00000004
    Error in collector routine

00000008
    Error in collector routine

00000012
    Error in collector routine

00000016
    Error detected by collector module KO2ACONB

00000020
    Error detected by agent module KD5ATC00

00000024
    Agent module KD5ATC00 timed out or abended

00000028
    Agent module KD5ATC00 detected internal DCST table was not initialized

KO2I reason codes

KO2I messages might be accompanied by the following reason codes:

Reason code

00000000
    Operation completed successfully

00000004
    Invalid call type in D5API control structure

00000008
    Invalid eyecatcher in D5APIUSE structure

00000012
    Invalid D5APIUSE pointer in DAPICOMM structure

00000016
    Collector address space is not active

00000020
    Common collector registry entry not found

00000024
    Common collector registry not found

00000028
    Common collector registry entry eyecatcher is invalid
D5APIUSE structure pointer in registry entry is zero

Agent attempt to connect to collector address space timed out

Agent attempt to collect data from collector timed out. Will retry

While connecting to the collector address space for a given DB2, the agent detected the DB2 subsystem was inactive.

Agent detected the collector address space common collector component (COMMCOLL) is inactive

Agent detected the collector address space common collector component (COMMCOLL) is inactive

Agent could not locate the ASCB address for the collector address space

Agent data collect call was issued for an unsuccessful connection

Agent data collect call occurred while connection was being disconnected

Common collector detected an invalid table name

Agent timed out attempting to disconnect from the collector address space

Agent detected that the common collector registry was not initialized

Agent could not locate the DAPICOMM structure for a given connection

Agent encountered an abend handling a connect, collect, or disconnect request

Agent detected that a connection to the collector address space already existed for a given DB2 subsystem

Common collector detected that the subtask to process IFI requests for a given DB2 subsystem was terminated

Common collector routine KO2AOMBB could not be loaded

Common collector cannot monitor a given DB2 subsystem. The PESERVER instance for it may not have started successfully, or it was stopped.

Agent timed out or encountered a problem handling a connection to the collector address space
KO2I0100I  D5API COLLECTOR INITIALIZATION IN PROGRESS
Explanation: The D5API Collector is currently being initialized.
System action: None.
User response: None.

KO2I0101I  D5API COLLECTOR INITIALIZATION COMPLETE
Explanation: The D5API Collector has been successfully initialized.
System action: None.
User response: None.

KO2I0102I  D5API COLLECTOR MODIFY COMMAND IN PROGRESS
Explanation: The D5API Collector is processing the requested command.
System action: Begins command processing.
User response: None.

KO2I0103I  FORCE STOP REQUEST ACKNOWLEDGED
Explanation: A MODIFY command has been issued to force-stop the OMEGAMON XE for DB2 PE address space.
System action: The OMEGAMON XE for DB2 PE address space is forcibly terminated.
User response: Verify that the OMEGAMON XE for DB2 PE address space has terminated.

KO2I0104I  D5API COLLECTOR STOP PROCESSING IN PROGRESS
Explanation: A Stop command has been issued to terminate the D5API Collector in the OMEGAMON XE for DB2 PE address space.
System action: The D5API Collector is terminated.

KO2I0105U  D5API ABEND ACCESSING DAPICOMM
Explanation: The D5API Collector has abnormally terminated.
System action: An SVC dump is scheduled.
User response: Contact IBM support.

KO2I0553E  HINT Jobstep Program: pppppppp. OMPE Subsystem required.
Explanation: Program name 'pppppppp' is the name specified on the EXEC statement of the STC JCL.
OMEGAMON XE for DB2 PE releases version 4.2.0 and higher require that PGM=KO2ZT0BP is specified on the EXEC statement of the STC JCL statement.
System action: Started task terminates.
User response: Specify PGM=KO2ZT0BP on the EXEC statement of the STC JCL statement.

KO2I0554E  HINT Jobstep Program: pppppppp. OMPE Subsystem required.
Explanation: Program name 'pppppppp' is the name specified on the EXEC statement of the STC JCL.
OMEGAMON XE for DB2 PE releases version 4.2.0 and higher require that PGM=KO2ZT0BP is specified on the EXEC statement of the STC JCL statement.
System action: Started task terminates.
User response: Specify PGM=KO2ZT0BP on the EXEC statement of the STC JCL statement.

KO2I0107E  D5API FAILED TO ATTACH A CONNECTION TO DB2 %%% ON BEHALF OF AGENT %%%%%%
Explanation: The D5API common collector failed to attach a DB2 connection as requested by the XE agent.
System action: The XE agent Connect call is rejected.
User response: Contact IBM support.

KO2I01019I  D5API COLLECTOR TERMINATION IN PROGRESS
Explanation: The D5API Collector is terminating.
System action: None.
User response: None.

KO2I0120E  D5API CONTROL TABLE VALIDITY CHECK FAILED
Explanation: The D5API Collector could not validate the acronym name in the D5API control table.
System action: D5API Collector termination continues.
User response: Contact IBM support.

KO2I0121E  PC TABLE STORAGE RELEASE FAILED
Explanation: The D5API Collector could not release the PC table common storage structure.
System action: D5API Collector termination continues.
User response: If the problem persists, contact IBM support.

KO2I0121I  D5API COLLECTOR WAITING FOR SUBTASKS TO EXIT
Explanation: A MODIFY command has been issued to stop the D5API Collector. Stop processing is waiting for all subtasks to end before terminating.
System action: The D5API Collector waits for the subtasks to end.
User response: None.

KO2I0122I  RESMGR DEFERRED RESOURCE CLEANUP COMPLETE
Explanation: The D5API Collector successfully released common ECSA resources.
System action: None.
User response: None.

KO2I0122W  D5API COLLECTOR FORCIBLY TERMINATING
Explanation: A MODIFY command was previously issued to stop the D5API Collector. The timer interval used to wait for all subtasks to end has been exceeded, causing termination.
System action: The D5API Collector is forcibly terminated.
User response: If the problem persists, contact IBM support.

KO2I0123I  D5API REGISTRATION ENTRY SUCCESSFULLY RELEASED
Explanation: The D5API Collector instance registration entry has been successfully released.
System action: None.
User response: None.

KO2I0124I  D5API COLLECTOR TERMINATION COMPLETE
Explanation: The D5API Collector has terminated.
System action: None.
User response: None.

KO2I0127U  D5API ECSA STRUCTURES GETMAIN FAILED
Explanation: Error occurred while getting ECSA storage for common collector control structures.
System action: The common collector is terminated. Dump is generated.
User response: Contact IBM support.

KO2I0128U  D5API ECSA STRUCTURES GETMAIN FAILED
Explanation: The D5API Collector could not obtain ECSA virtual storage for the D5APIUSE structure.
System action: The D5API Collector task terminates with abend code 3100.
User response: Contact IBM support.

KO2I0129U  D5API REGISTRATION ENTRY CREATE FAILED
Explanation: The D5API Collector could not create the instance registration table entry.
System action: The D5API Collector task abnormally terminates.
User response: Contact IBM support.

KO2I0130I  D5API REGISTRATION ENTRY SUCCESSFULLY REBUILT
Explanation: The D5API Collector successfully rebuilt the registration table entry for this instance of OMEGAMON XE for DB2 PE.
System action: None.
User response: None.
KO2I0131U  D5API REGISTRATION TOKEN DELETE FAILED
Explanation: The D5API Collector could not delete the system-level registration name/token pair.
System action: The D5API Collector task abnormally terminates.
User response: Contact IBM support.

KO2I0133U  INTERNAL TRACE RECORDING TERMINATED DUE TO ABEND
Explanation: The D5API internal trace processing has abnormally terminated.
System action: Trace processing stops collecting internal trace data.
User response: Message KO2I0143I is issued indicating that recovery is successful. Contact IBM support if recovery is not successful.

KO2I0133W  INTERNAL TRACE RECORDING PREVIOUSLY TERMINATED DUE TO ABEND. NO TRACE DATA TO DISPLAY
Explanation: A command was issued to display internal trace data, but no trace data is available to display because trace processing was previously terminated because of an abnormal end.
System action: The command is rejected.
User response: Shut down and restart OMEGAMON XE for DB2 PE. If the problem persists, contact IBM support.

KO2I0134I  D5API REGISTRATION ENTRY SUCCESSFULLY CREATED
Explanation: The D5API Collector successfully created the registration table entry for this instance of OMEGAMON XE for DB2 PE.
System action: None.
User response: None.

KO2I0136I  D5API TASK-LEVEL TOKEN SUCCESSFULLY CREATED
Explanation: The D5API Collector successfully re-created the task-level name/token pair for Collect/Connect process functions.
System action: None.
User response: None.

KO2I0137E  D5API RESMGR INITIALIZATION FAILED
Explanation: The D5API Collector could not initialize the resource manager table.
System action: The D5API Collector abnormally terminates.
User response: Contact IBM support.

KO2I0138I  D5API RESMGR INITIALIZATION COMPLETE
Explanation: The D5API Collector successfully initialized the resource manager table.
System action: None.
User response: None.

KO2I0140E  INVALID MODIFY COMMAND RECEIVED
Explanation: An invalid D5API Collector command has been entered.
System action: The command is rejected.
User response: Specify a valid command.

KO2I0140I  D5API COLLECTOR MODIFY COMMAND COMPLETED
Explanation: A D5API Collector command has been successfully executed.
System action: The command is executed.
User response: None.

KO2I0141I  D5API COLLECTOR TRACE SET TO <V1>
Explanation: The D5API Collector has been started or modified with one of the following trace processing parameters (<V1>):
  • TRACE=NO - No trace informational messages will be displayed in the OMEGAMON job log and Agent address space log.
  • TRACE=YES - Trace informational messages will be displayed in the OMEGAMON job log and Agent address space log.
  • TRACE=YES,DATA - Trace informational messages will be displayed in the OMEGAMON job log and Agent address space log, including collected DB2 table data.
System action: The D5API Collector sets the appropriate trace environment.
User response: None.
**KO2I0142I** D5API ATTACHED A CONNECTION TO DB2 DDDD ON BE HALF OF AGENT $$$$$$$

**Explanation:** The D5API common collector successfully attached a DB2 connection as requested by the XE agent.

**System action:** The D5API common collector monitors the DB2 connection for XE agent data collection requests.

**User response:** None.

**KO2I0143I** D5API COLLECTOR ABEND RECOVERY SUCCESSFUL.

**Explanation:** A D5API Collector component has been deactivated because of an abnormal termination.

**System action:** Processing continues without the failed component.

**User response:** Contact IBM support.

**KO2I0144I** D5API DB2 CONNECTIONS DISPLAY

**Explanation:** A D5API Collector command was issued to display DB2 Agent connections.

**System action:** The command is executed.

**User response:** None.

**KO2I0144W** D5API NO ACTIVE DB2 AGENT CONNECTIONS FOUND

**Explanation:** A D5API Collector command was issued to display DB2 Agent connections, but no active DB2 Agent connections were found.

**System action:** None.

**User response:** None.

**KO2I0147U** MODIFY COMMAND ABNORMALLY TERMINATED

**Explanation:** The requested MODIFY command has abnormally terminated.

**System action:** The D5API Collector resumes processing.

**User response:** Contact IBM support.

**KO2I0148I** D5API USING REGISTRATION TABLE

**Explanation:** The D5API Collector successfully retrieved the persistent system-level name/token pair that is used to anchor the registration table address.

**System action:** None.
DB2 subsystem normally or abnormally terminates while the D5API Connect call is in progress. Verify that the indicated DB2 subsystem is started and functioning properly.

KO2I0152W D5API UNABLE TO LOCATE AGENT ADDRESS SPACE

Explanation: The D5API Collector Connect/Collect task could not determine the status of the Agent address space.

System action: The D5API Collector Connect/Collect task is terminated.

User response: Determine why the Agent address space terminated, and take appropriate action.

KO2I0153I D5API COLLECTOR WAITING FOR AGENT %%%%%% CONNECTION REQUESTS

Explanation: An OMEGAMON XE for DB2 PE agent caused the DB2 collection driver module to be attached.

System action: Waiting for Agent connection requests.

User response: None.

KO2I0154I D5API COLLECTOR IS CONNECTING TO DB2 %%%%%% ON BEHALF OF AGENT %%%%%%

Explanation: An OMEGAMON XE for DB2 PE agent caused the DB2 collection driver module to connect to the specified DB2 subsystem to collect data.

System action: The connection request is processed.

User response: None.

KO2I0155I D5API COLLECTOR SUCCESSFULLY COLLECTED DATA FROM DB2 %%%%%% ON BEHALF OF AGENT %%%%%%

Explanation: A DB2 collection request was issued by an OMEGAMON XE for DB2 PE agent, and data was successfully collected from the indicated DB2 subsystem.

System action: The requested data is collected.

User response: None.

KO2I0156I D5API COLLECTOR FOUND NO DATA TO COLLECT FROM DB2 %%%%%% ON BEHALF OF AGENT %%%%%%

Explanation: The OMEGAMON XE D5API common collector found no data to collect from the specified DB2 subsystem %%%%% as requested by Agent %%%%%.

System action: The Agent is notified that no data has been returned.

User response: Verify that the DB2 subsystem %%%%% is started and functioning properly.

KO2I0157I D5API COLLECTOR DISCONNECTED FROM DB2 %%%%%% ON BEHALF OF AGENT %%%%%%

Explanation: An OMEGAMON XE for DB2 PE shutdown request was issued and the active DB2 Agent connection was terminated.

System action: The active DB2 connection is terminated.

User response: None.

KO2I0158W D5API COLLECTOR UNABLE TO LOCATE AGENT %%%%%% FOR D5API CALL POST COMPLETION

Explanation: D5API could not locate the agent to complete the action.

System action: The common collector DB2 connection is terminated.

User response: None.

KO2I0159W D5API COLLECTOR UNABLE TO ACCESS AGENT %%%%%% COMMUNICATION DATA AREA <DAPICOMM>

Explanation: The D5API Collector tried to cross-memory post the Agent for completion of a Connect, Collect, or Disconnect call, but could not access the Agent DAPICOMM communication structure.

System action: The D5API Collector unit of work associated with the request is terminated.

User response: Verify that the Agent address space is still active in the system. If the Agent address space is not active in the system, restart it.

KO2I0160U COLLECTOR UNABLE TO LOCATE AGENT %%%%%% FOR D5API CALL POST COMPLETION

Explanation: D5API could not locate the agent to complete the action.

System action: The common collector DB2 connection is terminated.

User response: None.
KO2I0161W  D5API COLLECTOR FORCIBLY TERMINATED DB2 CONNECTION ON BEHALF OF AGENT

Explanation: The common collector DB2 connection is terminated forcibly when receiving no response from the termination request.

System action: The D5API collector DB2 connection is terminated.

User response: None.

KO2I0162U  D5API COLLECTOR FAILED TO LOAD THE OMEGAMON BATCH API ON BEHALF OF AGENT

Explanation: The common collector could not load the required API for agent.

System action: The common collector is terminated.

User response: Contact IBM support.

KO2I0163U  AGENT DAPICOMM STRUCTURE FAILED INTEGRITY CHECKS. DB2 CONNECTION TERMINATED

Explanation: D5API control structure internal error occurred for the DB2 connection.

System action: The D5API collector DB2 connection is terminated.

User response: Contact IBM support.

KO2I0164I  COLLECTOR RELEASE COUNTER TBL DB2 ON BEHALF OF AGENT

Explanation: The D5API collector released counter table when the D5API DB2 connection is terminated.

System action: Storage is released.

User response: None.

KO2I0170U  <Snnn> ABEND IN MODULE <progmnt1> PERCOLATED TO D5API MODULE <progmnt1>

Explanation: An abend <Snnn> occurred.

System action: An SVC dump is scheduled.

User response: Contact IBM support.

KO2I0180U  LOCAL DAPICOMM STORAGE RELEASE ERROR

Explanation: The XE Agent failed to release a local storage communication structure used to communicate with the D5API common collector.

System action: Normal disconnect processing continues.

User response: Contact IBM support.

KO2I0181W  D5API IS NOT ACTIVE IN D2 ADDRESS SPACE. CONNECT CALL FAILED FOR DB2

Explanation: The D5API Collector is not active in the OMEGAMON XE for DB2 PE address space.

System action: The Agent Connect call is rejected.

User response: Verify that the OMEGAMON XE for DB2 PE address space is active in the system. If not, restart it.

KO2I0182E  FAILED TO LOCATE THE D2 ADDRESS SPACE

Explanation: The OMEGAMON XE for DB2 PE address space is not active in the system.

System action: The Agent Connect call is rejected.

User response: Verify that the OMEGAMON XE for DB2 PE address space is active in the system. If not, restart it.

KO2I0183W  D5API IS NOT ACTIVE IN D2 ADDRESS SPACE. COLLECT CALL FAILED FOR DB2

Explanation: The OMEGAMON XE D5API Agent collection function could not collect data from the specified D2 Server address space.

System action: The Agent Collect call is terminated.

User response: Verify that the D5API Collector component is active in the D2 Server address space by issuing the following STATUS MODIFY command: F O2CI,COMMCOLL,STATUS. For STATUS=INACTIVE, stop the D5API Collector and restart it. To stop the D5API Collector, issue the following MODIFY command: F O2CI,F COMMCOLL,STOP. To restart the D5API Collector, issue the following MODIFY command: F O2CI,F COMMCOLL,START. Replace O2CI with your D2 Server started task name.
KO2I0184E  LOCASCB FAILED TO LOCATE THE D2=%%/%/%/%/% ADDRESS SPACE

Explanation: The OMEGAMON XE for DB2 PE address space is not active in the system.

System action: The Agent Connect call is rejected.

User response: Verify that the OMEGAMON XE for DB2 PE address space is active in the system. If not, restart it.

KO2I0185E  CONTROL TABLE LOCATE ERROR D2=%%/%/%/%/%

Explanation: The OMEGAMON XE for DB2 PE address space is not active in the system.

System action: The Agent Disconnect call is rejected.

User response: Verify that the OMEGAMON XE for DB2 PE address space is active in the system. If not, restart it.

KO2I0186E  D5API PC ENVIRONMENT NOT INITIALIZED D2=%%/%/%/%/%

Explanation: The OMEGAMON XE for DB2 PE address space has not yet initialized the cross-memory environment.

System action: The Agent Connect call is rejected.

User response: Verify that the OMEGAMON XE for DB2 PE address space is active in the system. If not, restart it.

KO2I0186U  DB2 %%%% CONNECTION ALREADY EXISTS IN OM %%%% - CONNECT CALL REJECTED

Explanation: The D5API Connect call failed because a DB2 connection already exists.

System action: The Connect call is rejected.

User response: Shut down and restart the Agent address space.

KO2I0187W  D5API IS NOT ACTIVE IN D2 NNNNNNNN ADDRESS SPACE. DISCOVER CALL FAILED

Explanation: The OMEGAMON XE D5API Agent Discover function could not discover the status of active DB2 subsystem IDs known to the D2 Server address space.

System action: The Agent Discover call is terminated.

User response: Verify that the D5API Collector component is active in the D2 Server address space by issuing the following STATUS MODIFY command: F O2CI,F COMMCCOLL,STATUS. For STATUS=INACTIVE, stop the D5API Collector and restart it. To stop the D5API Collector, issue the following MODIFY command: F O2CI,F COMMCCOLL,STOP. To restart the D5API Collector, issue the following MODIFY command: F O2CI,F COMMCCOLL,START. Replace O2CI with your D2 Server started task name.

KO2I0188E  LOCASCB FAILED TO LOCATE THE D2=%%/%/%/%/% ADDRESS SPACE

Explanation: The OMEGAMON XE for DB2 PE address space is not active in the system.

System action: The Agent Disconnect call is rejected.

User response: Verify that the OMEGAMON XE for DB2 PE address space is active in the system. If not, restart it.

KO2I0189I  AGENT %%%% ATTEMPTING CONNECTION TO %%%% VERSION Vnnn BY %%%% - DB2 %%%

Explanation: An OMEGAMON XE for DB2 PE agent is attempting a connection to the indicated Vnnn OMEGAMON common collector for the indicated DB2 system.

System action: The agent is attempting a connection.

User response: None.

KO2I0190W  CONNECT TIME LIMIT EXCEEDED. CONNECT CALL FAILED

Explanation: The OMEGAMON XE D5API Collector Agent connection function exceeded the internally specified nine minutes connect time allowance.

System action: The Connect call is terminated.

User response: Check the OMEGAMON collector job log or OMEGAMON XE for DB2 PE agent RKLVLOG for possible causes.

KO2I0191W  COLLECT TIME LIMIT EXCEEDED. COLLECT CALL FAILED

Explanation: The OMEGAMON XE D5API Collector Agent data collection function exceeded the internally specified 30 seconds collect time interval.

System action: The Agent Collect call is terminated.

User response: Issue the F O2CI,F COMMCCOLL,STIMER=hhmmssth MODIFY D2 Server command to change the default collect time interval. O2CI is the D2 Server started task name and hhmmssth is used to specify a new collect time interval. Example: F O2CI,F COMMCCOLL,STIMER=00050000 changes the collect time interval to 50 seconds.
KO2I0192W  DISCONNECT TIME LIMIT EXCEEDED. DISCONNECT CALL FAILED.

KO2I0193I  AGENT %%%%%%%%%%%%%%%%%% CONNECTED TO %%%%%%%%%% - DB2 %%%%%%

Explanation: The OMEGAMON XE for DB2 PE agent successfully connected to the OMEGAMON common collector for the indicated DB2 subsystem.

System action: The agent Connect call succeeded.

User response: None.

KO2I0194I  AGENT %%%%%%%%%%%%%%%%%% FAILED TO CONNECT TO %%%%%%%%%% - DB2 %%%%%%

Explanation: The OMEGAMON XE for DB2 PE agent failed to connect to the OMEGAMON common collector for the indicated DB2 subsystem.

System action: The agent Connect call failed.

User response: Check the OMEGAMON collector job log or OMEGAMON XE for DB2 PE agent RKLVLOG for possible causes.

KO2I0195I  AGENT %%%%%%%%%%%%%%%%%% DISCONNECTED FROM %%%%%%%%%% - DB2 %%%%%%

Explanation: The OMEGAMON XE for DB2 PE agent disconnected from the OMEGAMON common collector for the indicated DB2 subsystem.

System action: The agent is disconnected from the common collector.

User response: None. It might be that the OMEGAMON common collector or DB2 system was recycled.

KO2I0200U  UNABLE TO LOG COLLECTED DATA. ZERO UAB ADDRESS SUPPLIED

Explanation: The D5API Agent could not locate the User Agent Block (UAB) supplied by the caller.

System action: Log data is not collected.

User response: Contact IBM support.

KO2I0201U  UNABLE TO LOG COLLECTED DATA. UAB FAILED VALIDITY CHECK

Explanation: The D5API Agent could not validate the User Agent Block (UAB) supplied by the caller.

System action: Log data is not collected.

User response: Contact IBM support.

KO2I0202U  UNABLE TO LOG COLLECTED DATA. UAB BUFFER OVERFLOW

Explanation: The D5API Agent could not locate a User Agent Block (UAB) buffer required to log collected data.

System action: Log data is not collected.

User response: Contact IBM support.

KO2I0203U  DAPICOMM STRUCTURE CELL ELEMENT OBTAIN FAILURE

Explanation: The D5API call could not obtain a communication data structure that is required to communicate Connect calls to the common collector.

System action: The Connect call is rejected.

User response: Contact IBM support.

KO2I0203W  TASK TYPE RESMGR INITIALIZATION FAILED

Explanation: The D5API Agent could not define a task type resource manager.

System action: Processing continues without the resource manager.

User response: None.

KO2I0204U  LOCAL DAPICOMM STORAGE OBTAIN ERROR

Explanation: The XE Agent could not obtain local storage for the communication structure that is required to perform a Connect call to the D5API common collector.

System action: The XE agent Connect call is rejected.

User response: Increase the XE agent address space region size and restart the agent started task.

KO2I0205I  DISCONNECT CALL ISSUED ON BEHALF OF AGENT BY D5API EOT RESOURCE MANAGER

Explanation: The D5API Collector end-of-task resource manager detected that the Agent did not release its connection control structure during termination processing.

System action: The end-of-task resource manager releases the Agent connection structure on behalf of the terminating Agent address space.

User response: None.
KOI20205U UNABLE TO LOCATE COMMON COLLECTOR REGISTRY ENTRY FOR OM SERVER %%%%server-name%%%%

Explanation: The D5API call could not locate the common collector registry for the specified OMEGAMON Collector.
System action: The Connect, Collect, or Disconnect call is terminated.
User response: Verify that the OMEGAMON Collector that the Agent is trying to communicate with is active in the system. If it is not active, start the OMEGAMON Collector.

KOI20206U UNABLE TO VALIDITY-CHECK DAPICOMM STRUCTURE STATUS DUE TO QUEUE SCAN FAILURE

Explanation: The D5API call could not locate the communication data structure that is required to process the common collector Connect or Disconnect call.
System action: The Collect or Disconnect call is rejected.
User response: Contact IBM support.

KOI20207U D5API CONTROL STRUCTURE FOR D2 %%%%server-name%%% FAILED INTEGRITY CHECKS. CONNECT CALL FAiled

Explanation: The Agent program call (PC) routine could not successfully reference processing information in the D5API Collector control structure.
System action: The Connect call is rejected.
User response: Contact IBM support.

KOI20208U AGENT DAPICOMM STRUCTURE FAILED INTEGRITY CHECKS. CONNECT CALL FAiled

Explanation: The Agent program call (PC) routine could not successfully reference processing information in the DAPICOMM communication structure.
System action: The Connect call is rejected.
User response: Contact IBM support.

KOI20209U AGENT COLLECT CALL FAILED. CONNECT CALL NOT PREVIOUSLY ISSUED. COLLECT CALL FAiled

Explanation: The Agent program call (PC) routine could not process the Collect call because Connect was not previously issued.
System action: The Connect call is rejected.
User response: Contact IBM support.

KOI20210W AGENT TERMINATING DB2 %%%%server-name%%% CONNECTION IN D2 %%%%server-name%%%%

Explanation: The Agent program call (PC) routine disconnected the specified DB2 from the D5API Collector because the Agent issued a Connect call to the same DB2 subsystem twice without a Disconnect call being issued.
System action: The connection to the specified DB2 is reestablished.
User response: None.

KOI20211W DAPICOMM STRUCTURE ACCESS FAILED FOR DB2 <ssid> RECOVERY SUCCESSFUL

Explanation: The D5API agent disconnect function tried to storage release a previously freed ECSA DAPICOMM structure.
System action: The error is ignored and the Disconnect call request is successfully processed.
User response: None.

KOI20212I AGENT SUCCESSFULLY RELEASED DAPICOMM STRUCTURE FOR DB2 ssid

Explanation: The D5API agent disconnect function successfully storage released the ECSA DAPICOMM structure.
System action: Disconnect call processing continues.
User response: None.

KOI20212U UNABLE TO LOCATE A CONNECTION TO DB2=ssid IN OM SERVER server-name | COLLECT | DISCONNECT) CALL FAiled

Explanation: The D5API call could not locate a connection for the specified DB2 subsystem on the target OMEGAMON Collector.
System action: The specified D5API call is terminated and error and reason codes are returned to the calling agent.
User response: Contact IBM support.

KOI20213U UNABLE TO LOCATE SPECIFIED DB2=%%%server-name%%% SUBSYSTEM - %%%%server-name%%% CALL FAiled

Explanation: The D5API Connect or Collect call failed because the DB2 subsystem was not found.
System action: The Connect or Collect call is rejected.
User response: Start the specified DB2 subsystem.
Explanation: The D5API common collector detected that the table name supplied by the XE agent is invalid.
System action: The XE agent collect call is rejected.
User response: Contact IBM support.

Explanation: None.
System action: None.
User response: None.

Explanation: An active thread originated from an IMS version that is not supported by the product.
System action: IMS-specific information, such as transaction ID, is displayed as N/A.
User response: Request a product upgrade for support of IMS version <V1>.

Explanation: The XE Agent’s attempt to connect to the OMEGAMON for DB2 PE Collector failed.
System action: The Agent will keep retrying to connect to the OMPE Server until it is started.
User response: Start the OMPE Server.

Explanation: The immediate return function was successfully modified by a user action.
System action: None.
User response: None.

Explanation: EXEC FPEJINIT could not locate the
indicated module in the indicated data set.

System action: The start process terminated.

User response: Ensure that the indicated library is accessible.

---

</tbody>
</table>
KO2O0602W %%%% Trace data lost - too many buffers in use.

Explanation: %%%% is the name of the DB2 subsystem. DB2 produces IFCID records faster than the Near-Term History Collector can process. Currently, more than 15 buffers are used. The collection of IFCID records is suspended until 15 or less buffers are used.

System action: Records are skipped until the Near-Term History Collector can reduce the backlog of records to be processed.

User response: You can solve the problem by doing one or more of the following actions.

Note: Use the Configuration Tool (previously called ICAT, panel KD261P8 and KD261PB) to modify the BUFSIZE-, NEGSQL-, SCAN-, SORT-, DYNAMICSQL- and POSTPCT- parameters below.

If you do not use the Configuration Tool to record and update the parameter library, changes might be reversed the next time you are using it.

1. Increase the buffer size by setting its value to 2048.
   Try different values and evaluate the results.
   By default, the buffer size (BUFSIZE) is 1024. This value might be too small for high volume production systems. The upper limit for the buffer size is the maximum value for a -START TRACE command. For more information, see the DB2 commands reference.
   For the OMEGAMON Near-Term History collector, the recommended value for the buffer size is 2048.

2. Reduce the number of IFCIDs to be written to the OPx by using the following settings:

   NEGSQNL(NO)
   Use this setting to not collect return codes on SQL events.
   Affected IFCIDs: 58, 59, 60, 61, 62, 64, 65, 66, 233.
   If Near-Term History data is not collected to sequential files, there is no reason to collect this data.
   Near-Term History data is not externalized by the real time product. However, it can be externalized by batch reporting if it is collected to sequential files.

   SCAN(NO)
   Use this setting to not collect SCAN data.
   Affected IFCIDs: 15, 16, 17, 18.

   SORT(NO)
   Use this setting to not collect SORT data.

KO2O0508E Near-Term History Data Collector - VSAM PHYSICAL I/O ERROR WITH RETURN CODE=r, REASON CODE=r

Explanation: A physical I/O error occurred while a PUT was issued to the VSAM data set. This problem could be caused by an I/O error on the VSAM data set.

System action: Processing continues, but the data extractor cannot extract any performance data from GTF or SMF.

User response: If the error code does not indicate an I/O error, contact IBM support.

KO2O0509E Near-Term History Data Collector - ERROR IN VSAM PUT SEQUENT. WITH RETURN CODE=r, REASON CODE=r

Explanation: An error occurred while a PUT sequential was issued to the VSAM data set. This problem could be caused by an I/O error on the VSAM data set.

System action: Processing continues, but the data extractor cannot extract any performance data from GTF or SMF.

User response: If the error code does not indicate an I/O error, contact IBM support.
KO200510E  Near-Term History Data Collector - ERROR IN VSAM PUT DIRECT WITH RETURN CODE=rc, REASON CODE=rs

Explanation: An error occurred while a PUT direct was issued to the VSAM data set. This problem could be caused by an I/O error on the VSAM data set.

System action: Processing continues, but the data extractor cannot extract any performance data from GTF or SMF.

User response: If the error code does not indicate an I/O error, contact IBM support.

KO200511E  Near-Term History Data Collector - END OF VOLUME DETECTED. NO MORE PERFORMANCE DATA IS COLLECTED

Explanation: An end of volume is detected, and performance data will not be extracted any more.

System action: Processing continues, but the data extractor cannot extract any performance data from GTF or SMF.

User response: Allocate another VSAM data set or reallocate the VSAM data set and try the data extractor again.

KO200512E  Near-Term History Data Collector - VSAM POINT MACRO FAILED WITH RETURN CODE=rc, REASON CODE=rs

Explanation: An error occurred while a POINT was issued to the VSAM data set.

System action: Processing continues, but the data extractor cannot extract any performance data from GTF or SMF.

User response: If the error code does not indicate an I/O error, contact IBM support.

KO200513E  Near-Term History Data Collector - KEY LENGTH FOR VSAM FILE IS NOT CORRECT

Explanation: The key length specified for the VSAM data set was incorrect.

System action: Processing continues, but the data extractor cannot extract any performance data from GTF or SMF.

User response: Correct the key length to 80 and allocate the VSAM data set again.

KO200514E  Near-Term History Data Collector - MAXIMUM RECORD LENGTH FOR VSAM FILE IS NOT CORRECT

Explanation: The maximum record length specified for the VSAM data set was incorrect.

System action: Processing continues, but the data extractor cannot extract any performance data from GTF or SMF.

User response: Correct the maximum record length to 4096 and allocate the VSAM data set again.

KO200515E  Near-Term History Data Collector - VSAM GET MACRO FAILED WITH RETURN CODE=rc, REASON CODE=rs

Explanation: An error occurred while a GET was issued to the VSAM data set. This problem could be caused by an I/O error on the VSAM data set.

System action: Processing continues, but the data extractor cannot extract any performance data from GTF or SMF.

User response: If the error code does not indicate an I/O error, contact IBM support.

KO200516E  Near-Term History Data Collector - VSAM DATA SET IS NOT INITIALIZED. PERFORMANCE DATA IS NOT COLLECTED

Explanation: The specified VSAM data set was not initialized.

System action: Processing continues, but the data extractor cannot extract any performance data from GTF or SMF.

User response: Initialize the VSAM data set using the H2VSMINT utility. The JCL to initialize the VSAM data set is in rhilev.RK2SAM(ACRTcccc).

KO200517I  Near-Term History Data Collector - DATA SET dname INITIALIZED

Explanation: The indicated H2 (near-term history) data set was initialized successfully.

System action: None.

User response: None.

KO200518E  Near-Term History Data Collector - DATA SET dname INIT FAILED

Explanation: The indicated H2 (near-term history) data set could not be initialized because of an error.

System action: None.

User response: Check for other error messages associated with this message and correct the error.
KO2O0519E  Near-Term History Data Collector - VSAM DATA SET DDNAME H2VSAM IS NOT SPECIFIED

Explanation: The ddname H2VSAM is not specified, but is required for data extraction.

System action: Processing continues, but the data extractor cannot extract any performance data from GTF or SMF.

User response: Add the DD card H2VSAM, together with the VSAM data set name, to the data extractor JCL.

KO2O0520E  Near-Term History Data Collector - VSAM ENDRQ FAILED WITH RETURN CODE=rc, REASON CODE=rs

Explanation: Internal error.

