

DB2 Web Query for i

Release Levels and Prerequisites

The table below shows interoperability between release levels of DB2 Web Query for i and the IBM i OS. For each combination, the table lists the prerequisite products, prerequisite PTFs, and Web Query group PTF numbers. The prerequisites must be applied before installing Web Query. It is recommended that you apply the latest levels of any group PTFs.

The latest Web Query group PTF levels and any individually released Web Query PTFs can be found at <http://ibm.biz/db2wqGroupPTFs>. The site provides detailed PTF and service information, such as the release dates and package identifiers for each group level.

Every Web Query release and some PTFs, as well, introduce new features and functional enhancements. To view highlights, see the New Features document at <https://ibm.biz/Bd4aXQ>. You can also refer to this document for a table of supported browsers and their release levels.

Web Query includes an optional Developer Workbench client. When upgrading the Web Query release or group PTF level, users who installed the client on their workstation must refresh it. The level of the Developer Workbench client must match that of the base Web Query product running on the IBM i.

Note 1: N/A indicates the specified release of DB2 Web Query is not supported on the IBM i OS release.

****Note 2:** For Web Query 2.1.0 group PTF level 17 and later, and for 2.1.1 group PTF level 5 and later, 5761JV1 option 14 is required. For earlier levels, 5761JV1 option 11 was required, but is no longer supported as of September 30, 2017.
