Fixed issues

SYS-265403

After upgrading from a version exposed to Heartbleed, additional steps are required:
1. The digital SSL Certificates provided by IBM need to be replaced, and will be replaced by IBM as part of the upgrade procedure.

2. If you installed your own digital certificates, revoke those and replace them with new certificates. Be sure not to generate the new certificates using the old private key and create a new private key (using `openssl genrsa`). Use the new private key to create the new certificate signing request (CSR).

3. The `admin` password needs to be changed, as well as any additional users defined internally (if you’re using LDAP authentication, then only the `admin` password needs to be changed). Make sure to do this after upgrading and replacing the digital certificates.