System action: Processing terminates.

User response: Contact IBM support.

KO2O0521E  Near-Term History Data Collector - VSAM VERIFY FAILED WITH RETURN CODE=rc, REASON CODE=rs

Explanation: Internal error.

System action: Processing terminates.

User response: Contact IBM support.

KO2O0522E  Near-Term History Data Collector - RECORD LENGTH EXCEEDED MAXIMUM RECORD LENGTH. RECORD TRUNCATED

Explanation: The length of the performance record exceeds the maximum record length defined in the VSAM data set. The record is truncated.

System action: Processing continues.

User response: Contact IBM support.

KO2O0523E  Near-Term History Data Collector - RETRIEVE RECORD FAILED. END OF DATA SET REACHED

Explanation: The length of the performance record exceeds the maximum record length defined in the VSAM data set. The record is truncated.

System action: Processing continues.

User response: Contact IBM support.

KO2O0550E  NEAR-TERM HISTORY DATA COLLECTOR - DDNAME name IS NOT SPECIFIED IN THE LOG ARCHIVE JCL

Explanation: The indicated ddname is not specified in the model archive JCL specified by the ARCHIVEJCL parameter.

System action: Processing continues, but no JCL is generated to archive the full Near-Term History Data Collector data set.

User response: Correct the model archive JCL.

KO2O0551E  Near-Term History Data Collector - OPEN FAILED FOR DATA SET WITH DDNAME dd

Explanation: The indicated data set in the model archive JCL specified by the ARCHIVEJCL parameter could not be opened.

System action: Processing continues, but no JCL is generated to archive the full Near-Term History Data Collector data set.

User response: Correct the model archive JCL.

KO2O0553E  Near-Term History Data Collector - FAILED TO LOAD MODULE c

Explanation: The indicated module could not be loaded.

System action: Processing stops.

User response: Ensure that this module is in the OMEGAMON XE for DB2 PE load library.

KO2O0554E  Near-Term History Data Collector - UNABLE TO CREATE JCL TO ARCHIVE H2 DATA SET

Explanation: OMEGAMON XE for DB2 PE could not create the JCL that is needed to archive the Near-Term History Data Collector data set.

System action: Processing continues.

User response: Ensure that the member specified by the ARCHIVEJCL parameter exists in the data set allocated to the RKD2PAR DD statement.

KO2O0555I  Near-Term History Data Collector - A BATCH JOB IS SUBMITTED TO FLUSH THE CONTENTS OF THE H2 DATA SET

Explanation: This is an informational message.

System action: Processing continues.

User response: None.
KO200557W Near-Term History Data Collector - ONLY ONE H2 DATA SET IS AVAILABLE FOR FUTURE LOG SWITCHING

Explanation: This is an informational message.
System action: Processing continues.
User response: None.

KO200558E Near-Term History Data Collector - NO H2 DATA SET IS AVAILABLE, DB2 DATA IS NOT WRITTEN TO H2 DATA SET

Explanation: No data set is available for storing near-term history data, so the collected DB2 data cannot be saved.
System action: Processing continues.
User response: Specify at least one H2 (near-term history) data set in the collection options member you are using.

KO200559W Near-Term History Data Collector - NO H2 DATA SET IS AVAILABLE FOR FUTURE LOG SWITCHING

Explanation: No data set is available to store near-term history data after the active data set is full.
System action: Processing continues.
User response: Be sure that the maximum of three data sets have been specified in the collection options member.

KO200560W Near-Term History Data Collector - WRONG DISPOS. FOR dsnname

Explanation: The disposition mode for the named data set is not correct. Either MOD or NEW is specified; however, only SHR and OLD are supported.
System action: Processing continues.
User response: Change the disposition to SHR or OLD in the JCL and try again.

KO200561I Near-Term History Data Collector - H2 DATA SET dsnname STATUS n % FULL

Explanation: This message supplies information about the status of all VSAM data sets specified in the collection options member. It shows whether the data set is actively storing data, available to store data, or unavailable. It also shows what percentage of the data set has been used.
System action: Processing continues.
User response: None.

KO200562W Near-Term History Data Collector - n H2 RECORDS WERE LOST WHILE NO H2 DATA SET WAS AVAILABLE TO STORE DB2 DATA

Explanation: Near-term history data records were lost because no output buffer or no H2 (near-term history) data set was available for some time to store collected data. This might also happen when the DB2 subsystem is terminating.
System action: Processing continues.
User response: Ensure that the maximum number of H2 (near-term history) data sets (3) is specified in the collection options member, so it will be unlikely to lose data in the future.

KO200563W NO H2 DATA SET INFORMATION IS PROVIDED BECAUSE VSAM WRITE OPTION IS NOT USED

Explanation: You have attempted to display the status of your VSAM data sets, but the Near-Term History Data Collector is not writing to VSAM because the WRITEOPTION keyword is not set to VSAM.
System action: Processing continues.
User response: None.

KO200564W H2 DATA SET IS NOT SWITCHED BECAUSE VSAM WRITE OPTION IS NOT USED

Explanation: You have attempted to manually switch VSAM data sets, but the Near-Term History Data Collector is not writing to VSAM because the WRITEOPTION keyword is not set to VSAM.
System action: Processing continues.
User response: None.

KO200565W NO SUBSTITUTION IS DONE IN ARCHIVE DATA SET. PLEASE CHECK ARCHIVE JCL

Explanation: An error exists in variable usage for @DB2, @DATE, or @TIME in the model archive JCL.
System action: Processing continues, but the archive job is not submitted.
User response: Check variable usage in the model archive JCL and correct any errors.

KO200566E ARCHIVE DATA SET NAME IS LONGER THAN 44 BYTES AFTER SUBSTITUTION. ARCHIVE JOB IS NOT SUBMITTED

Explanation: The variable @DB2, @DATE, or @TIME in the model archive JCL is improperly used.
Collector startup member is specified in the Near
System action: Processing continues, but the archive job is not submitted.
User response: Check and correct the use of the variables in the model archive JCL.

KO2O0567I THERE ARE NO RECORDS IN H2 DATA SET AND SO IT IS NOT BEING ARCHIVED
Explanation: The Near-Term History Data Collector received a SWITCH command and detected that the current log does not have any Accounting, Audit, or Statistics records.
System action: Switches to the next log, but does not submit the archive JCL.
Note: This message is displayed when the SWITCH command processing determines that no Statistics, Accounting or Audit records are in the current log data set. As a result, the archive JCL is not submitted.
User response: If you wish to archive any other records, for example, DKNZPARM records, submit the archive JCL manually.

KO2O0568W ARCHIVEJCL OPTION IS NOT SPECIFIED, SO NO ARCHIVE JOB IS SUBMITTED
Explanation: No archival JCL member name was specified at the time a SWITCH command was executed.
System action: Switches Near-Term History Data Collector log data sets and continues processing.
User response: Check that the archive JCL member of the rhilev.RK02SAM data set was not deleted. The member supplied by IBM is ARCVcccc, where cccc is the identifier for the DB2 system being monitored.
Note: You can manually submit the archive JCL to correct the situation.

KO2O0590E Near-Term History Data Collector - INVALID COLLECTION OPTION MEMBER c IS SPECIFIED
Explanation: The collection options member name specified in the Near-Term History Data Collector startup member or the vary option of the MODIFY command is not valid.
System action: If a not valid collection options member is specified in the Near-Term History Data Collector startup member, the Near-Term History Data Collector terminated. If a not valid collection options member was specified by means of the MODIFY command, no collection option is changed.
User response: Check the collection options member name and reissue the command with a valid member name.

KO2O0591E Near-Term History Data Collector - VSAM DATA SET IS NOT INITIALIZED. DB2 DATA IS NOT COLLECTED
Explanation: See member DFNLOG1 or DFNLOG2 in the RK02SAM data set for information on how to initialize a VSAM data set before it can be used by the Near-Term History Data Collector.
System action: Processing continues with the next VSAM data set specified in the collection options member, if any.
User response: Initialize the VSAM data set.

KO2O0592E DATA SET name IS ALLOCATED TO ANOTHER JOB
Explanation: This message is related to the Near-Term History Data Collector. The named data set is already allocated to another job. However, a different data set name is required for each DB2 on each LPAR.
System action: Processing terminates.
User response: Check the Configuration Tool (formerly ICA) configuration to ensure that different data set names are used.

KO2O0593E DYNAMIC ALLOC FAILED - R15=n1, S99ERROR=n1, S99INFO=n1, S99ERSN=n1, DSN=dsnname
Explanation: Unable to dynamically allocate one of the data sets specified in the options member.
System action: Processing continues.
User response: Check the return code and reason code provided in the message and resolve the problem. See the MVS system programming library Application Development Guide, section 19-19, for return codes and reason codes.

KO2O0594E DATA SET name CANNOT BE FOUND

KO2O0595W NO AUTHORIZATION TO ACCESS DB2 SYSUTIL DATA SET AND NO STOPPED UTILITY INFORMATION COLLECTED
Explanation: Unable to collect any stopped utility information because of missing authorization to access the DB2 SYSUTIL data set.
**KO2O0600E**  EXCEPTION PROCESSING FAILED TO LOCATE FIRST XECB. EXCEPTION PROCESSING NOT ACTIVE

**Explanation:** OMEGAMON XE for DB2 PE could not locate the first exception control block during initialization. OMEGAMON XE for DB2 PE cannot monitor exceptions.

**System action:** Processing continues without monitoring exceptions.

**User response:** Contact IBM support.

---

**KO2O0703E**  EXCEPTION PROCESSING FAILED TO PROCESS EXCEPTION cccc

**Explanation:** OMEGAMON XE for DB2 PE cannot process the indicated exception. This error is probably caused by a storage overlay.

**System action:** Processing continues, but the indicated exception is ignored.

**User response:** Contact IBM support.

---

**KO2O0704E**  EXCEPTION PROCESSING FAILED TO PROCESS EXCEPTION cccc. TABLE NOT EXPANDABLE

**Explanation:** OMEGAMON XE for DB2 PE cannot process the indicated exception because the exception table is not expandable.

**System action:** Processing continues, but the indicated exception is ignored.

**User response:** Check the installation region constraints for storage above the 16M line. If necessary, increase the amount of storage available above the line. If the problem persists, contact IBM support.

---

**KO2O0705E**  EXCEPTION PROCESSING FAILED TO INITIALIZE. RC = rc. EXCEPTION PROCESSING NOT ACTIVE

**Explanation:** The OMEGAMON XE for DB2 PE exception processing routine could not initialize and ended with the indicated return code.

**System action:** Processing continues without monitoring exceptions.

**User response:** Verify that OMEGAMON XE for DB2 PE is not being constrained by installation parameters that restrict the use of storage above the 16M line. If the problem persists, contact IBM support.

---

**KO2O0706E**  EXCEPTION PROCESSING FAILED TO OBTAIN ID INFORMATION. DATA OMITTED

**Explanation:** OMEGAMON XE for DB2 PE exception processing could not obtain identification information.
KO200707E • KO200716E

KO200707E EXCEPTION PROCESSING FAILED TO OBTAIN ID. ZOOMING ERRATIC

Explanation: OMEGAMON XE for DB2 PE exception processing could not obtain identification information about the specified exception. OMEGAMON XE for DB2 PE might not have enough information to go to the expected panel when you press F11 (Zoom).

System action: Processing continues.

User response: Press F11 (Zoom) again. If the problem persists, contact IBM support.

KO200708E EXCEPTION PROCESSING FAILED TO LOCATE XGRP TABLE. EXCEPTION PROCESSING NOT ACTIVE

Explanation: OMEGAMON XE for DB2 PE exception processing could not locate the exception group table. OMEGAMON XE for DB2 PE exception processing is not active.

System action: Processing continues without monitoring exceptions.

User response: Contact IBM support.

KO200709E EXCEPTION PROCESSING FAILED TO FORMAT XGRP TABLE. EXCEPTION PROCESSING NOT ACTIVE

Explanation: OMEGAMON XE for DB2 PE exception processing could not format the exception group table.

System action: Processing continues without monitoring exceptions.

User response: Contact IBM support.

KO200710E EXCEPTION PROCESSING FAILED TO OBTAIN ccccc CELL.

Explanation: OMEGAMON XE for DB2 PE exception processing could not obtain the ccccc cell.

System action: OMEGAMON XE for DB2 PE exception processing continues, but might not produce the expected results.

User response: Verify that OMEGAMON XE for DB2 PE is not being constrained by installation parameters that restrict the use of storage above the 16M line. If the problem persists, contact IBM support.

KO200711E EXCEPTION PROCESSING FAILED TO LOCATE EXCEPTION TABLE ENTRY. EXCEPTION cccc

Explanation: OMEGAMON XE for DB2 PE exception processing could not locate the table entry for the indicated exception. This error is probably caused by a storage overlay.

System action: Processing continues, but OMEGAMON XE for DB2 PE does not display data for this exception.

User response: Contact IBM support.

KO200713E EXCEPTION PROCESSING FAILED TO FIND MESSAGE FOR EXCEPTION cccc

Explanation: OMEGAMON XE for DB2 PE exception processing could not locate the message for the indicated exception. This error is probably caused by a storage overlay.

System action: Processing continues without displaying data for this exception.

User response: Contact IBM support.

KO200714E EXCEPTION PROCESSING FAILED TO FORMAT EXCEPTION MESSAGE cccc

Explanation: OMEGAMON XE for DB2 PE exception processing could not format the message for the specified exception. This error is probably caused by a storage overlay.

System action: Processing continues without displaying data for this exception.

User response: Contact IBM support.

KO200715E EXCEPTION PROCESSING FAILED TO OBTAIN OUTPUT CELL. UPDATE OMITTED

Explanation: A request for additional virtual storage was denied.

System action: Processing continues, but exception information and highlighting are incomplete.

User response: Verify that OMEGAMON XE for DB2 PE is not being constrained by installation parameters that restrict the use of storage above the 16M line. If the problem persists, contact IBM support.

KO200716E EXCEPTION PROCESSING FAILED TO FIND CICS JOB NAME. ID OMITTED

Explanation: OMEGAMON XE for DB2 PE could not determine the CICS job name associated with an exception. This error is probably caused by a storage overlay.

System action: Processing continues, but exception information and highlighting are incomplete.
information and highlighting are incomplete.

User response: Contact IBM support.

KO200717E EXCEPTION PROCESSING THREAD ID NOT AVAILABLE. THREAD TERMINATED

Explanation: A thread related to an exception that exceeded its threshold value has terminated.

System action: Processing continues without displaying these exceptions.

User response: This is a normal occurrence if the thread has just terminated. If the problem persists, contact IBM support.

KO200718E EXCEPTION PROCESSING FAILED WITH UNEXPECTED PROGRAM CHECK IN routine

Explanation: The OMEGAMON XE for DB2 PE exception processing routine unexpectedly encountered a program check in the indicated routine.

System action: Processing continues, but OMEGAMON XE for DB2 PE exceptions might not produce the expected results.

User response: Take a note of this message, including the routine, and contact IBM support.

KO200719E EXCEPTION PROCESSING FAILED WITH UNEXPECTED PROGRAM CHECK IN TRIP PROCESSING

Explanation: The OMEGAMON XE for DB2 PE exception processing routine unexpectedly encountered a program check in a routine when an exception exceeded its threshold value.

System action: Processing continues, but OMEGAMON XE for DB2 PE exceptions might not produce the expected results.

User response: Verify that OMEGAMON XE for DB2 PE is not being constrained by installation parameters that restrict the use of storage above the 16M line. If the problem persists, contact IBM support.

KO200720E EXCEPTION PROCESSING FAILED TO LOCATE cccc EXCEPTION TABLE ENTRY

Explanation: OMEGAMON XE for DB2 PE exception processing could not locate the table entry for the indicated exception. This is probably caused by a storage overlay.

System action: Processing continues, but OMEGAMON XE for DB2 PE does not display data for this exception.

User response: Restart OMEGAMON XE for DB2 PE. Contact IBM support.

KO200740E EXCEPTION PROCESSING FAILED TO OBTAIN STORAGE FOR MESSAGE EXCEPTION TABLE

Explanation: The OMEGAMON XE for DB2 PE exception processing routine could not obtain enough storage for its exception message table.

System action: Processing continues, but OMEGAMON XE for DB2 PE cannot monitor any exceptions.

User response: Verify that OMEGAMON XE for DB2 PE is not being constrained by installation parameters that restrict the use of storage above the 16M line. If the problem persists, contact IBM support.

KO200741E EXCEPTION PROCESSING FAILED TO OBTAIN MSGE EXCEPTION CONTROL BLOCKS

Explanation: The OMEGAMON XE for DB2 PE exception processing routine could not obtain the control blocks it needs to process the MSGE exception.

System action: Processing continues, but OMEGAMON XE for DB2 PE cannot monitor the MSGE exception.

User response: Verify that OMEGAMON XE for DB2 PE is not being constrained by installation parameters that restrict the use of storage above the 16M line. If the problem persists, contact IBM support.

KO200742E ERROR ENCOUNTERED IN USER PROFILE FACILITY. MSGE EXCEPTION NOT AVAILABLE

Explanation: OMEGAMON XE for DB2 PE encountered an error during profile processing that prohibits the MSGE exception from operating properly.

System action: OMEGAMON XE for DB2 PE continues processing, but cannot monitor the MSGE exception.

User response: Contact IBM support.

KO200743E ERROR ENCOUNTERED IN USER PROFILE FACILITY. POPT OPTION WILL NOT BE USED

Explanation: User profile processing failed.

System action: Processing terminates.

User response: Contact IBM support.
KO2O0750E  ABEND IN NEW CYCLE SUBROUTINE
Explanation: OMEGAMON XE for DB2 PE terminated in the indicated new cycle subroutine.
System action: Processing continues, but the data OMEGAMON XE for DB2 PE displays might not be correct.
User response: Contact IBM support.

KO2O0751E  ABEND IN NEW CYCLE DRIVER.
REPORTED DATA MIGHT BE ERRATIC
Explanation: OMEGAMON XE for DB2 PE terminated in the driver that controls new cycles.
System action: Processing continues, but the data OMEGAMON XE for DB2 PE displays might not be correct.
User response: Contact IBM support.

KO2O0752I  MONITORED DB2 IS NO LONGER ACTIVE. DISPLAYED DATA IS FROM LAST CYCLE
Explanation: The DB2 that OMEGAMON XE for DB2 PE was monitoring is no longer active.
System action: OMEGAMON XE for DB2 PE displays the data it collected during the previous OMEGAMON XE for DB2 PE cycle. Processing continues.
User response: Determine why the DB2 that OMEGAMON XE for DB2 PE was monitoring is no longer active, and then restart DB2.

KO2O0753E  ABEND IN THREAD CPU COLLECTION ROUTINE
Explanation: OMEGAMON XE for DB2 PE terminated in the routine that collects data about the CPU used by a thread.
System action: Processing terminates.
User response: Contact IBM support.

KO2O0754W  THREAD CPU COLLECTION HAS BEEN DISABLED
Explanation: OMEGAMON XE for DB2 PE has disabled the routine that collects data about the CPU used by a thread.
System action: Processing terminates.
User response: Contact IBM support.

KO2O0755E  ABEND IN CPU COLLECTION ROUTINE
Explanation: OMEGAMON XE for DB2 PE terminated in the routine that collects data about the CPU usage.
System action: Processing terminates.
User response: Contact IBM support.

KO2O0756W  CPU COLLECTION HAS BEEN DISABLED
Explanation: OMEGAMON XE for DB2 PE has disabled the routine that collects data about the CPU usage.
System action: Processing terminates.
User response: Contact IBM support.

KO2O0757E  TRACE STATUS COLLECTION HAS TERMINATED
Explanation: OMEGAMON XE for DB2 PE terminated in the routine that collects data about the status of the global trace.
System action: Processing terminates.
User response: Contact IBM support.

KO2O0758W  TRACE STATUS COLLECTION HAS BEEN DISABLED
Explanation: OMEGAMON XE for DB2 PE has disabled the routine that collects data about the status of the global trace.
System action: Processing terminates.
User response: Contact IBM support.

KO2O0800E  INVALID SSCVT FOUND WITH SSCTID NOT EQUAL TO SSCT. TERMINATING
Explanation: The JES SSCVT chain contains a not valid SSCVT, one without an SSCTID equal to SSCT.
System action: OMEGAMON XE for DB2 PE stops its search of the SSCVT chain and terminates processing.
User response: Identify and correct the invalid SSCVT. (Your MVS systems programmer can help you trace the SSCVT chain to correct the invalid SSCVT.)

KO2O0900E  OMEGAMON XE for DB2 PE INCOMPATIBLE WITH THIS OPERATING SYSTEM. TERMINATING
Explanation: OMEGAMON XE for DB2 PE operates only in an MVS/XA or MVS/ESA environment.
System action: Processing terminates.
User response: Do not start OMEGAMON XE for DB2 PE on a non-MVS/XA or non-MVS/ESA operating system. Also, ensure that your operating system and your load library are compatible (both XA or both ESA).

KO2O0901E OMEGAMON XE for DB2 PE MUST RUN FROM AN APF-AUTHORIZED LIBRARY. TERMINATING

Explanation: OMEGAMON XE for DB2 PE must run from an APF-authorized library.

System action: Processing terminates.

User response: Move the OMEGAMON XE for DB2 PE load modules to an APF-authorized library and restart the OMEGAMON XE for DB2 PE Common Interface.

KO2O0902U CANNOT LOCATE LOAD MODULE module. TERMINATING

Explanation: OMEGAMON XE for DB2 PE could not locate a DB2 subsystem with a system services address space named cccccccc.

System action: Processing terminates.

User response: Supply a valid DB2 ID to monitor.

KO2O0903U LOAD MODULE module IS AT THE WRONG RELEASE LEVEL. TERMINATING

Explanation: The indicated OMEGAMON XE for DB2 PE load module is not at the correct release level. This message is usually caused by a failure to fully unload the OMEGAMON XE for DB2 PE product tape, or by a failure to migrate all modules to the runtime library.

System action: Processing terminates.

User response: Place a version of the load module that is at the correct release level in the proper library and restart OMEGAMON XE for DB2 PE.

KO2O0904E OMEGAMON XE for DB2 PE REQUIRES A DB2= DB2ID AT LOGON. TERMINATING

Explanation: OMEGAMON XE for DB2 PE did not find a DB2 subsystem services address space matching the ID of the specified DB2 subsystem to be monitored when the session was started.

System action: Processing terminates.

User response: Use the DB2= parameter when you log on to indicate the ID of the DB2 subsystem to be monitored. Alternatively, specify DB2= on the START OMVTAM statement to supply a default DB2 ID.

KO2O0905E SPECIFIED DB2 ID IS GREATER THAN 8 CHARACTERS. SESSION TERMINATING

Explanation: The DB2 ID specified for the DB2= parameter is longer than 8 characters. The ID for the DB2 subsystem to be monitored cannot be longer than 8 characters.

System action: Processing terminates.

User response: Supply a valid DB2 ID.

KO2O0906E COULD NOT LOCATE SPECIFIED DB2 cccccccc. TERMINATING

Explanation: OMEGAMON XE for DB2 PE did not find a DB2 subsystem with a system services address space named cccccccc.

System action: Processing terminates.

User response: Supply a valid DB2 ID to monitor.

KO2O0907W OMEGAMON XE FOR DB2 PE TERMINATING BECAUSE DB2 NOT YET INITIALIZED OR TERMINATING

Explanation: OMEGAMON XE for DB2 PE tried to check the release level of the DB2 subsystem to be monitored and did not find the normal set of DB2 control blocks during initialization. This problem can occur when DB2 is initializing or terminating.

System action: Processing terminates.

User response: Check to see whether the DB2 to be monitored is still active. If so, restart OMEGAMON XE for DB2 PE.

KO2O0908W OMEGAMON XE FOR DB2 PE DOES NOT SUPPORT DB2 RELEASE vrm. TERMINATING

Explanation: OMEGAMON XE for DB2 PE does not support the release level of the DB2 to be monitored.

System action: Processing terminates.

User response: None.

KO2O0910W DB2 HAS Terminated. The following display data was collected on dd/mm/yy AT hh:mm:ss

Explanation: The DB2 subsystem that OMEGAMON XE for DB2 PE was monitoring has terminated. The data that appears on this display was collected at the specified date and time.
KO2O0911E  FAILED TO LOCATE IRLM JOB  
cccccccc, TERMINATING
Explanation: OMEGAMON XE for DB2 PE could not locate the Internal Resource Lock Manager (IRLM) associated with the DB2 to be monitored at initialization time.

System action: Processing terminates.
User response: Start or restart the IRLM used by DB2.

KO2O0912W  DB2 HAS TERMINATED. NO DISPLAY 
DATA HAS BEEN COLLECTED 
DURING THIS SESSION
Explanation: The DB2 subsystem that OMEGAMON XE for DB2 PE was monitoring has terminated. OMEGAMON XE for DB2 PE cannot collect data about this DB2.

System action: OMEGAMON XE for DB2 PE continues processing, but cannot display data about this DB2.
User response: Restart the DB2 subsystem or direct OMEGAMON XE for DB2 PE to monitor a different DB2.

KO2O0913E  OMEGAMON XE for DB2 PE 
SUPPORTED BY COMMON 
INTERFACE VERSION 230 AND 
ABOVE ONLY. VERSION IS vrm
Explanation: OMEGAMON XE for DB2 PE only operates with a Common Interface at version 230 or later.

System action: OMEGAMON XE for DB2 PE terminates processing.
User response: Verify that OMEGAMON XE for DB2 PE is using an appropriate version of the common interface. If the problem persists, contact IBM support.

KO2O0914E  FAILED TO LOCATE IRLM JOB. 
TERMINATING
Explanation: The Internal Resource Lock Manager (IRLM) address space is not active.

System action: OMEGAMON XE for DB2 PE terminates.
User response: Verify that the IRLM address space is active and restart OMEGAMON XE for DB2 PE.
KO2O0925E  OMEGAMON XE FOR DB2 PE
    INITIALIZATION TERMINATED
    BECAUSE DB2 xxxx IS NOT USABLE

Explanation:  DB2 xxxx not usable during OMEGAMON XE for DB2 PE initialization.
System action:  Processing terminates.
User response:  Determine why DB2 not usable and then restart OMEGAMON XE for DB2 PE.

KO2O0926E  OMEGAMON XE for DB2 PE B37 SNAP FAILURE OCCURRED. SNAP DEBUGGING FACILITY DISABLED (ABENDXIT)

Explanation:  The data set in use by the O2CI O2SNAP ddname is full. The O2SNAP data set is used for diagnostic purposes.
System action:  OMEGAMON XE for DB2 PE stops producing diagnostics.
User response:  Terminate the O2CI, then delete and reallocate the O2SNAP data set.

KO2O0927U  UNRECOVERABLEOMEGAMON XE for DB2 PE SNAP FAILURE. TERMINATING

Explanation:  A SNAP dump is taken, but failed to complete.
System action:  Processing terminates.
User response:  Contact IBM support.

KO2O0928E  UNSUPPORTED COMBINATION OF DB2 AND IRLM RELEASES. USING DEFAULT IRLM R\text{\textsuperscript{\textdagger}}

Explanation:  A compatibility problem between DB2 and the Internal Resource Lock Manager (IRLM) was detected.
System action:  Processing terminates.
User response:  Call IBM support.

KO2O0930E  INVALID VALUE FOR OPTION=PARAMETER. TERMINATING

Explanation:  A not valid parameter was found, usually being configured by the Configuration Tool (formerly ICAT).
System action:  Processing terminates.
User response:  Rebuild the runtime environment by using the Configuration Tool (formerly ICAT).

KO2O0930E - ** WARNING ** - EP ADDR TO RTN routine IS UNRESOLVED!

Explanation:  An entry point address to the indicated routine could not be resolved. This happens if a program component in OMEGAMON XE for DB2 PE tries to call another entry point that does not exist.
System action:  Processing terminates.
User response:  Contact IBM support.

KO2O0951U  OMEGAMON XE for DB2 PE MUST RUN FROM AN APF-AUTHORIZED LIBRARY. TERMINATING

Explanation:  OMEGAMON XE for DB2 PE must run from an APF-authorized library.
System action:  Processing terminates.
User response:  Move the OMEGAMON XE for DB2 PE load modules to an APF-authorized library and restart the OMEGAMON XE for DB2 PE Common Interface.

KO2O0992E  GETMEM > LIMIT: X1 T1 R1 W1 C1
    R14=X2

Explanation:  An internal memory request was denied. If allowed, the address space will run short on storage.
• X1 is the requested amount.
• T1 is the request type.
• R1 is the requesting routine name.
• W1 is the requested work area.
• C1 is the calling routine.
• X2 is the requesting return address.
System action:  The memory request is denied.
User response:  Contact IBM support.

KO2O1000W  DB2 ACCOUNTING CLASS ONE TRACE STATUS IS INACTIVE, ALL FIELDS CONTAINING N/A ARE UNAVAILABLE

Explanation:  OMEGAMON XE for DB2 PE cannot provide data for some fields when Accounting trace class 1 is not active. OMEGAMON XE for DB2 PE indicates these fields by displaying the characters N/A as their output.
System action:  OMEGAMON XE for DB2 PE processing continues.
User response:  To display accurate data in these fields, start Accounting trace class 1.
KO2O1001E  TABLE OVERFLOW. NOT ALL THREADS CAN BE DISPLAYED. INCREASE LROWS LOGON PARAMETER

Explanation: The number of threads that can be displayed is limited by the LROWS parameter.

System action: Processing terminates.

User response: Use the Configuration Tool (formerly ICAT) to increase the LROWS parameter.

KO2O1100E  AN APPLICATION TRACE REQUEST IS ALREADY ACTIVE. TRACE REQUEST CANNOT BE PROCESSED

Explanation: The Application Trace Facility (ATF) received a request to start a trace, but is already tracing an application. The ATF can only trace one application for each OMEGAMON XE for DB2 PE session.

System action: The ATF ignores the request.

User response: Wait for the current trace to end, or stop it manually, then resubmit the request.

KO2O1101E  APPLICATION TRACE REQUEST HAS BEEN STARTED. TRACE INITIALIZATION IS IN PROGRESS

Explanation: The Application Trace Facility (ATF) received a request to trace an application and is preparing to start the trace.

System action: The ATF initializes its trace data collector.

User response: None.

KO2O1103E  APPLICATION TRACE REQUEST HAS FAILED. COLLECTOR ATTACH HAS FAILED

Explanation: OMEGAMON XE for DB2 PE could not start the application trace request because it could not attach its collector to capture the trace data.

System action: The Application Trace Facility (ATF) terminates the trace request.

User response: Call IBM support.

KO2O1104E  APPLICATION TRACE REQUEST HAS FAILED. MODULE NAME DSNALI WAS NOT FOUND

Explanation: OMEGAMON XE for DB2 PE could not start the application trace request because it could not locate the DSNALI module.

System action: The Application Trace Facility (ATF) terminates the trace request.

User response: Verify that the DSNALI module is available to the common interface. If the DB2 load modules do not reside in MVS LPALIB or a LINKLIST data set, ensure that the installation data set is concatenated to the STEPLIB ddname in the O2CI JCL and that the installation data set is APF-authorized.

KO2O1105E  APPLICATION TRACE START REQUEST HAS FAILED. MODULE NAME DSNWLI2 WAS NOT FOUND

Explanation: OMEGAMON XE for DB2 PE could not start the application trace request because it could not locate the DSNWLI2 module.

System action: The Application Trace Facility (ATF) terminates the trace request.

User response: Verify that the DSNWLI2 module is available to the common interface. If the DB2 load modules do not reside in MVS LPALIB or a LINKLIST data set, ensure that the installation data set is concatenated to the STEPLIB ddname in the O2CI JCL and that the installation data set is APF-authorized.

KO2O1106E  APPLICATION TRACE START REQUEST HAS FAILED. MODULE NAME O2ATccc WAS NOT FOUND

Explanation: OMEGAMON XE for DB2 PE could not start the application trace request because it could not locate the O2ATccc module (where ccc is the DB2 version being monitored).

System action: The Application Trace Facility (ATF) terminates the trace request.

User response: Verify that the O2ATccc module is in the proper library; then restart OMEGAMON XE for DB2 PE and resubmit the request.

KO2O1107E  APPLICATION TRACE REQUEST KEYWORD=value CONTAINS AN INVALID VALUE. CORRECT AND PRESS ENTER

Explanation: The indicated value of the specified keyword is incorrect.

System action: OMEGAMON XE for DB2 PE does not start the application trace request.

User response: Correct the value of the specified keyword. Resubmit the request.

KO2O1108E  ATF START date or time GREATER THAN END. CORRECT AND PRESS ENTER

Explanation: The indicated start date or start time is greater than the end date or end time.

System action: OMEGAMON XE for DB2 PE does not start the application trace request.
User response: Correct the date or time value. Resubmit the request.

**KO2O1109E** APPLICATION TRACE REQUEST
KEYWORD=*
VALUE* IS MISSING OR INVALID. CORRECT AND PRESS ENTER

Explanation: The indicated keyword is missing or contains a not valid value.

System action: OMEGAMON XE for DB2 PE does not start the application trace request.

User response: Correct or supply the value for the keyword. Resubmit the request.

**KO2O1110W** APPLICATION TRACE REQUEST
ATTACH KEYWORDS MAY ONLY BE SPECIFIED FOR A SINGLE DB2 CONNECTION TYPE

Explanation: The Application Trace Facility (ATF) received a trace request that contained qualifiers for more than one connection type.

System action: OMEGAMON XE for DB2 PE does not start the trace.

User response: Review the application trace request. Clarify the request to contain qualifiers only for the connection type of the plan you wish to trace.

**KO2O1111I** ATTF DATA IS FROM AN UNSUPPORTED DB2 VERSION <V1>.

Explanation: The Application Trace Facility (ATF) received a trace request to display trace data that is captured in a VSAM data set, however, the data was collected from a DB2 version that is no longer supported by OMEGAMON for Db2 PE version 5.2.0.

System action: The Application Trace Facility (ATF) ignores the request.

User response: You can do one of the following actions:

- Use a version of OMEGAMON for Db2 PE that supports the DB2 version that was used to collect the trace data.
- Reinitialize the VSAM data set and collect new ATTF trace data by using OMEGAMON for Db2 PE version 5.2.0.

**KO2O1112I** APPLICATION TRACE INFORMATION UNAVAILABLE. AN APPLICATION TRACE HAS NOT BEEN REQUESTED

Explanation: The Application Trace Facility (ATF) received a request to display trace data, but no application trace was started.

System action: The Application Trace Facility (ATF) ignores the request.

User response: Start an application trace, then navigate to the Display Trace Data panels.

**KO2O1113E** APPLICATION TRACE PROGRAM SUMMARY DISPLAY IS NOT POSSIBLE. ZOOM FROM UNIT OF WORK SUMMARY

Explanation: The Application Trace Facility (ATF) was not able to produce the Program Summary panel.

System action: The request is ignored.

User response: Navigate to the Program Summary panel from the Unit of Work panel.

**KO2O1114E** APPLICATION TRACE PROGRAM DETAIL DISPLAY IS NOT POSSIBLE. ZOOM FROM TRACE PROGRAM SUMMARY

Explanation: The Application Trace Facility (ATF) was not able to produce the Program Detail panel.

System action: The request is ignored.

User response: Navigate to the Program Detail panel from the Thread Unit of Work panel.

**KO2O1116I** APPLICATION TRACE PROGRAM DETAIL HAS NOT LOCATED SUFFICIENT TRACE DATA TO PRODUCE A DISPLAY

Explanation: The Application Trace Facility (ATF) received a request to display trace data, but it could not find enough information to produce the requested display.

System action: OMEGAMON XE for DB2 PE displays this message. There is no data to display.

User response: Wait for OMEGAMON XE for DB2 PE to collect more trace data.
**KO2O1117E** APPLICATION TRACE SCROLL
CONTROL ARGUMENT IS NONNUMERIC

**Explanation:** A nonnumeric argument was specified with either the +nmmm, -nmmm, or smmm ATF control keyword. +nmmm scrolls forward nmmm records, -nmmm scrolls backward nmmm records, and smmm selects the specified record.

**System action:** The request is ignored.

**User response:** Specify a numeric value for nmmm and press Enter to continue.

---

**KO2O1118E** APPLICATION TRACE CONTROL
KEYWORD ARGUMENT IS INVALID.
LENGTH EXCEEDS SIX CHARACTERS

**Explanation:** A scroll request (+nmmm scroll forward, -nmmm scroll backward, smmm select the specified record) was made on the Detail panel, but the argument is too long.

**System action:** The request is ignored.

**User response:** Correct the length of the argument and press Enter to continue.

---

**KO2O1119E** APPLICATION TRACE CONTROL
KEYWORD ARGUMENT IS NOT VALID

**Explanation:** The Application Trace Facility (ATF) received a not valid argument for the control keyword.

**System action:** The request is ignored.

**User response:** Supply a valid argument for the keyword and press Enter to continue.

---

**KO2O1120E** APPLICATION TRACE CONTROL
KEYWORD NOT LOCATED

**Explanation:** The Detail panel does not contain a control keyword.

**System action:** OMEGAMON XE for DB2 PE displays this message and chooses the current SQL statement as the control keyword on the Detail panel.

**User response:** Press Enter to continue.

---

**KO2O1121I** APPLICATION TRACE
INFORMATION UNAVAILABLE. NO
SQL CALLS LOCATED

**Explanation:** The Application Trace Facility (ATF) received a request to display SQL Detail data, but it could not find any data that matched the trace request criteria.

**System action:** OMEGAMON XE for DB2 PE displays this message. There is no data to display.

**User response:** Wait for OMEGAMON XE for DB2 PE to collect more trace data, or evaluate the trace criteria specified for the current trace.

---

**KO2O1122I** APPLICATION TRACE
INFORMATION UNAVAILABLE. SQL
CALL REQUESTED NOT LOCATED

**Explanation:** The Application Trace Facility (ATF) Detail panel received a plus, minus, or select request to display trace data for a selected SQL statement, but the SQL statement was out of range.

**System action:** OMEGAMON XE for DB2 PE displays this message.

**User response:** Correct the control keyword argument and press Enter to continue.

---

**KO2O1123I** APPLICATION TRACE SQL DETAIL
REQUEST MUST BE SELECTED FROM
PROGRAM SUMMARY DISPLAY

**Explanation:** The Application Trace Facility (ATF) could not produce the requested panel.

**System action:** OMEGAMON XE for DB2 PE ignores the request.

**User response:** Navigate to the SQL Detail panel by selecting it from the Program Summary panel.

---

**KO2O1124I** APPLICATION TRACE HAS
TERMINATED. TRACE HAS BEEN
TERMINATED DUE TO -STOP TRACE
BEING ISSUED

**Explanation:** The Application Trace Facility (ATF) trace collector has terminated because DB2 received a DB2 STOP TRACE command that terminated the DB2 trace that the ATF uses to collect data.

**System action:** The Application Trace Facility (ATF) does not collect data.

**User response:** Determine why the STOP TRACE command was issued. Restart the trace and then issue an ATF trace request.

---

**KO2O1125E** APPLICATION TRACE START
REQUEST HAS FAILED. PLAN NAME
plan NOT FOUND OR NOT
AUTHORIZED

**Explanation:** The plan name required by the Application Trace Facility (ATF) was not found or is not authorized for use by the Common Interface.

**System action:** DB2 stops attempting to create a thread and terminates the Application Trace Facility (ATF) trace collection.

**User response:** Determine if the customization tasks have been completed for the DB2 subsystem being
monitored. Bind the indicated plan name and authorize it for use through the OMEGAMON XE for DB2 PE Common Interface.

KO201126E  APPLICATION TRACE START REQUEST HAS FAILED. START TRACE IS NOT AUTHORIZED

Explanation: The Application Trace Facility (ATF) trace collector was not able to execute a **START TRACE** request to the DB2 subsystem being monitored; therefore, it could not start.

User response: Attempt to reissue the request. If the amount of trace data collected is insufficient, contact IBM support.

KO201127E  APPLICATION TRACE START REQUEST HAS FAILED. PLAN NAME plan IS NOT AUTHORIZED FOR USE

Explanation: The indicated OMEGAMON XE for DB2 PE plan name is not authorized for use by the Common Interface. (This was determined during the request to start an Application Trace Facility (ATF) trace.)

User response: Authorize the Common Interface to use the specified plan name.

KO201128E  APPLICATION TRACE START REQUEST HAS FAILED. DB2 CONNECT IS NOT AUTHORIZED

Explanation: The Application Trace Facility (ATF) attempted to connect to DB2 as a result of a **START TRACE** request. The connection was rejected by DB2 because the Common Interface was not authorized to connect.

User response: If external security is being used to control the ability to connect to DB2, then authorize the Common Interface to allow it to connect to the DB2 subsystem being monitored. If external security is not being used, contact IBM support.

KO201129E  APPLICATION TRACE HAS BEEN TERMINATED. TRACE DATA COLLECTION WORK AREA IS FULL

Explanation: The Application Trace Facility (ATF) stopped its current trace because the trace data collection work area is full.

System action: The ATP trace collector stops.

User response: Attempt to further qualify the trace criteria to limit the amount of trace data collected.

KO201130E  APPLICATION TRACE START REQUEST HAS FAILED. DB2 CONNECT REJECTED. MAX CONNECTIONS REACHED

Explanation: The Application Trace Facility (ATF) could not start the requested trace because it could not connect to DB2. DB2 has reached the maximum number of connections allowed at this time.

User response: Increase the value of the CTHREAD parameter in the DSNZPARM module, if necessary. Wait for the background collection to stop and reissue the trace request.

KO201131E  APPLICATION TRACE START REQUEST HAS FAILED. TRACE MONITOR2 NOT AUTHORIZED

Explanation: The DB2 subsystem being monitored has not authorized the Common Interface to issue DB2 trace requests. (This was determined during the request to start an Application Trace Facility (ATF) trace.)

User response: Grant trace authority to the Common Interface.

KO201132E  APPLICATION TRACE START REQUEST HAS FAILED. ALL TRACE OPX DESTINATIONS ARE IN USE

Explanation: The Application Trace Facility (ATF) start trace request determined that all OPX destinations are in use.

User response: Call IBM support.

KO201133E  APPLICATION TRACE DATA HAS BEEN LOST. COLLECTOR UNABLE TO PROCESS VOLUME OF DATA COLLECTED

Explanation: The Application Trace Facility (ATF) determined that it cannot process the volume of trace data being generated by DB2. As a result, some data has been lost.

User response: Attempt to reissue the request. If the amount of trace data collected is insufficient, contact IBM support.
Specify a plan name and authid in the trace request. If the problem persists, contact IBM support.

KO2O1134E  APPLICATION TRACE UNIT OF WORK DISPLAY IS NOT POSSIBLE.
ZOOM FROM TRACE THREAD SUMMARY

Explanation:  The Application Trace Facility (ATF) could not produce the Unit of Work panel.
System action:  The request is ignored.
User response:  Navigate to the Unit of Work panel from the Thread Summary panel.

KO2O1135E  APPLICATION TRACE UOW SUMMARY HAS NOT LOCATED SUFFICIENT TRACE DATA TO PRODUCE A DISPLAY

Explanation:  The Application Trace Facility (ATF) could not produce the Unit of Work panel.
System action:  The request is ignored.
User response:  Navigate to the Unit of Work panel from the Thread Summary panel.

KO2O1136E  APPLICATION TRACE PROG SUMMARY HAS NOT LOCATED SUFFICIENT TRACE DATA TO PRODUCE A DISPLAY

Explanation:  The Application Trace Facility (ATF) could not produce the Unit of Work panel.
System action:  The request is ignored.
User response:  Navigate to the Unit of Work panel from the Thread Summary panel.

KO2O1137E  APPLICATION TRACE SQL INDEX HAS LOCATED MORE ENTRIES THAN CAN BE DISPLAYED

Explanation:  The Application Trace Facility (ATF) could not produce the SQL Index panel.
System action:  The request is ignored.
User response:  Try again when more data is collected.

KO2O1138E  ATF AUTHORIZATION IDENTIFIER IN USE = authid

Explanation:  This message follows other ATF authorization failure messages and shows the AUTHID for which access was denied.
System action:  None.
User response:  Grant authorization to the indicated AUTHID, then try again.

KO2O1139E  OVERLAPPING OR DUPLICATE DATA HAS RESULTED IN INSUFFICIENT TRACE DATA

Explanation:  The Application Trace Facility (ATF) could not return the required trace information because of overlapping or duplicate data.
Overlapping data can occur if the DB2 time stamp for performance trace records has overlapped for the same thread.
System action:  The request is ignored.
User response:  If you are able to determine that duplicate data is the source of the problem, then invoke the Application Trace Facility (ATF) again. If you cannot determine the source of the problem, contact IBM support.

KO2O1140E  APPLICATION TRACE CAPTURE REQUEST FAILED. UNABLE TO LOAD O2ATCccc, O2ATCAPI, O2ATCAP2

Explanation:  The Application Trace Facility (ATF) could not load all of the mentioned modules.
System action:  Application trace capture to VSAM data set is denied.
User response:  Ensure that the load library used to start up OMEGAMON XE for DB2 PE contains the mentioned modules. Correct the problem and invoke the Application Trace Facility (ATF) again.

KO2O1141E  APPLICATION TRACE DSNAME INCOMPLETE. SINGLE QUALIFIER NOT ALLOWED. REENTER THE TRACE REQUEST

Explanation:  The Application Trace Facility (ATF) trace data set name must have two or more qualifiers.
System action:  The ATF terminates the trace request.
User response:  Respecify the trace request.

KO2O1142E  APPLICATION TRACE value LIMIT REQUESTED IS NOT VALID. REENTER THE TRACE REQUEST

Explanation:  The indicated keyword value is not valid.
System action:  The Application Trace Facility (ATF) terminates the trace request.
User response:  Re-specify the trace request with a valid value for the keyword.
KO2O1143E  APPLICATION TRACE REQUEST FAILED FOR AN UNDETERMINED REASON

Explanation: The attempt to start the Application Trace Facility (ATF) trace has failed for a reason not checked by the ATF. The DB2 return code and reason code from the START TRACE command are displayed below this message.

System action: The ATF terminates the trace request.

User response: Locate the reason code in DB2 Messages and Codes to determine why the ATF trace request was not successful. Correct the problem and reenter the trace request.

KO2O1144E  APPLICATION TRACE START REQUEST HAS FAILED. UNABLE TO ALLOCATE SPECIFIED DATA SET

Explanation: The Application Trace Facility (ATF) could not allocate the specified VSAM data set for use.

System action: The ATF is terminated.

User response: Specify the name of a VSAM linear data set and invoke the ATF again.

KO2O1145E  APPLICATION TRACE START REQUEST HAS FAILED. THE VSAM DATA SET CANNOT BE OPENED. CHECK LOG

Explanation: The Application Trace Facility (ATF) detected an error when opening the VSAM data set for use.

System action: The ATF is terminated.

User response: Check the system log for the specific reason. Correct the problem, and invoke the ATF again.

KO2O1146E  ALLOCATION FAILED, DSN: dsname REASON CODE: rs

Explanation: The dynamic allocation of the named data set failed. The supervisor call instruction (SVC) 99 returned with the named reason code.

System action: Processing terminates.

User response: See MVS Messages and Codes for more information.

KO2O1147E  ATF CAPTURE ERROR: request ON type RETURN= rc REASON= rs INFO=info

Explanation: The Application Trace Facility (ATF) detected an error with the VSAM data set while using the capture server API. The API request and type information are returned along with the failing return code, reason code, and information code.

System action: Application trace capture to VSAM data set is discontinued.

User response: Examine the associated MVS messages and other capture server messages prefixed by KO2R. Correct the problem, and invoke the ATF again.

KO2O1148E  ATF DATA SET SPECIFIED COULD NOT BE FOUND OR IS NOT A VSAM DATA SET

Explanation: The specified Application Trace Facility (ATF) data set does not exist or is not a VSAM data set.

System action: OMEGAMON XE for DB2 PE does not start the ATF trace request.

User response: Correct the data set name. Resubmit the request.

KO2O1149I  ATF DATA SET SPECIFIED HAS BEEN MIGRATED. PRESS ENTER TO PROCEED

Explanation: The specified Application Trace Facility (ATF) data set has been migrated.

System action: None.

User response: Press Enter to use the data set, specify a different data set name, or press PF3 to cancel the request.

KO2O1150W  APPLICATION TRACE REQUEST PLANNAME=ALL DISABLED VIA INSTALLATION EXIT

Explanation: This warning was programmed on purpose. When OMEGAMON XE for DB2 PE was installed, it was configured that PLANNNAME = ALL is not allowed for the Application Trace Facility (ATF).

System action: Processing continues.

User response: If required, ask your administrator to allow this parameter.

KO2O1151E  ATF SMF=Y and GTF=Y ARE MUTUALLY EXCLUSIVE. CORRECT AND PRESS ENTER TO PROCEED

Explanation: Only SMF=Y or GTF=Y can be specified.

System action: OMEGAMON XE for DB2 PE does not start the Application Trace Facility (ATF) trace request.

User response: Change one or both of these parameters to N. Resubmit the request.

KO2O1152  NUMBER OF TRACE RECORDS LOST DUE TO VSAM TASK: n

Explanation: The Application Trace Facility (ATF) lost n trace records produced by DB2 because of high volume.
KO2O1152E  THE APPLICATION TRACE START FAILED. THE VSAM DATASET IS FULL.

Explanation: The application trace cannot be started because the VSAM dataset is full and the option MODE=APPEND is used.

System action: None.

User response: Use selection criteria that restrict the volume of records to be captured by the ATF.

KO2O1153  NUMBER OF UOW RECORDS LOST DUE TO VSAM TASK: n

Explanation: The Application Trace Facility (ATF) lost nUnit of Work (UOW) records because of high volume UOWs in DB2.

System action: None.

User response: Use selection criteria that restrict the volume of records to be captured by the ATF.

KO2O1160E  APPLICATION TRACE REPORT REQUEST FAILED. UNABLE TO LOAD O2AR210, O2AR220, O2ATRPT

Explanation: The Application Trace Facility (ATF) could not load all of the mentioned modules.

System action: Application trace reporting is denied.

User response: Ensure that the load library used to start up OMEGAMON XE for DB2 PE contains the mentioned modules. Correct the problem and invoke the ATF again.

KO2O1161E  MULTIPLE ENTRIES NOT ALLOWED FOR field1 AND field2.

Explanation: You can enter multiple values for the Trace Specification Fields PLANNAME, PACKNAME, COLLID, PKGLOC and AUTHID. However, DB2 TRACE only supports the specification of multiple values for one of the fields.

System action: Application Trace Facility will not continue trace specification until the field(s) have been corrected.

User response: Either enter a value in the filter field, or change the exclude field to N.

KO2O1162I  xxxx START TRACE yyyy

Explanation: A START TRACE command yyyy is issued to DB2 subsystem xxxx.

System action: The application trace is being initialized.

User response: None.

KO2O1163E  NO VALUE SPECIFIED FOR FIELD field1, field2 =YES IS INVALID

Explanation: The exclude option field can only be requested if the corresponding value field has one or more values entered.

System action: ATF will not continue trace specification until the field(s) have been corrected.

User response: Either enter a value in the filter field, or change the exclude option field to N.

KO2O1164I  xxxx STOPPING APPLICATION TRACE

Explanation: An application trace on DB2 subsystem xxxx has run for the specified duration or has been stopped manually.

System action: The application trace is being stopped.

User response: None.

KO2O1165I  xxxx STOP TRACE yyyy

Explanation: A STOP TRACE command yyyy is issued to DB2 subsystem xxxx.

System action: The application trace is being stopped.

User response: None.
KO2O1165E ROUTINE FILTERING NOT ALLOWED WHEN XXXXXXXX SPECIFIED

Explanation: When ROUTINE1 or ROUTINE2 is specified, some ATF filter options are not supported. In the message, XXXXXXXX is given in the example above, the actual text may be PACKNAME, COLLID, or PKGLOC.

System action: ATF will not continue trace specification until the field(s) have been corrected.

User response: Either remove ROUTINE from trace specification or remove other filter value.

KO2O1165W APPLICATION TRACE DBID/OBID BUFFER FULL

Explanation: The Application Trace Facility (ATF) buffer, used to hold DBID/OBID information, is full. Some DBID/OBID will not be translated.

System action: Processing continues.

User response: Contact IBM support.

KO2O1167E THE VTAM TRACE CANNOT BE PROCESSED. REASON: <V1> OR <V2>

Explanation: TIME OVERLAP OCCURRED
If a deferred trace in ATF is scheduled to write to a particular dataset at a particular time, and you specify another deferred trace to write to this particular dataset at this particular time, this trace cannot be executed because the VSAM dataset is not available.

<V2> MODE=APPEND REQUIRED
If there are one or more deferred traces that write to a particular dataset, and you specify another deferred trace to write to this particular dataset by using the option MODE=REUSE, this trace cannot be started because it would overwrite data from the other traces.

System action: None.

User response:
- If <V1> is issued, specify a different dataset or modify the start time or the duration of the trace so that the scheduled time does not overlap with other requests to this dataset.
- If <V2> is issued, specify a different dataset or use the option MODE=APPEND.

KO2O1169I THE START DATE IS NOT SPECIFIED. THE CURRENT DATE IS USED.

Explanation: If the start time is specified without specifying the start date, the current date is used as the start date of the deferred ATF trace.

System action: None.

User response: None.

KO2O1170E ROUTINEx REQUIRES BOTH SCHEMA AND NAME TO BE SPECIFIED

Explanation: When ROUTINE1 or ROUTINE2 is specified, both the schema and name fields must be filled in.

System action: Trace specification cannot be completed.

User response: If routine filtering is requested, provide values for both fields.

KO2O1171E TRACING ROUTINES REQUIRES SQLDATA=Y TO BE SPECIFIED

Explanation: Routine filtering requires SQLDATA=Y to be specified.

System action: Trace specification cannot be completed.

User response: If routine filtering is requested, specify SQLDATA=Y.

KO2O1174E ROUTINE FILTERING REQUIRES DSN SPECIFICATION

Explanation: Routine filtering requires VSAM data set output.

System action: Trace specification cannot be completed.

User response: If routine filtering is requested, specify an OUTPUT data set name.

KO2O1200E UNABLE TO ISSUE DB2 COMMAND. DB2 NOT ACTIVE

Explanation: OMEGAMON XE for DB2 PE could not issue the command requested because the DB2 to which the command was issued is not active.

System action: Processing continues.

User response: Issue the command to an active DB2 subsystem, or wait for this DB2 to become active.
KO2O1201E UNABLE TO ISSUE DB2 COMMAND.
GETMAIN FAILED

Explanation: OMEGAMON XE for DB2 PE could not issue the command requested because its getmain request failed.

System action: Processing continues.

User response: Verify that OMEGAMON XE for DB2 PE is not being constrained by installation parameters that restrict the use of storage above the 16M line. If the problem persists, contact IBM support.

KO2O1222I OMEGAMON XE FOR DB2 PE MESSAGE SUBSYSTEM IS SUCCESSFULLY INITIALIZED

Explanation: OMEGAMON XE for DB2 PE successfully initialized its message subsystem.

System action: Processing continues.

User response: None.

KO2O1223E OMEGAMON XE FOR DB2 PE MESSAGE SUBSYSTEM INITIALIZATION FAILED

Explanation: OMEGAMON XE for DB2 PE could not initialize its message subsystem successfully.

System action: OMEGAMON XE for DB2 PE processing terminates.

User response: Contact IBM support.

KO2O1223E AN ERROR WAS FOUND OBTAINING DB2/IRLM MESSAGES

Explanation: OMEGAMON XE for DB2 PE encountered an error while collecting DB2/IRLM messages.

System action: OMEGAMON XE for DB2 PE processing continues, but OMEGAMON XE for DB2 PE cannot display any DB2/IRLM messages. OMEGAMON XE for DB2 PE writes a SNAP dump to the O2SNAP data set and terminates the command.

User response: Verify that OMEGAMON XE for DB2 PE is not being constrained by installation parameters that restrict the use of storage above the 16M line. Contact IBM support.

KO2O1224E O2 MESSAGE SUBSYSTEM IS NOT ACTIVE. PLEASE TRY RECYCLING THE O2CI STARTED TASK

Explanation: The OMEGAMON XE for DB2 PE message subsystem is not active. OMEGAMON XE for DB2 PE cannot display DB2/IRLM messages.

System action: OMEGAMON XE for DB2 PE processing continues, but OMEGAMON XE for DB2 PE processing continues, but OMEGAMON XE for DB2 PE does not display thread information.

User response: Select the All Threads Connected to DB2 panel (by typing A on the top line of the panel). From this panel, move the cursor to a thread for which detailed information is needed.

KO2O1250E THE KEYWORD SPECIFIED IS NOT RECOGNIZED

Explanation: OMEGAMON XE for DB2 PE did not recognize the keyword you supplied.

System action: OMEGAMON XE for DB2 PE ignores the command.

User response: Correct the keyword and press Enter.

KO2O1251W NON-UNIQUE THREAD FOUND BASED ON SPECIFIED INFORMATION

Explanation: OMEGAMON XE for DB2 PE could not find a unique thread based on the plan name, connection ID, correlation ID, and authorization ID supplied. The characters in the parentheses at the end of the message are an internal code.

System action: OMEGAMON XE for DB2 PE processing continues, but OMEGAMON XE for DB2 PE does not display thread information.

User response: Select the All Threads Connected to DB2 panel (by typing A on the top line of the panel). From this panel, move the cursor to a thread for which detailed information is needed.

KO2O1252W THREAD NOT FOUND

Explanation: OMEGAMON XE for DB2 PE could not find the requested thread. The requested thread has probably terminated.

System action: OMEGAMON XE for DB2 PE continues processing.

User response: Specify another thread.
KO2O1253E  UNABLE TO LOCATE IRLM CONTROL BLOCK

Explanation: OMEGAMON XE for DB2 PE could not locate the indicated Internal Resource Lock Manager (IRLM) control block.

System action: OMEGAMON XE for DB2 PE continues processing, but cannot display all locking information for the specified thread.

User response: Specify a different thread. If the problem persists, contact IBM support.

KO2O1254W THREAD INDOUBT. THREAD DOES NOT OWN LOCKS OR CLAIMS

Explanation: The Locks/Claims Owned By a Thread panel could not find any locks or claims owned by the thread that is indoubt. Indoubt threads do not own locks or claims.

System action: The display is terminated.

KO2O1255W THREAD INDOUBT. THREAD DOES NOT WAIT FOR LOCKS OR DRAINS

Explanation: The Locks/Claims Causing a Thread to Wait panel could not find any locks or drain waits for the thread that is indoubt. Indoubt threads do not acquire locks and do not drain claims.

System action: The display is terminated.

KO2O1273E INVALID FUNCTION SPECIFIED

Explanation: Related to exception processing.

**Chapter 9. Messages** 5111
KO201301E Near-Term History Data Collector COULD NOT LOCATE MODULE module. TERMINATING

Explanation: The indicated module is required, but missing in the load library.

System action: Processing terminates.

User response: Add the module to the load library and restart the Near-Term History Data Collector.

KO201302E Near-Term History Data Collector LOAD MODULE module IS AT THE WRONG RELEASE LEVEL. TERMINATING

Explanation: The indicated module is at the wrong release level.

System action: Processing terminates.

User response: Move the module with the correct release level to the load library and restart the Near-Term History Data Collector.

KO201303E NEAR-TERM HISTORY DATA COLLECTOR SUPPORTED BY VERSION 250 AND ABOVE ONLY. ACTUAL VERSION IS not

Explanation: The OMNIMON version is not compatible with the Near-Term History Data Collector.

System action: Processing terminates.

User response: Use the OMNIMON version delivered with OMEGAMON XE for DB2 PE and restart the Near-Term History Data Collector.

KO201304I Near-Term History Data Collector OPTION PARAMETERS PROCESSED SUCCESSFULLY FROM MEMBER member

Explanation: This is an informational message.

System action: Processing continues.

User response: None.

KO201305E NEAR-TERM HISTORY DATA COLLECTOR NOT LICENSED FOR THIS SYSTEM. TERMINATING

Explanation: OMEGAMON XE for DB2 PE operates in an MVS/ESA environment, but you have an MVS/XA version of the OMEGAMON XE for DB2 PE near-term history component.

System action: Processing terminates.

User response: Use an MVS/ESA version of the OMEGAMON XE for DB2 PE near-term history component and restart the Near-Term History Data Collector.

KO201306E Near-Term History Data Collector REQUIRES APF LIBRARY. TERMINATING

Explanation: OMEGAMON XE for DB2 PE must run from an APF-authorized library.

System action: Processing terminates.

User response: Move the OMEGAMON XE for DB2 PE load modules to an APF-authorized library and restart the Near-Term History Data Collector.

KO201307I Near-Term History Data Collector IS TERMINATING

Explanation: This is an informational message.

System action: Processing terminates.

User response: None.

KO201308I Near-Term History Data Collector ACTIVELY MONITORING DB2 ccccc

Explanation: This is an informational message.

System action: Processing continues.

User response: None.

KO201309I Near-Term History Data Collector SERVER ccccccc IS ACTIVE

Explanation: This is an informational message.

System action: Processing continues.

User response: None.

KO201310I Near-Term History Data Collector SERVER ccccccc HAS TERMINATED

Explanation: This is an informational message.

System action: Processing terminates if a STOP H2 command was issued, unless an error is recoverable.

User response: If the Near-Term History Data Collector is terminating as a result of a STOP H2 command, no action is necessary. Otherwise, look for previous messages to determine the reason for termination, and action that is required.

KO201311I Near-Term History Data Collector SERVER ccccccc REATTACHED AFTER TERMINATION

Explanation: This is an informational message.

System action: Processing continues.

User response: None.
KO2O1312E ANOTHER Near-Term History Data Collector ALREADY ACTIVE FOR DB2 subsystem

Explanation: Another Near-Term History Data Collector is already monitoring this DB2 subsystem. There is only one active Near-Term History Data Collector for each DB2.

System action: Processing terminates during Near-Term History Data Collector startup. Processing continues if a new collection options member is used.

User response: None.

KO2O1313W Near-Term History Data Collector TEMPORARILY SUSPENDED DATA COLLECTION BECAUSE OF NO AVAL. STORAGE

Explanation: This is an informational message.

System action: Processing continues.

User response: None.

KO2O1314I Near-Term History Data Collector RESUMED DATA COLLECTION. STORAGE AVAILABLE

Explanation: This is an informational message.

System action: Processing continues.

User response: None.

KO2O1315W NEAR-TERM HISTORY DATA COLLECTOR - INVALID OUTPUT RECEIVED xxx

Explanation: Invalid output was received.
• xxx is a short text string describing the reason for the invalid input.

System action: Processing continues.

User response: Contact IBM support.

KO2O1316I Near-Term History Data Collector HAS TERMINATED

Explanation: This is an informational message.

System action: Processing terminates.

User response: None.

KO2O1317E Near-Term History Data Collector SERVER cccccc HAS EXCEEDED THE MAX. NBR OF ABENDS AND TERMINATED

Explanation: The OMEGAMON Collector failed more than 10 times and has terminated.

System action: Processing terminates.

User response: Contact IBM support.

KO2O1318I Near-Term History Data Collector - NEW OPTIONS IN EFFECT FOR CURRENT INTERVAL

Explanation: This is an informational message.

System action: Processing continues.

User response: None.

KO2O1319E Near-Term History Data Collector - NEW INTERVAL OPTIONS REJECTED

Explanation: The specified check for DB2 failed.

System action: Processing continues.

User response: Contact IBM support.

KO2O1320E Near-Term History Data Collector - IDENTITY TO DB2 FAILED. RETURN CODE rc

Explanation: The Near-Term History Data Collector identified to DB2 failed.

System action: Processing terminates.

User response: Check the IFI return code in DB2 Messages and Codes. Correct the problem and restart the Near-Term History Data Collector.

KO2O1321E Near-Term History Data Collector - IDENTITY TO DB2 FAILED. REASON CODE rs

Explanation: The Near-Term History Data Collector identified to DB2 failed.

System action: Processing terminates.

User response: Check the IFI return code in DB2 Messages and Codes. Correct the problem and restart the Near-Term History Data Collector.

KO2O1322E Near-Term History Data Collector - CREATE THREAD FAILED. RETURN CODE rc

Explanation: The Near-Term History Data Collector could not create a thread to DB2.

System action: Processing terminates.

User response: Check the IFI return code in DB2 Messages and Codes. Correct the problem and restart the Near-Term History Data Collector.
KO2O1323E • KO2O1342E

KO2O1323E  Near-Term History Data Collector - CREATE THREAD FAILED. REASON CODE rc
Explanation: The Near-Term History Data Collector could not create a thread to DB2.
System action: Processing terminates.
User response: Check the IFI return code in DB2 Messages and Codes. Correct the problem and restart the Near-Term History Data Collector.

KO2O1324E  Near-Term History Data Collector - DISCONNECT FROM DB2 FAILED. RETURN CODE rc
Explanation: The Near-Term History Data Collector could not disconnect from DB2.
System action: Processing terminates.
User response: Check the IFI return code in DB2 Messages and Codes. Correct the problem and restart the Near-Term History Data Collector.

KO2O1325E  Near-Term History Data Collector - DISCONNECT FROM DB2 FAILED. REASON CODE rc
Explanation: The Near-Term History Data Collector could not disconnect from DB2.
System action: Processing terminates.
User response: Check the IFI return code in DB2 Messages and Codes. Correct the problem and restart the Near-Term History Data Collector.

KO2O1326E  Near-Term History Data Collector - TRACE COMMAND FAILED. RETURN CODE rc
Explanation: The Near-Term History Data Collector could not start/stop/modify a trace.
System action: Processing terminates.
User response: Check the IFI return code in DB2 Messages and Codes. Correct the problem and restart the Near-Term History Data Collector.

KO2O1327E  Near-Term History Data Collector - TRACE COMMAND FAILED. REASON CODE rc
Explanation: The Near-Term History Data Collector could not start/stop/modify a trace.
System action: Processing terminates.
User response: Check the IFI return code in DB2 Messages and Codes. Correct the problem and restart the Near-Term History Data Collector.

KO2O1328W  Near-Term History Data Collector - DB2 subsystem SPECIFIED IN OPTIONS NOT ACTIVE
Explanation: The specified DB2 subsystem was not active. The Near-Term History Data Collector has waited for it to come up for 30 minutes.
System action: Processing terminates.
User response: Bring up the specified DB2 subsystem and restart the Near-Term History Data Collector.

KO2O1329E  Near-Term History Data Collector IS TERMINATING BECAUSE OF A CRITICAL SERVER FAILURE
Explanation: The Near-Term History Data Collector terminated because it detected a critical server failure.
System action: Processing terminates.
User response: Contact IBM support.

KO2O1330W  Near-Term History Data Collector - TRACE STOPPED. NO STATISTICS DATA IS COLLECTED
Explanation: The trace started by the Near-Term History Data Collector was stopped. No statistics data was collected.
System action: Processing continues.
User response: Restart the Near-Term History Data Collector and ensure that traces started by the collector do not stop.

KO2O1331W  Near-Term History Data Collector - TRACE STOPPED. NO ACCOUNTING, AUDITING OR PERF. DATA COLLECTED
Explanation: The trace started by the Near-Term History Data Collector was stopped. As result, no accounting, audit, or performance data can be collected.
System action: Processing continues.
User response: Restart the Near-Term History Data Collector and ensure that traces started by the collector are not stopped.

KO2O1342E  Near-Term History Data Collector - TRACE COMMAND FAILED. cccccccc HAS NO TRACE AUTHORIZATION
Explanation: The trace command did not go through because OMEGAMON XE for DB2 PE does not have DB2 trace authority.
System action: Processing terminates.
User response: Grant trace authority to O2CI DB2, then try again.
KO2O1343E Near-Term History Data Collector - TRACE COMMAND FAILED WITH DB2 MESSAGE ID n

Explanation: OMEGAMON XE for DB2 PE could not issue a DB2 trace command. The indicated message ID reveals why.

System action: Processing terminates.

User response: Contact IBM support for an explanation of the message and help in resolving the problem.

KO2O1345I Near-Term History Data Collector - NEW OPTIONS WILL TAKE EFFECT WHEN THE CURRENT INTERVAL EXPIRES

Explanation: Newly specified options for the Near-Term History Data Collector will go into effect after the current interval ends.

System action: None.

User response: None.

KO2O1346E Near-Term History Data Collector - NO MORE STORAGE FOR UOW. PERFORMANCE DATA IS NOT COLLECTED

Explanation: Lack of storage was detected for Unit of Work (UOW).

System action: Processing terminates.

User response: Increase the region size.

KO2O1347E Near-Term History Data Collector - READA/READS FAILED. RETURN CODE rc

Explanation: READA/READS failed during online data collection.

System action: The Near-Term History Data Collector terminates.

User response: See DB2 Messages and Codes for an explanation of the return code.

KO2O1348E Near-Term History Data Collector - READA/READS FAILED. REASON CODE rs

Explanation: READA/READS failed during online data collection.

System action: The Near-Term History Data Collector terminates.

User response: See DB2 Messages and Codes for an explanation of the reason code.

KO2O1349W Near-Term History Data Collector - DYNAMIC BUFFER POOL CELL POOL IS FULL

Explanation: The buffer pool storage used to hold buffer pool information is full.

System action: Processing continues.

User response: Contact IBM support.

KO2O1350W Near-Term History Data Collector - READS RETRY LIMIT EXCEEDED

Explanation: DB2 has detected a temporary lack of storage on a READS command.

System action: The system re-executes the READS command 10 times. If lack of storage persists, the command terminates and returns to the caller with no data.

User response: See messages KO2O1347E and KO2O1348E for more information.

KO2O1351I variable message text

Explanation: Not applicable.

System action: Not applicable.

User response: Not applicable.

KO2O1352I variable message text

Explanation: Not applicable.

System action: Not applicable.

User response: Not applicable.

KO2O1353E %%% STOP TRACE NOT ISSUED. TRACE NUMBER IS NOT AVAILABLE

Explanation: Internal error.

System action: Processing terminates.

User response: Contact IBM support.

KO2O1355W Near-Term History Data Collector - APPROACHING STORAGE LIMIT. LOG ARCHIVE MIGHT BE REQUIRED

Explanation: DB2 has detected a temporary lack of storage on a READS command.

System action: The system re-executes the READS command 10 times. If lack of storage persists, the command terminates and returns to the caller with no data.

User response: See messages KO2O1347E and KO2O1348E for more information.
KO2O1360E

KO2O1360E  NEAR-TERM HISTORY DATA COLLECTOR - DATA CAPTURE FAILED WITH RC=nn, RSC=nnnn, ARSC=nn, DB2=ssid

Explanation: The data capture request failed. The return code RC=nn, reason code RSC=nnnn, additional reason code ARSC=nnnn, and DB2 subsystem identifier DB2=ssid are provided for diagnostics.

RC  Meaning
00  REQUEST COMPLETED
    The request is complete.
04  REQUEST COMPLETED/WARNING
    The request was completed but warnings conditions are returned.

RSC  Meaning
0004  QUERY DATA IS INCOMPLETE
0008  SWITCHED- NO OUTPUT DS
08  REQUEST COMPLETE/NO ACTION
    The request was completed but no action was taken.

OC  DRIVER REQUEST FAILED
    The driver request failed.

RSC  Meaning
0204  INVALID DTOKEN ADDRESS
0208  LOAD FAILED FOR PAPC
020C  DELETE OF PAPC FAILED
0210  INIT FAILED

ARSC  Meaning
04  NO STORAGE UNAVAILABLE
08  ATTACH FAILED
0C  INVALID STOP ECB
10  INVALID PARM LIST
14  NOT APF AUTHORIZED

0214  ASSOCIATION FAILED
ARSC  Meaning
04  CS+CID ENQUE EXIST
08  INVALID CONNID LENGTH

0C  NON-UNIQUE CONNID
10  INVALID SETECB
14  STORAGE NOT AVAILABLE
18  INPUT PARM ERROR

0218  DRIVER INACTIVE
021C  TERMINATION FAILED

ARSC  Meaning
04  DRIVER REQUEST ABENDED
0220  DRIVER ALREADY TERMINATED
0224  DEFINE FAILED

ARSC  Meaning
04  CS ALREADY DEFINED
08  STORAGE NOT AVAILABLE
0C  CT ALREADY DEFINED
10  CT NOT FOUND
14  DS ALREADY DEFINED
18  OBJ ALREADY DEFINED

System action: The Near-Term History Data Collector subtask processing terminates.
User response: Perform a near-term history log archive; repeat as needed for all defined log data sets. If the archive does not resolve the problem, delete and redefine the log data sets. If the problem persists, contact IBM support.

KO2O1362W Near-Term History Data Collector TEMPORARILY SUSPENDED DATA COLLECTION. NO VSAM FILES. DB2=drb

Explanation: Usually, a job is automatically submitted that deletes the oldest file. You get this message when all files are filled and the oldest one is not yet deleted.
System action: Processing is halted.
User response: Delete the oldest file.

KO2O1363I Near-Term History Data Collector RESUMED DATA COLLECTION. VSAM FILE AVAILABLE. DB2=drb

Explanation: This is an informational message.
System action: Processing continues.
User response: None.

KO2O1364E NEAR-TERM HISTORY DATA COLLECTOR - SEQUENTIAL COLLECTION SUSPENDED. REASON reason code

Explanation: The Near-Term History Data Collector stopped collecting data to the sequential output file.
System action: Processing continues.
User response: Ensure there is enough space to allocate sequential data sets (for example, GDG).

KO2O1365I NEAR-TERM HISTORY DATA COLLECTOR - SEQUENTIAL OUTPUT TO dsn

Explanation: The Near-Term History Data Collector collects information in data set indicated by dsn.
System action: Processing continues.
User response: None.

KO2O1366E SEQ OUTPUT NEEDS DISP=OLD,DSN=xxx

Explanation: An attempt to allocate a new sequential file xxx or GDG generation xxx(+1) failed. Another process has an existing allocation against the file or GDG base xxx.
System action: This message is issued once. The Near-Term History Data Collector retries the allocation once a second. When the other process releases its allocation, the sequential file is allocated, output is
KO2O1367I • KO2O1402W

KO2O1367I  SEQ OUTPUT NOW RESUMED
DSN=xxx
Explanation: A previously locked data set has successfully been allocated.
System action: The Near-Term History Data Collector continues writing IFCID trace output to the new sequential file.
User response: None.

KO2O1369I  NEAR-TERM HISTORCCY DATA COLLECTOR - RECORD IS TOO LONG FOR SEQUENTIAL COLLECTION IFCID = <V1> DB2 subsystem = <V2>
Explanation: An IFI record length is longer than expected.
   <V1> is the name of the IFCID.
   <V2> is the name of the DB2 subsystem.
System action: The record is skipped. Processing continues with the next record.
User response: None.

KO2O1371I  <V1> RECORD IS TOO LONG FOR ATF DATASET COLLECTION. IFCID = <V2>
Explanation: An IFI record length is longer than expected.
   <V1> is the name of the IFCID.
   <V2> is the name of the DB2 subsystem.
System action: The record is skipped. Processing continues with the next record.
User response: None.

KO2O1372E  <V1> ACCTG CLASS(11) only valid for DB2 11 and above (IFITRACE).
Explanation: Accounting Class 11 is only valid for DB2 11 and later.
System action: Near Term History is not started for subsystem <v1>.
User response: Change Near Term History parameters to not use class 11 for this DB2 subsystem.

KO2O1385I  SSN=ssn REQUEST=req FROM=mod RC=ret RS=rsn TCB=addr
Explanation: This message describes the Near-Term History Data Collector initialization process. It contains the following variable information:
   • ssn is the DB2 subsystem name.
   • req is the request string.
   • mod is the module name (DSNRLI or DSNCLI).
   • ret is the return code.
   • rsn is the reason code.
   • addr is the storage address of the requesting TCB.
System action: Processing continues.
User response: None.

KO2O1400W  Near-Term History Data Collector DETECTED THAT RMF IS NOT ACTIVE. 15 MINUTE INTERVAL IS USED
Explanation: OMEGAMON XE for DB2 PE detects that RMF was not active when INTERVAL(RMF) was specified in the collection options member.
System action: Processing continues and a 15 minute interval is used.
User response: Activate RMF. Near-Term History Data Collector uses RMF interval if RMF is active when the current interval expires.

KO2O1401W  Near-Term History Data Collector DETECTED THAT RMF IS ACTIVE. RMF INTERVAL IS USED
Explanation: OMEGAMON XE for DB2 PE detects that RMF was active so RMF interval was used. This message displays only if RMF was not active and INTERVAL(RMF) is specified in the collection options member.
System action: Processing continues.
User response: None.

KO2O1402W  Near-Term History Data Collector - SUBSYSTEM name IS IN MAINTENANCE MODE. WAITING FOR NORMAL RESTART
Explanation: The Near-Term History Data Collector has been started, but the DB2 subsystem to be monitored is currently running in maintenance mode.
System action: The Near-Term History Data Collector sends a message to the console and waits for the operator to reply.
User response: Read messages KO2H0001 and KO2H0003 for further instructions.
KO2O1405E  Near-Term History Data Collector - DB2
CONNECT FAILED. THE MAXIMUM NUMBER OF CONNECTIONS IS REACHED

Explanation: The maximum number of connections is reached. The DB2 connect failed.
System action: Processing terminates.
User response: Increase the maximum number of connections, or restart the Near-Term History Data Collector later.

KO2O1406E  Near-Term History Data Collector - DB2
CONNECT FAILED. THE SPECIFIED DB2 SUBSYSTEM ID IS NOT VALID

Explanation: The DB2 subsystem ID specified is not valid and DB2 connection failed.
System action: Processing terminates.
User response: Ensure that the subsystem specified in the Near-Term History Data Collector options is active and restart the collector.

KO2O1407E  Near-Term History Data Collector - DB2
SUBSYSTEM IS NOT ACTIVE OR IS TERMINATING

Explanation: The DB2 subsystem to be monitored is not active or is terminating.
System action: Processing terminates.
User response: Ensure that the DB2 subsystem specified in the Near-Term History Data Collector options is active, and restart the collector.

KO2O1408E  Near-Term History Data Collector - DB2
CONNECT FAILED. USER NOT AUTHORIZED

Explanation: The DB2 connection failed because the Common Interface does not have authorization to connect to DB2.
System action: Processing terminates.
User response: Grant authorization to the Common Interface, then restart the Near-Term History Data Collector.

KO2O1409E  Near-Term History Data Collector - DB2
CREATE THREAD FAILED. PLAN NOT FOUND OR NOT AUTHORIZED

Explanation: The plan was not found or not authorized, so the DB2 Create Thread failed.
System action: Processing terminates.
User response: Ensure that K02vrmHP has been bound and that the necessary authorizations have been given.

KO2O1410E  Near-Term History Data Collector - DB2
CREATE THREAD FAILED. PLAN NOT AUTHORIZED

Explanation: The plan is not authorized for use by the Common Interface; therefore, the Create Thread failed.
System action: Processing terminates.
User response: Ensure that K02vrmHP has been bound and that the necessary authorizations have been given.

KO2O1420W  Near-Term History Data Collector
DETECTED TERMINATION OF DB2 SUBSYSTEM subsystem

Explanation: The Near-Term History Data Collector detected termination of the indicated DB2 subsystem.
System action: Processing terminates.
User response: None.

KO2O1421E  Near-Term History Data Collector - WORKLOAD ccccccc HAD LOOPED MORE THAN TEN TIMES. TERMINATING

Explanation: The Near-Term History Data Collector detected that one of its workloads had looped more than ten times.
System action: Processing terminates.
User response: Contact IBM support.

KO2O1422E  NEAR-TERM HISTORY DATA COLL. - WORKLOAD %%%%%% HAD PROGRAM CHECK MORE THAN 10 TIMES. TERMINATING

Explanation: The Near-Term History Data Collector detected that one of its workloads had a program check more than ten times.
System action: Processing terminates.
User response: Contact IBM support.

KO2O1423W  DB2 SUBSYSTEM subsystem IS NOT ACTIVE, AND NEAR-TERM HISTORY DATA COLLECTOR IS WAITING FOR IT

Explanation: The indicated DB2 subsystem is to be monitored, but is not active at this time.
System action: The Near-Term History Data Collector issues WTOR message KO2H0001 and waits for a reply from the operator.
User response: Read message KO2H0001 and take appropriate action.

<td>KO2O1426I</td>
<td>DB2 subsystem TERMINATED. Near-Term History Data Collector SUSPENDED DATA COLLECTION</td>
<td>The DB2 subsystem being monitored by the Near-Term History Data Collector was terminated. Data collection was stopped and will resume when this DB2 subsystem is active again. System action: The Near-Term History Data Collector waits for the DB2 subsystem to become active again. User response: None.</td>
<td>Read message KO2H0003 and take appropriate action.</td>
</tr>
<tr>
<td>KO2O1427I</td>
<td>DB2 subsystem IS ACTIVE. Near-Term History Data Collector HAS RESUMED DATA COLLECTION</td>
<td>The DB2 subsystem is active again, and the Near-Term History Data Collector has resumed data collection. System action: Data collection continues. User response: None.</td>
<td></td>
</tr>
<tr>
<td>KO2O1430E</td>
<td>Near-Term History Data Collector IS TERMINATING. DB2 VERSION HAS BEEN CHANGED</td>
<td>This conflict occurs if a version change of either DB2 or OMEGAMON XE for DB2 PE is detected. System action: Processing terminates. User response: Delete the near-term history files and redefine them.</td>
<td></td>
</tr>
<tr>
<td>KO2O1431E</td>
<td>DB2 SUBSYSTEM id IS NOT VALID. RESPOND TO THE FOLLOWING MESSAGES TO PROCEED</td>
<td>The DB2 subsystem to be monitored, identified by id, is not valid on this system. System action: The Near-Term History Data Collector issues WTOR message KO2H0003 and waits for a reply from the operator. User response: Read message KO2H0003 and take appropriate action.</td>
<td></td>
</tr>
<tr>
<td>KO2O1432E</td>
<td>DB2 SUBSYSTEM id FOR INSERTION IS NOT VALID. RESPOND TO THE FOLLOWING MESSAGES TO PROCEED</td>
<td>The DB2 subsystem to which near-term history data is to be written, identified by id, is not valid on this system. System action: The Near-Term History Data Collector issues WTOR message KO2H0003 and waits for a reply from the operator. User response: Read message KO2H0003 and take appropriate action.</td>
<td></td>
</tr>
<tr>
<td>KO2O1433W</td>
<td>Near-term history does not support ACCUMACC greater than 25 (NEWINOPT)</td>
<td>The QWAR accounting rolled-up information can only contain ACE values for up to 25 rolled-up records. QWAR is used by Near-term history to determine the records to be included in a rolled up accounting record. If more than 25 records are rolled up, the records that are created by the threads can neither be found nor matched with the rolled up record. System action: None. User response: Specify a maximum number of 25 for the installation parameter ACCUMACC.</td>
<td></td>
</tr>
<tr>
<td>KO2O1434W</td>
<td>Near-term history does not support ACCUMACC with DB2 9 (NEWINOPT)</td>
<td>QWAR is used by Near-term history to determine the records to be rolled up by using the installation parameter ACCUMACC. With DB2 9, a QWAR cannot be created. Therefore roll-up processing is not possible. System action: None. User response: Specify the value NO for the installation parameter ACCUMACC.</td>
<td></td>
</tr>
<tr>
<td>KO2O1500E</td>
<td>CANNOT OBTAIN STORAGE FOR NEAR-TERM HISTORY STATISTICS RECORD</td>
<td>Additional storage was needed to keep statistics data for 96 intervals. System action: Processing continues by reusing storage for the oldest interval. User response: Increase region size and restart the CI.</td>
<td></td>
</tr>
</tbody>
</table>
KO2O1501E  CANNOT OBTAIN STORAGE FOR NEAR-TERM HISTORY DDF STATISTICS RECORD

Explanation: Additional storage was needed to keep DDF statistics data for 96 intervals.

System action: Processing continues by reusing storage for the oldest interval.

User response: Increase region size.

KO2O1520W NEAR-TERM HISTORY DATA NOT AVAILABLE: reason

Explanation: Near-term history data is not available for one of the following reasons:

**H2 IS NOT RUNNING**
- The Near-Term History Data Collector is not running.

**NO STATISTIC DATA**
- Statistics data is not being collected.

**NO DATA AVAILABLE**
- First interval has not occurred yet.

**NTHWORK NOT FOUND**
- Internal logic error.

System action: Processing continues.

User response: Perform the action that corresponds to the indicated reason:

**H2 IS NOT RUNNING**
- Start the Near-Term History Data Collector.

**NO STATISTIC DATA**
- Specify STATISTICS=YES in the Near-Term History Data Collector options.

**NO DATA AVAILABLE**
- Wait for the first interval.

**NTHWORK NOT FOUND**
- Contact IBM support.

KO2O1531W REPORT COMBINE LEVEL IGNORED. COLLECTION INTERVAL DOES NOT DIVIDE EVENLY INTO 60 MINUTES

Explanation: The report combine level is set to HOURLY, but the selected collection interval does not divide evenly into 60 minutes.

System action: Processing continues; OMEGAMON XE for DB2 PE ignores the report combine level option.

User response: Change the report combine level to NONE on the Near-Term History Report Option panel. Or change the collection interval (use 1, 2, 3, 4, 5, 6, 10, 12, 15, 20, or 30 minutes) and restart the Near-Term History Data Collector.

KO2O1600I OBJECT ANALYSIS COLLECTION IS NOT ACTIVE

Explanation: Object analysis displays require object analysis collection to be active.

System action: The display is terminated.

User response: Start the collection by using the Start Object Analysis Collection panel.

KO2O1601I NO OBJECT ACTIVITY LOCATED FOR THIS COLLECTION INTERVAL

Explanation: Object analysis collection occurs on an interval basis. This message informs that no object activity has occurred for the current interval.

System action: The display is terminated.

User response: None.

KO2O1602I NO VOLUMES CONTAINING ALLOCATED DB2 OBJECTS LOCATED DURING THIS COLLECTION INTERVAL

Explanation: No volumes containing allocated DB2 objects could be located.

System action: The display is terminated.

User response: None.

KO2O1603I NO OBJECTS ARE CURRENTLY ALLOCATED

Explanation: No DB2 objects allocated to DB2 were located.

System action: The display is terminated.

User response: None.

KO2O1604I NO DB2 I/O ACTIVITY LOCATED FOR THIS VOLUME DURING THIS COLLECTION INTERVAL

Explanation: The volume being viewed has not incurred any DB2 I/O activity during the collection interval.

System action: The display is terminated.

User response: None.

KO2O1605I VOLUME CONTAINS NO DB2 ALLOCATED OBJECTS

Explanation: The volume viewed no longer contains any allocated DB2 objects.

System action: The display is terminated.

User response: None.

KO2O1606I NO DB2 I/O ACTIVITY LOCATED FOR THIS OBJECT DURING THIS COLLECTION INTERVAL

Explanation: No DB2 I/O activity could be located for the object in the current collection interval.
KO2O1607E  •  KO2O1617E

Chapter 9. Messages  5123

KO2O1607E  COLLECTION NOT SUCCESSFUL. VALIDATION FAILED

Explanation: An internal error was encountered during collection for the display.
System action: The display is terminated.
User response: None.

KO2O1608I  NO OBJECTS ARE CURRENTLY ALLOCATED FOR THIS DATABASE

Explanation: The database being viewed is no longer allocated to DB2.
System action: The display is terminated.
User response: None.

KO2O1609I  OBJECT IS NOT CURRENTLY ALLOCATED TO DB2

Explanation: The space name being viewed no longer contains any data sets allocated to DB2.
System action: The display is terminated.
User response: None.

KO2O1610E  EVENTMGR O2ECNTL IS NOT ACTIVE. START REQUEST IS IGNORED

Explanation: OMEGAMON XE for DB2 PE could not start the object- and volume analysis collection because the Event Collection Manager O2ECNTL is not active.
System action: The start request is ignored.
User response: Start the OMEGAMON XE for DB2 PE Event Collection Manager under the O2CI. For instructions see IBM Tivoli OMEGAMON XE for DB2 Performance Expert on z/OS: Configuration and Customization.

KO2O1611I  START REQUEST SUCCESSFULLY PROCESSED

Explanation: The start request for the object analysis collection was successfully issued.
System action: The display is terminated.
User response: None.

KO2O1612I  STOP REQUEST SUCCESSFULLY PROCESSED

Explanation: The stop request for the object analysis collection was successfully issued.
System action: The display is terminated.
User response: If object analysis remains active, check the SYSLOG data set for O2CI messages and contact IBM support if necessary.

KO2O1613I  MODIFY REQUEST SUCCESSFULLY PROCESSED

Explanation: The modify request for the object analysis collection was successfully issued.
System action: The display is terminated.
User response: None.

KO2O1614E  START REQUEST DENIED. COLLECTION IS ALREADY ACTIVE

Explanation: The start request is denied because the object analysis collection is already active.
System action: The display is terminated.
User response: None.

KO2O1615E  STOP REQUEST DENIED. COLLECTION IS NOT ACTIVE

Explanation: The stop request is denied because the object analysis collection is not active.
System action: The display is terminated.
User response: None.

KO2O1616E  STOP REQUEST DENIED. COLLECTION IS NOT ACTIVE

Explanation: The stop request is denied because the object analysis collection is not active.
System action: The display is terminated.
User response: None.

KO2O1617E  VALID INTERVAL= keyword NOT LOCATED. REQUEST DENIED

Explanation: The start request for the object analysis collection could not be processed because the INTERVAL= keyword was missing or not valid.
System action: The start request is ignored.
User response: Correct the start request, by specifying a valid INTERVAL= operand. Valid interval range is 1 to 9999.
KO2O1618E REQUEST COULD NOT BE PROCESSED. TRY AGAIN

Explanation: OMEGAMON XE for DB2 PE could not start the object- and volume analysis collection because the Event Collection Manager (EVENTMGR) was busy.

System action: The request is ignored.
User response: Try issuing the request again. If the problem persists, contact IBM support.

KO2O1619I NO NEW DATA SET EXTENT ACTIVITY DETECTED

Explanation: Object analysis did not acquire any new extents by any data sets in the DB2 subsystem being monitored during the current interval. No new information to display.

System action: Processing continues.
User response: None.

KO2O1620I OBJECT ANALYSIS THREAD SUPPORT IS NOT ACTIVE

KO2O1621I NO THREAD ACTIVITY LOCATED FOR THIS COLLECTION INTERVAL

Explanation: No data has been found.

System action: Processing continues.
User response: None.

KO2O1700W CAPTURE SERVER INACTIVE

Explanation: The data capture facility is not available.

System action: Processing terminates.
User response: Call IBM support.

KO2O1701E CAPTURE SERVER CONNECTION FAILED = reason

Explanation: The near-term thread history feature could not connect to the server for one of the following reasons:

H2 NOT ACTIVE
The Near-Term History Data Collector must be started to access near-term thread history information.

H2 NOT COLLECTING TO VSAM
The Near-Term History Data Collector must be collecting to VSAM data sets to access near-term thread history information.

INVALID CONNECT ID
Internal error.

CONNECT ID NOT FOUND
Internal error.

RC=nnnn, RSC=nnnn, ARSC=nnnn
Internal error. The reason code RC=nnnn, return code RSC=nnnn, and additional reason code ARSC=nnnn are provided for diagnostics.

System action: Processing terminates.
User response: Perform the action that corresponds to the indicated reason:

H2 NOT ACTIVE
Start the Near-Term History Data Collector.

H2 NOT COLLECTING TO VSAM
Customize the Near-Term History Data Collector to collect to VSAM data sets if use of the near-term thread history information is required.

All other reasons
Call IBM support.

KO2O1750E INVALID ORG - DSN: dsn - MUST BE PO

Explanation: The characteristic of the named data set is not correct. The sequential data set must be partitioned organized (PO).

System action: Processing terminates.
User response: Change the data set organization.

KO2O1751E DYNAMIC ALLOCATION FAILED - dsn

Explanation: The dynamic allocation of the named data set failed.
KO2O1761E  INVALID DSN: %%%% - PLEASE RE-ENTER
Explanation: The name of the data set was entered incorrectly.
System action: Processing terminates.
User response: Correct the syntax of the data set name.

KO2O1762E  INVALID SIZE: %%%% - PLEASE RE-ENTER

KO2O1763E  INVALID VOLUME ID: %%%% . PLEASE RE-ENTER
Explanation: The identifier of the volume was entered incorrectly, or the volume with the specified volume identifier does not exist.
System action: Processing terminates.
User response: Correct the syntax or specify a valid volume identifier.

KO2O1764E  INVALID DSN: dsname DATA SET ALREADY EXISTS
Explanation: None.
System action: Processing terminates.
User response: Specify a different data set name that does not already exist.

KO2O1765E  UNABLE TO LOAD MODULE ATRE. POSSIBLE REGION SIZE PROBLEM
Explanation: The application trace could not be started because there is not enough space in the storage region.
System action: Processing terminates.
User response: Increase the size of the storage region.

KO2O1766E  IFCID TRACE DATA SET NAME INCOMPLETE. REENTER THE TRACE REQUEST
Explanation: A complete, valid data set name is required for the output of an IFCID trace.
System action: The IFCID trace request is rejected.
User response: Reenter the trace request using a complete data set name.

KO2O1769I  IFCID TRACE IS NOT CURRENTLY RUNNING
Explanation: The user requested that the results of an IFCID trace be displayed, but the trace is not active.
System action: The IFCD command is rejected.
User response: None.

KO2O1802E  TRACE CONNECT TO DB2 FAILED WITH REASON CODE rs
Explanation: OMEGAMON XE for DB2 PE attempted to connect to DB2 to start an IFCID trace. The attempt to connect to DB2 failed with the reason code indicated.
System action: The IFCID trace was not started.
User response: Correct the condition that caused the failure and start the trace again.

KO2O1803E  TRACE OPEN PLAN FAILED WITH RETURN CODE rc
Explanation: OMEGAMON XE for DB2 PE attempted to open the plan to start an IFCID trace. The attempt to open the plan failed with the return code indicated.
System action: The IFCID trace was not started.
User response: Correct the condition that caused the failure and start the IFCID trace again.

KO2O1804E  TRACE OPEN PLAN FAILED WITH REASON CODE rs
Explanation: OMEGAMON XE for DB2 PE attempted to open the plan to start an IFCID trace. The attempt to open the plan failed with reason code indicated.
System action: The IFCID trace was not started.
User response: Correct the condition that caused the failure and start the IFCID trace again.

KO2O1805E  START TRACE COMMAND FAILED WITH RETURN CODE rc
Explanation: The START TRACE command was issued to start an IFCID trace. The attempt failed with the return code indicated.
System action: The IFCID trace was not started.
User response: Correct the condition that caused the failure and start the IFCID trace again.

KO2O1806E  START TRACE COMMAND FAILED WITH REASON CODE rs
Explanation: The START TRACE command was issued to start an IFCID trace. The attempt failed with the reason code indicated.
System action: The IFCID trace was not started.
User response: Correct the condition that caused the failure and start the IFCID trace again.

KO2O1808W TOO MANY IFCIDS SPECIFIED. LIST TRUNCATED
Explanation: The number of IFCIDs requested to be included in the IFCID trace exceeds the maximum allowed.
System action: IFCID trace is started without some of the requested IFCIDs.
User response: None.

KO2O1809E  TRACE DATA SET SPECIFIED COULD NOT BE FOUND. CORRECT AND PRESS ENTER TO PROCEED
Explanation: The data set name specified for the IFCID trace output does not exist.
System action: OMEGAMON XE for DB2 PE waits for the user response.
User response: Enter a valid existing data set name.

KO2O1810W  TRACE DATA SET SPECIFIED HAS BEEN MIGRATED. PRESS ENTER TO PROCEED
Explanation: The data set specified for the IFCID trace output has been migrated.
System action: OMEGAMON XE for DB2 PE waits for the user response.
User response: When the data set recall has completed, press Enter to proceed with the IFCID trace.

KO2O1811W  TRACE DATA SET SPECIFIED IS NOT QSAM. PRESS ENTER TO PROCEED
Explanation: The data set specified for the IFCID trace output is not a QSAM data set.
System action: OMEGAMON XE for DB2 PE waits for the user response.
User response: Press Enter to allow the correct data set name to be entered.

KO2O1901W  IFI COLLECTOR MONITOR TRACE IS NO LONGER ACTIVE
Explanation: OMEGAMON XE for DB2 PE requires the monitor trace to be active to collected data.

KO2O1902E  MONITOR1 AUTHORIZATION REQUIRED. NO DATA CAN BE COLLECTED
Explanation: OMEGAMON XE for DB2 PE requires MONITOR1 authorization to start the data collection process.
System action: Processing terminates.
User response: The system administrator should grant the necessary authorization.

KO2O1903E  STATISTICS COLLECTOR READS FAILED. MULTIPLE RETRY ATTEMPTS. READS ABANDONED

KO2O1904E  IFI COLLECTOR READS FAILED WITH RETURN CODE rc
Explanation: A READS to the IFI failed with the indicated return code.
System action: Processing terminates.
User response: See message KO2O1906E. Analyze the return code, correct the problem, and retry.

KO2O1905E  IFI COLLECTOR READS FAILED WITH REASON CODE rs
Explanation: A READS to the IFI failed with the indicated reason code.
System action: Processing terminates.
User response: See message KO2O1904E. Analyze the reason code, correct the problem, and retry.

KO2O1906E  IFI COLLECTOR LOAD OF module FAILED
Explanation: module is either DSNALI or DSNRLI.
System action: Processing terminates.
User response: Check and correct the STEPLIB DD statement for the missing DB2 load library.

KO2O1907E  IFI COLLECTOR LOAD OF DSNWLI2 FAILED
Explanation: OMEGAMON XE for DB2 PE could not load the required module.
System action: Processing terminates.
User response: Check and correct the STEPLIB DD statement for the missing DB2 load library.
KO2O1908E  IFI COLLECTOR CONNECT FAILED - RETURN CODE rc
System action: Processing terminates.

KO2O1909E  IFI COLLECTOR CONNECT FAILED - REASON CODE rs
System action: Processing terminates.
User response: If the reason code is 00F30013, check RACF CLASS DSNR, then look for profiles xxxx.RRSAF (where xxxx is the DB2 subsystem name).

KO2O1910E  IFI COLLECTOR OPEN FAILED - RETURN CODE rc
System action: Processing terminates.

KO2O1911E  IFI COLLECTOR OPEN FAILED - REASON CODE rs PLAN NAME=name DB2=subsystem
System action: Processing terminates.

KO2O1912E  IFI COLLECTOR DISPLAY TRACE FAILED IFI DISPLAY TRACE - FAILED RETURN CODE rc IFI DISPLAY TRACE - FAILED REASON CODE rs

KO2O1913E  IFI START TRACE - FAILED RETURN CODE rc IFI START TRACE - FAILED REASON CODE rs

KO2O1914W  IFI COLLECTOR NO MORE STORAGE FOR BUFFER USING %%%%%

KO2O1915W  IFI COLLECTOR REACHED MAXIMUM STORAGE AMOUNT <V1> <V2> <V3> <V4> <V5> <V6> <V7>
Explanation: IFI Collector did not read all of the data because the maximum buffer size was exceeded.
<V1> is the buffer size.
<V2> is the number of bytes moved to the buffer.
<V3> is the number of bytes not moved to the buffer.
<V4> is the global reason code.
<V5> is the return code.
<V6> is the reason code.
<V7> are the IFCIDS (two bytes per IFCID).
System action: Processing continues.
User response: Contact IBM support.

KO2O1916W  IFI COLLECTOR TIMED OUT
Explanation: DB2 did not respond in time.
System action: The system retries automatically.
User response: None.

KO2O1917E  IFI COLLECTOR CRE THRD FAILED - RETURN CODE rc IFI COLLECTOR CRE THRD FAILED - REASON CODE rs PLAN NAME=plan name DB2=subsystem

KO2O1918I  subsystem + IFI COLLECTOR (CAF) CONNECTION ESTABLISHED
Explanation: The IFI Collector uses a different type of connection through the Call Attach Facility (CAF).
System action: Processing continues.
User response: None.

KO2O1920I  subsystem + IFI COLLECTOR (CAF) CONNECTION TERMINATED
Explanation: The session ended. The user is no longer connected through the Call Attach Facility (CAF).
System action: Processing ends normally.
User response: None.

KO2O1922I  subsystem + IFI COLLECTOR (CAF) FORCIBLY DETACHED
Explanation: The call to DB2 through the Call Attach Facility (CAF) has been terminated because the program has terminated or the subsystem server has been shut down.
System action: Processing ends normally.
User response: None.

KO2O1924I  EPS1 <KO2PLAN> NOT USING IFI INTERFACE
Explanation: The DB2 plan needed by OMPE has not been bound to this DB2. OMEGAMON cannot use the IFI interface and cannot obtain complete monitoring information.
System action: Processing ends normally.
User response: None.

KO2O1925W  THE AUTHORIZATION EXIT IS ACTIVE. ALL DATA IS SUPPRESSED.
Explanation: The parameter USEUSERAUTHXIT=Y is configured. The authorization user exit is active.
System action: Processing ends normally.
User response: None.
System action: None.
User response: Contact your administrator.

KO2O1940E  WLM SERVICE XX RC: 99 - YY
REASON: ZZ

Explanation: OMEGAMON XE for DB2 PE on z/OS has requested information from one of the standard workload manager interfaces. The interface has issued a nonzero return code as a result of that request.

- XX is the name of the WLM interface:
  - 1WMCOLL
  - 1WMCQRY
  - 1WMQRY
  - 1WMPQRY
  - 1WMDEXTR

- 99 is the nonzero return code:
  - 04
  - 08
  - 12
  - 16

- YY is a short text describing the general type of error:
  - WARNING
  - INVOCATION ERROR
  - ENVIRONMENTAL ERROR
  - COMPONENT ERROR

- ZZ is a short text describing the specific error and may be one of the values listed in the table below. This table contains the short text string followed by the specific return code. This specific return code may be found in the WLM documentation in your MVS Bookshelf Programming: Workload Manager Services, SA22-7619.

System action: See Workload Manager Services, SA22-7619.

User response: See Workload Manager Services, SA22-7619.

KO2O1941E EXCHANGE LAYER CALL FAILED - RETURN CODE rc

Explanation: An internal inter-program communication error occurred.

System action: Processing terminates.

User response: See KO2O1942E. Contact IBM support.

KO2O1942E EXCHANGE LAYER CALL FAILED - REASON CODE rc

Explanation: An internal inter-program communication error occurred.

System action: Processing terminates.

User response: See KO2O1941E. Contact IBM support.

KO2O1943E FUDA SERVICES LICENSE CHECK FAILED, EXITING (O2INITI)

Explanation: The OM PE FUDA service failed to verify the license during server initialization.

System action: Processing ends. If this message is preceded by message FPEVOI37E, the license is not valid. If not, the security setup might have been done incorrectly.

KO2O1944I SQL PA ANALYSIS INITIATED (OSQPSQPI). REPORT=mmmm PLAN=ppppppp PACKAGE=kkkkkkk

Explanation: An attempted was made to initiate an SQL PA analysis from Active Thread display (panel ZSQL), EDM Snapshot (panel EDDM3), or Near Term history (panel ZHTCALL), but there was no active SQL statement being displayed.

Reports can only be initiated when a current SQL statement is displayed.

User response: None.

KO2O1945I NO ACTIVE SQL STATEMENT TEXT FOUND. REPORT NOT INITIATED. (OSQPSQPI)

Explanation: An attempt was made to initiate an SQL PA analysis from Active Thread display (panel ZSQL), EDM Snapshot (panel EDDM3), or Near Term history (panel ZHTCALL), but there was no active SQL statement being displayed.

User response: None.

KO2O1946I PERFORMANCE WAREHOUSE BUSY OR NOT STARTED. PRESS ENTER TO RETRY REQUEST (SQPSQPI)

Explanation: An attempt was made to initiate a SQL PA analysis from Active Thread display (panel ZSQL), EDM Snapshot (panel EDDM3), or Near Term history (panel ZHTCALL), but the interface could not initiate the request with PWH.

User response: Ensure that PWH is properly configured for SQL PA using the Configuration Tool (formerly ICAT). If PWH has been properly configured, hit Enter to retry the request.

KO2O1947W NO REPORTS FOUND FOR CURRENT USER (O2OSQP)

Explanation: Option V was selected to display a list of SQL PA reports, but no reports were found that either had a creator ID equal to the current user ID or had a scope of Public.

User response: None.

KO2O1948I NO REPORT OUTPUT GENERATED FOR xxxxxxx (O2OSQP)

Explanation: No output was generated for the file selected. xxxxxxx is one of the following: ANLREP, ANLQM, ANLQTRC, ANLELOG, ANLLSQL, or JOBERR.

User response: Except for JOBERR, refer to the appropriate SQL PA documentation for information on how each file is generated. JOBERR is only available when an SQL PA report has a status of FAILED.
KO2O1949E  PERFORMANCE WAREHOUSE
REQUEST FAILED (O2OSQP).

variable message text

Explanation:

ACTION IGNORED. REPORT NOT RUNNING
An attempt was made to cancel a report, but
the report was no longer in RUNNING status.

ACTION IGNORED. REPORT HAS NOT COMPLETED
An attempt was made to view, delete or
modify the scope of a report that has not yet completed.

SQL PA NOT CONFIGURED ON THIS SYSTEM
An attempt was made to initiate an SQL PA
analysis from Active Thread display (panel
ZSQL), EDM Snapshot (panel EDDM3), or
Near Term history (panel ZHTCALL.), but the
interface could not initiate the request with
PWH.

REPORT NOT WITHIN SCOPE
An attempt was made to alter a report by
someone other than the creator of the report.
Only the creator of a report may modify or
delete it.

REQUEST=rrrrrrrr RETURN CODE=xxxxxxxx
REASON CODE=xxxxxxxx
An internal error occurred during processing.

User response:

ACTION IGNORED. REPORT NOT RUNNING
None.

ACTION IGNORED. REPORT HAS NOT COMPLETED
Wait for the report to complete before
performing the action.

SQL PA NOT CONFIGURED ON THIS SYSTEM
Ensure that PWH is properly configured for
SQL PA using the Configuration Tool (formerly
ICAT).

REPORT NOT WITHIN SCOPE
None.

REQUEST=rrrrrrrr RETURN CODE=xxxxxxxx
REASON CODE=xxxxxxxx
Contact IBM support.

KO2O1950E  PWH/CAF SUBTASK FAILURE

Explanation: An internal error occurred during
processing and an SVC dump has been generated.

User response: Contact IBM support.

KO2O1957E  NO ENTRY FOUND FOR IFCID nnnn

Explanation: No entry found for IFCID nnnn, where
nnnn could be 0197.

User response: Contact IBM support.

KO2O1958E  NO DATA ADDRESS FOUND FOR IFCID nnnn

Explanation: No data address found for IFCID nnnn
where nnnn could be 0197.

User response: Contact IBM support.

KO2O1959E  NO DB2 MESSAGE nnnn

Explanation: No DB2 Message nnnn, where nnnn
could be an address or a counter value.

User response: Contact IBM support.

KO2O1961W  Not a Data Sharing Group - G option
not valid

Explanation: In the information line after the DB2
subsystem name G for group mode may only be
entered for subsystems that are members of a data
sharing group.

System action: The field is set to value S for a single
DB2.

User response: Enter group code G only for data
sharing group members.

KO2O1962I  Group mode must be S or G

Explanation: In the information line after the DB2
subsystem name only G for group mode or S for a
single DB2 might be entered.

System action: The field is set to value S for a single
DB2.

User response: Enter group code S or G.

KO2O1963E  OMEGAMON Server subtask
PESERVER not active.

Explanation: The PESERVER subtask is not active. It
might have been stopped during initialization with the
following command:

/F <STC_Name>, P PESERVER

Or the START PESERVER command was not executed,
or it failed.

System action: Monitoring is not available.

User response: Start the PESERVER subtask by using
the following command:

/F <STC_Name>, S PESERVER

Chapter 9. Messages  5131
Ensure that the message FPEV0000I appears during initialization.

KO2O1368E  NEAR-TERM HISTORY DATA COLLECTOR - INVALID RECORD RECEIVED

Explanation: An IFI record with a length longer than expected or zero has been received.
System action: The record is skipped and processing continues with the next record.
User response: None.

KO2O1964I  Backlevel Near-Term History data set(s) detected. Resetting.

Explanation: Near-term history VSAM data sets from a previous version of Near-Term History Data Collector were found. These data sets are not compatible with the current Near-Term History Data Collector.
System action: The near-term history VSAM data sets are cleared and the Near-Term History Data Collector will start.
User response: None.

KO2O1965I  Number of threads displayed truncated, LROWS limit value of mnnn exceeded (source)

Explaination: The number of threads running in DB2 is larger than the LROWS value (mnnn) used. source is the source module returning this message.
System action: The number of DB2 threads is truncated by the collector to adhere to the requested LROWS limit and to avoid long response times. The threads being displayed are in random order as received by the DB2 IFI READS call that is issued by the OMEGAMON Collector PE Server subtask.
User response: Use appropriate filtering to limit the data in the thread summary displays. For example, by specifying a specific plan name (PLAN) or authorization ID (AUTHID) in panel ZFILT, the thread data is filtered in DB2 and only the qualifying threads are shown.

You can retain filter specifications in a user profile, or use an existing profile at logon time by using the "data(user=xx)" logon option, where xx is the profile name. For example, the command logon applid(ipomd2c) data(user=MT,LROWS=500) opens a session that shows up to 500 threads (LROWS=500) and use the user profile "MT" (user=MT). For more information, see the ZFILT panel help.

KO2R - Capture Server messages

KO2R0010E  SERVER PARAMETERS NOT VALID

Explanation: The capture server component could not initialize a server component because of invalid linkage parameters.
System action: The capture server component terminates.
User response: Contact IBM support.

KO2R0011E  CANNOT SET RECOVERY ENVIRONMENT

Explanation: The capture server component could not initialize a server component because of recovery environment errors.
System action: The capture server component terminates.
User response: Contact IBM support.

KO2R0012E  CANNOT SET UP ENVIRONMENT

Explanation: The capture server component could not initialize a server component because of program environment errors.
System action: The capture server component terminates.
User response: Contact IBM support.

KO2R0021U  ENVIRONMENT NOT SUPPORTED

Explanation: The capture server component could not load the indicated module when calling the indicated routine because the operating system environment is not supported.
System action: The capture server component terminates.
User response: Contact IBM support.
KO2R0022U  CANNOT LOAD MODULE module FOR ROUTINE routine

Explanation: The capture server component could not load the indicated module when calling the indicated routine because the load module was not found.

System action: The capture server component terminates.

User response: Contact IBM support.

KO2R0023U  CANNOT INITIALIZE LOAD MODULE module FOR ROUTINE routine

Explanation: The capture server component detected an initialization error in the indicated module when calling the indicated routine.

System action: The capture server component terminates.

User response: Contact IBM support.

KO2R0024U  VECTORS NOT SET BY INITIALIZATION PROGRAM module FOR ROUTINE routine

Explanation: The capture server component detected an initialization error for the indicated module when calling the indicated routine. The program vectors were not correctly set by the initialization routine.

System action: The capture server component terminates.

User response: Contact IBM support.

KO2R0100I  DRIVER INITIALIZED

Explanation: The capture server component is initialized.

System action: Processing continues.

User response: None.

KO2R0101E  DRIVER INIT FAILED - RS reason1 RI reason2 LR return

Explanation: The capture server initialization request failed.

RS reason1
Reason code.

RI reason2
Additional reason information.

LR return
Lower routine return code.

System action: Processing terminates.

User response: None.

KO2R0102I  DRIVER TERMINATED

Explanation: The capture server component has terminated.

System action: Processing terminates.

User response: None.

KO2R0103E  DRIVER TERM FAILED - RS reason1 RI reason2 LR return

Explanation: The capture server termination request could not terminate normally.

RS reason1
Reason code.

RI reason2
Additional reason information.

LR return
Lower routine return code.

System action: Processing terminates.

User response: Contact IBM support.

KO2R0104W  SET NOT STARTED - set name

Explanation: The capture server start request failed for the indicated set name for one of the following reasons:

SET NOT FOUND
The indicated capture container set name was not found.

SET ALREADY STARTED
The indicated capture container set name was already started.

System action: Processing continues.

User response: None.

KO2R0105I  SET STARTED - set name connect id

Explanation: The capture server start request is completed for the indicated SET name and connect ID.

System action: Processing continues.

User response: None.

KO2R0107I  SET STOPPED - set name connect id

Explanation: The capture server resources for the indicated SET name and connect ID have been released/stopped.

System action: Processing continues.

User response: None.

KO2R0108W  SET NOT STARTED (NO CONTAINERS STARTED) - set name connect id

Explanation: The capture server resources for the
indicated SET name and connect ID were not allocated/started.

**System action:** Processing continues.

**User response:** None.

---

KO2R0109W SET STARTED (ONE OR MORE CONTAINERS NOT STARTED) - set name connect id

**Explanation:** The capture server resources for the indicated SET name and connect ID were not completely allocated/started.

**System action:** Processing continues.

**User response:** None.

---

KO2R0110E SET TERMINATION FAILED - set name connect id

**Explanation:** The capture server resources for the indicated SET name and connect ID could not be successfully terminated.

**System action:** Processing terminates.

**User response:** None.

---

KO2R0111W SET NOT STARTED (NO DATA AVAILABLE) - set name connect id

**Explanation:** The capture server resources for the indicated SET name and connect ID were started for Read access, but there was no capture data available.

**System action:** Processing continues.

**User response:** None.

---

KO2R0121I FORMAT STARTED FOR DATA SET - Data Set Name

**Explanation:** A new linear data set is formatted so it can be used by the Near Term History collector.

---

KO2R0120E NO OUTPUT DATA SETS AVAILABLE FOR CONTAINER name

**Explanation:** The capture server has detected that no capture output data sets are available for the indicated container.

**System action:** Processing continues.

**User response:** Verify that archival jobs have been completed for all full capture data sets.

---

KO2R0121W CONTAINER NOT STARTED FOR name - reason

**Explanation:** The capture server could not start the indicated container for one of the following reasons:

---

KO2R0109W

**Explanation:** The capture server resources for the indicated SET name and connect ID were not allocated/started.

**System action:** Processing continues.

**User response:** None.

---

KO2R0110E

**Explanation:** The capture server resources for the indicated SET name and connect ID could not be successfully terminated.

**System action:** Processing terminates.

**User response:** None.

---

KO2R0111W

**Explanation:** The capture server resources for the indicated SET name and connect ID were started for Read access, but there was no capture data available.

**System action:** Processing continues.

**User response:** None.

---

KO2R0123E START FAILED FOR DATA SET dsname - reason

**Explanation:** The capture server could not start the indicated capture data set for one of the following reasons:

**ALLOCATION FAILED return code**

- The indicated data set could not be dynamically allocated.

**NOT AUTHORIZED FOR UPDATE**

- The user does not have Update access to the data set.

**NOT AUTHORIZED FOR READ**

- The user does not have Read access to the data set.

**OPEN FAILED - CHECK DS TYPE**

- The data set may not be a linear data set; check the data set organization type.

**DATA SET IS NOT LINEAR**

- The capture data set is not a linear data set.

**PRIMARY EXTEND IS TOO SMALL**

- The capture data set is a linear data set; however the indexes and data portions could not be built.

**DIV ERROR return code reason code**

- Data-in-virtual request failed with the indicated return and reason codes.

**DATA SET IS ALREADY IN USE**

- An attempt to start the data set for Update access failed because the data set is already being used for Update access.

**System action:** The start request is terminated.

**User response:** Perform the action that corresponds to the indicated reason:

**ALLOCATION FAILED return code**

- Correct the data set name, and restart the capture server.

**NOT AUTHORIZED FOR UPDATE**

- Verify that the proper authority is given to the data set.

**NOT AUTHORIZED FOR READ**

- Verify that the proper authority is given to the data set.
OPEN FAILED - CHECK DS TYPE
Check the data set organization; the data set must be defined as a linear VSAM data set.

DATA SET IS NOT LINEAR
Specify the name of a linear data set, and restart the capture server.

PRIMARY EXTEND IS TOO SMALL
Use a larger data set.

DIV ERROR return code reason code
Verify that the data set is a linear VSAM data set. If it is, contact IBM support. Otherwise, redefine the data set as a linear data set.

DATA SET IS ALREADY IN USE
Verify that the data set is correctly being used by the capture server.

KO2R0124W WARNING FOR DATA SET dsname - 3390 TRK SIZE USED device type
Explanation: The capture server started the data set, but the data set is on an unknown device type. This may cause a performance degradation.
System action: Processing continues.
User response: Contact IBM support.

KO2R0125W STOP FAILED FOR DATA SET dsname - reason
Explanation: The capture server could not successfully stop the indicated data set for one of the following reasons:
DEALLOC FAILED return code
The dynamic deallocation failed.
DIV ERROR return code reason code
Data-in-virtual request failed with the indicated return and reason codes.
System action: Processing continues, but all resources for the data set may not be released.
User response: Contact IBM support.

KO2R0126W VALIDATE FAILED FOR DATA SET dsname - reason
Explanation: The capture server could not successfully validate the indicated capture data set for one of the following reasons:
DUPLICATE VALIDATION TIME
A duplicate validation time exists. This may be the result of a duplicate data set. The data set can be archived; the data set is not available for interactive retrieval.
XID# IS OUT OF SYNC
The internal index directory XID# is not synchronized with the control block XCI#. This may be the result of a system outage. The data set can be archived; the data set is not available for interactive retrieval.
XIB# IS OUT OF SYNC
The current index block XIB# is not synchronized with the control block XCI#. This may be the result of a system outage. The data set can be archived; the data set is not available for interactive retrieval.

KO2R0127E FORMAT FAILED FOR DATA SET dsname - PRIMARY EXTENT IS TOO SMALL
Explanation: The capture server could not format the capture data set dsname because the primary extent is below the minimum size.
System action: Processing terminates; the data set is not used.
User response: Redefine the capture data set with a primary size of at least 3 cylinders, 45 tracks, or 370K, and restart the capture server.

KO2R0128I CAPTURING OUTPUT ON DATA SET dsname
Explanation: The capture server has selected the indicated capture data set for output.
System action: Processing continues.
User response: None.

KO2R0129I CAPTURE DATA SET HAS BEEN RESET FOR REUSE - dsname
Explanation: The capture server has reset the indicated capture data set for reuse.
KO2R0130E  •  KO2R0142W

System action: Processing continues.
User response: None.

KO2R0130E  DUPLICATE OBJECT ON DATA SET
dsnamedsn - object version

Explanation: The capture server has detected that the capture data set has a duplicate object and version that exists in other data sets, but the data description does not match all other capture data sets.
System action: Processing continues.
User response: None.

KO2R0131E  VERSION OF CAPTURE DATA SET
NOT SUPPORTED - DATA SET version1
CAPTURE version2

Explanation: The capture server has detected that the capture data set was created, but it is at an unsupported version. The format version of the capture data set is version1; the latest version supported by the current capture module is version2.
System action: Processing continues.
User response: Contact IBM support.

KO2R0132W  CAPTURING OUTPUT ON LAST
AVAILABLE DATA SET FOR
CONTAINER name

Explanation: The capture server is capturing output on the last available data set.
System action: Processing continues.
User response: None.

KO2R0133I  CAPTURE DATA SET IS REUSABLE -
dsnamedsn

Explanation: The capture server has detected that the indicated capture data set is now reusable.
System action: Processing continues.
User response: None.

KO2R0134E  VSAM OBJECT DEFINITION
CHANGED. PLEASE R-ECREATE
VSAM DATASET(S). RC=12

Explanation: The VSAM object definition has changed after installation of PTF UK26200.
System action: Processing continues.
User response: Re-create H2 VSAM data sets by using the sample JCL described in the README file accompanying the PTF.

KO2R0135E  CAPTURE OPEN OBJECT FAILURE -
RC=retcode, msgText

Explanation: An internal error occurred.
System action: An SVC dump was generated.
User response: Send the SVC dump with retcode and msgText to IBM support center.

KO2R0140W  SWITCHING FROM DATA SET dsnamedsn
- reason

Explanation: The capture server is switching from the indicated capture data set for one of the following reasons:
DATA SET IS FULL
The capture data set cannot be extended.
OBJECT DIRECTORY IS FULL
No more objects can be contained in the data set.
INDEX DIRECTORY IS FULL
All usable space in the index directory blocks are used.
USER REQUEST
A dynamic request for switch has been requested.
System action: Processing continues.
User response: Perform the action that corresponds to the indicated reason:
DATA SET IS FULL
None.
OBJECT DIRECTORY IS FULL
Contact IBM support.
INDEX DIRECTORY IS FULL
None.
USER REQUEST
None.

KO2R0141W  SWITCH IS REJECTED. CAPTURE
SERVER IS TERMINATING

Explanation: The capture server switch request was rejected because the capture server is terminating.
System action: Processing continues.
User response: None.

KO2R0142W  USER SWITCH REQUEST REJECTED.
NOT CURRENTLY CAPTURING
OUTPUT TO CONTAINER name

Explanation: The capture server user switch request was rejected because the capture server is not currently capturing output for the indicated container.
System action: Processing continues.
User response: None.
KO2R0143W USER SWITCH REQUEST REJECTED.
CURRENT OUTPUT DATA SET IS EMPTY FOR CONTAINER name

Explanation: The capture server user switch request was rejected because the current capture data set is empty.
System action: Processing continues.
User response: Stop the capture server if the data set must be deallocated.

KO2R0200E DIV I/O ERROR. DATA SET dsname.
DIV ERROR return code reason code

Explanation: Data-in-virtual request failed with the indicated return and reason codes.
System action: Processing terminates.
User response: Contact IBM support.

KO2R0201E CAPTURE DATA SET TRUNCATED.
S0C1 ABEND IN PROGRESS. SAVE THE DUMP AND CALL IBM SUPPORT

Explanation: Internal error.
System action: Processing terminates.
User response: Contact IBM support.

KO2R0900E ERROR DETECTED BY module Sxxxx
   Uuuuu RC=yyyyyyyy PSW=pppppppp pppppppp AT routine +offset level

Explanation: An abend has been detected by a capture server component.
module Module affected.
Sxxxx System abend code.
Uuuuu User abend code.
RC=yyyyyyyy Reason code.
AT routine +offset Module in error and its offset.
level Maintenance level of the module in error.
System action: Processing terminates.
User response: Contact IBM support.

KO2R1142E VSAM ERROR: n ON m RETURN CODE=rc REASON CODE=rs FDBK=ax

Explanation: The capture server could not write on the VSAM data set.
System action: Processing terminates.
User response: None.

KO2R1146E ALLOCATION FAILED, DSN: dsname
   REASON CODE: rs

Explanation: The dynamic allocation of the named data set failed. The supervisor call instruction (SVC) 99 returned with the named reason code.
System action: Processing terminates.
User response: See MVS Messages and Codes for more information.

KO2R1147E ATF CAPTURE ERROR: n ON m
   RETURN=rc REASON=rs INFO=info

Explanation: The capture server could not write on the VSAM data set.
System action: Processing terminates.
User response: None.

KO2R1150I NUMBER OF TRACE RECORDS WRITTEN: n

Explanation: The Application Trace Facility (ATF) successfully wrote n trace records.
System action: None.
User response: None.

KO2R1151I NUMBER OF UOW RECORDS WRITTEN: n

Explanation: The Application Trace Facility (ATF) successfully wrote n Unit of Work (UOW) records.
System action: None.
User response: None.

KO2R1152I NUMBER OF TRACE RECS LOST DUE TO VSAM TASK: n

Explanation: The Application Trace Facility (ATF) lost n trace records produced by DB2 because of high volume.
System action: None.
User response: Use selection criteria that restrict the volume of records to be captured by the ATF.

KO2R1153I NUMBER OF UOW RECS LOST DUE TO VSAM TASK: n

Explanation: The Application Trace Facility (ATF) lost n Unit of Work (UOW) records because of high volume UOWs in DB2.
System action: None.
User response: Use selection criteria that restrict the volume of records to be captured by the ATF.

Chapter 9. Messages  5137
NUMBER OF TRACE RECS LOST DUE TO IFCARLC: n

Explanation: Data loss occurs when the buffer fills before the monitor program can obtain the data. DB2 does not wait for the buffer to be emptied, but, instead, informs the monitor program on the next READA request (in the IFCARLC field of the IFCA) that the data has been lost.

System action: None.

User response: Have a high enough dispatching priority that the application can be posted and then issue the READA request before significant data is lost.

DSN USED FOR CAPTURE: dname

Explanation: A user has captured an application trace to data set dname.

System action: The trace is completed.

User response: None.

Capture Server Failure - Invalid start or end times

Explanation: A near-term history record that was being written did not pass the date validity checks. The thread start or end date was zero, or the end data was greater than the start date.

System action: The record is skipped and not written to the near-term history data set and processing continues with the next record.

User response: None.

Capture object open failure - Description mismatch. Redefine file

Explanation: Near-term history files were created by a previous maintenance level of OMEGAMON. The VSAM files must be deleted and redefined.

System action: The Near-Term History Data Collector terminates.

User response: Redefine the VSAM files.

Capture object open failure - Server terminating

Explanation: The Near-Term History Data Collector has terminated.

System action: The Near-Term History Data Collector terminates.

User response: Contact IBM support.
KO2R244E  Capture server failure - Invalid area length parameter
Explanation: The Near-Term History Data Collector has detected an invalid length.
System action: The Near-Term History Data Collector skips processing this request. A dump is produced.
User response: Contact IBM support.

KO2R245E  Capture server failure - No user buffers
Explanation: The Near-Term History Data Collector has terminated.
System action: The Near-Term History Data Collector terminates.
User response: Contact IBM support.

KO2R246E  Capture server failure - Invalid access path not open for input
Explanation: The Near-Term History Data Collector has detected a record with an invalid time.
System action: The Near-Term History Data Collector skips processing this record. A dump is produced.
User response: Contact IBM support.

KO2R247E  Capture server failure - Invalid start or end times
Explanation: The Near-Term History Data Collector has terminated.
System action: The Near-Term History Data Collector terminates.
User response: Contact IBM support.

KO2R248E  Capture server failure - I/O errors encountered on data
Explanation: The Near-Term History Data Collector has terminated.
System action: The Near-Term History Data Collector terminates.
User response: Contact IBM support.

KO2R249E  Capture server failure - Invalid argument list detected
Explanation: The Near-Term History Data Collector has terminated.
System action: The Near-Term History Data Collector terminates.
User response: Contact IBM support.

KO2R250E  Capture server failure - Cannot obtain retrieve buffer
Explanation: The Near-Term History Data Collector has terminated.
System action: The Near-Term History Data Collector terminates.
User response: Contact IBM support.

KO2R251E  Capture server failure - Invalid sequence return area
Explanation: The Near-Term History Data Collector has terminated.
System action: The Near-Term History Data Collector terminates.
User response: Contact IBM support.

KO2R252E  Capture server failure - Invalid data return area
Explanation: The Near-Term History Data Collector has terminated.
System action: The Near-Term History Data Collector terminates.
User response: Contact IBM support.

KO2R253E  Capture server failure - Invalid qualify subtype
Explanation: The Near-Term History Data Collector has terminated.
System action: The Near-Term History Data Collector terminates.
User response: Contact IBM support.

KO2R254E  Capture server failure - Invalid path type for request not open for output
Explanation: The Near-Term History Data Collector has terminated.
System action: The Near-Term History Data Collector terminates.
User response: Contact IBM support.

KO2R255E  Capture server failure - User request abended
Explanation: The Near-Term History Data Collector has terminated.
System action: The Near-Term History Data Collector terminates.
User response: Contact IBM support.
KO2R256E - Capture server failure - Disconnect failed. Already disconnected

Explanation: The Near-Term History Data Collector has terminated.

System action: The Near-Term History Data Collector terminates.

User response: Contact IBM support.

KO2R257E - Capture server failure - Primary path failed to close

Explanation: The Near-Term History Data Collector has terminated.

System action: The Near-Term History Data Collector terminates.

User response: Contact IBM support.

KO2R258E - Capture server failure - Unable to obtain argument list area

Explanation: The Near-Term History Data Collector has terminated.

System action: The Near-Term History Data Collector terminates.

User response: Contact IBM support.

KO2R259E - Capture server failure - Invalid maximum record parameter

Explanation: The Near-Term History Data Collector has terminated.

System action: The Near-Term History Data Collector terminates.

User response: Contact IBM support.

KO2R260E - Capture server failure - Invalid object return area

Explanation: The Near-Term History Data Collector has terminated.

System action: The Near-Term History Data Collector terminates.

User response: Contact IBM support.

KO2R261E - Capture server failure - Invalid version return area

Explanation: The Near-Term History Data Collector has terminated.

System action: The Near-Term History Data Collector terminates.

User response: Contact IBM support.

KO2R262E - Capture server failure - Invalid request type

Explanation: The Near-Term History Data Collector has terminated.

System action: The Near-Term History Data Collector terminates.

User response: Contact IBM support.

KO2S - Storage Manager messages

KO2S0500E - OSNP SDUMPX Failure. RC: XXXXXXXX

Explanation: The SDUMPx service request failed. The SDUMPx macro return codes and reason codes are documented in the z/OS MVS Programming: Authorized Service Manuals.

For example:
RC: 00000608
Return code: X'08'
Reason code: X'0B'

The SDUMPx macro FAILRC parameter is specified.

System action: The SVCDUMP is not generated.

User response: Investigate the reason for the abend. Contact IBM Support to report the problem.

KO2S0501E - GCAM Primary-Level Name/Token pair CREATE failure. RC: XXXXXXXX

Explanation: A Create Name/Token Pair failure occurred during a primary-level name/token request.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.

KO2S0503I - GCAM primary-level Name/Token pair created.

Explanation: A Create Name/Token Pair request for a primary-level name/token pair was successful.

User response: None.

KO2S0504E - GCAM primary-level Name/Token RETRIEVE failure. RC: XXXXXXXX

Explanation: A Retrieve Name/Token Pair failure occurred for a primary-level name/token pair request.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.
KO2S0505E  GCAM primary-level Name/Token
DELETE failure. RC: XXXXXXX

Explanation: A Delete Name/Token Pair failure occurred for a primary-level name/token pair request.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.

KO2S0506E  GCAM Primary-Level Name/Token request failure

Explanation: The Name/Token request is invalid.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.

KO2S0507I  GCAM Primary-Level Name/Token pair deleted.

Explanation: The Delete Name/Token Pair request was successful.

User response: None.

KO2S0508E  OSNP LMOD: xxxxxxx, CSECT: xxxxxxx, OFFSET: xxxxxx

Explanation: The SDUMPx service request failed for the specified symptom record. Review message KO2S0500E.

System action: The SVCDUMP is not generated.

User response: Contact IBM support.

KO2S0509E  SDMP LMOD: xxxxxxx, CSECT: xxxxxxx, OFFSET: xxxxxx

Explanation: The SDUMPx service request failed for the specified symptom record. Review message KO2S0500E.

System action: The SVCDUMP is not generated.

User response: Contact IBM support.

KO2S0510I  DSPM Dataspace XXXXXXX created

Explanation: The indicated data space was successfully created.

User response: None.

KO2S0511E  DSPM DSPSERV Request Failure. (SCOPE = COMMON ) RC: XXXXXXX

Explanation: A DSPSERV CREATE failure occurred for a SCOPE=Common data space request.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.

KO2S0512E  DSPM DSPSERV Request Failure. (SCOPE = ALL) RC: XXXXXXX

Explanation: A DSPSERV CREATE failure occurred for a SCOPE=ALL data space request.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.

KO2S0513E  DSPM DSPSERV Request Failure. (SCOPE = SINGLE) RC: XXXXXXX

Explanation: A DSPSERV CREATE failure occurred for a SCOPE=SINGLE data space request.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.

KO2S0514E  DSPM ALESERV PASN-AL ADD Failure. RC: XXXXXXX

Explanation: An ALESERV ADD failure occurred for a PASN-AL request.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.

KO2S0515E  DSPM ALESERV DU-AL ADD Failure. RC: XXXXXXX

Explanation: An ALESERV ADD failure occurred for a DU-AL request.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.

KO2S0516I  DSPM Dataspace XXXXXXXX deleted

Explanation: The indicated data space was successfully deleted.

User response: None.

KO2S0517E  DSPM DSPSERV XXXXXXXX DELETE Failure. RC: XXXXXXX

Explanation: A DSPSERV DELETE failure occurred for the indicated data space.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.
KO2S0518I  DSPM Dataspace Xxxxxxxxx added to PASN-AL
Explanation: The indicated data space was successfully added to the PASN-AL.
User response: None.

KO2S0519I  DSPM Dataspace Xxxxxxxxx added to DU-AL
Explanation: The indicated data space was successfully added to the DU-AL.
User response: None.

KO2S0520E  DSPM Dataspace Xxxxxxxxx access list DELETE Failure. RC: Xxxxxxxxx
Explanation: A ALESERV DELETE failure occurred for the indicated data space.
System action: The OMPE subtask terminates with abend code S0C3.
User response: Contact IBM support.

KO2S0522E  DSPM TCBTOKEN Service failures. RC: Xxxxxxxxx
Explanation: A TCBTOKEN failure occurred for the TYPE=JOBSTEP request.
System action: The OMPE subtask terminates with abend code S0C3.
User response: Contact IBM support.

KO2S0523I  LTCH Latch Set created.
Explanation: The request to create a set of latches was successful.
User response: None.

KO2S0524I  LTCH Latch Set previously defined.
Explanation: A Latch Create request was previously defined.
System action: None.
User response: None.

KO2S0525E  LTCH Latch Set CREATE Failure. RC: Xxxxxxxxx
Explanation: The request to create a set of latches failed.
System action: The OMPE subtask terminates with abend code S0C3.
User response: Contact IBM support.

KO2S0526E  LTCH Latch Set OBTAIN Failure. RC: Xxxxxxxxx
Explanation: The request to obtain a set of latches failed.
System action: The OMPE subtask terminates with abend code S0C3.
User response: Contact IBM support.

KO2S0527E  LTCH Latch Set RELEASE Failure. RC: Xxxxxxxxx
Explanation: The request to release a set of latches failed.
System action: The OMPE subtask terminates with abend code S0C3.
User response: Contact IBM support.

KO2S0528E  LTCH Latch Set PURGE Failure. RC: Xxxxxxxxx
Explanation: The request to purge a set of latches failed.
System action: The OMPE subtask terminates with abend code S0C3.
User response: Contact IBM support.

KO2S0529I  LTCH Latch Set purged.
Explanation: The request to purge a set of latches was successful.
User response: None.

KO2S0530I  SDMP SDUMPX Failure. RC: Xxxxxxxxx
Explanation: The SDUMPx service request failed.
System action: The SVCDUMP is not generated.
User response: Contact IBM support.

KO2S0551E  SDMP Latch Services OBTAIN Failure. RC: Xxxxxxxxx
Explanation: The request to obtain a set of latches failed.
System action: The OMPE subtask terminates with abend code S0C3.
User response: Contact IBM support.
KO2S0552E  SDMP Latch Services RELEASE Failure.
   RC: XXXXXXXX

Explanation: The request to release a set of latches failed.

System action: The OMPE subtask terminates with abend code S0C3.

User response: Contact IBM support.

KO2S0553E  IFI INITIALIZATION FAILURE. TCB: <V1> DB2: <V2> RC: <V3>

Explanation: An error occurred during the IFI initialization process.

System action: Processing continues, but IFI processing for the indicated DB2 subsystem is terminated.

User response: Contact IBM support.

KO2S0554E  IFI EXCHANGE LAYER REQUEST FAILURE. TCB: <V1> DB2: <V2> RC: <V3>

Explanation: An error occurred during the IFI Exchange Layer process.

System action: Processing continues, but IFICID data will not be available, and the symptoms might persist for the indicated DB2 subsystem.

User response: Contact IBM support.

KO2S0555E  IFI FUDA REQUEST FAILURE. TCB: <V1> DB2: <V2> RC: <V3>

Explanation: An error occurred during the IFI FUDA Service process.

System action: Processing continues, but IFI processing for the indicated DB2 subsystem is terminated.

User response: Contact IBM support.

KO2S0556I  CIFIMODE=IRB REQUEST BYPASSED.
   TCB: <V1> DB2: <V2>

Explanation: The DB2 subsystem ID is not recognized.

System action: Processing continues, but IFI processing for the indicated DB2 subsystem is bypassed.

User response: None.

KO2S0557I  CIFIMODE=IRB TARGET TCB: <V1>
   DB2: <V2>

Explanation: For information only.

System action: None.

User response: None.

KO2S0558E  OSNP SDUMPx Failure.

Explanation: A SDUMP(x) request failed. Message KO2S0500E contains the corresponding return code and reason code.

There is a large number of reasons why the SDUMP(x) request failed. The following list contains some of the most common reasons and explanations:

X'02' – Dump in Progress
   On this system, another SVC dump is currently in the capture phase.

X'03' – CHNGDUMP Suppress
   In a CHNGDUMP operator command, DUMP=NO is specified to suppress the taking of dumps.

X'04' – SLIP NODUMP
   For this ABEND CODE, a SLIP trap indicates that the dump is to be suppressed.

X'0B' – DAE Suppress
   The dump is suppressed by MVS DAE.

X'3E' – MAXSPACE Exceeded
   The maximum amount of storage for dump captures exceeded. You might want to increase the value for the CHNGDUMP option MAXDUMP.

X'46' – AUX Storage Exceeded
   The MVS threshold of available auxiliary storage exceeded. All dumps are suppressed until more than 35% of system wide AUX storage is available.

System action: The SDUMP(x) dump request failed.

User response: Check the messages for the reason why the request might have failed and consider the appropriate actions.

KO2X - Cross-Memory Module messages

KO2X0450I  Initializing Common Services

Explanation: An informational message.

KO2X0452I  Terminating Common Services

Explanation: An informational message.
KO2X0453I • KO2X0455S

KO2X0453I  UNSUBSCRIBING COMMON SERVICES

KO2X0455S  COMMON SERVICES INITIALIZATION FAILED
Explanation: A fatal error has occurred.
User response: Contact IBM support.

KO2X0454I  COMMON SERVICES PARTIALLY TERMINATED
Explanation: An informational message.

KO2Z - OMEGAMON PE Subsystem messages

KO2Z abend codes

KO2Z messages might be accompanied by the following abend codes:

Abend code

U2008  The current OMPE subsystem function terminated abnormally. Locate message KO2Z999E in the SYSLOG or OMPE Server job log to identify the reason code associated with this failure.

KO2Z return codes

KO2Z messages might be accompanied by the following return codes:

Return code

0000  Request successful.
0004  OMEGAMON XE for DB2 PE return code.
0008  Subsystem function failed.
0012  Request terminated abnormally.
0016  Unexpected ABEND occurred
0020  Internal failure occurred
0028  OMPE Collector request failed.
0256  OMPE/XCF failure occurred

KO2Z reason codes

KO2Z messages might be accompanied by the following reason codes:

Reason code

0000  Successfully completed.
0004  Invalid subsystem name specified.
0008  OMPECT structure not found in system-level name/token pair.
0011  OMPECT validity check error.
0016  OMPE subsystem failed.
0020  OMPE subsystem is inactive.
0024  Mutually exclusive INITPARM parameters specified.
0028  One or more INITPARM parameters are not valid.
0032  Module OMPELIB cannot open the TKANMOD library.
0036  ECSA storage obtain error.
0040  Dynamic allocation error trying to allocate data set specified in INITPARM parameter DSN=name.
0044  Incorrect input parameter string specified with the VARY OMPE,REFRESH command request.
0048  OMPEMG/LINKAGE=PC must be called within the OMPE Collector address space.
0052  JCL parameter data not specified with the utility PARM= JCL keyword.
0056  Invalid F/MODIFY command input specified.
0060  GXL/GXE global structure update failed.
0064  OMPECT control structure ECSA virtual storage obtain error.
0068  Refresh processing architecture error detected.
0072  Utility command not allowed from TSO/E session.
0076  The XCF main task abnormally terminated. Check the OMPE Server job log for error messages in support of this failure.
0080  RKD2PAR parameter data set RDJFCB error detected.
0084  RKD2PAR parameter data set Open error detected.
0088  The I/O read routine could not find the specified member.
0092  The I/O routine could not obtain virtual storage for a READ request.
0096  Could not find enough virtual storage to read member data.
0100  Member data record insert overflow error detected.
0104  Ddname/DSName function error detected by initialization routine.
0108  No input records found in the specified set member.
0112  Could not identify the XCF component main XCFCT control structure. Structure has been overlaid.
0116  XCF main task could not create, delete, or retrieve the home-level name/token pair.
0120  XCF resource manager abnormally terminated.
0124  XCF member query function abnormally terminated.
0128  XCF member Receive request abnormally terminated.
0132  Parse routine found no record data to process.
0136  Parse routine detected an unrecognized record.
0140  Parse routine detected an unrecognized subrecord.
0144  The specified input member was not found in the specified data set.
0148  Read routine SYNAD error was detected.
0152  Unsupported member was specified as input member name.
0156  DDN or DSN INITPARM parameter not specified.
0160  Parse entry structure error has been detected.
0164  SVC call caused an abend because ALLOW(NO) was specified.
0168 INITPARM LIB=DSName DYNALLOC allocation error.
0172 INITPARM LIB=DSName data set Open error.
0176 INITPARM LIB=DSName load module LOAD error.
0180 INITPARM LIB=DSName E/CSA storage obtain error.
0184 OMPE/XCF status routine abnormally terminated.
0188 OMPE/XCF failed to successfully create a required data space.
0192 OMPE/XCF XSRE failed validity checks.
0196 UCM function detected an invalid input request.
0200 The subsystem initialization routine could not obtain ECSA storage for the diagnostic work area buffers.
0204 The global virtual storage list (GSL) is not currently initialized.
0208 Incorrect global virtual store list element was specified with a storage release request.
0212 Incorrect SSCT control block was processed by the global virtual storage list (GSL) component.
0216 Invalid common subpool number was received by the global virtual storage (GSL) component.
0220 Loop detected while executing a subsystem interface (SSI) subsystem routine.
0224 An operator command interface storage obtain error was detected.
0228 Loop detected while executing an EOT broadcast function request.
0232 Loop detected while executing an EOM broadcast function request.
0236 Loop detected while executing a WTO broadcast function request.
0240 OMPECT control structure ESQA storage obtain error.
0244 Loop detected by the subsystem initialization routine running in the MSAS address space.
0248 Invalid parameter list supplied to the common message WTO processing routine.
0252 Undefined message ID was passed as input to the WTO macro.
0256 Internal error while processing the subsystem WTO message table repository.
0260 Undefined segment error processing a subsystem WTO message request.
0264 Invalid global virtual storage structure (GSL) detected.
0268 Invalid ASCB(FREE=EOM) global virtual storage request was specified.
0272 Invalid TCB (FREE=EOT) global virtual storage request was specified.
0276 The global virtual storage list component detected that the GSL structure is not initialized.
0280 A utility request was made against a subsystem that is not currently initialized.
0284 No data was found to display for the specified command.
A subsystem request was issued against a subsystem release that does not match the current environment.

The OMPE subsystem could not initialize the ESVT control structure.

The OMPE subsystem module loader routine abnormally terminated.

The OMPE cross-memory initialization routine abnormally terminated.

The OMPE subsystem loader routine could not obtain ECSA virtual storage required for commonly loaded load modules.

The OMPE subsystem could not locate the OMVT vector table.

The OMPE subsystem loader routine could not obtain ESQA virtual storage for the CDE/XTLST control blocks.

IRB timer service error. The common IRB routine abnormally terminated.

IRB ABTERM post error. The common IRB routine was abnormally terminated while waiting for a request to complete.

Subsystem module OMPECIU abnormally terminated.

Subsystem module OMPERFC abnormally terminated.

Subsystem module OMPERFR abnormally terminated.

Subsystem module OMPERFS abnormally terminated.

Invalid PARM= JCL initialization values specified.

Subsystem module OMPESVS abnormally terminated.

Subsystem module OMPESVS abnormally terminated.

Subsystem module OMPEIVT abnormally terminated.

Message processing routine loop detected error.

A subsystem Refresh request did not complete.

An invalid OMPE subsystem name was specified by a utility function.

The requested task to be attached by the Attach service request failed while processing in IRB mode.

Lock manager routine abnormally terminated.

IXCQUERY failed to obtain a buffer large enough to hold group member data.

IXCQUERY group NO_MEMBER service request call failed.

IXCQUERY group NO_MEMBER service request found no member records in QUAH#REC field.

Group user SRB exit routine abnormally terminated.

Member XMEM entry dequeue routine abnormally terminated.

Module OMPEXDQ XMEM loop detected. The service request abnormally terminated.

Module OMPEXDB XMEM loop detected. Service request abnormally terminated.

Module OMPEXRB Receive request failed to validate the input parameters supplied by the OMPEXRE request SRB routine.
Module OMPEXRB could not load the module specified in the CALL= operand of the Send service request.

The routine specified on the CALL= operand of the Send service request returned a non-zero return code.

The routine specified on the CALL= operand of the Send service request abnormally terminated.

Routine OMPEXRE failed to add the XCF data space to the DU-AL access list.

Routine OMPEXRE failed to receive the XCF response data via the IXCMSGI XCF service request.

The main XCF OMPEXCF Receive routine abnormally terminated. XCF Receive services are no longer available.

The main OMPEXCF task failed to load the driver function load modules.

The OMPEXRM resource termination manager terminated abnormally.

OMPETOP job step task abended referencing the OMPECT control table.

OMPE/XCB function failed while validity checking control structures.

OMPE/XCF IRB routine abnormally terminated.

OMPE/XCF dispatcher abnormally terminated.

OMPE/XCF dispatcher was entered without the LOCAL lock held.

OMPE/XCF dispatcher failed to locate a dispatchable TCB.

The Attach driver routine detected an invalid task ATTACH count.

The Attach driver failed to obtain the required virtual storage buffers.

OMPE/XCF dispatcher failed to locate a valid XRRD dispatcher entry.

OMPETOP job step task failed to locate the subsystem control table.

OMPE/XCF receive routine could not locate sending XMEM status entry.

OMPE/XCF receive routine detected a XMEM queue loop condition.

OMPE/XCF receive routine could not identify the correct Receive request.

OMPE/XCF receive routine failed validity checking XSRE and XRDE structures.

OMPE/XCF dispatcher could not retrieve a dispatcher token.

OMPE/XCF dispatcher failed control structures validity checks.

OMPETOP initialization failed server verification checks.

OMPETOP APF-authorization check error detected.

OMPE/XCF resource manager failed due to unknown function code.

OMPETOP failed to create/retrieve home type name token pair.

OMPEOPT detected an invalid user option address.

OMPEOPT detected an invalid user options table.

OMPEOPT failed while validity checking user options table.

OMPEOPT found zero user option table entries defined.

OMPEOPT specified user option not found in user options table.
OMPETOP could not match a subsystem name to server name.

Virtual storage test protection service abnormally terminated.

IRB service schedule failed to respond with completion indicator.

Event notification cell pool build request failed.

General I/O manager detected that the output buffer is too small to handle the request.

General I/O manager failed to validity check the supplied buffer address.

General I/O manager failed the request due to PSW storage key mismatch.

Initialization failed to locate the system-level subsystem name/token pair

Common PC routine received invalid input parameters

Linkage stack storage key authorization error.

Linkage stack storage subpool authorization error.

Linkage stack request specified a zero stack size.

Linkage stack request size requested exceeds maximum allowed.

Linkage stack requested segment size exceeds stack size.

OMPE/XCF invalid XSRE structure ID detected in input request data buffer.

OMPE/XCF receive routine could not locate the target receive load module.

OMPE/XCF receive routine could not locate the specified receive TCB.

OMPE/XCF receive routine detected an invalid input request data buffer address.

OMPE/XCF receive routine detected an invalid input request data buffer length.

OMPE/XCF receive routine detected that the input request data buffer length is too small to handle the data request.

OMPE/XCF receive routine detected that the target data space STOKEN is not initialized.

Linkage stack build service routine terminated abnormally.

Collector Initialization routine failed to dynamically allocate the load module library.

Collector initialization routine failed while closing the STEPLIB load module library.

Initialization routine failed to build the cell pool callable services cell pool.

Initialization resource manager failed to build the OMPE/XCF receive cell pool.

Initialization resource manager failed to build the OMPE/XCF request cell pool.

Collector Initialization routine failed to build the required recovery cell pool.
0776 Initialization resource manager failed to build the control block access cell pool.
0780 OMPE/XCF detected that an invalid SEND request load module was specified.
0784 Initialization resource manager failed validity checking a subsystem control structure.
0792 The IRB scheduler failed to schedule the requested service routine.
0796 OMPE/XCF failed while validity checking the ZXCF collector structure.
0800 Linkage stack manager failed validity checking STKE stack element.
0804 Linkage stack manager failed validity checking TSTK top element structure.
0808 Linkage stack manager failed validity checking BSTK bottom element structure.
0812 Linkage stack manager received an invalid service request length.
0816 Linkage stack manager detected a linkage stack overflow exception.
0820 Linkage stack manager received an invalid stack service request.
0824 Linkage stack manager failed validity checking the LSCT control table.
0828 Linkage stack manager detected LSCT control table overflow.
0832 Initialization resource manager failed to build the control block access key=7 cell pool.
0836 Initialization resource manager failed to build the control block access key=8 cell pool.
0840 The resource manager driver routine detected that an invalid request was specified.
0844 Entry convention processing detected a save area stack overflow exception.
0848 Subentry convention processing detected a save area stack overflow exception.
0852 Entry stack processing detected a save area stack overflow exception.
0856 Initialization resource manager failed to initialize the required cell pool environment.
0876 OMPE/XCF receive routine detected that the receive buffer size is too small to process the incoming XCF data request.
0880 OMPE/XCF receive routine detected that the receive data space is too small to process the incoming XCF data request.
0884 OMPE/XCF response routine received an invalid data space ALET.
0888 OMPE/XCF IRB function failed during ALESERV add request processing.
0892 OMPE/XCF receive routine failed during ALESERV add request processing.
0896 Initialization resource manager failed to build the required SRB cell pool.
0900 Common PC routine driver failed validity checking the OMVT vector table.
0904 Common PC routine driver failed validity checking the PCPL parameter list.
0908 Common PC routine driver failed validity checking the SSCT control table.
0912 OMPE/XCF failed to load the required control block access load module.
0916 Common PC routine driver failed while processing the save area stack.
0920 OMPE/XCF failed due to no OMPEXMT table entries specified.
0924 Common PC routine driver received an invalid PC function entry code.
0928 OMPE/XCF response routine failed validity checking the XRDE structure.
0932 OMPE/XCF response routine failed validity checking the XSRE structure.
0936 OMPE/XCF response routine failed validity checking the response data buffer.
0940 OMPE/XCF response routine failed validity checking the response buffer size.
0944 OMPE/XCF response routine failed validity checking the input buffer size.
0948 OMPE/XCF response routine failed validity checking the XMEM structure.
0960 OMPE/XCF receive routine failed validity checking the XMEM structure.
0964 OMPE/XCF receive routine failed validity checking the XCF status entry.
0968 OMPE/XCF detected an output buffer overflow condition.
0972 OMPE/XCF detected that the output buffer size specified is zero.
0984 Collector initialization driver failed to retrieve the OMPE/XCF connect token.
0988 OMPE/XCF component failed validity checking XMEM structure.
0992 Common PC routine driver failed validity checking SSCTSUSE pointer.
0996 Common PC routine driver failed validity checking OMPECT structure.
1000 Common SRB scheduler failed to locate target requested address space.
1004 Common SRB scheduler failed to locate the address space STOKEN.
1008 Common SRB scheduler failed to locate the subsystem control table.
1012 Common SRB scheduler failed to validity check subsystem structures.
1016 Common SRB scheduler received an invalid SRB input routine.
1020 Common SRB scheduler failed to schedule the specified SRB routine.
1024 Common SRB scheduler abnormally terminated.
1028 Subsystem initialization routine failed validity checking the SSVT control block.
1032 Subsystem initialization routine failed validity checking the SSCT control block.
1036 Subsystem initialization routine failed validity checking SSI entry point.
1040 OMPE/XCF query module detected a locked loop condition.
1044 OMPE/XCF group service routine detected a locked loop condition.
1048 Subsystem initialization routine failed validity checking SSI function codes.
Subsystem initialization routine failed validity checking SSVT address pointer.
Subsystem initialization routine failed to swap SSVT control blocks.
Subsystem initialization routine failed during SSVT compare and swap processing.
Subsystem initialization routine detected invalid SSVT function matrix.
Subsystem initialization routine failed during swap SSVT processing.
VTAM resource manager failed validity checking XRDE structure.
VTAM resource manager failed validity checking XRDE environment.
VTAM resource manager detected an invalid processing environment.
OMPE/XCF control block access response routine not specified error.
OMPE/XCF notify routine received the requested input buffers.
OMPE/XCF notify routine abnormally terminated.
VTAM resource manager failed validity checking OMPE/XCF structures.
VTAM resource manager detected an invalid OMPE/XCF initialization request.
VTAM route manager could not locate the DB2 routing table.
Memory object manager received an invalid service request.
Memory object manager failed validity checking the SGT segment table.
Memory object manager failed releasing the SGT segment table.
Memory object manager failed validity checking requested segment length.
Memory object manager request exceeds maximum size allowed.
Memory object manager received a zero or negative segment request length.
Memory object manager computed a segment length that exceeds maximum allowed.
Memory object manager could not locate key-related segment table.
Memory object manager failed validity checking segment table index.
Memory object manager failed validity checking segment table entry.
Memory object manager could not locate a segment table entry.
Memory object manager failed validity checking the SGTE free queue.
Memory object manager detected an invalid SGTE free queue.
Memory object manager maximum SGT/SGTE slots exceeded.
Memory object manager received an invalid free segment request.
Memory object manager failed validity checking SGTE element.
Memory object manager failed validity checking SGTE segment length.
Memory object manager failed due to incorrect storage release size.
Memory object manager could not locate specified storage address.
1196 Memory object manager detected that the current TCB exceeded the allowed memory limit.
1200 Memory object manager detected that the current address space exceeded the allowed memory limit.
1204 Memory object manager abnormally terminated.
1300 OMPE/XCF Send service routine failed validity checking XRDE structure.
1304 OMPE/XCF Send service routine failed XRDE fetch/store access.
1308 OMPE/XCF Send service routine failed validity checking TOKEN parameter.
1312 OMPE/XCF Send service routine failed TOKEN fetch/store access.
1316 OMPE/XCF Send service routine detected the output data buffer address is not initialized.
1320 OMPE/XCF Send service routine detected the output data buffer size is not initialized.
1324 OMPE/XCF Send service routine detected the output data buffer exceeds 128 MB.
1328 OMPE/XCF Send service routine failed output data buffer fetch/store access.
1332 OMPE/XCF Send service routine detected the input data buffer address is not initialized.
1336 OMPE/XCF Send service routine detected the input data buffer length is not initialized.
1340 OMPE/XCF Send service routine detected the input data buffer exceeds 60K.
1344 OMPE/XCF Send service routine failed input data buffer fetch/store access.
1348 OMPE/XCF Send service routine abnormally terminated due to fetch/store failure.
1352 OMPE/XCF Send service routine failed to retrieve connection token.
1356 OMPE/XCF Send service routine failed validity checking XMEM structure.
1360 OMPE/XCF Send service routine detected that the OMPE/XCF environment is inactive.
1364 OMPE/XCF Send service routine could not locate the OMPEXMT control table.
1368 OMPE/XCF Send service routine failed during timer supervision processing.
1372 OMPE/XCF Send service routine detected that the input buffer length exceeds data space size.
1376 OMPE/XCF Send service routine did not receive a response in the specified time limit.
1380 OMPE/XCF Send service routine failed establishing a timer environment.
1384 OMPE/XCF Send service routine detected a locked XMEM structure loop.
1388 OMPE/XCF Send service routine found an empty XMEM queue.
OMPE/XCF Send service routine failed to validity check XMEM structure.
OMPE/XCF Send service routine could not locate the target XMEM structure.
OMPE/XCF Send service routine timed out waiting for response data.
OMPE/XCF Send service routine failed validity checking token TCB address.
OMPE/XCF Send service routine failed validity checking token ASCB address.
OMPE/XCF Send service routine failed validity checking input buffer ALET.
OMPE/XCF Send service routine failed validity checking output buffer ALET.
OMPE/XCF Send service routine detected that the target XCF member is not active.
OMPE/XCF Send service routine abnormally terminated.
OMPEZ64 For the $ZSTOR64 service request, an invalid function code is specified.
OMPEZ64 An error occurred. The 64-bit memory object manager stopped abnormally.
OMPEZ64 For the $ZSTOR64 service request, an invalid CELLS= macro operand is specified.
OMPEZ64 For the $ZSTOR64 service request, an invalid CSIZE= macro operand is specified.
OMPEZ64 The CSIZE= value that is specified for the $ZSTOR64 service request exceeds the maximum value.
OMPEZ64 For the $ZSTOR64 service request, the FPROT= macro operand is specified. This operand is not supported.
OMPEZ64 For the $ZSTOR64 service request, an invalid TCB= macro operand is specified.
OMPEZ64 For the $ZSTOR64 service request, an invalid MODE= macro operand is specified.
OMPEZ64 For the $ZSTOR64 service request, an invalid cell pool HDR= macro operand is specified.
OMPEZ64 For the $ZSTOR64 service request, an invalid object segment OWNER= macro operand is specified.
OMPEZ64 The 64-bit memory object storage manager request stopped abnormally.
OMPEZ64 A shortage of memory object segments is detected.
OMPEZ64 The memory object segment request failed.
OMPEZ64 An error occurred while checking the validity of the requestor parameter list.
OMPEZ64 An error occurred while checking the validity of the FREE ID control field.
2064 OMPEZ64 An error occurred while checking the validity of the FREE segment request.
2068 OMPEZ64 An error occurred while checking the validity of the CP64 task control segment.
2072 OMPEZ64 The memory segment to be freed cannot be found.
2076 OMPEZ64 An internal loop is detected while scanning the CP64 control structure.
2084 OMPEZ64 The 64-bit memory object storage manager CPCT control table cannot be obtained.
2088 OMPEZ64 An overflow condition is detected while processing the CPCT control table.
2092 OMPEZ64 An internal error occurred while processing a free extent.
2096 OMPEZ64 The requested memory object cannot be built.
2100 OMPEZSL The virtual storage cell pool manager received an invalid function code request.
2104 OMPEZSL The virtual storage cell pool manager stopped abnormally.
2108 OMPEZSL For the $ZPOOL service request, an invalid CELLS= macro operand is specified.
2112 OMPEZSL For the $ZPOOL service request, an invalid CSIZE= macro operand is specified.
2116 OMPEZSL For the $ZPOOL service request, an invalid CSIZE= macro operand is specified.
2120 OMPEZSL For the $ZPOOL service request, an unauthorized virtual storage subpool is specified.
2124 OMPEZSL For the $ZPOOL service request, an invalid BUILD macro operand is specified.
2128 OMPEZSL For the $ZPOOL service request, an invalid MODE= macro operand is specified.
2132 OMPEZSL For the $ZPOOL service request, an invalid HDR= macro operand is specified.
2140 OMPEZSL The $ZPOOL service request is stopped abnormally.
2144 OMPEZSL For the $ZPOOL service request, an invalid GET= was specified while a cell pool deletion was in progress.
2148 OMPEZSL A shortage of cell pool elements is detected.
2152 OMPEZSL The cell pool cannot be extended because the limit for maximum extents is exceeded.
2156 OMPEZSL An invalid cell pool GET service request is detected.
2160 OMPEZSL An error occurred while checking the structure of the FREE ID data field.
2164 OMPEZSL An error occurred while checking a FREE service request cell.
2168 OMPEZSL The CP31 structure validity check failed.
2172 OMPEZSL A previously freed cell element cannot be freed again.
2176 OMPEZSL A CP31 infinite structure loop is detected.
OMPEZSL A CP31 infinite extent structure loop is detected.

OMPEZSL The validity check of the CPXT control table failed.

OMPEZSL A CPXT table overflow error occurred.

OMPEZSL A CP31 extent free internal error occurred.

OMPEZSL The DELETE cell pool request is not valid.

Classic session OMPE/XCF driver detected an invalid input buffer address.

Classic session OMPE/XCF driver detected an invalid collection routine name.

Classic session OMPE/XCF driver detected that the XCF gateway is not active.

Classic session OMPE/XCF driver detected that the specified collection routine is undefined.

Classic session OMPE/XCF driver failed to locate the DB2 routing table.

Classic session OMPE/XCF driver detected an invalid DB2 routing table.

Classic session OMPE/XCF driver failed to locate the specified DB2 subsystem.

Classic session OMPE/XCF driver detected an invalid routing table pointer.

Classic session OMPE/XCF driver detected an invalid routing table header.

Classic session OMPE/XCF driver detected an invalid routing table DB2 ID.

Classic session OMPE/XCF driver could not locate the XCF token.

OMPE/XCF Send service routine failed validity checking XRDE structure.

OMPE/XCF Send service routine failed to locate the XCF connection token.

OMPE/XCF Send service routine failed validity checking token TCB pointer.

OMPE/XCF Send service routine failed validity checking token ASCB pointer.

OMPE/XCF Send service routine failed to locate target XMEM structure.

OMPE/XCF Send service routine failed to validity check XMEM structure.

OMPE/XCF Send service routine failed to validity check ALLTHOUT thread entry.

OMPE/XCF Send service routine detected that the buffer size exceeds data space size.

Classic session OMPE/XCF driver failed validity checking $ZDB2 control block.

Classic session OMPE/XCF driver failed validity checking VPI9800 block.

OMPE/XCF remote DB2 thread CPU driver failed sorting ALLTHOUT thread entries.

OMPE/XCF remote DB2 thread CPU driver stopped abnormally.

OMPE/XCF remote DB2 thread CPU driver found zero threads to process.
OMPE/XCF remote DB2 thread CPU driver failed validity checking ZCPU structure.

OMPE/XCF remote DB2 thread CPU response routine failed to validity check XSRE structure.

OMPE/XCF remote DB2 thread CPU response routine failed to validity check XRDE structure.

OMPE/XCF remote DB2 thread CPU response routine failed to validity check IRDA block.

OMPE/XCF remote DB2 thread CPU response routine failed to validity check IRDL length.

OMPE/XCF remote DB2 thread CPU response routine found zero ZCPE entries to process.

OMPE/XCF remote DB2 thread CPU response routine failed during ALESERV ADD request.

OMPE/XCF remote DB2 thread CPU response routine failed to validity check ZCPE block count.

OMPE/XCF remote DB2 thread CPU response routine found an unsupported DB2 subsystem version.

OMPE/XCF environment initialization failed to validity check the DB2 ERLY block.

OMPE/XCF environment initialization failed to validity check the DB2 subsystem ID.

OMPE/XCF environment initialization found an invalid DB2 subsystem ID as input.

OMPE/XCF environment initialization failed to validity check the DB2 SCOM block.

OMPE/XCF environment initialization failed to validity check the DB2 SSCT control block.

OMPE/XCF environment initialization failed to validity check the DB2 ACOM control block.

OMPE/XCF environment initialization failed to validity check the DB2 RMVT control block.

OMPE/XCF environment initialization failed to validity check the DB2 RMFT control block.

OMPE/XCF environment initialization failed to validity check the DB2 AMGS control block.

OMPE/XCF environment initialization failed to locate the DB2 routing table.

OMPE/XCF remote DB2 thread CPU collection routine failed to validity check Agent ASCB pointer.

OMPE/XCF remote DB2 thread CPU collection routine failed to validity check Agent ASSB pointer.
OMPE/XCF remote DB2 thread CPU collection routine failed to validity check Agent ASCB address.

OMPE/XCF remote DB2 thread CPU collection routine failed during ALEASEV ADD request processing.

OMPE/XCF remote DB2 thread CPU collection routine failed during ALEASEV DELETE processing.

OMPE/XCF remote DB2 thread CPU collection routine could not locate the DB2 AGNT control block.

OMPE/XCF control block access PC routine driver received an invalid input parameter list.

OMPE/XCF control block access PC routine driver specified an invalid processing environment.

OMPE/XCF control block access PC routine driver detected an invalid OMPE Collector environment.

OMPE/XCF control block access PC routine driver does not support the COMMCOLL collector environment.

OMPE/XCF control block access PC routine driver failed validity checking the specified DB2 version.

OMPE/XCF control block access PC routine driver detected an unsupported DB2 subsystem version.

OMPE/XCF control block access PC routine driver could not locate the XRDE structure.

OMPE/XCF control block access PC routine driver failed to validity check XRDE structure.

OMPE/XCF control block access PC routine driver could not locate the DB2 vector table.

OMPE/XCF control block access PC routine driver received a zero DBPL block address.

OMPE/XCF control block access PC routine driver failed to validity check DBPL block.

OMPE/XCF control block access PC routine driver found an invalid collection routine entry address.

OMPE/XCF control block access PC routine driver failed to locate the specified DB2 subsystem.

OMPE/XCF control block access PC routine driver failed to locate the DB2 subsystem SSCT control table.

OMPE/XCF control block access PC routine driver received a null DBPL block address.

OMPE/XCF control block access PC routine driver failed to validity check DBPL block.

OMPE/XCF control block access PC routine driver detected a zero work area address.

OMPE/XCF control block access PC routine driver detected a zero input buffer address.
OMPE/XCF control block access PC routine driver detected a zero output buffer address.

OMPE/XCF control block access PC routine driver detected a zero work area length.

OMPE/XCF remote DB2 thread CPU collection routine failed to validity check the DB2 AGNT control block pointer.

OMPE/XCF remote DB2 thread CPU collection routine failed to validity check the DB2 AGNT control block address.

OMPE/XCF remote DB2 thread CPU collection routine failed to validity check the Agent ASCB address.

OMPE/XCF remote DB2 thread CPU collection routine failed to validity check the Agent TCB address.

OMPE/XCF remote DB2 thread CPU collection routine abnormally stopped.

OMPE/XCF DB2 environment initialization routine detected an invalid environment request.

OMPE/XCF ACE to AGNT collection routine failed to validity check the AMGS DB2 control block.

OMPE/XCF ACE to AGNT collection routine failed to validity check the DB2 ACE control block.

OMPE Collector subsystem token service routine retrieve request failed.

OMPE Collector subsystem token service routine failed token type validity checks.

OMPE Collector subsystem token service routine token name failed validity checks.

OMPE Collector subsystem token service routine token address failed validity checks.

OMPE Collector subsystem token service routine token retrieve failed validity checks.

OMPE Collector subsystem token service routine token delete failed validity checks.

OMPE Collector subsystem token service routine token create failed validity checks.

OMPE Collector subsystem token service routine token type retrieve failed validity checks.

OMPE Collector subsystem token service routine token delete function failed.

OMPEZIP The validity check of the OMPECT control structure failed.

OMPEZIP A duplicate $ZIIP ENABLE service request call is detected.

OMPEZIP The PC service request function code is not valid.

OMPEZIP A duplicate $ZIIP ENABLE instance service request is detected.

OMPEZIP $ZIIP ENABLE cannot be issued in SRB-mode.

OMPEZIP ZIIP support is not available (CVTZIIP).
OMPEZIP $ZIIP DISABLE cannot be issued in TCB-mode.

OMPEZIP The SVZ control storage block cannot be obtained.

OMPEZIP The $ZOMCT control structure is not initialized.

OMPEZIP The validity checks of the &ZOMCT control structure failed.

OMPEZIP The $ZMSTATE state entry block address is not initialized.

OMPEZIP The validity check of the $ZMSTATE entry block failed.

OMPEZIP The $ZIIP service request cannot be issued in XM-mode.

OMPEZIP The scheduling of the target enclave SRB routine failed.

OMPEZIP The DISABLE service request cannot locate the $ZMSTATE state entry block.

OMPEZZP The $ZMSTATE state entry block is not valid.

There are no zIIPs processors defined for the z/OS image.

OMPEZIP The Disable post-processor EPA is not initialized.

OMPEZIP The zIIP jobstep TCB environment is not valid.

OMPEHVS The return code of the $ZTOKEN CREATE service request is nonzero.

OMPEHVS The issued service request is incorrect.

OMPEHVS The service request stopped abnormally.

OMPEHVS The DELETE service request is not supported in SRB-mode.

OMPEHVS The virtual storage is insufficient.

OMPEHVS The specified storage heap structure cannot be found.

OMPEHVS In the pool, no extents are available.

OMPEHVS The heap virtual storage segment to be freed cannot be found.

OMPEHVS The BUILD service request cannot to be issued in SRB-mode.

OMPEHVS The MODE= service request macro operand is not valid.

OMPEHVS The specified heap virtual storage subpool is not valid.

OMPEHVS The LOC= service request macro operand is not valid.

OMPEHVS The USAGE= service request macro operand is not valid.

OMPEHVS The TOKEN= macro operand contains a value of zero.

OMPEHVS The TOKEN= macro operand points to an invalid SH31 block.

OMPEHVS The validity check of the $ZSHCT control structure failed.

OMPEHVS The validity check of the $ZSHCT control structure identifier failed.

OMPEHVS No $ZSHCT control table slots are available.

OMPEHVS The zIIP TCB address cannot be found.

OMPEHVS The validity checks of the $ZMSTATE service failed.

OMPEHVS The value of the TCB address is null.

OMPEHVS The specified TOKEN= macro operand is not valid.
92216  OMPEHVS The validity check of the $ZSH31 data structure failed.
92220  OMPEHVS In SRB-mode, the $ZHEAP FREE service request cannot be issued with the macro operand USAGE=ANY.
92224  OMPEHVS The owner TCB address of the heap virtual storage manager $ZHEAP FREE service request does not match.
92228  OMPEHVS The TCB address owner is not valid.
92232  OMPEHVS A zero length value is supplied.
92236  OMPEHVS The length exceeds the maximum size.
92240  OMPEHVS The heap virtual storage manager $ZHEAP FREE service request is issued in an incorrect state.
92244  OMPEHVS The specified ADDR= macro operand is not valid.
92248  OMPEHVS The specified LENGTH= macro operand is not valid.
92252  OMPEHVS The specified cell pool ID is not valid.
92256  OMPEHVS The specified MODE= macro operand is not valid.
92260  OMPEHVS The TCB token cannot be found.
92264  OMPEHVS The OMCT control table cannot be found.
92268  OMPEHVS The specified TOKEN=TCB macro operand is not valid.

KO2Z000I  OMPE Vrm Command Processed
Explanation: The issued subsystem command was successfully processed.
System action: The subsystem command is processed.
User response: None.

KO2Z001I  OMPE Vrm Subsystem Initialization in Progress
Explanation: The subsystem is being initialized.
System action: Subsystem initialization proceeds.
User response: None.

KO2Z002E  OMPE Vrm IEFSSVT REQUEST=CREATE error RC=%%%% RSN=%%%%
Explanation: Subsystem initialization could not create the subsystem interface (SSI) environment.
• RC= indicates the return code. For more information, see “KO2Z return codes” on page 5144.
• RSN= indicates the reason code. For more information, see “KO2Z reason codes” on page 5144.
System action: Subsystem initialization terminated.
User response: Contact IBM support.

KO2Z003E  OMPE Vrm IEFSSSI REQUEST=PUT error RC=%%%% RSN=%%%%

KO2Z004E  OMPE Vrm IEFSSSI REQUEST=OPTIONS error RC=%%%% RSN=%%%%
Explanation: Subsystem initialization could not verify options processing.
• RC= indicates the return code. For more information, see “KO2Z return codes” on page 5144.
• RSN= indicates the reason code. For more information, see “KO2Z reason codes” on page 5144.
System action: Subsystem initialization terminated.
User response: Contact IBM support.

KO2Z005E  OMPE Vrm IEFSSSI REQUEST=ACTIVATE error RC=%%%% RSN=%%%%
Explanation: Subsystem initialization could not activate the subsystem.
• RC= indicates the return code. For more information, see “KO2Z return codes” on page 5144.
• RSN= indicates the reason code. For more information, see “KO2Z reason codes” on page 5144.
KO2Z006E • KO2Z015E

System action: Subsystem initialization terminated.
User response: Contact IBM support.

KO2Z006E  OMPE Vm Name/Token Pair create error RC=%%%

Explanation: Subsystem initialization could not define a system-level name/token pair.
- RC= indicates the return code. For more information, see “KO2Z return codes” on page 5144.

User response: Check the SYSLOG for abends or additional messages that describe the reason for the failure. Gather SYSLOG, SVC dumps and contact IBM support.

KO2Z007I  OMPE Vm subsystem initialization failed. Invalid subsystem name prefix specified

Explanation: Subsystem initialization failed. An incorrect subsystem name prefix was specified.

User response: Specify a valid four-character subsystem name. The first three characters should be OMP and the last character can be any alphanumeric value, for example, OMPE. The default subsystem name is OMPE.

KO2Z008I  OMPE Vm Subsystem successfully initialized in active mode

Explanation: The OMPE subsystem has been initialized in active mode. The OMPE subsystem is ready to Receive service request calls from OMPE Collector components.

User response: None.

KO2Z009E  OMPE Vm INITPARM error: PID=%%% INITPARM=%%%

Explanation: The OMPE subsystem detected an incorrect input parameter. PID= shows the incorrect input parameter. INITPARM= shows the complete input parameter string.

User response: Specify valid input parameters when starting the OMPE subsystem.

KO2Z010E  OMPE Vm %%% Subsystem initialization failed

Explanation: The OMPE subsystem failed to initialize.

System action: Subsystem initialization terminated.
User response: Specify valid input parameters when starting the OMPE subsystem.

KO2Z011I  OMPE Vm Options member %%%%% % keyword %%%%%

Explanation: The OMPE subsystem issues this message to show the options member and the type of invalid keyword specified.

User response: Specify the valid user option and restart the OMPE Collector.

KO2Z012E  OMPE Vm %%%% Loop detection timer set failed

Explanation: A subsystem function takes too long to complete. The default timeout, specified by SSITIMER=30 seconds, exceeded.

System action: The current subsystem function is terminated.
User response: Contact IBM support.

KO2Z013E  OMPE Vm Mutually exclusive keywords specified

Explanation: Mutually exclusive OMPE subsystem initialization keywords have been detected by the subsystem parse routine.

User response: Specify valid keywords on the OMPE subsystem INITPARM= parameter and restart the OMPE subsystem.

KO2Z014E  OMPE Vm IEFSSI REQUEST=QUERY error RC=%%% RSN=%%%

Explanation: The service request router could not complete a subsystem interface (SSI) query request.
- RC= indicates the return code. For more information, see “KO2Z return codes” on page 5144.
- RSN= indicates the reason code. For more information, see “KO2Z reason codes” on page 5144.

System action: The caller's service request is rejected.
User response: Contact IBM support.

KO2Z015E  OMPE Vm Configuration incomplete.
Collector initialization failed RC=%%% RSN=%%%

Explanation: The OMPE Collector failed to initialize because of a missing or incorrect initialization member data specified in RKD2PAR.
KO2Z016E  OMPE Vrm Invalid Collector configuration parmlist. SR=%%%%

Explanation: The indicated service request parameter list is not valid.

System action: The caller's service request is rejected.

User response: Contact IBM support.

KO2Z017E  OMPE Vrm WTO broadcast count update error

Explanation: Subsystem initialization could not update the write to operator (WTO) broadcast count field maintained by the z/OS communication task address space (CTAS).

System action: Subsystem initialization is terminated.

User response: Contact IBM support.

KO2Z018E  OMPE Vrm Diagnostic work area storage obtain failure

Explanation: The OMPE subsystem could not obtain ECSA storage for a diagnostic work area structure.

System action: Subsystem initialization terminated.

User response: Contact your systems programmer.

KO2Z019E  OMPE Vrm OMEGAMON XE FOR DB2 PE IS ALREADY ACTIVE. START REJECTED

Explanation: The OMPE Collector is already active.

System action: The OMPE Collector Start request is rejected.

User response: Stop the target OMPE Collector. Wait for the OMPE Collector to end. Restart the Collector.

KO2Z020I  OMPE Vrm Collector options successfully initialized

Explanation: The OMPE Collector global options defined in RKD2PAR member OMPEOPTS have been successfully defined.

System action: OMPE Collector Initialization continues.

User response: None.

KO2Z021I  OMPE Vrm Subsystem re-initialization performed by START service request

Explanation: The OMPE Collector subsystem instance has been successfully reinitialized.

System action: OMPE Collector initialization continues.

User response: None.

KO2Z022I  OMPE Vrm MEMBER= %%%%%%% SVC screening initialization failed.

Explanation: The initialization of the SVC screening subsystem component failed.

System action: The initialization of the OMEGAMON Collector continues.

User response: Add the SVC screening member OMPESV00 to the RKANPAR parameter library data set and restart the OMEGAMON Collector.

KO2Z024E  OMPE Vrm KO2ZMSGB message processing error RC=%%% RSN=%%% 

Explanation: The general OMPE subsystem message processing routine failed to issue the target WTO message.

User response: Contact IBM support.

KO2Z026E  OMPE Vrm Collector component statement missing from RKANPAR.

Explanation: OMPE Collector initialization detected that a required collector component is missing in the configuration.

System action: The OMPE Collector is abnormally terminated.

User response: Include the required component in the RKANPAR and restart the OMPE Collector.

KO2Z027I  OMPE Vrm Invalid OMPEOPTS option specified: %%%%%

Explanation: The specified OMEGAMON for Db2 PE Collector user option is invalid.

System action: The invalid user option is ignored. The default value is used.

User response: Verify that the user option is defined correctly in the RKD2PAR member OMPEOPTS.
KO2Z028E  OMPE Vm START Service request
error RC=%%% RSN=%%%
Explanation: A request to internally start the OMPE subsystem failed. The subsystem could not locate load modules prefixed with KO2Z* in the first load module library specified by the STEPLIB DDname of the OMPE Collector JCL procedure.
System action: The OMPE subsystem Start request is terminated.
User response: Ensure that load modules prefixed with KO2Z* reside in the first library specified by the STEPLIB DDname. Additionally, the first load module library that contains these load modules must have a suffix of TKANMOD.

KO2Z029I  OMPE Vm Subsystem %%%% belongs to collector %%%. Collector %%%% start rejected.
Explanation: The starting OMPE Collector cannot specify a subsystem name that is associated with a different OMPE Collector.
System action: The OMPE collector Start request is rejected.
User response: Specify a unique collector subsystem name in the OMPE Collector started task JCL procedure PARM= keyword, then restart the OMPE Collector.

KO2Z030I  OMPE Vm XCF timer reset successful XCFTIMER=%%
Explanation: The OMPE/XCF XCF timer interval has been successfully reset.
System action: OMPE Collector processing continues.
User response: None.

KO2Z031E  OMPE Vm CSVDYLPA dynamic LPA %%%% failed SSM=%%% RC=%%% RSN=%%% FLGS=%%%
Explanation: The OMPE Collector initialization failed to add/delete a module to/from the dynamic LPA.
System action: OMPE Collector initialization is abnormally terminated.
User response: Contact IBM support.

KO2Z032E  OMPE Vm Invalid parameter data supplied. PARM=%%%
Explanation: The OMPE Collector initialization detected invalid parameters supplied on the PARM= statement of the OMPE Collector started task JCL procedure.

KO2Z033E  OMPE Vm Collector member name %%%% not found in RKANPAR concatenation
Explanation: The OMPE Collector initialization could not locate the specified member name in the RKANPAR parameter library concatenation.
System action: OMPE Collector initialization is abnormally terminated.
User response: Specify the missing collector member name and restart the OMPE Collector.

KO2Z034I  OMPE Vm Searching RKANPAR for "EXEC %%%% component statement
Explanation: The OMPE Collector initialization could not locate the specified collector component in the RKANPAR parameter library concatenation.
System action: OMPE Collector initialization is abnormally terminated.
User response: Specify the missing collector component and restart the OMPE Collector.

KO2Z035I  OMPE Vm Server virtual storage limit MEMLIMIT(NOLIMIT) setting discovered
Explanation: The OMPE Collector initialization detected that there is no 64-bit memory object limit size imposed on the OMPE Collector.
System action: OMPE Collector initialization continues.
User response: None.

KO2Z036E  OMPE Vm Vector table swap failed SSM=%%% RC=%%% RSN=%%%%
Explanation: The OMPE Collector subsystem initialization is unable to swap the SSVT matrix table.
System action: OMPE Collector initialization is abnormally terminated.
User response: Contact IBM support.

KO2Z037E  OMPE Vm The range of the dynamic subsystem name exceeds IX=%%
RC=%%% RSN=%%%%
Explanation: The two digit suffix of the OMEGAMON Collector subsystem is out of range.
System action: The OMEGAMON Collector stopped
abnormally with ABEND code U2008.

**User response:** Contact IBM Support to report this problem.

KO2Z038E OMPE V%%% SSI call failed
RC=%%%% RSN=%%% SSSRC=%%%%

**Explanation:** The subsystem service request failed.

**System action:** The subsystem function request is rejected with error codes and reason codes.

**User response:** Provide the OMPE collector job log and the SVC dump for IBM support.

KO2Z039I OMPE V%% command request RSN=%%% RC=%%%%

**Explanation:** The issued command failed.

**System action:** The OMEGAMON Collector ignores the issued command.

**User response:** Check the error codes and the reason codes for further information.

KO2Z040W OMPE V%% Member %%%% not found in RKANPAR. Using all subsystem defaults

**Explanation:** The OMPE Collector initialization detected that RKANPAR parameter library member OMPE00 is missing from the configuration.

**System action:** OMPE Collector initialization continues using all internal defaults.

**User response:** None.

KO2Z041E OMPE V%% RDJFCB error
DDName=%%% RC=%%%%

**Explanation:** The OMPE subsystem detected a read JFCB block error while trying to determine the status of a data set.

**System action:** The subsystem function is abnormally terminated.

**User response:** Contact IBM support.

KO2Z042E OMPE V%% OPEN failure
DDName=%%%% RC=%%%%
RSN=%%%%

**Explanation:** The subsystem could not open the indicated data set.

**System action:** The subsystem function is abnormally terminated.

**User response:** Contact IBM support.

KO2Z043E OMPE V%% FIND failure
Member=%%% RC=%%%%

**Explanation:** The subsystem could not locate the indicated member.

**System action:** The subsystem function is abnormally terminated.

**User response:** Verify that the data set member exists. Correct the problem and restart the OMPE subsystem.

KO2Z044E OMPE V%% Storage obtain failed
Member=%%%%

**Explanation:** The subsystem could not obtain local storage to process data from the indicated member.

**System action:** The subsystem function is abnormally terminated.

**User response:** Contact your systems programmer.

KO2Z045E OMPE V%% Record input overflow
Member=%%%%

**Explanation:** The subsystem detected a record overflow condition while reading input member records from the indicated member name.

**System action:** The subsystem function is abnormally terminated.

**User response:** Contact IBM support.

KO2Z046E OMPE V%% Parameters READ error
Member=%%%%

**Explanation:** A subsystem failure was detected reading record data from the indicated data set member.

**System action:** The subsystem function is terminated.

**User response:** Contact IBM support.

KO2Z047E OMPE V%% DYNALLOC error
ERR=%%% INFO=%%%
DSN=%%%%

**Explanation:** The subsystem failed to dynamically allocate the specified data set.

**System action:** The subsystem function is abnormally terminated.
Verify that the specified data set name is correct. Correct the problem and re-execute the specified function.

KO2Z048W  OMPE Vorm Using default DDname=%% to locate member=%%%

Explanation: The OMPE Collector initialization routine is using the default ddname to locate the specified configuration member name.

System action: OMPE collector initialization continues.

User response: None.

KO2Z049E  OMPE Vorm No input records found. Member=%%%

Explanation: The subsystem did not recognize any input records specified in the target member name.

System action: The subsystem function is terminated.

User response: Correct the problem and re-execute the specified function.

KO2Z050E  OMPE Vorm READ Failure. Member=%% Unsupported

Explanation: The subsystem detected an incorrectly specified member name.

System action: The subsystem function terminated.

User response: Specify a supported member name.

KO2Z051E  OMPE Vorm Memory object request failed SSM=%% RC=%% RSN=%%

Explanation: The OMPE Collector subsystem could not successfully create the specified memory object.

System action: OMPE collector processing continues.

User response: Contact IBM support.

KO2Z052E  OMPE Vorm Memory object request failed SSM=%% RC=%% RSN=%%

Explanation: The OMPE Collector subsystem could not successfully create the specified memory object.

System action: OMPE collector processing continues.

User response: Contact IBM support.

KO2Z053E  OMPE Vorm SSM=%% abnormally terminated RC=%% RSN=%%

Explanation: The identified OMPE Collector subsystem module terminated abnormally.

System action: OMPE collector processing continues.

User response: Contact IBM support.

KO2Z055I  OMPE Vorm SSM=%% using heap storage buffer pool

Explanation: The subsystem component of the OMPE Collector is currently using the 31-bit heap virtual storage manager.

System action: None.

User response: None.

KO2Z056I  OMPE Vorm DD=%% allocated to VOL=%% DSN=%%

Explanation: At OMPE Collector initialization, the current list of all STEPLIB data sets that are allocated by OMEGAMON XE for DB2 PE on z/OS is displayed:

• <v1> shows the STEPLIB sequence number
• <v2> shows the data definition name
• <v3> shows the volume serial number where the STEPLIB dataset resides
• <v4> shows the STEPKIB dataset name

System action: The OMPE Collector initialization proceeds.

User response: None.

KO2Z057I  OMPE Vorm Subsystem message log RC=%% RSN=%%

Explanation: In the log data set, the status of a dynamically added or removed message is indicated.

System action: The message log is activated or inactivated.

User response: None.

KO2Z058I  OMPE Vorm XCF gateway is at PTF maintenance level

Explanation: At OMPE Collector initialization, the current maintenance level of the XCF gateway is displayed.

System action: The OMPE Collector initialization proceeds.

User response: None.
**KO2Z059I**  OMPE Vmm OMPEOPTS user option set to %%%%.%

**Explanation:** At OMPE Collector initialization, the values of the real-time user options that are defined by the RKANPAR parameter library member OMPEOPTS are displayed.

**System action:** The OMPE Collector initialization continues.

**User response:** None.

**KO2Z060E**  OMPE Vmm SSM=%%%% IARV64 detach failed

**Explanation:** The OMPE Collector subsystem failed to detach a 64-bit memory object.

**System action:** OMPE collector processing continues.

**User response:** Contact IBM support.

**KO2Z061E**  OMPE Vmm Member=%%% No parm data found

**Explanation:** The OMPE Collector subsystem detected than invalid parameter data is specified.

**System action:** The subsystem function is abnormally terminated.

**User response:** Specify valid parameter data and re-execute the subsystem function.

**KO2Z062E**  OMPE Vmm Member=%%% RID=%%% KEY=%%% unrecognized/misplaced keyword

**Explanation:** The subsystem detected an incorrect parameter record while reading the indicated member name. The RID= value identifies the member record number and the KEY= value identifies the incorrect keyword.

**System action:** The subsystem function terminated.

**User response:** Correct the problem and re-execute the subsystem function.

**KO2Z063E**  OMPE Vmm Member=%%% unsupported

**Explanation:** The subsystem parse routine detected an incorrect input member name.

**System action:** The subsystem function is abnormally terminated.

**User response:** Specify a supported member name and re-execute the subsystem function.

**KO2Z064E**  OMPE Vmm XCF timer reset error

**Explanation:** The subsystem parse routine detected that an invalid XCF timer value was specified.

**System action:** The subsystem command is abnormally terminated.

**User response:** Specify a numeric timer interval when executing the command.

**KO2Z065E**  OMPE Vmm Member=%%%% initialization failed

**Explanation:** The subsystem failed to parse and initialize the specified member record data.

**System action:** The subsystem function is abnormally terminated.

**User response:** Specify valid member data keywords and re-execute the subsystem function.

**KO2Z069E**  OMPE Vmm Server virtual storage limit MEMLIMIT(x"00000004"MB) setting discovered

**Explanation:** The OMPE Collector subsystem discovered the 61-bit memory object setting value specified for the OMPE Collector started task.

**System action:** None.

**User response:** None.

**KO2Z069I**  OMPE Vmm The value for the virtual storage limit of the server is MEMLIMIT(00000004MB). The maximum value that can be specified for MEMLIMIT is 2048M.

**KO2Z035I**  OMPE Vmm The value for the virtual storage limit of the server is MEMLIMIT(NOLIMIT).
KO2Z073E  OMPE Vorm Virtual storage heap element failed.
RC=%%% RSN=%%% 

Explanation: An internal error occurred.

System action: The virtual storage heap request failed with error codes and reason codes.

User response: Check the error codes and the reason codes for more information.

KO2Z074I  OMPE Vorm DAPICOMM structure table RC=%%% RSN=%%% 

Explanation: The status of the Common Collector structure that is used to communicate the D5AFI request from the Agent address space is shown.

System action: The initialization of the OMGAMON Collector continues.

User response: None.

KO2Z075I  OMPE Vorm Common field table initialization completed. RC=%%% RSN=%%% 

Explanation: The initialization of the common field table is completed. The common field table is a dictionary that contains all data fields and their describing attributes. It is shared among the components within the address space. The common field table is prerequisite for the proper function of the user interfaces.

System action: None.

User response: None, if the return codes and the reason codes are set to zero. Otherwise, contact IBM Support.

KO2Z076I  OMPE Vorm Common field table release completed. RC=%%% RSN=%%% 

Explanation: The common field table is released.

System action: None.

User response: None if the return codes and the reason codes are set to zero. Otherwise, contact IBM Support.

KO2Z077I  OMPE Vorm CMD Display 

Explanation: Shows the first line of the multi-line write to operator (WTO) message output. This message is followed by multi-line WTO data lines.

System action: The command output is displayed.

User response: None.

KO2Z078I  display text from command D OMPE, STATUS

Explanation: Shows the DISPLAY OMPE,STATUS command data lines. This message displays the following information:

- Subsystem name
- Subsystem initialization date and time
- Current TRACE status selected
- Current DEBUG status selected
- SMF record number (currently unused)
- PARMLIB(RKD2PAR) OMPEin member name selected
- PARMLIB(RKD2PAR) OMPEin member parameter data set name selected
- LOADLIB(TKANMOD) Load module data set name selected
- Status of the Event Notification Facility Task (ENF) – (currently unused)
- Name of the sysplex selected
- Name of the XCF group selected
- SSI processing trap selected for TSO/E user IDs (currently set to none)
- SSI processing trap selected for STC address spaces (currently set to none)
- SSI processing trap selected for JOB address spaces (currently set to none)
- SVC screening member name selected (currently unused)
- Name of the automatic command member name (currently unused)
- Name of the system-level name/token pair created by the subsystem
- The input parameters specified in the INITPARM SSI keyword to initialize the subsystem
- Name of the generic operator command interface member (currently unused)
- Subsystem load module protection option selected
- Resource manager interface member name selected (currently unused)
- Resource manager interface abend limit (currently unused)
- Current setting of the RKD2PAR member refresh status (currently set to LOCK)
- Type of cross-memory environment selected and created by the subsystem
- Maximum number of XCF subtasks requested to be attached to process Receive requests

System action: The command data output is displayed.

User response: None.

KO2Z079I  display text from command D OMPE, STATUS

Explanation: Shows the DISPLAY OMPE,STATUS command end line.

System action: The command end line is displayed.

User response: None.
KO2Z080I  OMPE Vrm Subsystem debug mode is
解释：此消息是在响应VARY OMPE,DEBUG=[ON | OFF]子系统命令时显示的。

**Explanation:** A subsystem command was issued and an abend condition was detected.

**System action:** The command is rejected.

**User response:** Contact IBM support.

**KO2Z610E** \ OMPE Vrm Parse error. Keyword not found. Member=%%% KEY=%%%%

**Explanation:** A parsing error was encountered for the specified member name. The error is identified by the KEY= keyword.

**System action:** Subsystem function processing is terminated.

**User response:** Correct the error and re-execute the subsystem function.

**KO2Z612E** \ OMPE Vrm Parse error. Invalid keyword table supplied

**Explanation:** An internal parsing error was detected by the subsystem parsing routine.

**System action:** Subsystem function processing is terminated.
User response: Contact IBM support.

KO2Z613I  Vrm CMD Display  nnn
Explanation: This message is displayed as a data line of a multi-line write to operator (WTO) message in response to a DISPLAY OMPE, DIAGS command.
System action: The command is executed.
User response: None.

KO2Z615I  Vrm CMD Display  nnn
Explanation: This message is displayed as a data line of a multi-line write to operator (WTO) message in response to a DISPLAY OMPE, ZAP command. The following information is displayed:
Module  The name of the subsystem control section
Version  The control section subsystem version number
Level  The current PTF level
Date  The assembled date
Time  The assembled time
Trace  The current trace option status
System action: The command is executed.
User response: None.

KO2Z616I  Vrm CMD Display  nnn
Explanation: This message is displayed as data line of a multi-line write to operator (WTO) message in response to a global storage list (GSL) DISPLAY OMPE, GSL command. The following information is displayed:
GSL=nnn  The number of GSL structures currently created by the subsystem.
SP=nnn  The storage subpool number of the GSL structure.
EPA=entry  The entry point address of the GSL processing routine.
InUse  The number of GSL entries currently used by the subsystem.
Freed  The number of GSL entries freed by the subsystem.
TotalStg  The total amount of common virtual storage used by the subsystem.
Next-GSL  The address of the next GSL structure.
Address  The address of the common virtual storage element.
Xlength  The length of the common storage element.
SP  The subpool number of the virtual storage element.
Key  The storage protection key of the current storage element.
FreeWhen  When will the virtual storage element be freed.
Owner  The owner of the virtual storage element.
System action: The command is executed.
User response: None.

KO2Z618E  OMPE Vrm LXRES linkage index reserve failed
Explanation: The subsystem could not obtain a system linkage index required to build the cross-memory environment.
System action: Subsystem function processing is terminated.
User response: Contact your systems programmer.

KO2Z619E  OMPE Vrm ETCRE entry table create failed
Explanation: The subsystem could not create a cross-memory environment entry table entry.
System action: Subsystem function processing is terminated.
User response: Contact IBM support.

KO2Z620E  OMPE Vrm ETCON entry table connect failed
Explanation: The subsystem failed to connect a cross-memory environment entry table.
System action: Subsystem function processing is terminated.
User response: Contact IBM support.

KO2Z621E  OMPE Vrm Cross-memory environment creation failed.
CALL=%% ABEND=%%% RSN=%%%
Explanation: The subsystem abnormally terminated while trying to create the required cross-memory environment.
RSN= indicates the reason code. For more information,
KO2Z622E OMPE Vrm Task level name/token pair %%%% failed RC=%%% SRSN=%%%.

Explanation: The subsystem could not create a task level name/token pair.
- RC= indicates the return code. For more information, see “KO2Z return codes” on page 5144.

System action: Subsystem processing is abnormally terminated.
User response: Contact IBM support.

KO2Z623I OMPE Vrm Cross-memory environment successfully created

Explanation: The subsystem successfully created the required cross-memory environment.

System action: Subsystem processing continues.
User response: None.

KO2Z624E OMPE Vrm Cross-memory environment creation failed RC=%%% SRSN=%%%

Explanation: The subsystem could not create the required cross-memory environment.
- RC= indicates the return code. For more information, see “KO2Z return codes” on page 5144.
- RSN= indicates the reason code. For more information, see “KO2Z reason codes” on page 5144.

System action: The cross-memory environment is not created.
User response: Contact IBM support.

KO2Z625E OMPE Vrm %%%% Module %%%% ABENDs exceeded and has been disabled

Explanation: The indicated load module has exceeded the number of allowed abends and has been disabled.

System action: Future calls to the indicated module will be rejected.
User response: Contact IBM support.

KO2Z631I OMPE Vrm SSM=%%%%%% REMGR=%%%% environmental error

Explanation: The OMPE Collector subsystem detected an environmental error associated with the identified resource termination manager.

System action: OMPE Collector processing continues.
User response: Contact IBM support.

KO2Z636I OMPE Vrm CMD Display mnn

Explanation: This message is displayed in response to a DISPLAY OMPE, XCF command.

System action: The command is executed.
User response: None.

KO2Z637E OMPE Vrm XCF environment creation failed RC=%%% SRSN=%%%.

Explanation: The cross-coupling facility communication interface component failed to initialize.
- RC= indicates the return code. For more information, see “KO2Z return codes” on page 5144.
- RSN= indicates the reason code. For more information, see “KO2Z reason codes” on page 5144.

System action: The cross-coupling facility communication environment is not initialized.
User response: Contact IBM support.

KO2Z638I OMPE Vrm XCF SYSPLEX=%%% GROUP=%%% MEMBER=%%%.

Explanation: This message shows sysplex name, group name, and member name associated with a specific service request.

System action: None.
User response: None.

KO2Z639E OMPE Vrm XCF request %%%% SSM=%%%% failed RC=%%% SRSN=%%%

Explanation: The cross-coupling facility communication interface component issued an XCF request and the request failed.
- RC= indicates the return code. For more information, see “KO2Z return codes” on page 5144.
- RSN= indicates the reason code. For more information, see “KO2Z reason codes” on page 5144.

System action: The XCF service request caller is notified about the failure with return and reason codes.
User response: Contact IBM support.

KO2Z640I OMPE Vrm XCF SYSPLEX=%%%% GROUP=%%%% MEMBER=%%%

Explanation: This message shows sysplex name, group name, and member name associated with a specific service request.

System action: None.
User response: None.
KO2Z641E OMPE Vrm IRB failed to attach
Explanation: An Attach failure on behalf of the Attach service requestor occurred.
System action: The Attach service request is terminated.
User response: Contact IBM support.

KO2Z642E OMPE Vrm XCF SEND request failed
Explanation: The XCF Send service request failed while validity-checking input parameter structures.
System action: The XCF initialization task is terminated.
User response: Contact IBM support.

KO2Z643E OMPE Vrm Receive task
Explanation: The classic session successfully disconnected from the identified XCF group name and member name.
System action: None.
User response: None.

KO2Z644E OMPE Vrm The XCF requestor is no longer connected. RSN=!!!!!!!!!
Explanation: The response for DB2 performance data is cancelled because the requestor is no longer active.
System action: The XCF gateway component storage releases the response data buffer.
User response: Check the RSN= reason code for additional diagnostic information.

KO2Z645E OMPE Vrm User options member not found in RKANPAR. Using internal defaults
Explanation: The user options member could not be found in the RKANPAR parameter dataset concatenation.
System action: The OMPE Collector initialization continues using all internal defaults.

KO2Z646E OMPE Vrm XCF failed
Explanation: Errors occurred in the XCF Message Receive routine.
System action: The Message Receive request is rejected.
User response: This error is possibly caused because a member of the OMPEXCF group is terminating. Verify that the XCF member is still in the system. If not, restart the member.

KO2Z647E OMPE Vrm XCF SCHEDIRB failed
Explanation: The XCF Message Receive routine could not schedule a Send request to the target member.
System action: The Message Receive request is rejected.
User response: Contact IBM support.

KO2Z648E OMPE Vrm XCF Load failed
Explanation: The target load module specified on the CALL= operand of the Send service request could not be z/OS loaded.
System action: The Send service request is terminated with return and reason codes.
User response: Contact IBM support.

KO2Z649E OMPE Vrm XCF component LOAD failed
Explanation: The component load module specified on the CALL= operand of the Send service request could not be z/OS loaded.
System action: The Send service request is terminated with return and reason codes.
User response: Contact IBM support.

</table>
KO2Z663I • KO2Z669W

OverflowErr
The PE Server routing table storage size does not match the common routing table storage size.

Parse error
The AUTOTIME real time option that is specified in the OMPEOPTS real time options member is invalid. An interval of 5 seconds is used when copying the PE Server routing table to the common routing table.

Terminated
The virtual storage of the DB2 routing table is released successfully.

Wait-PEinit
The initialization of the DB2 routing table is waiting for the PESERVER initialization to complete.

The message field AUTOTIME= specifies the number of seconds at which the DB2 routing table is refreshed.

The message field ROUT= shows the ECSA virtual storage address of the DB2 routing table.

System action: The initialization of the subsystem continues.

KO2Z663I OMPE Vnnn The PESERVER subtask DGOVMSTR restarted successfully.
Explanation: The PESERVER master subtask failed because DB2 stopped. The PESERVER master subtask restarted successfully.

KO2Z664I OMPE Vnnn The PESERVER subtask completed successfully.
Explanation: The PESERVER master subtask completed successfully.

KO2Z667I OMPE Vnnn XCF Gateway message ID KO2Z665W suppressed.
LPAR=%%%%%% %COUNT=%%%%%% 
Explanation: The XCF send service request was sent to LPAR %%% times.
The message ID KO2Z665W was suppressed %%%% times.
System action: The XCF send service request is rejected.
User response: Start the OMEGAMON PE Collector on the target LPAR.

KO2Z665W LPAR= Lparname not connected to service
XCF request SSID=Subsystem-ID
CBA=Service-request RSN=Reason-code.
Explanation:
• Lparname specifies the remote XCF gateway target LPAR.
• Subsystem-ID specifies the target DB2 subsystem.
• Service-request specifies the remote control block access request routine.
• Reason-code is RSN=0000 1292 for version 5.1.0 or RSN=0000 1396 for version 5.1.1.

A member of the XCF-gateway sent a request to a member (LPAR) that resides on a remote XCF-gateway. The member on the remote XCF-gateway is not yet fully initialized, or it does not exist. Therefore DB2 subsystem monitoring data cannot be exchanged with the specified remote XCF gateway.

User response: Verify that the remote XCF-Gateway LPAR is successfully initialized and connected. Restart the request.

KO2Z668E OMPE Vnnn NTH SRB ABENDed.
CC=%%%%%% ABEND
CODE=%%%%%% RSN=%%%%%% 
Explanation: Near Term History collector instance terminated abnormally while running in enclave SRB-mode on a zIIP processor.
System action: The NTH collector instance is abnormally terminated.
User response: Contact IBM Support.

KO2Z669W The maintenance level of the XCF gateway is not compatible with OMEGAMON for Db2 PE <V1>.
Explanation: The PTF maintenance levels of the sending and the receiving OMEGAMON Collector XCF gateway must be the same.
• <V1> is version 5.4.0.
• <V2> is the name of the sending system where the local OMEGAMON Collector is running.
• <V3> is the PTF maintenance level of the sending OMEGAMON Collector XCF gateway.
• <V4> is the name of the receiving system where the remote OMEGAMON Collector is running.
• <V5> is the PTF maintenance level of the receiving OMEGAMON Collector XCF gateway.
System action: The request for data is rejected by the receiving XCF gateway.
User response: Verify the PTF maintenance levels of the local and the remote XCF gateway by checking the message ID KO2Z058I in the job log of the local and
the remote OMEGAMON Collector address space.

If the PTF maintenance levels do not match, install the latest maintenance level on all OMEGAMON Collectors and shut down and restart the OMEGAMON Collector address spaces.

KO2Z670W  The request to send data is rejected by OMEGAMON for Db2 PE because the maintenance levels of the XCF gateways are not compatible.

Explanation:  The PTF maintenance levels of the sending and the receiving XCF gateway do not match.
> <V1> is the version number of OMEGAMON for Db2 PE on the sending system.

System action:  The local XCF gateway rejects the request to send data.

User response:  Install the latest maintenance level on all OMEGAMON Collectors and shut down and restart the OMEGAMON Collector address spaces.

KO2Z806I  OMPE Vm SS Module disconnected from XCF group (%%%%%%%%% %%

Explanation:  The classic session or the common collector session successfully disconnected from the specified XCF group name.

System action:  None.

User response:  None.

KO2Z808E  OMPE Vm SSM=%%%%%% failed

Explanation:  This message is issued by the OMPE Collector subsystem to indicate that the specified load module has exceeded its execution limit.

System action:  The request is abnormally terminated.

User response:  Contact IBM support.

KO2Z896E  OMPE Vm SSM=%%%%%% exceeded %%% seconds execution time limit

Explanation:  This message is issued by the OMPE Collector subsystem XCF component to indicate that the specified load module has exceeded its execution limit.

System action:  The request is abnormally terminated.

User response:  Contact IBM support.

KO2Z900I  OMPE Vm Subsystem Shutdown in Progress

Explanation:  The VARY OMPE,SHUTDOWN command is currently being processed.

System action:  The subsystem initiates shutdown processing.

User response:  None.
KO2Z901W  OMPE Vm XCF gateway data receive tasks shortage detected

**Explanation:** Tasks to receive data are currently busy processing the corresponding requests.

**System action:** Requests to receive data are queued for later processing.

**User response:** You might want to increase the number of XCF gateway RECEIVE tasks that are specified by the XCFTASKS OMPEOPTS user option and restart the tasks that were started by the OMEGAMON for Db2 PE Collector.

KO2Z902I  OMPE Vm XCF gateway data receive tasks shortage relieved

**Explanation:** The shortage of the tasks to receive data is relieved.

**System action:** The processing of incoming tasks to receive data continues.

**User response:** None.

KO2Z904E  OMPE Vm System level name/token pair delete failed RC=%%%%%

**Explanation:** The subsystem could not delete a system level name/token pair.

- RC= indicates the return code. For more information, see "KO2Z return codes" on page 5144.

**System action:** The subsystem is abnormally terminated.

**User response:** Contact IBM support.

KO2Z907I  OMPE Vm System level name/token pair retrieve failed RC=%%%%%

**Explanation:** The subsystem could not retrieve a system-level name/token pair.

- RC= indicates the return code. For more information, see "KO2Z return codes" on page 5144.

**System action:** The subsystem terminated.

**User response:** Contact IBM support.

KO2Z920I  OMPE Vm Command successfully issued

**Explanation:** The issued command has been successfully executed.

**System action:** The command is executed.

**User response:** None.

KO2Z921E  OMPE Vm Invalid PARM specified. Function terminated

**Explanation:** The subsystem utility program detected a not valid input parameter.

**System action:** The utility function is terminated.

**User response:** Correct the problem and re-submit the utility request.

KO2Z922E  OMPE Vm Command not allowed from TSO/E Session

**Explanation:** The utility program cannot be executed from a TSO/E session as a called program or command processor.

**System action:** The utility function is terminated.

**User response:** Execute the utility function as a batch job or started task.

KO2Z923E  OMPE Vm Subsystem %%%% not found. Reset rejected

**Explanation:** The subsystem utility program cannot locate the indicated OMPE subsystem that has been requested as a target of the reset function.

**System action:** The utility function is terminated.

**User response:** Specify a valid OMPE subsystem name and re-execute the utility function.

KO2Z924I  OMPE Vm Subsystem %%%% Successfully reset

**Explanation:** The subsystem utility program successfully reset the indicated OMPE subsystem name.

**System action:** The indicated OMPE subsystem name is reset.

**User response:** None.

KO2Z926E  OMPE Vm Unable to post asynchronous API caller SSM=<V1> RC=<V2> RSN=<V3>

**Explanation:** An error occurred when trying to post the API caller.

- <V1> is the failing OMEGAMON for Db2 PE Collector subsystem module name.
- <V2> is the return code that is issued by the failing module.
- <V3> is the reason code that is issued by the failing module.

**System action:** The asynchronous API call is abnormally terminated.

**User response:** Contact your system programmer.
KO2Z956I  OMPE Vnnn Subsystem has been successfully shut down

Explanation: None.
System action: Subsystem processing is terminated.
User response: None.

KO2Z957I  OMPE Vnnn is issued on behalf of PE Server subtask %%%%%%%%%
QN=%%%%%%%%%% RN=%%%%%%%%%%%

Explanation: A resource serialization request has been issued by the PE Server subtask to alert OMPE components that normal PESERVER termination is in progress:
• <v1> shows the type of serialization request
• <v2> shows the resource major name
• <v3> shows the resource minor name
System action: OMPE Collector address space termination continues
User response: None.

KO2Z958I  OMPE V530 PE Server RTG service request failed. RC=000C
RSN=00088552

Explanation: The OMPE Collector subsystem was unable to process a common collector request for DB2 performance monitoring data.
• RC=000C indicates that a severe error occurred processing an initialization function.
• RSN= shows the reason code associated with the error return code.
• RSN=00091228 OMPE Collector started task address space is not up and running.
• RSN=00091232 OMPE Collector started task address space not responding.
System action: The Service request for DB2 performance monitoring data is rejected.
User response: Start the OMPE Collector without specifying REUSASID=YES.

KO2Z959I  OMPE Vnnn Initialization verification procedures bypassed. EXECIVPS=NO

Explanation: The OMPE Collector subsystem by default, at initialization time, executes the initialization verification procedures. When EXECIVPS=NO is specified, the initialization verification procedures are bypassed.
System action: The initialization verification procedures are not processed.
User response: Specify EXECIVPS=YES in RK2DPAR member OMPEOPPTS to have the initialization verification procedures executed during OMPE Collector started task address space initialization.

KO2Z960I  OMPE V530 PE Server environment error. RTG container address not initialized. RC=000C RSN=%%%%%%%%

Explanation: The OMPE Collector subsystem was unable to locate the PE Server list of monitored DB2 subsystems.
• RSN=00088544 - PE Server subtask failed to properly initialize.
• RSN=00088548 - PE Server routing table address of DB2 subsystems is not initialized.
• RSN=00088552 - PE Server routing table structure failed validity checks.
• RSN=00088556 - PE Server routing table monitored DB2 subsystem container contains zero entries.
• RSN=00088560 - PE Server routing table monitored DB2 subsystems container contains.
System action: The OMPE Collector subsystem fails to initialize its internal structures that point to the PE Server list of monitored DB2 subsystem. Classic and Common Collector sessions will fail display any monitored DB2 subsystem data.
User response: Review the job log for additional error messages that may have been issued by the PE Server component and verify that the RKD2PAR member OMPEMSTR does not contain validity check errors.

KO2Z961I  OMPE Vnnn OMPE Collector does not support executing in a reusable ASID

Explanation: The OMPE Collector address space has been started in a reusable ASID which is not supported.
System action: OMPE Collector address space is abnormally terminated.
User response: Start the OMPE Collector without specifying REUSASID=YES.

KO2Z962I  OMPE Vnnn Class PE routing service error. SSM=%%%%%%%%
SSID=%%%%% % RC=%%%%%
RSN=%%%%%%%

Explanation: A request to discover the status of a DB2 subsystem did not complete successfully.
• <v1> shows the requesting OMPE Collector subsystem module name
• <v2> shows the target DB2 subsystem identifier
• <v3> shows the service request return code
• <v4> shows the service request reason code
System action: The DB2 subsystem instance request is rejected.
User response: Start the OMPE Collector started task address space.

KO2Z999E  OMPE Vorm Subsystem error.
module=%%%%%%% ABEND=%%%% REASON=%%%%

Explanation: The OMPE subsystem recovery/termination manager indicates that the currently executing subsystem function was terminated.

System action: The subsystem might be shut down depending on the severity of the abend.

User response: Contact IBM support.
Chapter 10. Troubleshooting and support

This section summarizes what you can do if you encounter problems.

“Troubleshooting during installation”
“Troubleshooting commands” on page 4802
“Creating a diagnostic report” on page 5186
“Responding to dialog boxes” on page 5187
“Troubleshooting for Performance Expert Client” on page 5187
“Troubleshooting for Performance Warehouse” on page 5187
“Troubleshooting for Buffer Pool Analyzer” on page 5188
“Troubleshooting empty reports” on page 3001

Troubleshooting during installation

When you install OMEGAMON XE for DB2 PE, you might encounter specific problems. The following examples help you make a corrective action that resolves the problem, or provide your IBM representatives with enough information so that they can resolve it.

In general, when you get an error message, complete these steps:
1. Try to specify what the problem is.
2. Determine the resource that is affected.
3. Obtain more information.

Error in RKLVLOG indicating that the connection failed

This error occurs when the HTTP/HPPTS daemon tries to obtain a special port. You receive repeating messages in the RKLVLOG indicating that the connection failed with errno 93.

This error happens when the HTTP/HPPTS daemon tries to obtain a special port. You will see the following error message:
(0000-E0A2716B:kbbssge.c,52,"BSS1_GetEnv") KDP_D2_STC="DSNFOM4S"
(0001-E0A2716B:kbbssge.c,52,"BSS1_GetEnv") KDP_STATUS_REFRESH="60"
(0002-E0A2716B:kdpsapi,257,"d5api_connect") KD211000W Connection to OMPE Server DSNFOM4S
Failed Subsystem DSN7 Return=00000000 Reason=0000006A Retrying in 60 Seconds
(0000-E0B367EB:kdebbcn.c,35,"KDEB_BaseConnect") connect failed, errno 93

To solve this problem, perform the following steps:
1. Stop the OMEGAMON Agent.
2. Edit the member KD5ENV in <variable R1>.<variable R2>.RKANPARU and insert HTTPS:0\ as first transport protocol for KDE_TRANSPORT. For example,
   KDE_TRANSPORT=\ IP.UDP PORT:1918 USE:N\ IP6.PIPE PORT:1918 USE:N\ ... HTTPS:0\
3. Save the member and restart the OMEGAMON Agent.

Troubleshooting commands

This section provides an overview of the Troubleshooting commands.
Usage

This section describes the DUMP command used to dump records from an input data set, and the TAPECOPY command used to copy records from an input data set to an output data set. The options for these commands are almost identical. DUMP and TAPECOPY can each occur once in a job step. The description of the subcommand options is intentionally brief, to avoid recurrences. See “OMEGAMON for DB2 PE subcommand options” on page 4806 for comprehensive descriptions.

The following topics provide additional information:
- “DUMP command” on page 4802
- “TAPECOPY command” on page 4804

DUMP command

This section provides an overview of the Troubleshooting command DUMP.

Usage

The DUMP command is a tool used for diagnosis. It provides, in dump format, a printout of an input data set. All records in the input data set, a selected range of records, or specific record types can be dumped.

Usage notes

- The DUMP command defines options for the record dump module.
- Dumps are written to SYSPRINT in a hexadecimal dump format.
- “Sample JCL for DUMP and TAPECOPY commands” on page 4805 shows sample JCL for DUMP and TAPECOPY commands.

Syntax

```
DUMP (dump name) EXEC (INPUTDD) OFFSET (integer) CODES (codelist) SKIP (integer) STOPAFT (integer) MAXDUMP (integer)
```

Subcommand options

**dump name**

A user-defined name printed on the dump. If this field is omitted, the records are identified with the name DUMP0001.

Ensure that the specified name is not the same as a OMEGAMON for DB2 PE command keyword or abbreviation.

**EXEC**

Specifies INPUTDD as the ddname of the input data set. INPUTDD is the only valid ddname for this option and must be specified.
**OFFSET**
The offset of the record code into the record. The record code is a 1-byte field at position offset-plus-1. For example, OFFSET(4) defines a record code in the fifth byte of the record. The offset must be a numeric value less than the actual length of the record. The maximum value is 999 999 999. The default is 4.

**CODES**
The code values for records to be processed. Each code is a 2-digit hexadecimal number. You can specify either of the following:

- A list of values, for example '01,02,03'
- A range of values, for example '01-03,05-07'

Each entry must be separated by a comma. Enclose the code list in quotes if more than one value is specified.

If this option is omitted, all record codes (00-FF) are processed.

**SKIP**
The number of records to be skipped before processing begins. The maximum value is 999 999 999. The default is 0, which means that processing begins with the first record.

**STOPAFT**
The number of records to be processed, starting after the number of records to be skipped (SKIP option). The maximum value is 999 999 999. The default is 0, which causes all records (after skipping, if specified) to be processed.

**MAXDUMP**
The length of the dump in bytes, starting from the beginning of the record. The default is the full length of the record. You can enter any integer in the range of 1 to 99 999. For example, if you specify MAXDUMP(128), only the first 128 bytes of input records are dumped.

**Note:** Some IFCID records can be up to 32 KB in length. If you use the default for MAXDUMP (the entire record), very large reports can be produced.

**Example using DUMP**

In this example:

- The DUMP is named DUMPSTAT.
- The ddnname of the input data set is INPUTDD (the GLOBAL default).
- The offset of 4 defines a record code in the fifth byte of the record.
- Only records with a value of 01 or 02 in the fifth byte are dumped.
- The first 125 records of the input data set are skipped.
- The next 10 records that meet the specifications are dumped.
- Only the first 1 000 bytes of each record are dumped.

```plaintext
DUMPSTAT DUMP ( EXEC (INPUTDD) OFFSET (4) CODES ('01,02') SKIP (125) STOPAFT (10) MAXDUMP (1000))
```

**Note:** See also “Sample JCL for DUMP and TAPECOPY commands” on page 4805.

**TAPECOPY command**

This section provides an overview of the Troubleshooting command TAPECOPY.
Usage

The TAPECOPY command is a utility tool that you can use to select a specified subset or all records from an input data set, and copy them to an output data set. The selection logic is identical to that used for the DUMP command.

Usage notes

- The TAPECOPY command defines options for the data set copy module.
- Copies of selected portions of the input data set are produced on a user-specified output data set.

Syntax

```
TAPECOPY (EXEC (INPUTDD))
  tape copy name
  OFFSET (integer)
  CODES (codelist)
  SKIP (integer)
  STOPAFT (integer)
  NEWCOPY (ddname)
```

Subcommand options

- **tape copy name**
  A user-defined name identifying the records copied. If this field is omitted, the records are identified by the name COPY0001.

  Ensure that the specified name is not the same as a OMEGAMON for DB2 PE command keyword or abbreviation.

- **EXEC**
  Specifies INPUTDD as the ddname of the input data set. INPUTDD is the only valid ddname for this option and must be specified.

- **OFFSET**
  The offset of the record code into the record. The record code is a 1-byte field at position offset-plus-1. For example, OFFSET(4) defines a record code in the fifth byte of the record. The offset must be a numeric value less than the actual length of the record. The maximum value is 999 999 999. The default is 4.

- **CODES**
  The code values for records to be processed. Each code is a 2-digit hexadecimal number. You can specify either of the following:
  - A list of values, for example '01,02,03'
  - A range of values, for example '01-03,05-07'

  Each entry must be separated by a comma. Enclose the code list in quotes if more than one value is specified.

  If this option is omitted, all record codes (00-FF) are processed.

- **SKIP**
  The number of records that are skipped before processing begins. The maximum value is 999 999 999.

  The default is 0. If 0 is specified, processing begins with the first record.
STOPAFT
The number of records to be processed, starting after the number of records to be skipped (SKIP option). The maximum value is 999 999 999.

The default is 0. This causes all records (after skipping, if specified) to be processed.

NEWCOPY
The ddname of the output data set. The default is TAPECOPY.

Example using TAPECOPY
In this example:
• The TAPECOPY is named COPYSTAT.
• The ddname of the input data set is INPUTDD (the GLOBAL default).
• The offset of 4 defines a record code in the fifth byte of the record.
• Only records with a value of 01 or 02 in the fifth byte are copied.
• The first 50 records of the input data set are skipped.
• The next 10 records that meet the specifications are copied.
• The ddname of the output data set is OUTDATA.

COPYSTAT TAPECOPY(
EXEC (INPUTDD)
OFFSET (4)
CODES ('01,02')
SKIP (50)
STOPAFT (10)
NEWCOPY (OUTDATA))

Sample JCL for DUMP and TAPECOPY commands
The following figure shows a sample JCL for the DUMP and TAPECOPY commands.

Note: The command syntax shown below is not appropriate in all circumstances. You must modify it to meet your requirements and system setup.
Creating a diagnostic report

If you have an error that you cannot resolve yourself, for example, if a function does not work correctly or an error message appears that you do not understand, you can create a diagnostic report that you can send to IBM support as a problem management report (PMR).

You create a report from the System Overview window. To forward the report to IBM support, ensure that you have specified your e-mail settings in the global settings. For more information about specifying global settings, see "Specifying global settings" on page 2504.

To create a diagnostic report:

1. In the System Overview window, click **Help > Diagnostics**.

   The Diagnostics window is displayed.
2. Click the **Start** ( ) toolbar button to start recording diagnostic information.

3. When you have recorded the entire information, click the **Stop** ( ) toolbar button.

4. Do one of the following:
   - Click the **Send** ( ) toolbar button to send the diagnostic report to IBM support.
     The Send Diagnostic Information window is displayed. Type a brief description of the problem in the **Subject** field and click **OK**. The diagnostic report is sent to IBM support and deleted from your system.
   - Click the **Save** ( ) toolbar button.
     The Save Diagnostic Information window is displayed. In the **Scenario** field, provide a detailed description of the error situation and click **OK**.

**Responding to dialog boxes**

OMEGAMON for Db2 PE supports a *modal* dialog boxes, such as message boxes, to which you must respond before you can proceed with any other action.

If such a dialog box is in the background, do the following:

1. Press Alt+Tab.
   A dialog box is displayed.

2. Press the Tab key while holding the Alt key until the Java Cup and Steam Logo is selected.

3. Release the Alt key.
   The previously invisible dialog box is displayed in the foreground.

4. Respond to the dialog box.

**Troubleshooting for Performance Expert Client**

This topic describes the problems that you might encounter in Performance Expert Client.

**Performance Expert Client does not work correctly after startup**

If you have a firewall installed on your workstation, ensure that Performance Expert Client has correct access permissions. Otherwise, Performance Expert Client does not work correctly.

**Launching Netscape as HTML browser**

If launching an HTML browser from Performance Expert Client fails, the browser is opened separately.

**Troubleshooting for Performance Warehouse**

The following sections describe the problems that you might encounter in Performance Warehouse.
Solving code-page problems when accessing Performance Warehouse

For some installations, you might receive SQL0332 errors when accessing Performance Warehouse.

To solve this problem, set DB2CODEPAGE to a value that is compatible with the host SCCSID. In addition, the SYSIBM.SYSSTRINGS table must contain a row that maps the two values in the INCCSID OUTCCSID columns. For more information about DB2CODEPAGE values, see the section National Language Support Considerations in one of the DB2 Connect Quick Beginnings books.

If you still cannot connect to Performance Warehouse, you might see the following message: SQL0332N - There is no available conversion for the source code page "1208 UNKNOWN 3" to the target code page. Reason Code. SQLSTATE=57017.

To solve this problem, add DISABLEUNICODE=1 in the file sqllib\db2cli.ini for the DB2 subsystem, where sqllib is the default DB2 Connect installation directory. See also the technical notes (Technotes) #1008683 and #1008573.

If DISABLEUNICODE does not work, you might get the following message: SQL0332N There is no available conversion for the source code page "01208" to the target code page "00437". Reason code "DSNXRIVB". SQLSTATE=57017.

To solve this problem, UNICODE support on z/OS must be enabled correctly including Enforced Subset and Round Trip method in the conversion image. For more information, see APAR PQ40270 and PMR #68853.

Restarting the OMEGAMON Collector

Before restarting the OMEGAMON Collector, which manages Performance Warehouse, disconnect from all Performance Warehouse clients and all subsystems of Performance Expert Clients that are connected.

This is necessary because the clients might hold a lock on the Performance Warehouse data tables and prevent the OMEGAMON Collector from restarting and initializing.

Running a CONVERT step with an incorrect data set

CONVERT steps assume Save data sets as input that were produced by Performance Expert batch reports. If a CONVERT step runs with an incorrect input data set, the OMEGAMON Collector fails (see error log) and is unable to run any processes. In this case, the OMEGAMON Collector must be stopped and restarted.

Troubleshooting for Buffer Pool Analyzer

This section categorizes possible Buffer Pool Analyzer problems and describes steps to solve them. The intention of this section is to provide a fast problem determination.

Problems with a collect task

Collect task terminates with message FPEM0802E and a reference to SQL code -805 Contact your DB2 administrator. One or more packages might need to be rebound. This error can occur if the product or a product update was improperly installed.
Collect task with compression shows TERSEMVS messages
These messages indicate errors reported from the TRSMAIN utility. See “Interpreting trace status summary and trace messages” on page 2614 about how to diagnose these errors.

Problems with batch jobs

Not enough records read or too many records lost
If the job summary log (JOBSUMDD) indicates these problems, your batch job might not have sufficient priority. See the recommendation in “Collecting data by using the batch JCL” on page 2616 for details.

Abend B37 (out of space) when creating reports or bpd files
Buffer Pool Analyzer cannot store temporary data in a temporary work data set because of virtual storage constraints. Use the BPWORK DD statement as described in “Specifying a JCL command stream” on page 2620.

FPEU0020E or FPEC4085U insufficient virtual storage
Check the REGION statement in the affected batch job.

Missing information in reports or bpd files

Sections are missing in reports
Ensure that you have collected the appropriate data type (Summary or Detail). See “Determining what to collect” on page 2593, “Configuring a collect task” on page 2611, and “Collecting data by using the batch JCL” on page 2616.

For reports, ensure that you have specified the appropriate LEVEL option of the BPACTIVITY REPORT command. See “Specifying reports and bpd files with BPACTIVITY” on page 2622.

Check the job summary log JOBSUMMDD for more details. See “Specifying a JCL command stream” on page 2620.

Object placement function lacks information about unused objects
If you miss certain objects in one of the windows, or if only active objects are listed (the Used column always shows Yes), or if the Show only objects with activity or Assign objects not accessed during data collection check boxes seem to have no effect, it is likely that you have used a bpd file that was created with the BPACTIVITY FILE ACTIVEOBJECTS command. The ACTIVEOBJECTS subcommand option excludes all information about inactive, respectively unused objects.

This behavior is not an error. If you want inactive objects to be considered during your object placement optimization, you need to use a bpd file that is created without the ACTIVEOBJECTS subcommand option.

Problems with client functions

Out of memory message
Your client might not have enough available physical memory (random access memory) to start or to perform a function. See the General remarks topics at the beginning of the corresponding sections for specific memory requirements.

Unable to select a bpd or trace data file
The file name extension of the bpd or trace file should be bpd, respectively trace, as described in “File and data set naming conventions” on page 2599.
If you have used other file name extensions, select All files (*) from the File of type list in the Open dialog box to see all files and select the file with your custom extension.

Unable to open a bpd or trace data file
Ensure that the file size is less than 2 GB. If required, modify the data collection parameters (described in "Configuring a collect task" on page 261).

Message BPOK6000 - Internal error - is displayed
You tried to open a buffer pool data (bpd) file with one of the client-based functions, but the bpd file could not be opened or properly preprocessed. The file might be damaged, does not contain data in the required format (Short or Standard) or data type (Summary or Detail), or was not created by means of the BPACTIVITY FILE command. Create a new bpd file, or use another bpd file. See Table 210 on page 2595 and "Specifying reports and bpd files with BPACTIVITY" on page 2622, if required.

If this error occurs when you use the File Transfer Protocol (FTP), also check whether your file transfer program provides the RDW and NORDW command options. If the default is RDW, it might cause a four-byte record descriptor record to be included in the data set being downloaded from the host to the client (which might then cause message BPOK6000). Specify the NORDW command option to avoid the creation of the descriptor record.

Unintentional characters are displayed during data entry
Check and correct the regional settings of the Windows operating system.

Simulation does not finish - progress indicator stops at approximately 99%
The number of simulated buffer pool sizes, determined by the minimum and maximum buffer pool size and the interval, should not exceed 40. See "Step 1: Setting simulation parameters" on page 2700 for more details.

Hard disk drive space management
Buffer Pool Analyzer needs to keep its input files (the buffer pool data files and trace data files) on the client's local hard disk drive to perform its functions. Further, Buffer Pool Analyzer keeps its results (from object placements, simulations, and long-term analyses) also on its local hard disk drive. Over time, you might have collected a multitude of input files and results that unnecessarily use up hard disk space.

Buffer Pool Analyzer does not perform any cleanup. All files and results remain on the hard disk until you delete them. Use the following guidelines to delete no longer required files and results:

Input files
Buffer pool data files (*.bpd) and trace data files (*.trace) are stored in optional folders, which are determined by you when these files are downloaded.

Delete these files by using the client's functions (Windows Explorer).

Output files
Results from different Buffer Pool Analyzer functions are stored in folder C:\Documents and Settings \<userid> \db2pev<version> \... \... and various subfolders. Do not delete individual files from these folders; they are also used by other DB2 Performance Expert functions and as temporary work area. If required, use them only to determine how much hard disk space they use (Windows' Properties function).
To delete results, use the Buffer Pool Analyzer main window. Refer to one or more of the following sections for a description:

- “Viewing the result of an optimization cycle” on page 2694
- “Viewing the result of a simulation cycle” on page 2704
- “Viewing the result of a long-term analysis” on page 2715

This process ensures that all files belonging to a report or result are properly deleted.

## Troubleshooting empty reports

This topic lists and explains several reasons why your report might not contain any report data. Use this information as a guide to identify possible reasons, including inappropriate command parameters.

At its core, OMEGAMON XE for DB2 PE identifies data to be collected and reported by IFCIDs. [“DB2 instrumentation data” on page 2762](#) provides an overview of how IFCIDs map to report sets, DB2 trace types and DB2 trace classes. The basic rule is that data to be reported needs to be collected and made available as input data to the report generation process. If required IFCIDs are missing, the generated report ends with *NO DATA TO REPORT*.

The problem of missing IFCIDs might also be caused by different versions of DB2 or OMEGAMON XE for DB2 PE. Both products might support different sets of IFCIDs, which can lead to situations where an IFCID is either not provided by a DB2 version or cannot be processed by an OMEGAMON XE for DB2 PE version. The same problem might arise if data from other sources, like SMF or GTF, is used for reports.

OMEGAMON XE for DB2 PE provides flexible means to specify which data to collect and which data to report. However, it provides no means to protect against inappropriate use of commands, subcommands and subcommand options, which also can result in empty reports.

The following sections list possible reasons why your report might end with a final message of *NO DATA TO REPORT*.

### Messages indicating unsupported IFCIDs or IFCID formats

If the job summary log shows message [FPEC4015I NUMBER OF RECORDS FROM UNSUPPORTED RELEASES OF DB2 WAS ...](#), OMEGAMON XE for DB2 PE has detected IFCIDs in its input data that it is not supposed to handle. Either the input data is from an outdated DB2 version and the IFCID is no longer supported by OMEGAMON XE for DB2 PE, or the input data contains IFCIDs from a newer DB2 version and OMEGAMON XE for DB2 PE is not yet aware of them.

If the job summary log shows message [FPEC4020I NUMBER OF RECORDS FROM UNSUPPORTED PRODUCT RELEASES WAS ...](#), the input data (such as input data in DPMOUT format) was created by earlier versions of OMEGAMON XE for DB2 PE or OMEGAMON XE for DB2 PM and is no longer supported.

### Identifying missing IFCIDs

Report sets such as Accounting, Locking, or Statistics require specific IFCIDs from DB2 instrumentation data, as outlined in [“DB2 instrumentation data” on page 2762](#).
If the input data sets (specified with the INPUTDD statement in your job stream) do not contain these IFCIDs, the generated report ends with NO DATA TO REPORT.

For example, an Accounting report requires IFCIDs 3 and 239 in the input data. If the job summary log shows nothing more than in the following example (no IFCIDs 3 and 239), your Accounting report remains empty.

<table>
<thead>
<tr>
<th>IFCID</th>
<th>INPUT COUNT</th>
<th>INPUT PCT OF TOTAL</th>
<th>PROCESSED COUNT</th>
<th>PROCESSED PCT OF TOTAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>89</td>
<td>33.58%</td>
<td>0</td>
<td>0.00%</td>
</tr>
<tr>
<td>2</td>
<td>88</td>
<td>33.20%</td>
<td>0</td>
<td>0.00%</td>
</tr>
</tbody>
</table>

Note: The job summary log gives a clear indication about which IFCIDs are contained in your input data. If an IFCID is not listed in the IFCID column or the INPUT COUNT column shows a count of 0, your input data does not contain this IFCID.

Reasons for missing IFCIDs

IFCIDs might be missing in your reports because they are either not collected (missing in the input data for the report generation) or being accidentally suppressed or filtered by inappropriate use of commands, subcommands, or subcommand options.

To identify why specific IFCIDs are not collected, review the methods of how the data was collected. “Collecting data for reports” on page 2748 describes several methods, some of them let you explicitly specify what to collect. For example, the DB2 startup parameters might determine that certain trace classes (with their implied IFCIDs) are not started.

If your input data to specific reports contains the required IFCIDs, but your reports still do not show any data, it is likely that restrictive command or subcommand options are in use in your job stream.

- The GLOBAL command might apply global filters to all data serving as input to subsequent OMEGAMON XE for DB2 PE commands like ACCOUNTING or STATISTICS.
- OMEGAMON XE for DB2 PE commands like ACCOUNTING or STATISTICS might use subcommand options that further restrict the data. The most important ones are:
  - FROM/TO might limit the time frame too much.
  - INCLUDE/EXCLUDE might limit a DB2 trace class or an IFCID.

For more information about commands and subcommand options, see the Report Command Reference.

For example, a Statistics report requires IFCIDs 1 and 2. The following job summary log shows that 48 records of each IFCID are included in the input data. However, none of these are being processed (PROCESSSED COUNT equals 0) during the report generation and consequently the Statistics report is empty.

<table>
<thead>
<tr>
<th>IFCID</th>
<th>INPUT COUNT</th>
<th>INPUT PCT OF TOTAL</th>
<th>PROCESSED COUNT</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>48</td>
<td>25.00%</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>48</td>
<td>25.00%</td>
<td>0</td>
</tr>
</tbody>
</table>
Insufficient amount of Statistics record pairs (IFCID 1 and 2)

Output in a Statistics report requires at least two DB2 Statistics record pairs (IFCID 1 and 2) in the input data. These IFCIDs are collected at a configurable interval (DB2 system parameter STATIME). For more information, see “General Statistics information” on page 2912.

An empty Statistics report usually indicates that either the input data does not cover at least two intervals or that filters restrict the amount of data being processed during report generation.

The following example of a job summary log shows that a sufficient amount of IFCID 1 and 2 records are in the input data (INPUT COUNT column). However, filters have limited the number of processed records below the required minimum of two record pairs (PROCESSED COUNT column). Consequently, the Statistics report is empty.

<table>
<thead>
<tr>
<th>IFCID</th>
<th>INPUT COUNT</th>
<th>INPUT PCT OF TOTAL</th>
<th>PROCESSED COUNT</th>
<th>PROCESSED PCT OF TOTAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>48</td>
<td>25.00%</td>
<td>1</td>
<td>1.02%</td>
</tr>
<tr>
<td>2</td>
<td>48</td>
<td>25.00%</td>
<td>1</td>
<td>1.02%</td>
</tr>
</tbody>
</table>

The following job stream example shows how improper use of subcommand options cause an empty Statistics report. Here, the REDUCE step causes a summarization of input data to an interval of 60 minutes, with a boundary to the start of the hour. However, in the REPORT step the FROM and TO subcommand options limit the data to 30 minutes, which is less than a single interval.

```
STATISTICS
  REDUCE
    INTERVAL(60)
    BOUNDARY(60)
  REPORT
    FROM (12/22/13,12:15:00.00)
    TO (12/22/13,12:45:00.00)
```

Messages indicating incomplete Accounting data (IFCID 3 and 239)

If the job summary log shows one or more of the following messages, incomplete Accounting data was found in the input data and your Accounting report might be incomplete. In the worst case, the report might end with NO DATA TO REPORT.

- FPEA4531I GENERAL ACCOUNTING DATA FOR LUWID INSTANCE <VI> IS MISSING. IFCID 3 IS MISSING.
- FPEA4532I ACCOUNTING DATA FOR A NUMBER OF PACKAGES FOR LUWID <VI> IS MISSING. ONE OR MORE IFCID 239 IS MISSING.
- FPEA4534I COORDINATING PARALLEL TASK FOR LUW INSTANCE <VI> IS NOT REPORTED AS NOT ALL INFORMATION FOR ASSISTING PARALLEL TASKS FROM MEMBER <VI> IS AVAILABLE.

Accounting reports require IFCID 3 for reporting a thread. However, package or program data belonging to a thread is contained in multiple 239 IFCIDs. A 1:n relation is established within the data. For correct reporting a complete set of these IFCIDs is required in the input data.

In case of DB2 Query Parallelism, additional sets of IFCIDs 3 and 239 are required. They were created from parallel processors or from DB2 systems that assisted an
initiating agent. Dependent on the degree of parallelism, this can result in a 1:p
relation between agent and parallel tasks. In other words, correct Accounting
processing needs from the agent one IFCID 3 and n IFCIDs 239, and for each of the
p parallel tasks also one IFCID 3 and a certain number of IFCIDs 239.

Accounting processing needs a complete set of these IFCIDs for a correct reporting.
If either IFCIDs 239 belonging to an IFCID 3 are missing, or if IFCIDs 239 are
available but their IFCID 3 is missing, the entire thread is excluded from further
processing and reporting.

Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

This information is for planning purposes only. The information herein is subject to change before the products described become available.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs. The sample programs are provided "AS IS", without warranty of any kind. IBM shall not be liable for any damages arising out of your use of the sample programs.
Each copy or any portion of these sample programs or any derivative work, must include a copyright notice as follows:

© (your company name) (year). Portions of this code are derived from IBM Corp. Sample Programs. © Copyright IBM Corp. _enter the year or years_. All rights reserved.

If you are viewing this information softcopy, the photographs and color illustrations may not appear.

**Programming interface information**

This publication documents intended Programming Interfaces that allow the customer to write programs to obtain the services of Db2 Performance Expert.

This publication documents information that is NOT intended to be used as Programming Interfaces of Db2 Performance Expert.

This publication primarily documents intended Programming Interfaces that allow the customer to write programs to obtain the services of Db2 Performance Expert.

This publication also documents information that is NOT intended to be used as Programming Interfaces of Db2 Performance Expert. This information is identified where it occurs by an introductory statement to a topic or section.

This publication primarily documents information that is NOT intended to be used as Programming Interfaces of Db2 Performance Expert.

This publication also documents intended Programming Interfaces that allow the customer to write programs to obtain the services of Db2 Performance Expert. This information is identified where it occurs by an introductory statement to a topic or section.

**Trademarks**

IBM, the IBM logo, and ibm.com® are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the web at "Copyright and trademark information" at [http://www.ibm.com/legal/copytrade.html](http://www.ibm.com/legal/copytrade.html).

Adobe, the Adobe logo, PostScript, and the PostScript logo are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States, and/or other countries.

Intel, Intel logo, Intel Inside, Intel Inside logo, Intel Centrino, Intel Centrino logo, Celeron, Xeon, Intel SpeedStep, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.

Java and all Java-based trademarks and logos are trademarks or registered trademarks of Oracle and/or its affiliates.

Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both.
Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.

UNIX is a registered trademark of The Open Group in the United States and other countries.

Other company, product, and service names may be trademarks or service marks of others.

**Terms and conditions for product documentation**

Permissions for the use of these publications are granted subject to the following terms and conditions:

**Applicability:** These terms and conditions are in addition to any terms of use for the IBM website.

**Personal use:** You may reproduce these publications for your personal, noncommercial use provided that all proprietary notices are preserved. You may not distribute, display or make derivative work of these publications, or any portion thereof, without the express consent of IBM.

**Commercial use:** You may reproduce, distribute and display these publications solely within your enterprise provided that all proprietary notices are preserved. You may not make derivative works of these publications, or reproduce, distribute or display these publications or any portion thereof outside your enterprise, without the express consent of IBM.

**Rights:** Except as expressly granted in this permission, no other permissions, licenses or rights are granted, either express or implied, to the publications or any information, data, software or other intellectual property contained therein.

IBM reserves the right to withdraw the permissions granted herein whenever, in its discretion, the use of the publications is detrimental to its interest or, as determined by IBM, the above instructions are not being properly followed.

You may not download, export or re-export this information except in full compliance with all applicable laws and regulations, including all United States export laws and regulations.

IBM MAKES NO GUARANTEE ABOUT THE CONTENT OF THESE PUBLICATIONS. THE PUBLICATIONS ARE PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT, AND FITNESS FOR A PARTICULAR PURPOSE.

**Privacy policy considerations**

IBM Software products, including software as a service solutions, ("Software Offerings") may use cookies or other technologies to collect product usage information, to help improve the end user experience, to tailor interactions with the end user or for other purposes. In many cases no personally identifiable information is collected by the Software Offerings. Some of our Software Offerings can help enable you to collect personally identifiable information. If this Software Offering uses cookies to collect personally identifiable information, specific information about this offering’s use of cookies is set forth below.
This Software Offering does not use cookies or other technologies to collect personally identifiable information.

If the configurations deployed for this Software Offering provide you as customer the ability to collect personally identifiable information from end users via cookies and other technologies, you should seek your own legal advice about any laws applicable to such data collection, including any requirements for notice and consent.
